Russia at present is a pure dictatorship, and not a pure Communist state, but its key to success is not in its armies and air forces, but in the disposition of land to the landless. The great private estates of Poland and Czechoslovakia were divided up among the people who wanted to use the land, and when they were allowed to do this they were not particular about the kind of government existing in Russia. Russia advocates this day and night—let the people have land—and when this doctrine is preached among the landless they embrace it with zeal. When others see how the people of Russia, Poland, Bulgaria, and Czechoslovakia have realized their ambition to have the use of land the doctrine spreads. Guns and billions cannot stop this movement—nothing can stop it except to have these countries that we are helping radically change their economic policy and give the people the same as the Russians give, namely, the right to use and occupy land.

Since we are financing certain countries with large landed estates amidst landless millions, we ought to insist they change their policy and make it possible for their citizens to have and enjoy the same right to land as is promised by the Reds.

We could well afford to see some of our money go for the purchase of these large landed estates, to permit the landless to occupy and use them. As we have spent our money so far, the threat of communism has not been in the least degree lessened. Armed forces will not settle the question but it could be settled if our statesmen understood that economic conditions and pressure of population cannot be permanently remedied with guns.

It is true that we may have another world war—but we do not need to have it. If we do have a war and win again as we have in two World Wars, we will still not have a settlement that will bring lasting peace. There will, in my judgment, be no peace in this world as long as a few individuals own the lands and the millions are not permitted to participate in ownership.

In this country 46 percent of the citizens own their homes and with more help from the Government this percentage must be increased. A country like ours does not feel the pinch of expanding populations as older countries do, but we must be on the alert and keep opportunities open for more of the people of the United States to own homes—if we do, there will not be and cannot be any serious threat from any "ism."

If my diagnosis of the success of communism is correct, and I think it is, we can go about the job of establishing world peace in a way that will not consume another $97,000,000,000 with no known beneficial results.

Some say we have no right to dictate to other governments what their land policy is, or has been, or is to be. That is true enough, but if we are to keep dumping billions on billions of our money into those countries we should have some control over the spending. If these countries will not take our advice, well and good, but they should be given to understand that neither will they take any more of our money.

Because of the belief I have in what is necessary to establish content among the various nations of Europe and Asia, I have consistently voted against all appropriations for the Marshall plan. It appears plain to me that the expenditure of the billions is an utter waste of money, and that the thing we are doing does not have the effect of bringing about the contentment and peace, but will prolong the struggle of the people for land. Instead of stopping the spread of communism, it will increase it. No better example of this can be found than in China, where our two billion went down the drain and only increased the ardor of the people of China for the Communist cause. No attempt was made by the National Chinese Government to devise a land policy, and if we ever did advise it, it was not carried out. As the Communist armies advanced, the national land system behind the armies was uprooted, and lands were parceled to the people. They are on that land now, and with that desire satisfied, they are not much concerned with what kind of government supplants the old National Government.

The national government could have become as solidly fixed with the millions of China as the Communist government is now, had the Nationalists granted what the people were fighting for. The national government did not do so and was defeated. Once having had a taste of the right to occupy and use the soil the people of China will never go back to the former regime.

I do not want to criticize the State Department too severely as I realize they know more about the situation than I do, but it appears to me that in spending the funds appropriated under the Marshall plan, we spend it to support governments which are in danger of being taken over by a communistic regime. We have so far gone in blindly to support the Dutch against the people of Indonesia, to support the Greek Government, to support the Italian Government, without in any way demanding that these countries change their economic policies.

The State Department, obviously, does not understand what makes communism a driving force. The communistic drive can be halted if the people lined up with that cause are given what they want—what they are fighting for—the right to occupy and use land, without paying tribute for that right.

Chief Justice Hughes in his speech at the one hundred and fiftieth anniversary of the founding of this Government said, "The people in this Government will always get what they want." That should be a good doctrine in other countries.

Ship Construction on the Pacific Coast

EXTENSION OF REMARKS

OF

HON. JOHN J. ALLEN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. ALLEN of California. Mr. Speaker, the Subcommittee on Maritime Affairs of the Committee on Merchant Marine and Fisheries has had under consideration H. R. 4190, a bill to provide for the allocation of ship-construction contracts. The hearings were recently concluded. A number of endorsements requesting favorable consideration of H. R. 4190 were forwarded to the committee and appear in the record of its hearings. There were, however, a great number of similar endorsements which were not forwarded in time to receive such consideration. Accordingly, in order that they may appear as a part of the records of the House, I am extending my remarks in the RECORD and including the telegrams, letters, and resolutions. They are the following:

COMPTON, CALIF., *August 3, 1949.*
Congressman JOHN J. ALLEN, Jr.,
House Office Building,
Washington, D. C.:
Compton City Council urges passage H. R. 4190 for best interest of Nation.
K. B. DOUGLASS, *City Manager.*

LIVERMORE, CALIF., *August 2, 1949.*
Hon. JOHN J. ALLEN, Jr.,
Washington, D. C.:
We urgently request you a "do pass" on H. R. bill 4190.
CITY COUNCIL, CITY OF LIVERMORE, CALIF.

HAYWARD, CALIF., *July 18, 1949.*
MERCHANT MARINE AND FISHERIES COMMITTEE,
House of Representatives,
Washington, D. C.:
Hayward City Council endorses H. R. 4190, a bill to allocate shipbuilding work to west coast. Solicit your support of bill.
Mayor ART PHILLIPS.

PINOLE, CALIF., *August 2, 1949.*
MERCHANT MARINE AND FISHERIES COMMITTEE OF THE HOUSE,
Washington, D. C.:
The Pinole City Council of Pinole, Calif., request a "do pass" on bill H. R. 4190.
CARRIE MOORE, *City Clerk.*

CITY OF EL SEGUNDO, *August 4, 1949.*
MERCHANT MARINE AND FISHERIES COMMITTEE,
House of Representatives,
Washington, D. C.:
City Council, city of El Segundo, Calif., believes H. R. 4190 to be desirable legislation and respectfully requests your support.
VICTOR D. MCCARTHY,
City Clerk.

OAKLAND, CALIF., *August 5, 1949.*
JOHN J. ALLEN, Jr.,
House Office Building, Washington, D. C.:
Hundreds more endorsements on the way from Washington, Oregon, and California in support H. R. 4190. Appreciate reports sent us on progress. Keep up the good work.
LABOR'S LEAGUE FOR POLITICAL EDUCATION.

PLEASANTON, CALIF., *August 2, 1949.*
MERCHANT MARINE AND FISHERIES COMMITTEE,
House of Representatives,
Washington, D. C.:
Pleasanton City Council urgently request "do pass" on H. R. 4190.
MATT JORGENSEN,
City Clerk.

VALLEJO, CALIF., *August 4, 1949.*
MERCHANT MARINE AND FISHERIES COMMITTEE,
House of Representatives,
Washington, D. C.:
The Vallejo City Council is regular session officially approves H. R. 4190 and asks the committee to do pass the bill.
MELVIN F. BROOKS,
City Clerk.

SACRAMENTO, CALIF., *August 2, 1949.*
Hon. JOHN J. ALLEN, Jr.,
House of Representatives,
Washington, D. C.:
The Sacramento City Council at its meeting on date of July 29, 1949, unanimously adopted a motion requesting a "do pass" on H. R. 4190, which bill would allocate shipbuilding work to the west coast.
H. G. DENTON,
City Clerk.

SAUSALITO, CALIF., *July 28, 1949.*
MERCHANT MARINE AND FISHERIES COMMITTEE,
House of Representatives,
Washington, D. C.:
The City of Sausalito Council refuses a "do pass" on H. R. 4190.
AMELIE L. SMITH,
City Clerk.

AUGUST 1, 1949.
MERCHANT MARINE AND FISHERIES COMMITTEE,
House of Representatives,
Washington, D. C.
GENTLEMEN: The Fresno City Commission in regular meeting assembled on Thursday, the 28th day of July 1949, went on record in favor of passage of H. R. 4190, a bill to allocate shipbuilding to the west coast, and directed me to request your honorable committee to support the passage of said bill.
Respectfully yours,
CITY CLERK.

CITY OF SAN PABLO, CALIF.,
August 3, 1949.
MERCHANT MARINE AND FISHERIES COMMITTEE,
House of Representatives,
Washington, D. C.
GENTLEMEN: The City Council of the City of San Pablo went on record at their meeting of August 1, as requesting that the H. R. 4190 be passed.
We feel that it is definitely of interest to our district.
Yours very truly,
GERTRUDE YURKO, *City Clerk.*

CITY OF SAN BRUNO, CALIF.,
July 30, 1949.
Hon. JOHN J. ALLEN,
Member of Congress, House of Representatives, Washington, D. C.
DEAR SIR: Following is a copy of telegram forwarded to the Merchant Marine and Fisheries Committee concerning H. R. 4190:
"Respectfully urge 'do pass' action on H. R. 4190.
"CITY COUNCIL, SAN BRUNO, CALIF."
The members of the council have asked me to express their appreciation of your efforts in introducing this bill to the House.
Respectfully yours,
CITY OF SAN BRUNO,
RALPH E. WOODMAN, *City Clerk.*

DALY CITY, CALIF., *July 28, 1949.*
Congressman JOHN J. ALLEN, Jr.,
Seventh Congressional District,
Washington, D. C.
DEAR SIR: The following wire was sent to the Merchant Marine and Fisheries Committee of the House of Representatives on July 28, 1949:
"The City Council of the City of Daly City wishes to endorse and earnestly urges the passage of H. R. 4190, bill providing for the allocation of some of the Nation's shipbuilding work to the Pacific coast.
"Sincerely,
"CITY OF DALY CITY COUNCIL."
Yours truly,
B. C. ROSS, *City Clerk.*

REDWOOD CITY, CALIF., *July 26, 1949.*
Hon. JOHN J. ALLEN, Jr.,
Congressman, Seventh District, California, Washington, D. C.
DEAR CONGRESSMAN: City Council of the City of Redwood City, Calif., at their meeting last night endorsed bill H. R. 4190, and I have today wired the Merchant Marine and Fisheries Committee as follows:
"City Council, City of Redwood City, Calif., urges approval and passage bill H. R. 4190, allocating shipbuilding work to the Pacific coast. We feel passage of this bill is vital to this area."
This was done in cooperation with several city councils and board of supervisors in the bay area. This for your information.
Yours very truly,
R. S. DODGE, *City Clerk.*

In the Board of Supervisors of Contra Costa County, State of California, Monday, July 18, 1949. Present: Hon. W. J. Buchanan, chairman

In the matter of endorsement of H. R. 4190, pending in the United States Congress.

Whereas H. R. 4190, a bill to allocate shipbuilding work to the west coast, is before the Merchant Marine and Fisheries Committee of the House, said bill having been introduced by Representative JOHN J. ALLEN, Jr., of the Seventh California District; and

This board having fully considered said bill, and on motion of Supervisor Ripley, seconded by Supervisor Taylor, it is by the board ordered that this board go on record as approving said bill, and that same be favorably considered by the Merchant Marine and Fisheries Committee of the House and by the United States Congress; and

The clerk of this board is authorized and directed to wire Hon. JOHN J. ALLEN, Jr., Representative, and the Merchant Marine and Fisheries Committee of the board's approval of said bill.

The foregoing order is passed by the unanimous vote of the board.

I hereby certify that the foregoing is a true and correct copy of an order entered on the minutes of said board of supervisors on the date aforesaid.

Witness my hand and the seal of the board of supervisors, affixed this 25th day of July 1949.

[SEAL] W. T. PAASCH, *Clerk.*
By R. M. BILLECI,
Deputy Clerk.

CITY OF LONG BEACH, CALIF.,
August 8, 1949.
MERCHANT MARINE AND FISHERIES COMMITTEE,
House of Representatives,
Washington, D. C.:
City Council of Long Beach unanimously adopted a motion urging a "do pass" on H. R. 4190.
C. G. ROSEBERRY, *City Clerk.*

LODI, CALIF., *August 5, 1949.*
Hon. JOHN J. ALLEN, Jr.,
House of Representatives,
Washington, D. C.

DEAR SIR: On behalf of the city council of this city, I am wiring the House Committee on Merchant Marine and Fisheries requesting favorable action by that committee on H. R. 4190, relating to allocation of ship building work to the Pacific coast.

We appreciate your efforts to return ship building to our west coast communities.

Sincerely,
H. D. WELLER, *City Manager.*

CONCORD, CALIF., *July 26, 1949.*
Hon. JOHN J. ALLEN, Jr.,
Seventh Congressional District,
Washington, D. C.:

City council of Concord, Calif., approve passage of H. R. 4190 and urge your support.
W. E. BALLENGER, *City Clerk.*

SHIPYARD AND MARINE SHOP
LABORERS, LOCAL 886,
Oakland, Calif., July 26, 1949.
Hon. JOHN J. ALLEN, Jr.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ALLEN: For your information, our local union took official action at our July 22, 1949, meeting to dispatch the following telegram to the committee handling your resolution 4190:

"We urge your honorable body to take favorable action on H. R. 4190. It is in the interest of national defense and preservation of existing shipyard facilities and personnel that this resolution be passed."

Hoping this action by our union will assist in passage of the measure and if we can be of further assistance, please call on us.

Very truly yours,
T. E. GEORGE,
Corresponding and Recording Secretary.

REDONDO BEACH, CALIF., *August 10, 1949.*
Hon. JOHN J. ALLEN, Jr.,
House of Representatives,
Washington, D. C.:

Please be advised that the city council of Redondo Beach, Calif., has officially gone on record as favoring H. R. 4190, a bill to allocate shipbuilding work to the west coast.
EVAN E. PETERSON, *City Manager.*

AUGUST 12, 1949.
MERCHANT MARINE AND FISHERIES COMMITTEE,
House of Representatives,
Washington, D. C.:

Petaluma (Calif.) City Council requests a "do pass" on H. R. 4190.
J. S. WOODSON, *Mayor.*

THE BOARD OF SUPERVISORS
OF MARIN COUNTY,
San Rafael, Calif., August 8, 1949.
Hon. HUBERT B. SCUDDER,
House of Representatives,
Washington, D. C.

DEAR MR. SCUDDER: At a regular meeting of the board of supervisors held this date, a letter was read from R. J. Brennan, chairman of Labor's League for Political Education of Shipyard Laborers, local 886, requesting the board to give their support to the passage of H. R. 4190, a bill to allocate shipbuilding work to the west coast.

The clerk was then directed to address a letter to you stating that the board approved the passage of said bill.

Very truly yours,
GEO. S. JONES, *Clerk.*

Will United States Dairy Cattle Be Purchased for Italy?

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, many livestock people are inquiring as to whether or not Marshall plan money will be used to supply dairy cattle to Italy.

Wisconsin has long been recognized as the largest primary dairy cattle market in the world, and shipments of foundation stock have gone to nearly all parts of the world. Under UNRA thousands of dairy cattle of different breeds have been shipped.

I include in my remarks the following letter received from the Acting Administrator of the Economic Cooperation Administration:

ECONOMIC COOPERATION
ADMINISTRATION,
Washington, D. C., August 10, 1949.
Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in reply to your letter of August 4, 1949, regarding a report that a substantial amount of ECA funds would be programed for the purchase of cattle in Canada and Holland for shipment to Italy.

Some time ago the ECA mission from Italy submitted a request for a procurement authorization to cover the purchase of Holstein cattle in Canada. At that time we discussed this request at some length with a representative of the Italian delegation and suggested that they submit full details regarding the plan of dairy-cattle improvement in Italy, of which such imports were to be a part. They were requested at that time to give consideration to the availability of cattle of comparable quality in the United States. Information regarding these discussions was transmitted to our mission in Italy.

Since that time we have had no further request from the Italian delegation and it appears unlikely at this time that their request will be renewed. In fact, it has been reported here that purchases have been made in Canada for export to Italy with funds other than those supplied by ECA. ECA has not authorized the use of any funds for the importation of live cattle to Italy. If the Italian representatives again indicate an interest in utilizing ECA funds for the purchase of dairy cattle in the Western Hemisphere you may be sure that the interests of United States producers will be considered fully before any procurement authorization is issued in such connection.

It is quite possible that Italy may be importing cattle from Holland. If so, this would be with the use of funds other than those made available under procurement authorizations issued by ECA.

Your continued interest in the ECA program is very much appreciated.

Sincerely yours,
WILLIAM C. FOSTER,
Acting Administrator.

Cotton Production in California

EXTENSION OF REMARKS
OF
HON. CECIL F. WHITE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. WHITE of California. Mr. Speaker, the district I represent, the Ninth District of California, lies in the heart of the great San Joaquin Valley. Very often, when we refer to our valley as the richest farming area in the world, we are accused of boasting, but actually we are merely stating the facts. Truly the San Joaquin Valley, and the Ninth California District in particular, is a miracle-land for the production of food and fiber. A traveler through the Ninth California District is amazed at the endless miles of orchard lands, and vineyards, and fields of vegetables, and rows of cotton.

It has become commonplace for the counties of the Ninth California District to be listed among the leading agricultural counties of the Nation in the matter of production. Our latest record has been set as the leading California county in the production of cotton. The following article from the Fresno Bee of August 6 illustrates my point:

FRESNO IS STATE'S TOP COTTON COUNTY, SECOND IN NATION

Fresno County today was disclosed as the first cotton-growing county of California and the second heaviest producer in the United States.

A compilation of cotton-growing data by the United States Department of Commerce shows Fresno County in 1948 produced 278,402 bales of the seed and fiber crop.

Alone exceeding the Fresno County total is Mississippi County in Arkansas, which grew 290,574 bales last year.

Kern County is rated second in California in the production of cotton, with 275,533 bales.

Kern County, however, tops Fresno County in the number of bales ginned, with 281,813 bales to Fresno's 263,355.

Local cotton industry representatives said a considerable amount of the cotton grown in Fresno County is trucked to Kern County for processing, accounting for the discrepancy in the department's figures.

Social Security Revision To Increase Benefits Is a Necessity and Should Be Done Without Delay

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. WOLVERTON. Mr. Speaker, revision of the social-security law so that increased payments may be paid to beneficiaries is a matter of prime importance. It should be done without delay. The necessities of those who come within the

law is immediate. Therefore, Congress should act immediately to relieve them. There is no good and sufficient reason to justify further delay. If it is not acted upon by Congress before it takes a recess then the whole subject will go over until next year. This will mean that probably a year will elapse before any additional help becomes available, assuming that the bill is passed, and I certainly hope it will be. The Committee on Ways and Means, which has had the matter under consideration for several months, announces that it is ready to make a report. The Rules Committee should immediately, as soon as the bill is reported, grant a rule to bring it before the House for action before any recess is taken. It would be shameful, in my opinion, for Congress to recess without taking action over this very necessary revision of the social-security law.

The correspondence which I receive leaves no doubt of the necessity of increasing benefits to the aged and other beneficiaries coming within the provisions of the present law. It is impossible for them to exist on any proper standard of living, with the meager benefits now being paid. It has now been 10 years since there was any general overhauling of the law. Since that time the cost of living has reached unparalleled heights. The payments of the act now in force do not meet the need that exists. Furthermore, the limited amount the present law permits beneficiaries to earn to add to the insufficient amounts they receive is not sufficient. Certainly we do not wish our aged to be required to live on a substandard basis. Our national wealth and resources have been literally poured out to aid those in less-favored countries who have experienced the ravages of war. It is well that we should help them, but there is no reason that we should neglect or overlook the needy on our own land. It is our bounden duty to care for them in a way that will remove the actual distress they now experience.

It has been announced that the bill soon to be reported will also, in addition to increasing old-age benefits, increase the number of persons coming within the retirement provisions of the Social Security Act. These last-mentioned persons, as is well known, receive payments upon retirement based upon their earnings over a period of years and upon which a Federal tax has been paid, both by them and the employer. The additional classes of workers now to be brought by the provisions of the bill within the coverage of the act are as follows: Certain classes of self-employed, State and local governments—subject to agreement by the States; employees of nonprofit organizations; Federal employees not now covered; domestic servants and miscellaneous categories. The total number of these new classes will be approximately 11,500,000. For both workers and employers the tax rate will be 1 percent at the start and gradually reaching over a period of years to a maximum of 3 percent. This additional coverage is most appropriate.

An editorial in the Courier-Post newspaper of Camden, N. J., on Thursday, August 11, 1949, so clearly sets forth this whole matter that I have included it as part of my remarks in accordance with the consent of the House granted to me. It reads as follows:

SOCIAL SECURITY REVISION COULD BE MADE THIS YEAR

After many months of deliberation the House Ways and Means Committee has agreed on changes in the social-security structure which, if adopted, will constitute its first general overhauling since 1939.

The changes in some respects comply fully with those President Truman recommended in his message to Congress. In others they do not.

On the highly important question of increasing present benefits, the committee endorses Mr. Truman's proposal for minimum old-age pensions of $25 a month instead of the present $10, minimum family benefits of $150 instead of $85, and scaled increases all along the line which would boost benefits 80 percent on the average.

The President's proposal to lower the retirement age for women from 65 to 60, however, is rejected. So is the plan to include farmers and farm workers—totaling about 9,000,000—in the social-security system. Administrative difficulties are given as the reason for the latter action.

About 11,000,000 persons would be added to the system, however, under the committee's program. These would include 4,500,000 self-employed; 4,000,000 State and local government workers (subject to States agreeing); employees of nonprofit organizations, numbering 600,000; about 750,000 domestic servants; 1,110,000 Federal employees not now under retirement programs; and 500,000 in miscellaneous categories.

Other liberalizing provisions:

Old-age benefit recipients might earn, without jeopardizing their payments, up to $50 a month instead of the present $14.99.

Permanent and total disability would bring benefits, after a 6-month waiting period, to workers equal to those they would have received on reaching retirement age.

Veterans would be credited for old-age benefits for their military service as if they had been employed at $160 a month.

In order to meet the cost of the more liberal benefit program, the committee proposes that pay-roll taxes be collected, both from workers and employers, up to the first $3,600 of annual income instead of the present $3,000.

The tax rate of 1 percent would rise to 1.5 percent next January, 2 percent on January 1, 1952, and eventually to 3 percent, in all cases on both worker and employer.

The committee's program, as announced by Chairman DOUGHTON, is not a formal favorable report of a bill, but agreements reached on major features of a bill which will be drafted and reported out soon.

Before the changes can become law they will have to be approved by both House and Senate, and because of the legislative pile-up in both branches of Congress, Washington feels there is little chance of a law being passed at this session.

There is a possibility that the House may act on the bill, but even if it does the Senate will probably want to hold extended hearings on it and make revisions of its own, or even write a bill of its own.

Hence the emphasis being placed in the Washington stories on the fact that the committee's announcement does not necessarily, or even probably, mean the changes will go into effect until well along in 1950.

It is a fact, however, that social-security pensioners have been waiting for years for a more liberal program and that there is much justice in their insistence that benefits should be immediately brought up to a scale more nearly in proportion to the increased cost of living. Such a change is already long overdue.

There seems little prospect now that Congress can adjourn before the end of the summer at the earliest, and while it remains in session it is still possible to push a social-security bill through this year.

Much pressure will be brought to bear to this end, despite the difficulties of obtaining action before 1950.

Will State Department Now Recognize Chinese Communists?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial which appeared in the Washington News of today entitled "Don't Recognize Chinese Reds":

DON'T RECOGNIZE CHINESE REDS

When the smear, the whitewash and the window dressing are eliminated from the State Department's white paper on China policy, it can be seen that the essential issue between Chiang Kai-shek and our Government was communism.

Chiang knew the Chinese Communists were Moscow-directed, and wanted nothing to do with them. Our Government insisted he could and should do business with them.

Chiang was right. Our Government was wrong. Great damage has been done by its mistake. But what do we do now?

The basic issue remains unchanged. It is communism. Our alternatives are to oppose it, as we are doing in Europe, or to appease it, as we have done and are doing in China and the rest of Asia.

It is quite obvious what the State Department wants to do. It wants to recognize and do business with the Chinese Communists. Don't ask us why. Ask the State Department.

American policy has been pointed toward that objective for 4 years. The Marshall mission was designed to further that purpose. The Wedemeyer report was suppressed because it offered an alternative to that program. Our official attitude was revealed when the Communists were advancing on Nanking months ago. Although our Ambassador was accredited to the Nationalist Government, on State Department orders he did not follow that Government when it fled to Canton. He remained in Communist-held Nanking and attempted to establish relations with the new regime. He was unsuccessful only because the Communists weren't ready to do business with us.

British Foreign Minister Bevin will visit Washington next month. One of the purposes of his visit is to seek to coordinate American-British policies on China. That is nothing new. The State Department and the British Foreign Office have been discussing the subject for months. Now a statement of policy may be in the offing.

Britain wants to placate the Communists if it can, to protect British investments in Shanghai and to prevent an attack upon the crown colony at Hong Kong. Why the United States should consent to be the cat's-paw in such a futile venture hasn't been revealed. But we may be sure the State Department will have a glib answer when the time comes to let the public in on its intentions.

Recognition of the Chinese Communists would confirm Russia's title to Manchuria. It would give Russia another vote in the Security Council and in the Japanese war settlement. It would permit the fifth column in China to obtain the things it needs to complete the Communist conquest of Asia.

Congress can prevent this, if it will. But it should act, and act now, by serving notice on the State Department by joint resolution that it will not submit to any such betrayal of American interests.

Government Reorganization

EXTENSION OF REMARKS
OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. HOLIFIELD. Mr. Speaker, under unanimous consent, I include the script of a radio-interview broadcast between Mr. Lief Eid and myself in the Appendix of the RECORD and to include therewith two editorials on the same subject, which appeared in the Washington Post of August 6 and August 10, 1949:

Mr. EID. Good evening, ladies and gentlemen of the radio audience, this is Leif Eid in Washington with "Pro and Con." Tonight we are to discuss one of the important changes in the Government recommended by Herbert Hoover, former President of the United States. Most of us are familiar in general with the recommendations made by the Hoover Commission which are designed to make the operation of the executive branch of the Federal Government more efficient and more economical.

President Truman has strongly urged adoption of major portions of the Hoover Commission Report. And, in the Senate right now, consideration is being given to one of the most important of these reorganization plans—the recommendation by President Truman that a Department of Welfare be established to handle matters of education, health, and social security. In the studio tonight to discuss this recommendation is Congressman CHET HOLIFIELD, Democrat, of California, who is chairman of the Subcommittee on Reorganization of the Legislative and Executive Branches of Government.

When will this proposal become effective, Congressman HOLIFIELD?

Mr. HOLIFIELD. Under the reorganization law the proposal to create a new Cabinet post to be called the Department of Welfare will become law on August 20 unless one of the Houses of Congress objects.

Mr. EID. Is there any possibility that this reorganization proposal may be objected to?

Mr. HOLIFIELD. Yes, Leif, there is a possibility. The Senate Expenditures Committee has already passed an adverse resolution. I doubt whether the full Senate will approve such a resolution, but certainly it could happen.

Mr. EID. But why, if the reorganization plan which involves a creation of a Department of Welfare was recommended by both a Republican, former President Hoover, and by President Truman, why would there be opposition? Actually the Hoover Commission is nonpartisan, isn't it?

Mr. HOLIFIELD. Yes, the Hoover Commission is nonpartisan, but it's still a complicated question, Leif. It boils down to this—many organizations have confused, for one reason or another, the debate over national health insurance with the President's plan to reorganize the Government. Actually, of course, they are two completely separate items.

Mr. EID. Where does the opposition come from, Mr. HOLIFIELD?

Mr. HOLIFIELD. Well, generally the forces opposed to the establishment of a national health insurance program are also opposed to the establishment of a Department of Welfare.

Mr. EID. For example?

Mr. HOLIFIELD. The American Medical Association is one of the major opponents.

Mr. EID. What do you feel is the real issue involved?

Mr. HOLIFIELD. It is vital, I think, that we have a Federal department with Cabinet rank primarily concerned with the fundamental human problems that are the chief concern of people today—their health, education, security, and general well-being. This has no bearing at all on the issue of national health insurance.

Mr. EID. But doesn't the Federal Security Agency handle those human problems now?

Mr. HOLIFIELD. Yes; to some extent, Leif, but it doesn't have a completely integrated operation which would be economical in terms of money, time, and effort. You see, the Federal Security Agency is like Topsy—it just grew. It is a loose collection of bureaus and Federal agencies which have little coordination because they were set up piecemeal and grew separately. What we need to solve the problem today in this field is a thoroughly reorganized set-up that will give us the benefit of good administration at all levels.

Mr. EID. I thought that the Federal Security Agency was only a recent thing. Why does it need to be reorganized now, Mr. Holifield?

Mr. HOLIFIELD. In 1937 President Roosevelt appointed a commission to survey the Government's administrative work. It reported that the Government was in a sad muddle of overlapping responsibility and administrative weakness. It is true that the Reorganization Act of 1939 improved this situation by establishing the Federal Security Administration. But it wasn't enough, And the weaknesses in organization have become apparent through the stress and strain of, first, the war, and now of our jet-propulsion age.

The 1939 act did seek to consolidate the bureaus having similar functions and to eliminate those which had become unnecessary. But more than half of the total Federal services in the field of health, education, and welfare are still scattered among Federal agencies. For instance, various aspects of care of the blind are now divided among seven Government agencies or departments.

Mr. EID. Situations like that must be confusing to the people the Government is trying to help.

Mr. HOLIFIELD. It's confusing to everybody, Leif. It is difficult for the people who are supposed to be helped, and it is difficult for the Government workers who are trying to do a good job. You know, sometimes our Federal Government, which is supposed to be working as a team to achieve some goal, is more like a baseball team with nine players and nine managers than like a team with nine players and one manager.

Mr. EID. Well, I don't think a team with nine managers would be able to win many games.

Mr. HOLIFIELD. Of course not. But when Government agencies and Government services grew up piecemeal it is a wonder that things work out as well as they do. One of the amazing things about Government reform is that everybody professes to be for a streamlined organization, but when specific streamlining programs are made, there is always a sizable group somewhere which believes it can do better under the old system than under a new one. Also, quite often the attitude is: "These things are for other people but not for me."

Mr. EID. What are some of the specific arguments that have been advanced against formation of a Department of Welfare?

Mr. HOLIFIELD. Well, I think the real opposition has nothing at all to do with the real merits of the case. Let's be frank about this. The foes of the measure are equally frank in their private conversations. They feel that if the Department of Welfare were authorized and Mr. Oscar Ewing appointed to the post, he would attract more favorable publicity in his advocacy of the President's national health program.

Mr. EID. Granting that this has no direct bearing on the merits of the proposal, still I think our listeners would like to know your answer to that charge, Congressman HOLIFIELD.

Mr. HOLIFIELD. Well, Leif, I think there is an answer. Who is the major advocate of national health insurance? It is President Truman. Naturally, Oscar Ewing as Federal Security Administrator favors the President's health program. The President would not have been likely to appoint him if he did not support the program. But the opponents of health insurance—and they are spending millions a year in propaganda—like to talk about the perils of propaganda from a Department of Welfare. The truth is that the law is very explicit in limiting publicity activities of Government officials and agencies. The Secretary of a Department of Welfare would be more strictly controlled than a Federal Security Administrator, since he would have direct control over agencies involved in such possible activity, and thus would be directly responsible for their actions. The new plan offers more control over alleged propaganda, not less.

Mr. EID. What are some other arguments involved, Mr. HOLIFIELD?

Mr. HOLIFIELD. The record will show that the principal objection to the creation of a Welfare Department stems from leaders of the organized medical profession through the medium of the American Medical Association. The AMA it seems, is fearful that the new Department of Welfare is just a grand scheme for promoting socialized medicine. Nothing could be further from the truth. President Truman favors a comprehensive program of health insurance (which is certainly not socialized medicine) but whatever decisions are to be made for the improvement of medical care will be made by the Congress. The Department of Welfare created by the President through the reorganization plan will carry on existing activities of the Federal Security Agency—activities already prescribed by law. It is unfortunate and rather ironic that the medical profession, which above every other calling is intimately concerned with the health and well-being of the individual, should be so blindly opposed to the Department of Welfare.

Prematurely, and unwisely, the AMA by this opposition is trying to create a test case on national health insurance—an issue not involved in the present plan. Already in the first 6 months of 1949, the AMA has expended $508,397—more than half a million dollars—for lobbying activities against a Government program of health insurance. The AMA slush fund, built up by a $25 levy on each doctor in the organization, now amounts to almost $2,000,000.

This is lobbying with a vengence. It makes the five-percenters and other would-be salesmen of influence look like small potatoes.

Mr. EID. Mr. HOLIFIELD, Senator TAFT stated that the Welfare Department plan violated the Hoover Commission recommendations, chiefly because it did not provide for the United Medical Administration.

Mr. HOLIFIELD. Mr. Hoover stated categorically that Reorganization Plan No. 1 did

not violate any of the Hoover Commission recommendations, but instead that it was an important step in the right direction. Mr. Hoover endorsed the plan wholeheartedly. I think that answers the Taft argument. As a matter of fact, Senator Taft insisted that, if a Department of Welfare is to be created, it should be a loose holding company with a professionally qualified under secretary in charge of virtually independent subdepartments of health, education, and security. He specifically said that he believed each of these under secretaries should have even greater autonomy than the Secretaries of the Army, Navy, and Air, under the original armed forces unification scheme. He inferred that, by failing to meet his requirement in this respect, Reorganization Plan No. 1 again was in violation of the Hoover Commission recommendations.

Mr. EID. I've heard that argument. Can you comment on it?

Mr. HOLIFIELD. Senator TAFT's proposal would be a direct violation of the basic Hoover Commission recommendations on the principles of executive management, of its specific recommendation for a Department of Welfare, and of Mr. Hoover's personal recommendations.

Concepts of modern management, as the Hoover Commission pointed out, require authority and responsibility to be located in the department head, who can organize his department, delegate duties, and be held fully accountable to the President and the Congress. Establishment of a Department of Welfare will bring the welfare activities of the Government into a more efficient and up-to-date administrative arrangement.

Mr. EID. The assertion was made repeatedly at committee hearings that the Public Health Service is subordinated to the Social Security Administration in the Federal Security Agency, and would be even more subject to domination in a Department of Welfare.

Mr. HOLIFIELD. I'm glad you raised that point. The Public Health Service has grown faster during its 9 years in the Federal Security Agency than in all the rest of its long history. Today it is by far the largest unit in the agency, with 17,000 employees as compared with 13,000 for the Social Security Administration.

Programs of the Public Health Service are more extensive, account for more money administratively, and affect more people. It is simply false to say that the Service or any of its programs is subordinated to or dominated by the Social Security Administration or any of its programs.

Mr. EID. This has been very informative, Mr. HOLIFIELD. I've been doing a little clock watching and we have just about enough time left for you to sum up the arguments briefly which you believe prove that our Federal Government should include a Department of Welfare in the Cabinet.

Mr. HOLIFIELD. The Government is now engaged in a multitude of activities which affect the welfare of every American citizen—social security, health, education—other activities that involve helping our people, conserving our human resources. It is not a question of adding new activities. The Government is already acting in these fields by congressional authorization. But there is no one agency that is responsible. There is no one man in charge of these activities, to see that they are efficient and do not overlap or conflict. The plan I advocate is pretty obvious. Put one department in charge of human welfare services. Put one man in charge of that department. Fix the responsibility for doing a good job and cutting expenses. We have a cabinet post for the man who is most concerned with our natural resources. I think that human resources are important enough to rank in the Cabinet along with natural resources. Certainly people are more important than commodities or raw materials.

In my opinion, the Department of Welfare plan is the number one plan of reorganization.

This plan will achieve a goal repeatedly sought by President Truman and advocated for more than a quarter of a century by leading representatives of both political parties.

The enactment of this plan will be a reaffirmation of the basic principle of our democracy—that the welfare and security of the individual is the paramount responsibility of government.

That is my case for establishing a Department of Welfare.

[From the Washington Post of August 6, 1949]

REORGANIZATION CHECK

Rejection by the Senate Expenditures Committee of the President's No. 1 Reorganization Plan creating a new Department of Welfare is a foretaste of trouble ahead. For it is certain to lead to a lively debate in the Senate over the proposal to transfer the Public Health Service, along with most of the other functions of the Federal Security Agency, to the new department. If an adverse vote from the floor prevents the President from carrying out his program, the chances of smooth sailing for other pending reorganization plans embodying changes of a controversial nature will be seriously impaired.

The arguments in favor of giving the Federal Security Agency departmental status seem to us compelling, both because of its size and the importance of its activities in the field of social insurance, health, and education. We also believe that if the new agency is to function with maximum efficiency, it should be given jurisdiction over health services which are closely interrelated with education and security. To set up an independent United Health Service, as recommended by the Hoover Commission, would seriously cripple the proposed Department of Welfare. For, as Messrs. Acheson, Aiken, and Rowe, all members of the Hoover Commission, stated in a dissenting opinion, "One need not be an expert to understand that an individual's health, education, and security are inseparable. * * * The interrelationship and interdependence of health, education, and security are equally self-evident when we deal with governmental organization as when we discuss the well-being of the individual." Hence, they concluded that coordination at the Federal level in health, education, and social-security fields is the key to effective Federal administration.

There is unquestionably need in the interest of economy and efficiency for the integration of medical services provided by numerous Government agencies at great cost to taxpayers. It was only because of the size and variety of these activities that the Hoover Commission recommended creation of an independent set-up instead of an agency subordinate to the Department of Welfare. Such a divorce of interrelated functions would, in our opinion, for reasons already given, impair the effectiveness of the proposed Department of Welfare and, as critics have pointed out, cause more of the very organizational confusion that reorganization plans aim to reduce to a minimum.

Since plans for the new department involving transfers to and from other agencies are still incomplete, there will be opportunity for expanding, strengthening, or modifying them after the initial try-out. Moreover, as the President has told Congress, his proposals will not interfere with other recommendations of the Hoover Commission in this field or prevent Congress from dealing with any of them by statute. If either branch of Congress vetoes the program as presented, in face of these assurances, a much-needed organizational reform is likely to be indefinitely delayed.

[From the Washington Post of August 10, 1949]

WELFARE DEPARTMENT

All over the country today, people working in the fields of health, welfare, and education are experiencing a bitter disappointment because of the action of the Senate Expenditures Committee in recommending against Reorganization Plan No. 1 to elevate the Federal Security Agency to a department of welfare.

It seems most unfortunate that the wholly irrelevant issue of health insurance should be permitted to confuse the simple issue of giving these functions the prestige and recognition of Cabinet representation. No program of health insurance can be undertaken by the proposed department or any other Federal agency unless Congress enacts a law for that purpose, which is not soon likely. On the other hand the present social-insurance and grant-in-aid programs of the Federal Security Agency, widely supported and noncontroversial in character, have reached a scope which leaders in these fields have long felt warranted a regular department at the Cabinet level.

As evidence of this support the following is pertinent: In 1947 the American Council on Education and the National Social Welfare Assembly, central clearinghouse organizations for virtually all national associations in these fields, set up a joint committee composed of a group of distinguished and representative leaders in all areas of health, welfare, and education. Many meetings were held, a careful report was prepared and recommendations made for a combined department as proposed in Reorganization Plan No. 1. Among other things this report recommended that "an executive department of health, education, and security, headed by a secretary of Cabinet rank, be established at this time by the Congress of the United States" and further "that this objective be accomplished by legislation converting the existing Federal Security Agency into such an executive department and transferring the powers and duties of the agency and its administrator to the new department and its secretary." This is exactly what Reorganization Plan No. 1 does.

Earlier in 1945 the committee on reorganization of community services of the Woman's Foundation, of which Mrs. Agnew Meyer and Dr. Leonard Mayo, vice president of Western Reserve University, served as cochairmen, likewise recommended "an inclusive Federal department of education, health, recreation, welfare, and social insurance." This committee, likewise, was composed of distinguished representatives in these fields. Many previous proposals had been made going back to the Harding administration.

At the recent hearings on Reorganization Plan No. 1 statements in behalf of the plan were submitted by the following organizations among others: American Public Health Association, American Council on Education, American Public Welfare Association, Congress of Industrial Organizations, American Federation of Labor, American Legion, Family Service Association of America, National Association for the Advancement of Colored People, Council of Social Action of the Congregational Church, American Association of Social Workers, National Federation of Settlements, Disabled American Veterans.

I have cited these facts as evidence that this proposal for a department of welfare represents the historical culmination of long-felt aspiration on the part of an important segment of American life.

It is hoped that the Senate will recognize this proposal as such, and permit the plan to become law, thus giving to millions of Americans the reassurance that the welfare of our own people is a concern of Government on an equal footing with our foreign affairs, our national defense, agriculture, business, labor, natural resources, and law enforcement.

ELIZABETH WICKENDEN,
Washington Representative,
American Public Welfare Association.

China—State Department Has Been Second Guessing on China

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Clyde Farnsworth, who is in Canton, China, sends an interesting report on the Chinese situation as it has been influenced by the conduct of the State Department. He is on the ground and has the feel of the situation. He, too, points out that great damage was done at Yalta. In fact, it was a sell-out of our great ally to the now infamous Joe Stalin. The loss of Manchuria by Roosevelt's action at Yalta will forever be condemned by historians. Mr. Speaker, I am including Mr. Farnsworth's article at this point.

SECOND GUESSING ON CHINA

(By Clyde Farnsworth)

CANTON, August 12.—The Chinese Nationalists wonder if the United States State Department would be any happier about China today if it had succeeded in bringing about a Communist-Nationalist coalition 3 years ago. And whether China and the world would be better off.

Their guess is "No."

This excursion into afterthought probably would be idle and unimportant if State Secretary Acheson, reviewing American-Chinese relations last week, hadn't gone to considerable length to justify that ill-favored peacemaking effort of 1946. He concluded that had been the only thing to do under the circumstances after the end of the war with Japan.

Although some in the Nationalist camp more recently have flirted with the idea of honorable peace with the Communists—coalition on worse terms than were available from the Reds in 1946—the prevailing thought probably was well expressed by one official:

"Communism cannot be checked by political compromise. If Gen. George C. Marshall had worked out a coalition, if there hadn't been 'such deep personal bitterness and such irreconcilable differences,' as Mr. Acheson put it, China already would have been swallowed up."

The principal stumbling blocks for General Marshall were the Communists' refusal to nationalize (that is, give up) their armies and Chiang Kai-shek's refusal to deal with them on any other basis.

Also, on a what-might-have-been basis, the Nationalists were gratified by Mr. Acheson's publication of Lt. Gen. A. C. Wedemeyer's version of what ought to have been done in 1947.

People I've talked to still are somewhat puzzled by suppression of General Wedemeyer's findings from September 1947 to August 5, 1949, when they were published in the white paper.

They doubted that fear of offending the Chinese Nationalist Government by disclosing the Wedemeyer suggestion of a five-power guardianship for Manchuria was the reason his report was suppressed.

Instead of being offended by the Wedemeyer proposal on Manchuria, at least some Nationalists believe it might have been an acceptable and effective repair for the damage done at Yalta. It was at Yalta that Americans, as Mr. Acheson said, paid the requisite price for Russian commitment to attack Japan.

That price—another secret which the Chinese were not permitted to share until long afterward—was substantial restoration of the rights Czarist Russia once enjoyed in Manchuria. The Nationalist Government was required by the United States to embody Manchurian concessions in the Chinese treaty with Russia which was signed after Japan surrendered.

Though pledged to respect Chinese sovereignty in Manchuria and to recognize and assist only the Nationalist Government, the Russians looted Manchurian factories, armed Chinese Communists with captured Japanese weapons, shut the Nationalists out of Port Arthur and Dairen and set about indoctrinating Japanese prisoners of war to be fifth columnists when they returned to Japan.

Mr. Acheson said secrecy was imposed on General Wedemeyer's report simply because publication at the time of a suggestion for "alienation of a part of China from control of the Nationalist Government" wouldn't have been helpful.

The fact was that General Wedemeyer's favorable opinion of Chiang Kai-shek's leadership was considerably at odds with the prevailing State Department view, as were also his recommendations of military and economic aid. The Wedemeyer proposals were never laid before the Nanking Government.

The Chinese appreciate face saving. The Nationalist officials never expected the State Department to admit a major mistake anywhere along the line.

Rally to the Marines

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Reading (Pa.) Times of July 26, 1949:

RALLY TO THE MARINES

Fears are being expressed that in the move to unify the Army, the Navy, and Air Force, that gallant body, the Marine Corps, may be "unified" into oblivion, wiping out a tradition, a legend that was more real than legendary—that where the fighting was toughest, there always were the marines.

Thinking men and women must feel a bit alarmed by this drive for centralization which would enhance one branch of the military at the expense of all the others. Certainly, the Nation must think about the economics of the thing—in the Army it is the logistics. Surely we cannot tolerate autonomy on the part of any service or for each of them if it means costly maintenance and pointless duplications, waste, extravagance, and inefficiency.

The spectacle of the Army and the Air Force outvoting the Navy on the supercarrier issue purely as a matter of rivalry and race for preferred position is not a healthy one if it jeopardizes the Nation's over-all defense and security.

When we start friction within our armed forces, then we are indeed approaching a sorry state. Rivalry, within bounds, is one thing. Friction, with destruction of any unit as summary vengeance, is something else. It is something that must not come to pass.

The Army has its place and its traditions, just as its various branches, the infantry, the cavalry, and the artillery had their rivalries. In later years came the air branch. The Navy, too, has a very definite place and also hallowed traditions. And for 173 years, the marines have been a symbol of American strength, American fighting prowess, of American toughness in face of the worst obstacles. It has been an elite corps of specialists. It was not a place for "namby-pambies." It had a pride in volunteering for the toughest of assignments and carrying them out.

Who shall say that such a force was not an asset to the Nation's defense? Who shall say the deeds of the marines did not spur other branches to emulate them? Who will say that the marines' glory did not spur men to volunteer, first for the marines, and if they couldn't make the grade, then to any service in the Army?

Let's have unity but with it, rivalry. And if there is any way to have rivalry it is by open competition for deeds, for bravery, for esprit de corps.

The United States marines have little strength to fight the destructive forces arrayed against them in the military hierarchy. They cannot fight the proposal to divorce them from their time-honored branch of the service, the Navy. The Army, it seems, has the upper hand. But there is something equally as powerful, we believe, arrayed on the side of the marines, and that is public opinion from a Nation's grateful people who will always join lustily in that stirring chorus:

"From the Halls of Montezuma,
To the shores of Tripoli."

White Paper Whitewash

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HQUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. VELDE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an editorial from the Peoria Star of August 9, 1949, with reference to the State Department's recent statement on China:

WHITE PAPER WHITEWASH

In his most recent public speech, President Truman declared that every important decision in foreign policy since the war had been based upon informed public opinion.

The white paper on China, released by the State Department last week, appears to be the administration's attempt to explain its

monumental failure in China while pursuing a policy which was carefully kept a secret from the American people.

Much of the adverse comment aroused by the white paper is to the effect that it is an attempted whitewash which will not bear close scrutiny. It has been said before that the State Department has a vested interest in its errors in the Far East. The white paper is convincing evidence of the truth of that statement.

A good many pages are devoted to explaining why nothing could have been done other than was done, but these pages cannot explain away the fact that American policy in the Far East has served the interests of the Soviet Union for 4 years and brought to defeat the regime in China which was friendly to us and hostile to communism.

The white paper gives to the American people the Wedemeyer report after it was suppressed and kept a carefully guarded secret for 2 years. The reasons for this secrecy seem unconvincing to us. A more logical reason, from the administration's viewpoint, seems to be that General Wedemeyer called for immediate aid for Nationalist China and advocated a 5-year aid program under a United Nations trusteeship of five nations over Manchuria. In his report, General Wedemeyer warned that any spread of Soviet influence would be inimical to the United States strategic interests. His advice was not followed and it is not unreasonable to believe that his report was suppressed because the administration did not intend to follow his advice. The white paper explains that the Wedemeyer report was suppressed because it was feared that its publication would alienate part of China from Nationalist to Communist control. In view of what has happened in China, no explanation at this time could be more absurd.

General Wedemeyer recognized the conflicts in the Nationalist regime and the resultant difficulties in making American aid effective, but he warned that a wait-and-see policy would be disastrous. The administration adopted the wait-and-see policy and this decision was not based upon informed public opinion but upon the judgment of a few men who chose to keep the public ignorant.

Lies and half-truths about China which confused the American people were cleverly circulated by American Communists and their front organizations. Some of these propaganda statements were: that Americans were interested in Europe but not in China; that key men in the State Department were not fully informed of developments in China; that the cost of effective aid to the Nationalist Government would have been fantastically high and impossible; that the Chinese Communists were not Marxists but agrarian reformists; that the Nationalist Government was so corrupt that it was incapable of benefiting from American aid; and that it was too late to change the course of events in China.

One theory of the reason for our wait-and-see policy has been expressed many times in the press. It is a suspicion that the Far East policy was influenced by State Department employees who were Communist sympathizers or were influenced by Communists. No proof pro or con will probably ever be forthcoming. With President Truman denouncing investigations and evidence of Communists in Government departments as a red herring it is most unlikely that official recognition of such a thing will ever be given.

The problems of China policy are intricate and confusing and not many of us will try to understand them. But those who do will find many questions unanswered in the white paper.

Clear It With Sidney

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include herewith an editorial appearing in the August 9, 1949, edition of the Jackson (Miss.) Daily News:

CLEAR IT WITH SIDNEY

The late President Roosevelt denied that he had told politicos seeking the vice-presidential nomination for South Carolina's Jimmy Byrnes, in 1944, to "clear it with Sidney," meaning Sidney Hillman.

Can the Truman administration today truthfully deny that national Democratic leaders are, in effect, advising applicants for Federal jobs to "clear it with the CIO-PAC"?

The late Sidney Hillman, born in Lithuania, came to America to become a national CIO labor leader and organize that union's so-called Political Action Committee. Today the PAC has virtually moved in on the national Democratic organization. Apparently with the permission of national party leaders, this CIO political group is having a lot to say—and do—about filling Federal jobs.

There is ample proof of PAC influence in Federal appointments right here in Mississippi.

The Democratic National Committee sent one Tilford E. Dudley to this State early in the summer to demonstrate some "show-how" to Trumancrat leaders in building a political organization whose objective is to take over the Democratic Party in Mississippi. The fact that the overwhelming majority of patriotic Mississippians would have none of Mr. Dudley does not mean that Mr. Dudley and his PAC cronies have given up.

The fact that Mr. Dudley had no official connection with the Democratic National Committee staff was not known in the State until the Daily News Washington Bureau telegraphed a dispatch, which was published throughout the State, revealing that he is assistant director of the CIO-PAC.

The dispatch also revealed that the PAC's assistant director had been a member of an organization cited by a committee of Congress and the Justice Department as Communist front—the so-called Washington Book Shop, and active in the affairs of another group declared by the congressional committee as Communist front—the Southern Conference for Human Welfare.

And to further demonstrate that Mr. Dudley, who, incidentally, is a native of Illinois, is apparently imbued with ideologies entirely foreign to Mississippi and Mississippians, he is listed also as Washington representative of the United Packing House Workers, a CIO union. CIO President Philip Murray a few weeks ago publicly declared the UPHW was infiltrated with and dominated by Communists.

Control of the national Democratic Party—the party of L. Q. C. Lamar, J. Z. George, John Sharp Williams, Pat Harrison, Woodrow Wilson, Grover Cleveland, and Thomas Jefferson—has today been captured by elements who have departed from the basic principles upon which the party was founded and has thrived—the principles of free enterprise, individual initiative, personal freedom, and local self-government.

These elements make no bones in Washington that they have set a "tell-the-South-go-to-hell" objective. They are thinking in terms of a time when they will be able to say to the Southern States:

"The Democratic Party doesn't need the solid South any longer. We can win elections without you. So to hell with you."

Thank God, however, that party control by these elements is not complete—there are among our people fighting Democrats who are determined that the party of Thomas Jefferson shall not die.

It is heartening to observe that the weight of the Truman administration, backed by the PAC, ADA, and other alphabetical groups with ideologies foreign to the principles which have made America the greatest nation on earth, could not put over their candidate for governor in Virginia last Tuesday.

It is heartening to note that the all-out fight last year of the States' Rights Democrats, made against overwhelming odds and under conditions of gross misunderstanding by many Americans of the real objectives of the States' Rights campaign, has borne fruit during the present session of Congress.

It is heartening to know that there are in Congress many Senators and Representatives who consistently refuse to sell their people down the river for a mess of political patronage, who have told the administration in no uncertain terms that if they must vote against their honest convictions in order to get Federal patronage, President Truman can "just keep his patronage."

It is heartening to see that even though the national party organization has been captured by elements foreign to Democratic principles, control of party machinery in many States remains in the hands of real Democrats, and that such leaders in other States are making headway in their fight to convince the people of the grave dangers to the United States in the un-American socialistic politics of the present administration.

As for Mississippi, the overwhelming majority of her people are opposed to the so-called Pendergast machine politics. Mississippians are not going to permit any "expert" in machine politics from Illinois to come in here and tell them how to conduct their governmental affairs.

And the real Democrats of Mississippi are not going to surrender control of their State party organization to any group of local stooges, who for reasons of personal gain or for any other reason, may be willing to see the most thoroughly Democratic State in America kicked around by those who would rape the Constitution, pillory free enterprise, destroy individual freedom and do away with local self-government.

What We Must Do To Stop Communism

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. McDONOUGH. Mr. Speaker, recognition of the dangers of communism is but the first step in our efforts to combat the menace of this evil in the United States. To wage an effective fight against its insidious methods and goals, it is necessary that we know what we as Americans stand for, that we understand the meaning of individual liberty.

To put the allies of communism to rout, we must each as individuals become aggressive champions of our American principles and ideals and defenders of our heritage of personal freedom.

The following is an arresting discussion of our present need for constructive individual action to defeat communistic infiltration in the United States written by Shane MacCarthy:

WHAT WE MUST DO TO STOP COMMUNISM

(By Shane MacCarthy)

When people learn about the insidious methods and goals of the Communists; when they are told that communism is a materialistic philosophy of life which is premised on the inability of the individual man to live his own life, and which governs his every activity from cradle to grave; when they first realize that communism is a world-wide planned conspiracy to subvert private ownership, individual freedom, yes, religion itself, they invariably ask the question: "What shall we do?"

There is no monosyllable answer or simple formula in response to this inquiry, since communism is too deepseated in the cultural, scientific, and economic life of this war-weary world, and has had the opportunity for propagandizing and procreating itself for too many years to be eliminated by the waving of a magic wand.

Because the situation confronting us is so complex, the preaching of rugged individualism and the clamoring for continuance of the free-enterprise system are just so many words of noble vintage which aid little in combating communism. Thus we must become specific and attempt to answer this plural problem as asked by each person of himself: What shall or what can I do? The basic answer to this question is that you and I can do nothing to stem the tide of communism, unless we know positively what we stand for in a true democracy, unless we realize what is meant by democratic freedom, and with such appreciation, the better comprehend all aspects of the battle against atheistic communism. In this battle for life and liberty it is not so much the strength of the aggressor that counts, though this is formidable, as the weakness of the attacked. Accordingly, it is of fundamental importance that to conduct articulate and worthwhile endeavors in support of our way of life, and against materialistic tyranny we must follow the norm that action is based on conviction and conviction is the product of knowledge.

This answer further subdivides itself into two categories which we may term long-range and the short-range components. From a long-range standpoint I recommend that our high schools and college curricula be adjusted so as to lay more emphasis on preparing young men and women for the militant type of life in which they, as educated persons, must assume roles of leadership. Though it is interesting and undoubtedly profitable to the students to study ancient and medieval history I believe, that since time is so short and we must be selective, it would be more beneficial if, in the study of history, political science, economics, etc., stronger stress were laid on the development of ideologies in the eighteenth, nineteenth, and twentieth centuries, using the ancient and medieval material as backdrop for full comprehension. This suggestion is bucking the habit and tradition of the educational process and hence, cannot be achieved without considerable groundwork and debate.

The short-range answer—that which today concerns the mature person in everyday life is the one of most immediate concern and interest to us, i. e., the acquisition of knowledge by the businessman, the professional man, the laboring man, which will guide appropriate action. He must know that all true government comes from God, from a personal living God who has created man with certain inalienable rights and that government exists to protect those rights rather than take them from the individual. When a nation is blind to the full meaning of the natural rights which it is established to defend, it will become the easy victim of totalitarianism, which drowns the divine principle of man's sovereignty.

Such knowledge means a recognition that democracy is not static immobility, that it does not wallow in the stagnation of inactivity, that it is not opposed to progressive change. At the same time we must know that our way of life with its acknowledgment of the fundamental freedoms can be easily undermined by those who translate freedom into license and so frequently get away with it. Thus, our efforts to combat atheistic communism must not be mere momentary, chauvinistic outbursts, but rather, constant endeavors with the conviction that "Eternal vigilance is the price of liberty."

With the assimilation of such fundamental information we must as individuals live, practice, preach, and be proud of democracy, convinced that with its human shortcomings it is still the most perfect type of government designed by man. Since we know that it is established to carry out God's design for man, then we shall not stand idly by when the Communists challenge God and substitute a Politburo for the omnipotence of God. In living democracy, we should not confuse sincere liberals and progressives with Communists. We should not allow our names to be used or associated with questionable undertakings. We lose ground if we become hoodwinked by the subtle Communist propaganda which says one thing and means another. If we read material that is against the objectives of our democracy we should take our pens in hand and express our viewpoints. If we personally sanction efforts to stabilize our American institutions, then add a word—a simple word—of support and encouragement. How many have thought of writing a short note to individuals or agencies, at national or local level, endorsing their efforts to thwart the growth of communism? In our labor unions and other organizations, let us be ever vigilant lest control be taken over by subversive elements. A person may say he is too busy to do any of these things. Can a man or woman be "too busy" to attend to the elemental security of one's very existence?

Since communism is preached by a trained subversive organization, individual effort is enhanced by getting the collective support of organizations. In living our normal easy-going lives we do not have, neither do we desire to have the dictatorial discipline of the Communist system. Thus, to match the efforts of such an enemy we must assume voluntarily the responsibility to keep strong, and make stronger, the system of life we call democracy.

Yes; the individual's voice is strengthened when it has the power of organization behind it. Hence, every group, social, civic, fraternal, veteran, should have as a permanent adjunct a current affairs unit to keep it posted on trends and to actively counteract and counterattack the insidious propaganda of Communists, whether made in writing or through oral channels.

Lastly, we have a most potent weapon, since it is that given to us by God Himself—prayer. Yes; Christ said, "Do good to them who hate you, bless them that curse you, and pray for them that blaspheme and caluminate you." Thus, we must pray for the Communists that they may get the grace and spiritual strength to shun their evil ways and stop the persecution of God, religion, and people. Such spiritual works on our part must never dupe us into false security. Again, we must pray for the oppressed people of Russia, the 94 percent of the population living under the 6 percent of tyrannical Communist despots. We cannot forget the millions of persecuted souls living a veritable hell upon earth in the slave camps of the U. S. S. R. and the satellite nations. Through devotion may we bring solace to the people behind the iron curtain, and in particular to Archbishop Stepinac, the 13 Protestant ministers of Bulgaria, Bishop Ordass, and Cardinal Mindszenty, and the hundreds of other ministers of the Gospel who have suffered and died because they refused to render to Stalin what belongs to God.

Unless we wake up and stay awake, we could lose democracy to the Communists in our generation. If we feel that democracy is in the bag, we may be found "holding the bag." In just 31 years, and mostly during time of so-called peace, communism has succeeded in enslaving between one-fourth and one-half of the population of the world. In this trek toward power the Communists never needed a complete government breakdown or a majority vote of the people to put them in control, and once in power the Communists have never yet been overthrown because the voice of the people is stilled. Thus, the time for solid, sober, continuous, patriotic action is not 25 years hence; it is today and always.

ACADEMIC FREEDOM

One argument of the left-wing and self-annointed "liberal" college professors against barring Communist instructors from our schools is that this is a violation of the principle of academic freedom.

This plea of academic freedom is the thinnest mess of gruel that has come out of the left side of our educational world for a long time. Academic freedom must mean the right to teach principles which the instructor freely believes in after a careful research.

But the Communist who adheres to the party-line doctrine is not free to believe in anything except the dogma which comes out of Moscow, and he accepts the instructions which come from Joe Stalin and his intellectual hirelings or soon finds that he is no longer a Communist and the Red brethren won't associate with him. There is nothing free about communism. Science, art, oral speech, and the printed word in Russia are carefully and at the same time viciously regimented.

Not long ago the Columbia Daily Spectator at Columbia University printed the opinions of some of the educators on permitting Communists to teach in the institution. In backing up the ban on Communist professors, Dean Carman wisely said:

"Any person who is a member of the Communist Party is not free to seek or disseminate the truth. He or she is under rigid discipline to adhere to and disseminate Communist gospel even though the gospel is opposed to truth. An atmosphere of slavery and not freedom prevails. There is no opportunity for objectivity and dispassionate inquiry. The end product of Communist teachers' work is Communist propaganda."

Bolivar Ideals Urged on World To Repel the Enemies of Liberty

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following article from the New York Times of July 23, 1949:

BOLIVAR IDEALS URGED ON WORLD TO REPEL THE ENEMIES OF LIBERTY—LIBERATOR'S MOTIVES LIKENED TO THOSE THAT GUIDED WASHINGTON IN CEREMONY HERE MARKING ONE HUNDRED AND SIXTY-SIXTH BIRTH ANNIVERSARY

Facing the flags of the nations for whose liberation Simon Bolivar fought more than a century ago, Otto Shoenrich, president of the Pan American Society of the United States, called yesterday for a reaffirmation of the ideals that inspired the George Washington of South America.

Mr. Shoenrich spoke at a ceremony at the foot of the Bolivar statue in Central Park, marking the one hundred and sixty-sixth anniversary of the birth of South America's greatest soldier-statesman.

A color guard of 30 members of the Eighty-eighth Military Police Company from Governors Island, carrying the standards of the 21 Latin-American Republics, encircled the statue. Excerpts from the national anthems of all the Western Hemisphere nations were played by the First Army band from Governors Island.

In his address, Mr. Shoenrich said:

"At present, unfortunately, the principles defended by Bolivar are again under attack in different parts of the world. We are not dismayed, for we know that the opposition must vanish, as error always vanishes in the face of truth."

He asserted that it was the duty of every honorable citizen to combat the efforts of the enemies of liberty so that their insidious propaganda may soon come to an end, and the ideals of Bolivar may continue to inspire patriots and to benefit mankind.

"Bolivar, like Washington, belongs to all America, and to the world," he added. "Every lover of liberty, of democracy, of self-government, of the rights of man, hails Bolivar as one of the great leaders and heroes of history."

Another speaker, Dr. Santiago E. Vera, Minister Counselor of the Venezuelan Embassy, declared, "Bolivar foresaw over a century ago the whole history of struggles between despotism and anarchy. Both are bent on dominating our countries at the expense of a voiceless people and against the handful of upright men of good will who continue to fight for democracy."

A dozen wreaths were placed at the base of the statue by representatives of Latin-American countries and organizations. The services were jointly sponsored by the Pan American Society and the Bolivarian Society of the United States.

FDIC Assessments

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, August 12 (legislative day of Thursday, June 2), 1949

Mr. JOHNSON of Colorado. Mr. President, one of the important stabilizing influences in our economy today is the Federal Deposit Insurance Corporation. I know of no banker, depositor, bureaucrat, or businessman who would favor its dissolution today. This agency has proved its own case and made itself indispensable. In this connection, I ask unanimous consent that an article appearing in the August 6 edition of United States Investor be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FDIC ASSESSMENTS—THE REAL CAPITAL OF FDIC IS PUBLIC CONFIDENCE

SENATOR VANDENBERG'S LETTER

We read with close interest, a few weeks back, the text of a letter written by Senator VANDENBERG, of Michigan, in support of his firm belief that the Federal Deposit Insurance Corporation should be kept independent, and that it should be free from the mergers and consolidations proposed by the Hoover Commission. The letter is remarkable in many respects, but chiefly for two sentences which, to our way of thinking, strike at the very heart not only of the argument as to whether or not the FDIC should be continued as an independent agency, but also the question of whether the annual insurance premiums or assessments paid by member banks should be kept at present rates, reduced by half, or eliminated entirely for some period of time.

The assessment proposals interest us primarily at the moment, as witness the three leading articles in our issues of June 18, July 9, and July 16. It is from the arena of contention on the subject of assessments that we view the Senator's observations with great interest. The two sentences appearing in the letter read as follows:

"The real capital of the FDIC is public confidence. The moment that is lost in any slight degree, it is a loss which money cannot replace."

TWO IMPORTANT ASPECTS

In those few, simple words Senator VANDENBERG underscores two vitally important aspects in the debate over FDIC assessments. They are aspects which frequently are lost sight of by bankers in their anxiety to demonstrate the validity of their positions on the subject, pro and con, by producing as evidence dollar totals, ratios, charts, bank deposit insurance equivalents of mortality tables, and other such data. Much of this appeared as the substance of our previous articles on this subject. And yet those two aspects are the equal of, and in our opinion transcend, the persuasive power which the purely statistical factors carry in this debate, and we feel that they deserve the thoughtful scrutiny of every one interested in the issue.

PSYCHOLOGICAL REACTION

What does Senator VANDENBERG say in those two sentences? He says: 1. Let us not forget that the FDIC came into being and continues to exist primarily for the purpose of protecting millions of hard-working, thrifty American families from that nightmarish economic peril known as bank failures; and 2. Let us not overlook the nature of any possible psychological reaction those families may have to any proposals which may affect in any degree the confidence that is based upon the knowledge that the money they have on deposit in their banks—the fruits of their labor and their self-denial—will be returned to them, come what may, up to at least $5,000 in every instance.

In a word, he says, don't ever lose sight of the fact that the public has a large interest in the FDIC.

In saying so we note that Senator VANDENBERG does not document his thesis with statistics. He does not mention, for example, the oft-quoted figure of $1,000,000,000 which represents the FDIC's capital and reserves, nor does he comment upon the $3,000,000,000 which the Corporation may draw upon from the Treasury in case of emergency. He does not put one fact up against another fact and say, as some economists so frequently are prone to do under similar circumstances: Our charts and our tables indicate no trouble in the foreseeable future. No. The Senator remarks upon nothing like that, nor is there any obligation for him to do so because in the realm of his interest, which in this regard is identical with that of the American public as a whole, such figures are unknown and such facts as they may represent are meaningless.

FDIC IS A SYMBOL

This is not to say that the Senator is unfamiliar with the facts. They are quite well known to him. And as one who had much to do with the inauguration of deposit insurance in this country, he has great respect for them. But his respect goes beyond the FDIC as a fact. It embraces an appreciation of the Corporation as a symbol, also, and it is precisely at this point that the Senator's interest merges with the public's.

To the American public, by and large, the FDIC is an alphabetical symbol representing one thing—confidence in banks. The public has been told, and it believes, that thanks to what is represented by the letters FDIC it may safely and with every confidence deposit as much as $5,000 in any bank privileged to advertise its membership in the organization. Let disaster come; so what? At that moment, as the Senator so succinctly observes in his letter, "the FDIC becomes utterly priceless in its value." And that is exactly the public's sentiment.

Should the public, or its governmental representatives, read into the reports of current efforts by bankers to cut down their payments to the FDIC an attempt to discount that "utterly priceless" value, what may happen then? The likely answer is reflected only too clearly in the Senator's warning phrases.

OPINION OF A BANKING GROUP

And yet this great public faith in the FDIC, or the risk of its loss through possible misunderstanding of motives, so far has not figured importantly in the evidence produced by the proponents of assessment reduction. True, it has made its influence felt here and there in a cautious word or phrase; but nowhere in the reports of the discussions has it been given the ranking position its potency warrants. And this strikes us as odd, for we find that many bankers are by no means unaware of it, especially those who were around in the dark days of 1933.

It was our good fortune of recent date to encounter a small group of such men, some representing the large banking interests in New York City, who were discussing informally among themselves the merits of the arguments now being advanced for a cut in the FDIC annual payments. It was interesting to see these men applaud the emphasis given by Senator VANDENBERG to the psychological aspects of any circumstances surrounding proposals to alter the present FDIC set-up. They concurred in the conclusions implied by the two sentences quoted above. So far as any change in the assessment rate is concerned, at the present time at least, they are mindful of the fact that if anything is done to disturb the public's faith in the FDIC no amount of pecuniary benefits which may accrue to insured banks by way of retained earnings could begin to compensate for the anguish which loss of confidence could provoke.

"We would like to hang on to some of that one-twelfth of 1 percent, and who wouldn't?" remarked one man in this group frankly. "But let's not kid ourselves, much less the public. You know as well as I do what would happen to that money. A lot of banks would be tempted to pay it right out in dividends. I don't think there would be very many who would plow any added income from that source back into their capital funds. If they would plow it back the story might be different. Then it would be a case of replacing one form of deposit 'insurance' for another—less going to the FDIC but more going

into capital funds to give greater coverage to deposit liabilities. But I haven't heard much talk about that angle of it."

THE $10,000 PROPOSAL

Nor was the group much impressed with the counterproposal which has been made that the $5,000 limit of insurance on each bank account be increased to $10,000 or even to $15,000. They pointed out that the stanchest proponents of this proposal are the smaller banks, and their avowed purpose in assuming that position is to promote depositor confidence thus averting withdrawals of funds which may lead in turn to credit contraction in smaller communities. To propose, on the one hand, a reduction in the assessment rate, which would limit the size of the insurance reserve, and to propose on the other an increase in the amount of the coverage in order to promote greater public "confidence" is like "trying to carry water on both shoulders" as one banker in the group pointed out.

But what impressed us keenly in this informal exchange of views was a recollected incident told by a man old enough in the business to have sat in on many memorable conferences where the cold facts of insolvency led inevitably to bank closings. So closely does the incident illustrate what Senator VANDENBERG clearly has in mind, we believe it is worth reporting here, camouflaging some of the minor details to avoid embarrassment through identification.

AN INTERESTING INCIDENT

"In a town not far from here," the banker recalled "there are two national banks, a State bank, and a savings bank. At the time this happened the two national banks were members of the FDIC, but the State bank wasn't, and neither was the savings bank. One day a stranger walked into one of the national banks He took $5,000 in cash out of his pocket and let it be known he wanted to open a thrift account. His first words to the woman behind the new account desk were these: 'Are the deposits in this bank guaranteed?' He was told they were insured. That's what he meant, he said.

"Right about this time the bank wasn't particularly interested in taking on any more money of that kind—hadn't any outlet for it, tell the truth—and it told the fellow it wouldn't be interested in the whole $5,000 but it might take on $1,500. That was all right with him. Then the fellow asked if he might put the rest of his money, $3,500, in a checking account. He was told he could do that. 'Is that money in checking accounts insured, too?" he wanted to know. He was assured it was, so in went the $3,500.

"After these accounts had been opened the fellow then allowed that he had $10,000 more in cash at home, and he wanted to know what the bank thought he might do with it. The bank pointed out that there was another bank across the street—the national bank—and that the State bank and the savings bank were just down the street.

" 'Yes I know,' the fellow said. 'I've been to those places. But the bank across the street only offered me the same deal you have—it took $1,500. And those other banks don't have insurance'."

The incident is significant because it is not an isolated one. If anything it is uncomfortably representative of others bankers could relate, and the public sentiment it reveals undoubtedly is a contributing factor to the lack of unanimity one encounters among bankers on the wisdom of pressing for a change in the FDIC assessment rate at this time.

NEVER AN END TO ASSESSMENTS?

The question naturally arises, then, is it to be assumed that the FDIC must forever reach out for more and more money? Is there to be no limit to the billions the public may be thought to require to buttress its confidence in the impregnability of the FDIC? After all, as some bankers have pointed out, has it not been admitted by the FDIC officials themselves that the inflow of payments from banks has exceeded what actually has been needed—so far. That is correct.

But again, though we have heard from many sides on this point we have not heard from the public which, to cite the Senator once more, has a large interest in this issue. How much of a reserve does the public think the FDIC should have to enable it to make good to insured depositors in whatever circumstances may arise? A foolish question, obviously, but perhaps not more so than questions of similar nature which bankers and FDIC officials have been asking each other lately.

And it is equally foolish, perhaps, to expect any answer at this time either from the uninformed public or from the FDIC or the bankers, despite the impressive documentary evidence for and against which has been produced by the latter two. For the question of to what extent the FDIC may be able to weather a real economic storm clearly cannot be answered by the production of a statistic, because the elements of which it is composed are not abstractions from anyone's balance sheet. Fundamentally they are abstractions of the emotions of millions of American bank depositors.

PUBLIC RELATIONS MEN CONSULTED

Where does this lead us to? Since we claim not even the remotest omniscience in the wilderness of mass psychology and approach questions of possible public reaction to developments involving banks with no little naïveté, it has led us to consult with those whose interest in such matters is professional. The more we contemplated the Senator's sober warnings the more forcefully we became aware of the serious public implications inherent in this whole discussion, and we took the issue to some friendly counselors in public relations.

Singularly enough, we found these counselors not entirely unacquainted with the subject though their business does not commonly embrace specific questions on banking. They had no lack of appreciation, indeed, for the position occupied by the FDIC in public esteem.

We asked them bluntly: What do you think the public's reaction might be if it discovered tomorrow that the banks of the country had been successful in securing a reduction in the amounts they pay for having their depositors' money insured by the FDIC?

The answer came quickly, and was to the point. In essence it was this: It is conceivable that if the action were announced tomorrow, or over the near term, there might not be any visible public reaction at all, depending on the amount and nature of any notices the development received in the press, over the radio, by commentators, columnists, and so on. But it might be imagined, given the right atmosphere, that the reaction could easily become one of suspicion deepening into fear which, unless dissipated by the most plausible of explanations, undoubtedly could lead to distrust of and loss of confidence in banks. As a public issue—near-term or longer range—anything that could possibly be construed as interfering with the FDIC's ability to make good on deposits is full of dynamite.

AS A PUBLIC ISSUE

Invited to enlarge upon these observations, our counselors pointed out that as a public issue right now the proposed reduction in the FDIC assessment rate is virtually nonexistent. They noted that thus far reports of it have been limited to short items usually in the back pages of the newspapers, or to the business and financial columns, and also to the trade press. It has not reached the stage in the legislative chambers, in Congress, where the public's elected representatives have had much of an opportunity to make up their minds where they stand on it, or to vocalize their opinions one way or another.

This situation, they feel, could change, depending on the pressures applied. If such pressures produced action worthy of attention on the front pages of the newspapers and elsewhere in mass publicity mediums, they believe that banks would be called upon to justify the action—in terms of the public's interest, not banking's or the interest of bank stockholders. This accounting may not necessarily be demanded immediately, they pointed out. It could be postponed until such times, perhaps, an economic adversity might precipitate banking difficulties beyond the power of the FDIC to remedy. In such event the bankers unquestionably would be on the defensive, and would face the unhappy prospect of attempting to explain away to a hostile and distrustful audience an action which, fairly or not, could be blamed for contributing to the FDIC's inability to perform as advertised.

The net of these observations seemed to us to add up substantially to this. Could those bankers who are now advocating a reduction in the assessment rate justify their positions in terms which would be acceptable to their depositors and to the public as a whole? Could they do so at any future date under economic circumstances which might be less favorable than they are today? If the answers to these questions are affirmative, then the briefs calling for reduced assessments are strengthened. If the answers are in the negative, then, to press the issue at this stage carries with it a responsibility for assuming the risks and dangers of potential loss of public confidence.

NO FULL TEST SO FAR

Under these circumstances we feel constrained to reiterate a point emphasized in the first of our articles in this series. You never know that an enterprise is thoroughly sound until it has been tried in periods of deep adversity. The FDIC so far has had relatively easy sailing. Who knows, facts and figures to the contrary, how it may stand up under rough weather? In their own self-interest, it behooves all who have a stake in the public's confidence in banks and banking to direct their interests and energies in helping the FDIC to prepare for any eventuality. If such a stand may serve to postpone the day when banks may press for reduced assessments in full confidence of the rightness of their claim, what is to be lost? Some income, yes; but perhaps only temporarily. Should deposit insurance in this country justify the hopes of the people in the face of profound depression could not then the plea for lower assessments be entered again, and in great confidence? In such an atmosphere, at any rate, it could be made minus the frightening prospect of possibly at some future time having to face a public convinced that its trust had been betrayed.

Business Parade Veterans' Feature

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the

Standard-Sentinal, of Hazleton, Pa., July 22, 1949:

BUSINESS PARADE VETERANS' FEATURE

A parade of business is to be the major feature of the annual homecoming celebration of the Greater Hazleton Veterans Association, on North Wyoming Street, starting August 29 and continuing for a week. It will be an exhibit of Hazleton products and merchandise, it will display the wares that our progressive merchants handle, and it will be a condensation of the vast manufacturing and merchandising field that has carried this city to its present high rating. The exhibit promises to be the biggest thing of its kind ever attempted here.

Some conception of this year's show is already visible, for very little space is left in either Holy Trinity or St. John's halls, which flank the grounds where the Mardi Gras will be held.

Certainly, the old-time residents remember our early industries, carriage works, Chinese and hand laundries, horse-shoeing posts, tinsmith shops, making mine lamps and dinner pails, hat factory, a planing mill, a grist mill, piano factory, a candy plant, and a match factory. Putting them all together wouldn't fill one floor of the mammoth Duplan Corp. plant. Today we are a very cosmopolitan city with a diversified industry that is growing in size and in importance as our basic industry, coal mining, peters out. We are facing the future certain that the depletion of coal veins in this region will find Hazleton as industrially independent, that the once lush pay day at the mines, will hardly be missed.

The Greater Hazleton Veterans Association are to be commended for planning an exhibit of what Hazleton makes and sells. It will be an eye-opener for those who have failed to keep track of our steady progress and expansion, and it will be a commercial uplift to business in general as a new buying season is about to dawn.

Impeachment Proceedings Against Judge T. Alan Goldsborough

EXTENSION OF REMARKS

OF

HON. ANTHONY CAVALCANTE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. CAVALCANTE. Mr. Speaker, on August 8, 1949, on page 11022 of the CONGRESSIONAL RECORD, a petition was referred to the Committee on the Judiciary. This petition was received under clause 1 of rule XXII of this House and its contents prays for the impeachment of Judge Samuel Kaufman for conduct arising from the trial of Alger Hiss. An inspection of the RECORD of previous days will indicate that Members of this House extended their remarks at length on this same subject. It is unfair to any American jurist to be so assailed by accusers whom he is unable to meet face to face and defend his integrity against the charges leveled against him.

The trial of Alger Hiss was held in an open American court. The charges against him were passed upon by a jury of his peers consisting of 12 true Americans who were bound by oath to render a just and true verdict between the accused and his accusers. By virtue of our Constitution, Hiss was informed of the nature and cause of the accusations against him. He was confronted with the witnesses against him and permitted to cross-examine them. He was granted the right of compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense. Judge Kaufman, with eminent good sense and high judicial purpose, gave to the accusers and the accused a wide and just latitude for the introduction of lawful evidence. The learned and capable judge permitted neither accuser nor accused to withhold from the jury any lawful evidence that tended to prove or disprove the charges laid in the indictment. Judge Kaufman's rulings on evidence and his charge to the jury bear the indelible mark of the sane, impartial, and unbiased judicial mind that is necessary for the preservation of the letter and spirit of our American justice. Without this type of judicial mind, American justice might reach that low held by Communistic Russia or Hitlerized Germany. The sane, impartial, and unbiased mind cannot find in the record of the Hiss trial the "suspicious circumstances" leveled against this eminent jurist.

The bleary-eyed gentlemen who see suspicious circumstances in the conduct of the trial by the Honorable Samuel H. Kaufman might have rendered a notable service to the letter and spirit of American justice had they trained their critical eyes upon the court of Judge T. Alan Goldsborough. They might have found there the suspicious circumstances against which we Americans must ever be on guard, if the letter and spirit of our prized justice shall be preserved for our posterity. It was in this latter court and by this latter judge that 400,000 American united mine workers were found guilty and then fined the enormous sum of $1,200,000. This guilt and this fine were predicated upon a constructive disobedience to a preliminary injunction issued from Star Chamber and the nature and cause of which was known solely to the accuser and the judge. The United Mine Workers of America were without prior notice of the nature and cause of the accusation against them; they were not confronted with the witnesses against them and permitted to cross-examine the witnesses; they were denied the right to have compulsory process for obtaining witnesses in their favor; they were denied the right to have the assistance of counsel for their defense, in Star Chamber; they were not tried by a jury of their peers consisting of 12 true Americans who were bound by oath to render a just and true verdict between the accused and accuser; and, they were denied the right to interpose an iota of evidence for their defense, in Star Chamber. The issuance of injunctions, orders, or decrees by judges from Star Chamber is a backwash of truculent British judicial tyranny, by courts of equity (sic) that were created by the King to mete out the quality of justice that the King willed. The death knell of the Star Chamber was sounded in the Declaration of Independence and the Revolution that succeeded. Its death has been confirmed by patriots who have laid down their lives to sustain our Republic and the American sense of justice. It was more recently confirmed by the Americans who laid down their lives in World War II so that our sense of justice might embellish the lives of people in all corners of the world. Does not Judge Goldsborough know that the Star Chamber is the antithesis of American freedom and the letter and spirit of American justice? Does he not know that we harbor no king here in America? Does he not know that American justice is administered in open courts where the accused shall have his day before he may be adjudged guilty and punished?

The circumstances under which the temporary injunction was issued against the 400,000 American coal miners, from Star Chamber, carry the earmarks of a tyrannical judicial conduct that sets at naught the true letter and spirit of American justice. The injunction was a blow below the belt of these 400,000 Americans and their families, even below the point allowable under the letter and spirit of the infamous Taft-Hartley law. The circumstances go far beyond the point of being suspicious. They show design and concert on the part of the accuser and the judge to justify a popular end without regard to the lawfulness of the means employed.

The infamous Taft-Hartley law provides that the court may enjoin "such strike or lock-out or the continuing thereof * * * if the court finds that such threatened or actual strike or lock-out * * * will imperil the national health or safety."

This infamous law further provides that the petition to enjoin may be made to "any district court of the United States having jurisdiction of the parties."

In what open American court was the evidence adduced upon which the court could lawfully find that the threatened or actual strike by the miners would imperil the national health or safety? In what open American court did the judge find that the national health and safety was imperiled? How and when were the miners given their day in open court to plead against the infamous preliminary injunction? Nowhere in the infamous Taft-Hartley law is it said that the petition to enjoin may be made to "any judge of any district court of the United States having jurisdiction of the parties."

Nor does that law say that the petition to enjoin may be presented in Star Chamber. Unless it is doubly infamous, the letter and spirit of the Taft-Hartley law seems to negative any right to the accuser to seek or empower a single judge to issue such implicational injunction, from the cabals of a truculent Star Chamber. A court is a tribunal officially assembled under authority of law at an appropriate time and place for the administration of justice; a judge is simply an officer or member of such tribunal: *McCormick's Election* (281 Pa. 281). One might also ponder over the mental gymnastics adopted by the judge in order to justify his assumption of jurisdiction over 400,000 American miners, none of whom live in the judicial district wherein the judge wields a kingly scepter with awe and majesty. Is this latter jurisdiction conferred upon him by the infamous Taft-Hartley law?

It is evident from the circumstances under which Judge Goldsborough issued the star-chamber injunction that he and

the accuser were in concert to achieve an end—to humble John L. Lewis and drive 400,000 American miners back to the dark and dank pits. This end at that time was popular due to public hysteria created by the National Association of Manufacturers and other enemies of collective bargaining. Both the accuser and the judge knew that if the end would be reached, the public would be uncritical of the means adopted. This strategem does not square with the letter and spirit of our American justice. It is an abuse of judicial process which, if not nipped, will surely lead to a tyranny alike to that of the British Star Chamber. The guaranties of our Constitution against promiscuous searches and seizures; against tyrannical arrest and imprisonment; and against the deprivation of life, liberty, and property, without due process of law, and all indicative of the keen determination by which the founders of the Nation exorcised from their concept of justice the cabals of Star Chamber and the principle that the end justifies the means. Both the accuser and the judge knew that, without regard to the lawfulness or implication of the preliminary injunction, if it were issued, the 400,000 American miners and John L. Lewis would have to obey until the exigencies of the judge's court (sic) would permit a determination on the legality of the injunction. By the time that this latter point was reached, John L. Lewis would be humbled and the 400,000 American miners driven like peons back to the pits. Judge Goldsborough and the accuser knew that they would have their end, even though the means employed were contrary to the letter and spirit of American justice.

Mr. Speaker, the petition and the gentlemen who are impunging the integrity of the Honorable Samuel H. Kaufman upon purely imaginary figments, can do themselves honor and a worthy service to American justice if they will but move the House Un-American Activities Committee to investigate the pungent circumstances under which Judge Goldsborough, through Star Chamber activities, has robbed 400,000 American coal miners of the enormous sum of $1,200,000. This he did by importing into our American jurisprudence the tyrannical instrument of Star Chamber and the principle that the end justifies the means used by the judge, even though the means are known to be tyrannical and unlawful.

I demand a fair and just investigation of this matter by the House committee.

You Ought To Know My Doctor, by Dr. Fred F. Brown, of Knoxville, Tenn.

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article by Dr. Fred F. Brown, of Knoxville, Tenn. Doctor Brown is known and loved by thousands in his home city, where for 25 years he was pastor of the First Baptist Church. He is now pastor emeritus of that church. He has served as pastor of Baptist churches in Kentucky, Tennessee, and Texas. He is a former president of the Southern Baptist Convention. He is known and revered by members of the Baptist faith throughout the world.

"YOU OUGHT TO KNOW MY DOCTOR"

(By Fred F. Brown, Knoxville, Tenn.)

(This article is not an attempt to eulogize the medical profession. Members of the medical profession neither need nor desire eulogies. They would resent such an effort from anyone.

(The message is an expression of my sincere appreciation of a group of men to whom I look with confidence, a group of men whom I hold in the highest esteem—our physicians.)

Somewhere I have read the story of a teenage boy who lived in a remote rural community. An accident had left him with a serious injury to his spine—an injury attended by unrelieved suffering. The good country doctor told his parents of a celebrated surgeon in a distant city who could operate, relieve the suffering, and practically restore the boy to normal life. The family was very poor, but neighbors made up a purse sufficient to provide transportation. The local physician telephoned the surgeon and was told to send the boy on—there would be no charge for his service. The boy made the journey to the distant city, and the delicate operation was successful. In due time the boy returned to his home. Family and friends met him at the railroad station. As they drove home the family plied him with questions—questions about his journey—questions about his nurses—questions about the hospital—questions about the surgeon. When asked about the hospital the boy replied: "It was wonderful, but you ought to see my doctor." When asked about the nurses: "They were kind and good, but you ought to see my doctor. You ought to know my doctor."

We are passing through a period just now when some unkind and unjust statements are being made about the medical profession. Recently a prominent man speaking of the doctors of America used words such as "selfish," "mercenary," and other uncomplimentary terms. It seems to have become something of an indoor sport in certain quarters to push our doctors around. To such an attitude toward our physicians millions of us reply: "You ought to know my doctor."

The medical profession is an honorable profession. Its history of constructive, sacrificial service to suffering humanity answers all adverse criticism. And the spirit of the physicians of the past—the spirit of faithful, heroic, unselfish service—is alive and manifest in the lives and practice of our American doctors today. All of us know that there are quacks and crooks among doctors just as there are quacks and crooks in any group. I make bold to assert, however, that no group in society can give a better account of its stewardship than the medical fraternity. As a group they represent thorough, scientific training, high standards of ethics, and steadfast loyalty to their noble calling: Healing humanity's hurt.

PERSONAL EXPERIENCE

As I think of the great number of doctors whose knowledge and skill have brought me and members of my family through many serious crises—physicians representing surgery, internal medicine, orthopedics, neurology, urology, obstetrics, radiology, pediatrics, eye, ear, nose, and throat, and dentistry, I say of each of them: "You ought to know my doctor."

SOME OBSERVATIONS

A group of us from Knoxville have summer cabins in a remote section of the East Tennessee mountains, near the boundary of the Great Smoky Mountains National Park. While in our cabins one summer some of our wives visiting in a home at the head of a mountain cove found a boy who was horribly club-footed. Immediately we called an orthopedic surgeon in Memphis, Tenn., and asked if he could do anything for the boy. Promptly Dr. Willis Campbell—I call his name because he is now in the spirit world—replied: "Bring him to me."

The boy was sent to Dr. Campbell's clinic. The feet were straightened, and after a few weeks he was returned to the little mountain home wearing braces. When the time came for the removal of the braces I took him to Memphis and left him at the clinic, telling him that I would call for him the next day. When I went by for him the following morning he was in the lobby of the clinic. The braces had been removed and he was happy. I said to him, "We have a long, hard drive ahead of us and must get started." He replied, "I want to see Dr. Campbell before I go." I found the secretary and told her that the boy insisted on seeing Dr. Campbell. She went to the boy and told him that Dr. Campbell was operating and couldn't be disturbed. Then, noting the look of disappointment on his face, she said: "Why do you want to see Dr. Campbell?" He replied: "I want to thank him for straightening my feet." She threw her arms about him, drawing him to her, and said: "Go on, boy, Dr. Campbell is as proud of those feet as you are."

That boy is now a school teacher. He and many, many others think of Dr. Willis Campbell with boundless devotion and gratitude as they unite in saying: "You ought to know my doctor."

Such incidents are being repeated across America every day. In every city, village, and countryside of our Nation these scenes are being reenacted continuously. They are so familiar that they are commonplace. We have witnessed them so frequently that our eyes are blurred to the magnificent spirit which they represent.

The circle of suffering is always changing, but it is always full. Those in that circle represent every age, color, creed, and station of life. Our physicians spend their lives in that circle where pain and anxiety form an atmosphere that is heavy and tense. Calmly, intelligently, courageously, they wage a truceless warfare with the grim, threatening figure of death. It would be timely and appropriate for the people of America to catch the spirit of the little Scotch community so beautifully pictured in Ian MacClaren's "Beside the Bonnie Briar Bush," and applaud our doctors.

If the grateful voices of those in hospitals, clinics, and homes of suffering where faithful physicians quietly minister were all blended together they would form a mighty chorus sounding across our Nation lifting the refrain "You ought to know my doctor."

FRED F. BROWN, M. A., Th. D., D. D.

(Dr. Brown has been pastor of Baptist churches in Kentucky, Tennessee, and Texas. Twenty-five years pastor of First Baptist Church, Knoxville, Tenn. Now pastor-emeritus of that church. Former president of the Southern Baptist Convention. Mentioned in American Preachers of Today, 1933; Religious Leaders of America, 1941–42; Who's Who in America, since 1932; Who's Who in the World (current issue).)

The Case of the Anacostia Pool

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include herewith an editorial appearing in this morning's Washington Times-Herald:

THE CASE OF THE ANACOSTIA POOL

For the past 45 days the big Anacostia swimming pool in southeast Washington has been closed because of Federal interference in a purely local matter between people living here in the District. During this period Washington has suffered the hottest days of the year.

The cause for this outrageous condition goes back to the 1920's when the District contributed a lot of money to build up recreation areas all over the city.

THE KIDS SUFFER

This act started a long and bitter fight between the District and the Interior Department over control of the city's recreational facilities.

During these years, however, a definite pattern developed in the use of the six swimming pools located in the various sections of the city which fitted in with the feeling and inclinations of the local citizenry. For, despite Interior Department rules that all public facilities under its control must be open to everyone regardless of creed or color, segregation has been practiced. The pools were operated by the recreation board in the mornings and GSI under contract with Interior the rest of the day.

The Francis and Banneker pools were used by Negroes and Anacostia, McKinley, Takoma Park and East Potomac were used by white youngsters.

POLICE QUELL DISTURBANCE

The Federal Government's obstinate and persistent attempt to dictate a national pattern of social rules regardless of local conditions, was brought to a head in the last week of June at the swimming pools. A concerted effort was made to force mixed swimming in all the pools. On June 26, 50 Negro children attempted to get into the Anacostia pool. The resulting disturbance was so great the pool was closed several hours ahead of schedule.

The next day and the next, Negro children again came to the Anacostia and McKinley pools. Since the area surrounding the Anacostia pool is predominantly a white neighborhood, feeling ran high.

On June 28 the disorder became so violent three persons were injured and five were arrested after a squad of police were called to maintain order. As a result the Recreation Board canceled its morning class and Interior Secretary Krug closed the pool.

Spearheaded by the recreation board, the residents of Washington have made attempt after attempt to reach an agreement with Krug so the pool could be opened. But he refuses to budge from his position that all the pools must be operated on a nonsegregated basis.

KRUG REFUSES TO BUDGE

At Krug's insistence the Recreation Board has agreed to take over the pools, wipe from its bylaws any mention of segregation and to adopt a policy of discarding segregation as soon as it can be done safely.

Agreement on this proposal was about to be concluded when Krug drew out because the recreation authorities would not guarantee to reopen Anacostia immediately on a nonsegregated basis.

Now the board has suggested another compromise. It would operate Anacostia, East Potomac, and the Takoma pools for white swimmers, Francis for Negroes and Banneker and McKinley for mixed groups.

But the Interior Department has turned this proposal down also again demanding that Anacostia pool be operated for both whites and Negroes.

Mr. Krug could do a lot more for his country and attend to the multiple duties of a Secretary of the Interior in a much more efficient manner if he would keep his nose out of purely local affairs and let Washington parents decide what should be done about their children's swimming. If he doesn't, the kids will soon drift back to the Eastern Branch and the Potomac River and the drowning rate will increase.

Hold the Line

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial from last night's Washington Star.

I am in great hope that this speech of our former President, Mr. Hoover, given on his seventy-fifth birthday, will serve a very useful purpose. Mr. Hoover was more than kind not to blame the elected officials of our country. I can see his point and the wisdom of such a statement. However, I do not believe we are relieved of a serious responsibility. After all, the people look to its elected representatives for leadership. We cannot sit by each day and see how the pressure groups are gaining, without becoming alarmed. We have to say "No" to these pressure groups and educate the rank and file of our citizenry as to where all these programs will lead us.

Since the beginning of our great history as a Nation, we have enjoyed liberty and freedom. As a result of this we have become the leading nation of the world. Let us of this generation hold the line.

The editorial follows:

WE ARE OUR OWN UNDOING

Herbert Hoover's seventy-fifth birthday speech does not make pleasant reading. One comes away from it with a feeling of discouragement, with an uneasy conviction that we, the American people, are pulling the temple of our free society down upon our own heads, and that nothing much can be done about it.

It is a speech that will serve no useful purpose unless received in the spirit in which it was made. The professional detractors, of course, will cry it down as the expression of a man who is living in the past, as a philosophy which looks backward and not to the future. But the reaction of these professionals is not especially important. Mr. Hoover was trying to reach out to that great mass of people who make the final decisions in this country. Like James F. Byrnes, who made a similar speech a few weeks ago, Mr. Hoover has no personal ax to grind. His partisanship, as in the case of Mr. Byrnes, is behind him. His only purpose is to put before the people of this country, for what it may be worth to them, the counsel of a man who has grown with the years, and who has had an unparalleled opportunity to acquire that wisdom which comes only from long and varied experience in public affairs. The question is whether the people, or enough people, will listen.

Mr. Hoover stated the central problem, as he sees it, clearly and vigorously. In his opinion, most Americans, although they do not believe in a collectivist state, have endorsed or are acquiescing in policies of spending and taxation which will lead inevitably to that result.

He gave some interesting illustrations of what has been happening. Only 20 years ago there was one Government employee to about 40 of the population. Today there is a Government employee for every 22 of the whole population and for every 8 of the working population. Twenty years ago all varieties of government, excepting only debt service, cost the average family less than $200 a year. Today, again excluding debt service, the cost to the average family is about $1,300 a year. If the new spending programs now being seriously advocated are put through, and if debt service is included, the average family soon will be putting up $1,900 a year in taxes for the support of Government. If this trend continues, in Mr. Hoover's opinion, our present structure will collapse and one of two things will happen: The Government will take over, which means socialism, or the Government will dictate our economic and institutional life, which is fascism.

It is silly to say that this sort of thing cannot happen here, for it is happening or it has happened all around the world. Yet a great many people are actively clamoring for more and more of the things that bring on first collapse and then regimentation, and many others remain indifferent to the prospect.

Mr. Hoover pointed out that there is little reason to blame our elected officials or in hoping that they will find a way out. For it is not in the nature of our political system that they should do so. These men and women must run for reelection, and as long as that remains so, and as long as the mass of the people remain indifferent, as long as they will not think for themselves, the political candidates will be at the mercy of self-seeking pressure groups. Perhaps this is a fatal weakness in our political system. Mr. Hoover does not say it in so many words, but the fact remains that, given time, the pressure groups, each clamoring in behalf of some selfish interest without regard for the national welfare, will surely tear us apart.

The best hope of preventing this lies in creating an awakened public opinion which will be strong enough and alert enough to make it politically feasible for our public officials to say no to the pressure groups. This will not be done, however, unless the people, not as a mass but as individuals, can be induced to subordinate their immediate personal desires to the long-range interests of the country. Mr. Hoover struck a note of mild optimism at the end of his speech when he said that the qualities of self-restraint, of integrity, of conscience and courage still live in our people, and that it is not too late to summon these qualities.

But how to summon them? At the outset of his talk Mr. Hoover said he would list some items for thought, but that "I am not going to offer you solutions to our national ills."

That, alas, is the rock upon which the finest exhortation founders. For it is one thing—and this is not said in any spirit of criticism of Mr. Hoover—to delineate the really basic problem of our times; quite another to propose a specific solution.

Congress and the Future Welfare and Security of this Nation

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. ELLIOTT. Mr. Speaker, Mr. Fred W. Shield, president of the Independent Petroleum Association of America, has written a report of his recent contacts with the Congress, which report he calls Beneath the Surface in Washington.

We can all share a considerable pride in Mr. Shield's impression of us, and at the same time I am sure that we all appreciate his kindness in reducing his impression to writing.

I include Mr. Shield's article as a part of my remarks:

BENEATH THE SURFACE IN WASHINGTON

I have recently been your representative in Washington—not political—but rather in accord with the unwritten instructions and obligations accepted with the presidency of Independent Petroleum Association of America. But I was only one of many members of the IPAA in Washington at the time, convening for the purpose of reviewing the various problems of the industry. These members were from all sections of the country, from every area in which oil or gas is produced.

It was our privilege to be close to some of the mechanism that makes our Government a positive rather than a negative factor in our lives.

Almost without exception we were received with every courtesy. We were welcomed, not merely as friends or chance acquaintances but as representatives of an essential industry.

The attention given your needs and the needs of all the people by your elected Representatives in Congress was both apparent and impressive. I was deeply sensitive to the conviction that, as has been said by others, the very foundation and mainstay of our form of government rests with our elected Government officials. We found congressional representatives in Washington anxious to hear from their constituents. Seldom was an opportunity missed to ask about some friend or acquaintance back in the home town or home State.

We found your Representatives in Congress glad to have the views and a frank and concise opinion of the problems they daily face when legislation is being considered. They want to know, from the practical standpoint, how suggested bills or acts might bear upon the welfare or economy of their State or district. But, too, they must then relate this to the total welfare of all of the people before they can make a final decision.

We found your elected Congressman well aware of the red tape that has built an unhealthy halo of criticism over the Washington scene. Where possible, this tape is cut to obtain direct action.

Almost invariably we found your elected officials anxious to know your problems at home; and anxious to receive logical advice as to the solution of these problems. This applies to the petroleum industry as well as others.

A final conclusion has been inescapable—as it should be and as it always has been in our democracy; the future welfare and security of this Nation will continue to be determined by Representatives elected and sent to Washington by the people, and that their actions will be chiefly governed by what factual, unbiased and unprejudiced conclusions they receive from their constituents.

Sincerely yours,

FRED W. SHIELD,
President, Independent Petroleum Association of America.

Federal-Aid-to-Education Bill

EXTENSION OF REMARKS
OF
HON. J. FRANK WILSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. WILSON of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dallas Times Herald of August 9, 1949:

FEDERAL AID TO EDUCATION BILL STIRS UP BITTER DISPUTE

It is regrettable that discussion of the controversial Federal Aid to Education bill has degenerated into a bitter argument among religious leaders and others over the question of separation of church and State.

But this unfortunate turn of events is one of the logical fruits of the drive that certain groups are making to have the national Government assume among its other heavy responsibilities the task of financing and supervising education of youth, a task that the founding fathers left to the respective States.

Disputes over the teaching of religion in the tax-supported free schools are not new, but they have been only within the various States. The bill now before Congress has raised the issue to the national level.

In opposing this Federal aid, champions of State sovereignty have objected to it on the grounds that it would pave the way for Federal interference in State school programs. They know that once a huge sum of money is granted the States from the Federal Treasury, the time will come when the States will be required to meet certain specifications in order to qualify for the aid.

At this time there is a strong school of opinion that holds that the Federal government should take jurisdiction over nearly everything and that State sovereignty is an obsolete institution. The drive for the bill now in Congress is spearheaded by this school of opinion.

This has brought up the religious question, for it is obvious that as the Federal Government takes jurisdiction over the schools, it will become the task of Congress to decide what subjects are to be taught in the schools and what textbooks are to be used.

It is true that a large amount of Federal money is already being granted to the various States for use in their educational programs. But definite specifications are provided as to the use of such funds and the States may take the money or not, as they see fit. The bill now under consideration virtually compels the States to accept the Federal largess.

The bitter religious interchange is regrettable, but it is only one of many disturbing conditions that will arise as the blanket of Federal authority is extended. The argument simply shows the importance of keeping as much of government as possible on the State and local level.

Congressional Congratulations and Best Wishes to a New Member of the United States Circuit Court of Appeals

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. O'HARA of Illinois. Mr. Speaker, for all the Members of this body from the districts in Cook County in Illinois I have wired to the Honorable Philip Finnegan, who today was sworn in as a United States circuit judge of the seventh circuit, our congratulations and best wishes for a brilliant career on the bench second only in dignity and important standing to that of the Supreme Court of the United States.

Judge Finnegan has served for many years and with great distinction on the State bench in Illinois. His brilliant legal mind, his indefatigable industry, and spotless integrity have contributed to the making of his record as one of the great jurists of a State which is second to none in the quality and character of those who wear and have worn the robes of the judicial office.

On the bench of the United States Circuit Court of Appeals for the Seventh Circuit he will serve with our distinguished and beloved former colleague, the Honorable J. Earl Major, and with the Honorable Sherman Minton, who as a Member of the United States Senate from the great State of Indiana, enjoyed the high respect and the warm friendship of Members in both bodies of the Congress. Also serving in that court is the Honorable Otto Kerner, a former attorney general of Illinois and a former State judge. It is a court of which the lawyers in the seventh circuit are justly proud. It is heartening to know that in Judge Finnegan the court has one who by his works and by his character has merited a place in such company. It is reassuring to all of us, lawyers and laymen alike, interested in maintaining in a time of stress and change the purity of justice and the impartiality in the interpretation of the law, that men like Judge Finnegan are called to service in the highest courts.

I could not mention the United States Circuit Court of Appeals for the Seventh Circuit without paying the tribute of an affectionate memory to one who was a judge in that court for many years and whose death within recent months came as a blow of crushing force to all of his many friends. Judge Evan A. Evans was one of the greatest of American jurists, and the brilliance of his mighty intellect is reflected in the opinions during several decades of the seventh circuit. I know that Judge Finnegan will find inspiration in the thought that among his predecessors was Judge Evan A. Evans.

Letter From the Secretary of State to the President Transmitting the Record of United States Relations With China

EXTENSION OF REMARKS
OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD the letter of transmittal on the China paper by Secretary of State Dean Acheson to the President of the United States.

It is my hope that this letter and the China paper will be read with great care by the American people. The China paper is a factual and unbiased account of Sino-American relations over the period covered.

I have the highest confidence in our present Secretary of State, and I know that he is seeking by all means to establish a bipartisan China policy.

Secretary Acheson is to be commended for the setting up of a special committee to delve into this problem, and he has assured the Committee on Foreign Affairs in the House and on Foreign Relations in the Senate that he and this special committee will work closely with them in the development of this policy.

The answer to our dilemma in China is not to send American military aid and/or American combat troops. The whole question calls for the most careful study on a bipartisan basis to the end that the United States will receive first consideration in any policy evolved.

The times call for clear thinking, sound reasoning, and the exploration of every possible angle in the evolving of a China policy which will protect the best interests of the people of the United States.

Let us try to do this in a spirit of helpfulness, tolerance, and mutual understanding. The solving of this most complex of problems will tax our ingenuity to the utmost, and success will come only if we all work together and contribute to the limit of what abilities we possess. The task before us and the solution to be found may well be the most difficult questions that we, as a nation, have ever been confronted with.

A SUMMARY OF AMERICAN-CHINESE RELATIONS

(Letter from the Secretary of State to the President transmitting the record of United States relations with China)

LETTER OF TRANSMITTAL

DEPARTMENT OF STATE,
Washington, July 30, 1949.

THE PRESIDENT: In accordance with your wish, I have had compiled a record of our relations with China, special emphasis being placed on the last 5 years. This record is being published and will therefore be available to the Congress and to the people of the United States.

Although the compilation is voluminous, it necessarily covers a relatively small part of the relations between China and the United States. Since the beginning of World War II, these relations have involved many Government departments and agencies. The preparation of the full historical record of that period is by no means yet complete. Because of the great current interest in the problems confronting China, I have not delayed publication until the complete analysis could be made of the archives of the National Military Establishment, the Treasury Department, the Lend-Lease Administration, the White House files, and many other official sources. However, I instructed those charged with the compilation of this document to present a record which would reveal the salient facts which determined our policy toward China during this period and which reflect the execution of that policy. This is a frank record of an extremely complicated and most unhappy period in the life of a great country to which the United States has long been attached by ties of closest friendship. No available item has been omitted because it contains statements critical of our policy or might be the basis of future criticism. The inherent strength of our system is the responsiveness of the Government to an informed and critical public opinion. It is precisely this informed and critical public opinion which totalitarian governments, whether rightist or Communist, cannot endure and do not tolerate.

The interest of the people and the Government of the United States in China goes far back into our history. Despite the distance and broad differences in background which separate China and the United States, our friendship for that country has always been intensified by the religious, philanthropic, and cultural ties which have united the two peoples, and has been attested by many acts of good will over a period of many years, including the use of the Boxer indemnity for the education of Chinese students, the abolition of extraterritoriality during the Second World War, and our extensive aid to China during and since the close of the war. The record shows that the United States has consistently maintained and still maintains those fundamental principles of our foreign policy toward China which include the doctrine of the open door, respect for the administrative and territorial integrity of China, and opposition to any foreign domination of China. It is deplorable that respect for the truth in the compilation of this record makes it necessary to publish an account of facts which reveal the distressing situation in that country. I have not felt, however, that publication could be withheld for that reason.

The record should be read in the light of conditions prevailing when the events occurred. It must not be forgotten, for example, that throughout World War II we were allied with Russia in the struggle to defeat Germany and Italy, and that a prime object of our policy was to bring Russia into the struggle against Japan in time to be of real value in the prosecution of the war. In this period, military considerations were understandably predominant over all others. Our most urgent purpose in the Far East was to defeat the common enemy and save the lives of our own men and those of our comrades-in-arms, the Chinese included. We should have failed in our manifest duty had we pursued any other course.

In the years since VJ-Day, as in the years before Pearl Harbor, military considerations have been secondary to an earnest desire on our part to assist the Chinese people to achieve peace, prosperity, and internal stability. The decisions and actions of our Government to promote these aims necessarily were taken on the basis of information available at the time. Throughout this tragic period, it has been fully realized that the material aid, the military and technical assistance, and the good will of the United States, however abundant, could not of themselves put China on her feet. In the last analysis, that can be done only by China herself.

Two factors have played a major role in shaping the destiny of modern China.

The population of China during the eighteenth and nineteenth centuries doubled, thereby creating an unbearable pressure upon the land. The first problem which every Chinese Government has had to face is that of feeding this population. So far none has succeeded. The Kuomintang attempted to solve it by putting many land-reform laws on the statute books. Some of these laws have failed, others have been ignored. In no small measure, the predicament in which the national government finds itself today is due to its failure to provide China with enough to eat. A large part of the Chinese Communists' propaganda consists of promises that they will solve the land problem.

The second major factor which has shaped the pattern of contemporary China is the impact of the west and of western idea. For more than 3,000 years the Chinese developed their own high culture and civilization, largely untouched by outside influences. Even when subjected to military conquest the Chinese always managed in the end to subdue and absorb the invader. It was natural therefore that they should come to look upon themselves as the center of the world and the highest expression of civilized mankind. Then in the middle of the nineteenth century the heretofore impervious wall of Chinese isolation was breached by the West. These outsiders brought with them aggressiveness, the unparalleled development of western technology, and a high order of culture which had not accompanied previous foreign incursions into China. Partly because of these qualities and partly because of the decay of Manchu rule, the westerners, instead of being absorbed by the Chinese, introduced new ideas which played an important part in stimulating ferment and unrest.

By the beginning of the twentieth century the combined force of overpopulation and new ideas set in motion that chain of events which can be called the Chinese Revolution. It is one of the most imposing revolutions in recorded history, and its outcome and consequences are yet to be foreseen. Out of this revolutionary whirlpool emerged the Kuomintang, first under the leadership of Dr. Sun Yat-sen, and later Generalissimo Chiang Kai-shek, to assume the direction of the revolution. The leadership of the Kuomintang was not challenged until 1927 by the Chinese Communist Party, which had been organized in the early twenties under the ideological impetus of the Russian Revolution. It should be remembered that Soviet doctrine and practice had a measurable effect upon the thinking and principles of Dr. Sun Yat-sen, particularly in terms of economics and party organization, and that the Kuomintang and the Chinese Communists cooperated until 1927 when the Third International demanded a predominant position in the Government and the army. It was this demand which precipitated the break between the two groups. To a large extent the history of the period between 1927 and 1937 can be written in terms of the struggle for power between the Kuomintang and the Chinese Communists, with the latter apparently fighting a losing battle. During this period the Kuomintang made considerable progress in its efforts to unify the country and to build up the Nation's financial and economic strength. Somewhere during this decade, however, the Kuomintang began to lose the dynamism and revolutionary fervor which had created it, while in the Chinese Communists the fervor became fanaticism.

Perhaps largely because of the progress being made in China the Japanese chose 1937 as the departure point for the conquest of China proper, and the goal of the Chinese people became the expulsion of a brutal and hated invader. Chinese resistance against Japan during the early years of the war compelled the unqualified admiration of freedom-loving peoples throughout the world. Until 1940 this resistance was largely without foreign support. The tragedy of these

years of war was that physical and human devastation to a large extent destroyed the emerging middle class which historically has been the backbone and heart of liberalism and democracy.

In contrast also to the unity of the people of China in the war against Japan were the divided interests of the leaders of the Kuomintang and of the Chinese Communists. It became apparent in the early forties that the leaders of the government, just as much as the Communist leaders, were still as preoccupied with the internal struggle for power as they were with waging war against Japan. Once the United States became a participant in the war, the Kuomintang was apparently convinced of the ultimate defeat of Japan and saw an opportunity to improve its position for a show-down struggle with the Communists. The Communists, for their part, seemed to see in the chaos of China an opportunity to obtain that which had been denied them before the Japanese war, namely, full power in China. This struggle for power in the latter years of the war contributed largely to the partial paralysis of China's ability to resist.

It was precisely here that two of the fundamental principles of United States policy in regard to China—noninterference in its internal affairs and support of its unity and territorial integrity—came into conflict and that one of them also conflicted with the basic interests of the Allies in the war against Japan. It seemed highly probable in 1943 and 1944 that, unless the Chinese could subordinate their internal interests to the larger interest of the unified war effort against Japan, Chinese resistance would become completely ineffective and the Japanese would be able to deprive the Allies of valuable bases, operating points, and manpower in China at a time when the outcome of the war against Japan was still far from clear. In this situation and in the light of the paramount necessity of the most vigorous prosecution of the war, in which Chinese interests were equally at stake with our own, traditional concepts of policy had to be adapted to a new and unprecedented situation.

After Pearl Harbor we expanded the program of military and economic aid which we had inaugurated earlier in 1941 under the Lend-Lease Act. That program, described in chapter I of the attached record, was far from reaching the volume which we would have wished because of the tremendous demands on the United States from all theaters of a world-wide war and because of the difficulties of access to a China all of whose ports were held by the enemy. Nevertheless it was substantial.

Representatives of our Government, military and civilian, who were sent to assist the Chinese in prosecuting the war soon discovered that, as indicated above, the long struggle had seriously weakened the Chinese Government, not only militarily and economically, but also politically and in morale. The reports of United States military and diplomatic officers reveal a growing conviction through 1943 and 1944 that the Government and the Kuomintang had apparently lost the early crusading spirit that won them the people's loyalty during the early years of the war. In the opinion of many observers they had sunk into corruption, into a scramble for place and power, and into reliance on the United States to win the war for them and to preserve their own domestic supremacy. The Government of China, of course, had always been a one-party rather than a democratic government, in the Western sense. The stresses and strains of war were now rapidly weakening such liberal elements as it did possess and strengthening the grip of the reactionaries who were indistinguishable from the war lords of the past. The mass of the Chinese people were coming more and more to lose confidence in the Government.

It was evident to us that only a rejuvenated and progressive Chinese Government which could recapture the enthusiastic loyalty of the people could and would wage an effective war against Japan. American officials repeatedly brought their concern with this situation to the attention of the generalissimo and he repeatedly assured them that it would be corrected. He made, however, little or no effective effort to correct it and tended to shut himself off from Chinese officials who gave unpalatable advice. In addition to a concern over the effect which this atrophy of the central Chinese administration must have upon the conduct of the war, some American observers, whose reports are also quoted in the attached record, were concerned over the effect which this deterioration of the Kuomintang must have on its eventual struggle, whether political or military, with the Chinese Communists. These observers were already fearful in 1943 and 1944 that the National Government might be so isolating itself from the people that in the postwar competition for power it would prove itself impotent to maintain its authority. Nevertheless, we continued for obvious reasons to direct all our aid to the National Government.

This was of course the period during which joint prosecution of the war against Nazi Germany had produced a degree of cooperation between the United States and Russia. President Roosevelt was determined to do what he could to bring about a continuance in the postwar period of the partnership forged in the fire of battle. The peoples of the world, sickened and weary with the excesses, the horrors, and the degradation of the war, shared this desire. It has remained for the postwar years to demonstrate that one of the major partners in this world alliance seemingly no longer pursues this aim, if indeed it ever did.

When Maj. Gen. Patrick J. Hurley was sent by President Roosevelt to Chungking in 1944 he found what he considered to be a willingness on the part of the National Government and the Chinese Communists to lay aside their differences and cooperate in a common effort. Already they had been making sporadic attempts to achieve this result.

Previously and subsequently, General Hurley had been assured by Marshal Stalin that Russia had no intention of recognizing any government in China except the National Government with Chiang Kai-shek as its leader. It may be noted that during the late war years and for a time afterward Marshal Stalin reiterated these views to American officials. He and Molotov expressed the view that China should look to the United States as the principal possible source of aid. The sentiments expressed by Marshal Stalin were in large part incorporated in the Sino-Soviet treaty of 1945.

From the wartime cooperation with the Soviet Union and from the costly campaigns against the Japanese came the Yalta Agreement. The American Government and people awaited with intense anxiety the assault on the main islands of Japan which it was feared would cost up to a million American casualties before Japan was conquered. The atomic bomb was not then a reality and it seemed impossible that the war in the Far East could be ended without this assault. It thus became a primary concern of the American Government to see to it that the Soviet Union enter the war against Japan at the earliest possible date in order that the Japanese Army in Manchuria might not be returned to the homeland at the critical moment. It was considered vital not only that the Soviet Union enter the war but that she do so before our invasion of Japan, which already had been set for the autumn of 1945.

At Yalta, Marshal Stalin not only agreed to attack Japan within two or three months after VE-day, but limited his "price" with reference to Manchuria substantially to the position which Russia had occupied there prior to 1904. We for our part, in order to obtain this commitment and thus to bring the war to a close with a consequent saving of American, Chinese and other Allied lives, were prepared to and did pay the requisite price. Two facts must not, however, be lost sight of in this connection. First, the Soviet Union when she finally did enter the war against Japan, could in any case have seized all the territories in question and considerably more regardless of what our attitude might have been. Second, the Soviets on their side in the Sino-Soviet Treaty arising from the Yalta Agreement, agreed to give the National Government of China moral and material support and moreover formalized their assurances of noninterference in China's internal affairs. Although the unexpectedly early collapse of Japanese resistance later made some of the provisions of the Yalta Agreement seem unnecessary, in the light of the predicted course of the war at that time they were considered to be not only justified but clearly advantageous. Although dictated by military necessity, the Agreement and the subsequent Sino-Soviet Treaty in fact imposed limitations on the action which Russia would, in any case, have been in a position to take.

For reasons of military security, and for those only, it was considered too dangerous for the United States to consult with the National Government regarding the Yalta Agreement or to communicate its terms at once to Chungking. We were then in the midst of the Pacific war. It was felt that there was grave risk that secret information transmitted to the Nationalist capital at this time would become available to the Japanese almost immediately. Under no circumstances, therefore, would we have been justified in incurring the security risks involved. It was not until June 15, 1945, that General Hurley was authorized to inform Chiang Kai-shek of the agreement.

In conformity with the Russian agreement at Yalta to sign a treaty of friendship and alliance with Nationalist China, negotiations between the two nations began in Moscow in July 1945. During their course, the United States felt obliged to remind both parties that the purpose of the treaty was to implement the Yalta agreement—no more, no less—and that some of the Soviet proposals exceeded its provisions. The treaty, which was signed on August 14, 1945, was greeted with general satisfaction both in Nationalist China and in the United States. It was considered that Russia had accepted definite limitations on its activities in China and was committed to withhold all aid from the Chinese Communists. On September 10, however, our embassy in Moscow cautioned against placing undue confidence in the Soviet observance of either the spirit or letter of the treaty. The subsequent conduct of the Soviet Government in Manchuria has amply justified this warning.

When peace came the United States was confronted with three possible alternatives in China: (1) It could have pulled out lock, stack, and barrel; (2) it could have intervened militarily on a major scale to assist the Nationalists to destroy the Communists; (3) it could, while assisting the Nationalists to assert their authority over as much of China as possible, endeavor to avoid a civil war by working for a compromise between the two sides.

The first alternative would, and I believe American public opinion at the time so felt, have represented an abandonment of our international responsibilities and of our traditional policy of friendship for China before we had made a determined effort to be of assistance. The second alternative policy, while it may look attractive theoretically and in retrospect, was wholly impracticable. The Nationalists had been unable to destroy the Communists during the 10 years before the war. Now after the war the Nationalists

were, as indicated above, weakened demoralized, and unpopular. They had quickly dissipated their popular support and prestige in the areas liberated from the Japanese by the conduct of their civil and military officials. The Communists on the other hand were much stronger than they had ever been and were in control of most of North China. Because of the ineffectiveness of the Nationalist forces which was later to be tragically demonstrated, the Communists probably could have been dislodged only by American arms. It is obvious that the American people would not have sanctioned such a colossal commitment of our armies in 1945 or later. We therefore came to the third alternative policy whereunder we faced the facts of the situation and attempted to assist in working out a modus vivendi which would avert civil war but nevertheless preserve and even increase the influence of the National Government.

As the record shows, it was the Chinese National Government itself which, prior to General Hurley's mission, had taken steps to arrive at a working agreement with the Communists. As early as September 1943 in addressing the Kuomintang Central Executive Committee, the Generalissimo said, "we should clearly recognize that the Communist problem is a purely political problem and should be solved by political means." He repeated this view on several occasions. Comprehensive negotiations between representatives of the Government and of the Communists, dealing with both military cooperation and civil administration, were opened in Sian in May 1944. These negotiations, in which Ambassador Hurley later assisted at the invitation of both parties between August 1944 and September 1945, continued intermittently during a year and a half without producing conclusive results and culminated in a comprehensive series of agreements on basic points on October 11, 1945, after Ambassador Hurley's departure from China and before General Marshall's arrival. Meanwhile, however, clashes between the armed forces of the two groups were increasing and were jeopardizing the fulfillment of the agreements. The danger of widespread civil war, unless the negotiations could promptly be brought to a successful conclusion, was critical. It was under these circumstances that General Marshall left on his mission to China at the end of 1945.

As the account of General Marshall's mission and the subsequent years in chapters V and VI of the underlying record reveals, our policy at that time was inspired by the two objectives of bringing peace to China under conditions which would permit stable government and progress along democratic lines, and of assisting the National Government to establish its authority over as wide areas of China as possible. As the event proved, the first objective was unrealizable because neither side desired it to succeed: the Communists because they refused to accept conditions which would weaken their freedom to proceed with what remained consistently their aim, the communization of all China; the Nationalists because they cherished the illusion, in spite of repeated advice to the contrary from our military representatives, that they could destroy the Communists by force of arms.

The second objective of assisting the National Government, however, we pursued vigorously from 1945 to 1949. The National Government was the recognized Government of a friendly power. Our friendship, and our right under international law alike, called for aid to the Government instead of to the Communists who were seeking to subvert and overthrow it. The extent of our aid to Nationalist China is set forth in detail in chapters V, VI, VII, and VIII of the record and need not be repeated here. The National Government had in 1945, and maintained until the early fall of 1948, a marked superiority in manpower and armament over their rivals. Indeed during that period, thanks very largely to our aid in transporting, arming, and supplying their forces, they extended their control over a large part of north China and Manchuria. By the time General Marshall left China at the beginning of 1947, the Nationalists were apparently at the very peak of their military successes and territorial expansion. The following year and a half revealed, however, that their seeming strength was illusory and that their victories were built on sand.

The crisis had developed around Manchuria, traditional focus of Russian and Japanese imperialism. On numerous occasions, Marshal Stalin had stated categorically that he expected the National Government to take over the occupation of Manchuria. In the truce agreement of January 10, 1946, the Chinese Communists agreed to the movement of Government troops into Manchuria for the purpose of restoring Chinese sovereignty over this area. In conformity with this understanding the United States transported sizable Government armies to the ports of entry into Manchuria. Earlier the Soviet Army had expressed a desire to evacuate Manchuria in December 1945, but had remained an additional 2 or 3 months at the request of the Chinese Government. When the Russian troops did begin their evacuation, the National Government found itself with extended lines of communications, limited rolling stock, and insufficient forces to take over the areas being evacuated in time to prevent the entry of Chinese Communist forces, who were already in occupation of the countryside. As the Communists entered, they obtained the large stocks of matériel from the Japanese Kwantung Army which the Russians had conveniently abandoned. To meet this situation the National Government embarked on a series of military campaigns which expanded the line of its holdings to the Sungari River. Toward the end of these campaigns it also commenced hostilities within north China and succeeded in constricting the areas held by the Communists.

In the spring of 1946 General Marshall attempted to restore peace. This effort lasted for months and during its course a seemingly endless series of proposals and counterproposals were made which had little effect upon the course of military activities and produced no political settlement. During these negotiations General Marshall displayed limitless patience and tact and a willingness to try and then try again in order to reach agreement. Increasingly he became convinced, however, that 20 years of intermittent civil war between the two factions, during which the leading figures had remained the same, had created such deep personal bitterness and such irreconcilable differences that no agreement was possible. The suspicions and the lack of confidence were beyond remedy. He became convinced that both parties were merely sparring for time, jockeying for military position and catering temporarily to what they believed to be American desires. General Marshall concluded that there was no hope of accomplishing the objectives of his mission.

Even though for all practical purposes General Marshall, by the fall of 1946, had withdrawn from his efforts to assist in a peaceful settlement of the civil war, he remained in China until January 1947. One of the critical points of dispute between the Government and the Communists had been the convocation of the National Assembly to write a new constitution for China and to bring an end to the period of political tutelage and of one-party government. The Communists had refused to participate in the National Assembly unless there were a prior military settlement. The Generalissimo was determined that the Assembly should be held and the program carried out. It was the hope of General Marshall during the late months of 1946 that his presence in China would encourage the liberal elements in non-Communist China to assert themselves more forcefully than they had in the past and to exercise a leavening influence upon the absolutist control wielded by the reactionaries and the militarists. General Marshall remained in China until the Assembly had completed its work. Even though the proposed new framework of government appeared satisfactory, the evidence suggested that there had been little shift in the balance of power.

In his farewell statement, General Marshall announced the termination of his efforts to assist the Chinese in restoring internal peace. He described the deep-seated mutual suspicion between the Kuomintang and the Chinese Communist Party as the greatest obstacle to a settlement. He made it clear that the salvation of China lay in the hands of the Chinese themselves and that, while the newly adopted constitution provided the framework for a democratic China, practical measures of implementation by both sides would be the decisive test. He appealed for the assumption of leadership by liberals in and out of the Government as the road to unity and peace. With these final words he returned to Washington to assume, in January 1947, his new post as Secretary of State.

As the signs of impending disaster multiplied, the President in July 1947, acting on the recommendation of the Secretary of State, instructed Lt. Gen. Albert C. Wedemeyer to survey the Chinese scene and make recommendations. In his report, submitted on September 19, 1947, the General recommended that the United States continue and expand its policy of giving aid to Nationalist China, subject to these stipulations:

1. That China inform the United Nations of her request for aid.

2. That China request the United Nations to bring about a truce in Manchuria and request that Manchuria be placed under a Five-Power guardianship or a trusteeship.

3. That China utilize her own resources, reform her finances, her Government and her armies, and accept American advisers in the military and economic fields.

General Wedemeyer's report, which fully recognized the danger of Communist domination of all China and was sympathetic to the problems of the National Government, nevertheless listed a large number of reforms which he considered essential if that Government were to rehabilitate itself.

It was decided that the publication at that time of a suggestion for the alienation of a part of China from the control of the National government, and for placing that part under an international administration to include Soviet Russia, would not be helpful. In this record, the full text of that part of General Wedemeyer's report which deals with China appears as an annex to chapter VI.

The reasons for the failures of the Chinese National Government appear in some detail in the attached record. They do not stem from any inadequacy of American aid. Our military observers on the spot have reported that the Nationalist armies did not lose a single battle during the crucial year of 1948 through lack of arms or ammunition. The fact was that the decay which our observers had detected in Chungking early in the war had fatally sapped the powers of resistance of the Kuomintang. Its leaders had proved incapable of meeting the crisis confronting them, its troops had lost the will to fight, and its government had lost popular support. The Communists, on the other hand, through a ruthless discipline and fanatical zeal, attempted to sell themselves as guardians and liberators of the people. The Nationalist armies did not have to be defeated; they disintegrated. History has proved again and again that a regime without faith in itself and an army without morale cannot survive the test of battle.

The record obviously can not set forth in equal detail the inner history and develop-

ment of the Chinese Communist Party during these years. The principal reason is that, while we had regular diplomatic relations with the National Government and had the benefit of voluminous reports from our representatives in their territories, our direct contact with the Communists was limited in the main to the mediation efforts of General Hurley and General Marshall.

Fully recognizing that the heads of the Chinese Communist Party were ideologically affiliated with Moscow, our Government nevertheless took the view, in the light of the existing balance of forces in China, that peace could be established only if certain conditions were met. The Kuomintang would have to set its own house in order and both sides would have to make concessions so that the Government of China might become, in fact as well as in name, the Government of all China and so that all parties might function within the constitutional system of the Government. Both internal peace and constitutional development required that the progress should be rapid from one party government with a large opposition party in armed rebellion to the participation of all parties, including the moderate non-Communist elements, in a truly national system of government.

None of these conditions has been realized. The distrust of the leaders of both the Nationalist and Communist Parties for each other proved too deep-seated to permit final agreement, notwithstanding temporary truces and apparently promising negotiations. The Nationalists, furthermore, embarked in 1946 on an overambitious military campaign in the face of warnings by General Marshall that it not only would fail but would plunge China into economic chaos and eventually destroy the National Government. General Marshall pointed out that though Nationalist armies could, for a period, capture Communist-held cities, they could not destroy the Communist armies. Thus, every Nationalist advance would expose their communications to attack by Communist guerrillas and compel them to retreat or to surrender their armies together with the munitions which the United States has furnished them. No estimate of a military situation has ever been more completely confirmed by the resulting facts.

The historic policy of the United States of friendship and aid toward the people of China was, however, maintained in both peace and war. Since VJ-day the United States Government has authorized aid to Nationalist China in the form of grants and credits totaling approximately $2,000,000,000, an amount equivalent in value to more than 50 percent of the monetary expenditures of the Chinese Government and of proportionately greater magnitude in relation to the budget of that Government than the United States has provided to any nation of western Europe since the end of the war. In addition to these grants and credits, the United States Government has sold the Chinese Government large quantities of military and civilian war surplus property with a total procurement cost of over $1,000,000,000, for which the agreed realization to the United States was $232,000,000. A large proportion of the military supplies furnished the Chinese armies by the United States since VJ-day has, however, fallen into the hands of the Chinese Communists through the military ineptitude of the Nationalist leaders, their defections and surrenders, and the absence among their forces of the will to fight.

It has been urged that relatively small amounts of additional aid—military and economic—to the National Government would have enabled it to destroy communism in China. The most trustworthy military, economic, and political information available to our Government does not bear out this view.

A realistic appraisal of conditions in China, past and present, leads to the conclusion that the only alternative open to the United States was full-scale intervention in behalf of a government which had lost the confidence of its own troops and its own people. Such intervention would have required the expenditure of even greater sums than have been fruitlessly spent thus far, the command of Nationalist armies by American officers, and the probable participation of American armed forces—land, sea, and air—in the resulting war. Intervention of such a scope and magnitude would have been resented by the mass of the Chinese people, would have diametrically reversed our historic policy, and would have been condemned by the American people.

It must be admitted frankly that the American policy of assisting the Chinese people in resisting domination by any foreign power or powers is now confronted with the gravest difficulties. The heart of China is in Communist hands. The Communist leaders have foresworn their Chinese heritage and have publicly announced their subservience to a foreign power, Russia, which during the last 50 years, under czars and Communists alike, has been most assiduous in its efforts to extend its control in the Far East. In the recent past, attempts at foreign domination have appeared quite clearly to the Chinese people as external aggression and as such have been bitterly and in the long run successfully resisted. Our aid and encouragement have helped them to resist. In this case, however, the foreign domination has been masked behind the facade of a vast crusading movement which apparently has seemed to many Chinese to be wholly indigenous and national. Under these circumstances, our aid has been unavailing.

The unfortunate but inescapable fact is that the ominous result of the civil war in China was beyond the control of the Government of the United States. Nothing that this country did or could have done within the reasonable limits of its capabilities could have changed that result; nothing that was left undone by this country has contributed to it. It was the product of internal Chinese forces, forces which this country tried to influence but could not. A decision was arrived at within China, if only a decision by default.

And now it is abundantly clear that we must face the situation as it exists in fact. We will not help the Chinese or ourselves by basing our policy on wishful thinking. We continue to believe that, however tragic may be the immediate future of China and however ruthlesss a major portion of this great people may be exploited by a party in the interest of a foreign imperialism, ultimately the profound civilization and the democratic individualism of China will reassert themselves and she will throw off the foreign yoke. I consider that we should encourage all developments in China which now and in the future work toward this end.

In the immediate future, however, the implementation of our historic policy of friendship for China must be profoundly affected by current developments. It will necessarily be influenced by the degree to which the Chinese people come to recognize that the Communist regime serves not their interests but those of Soviet Russia and the manner in which, having become aware of the facts, they react to this foreign domination. One point, however, is clear. Should the Communist regime lend itself to the aims of Soviet Russian imperialism and attempt to engage in aggression against China's neighbors, we and the other members of the United Nations would be confronted by a situation violative of the principles of the United Nations Charter and threatening international peace and security.

Meanwhile our policy will continue to be based upon our own respect for the Charter, our friendship for China, and our traditional support for the open door and for China's independence and administrative and territorial integrity.

Respectfully yours,

DEAN ACHESON.

Farm Wage Hourly Rates by States, July 1948

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following table shows the farm wage hourly rates by States. It must be kept in mind that these labor rates per hour were being paid while agricultural products were bringing up to 150 percent of parity. If agricultural products drop to 90 percent of parity, you can see that these rates may be considerably lower.

The table follows:

Farm wage hourly rates by States, July 1948

[Cents per hour]

Tennessee	31
Alabama	32
Mississippi	32
South Carolina	34
Louisiana	36
Georgia	37
Arkansas	39
Kentucky	39
North Carolina	43
West Virginia	44
Florida	45
Virginia	47
Texas	50
New Mexico	51
Missouri	54
Oklahoma	57
Ohio	57
Pennsylvania	58
Arizona	59
Indiana	59

It's Easier To Get Out

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the News Review, London, England, for June 9, 1949:

IT IS EASIER TO GET OUT

(Doubts about mental hospitals have been aroused in the public mind by the Hollywood film, The Snake Pit. (News Review, May 26.) One widespread impression is that it is easier to get in than to get out.)

Perhaps nowhere else has the law been at such pains to protect the individual as in the matter of insanity.

All the old notions have been swept away. Even the word "insanity" is now taboo. Patients are "mentally unsound," and they are no longer inmates of an "asylum," but of a "mental hospital." This is the direct consequence of the century's revolution in psychological medicine.

Between sanity and insanity there are unnumbered rainbow tints of mental states. Few people are 100 percent sane or insane.

How, then, are people sent into mental hospitals? A subject can be detained against his will, when the issue is his unsoundness of mind, only under order of a person authorized by law.

This authority may follow on a petition and be dealt with by a justice of the peace, or the commissioners of the board of control (which replaced the commissioners in lunacy), or, in certain cases, by a master in lunacy.

Every safeguard has been taken to ensure the utmost protection of the individual, both as to being placed under restraint, properly treated while under restraint, and set free as soon as the necessity for restraint has passed.

Take the hypothetical case of a woman who has been "funny" for a long time, but now believes it is her mission to set fire to haystacks. The family's doctor says that it is time she went into a mental hospital.

"And this is what we'll have to do about it," he explains. "I shall have to get another doctor who is quite independent of me to examine her. He'll have to examine her alone. I mustn't be present. He will then say what he thinks of her mental condition. I shall then examine her myself and make a report, also.

"We now have to apply by petition from her nearest relative. With the petition will go the two medical certificates."

The petition, with statement of particulars, goes with two medical certificates before a justice of the peace, a county court judge or a stipendiary magistrate.

"We have to go carefully," explains the family physician. "I think she is of unsound mind. But I must be certain, otherwise she can 'have the law on me.'"

He then relates the case of the doctors who certified a Mr. Harnett in 1927. Mr. Harnett escaped, brought an action for damages, and won, but because of a legal point did not receive any money.

When the petition is laid before the proper judicial authority, that is not the end of the matter.

A few days later the physician reports to the family that the judge wants to see the patient; feeling that if she was manageable at home for 20 years she may not need to be made the subject of an order now.

Assuming that the judge is satisfied, the patient enters a mental hospital, but within 24 hours she is told in writing that she has the right to see a judicial authority if she so desires. The medical superintendent who omits this notification may be fined £20 for neglect.

In a different category is the voluntary patient—the man who is not insane in the crude sense of that word, but who has broken down under the strain of high-pressure modern life.

To such a case the family physician says, or ought to say, something like this: "Nobody can define the line between sanity and insanity. It is a shading off, and very few can claim to be without some sort of mental foible. Now you are sane, but I would not like to say you will be a year hence if you do not have early treatment."

If he is wise, the patient accepts the verdict. He is not insane. He is a nerve case about to undergo treatment. He can go whenever he likes and is as free, as regards his person, as a hotel visitor. The vast majority of these cases come out cured.

The law has also taken great care to protect patients under restraint, and to make sure that they are released when capable of managing themselves and their affairs.

Any patient must be released if the petitioner for the reception order, or someone acting for him, insists. The exception: if the demand is made where the patient is a danger, both to himself and to others, the medical superintendent may certify to that effect and hold the subject of the application for release for further treatment.

Patients are no longer cut off from the world, whether voluntary or under a reception order. There are visits from the commissioners of the board of control who have power to inquire into a case and order release if they think it the proper course.

If visiting commissioners from the board of control deem a patient wrongly detained, they can order release within 7 days. Anyone can apply to have the patient medically examined by two doctors, and, if after two visits over 7 days they find the patient sane, the board of control may order release.

To detain a patient after such an order has been made is a misdemeanor.

Just as it is exceedingly difficult to enter a mental hospital, to get out is relatively simple.

A Citizen From the Grass Roots Speaks

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. SMITH of Kansas. Mr. Speaker, recently my attention was called to a letter in the Wilson World, written by Mr. Ray Mikulecky, of Wilson, Kans. This letter clearly points out the dangerous road we are about to travel. We who believe that it is time to call a halt to so many of these new ideas get a great deal of inspiration from such letters.

I commend it for your reading:

Our folks who plug for various kinds of social controls seem to think they voice the latest word in progress. This discards the wisdom of Solomon, who proclaimed there was nothing new under the sun.

These social thinkers believe they have something new and better than anything that has gone before. That is not necessarily so. Friends, their thinking is faulty. Controls are nothing new.

Except for America, most of the world is a huge political graveyard littered with corpses of dead nations—nations that accepted controls and planning and central planning as the latest thing out. These were the nations that tried the very things being proposed in our Congress. The only thing different now is the way it is done. Then some king or tyrant said he'd control things the way he wanted, and did. The people let him go ahead and he charged them taxes.

Today in America there are groups that would like special privileges for themselves. There are persons athirst for political power, who want to run things for everybody. The words "freedom" and "liberty" are not on their lips. But knowing this is a Republic where those who make the laws represent the people, these controllers use agitation for idealism to stir up the people.

In principle most all of us recognize the danger to our independence and liberty if Government actvities are extended in matters that can be handled by private citizens and the States. We know that government is best when kept where the people live. Yet these propagandists get people so impatient "to advance the welfare" that some folks will submit to control and to loss of liberty.

I believe that the proposed Federal aid to schools is a good example of this. For 30 years Congress has refused to pass such bills. But because the Federal Government has its huge power of taxation, the planners keep insisting so many wonderful things may be done in Washington. The people are told they will receive benefits which are impossible of fulfillment. Even to attempt them would change the whole pattern of the American way of life.

My 50 Years or More in Mining

EXTENSION OF REMARKS
OF
HON. REVA BECK BOSONE
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mrs. BOSONE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by J. C. Jensen, at the second annual convention, Central Idaho Mining and Industrial Association, Hailey, Idaho, June 11, 1949:

Mr. Chairman, ladies, gentlemen, dignitaries from Washington, mine operators, prospectors, members of the small-mine operators' association, and visitors, I appear before you by invitation from our friend, Mr. New, executive secretary of the Central Idaho Mining and Industrial Association, who asked me to talk to you on my 50 or more years of mining.

Inasmuch as Mr. New gave me only 20 minutes for this job and later cut me down to 15 minutes—and fully realizing early in life that in order to be able to direct, one must first learn to obey—I accepted the assignment.

In addition to a résumé of some of my experiences in mining, I will point out the desperate need for protection of our mining industry, not only as a means of profit but also as a necessity for our national safety and as a means of developing our own country and providing employment for our own men, instead of financing the development of mines in foreign countries, which, even if the mines are successful, are hazardous investments and could be entirely inaccessible to us in case of war, through sabo-

tage by our enemies, and, or, even taken over by them.

A brief statement, I hope, will take care of Mr. New's request for a talk on my 50 years of mining, which covers a large part of my life.

In addition to my good wife, five outstanding men have helped to shape my life.

The first one was my father, whose admonition was "Whatever you do in life, first learn to do it well, then after that learn to do it fast." And also, "You must first learn to obey in order to be able to direct, or command."

The second one was my friend, J. M. Callow, the father of the General Engineering Co., who became world famous. I built and put into operation the first mill he designed.

The third one was John Dern, my friend, and the father of George Dern, former Governor of Utah and later Secretary of War, who also was my friend. I was superintendent for the Dern interests in the Tintic district, Utah, when D. C. Jackling, the father of the Utah Copper, was their chemist at Mercur. This was before there was a Utah Copper.

The fourth one was "Uncle" Jesse Knight, whom everybody, in fondness, called "Uncle." He was one of the outstanding developers of mining in early days and also my friend. I was vice president and general manager in a number of properties in Colorado and Utah of which he was president and financial backer."

The fifth one was my friend, E. H. Snyder, the present-day wizard of mine-mill and metallurgical development and general manager of Combined Metals Reduction Co. I have for 32 years, since its inception, been vice president and director in the Combined Metals, Inc., the parent company.

I was also one of the organizers of the Combined Metals Reduction Co. and a director for many years, with E. H. Snyder, of that company.

During the First World War, I served as a member of the executive committee of the war minerals division of the American Mining Congress, with headquarters at 744 Munsey Building, Washington, D. C.

The records there, as well as the CONGRESSIONAL RECORD, will show that we accomplished a great deal for the benefit of the mining industry and the small operators, and successfully defeated the adverse interests to mining, as well as exposed plain misrepresentation on the part of selfish interests.

However, I am not speaking today in connection with my positions mentioned above—but as an individual having the mining industry and the safety of our country at heart.

My own relation to mining is best expressed when I say it has been my aim to help develop the country and find employment for men.

I have been able to do this with the help of the Lord and my friends who are legion. These friends were men of integrity, loyalty, experience, faith, and were unwilling to take no for an answer—but always willing to, in the final, bet on their own judgments.

The road has been long—but never tedious—though smaller men, selfish men, ignorance, and the words, "It can't be done" has stood in our way, at times, but never swayed our purpose.

As an illustration, we had 125,000 tons of ore blocked in the combined metals at Pioche, assaying 8 lead, 8 silver, 18 zinc. When we tried to market it we found it worthless—the smelters would not take it under any consideration on account of the zinc.

We had no encouragement from the smelters; they simply did not want it on account of the zinc content. This was a blow to us who had spent our money developing and blocking the 125,000 tons. The smelters could not or would not do anything on account of the 360 pounds of zinc per ton contained in the ore—notwithstanding the fact that at that time 30 to 40 percent of the weight of every automobile tire made (except a few freak ones) was zinc oxide.

Portraying a condition unthinkable—on the face of it we were assumably licked—down, but not out, so we rolled up our sleeves, rustled more money, $30,000 of which came from London, England, and we went to work to solve the problem.

We did solve it, but time will not permit going into detail. I have in my office three slugs of lead, refined lead, the first one made cone-shaped resembling a small loaf of sugar, the second one small square-oblong with protruding letters "Pioche lead," now used for paper weights, and the third one, a 90-pound bar of refined lead, the first bar of refined lead made in the West, made without going to refineries in the East, made out of that dirty mixed complex ore which the smelters would not take, and made in our own plant at Bauer.

The first step in our success of separation by flotation was worked out in our own laboratory, on a Janny machine by N. C. Christensen, a young metallurgical and chemical genius who is still with us. We later turned to, and pioneered, the Fagergren flotation machine.

But long before that, and the foundation of the whole set-up was 125 tests made by another, now well-known genius, E. H. Snyder. These tests were the basis of he and I joining hands, in conquering, an unconquerable problem.

After our success on flotation, the smelters got interested, which resulted in three flotation mills in this district: our mill at Bauer, the United States mill at Midvale, and the International mill at Tooele. Eight years ago we completed another mill at Pioche.

In other words, our metallurgical pioneering 25 years ago on an ore that was pronounced worthless by the smelters, has resulted in the profitable mining and milling of 3,500 tons per day, or more than a million tons per year of this class of ore in the four mills mentioned above; thus enriching our country, giving employment to an army of men, and providing on a large scale metals so badly needed.

It is time now that something is said on the mining industry itself. It is in a deplorable condition.

My mining experience dates back to 1891, when I made my first mining investment 58 years ago. My milling experience goes back considerably longer than that.

Mining for profit is one thing; mining for use and for the protection of our country is another thing.

Development of our country and providing employment for our own men is the duty of industry and of every individual who is able to do so.

We are all of us citizens of the greatest country in the world, essentially our brother's keeper, without limitation as to creed or nationality.

Importation of metals and subsidizing developments of mines in foreign countries at the expense of nondevelopment of our own mines (unless through ignorance) shocks an old-timer and to him borders on treason.

As far as mining and metals are concerned we must have more mines and more metals of our own, in our own country, or we will lose the next war.

Development and subsidizing of foreign mines not alone endangers our national safety and robs our own men of employment, but destroys our market, as witnessed by the present depression in metal prices.

Destruction of our market will, in turn, result in the shutting down of more mines, again increasing unemployment—a vicious cycle without end.

This procedure of importing metals, however, has another aspect which is threefold:

1. Temporary overstocking of metals.

2. Encouraging nondevelopment of new mines in our own country.

3. Development and equipping of foreign mines, which in turn will be left vulnerable to the enemy in time of war, unless we protect them.

This (protection of foreign mines) will add to our burden, further jeopardizing our national safety in time of war—imposed by our enemies—who in this scientific age can keep us from importing.

Stock piling is mentioned as a protection, which in itself is a folly. No matter how much imported metals we stock pile—2, 3, 4, or even 5 years of stock piling has an end, and becomes a false hope, if not backed by a healthy mining industry in our own country.

We are fortunate, at this critical time, to have a man in Washington at the head of the Bureau of Mines, who believes in our mines and mining industry, and who is concerned with the safety of our country and that of our allies.

James Boyd has demonstrated that he is willing, and has shown his ability to fight for what is right.

With a man like James Boyd in Washington at the helm of our Bureau of Mines, we are in good hands.

This is different to our position in the first war when Mr. Spur, the then head of the Bureau of Mines, allowed himself and the Department to be hoodwinked by the misrepresentation of the main importer of pyrites from Spain.

This man had come to Washington and offered his service as a dollar-a-year man on allocation of pyrite—claiming that there was no pyrite to be had in this country.

Spur allowed the wool to be pulled over his eyes and the eyes of the Department, by this man, and did not investigate or contradict his assertions.

Though we in Rico, Colo., had responded to the urgent request to the mining industry of President Wilson to help win the war by developing war minerals—manganese, pyrite, tungsten, chrome. We had opened up, in Rico, deposits of pyrite that would have allowed us to start producing any amount needed and, as proven later, millions of tons to draw from.

The importer, by falsifying maps and reports, kept us off the market and continued importing his own product from Spain. He, in 1917, imported nearly 700,000 tons of his own product and allowed Naylor & Co. to import 300,000 tons, nearly a million tons of an inferior grade.

The sulfur content of this imported product was only 27 to 35 percent sulfur, where our Rico product assayed 50 to 51 percent sulfur. The iron in his product was worthless. Our Rico product would assay (in the crude before extracting the sulfur) 45 to 46 iron, very high grade, with no detrimental impurities, good for high-speed guns and other war implements. His imported iron was entirely worthless.

The sulfur was badly needed for ammunition at that time as also was the iron—and careful supervision of Mr. Spur and the Department would have corrected the misrepresentation of the importer.

Mr. Spur quit the Department early in 1919 for a position with the Engineering and Mining Journal. His first editorial was, quote, "As far as metal mining in this country is concerned it is a thing of the past. We will have to look to foreign countries for our future supply."

It should be obvious that if we had followed his advice and not developed our mines, we as a Nation and our allies, would have lost the last war.

The lamentable part is that, until lately, men in the Department in Washington have been singing the same song.

As stated before we have with us today Mr. Boyd. We are thankful for his presence. We need him to help guide our ship.

We have with us also the new organization of the Small Mine Operators and Prospectors. They are the present and future pioneers of mine development.

We must, as stated before, have new mines for the safety of our country. This problem is up to the small mine operators organization and to individuals with courage.

It is hoped that the bill to be presented to Congress, as rewritten, will be passed, and thus provide help on a sliding scale—for their protection—for the protection and encouragement of the mining industry—and for our national protection by providing new mines so badly needed.

Let us all put our shoulder to the wheel and remember that teamwork is the key note.

Thank you.

Federalization of State National Guards

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. ELLIOTT. Mr. Speaker, there has been considerable agitation that the National Guards of the several States be taken from under the control of the States and merged with the Reserve components of the regular armed forces of the United States.

In other words the agitation is to federalize the National Guard.

Mr. Speaker, the National Guard should not be federalized. Guard units are a source of local pride to the hundreds of communities throughout this country where they are located.

To federalize the National Guard would be to jeopardize the enthusiasm and support of the local communities which it now enjoys.

The National Guard has gloriously proven itself as an efficient fighting force on the battlefields of two World Wars. Today it is well organized, well equipped, and well trained.

Mr. Speaker, I am proud to report that the National Guard of Alabama stands high in its relationship to the guard organizations of the other States.

As a part of my remarks I include a senate joint resolution relating to the National Guard, recently passed by the Legislature of Alabama:

Senate joint resolution to memorialize the Congress, the President, and the Secretary of Defense of the United States in protest against all proposals for federalization of the National Guard

Whereas a Board appointed by the Secretary of Defense of the United States, known as the Gray Board, has recommended that the National Guards of the several States be taken from under the controls of the several States and Territories and merged with the Federal Reserve components of the Regular armed forces of the United States, with the ground units to be known as the National Guard of the United States and the Air National Guard to become a part of the Air Force Reserve, and with the States to be allowed to maintain only small limited-duty types of home-security units; and

Whereas not only is there continued agitation by various elements in favor of federalization of the National Guards of the several States and Territories, but there are persistent and determined efforts being made by the United States Air Force to obtain the federalization of the Air National Guard and take control away from the several States and Territories by either direct or indirect means and methods; and

Whereas the National Guard Association of the United States, the Adjutant General's Association, and the National Guard Officer's Association of Alabama, have formally and vigorously gone on record in protest against any form of federalization of any part of the National Guard as now constituted; and

Whereas the Governor and Adjutant General of Alabama have gone on record as definitely opposed to the federalization of any part of the National Guard; and

Whereas the Alabama National Guard, and the National Guard of the several other States, Territories, and the District of Columbia, have over many years maintained and provided for the defense of those States, Territories, and the District of Columbia and the Nation, well organized, well trained, well equipped, and efficient fighting forces, which in many emergencies and in two great world wars have gloriously demonstrated their worth and capabilities as efficient fighting forces; and

Whereas the National Guard, as federally recognized State forces, have traditionally enjoyed and do now enjoy a remarkable degree of local pride and support, and benefit from a splendid spirit of enthusiasm, zeal, and voluntary contribution of time and personal effort by members of the units over and above that required of them, which local support and unit esprit de corps it is believed will not be given nearly so freely to a Federal Reserve force with no local ties; and

Whereas it is believed that maintenance of the National Guard in times of peace as State forces, without a centralized authority over all of the military forces of the Nation, affords the Nation and the individual States a valuable form of insurance of the preservation of the present republican form of democratic government; and

Whereas, in the light of the highly unsettled and troubled state of international affairs existing today, requiring the maintenance of strong, well-organized defense forces recognized as such by the other powers of the world, it is most undesirable and dangerous to the safety of the Nation that the National Guard, as a principal element of the Nation's military defensive system, be disrupted and weakened over a period of years while readjusting itself to such a radical change in organization and policy; and

Whereas the repeated efforts and demands of the Regular armed forces of the United States that the National Guard be federalized, if long persisted in, can impair the present high morale of the National Guard: Now, therefore, be it

Resolved by the State Senate of Alabama (the house of representatives concurring):

1. That the State of Alabama is unalterably opposed to federalization of the National Guard or any part thereof, and to any basic change in the legal status of the National Guard as now provided in the Constitution of the United States and in the National Defense Act as presently amended.

2. That the heads and General Staffs of the regular armed services should be firmly instructed by proper authority to cease their efforts and waste of time in trying to destroy and disrupt a well-planned, time- and war-tested national military policy which has enabled the United States to win every great war in which it has been engaged by the use of vast civilian armies based upon the present Militia or National Guard system.

3. That the State of Alabama, in continuance of its past demonstration of its good faith, continues willing to provide for the Alabama National Guard all of the attention and support needed from the State of Alabama and its local communities and citizens for the continued maintenance of the Alabama National Guard at the highest possible state of organization, training, efficiency, and esprit possible in any type of part-time military force.

4. That the actions of the Governor and the Adjutant General of Alabama in protest and opposition to all efforts and proposals for federalization in any form of any part of the National Guard are hereby ratified and confirmed, and that they should continue their firm opposition to all such proposals and efforts.

5. That the Senators and Representatives in the Congress of the United States from the State of Alabama are hereby requested to oppose and vote against any and all proposals for the federalization in any form of any part of the National Guard as presently constituted under the Constitution of the United States and the National Defense Act as presently amended.

6. That the Secretary of State of Alabama is hereby instructed to forward certified copies of this resolution to the President of the United States, the Secretary of Defense of the United States, the United States Senators and all Representatives from Alabama in the Congress of the United States, the chairmen of the Armed Services Committees of both Houses of the Congress of the United States, the president of the National Guard Association of the United States, the president of the Adjutants General Association, and the governors and the adjutants general of all the other States, Territories, and the District of Columbia.

Approved August 4, 1949.

Tennessee-Tombigbee Waterway

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. ELLIOTT. Mr. Speaker, one of the greatest projects this Congress could undertake would be the construction of the Tennesee-Tombigbee inland waterway.

It is justified in terms of present and future needs.

It is justified in terms of its value to our national defense.

As a part of my remarks I include an article by Dr. W. A. Evans headed "The Tombigbee River, yesterday and today—the Timbigbee inland waterway tomorrow," which article appeared in a recent issue of the Aberdeen Examiner, of Aberdeen, Miss.:

THE TOMBIGBEE RIVER, YESTERDAY AND TODAY—THE TOMBIGBEE INLAND WATERWAY TOMORROW

(By Dr. W. A. Evans)

(This was the last article written by Dr. Evans before his death.)

When one crosses the Tombigbee on Highway 41, near Amory, he is disappointed at its size, and the small volume of water it sometimes carries. How could so small a stream be so well known and of such repute—and capable of such tremendous possibilities of

good for this immediate section, and the Nation? The answer is easily found. You see at once that the banks are high, and the bed of the stream has a large carrying capacity. Nature intended that the Tombigbee should be a sure-enough river and not merely a scratch in the sand. Who has mixed up this plan and made the stream what it is?

In the main this is the work of man, and the white man at that. When the country was as God made it the Tombigbee Valley was densely wooded. The rainwater as it fell was held back by the trees, their branches, their leaves, and their roots. And in consequence, the bed of the stream carried a depth and breadth of water that was much larger than is usually the case; and boats from Mobile to Aberdeen, Cotton Gin, Camargo (and some times to City Point and Fulton) had ample time to come up on the high water, load with cotton, pelts, honey, and brandy, take on passengers, and get back to Mobile while the water held.

If this river was once a community asset, and the work of man has converted it into a community liability, is it not fair to ask that man's government change this stream from a community liability to an asset? But the easily accessible records show that this comparatively small stream once had a large freight and passenger traffic, via steamboats, and now has none is not the only reason for its repute.

From the very beginning, when the white man first looked on this stream, he saw its magnificent possibilities—political, economic, and military. He was impressed more by what his imagination told him than he was by what his eyes saw.

About 200 years ago, the French Government detached one of its ambassadors, by whatever name he was called, and sent him to the Tombigbee Valley to report on its possibilities, both military and economic. His report was satisfactory, because presently we find the French Government trying to settle the Tombigbee Valley, and to use it as a base for capturing the Mississippi Valley, and then use it as a foundation on which to pin the English to a small territory east of the mountains, and along the Atlantic seaboard.

They began by developing Mobile and Biloxi, and then building a series of forts up the Tombigbee. These forts were at Epes, Plymouth, and the French fort near what was later Cotton Gin Port. They used this chain of forts as their bases for the battles of Ackia and other campaigns against the Chickasaws, Choctaws, Natchez, and other Indian tribes, as well as the British.

In that early period there was no American Government. The British knew very well what the French were up to, for it's reported of the Battle of Ackia that the French always saw British flags flying over the Indian forts, and in fact filed some more or less personal complaints about British flags flying over Indian troops, when France was not at the time in open war against Great Britain.

Aside from the other sources of information, in which dates are officially given, we find this French report proposing canals from the Tombigbee to the Tennessee before 1801, and that took a good deal of capacity to look into the future. Not many people besides John Rankin, the United States Army engineers, and about half of the United States Congress has been able to see into the future as far as these Frenchmen did, prior to 1801.

Mrs. George Wilson Newell, of Chattanooga, Tenn., has written a very beautiful book entitled "Natchez and the Pilgrimage." In this book she uses a cut taken from Carego's General Atlas of the United States, date 1814. This cut was made after 1814 because the Natchez Trace was not laid out until that year, and between that date and 1814. These canals connecting the Tennessee and Tombigbee were proposed long before the Natchez Trace was put in service.

These canals connecting the Tennessee and Tombigbee are two in number at the upper end, but only one at the lower end. They came out of the Tombigbee on the east side of that stream, above the mouth of Upper Town Creek, sometimes called the West Fork of the Tombigbee. They are labeled "proposed canals." They flowed in a northeasterly direction as one canal for about one-third of the distance to the Tombigbee, and then comes the fork. The West Fork ran into the Tennessee River just below Muscle Shoals, the other reached the south bank of Muscle Shoals, opposite the mouth of Duck River.

No claim is made that any technical survey of the routes of these canals was made, or that any details were given. The value that this map and the French reports on which it was based was that it showed that a French official sent to the Tombigbee by his government to make a report on the economic and military possibilities of the region could see that there should be a canal from the Muscle Shoals on the Tennessee River across to the Tombigbee River, and affording transportation from one river system to the other.

Later, a group of businessmen of New York and other eastern trading centers sent Bernard Romans to report on the trade, agricultural, and forestry possibilities of this region. He came down in the earlier days of the Revolutionary War. This man, Bernard Romans, traveled overland from Biloxi to the Pontotoc villages, and then on to Twenty Mile, somewhere near the present location of Booneville, Miss. When he reached Twenty Mile Creek, he had a boat built and launched, and on this vessel he went down the West Fork of the Tombigbee past Twenty-eight Mile Creek (now called Bull Mountain Creek), down the main river by Aberdeen and Columbus, Demopolis, Epes, the mouth of the Warrior, to the junction with the Alabama River, and later on he reached Mobile Bay. Bernard Romans made a formal and detailed report of his trip to his sponsors, and it is probably the first good description that we have of this river.

The report of the United States Government's engineers, which is of course by far the most thorough report that has ever been made on this river, says that the first report that has ever been made on the Tombigbee River was made in 1875. And 1875 is 73 years ago. Even on that showing, the proposed Tennessee Tombigbee inland waterway is not exactly a mushroom proposition, but at least two reports, of a kind, had already been made when Army engineers began their study in 1875.

Their report is entitled "Waterway Connecting the Tennessee and Tombigbee Rivers." Letter from the Secretary of War, transmitting a letter from the Chief of Engineers, United States Army, dated September 29, 1945. It states: "In obedience to a request in a resolution of the Committee on Rivers and Harbors adopted January 2, 1945, Seventy-ninth Congress, second session, House Document No. 486.

In the Evans Memorial Library at Aberdeen, Miss., we find with that report a map of the Tombigbee River and the proposed canals. This map shows the proposed location of each dam and cut-off, and the amount of land needed, and the land which will be flooded when the dams are built and the canal is constructed.

That there is a "something" about this river that gave it an appeal is shown by the fact that every people, both Indians and whites, who have seen the river, have given it a name which sounded big. The Indians called this river "Itomba Tykbi." The first white men to view the stream, feeling they could not wrestle with such words as Itomba-Tykbi and Iamba-Tynba, simplified matters by calling it the River of the Chickasaws. The Chickasaws had other rivers, but this was the only one to which the white man gave that title.

Later, the white man tried his hand at giving a high-sounding name to this striking river. Some of the names he gave it were Santa Spirites, or Holy Spirit; the Angels, Los Angeles River, the Mobile River or Manvilla.

The French finally built a fort near the present site of Epes, above Demopolis. They built this fort on a creek which flowed into the Mobile River near Epes. This creek was called Tom-beck-bee. The creek was named for an Indian officer who may have lived on it. The French named their fort, Fort Tombeekbee. Soon the name of the river was changed from Mobile River to Tom-beck-bee River, and the creek had to find another name.

It did not take the forthright early settlers of Mississippi and Alabama very long to Anglicize the Indian name Tom-beck-bee to Tombigbee. When I was a boy in Aberdeen, one of our citizens was named Tom Bigbee. At least we had to admit that the river had found its modern name elsewhere.

The steamboat traffic on the Tombigbee, even the upper Tombigbee, was no mean item up to the late 1870's. From several sources, principally bound volumes of the Mobile Register, by one name or another, I have gotten together the names of more than 100 steamboats which have made the port of Aberdeen. An officer of one of them, the *Lotus No. 2*, was later the president of the Western Lines of the Southern Pacific Railroad.

One of the most dramatic stories of a steamboat accident was that given by Dr. Wyatt of the burning of the steamboat *Eliza Battles*. This boat left Aberdeen on February 26, 1858, and was loaded with passengers bound for the Mardi Gras in Mobile. She burned to the water's edge and sank near Gainesville, Ala., on February 27, 1858, and nearly every passenger was lost. It was one of the worst steamboat disasters in history.

When Monroe County was organized by the State legislature in 1821, the purpose was to give service to the white people who had moved into the Indian country, and settled along the upper Tombigbee and the Buttahatchie. Soon there were boat landings at Gainesville, Columbus, Hamilton, Barton's Ferry, Morgan's Bluff, Cotton Gin, Camargo, Tatums, and other points. Then in 1834 to 1836 new lands having been ceded by the Indians, Robert Gordon saw the possibility of a town around a landing which he acquired, about 2 miles up the river from Morgan's Bluff. He named his town Aberdeen, and he was soon seeking to make it the county seat. He saw great possibilities in the steamboat landing on the Tombigbee River. He ran advertisements in the Mobile Register and other distant city papers, saying that by reason of the heavy traffic on the Tombigbee River, Aberdeen would eventually be the largest city in the world—larger than London. His fancy evidently ran away with his judgment. Clark Carr, in his history of Illinois, said that Cairo, Ill., by reason of its river traffic, would become the largest city in the world—larger than London, England. If Robert Gordon and Clark Carr ever met in "the Better World," they may have settled their differences over Aberdeen, Miss. and Cairo, Ill., let us hope, amicably.

And now for the Tombigbee inland waterway of tomorrow: I have ventured to suggest that this be called the Rankin waterway, and the Aberdeen Examiner has given the suggestion their approval. We have written that the Tombigbee River of the present was little more than a liability. It does give drainage to the area, and it serves some useful purposes, but it also requires expensive bridges and highways, and periodically it overflows and "drowns out" many of the

residents and their holdings. Two or three times in every decade, in recent times, the American Red Cross has been compelled to send rescue squads and relief workers into the Tombigbee area. The proposed waterway would stop all that. The dams would hold back the floodwaters, and feed it down the river just as fast as it could be advantageously used, and no faster. About three miles southeast of Aberdeen, United States Highway No. 45 crosses a creek now called Nichols Creek. This area is now the worst overflow area in this vicinity. Nichols Creek was once called Lann's Mill Creek, or Mill Creek. In that period there were five water mills on this creek, each with the stream regulated by a dam. In that period it was about the only creek in the county which never overflowed. The dams held back the floodwaters, and fed it into the creek as it was needed. Mill Creek in that period was a beautiful clear creek, which always served its masters, and never gave any trouble. But we can get a better example of the value of such stream development by going a little way from home. When the TVA was first proposed, it was claimed for it that it would stop the Tennessee from flooding, and in fact lower the flood stage on all the lower Mississippi. This claim has been fulfilled. When the Tennessee-Tombigbee inland waterway diverts a little of this well-controlled Tennessee down this way to operate dams on the Tombigbee, there will no longer be Tombigbee floods.

A study of the United States engineers' maps of the Tombigee shows that damming up the river about once in 20 miles will flood very little of the Tombigbee bottom lands—nothing to compare with flooding of the Tennessee bottom lands. The maps show that. You can see that in the deep banks, this water will be stored for navigation purposes. There will be an end to railroad-bridge washouts, and highway washouts. Barges will be traveling up the Tombigbee, almost with no currents to overcome. It will be slack-water navigation all the way. Boats will be going up and down the river. Transportation rates will be lowered, great industries will be developed. Many nonmetallic minerals, such as bauxite, bentonite, pottery clays, and lignites found here, will find a market.

But the proposed waterway will be a boon to commerce from a national standpoint. Distances will be shortened for all commerce on the Tennessee en route to tidewater, and shipment by sea. The same is true even for shipments from Pittsburgh and other points on the Ohio. The Tennessee-Tombigee offers them a cheaper and better outlet. And, from the standpoint of national defense, the Tennessee-Tombigee waterway is amply justified. Let's join hands and help get work started on this great waterway.

Must It Be Done?

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. SMITH of Kansas. Mr. Speaker, here is an editorial written by McDill Boyd, of the Phillipsburg Review, of Phillipsburg, Kans. It is so timely that I recommend that all read it. It points out clearly just what can happen to us as a Nation.

As we read our magazines we see many new and fine articles displayed in the advertising columns. We would like to have them, but each of us must, and do, ask: "Can we afford them?" Certainly, this article calls attention to this idea, "Can we afford it?" Must it be done?

MUST IT BE DONE?

Who can buy the bonds when times get tough again?

You may think this question doesn't affect you, but you're wrong—so badly wrong. It affects the future of every person—the wage earner, the civil-service employee, the farmer, the individual businessman, the needy aged, the teacher—everybody.

Who can buy the bonds when times get tough again?

Government money comes from us. We're the only source there is. When times get tough again we won't be making as much money and we'll pay less taxes of all kinds. At the same time, there will be more unemployed, and the demand for Government aid will go up.

With tax receipts going down and demand going up, the Government, to get funds, will ask us to buy bonds again—but who can buy the bonds?

The man who is out of a job?

The farmer who doesn't get a crop?

The businessman who is fighting lean years?

The public will be selling bonds to meet its needs when times get tough again.

How about the banks?

In 1941—that was a good year and most everybody made some money—in 1941, the First National Bank of Phillipsburg had $700,000 on deposit and $250,000 of that was invested in Government bonds.

In 1949, just 8 years later, there was $2,800,000 on deposit and $1,750,000 of that was invested in Government bonds.

If conditions would go back to 1941, the First National would be forced to sell at least $1,500,000 worth of Government bonds to meet the demands of its depositors and maintain its loaning service to this community.

Our bank is little different than other banks. Deposits are high everywhere, and most of the money is invested in Government bonds. Banks would be forced to sell bonds if the Nation's economy should revert to 1941. They would not be able to buy more.

If the Government cannot sell still more bonds, who will meet the civil-service pay roll? Who will pay the pensions? Where will funds come from for unemployment payments? From what source will the money come for farm price supports, reclamation projects, slum clearance, veterans' appropriations?

Printing-press money has ruined every country that ever tried it—but who can buy the bonds?

Nobody objects to the school-lunch program; farmers feel that price supports are essential to a sound agricultural economy; working men and women believe in social security; reclamation projects have their appeal in irrigated areas; an extra Government job in our town is rated a good thing (another wage earner); our aged persons in need must be cared for.

With Russia making threatening gestures throughout the world, we cannot quarrel with an adequate defense, nor with the idea of helping democratic peoples of the world become self-supporting.

We do not quarrel with worthy objectives, but some steps must be taken to insure the financial strength of our Government and protect the security of everybody.

The Government spent $3,000,000,000 more this fiscal year than last; at the same time tax receipts (for the period ending June 7) fell off nearly four billion. Every day the sun rises and sets, we are further "in the red"—and times are still good.

When depression hit us all in 1932, there were only a few Government bonds on the market. It was easy to sell bonds to finance Government aid. Who can buy the bonds this time?

What will your pension, your investments, your savings plans be worth if this generation fails to find the right answer?

New programs calling for new expenditures are now advocated. The number on the Federal pay roll continues to increase. The proposed budgets for various governmental activities are higher than ever.

We will not try to pick and choose the most worthy projects. We think that nearly everybody favors one expenditure or another. But we will suggest a yardstick:

"Must it be done?"

We think that every questionable or unnecessary expenditure today is another nail in the coffin of national security. We urge you to write your Congressman or Senator and ask him:

"Must it be done?"

If every expenditure is examined with that question in mind, we believe that out of present tax receipts a little something can be "laid by for a rainy day"—that an emergency surplus can be acquired which will provide the means to avert financial chaos in a declining economy.

Frankly, we doubt that anybody can buy bonds when times get tough again and a little cash on hand may save the day.

The Fight Is on To Preserve Individual Freedom and State Sovereignty

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. JENSEN. Mr. Speaker, the following editorial from the Idaho Statesman is indicative of the praiseworthy good fight which loyal Americans of the Northwest States are waging to preserve individual freedom and State sovereignty while there is yet time:

BY THEIR STRIPES YOU KNOW THEM

For all the time that the Columbia Valley Authority has been suggested for Idaho and the Northwest, the Statesman has honestly opposed the project. Our opposition is based on the fact that the law, if it were enacted, gives three political appointees dictatorial power over our State. This newspaper has consistently contended that it favors the orderly development of the natural resources of Idaho and the Northwest, on a basis of self-amortization, but we opposed the authority plan which would render helpless our laws and our courts.

We have also contended that the proposed Columbia Valley Authority law is dishonest and deceptive. We are suspicious of those men who are responsible for preparing the law. We have seen them change the word "authority" to "administration" and we have read the draft of the new bill. The deception is still there in a maze of words which say little except that in the final analysis the three-man board has absolute power over any area an authority covers, regardless of protests, regardless of right or wrong, regardless of courts, regardless of the welfare of the individual or the State.

But not until now have we come to the point of realization of all of our suspicions of dishonesty, treachery, trickiness, and deceit that is attached to the Columbia Valley Authority and to the men in Washington who are attempting to force this dictatorial government octopus upon us.

Saturday in Boise's Federal court, Secretary of the Interior Krug, the top man in the CVA drive, ordered the filing of a suit against the Idaho Power Co., for "willful trespass of public lands." The suit seeks an injunction against the power company which is building power transmission lines from a new power plant at Bliss to American Falls.

This is the most brazen affront to Idahoans t' come out of the entire CVA activities of the Department of the Interior.

The merits of this case will be decided in our courts. Not yet has the CVA been able to transcend these courts, as much as they hope one day to be able to do so. For this we can be temporarily thankful at least.

Just why would the Department of Interior file suit against the Idaho Power Co. for building transmission lines from Bliss to American Falls? The Idaho Power Co. has hundreds of miles of power transmission lines across Idaho sagebrush. For instance, there is the power line from Boise to Jordan Valley. And there are others.

But why this suit over new power lines from Bliss to American Falls?

This is our opinion:

Power lines moving in the direction of American Falls are moving in the direction of the proposed atomic-research plant at Arco. This plant was placed in Arco, in our carefully studied opinion, as a step to aid in forcing CVA upon Idaho. Public power available for the Arco plant stops CVA argument for this project.

The Department of the Interior was losing ground here. They filed the suit. They do not want uncontrolled public power near Arco's new project. They want to use that project as an argument for CVA. In the power company suit the whole argument is Mr. Krug's. He will let Idaho power build and pay for the lines but he is asking the right to take them over any time he might be able to get public power in Idaho. The power company refuses to spend its money for Mr. Krug, which is right.

Let's analyze the Arco project more closely.

At first it involved millions and millions of immediate dollars. Pocatello, from the advance word, visioned a city of 100,000 population, something four times the present population total.

Then the idea cooled off. The project would be delayed. The whole thing was indefinite.

But this did not halt Senator Taylor's prediction that Arco would require a CVA in Idaho in order to get this huge project under way, but the power company had announced it could furnish Arco all the power it needed.

But not if Mr. Krug had anything to do about it. He is suing to stop Idaho Power from building transmission lines in that direction unless Idaho Power joins the CVA campaign.

Until now the Statesman has wanted to believe that the Krug and C. Girard Davidson (Krug's assistant) efforts for a CVA were sincere. We have discussed these proposed dictatorial possibilities with Mr. Davidson personally and he assured us there was no intention of misusing any Government authority to enforce anything. Our respect for Mr. Davidson's word has vanished completely.

We have wanted to believe that Mr. Krug, in his important Cabinet position where he is supposed to represent all the people, had some sense of integrity. Now we know better. Mr. Krug is craftily planning to take over the direction of all government in the Northwest and he has said so in just that many words.

Here are the words, from his testimony before the House Public Works Committee June 22, 1949:

"These comprehensive plans and programs * * * will cover not only activities to be carried out by the Federal Government but also those contemplated by the various State and local governments."

Mr. Krug is already at work ahead of a CVA.

The Statesman is not attempting to try any power company suit in court. The Idaho Power Co. is no business of ours except as it represents a good example of private enterprise paying taxes to support a free government.

We are not half as much concerned over what might happen to the Idaho Power Co. as we are over what might happen to our average citizen if Mr. Krug started to toss his vindictiveness all over the State. We just want to be sure that Mr. Krug never gets his clutches around Idaho's throat. And, judging from what is going on, we have not been on guard 1 minute too long and certainly never without the required vigor.

The CVA supporters have opposed a vote on this issue by residents of northwest States. They say we have no right to vote on the issue. They say we have no right to a voice as to how we shall be governed. And they have been able to block legislation which would have given us this free American way to show Mr. Krug and Mr. Davidson that we do not want a CVA.

But, fortunately, CVA is a slumbering dog for a year at least and in that time we will have an election for Members of Congress. We hope that once more the election lines will be drawn along the CVA question. In a previous election, where CVA was the issue, it was defeated overwhelmingly. If it can become the issue again, especially with the Krug and Davidson stripe now so plain, it will get another drubbing of proportions which, we hope, will finally have an effect on the President and Congress, if not on the slippery gentlemen in the Interior Department.

Alaska Defense Needs

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. MITCHELL. Mr. Speaker, because of my belief that the serious problems of Alaska defense should be given real consideration by all Members of the House of Representatives, I ask that the following thought-provoking telegram from the Governor of Alaska, the Honorable Ernest Gruening, be printed in the RECORD:

WASHINGTON, D. C.

Hon. HUGH B. MITCHELL,
House of Representatives,
Washington, D. C.:

Word that Congress is deferring action for this session on the $137,738,712 defense authorization for Alaska appears to us unbelievable. I can state categorically that Alaska is defenseless and that the Territory could be taken tomorrow by a minor scale airborne invasion. While the Congress has just approved a $5,797,000,000 appropriation for Europe to check the advance of communistic totalitarianism across the Atlantic three to four thousand miles away it denies less than 2½ percent of that sum in authorization for the long overdue defense construction of American Territory just 54 miles across Bering Strait from our police state neighbor. Instead of having made Alaska impregnable, a bulwark for the United States and the Western Hemisphere, the Congress, if it fails to make this authorization, is perpetuating Alaska instead as America Achilles' heel. Alaska was the only part of America invaded by the enemy in World War II. Shall this happen again? To allege that this authorization is merely deferred to the second session of the Eighty-first Congress misses the entire point. Given the seasonal conditions in Alaska and the working organizations now created such deferment will mean the loss of at least a year and a half in military construction which should have been completed by now and which even if completed would give Alaska far less in the way of defenses than we ought to have for national safety. Postponement is morever the height of wastefulness. It will mean that all work will have to be stopped, organizations disbanded, the construction crews shipped back to the States and recruited all over again if and when Congress decides to act, probably not until June 1950. There has been complaint in Congress over the high cost of construction in Alaska. Here is precisely the reason. Military construction urgently demanded by the Army, Navy, and Air Force was interrupted when the Eightieth Congress failed to make the necessary appropriations. It apparently is happening again in the Eighty-first Congress. Those who are responsible for this action are incurring a great risk and a tragic responsibility. If there is another Pearl Harbor, and this time it will be a far more serious disaster than in 1941, it shall not be said that no warning has been given.

GOV. ERNEST GRUENING.
JUNEAU, ALASKA.

Bill, H. R. 5965, To Restore 16,000 Veterans' Hospital Beds

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a bill which I have introduced—H. R. 5965—to restore the 16,000 veterans' hospital beds in the Veterans' Administration's program eliminated by Executive order last December.

These beds are absolutely necessary if we are going to properly take care of our disabled veterans throughout the country.

I hope to bring this measure to the floor of the House at an early date in order to get it passed as quickly as possible.

The bill referred to follows:

H. R. 5965

A bill to provide for the construction of certain Veterans' Administration hospitals, and for other purposes

Be it enacted, etc., That the Administrator of Veterans' Affairs is directed to proceed with the construction of the additional facilities to provide approximately 16,000 additional hospital beds previously approved by the President, authorization for which was dropped in the Budget estimates for the fiscal year 1950, as presented to the Congress by the President, pursuant to determination by the President to cancel or reduce the size of certain hospital projects. The facilities which shall be constructed pursuant to this act are as follows: A 250-bed tuberculosis hospital at Americus, Ga.; a 500-bed general medical and surgical hospital at Charlotte, N. C., a 500-bed general medical and surgical hospital at Chattanooga, Tenn.; a 200-bed addition to

the Veterans' Administration hospital at Columbia, S. C.; a 250-bed general medical and surgical hospital at Decatur, Ill.; a 500-bed tuberculosis hospital at Detroit, Mich.; a 200-bed general medical and surgical hospital at Duluth, Minn.; a 500-bed neuropsychiatric hospital at El Paso, Tex.; a 1,000-bed neuropsychiatric hospital at Gainesville, Fla.; a 200-bed general medical and surgical hospital at Grand Rapids, Mich.; a 200-bed general medical and surgical hospital at Greenville, S. C.; a 200-bed general medical and surgical hospital at Harrisburg, Pa.; a 1,000-bed neuropsychiatric hospital at Houston, Tex.; a 200-bed general medical and surgical hospital at Klamath Falls, Oreg.; a 1,000-bed neuropsychiatric hospital at Memphis, Tenn.; a 200-bed general medical and surgical hospital at Mound Bayou, Miss.; a 1,000-bed general medical and surgical hospital at New York, N. Y.; a 750-bed neuropsychiatric hospital at Norman, Okla.; a 921-bed neuropsychiatric hospital at Salisbury, N. C.; a 200-bed general medical and surgical hospital at San Diego, Calif.; a 100-bed general medical and surgical hospital at Tallahassee, Fla.; a 100-bed general medical and surgical hospital at Thomasville, Ga.; a 1,000-bed neuropsychiatric hospital at Toledo, Ohio; and a 200-bed general medical and surgical hospital near Tupelo, Miss.

The hospital projects which shall be increased in size pursuant to this act are as follows: General medical and surgical hospital at Atlanta, Ga., from 500 beds to 750 beds; general medical and surgical hospital at Chicago, Ill., from 500 beds to 1,000 beds; general medical and surgical hospital at Cincinnati, Ohio, from 500 beds to 750 beds; general medical and surgical hospital at Cleveland, Ohio, from 500 beds to 1,000 beds; neuropsychiatric hospital at Cleveland, Ohio, from 1,000 beds to 1,250 beds; general medical and surgical hospital at Kansas City, Mo., from 500 beds to 745 beds, consisting of 250 tuberculosis beds and 495 general medical and surgical beds; general medical and surgical hospital at Louisville, Ky., from 500 beds to 750 beds; general medical and surgical hospital at Oklahoma City, Okla., from 500 beds to 1,000 beds; general medical and surgical hospital at Philadelphia, Pa., from 500 beds to 1,000 beds; general medical and surgical hospital at Pittsburgh, Pa., from 750 beds to 1,200 beds; neuropsychiatric hospital at Pittsburgh, Pa., from 1,000 beds to 1,250 beds; general medical and surgical hospital at St. Louis, Mo., from 500 beds to 1,000 beds; general medical and surgical hospital at Syracuse, N. Y., from 500 beds to 1,000 beds; and general medical and surgical hospital at Washington, D. C., from 500 beds to 750 beds.

CVA Opponent Tells Half the Story

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. MITCHELL. Mr. Speaker, under the guise of presenting an objective analysis of pending CVA legislation, Mr. SANBORN, of Idaho, placed in the Appendix of the CONGRESSIONAL RECORD, at page A5169, an extension of remarks which are not only intemperate and lacking in objectivity but which give a completely distorted picture of a report on CVA prepared by the Legislative Reference Service in the Library of Congress.

The gentleman from Idaho has a perfect right to express whatever opinions he may wish, but he is abusing a privilege when he cuts out from an impartial report of the Legislative Reference Service the arguments on one side of an issue and presents them as conclusive, unexceptional facts. Those were not facts; they were arguments or opinions typically held by opponents of valley authorities, and identified as such in the Library report. Mr. SANBORN would have the Members believe that the arguments of CVA opponents are the technical findings of the report. If he were truly interested in an objective analysis of the issues, the very least he could have done was to have presented the Library report in its entirety, which gives the arguments pro and con.

For the information of the Members, the report on CVA by the Legislative Reference Service was prepared more than 8 months ago, before the new CVA legislation was introduced, and without benfit of the extensive CVA hearings which have been held during the present session by both the House and Senate Committees on Public Works. I will not burden the record with this report, because it already appears, with some minor changes and elaborations, in the Appendix of the CONGRESSIONAL RECORD, at page A563. That statement makes plain, what the gentleman from Idaho conveniently ignores, that the CVA issue has more than one side.

Letter in New York Times Holds Statehood for Hawaii Best Way To Combat Communism

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. FARRINGTON. Hon. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to present herewith a letter on statehood for Hawaii appearing in the New York Times of July 11:

HAWAIIAN STATEHOOD ASKED—ENTRY INTO UNION CONSIDERED BEST WAY TO COMBAT COMMUNISM

To the EDITOR OF THE NEW YORK TIMES:

Once again the question of statehood for the Territory of Hawaii has been brought to the fore in the Congress. To understand the true nature, the essence of the question of statehood, one is reminded of the historic days during which our Union was being formed in the face of grave difficulties perpetrated by the narrow-minded and domineering political groups.

It is an established fact that the majority of the citizens both on the mainland and on the islands are of the conviction that immediate statehood would represent a sound step in establishing the sovereignty of the people and the State of Hawaii. Again and again the islanders have expressed their desire for closer association with the Union; their leaders, Governor Stainback and Delegate FARRINGTON, have fought incessantly for statehood; the President of the United States and the great majority of the Senators and Representatives in the Congress have voiced their approval—and yet Hawaii remains a Territory, her people taxed but not represented. The morale of the people of the Territory has remained steadfast and high—always in the hope of attaining that great dream: statehood.

Why, then, has Hawaii remained a Territory? Why has statehood been deferred time and again?

Surely Hawaii has proved herself worthy of statehood; her industry, her people, so diverse and yet so united, the very beauty of the islands, have been a source of inspiration to the American people.

The small minority of selfish interests, who have consistently opposed statehood for Hawaii, regardless of the will of the majority of the people, have fought a cruel battle against the efforts of the people of the Territory in their struggle for statehood. Much of the argument against statehood revolves around a statement by the late Nicholas Murray Butler, president of Columbia University, who warned in ominous tones that statehood for Hawaii would spell the end of the United States of America as we now know it. He warned of grave disaster of impending doom, should Hawaii become our great forty-ninth State. Others have taken up the cry, and yet in all the writings and oratory we can still sense the inconceivable attitude taken by Dr. Butler.

The insidious propaganda that Hawaii is under the domination of communism and under the rule of Moscow has been hurled at the people of Hawaii. Surely, the only sure way, the only honest and forceful method of combating communism in Hawaii would be to grant statehood to Hawaii, so that the very threat of communism would be destroyed, as it should be. The last thing in the world that the Communists would want would be statehood, because in its very nature statehood spells doom for the Communist movement in Hawaii. That communism must be destroyed is axiomatic: The method for its destruction lies in statehood. Let the Congress take heed, let the people be aware that statehood for Hawaii should be immediately granted.

The morale of the Hawaiians is high: let us not permit it to wane; give Hawaii her chance as an equal—as our forty-ninth State of the great Union of the United States of America.

KENNETH HASKELL MANTEL.

BROOKLYN, *July 4, 1948.*

The Arms Aid Program

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "General Marshall Speaks," published in the New York Times of August 2, 1949; an editorial entitled "If We Break Faith," published in the Dayton (Ohio) Daily News of July 26, 1949; an editorial entitled "Inevitable Result," published in the Topeka (Kans.) Daily

Capital of July 28, 1949; and an editorial entitled "An Eloquent Voice for Arms Aid," published in the Christian Science Monitor of July 29, 1949. All these editorials relate to the arms aid program.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of August 2, 1949]

GENERAL MARSHALL SPEAKS

Adding his voice to that of many, General Marshall has likewise impressed on Congress that the foreign military aid program is urgently necessary to bolster up western defenses as the best available means of stopping Soviet aggression and averting war. He emphasized in particular that this program is intended to start up an engine that is much greater than the program itself, and that any attempt to slash it, as proposed by a Republican opposition, would merely be false economy which, for a minor saving now, would risk vastly greater outlays later. Furthermore, he warned a Congress anxious for adjournment that any hesitation or delay on that issue would be a very dangerous thing because of the effects it would have on both our allies and on Russia.

General Marshall spoke both as an Army Chief of Staff during the war, who saw the dangerous military vacuum developing in western Europe without being able to prevent it, and as a former Secretary of State who experienced the full impact of the Soviet offensive against the west. Out of that experience he declared long ago that a final peace settlement was impossible until the vacuums had been filled in, and he tells Congress now that to reach a settlement with the Soviets we must get the respect of Russia—which pays respect to other powers only in proportion to the number of their divisions.

But most of all he spoke from the experience of the locust years before the war, when we continued to preach isolation, neutrality, and disarmament while Hitler and Japan were arming to conquer the free nations one by one. If, he said, the military requirements stated by the armed services in 1939 could have been met even to a modest degree, the war could have been shortened by at least 6 months, with all the saving in life and treasure which that would have meant. And the pointed blame he put on an aggressive and vocal minority for the denial of the requirements of 1939 might well be pondered by those who would pursue a similar course in 1949.

But General Marshall laid equal stress on the psychological effects of the pending program and of any delay, curtailment, or possibly rejection of it. A firm front, he declared, is the best defense against the men in the Kremlin, who, he was certain, will in the end destroy themselves, but who meanwhile have not only the largest peacetime army in history but also the dangerous advantage of being able to make arbitrary decisions without resort to any Congress. By the same token, any delay, curtailment, or rejection of the program would give a tremendous boost to their hopes and ambitions, and General Marshall is frankly fearful of the consequences.

The same, of course, applies in reverse to our allies. As pointed out before, this program is merely the beginning of a larger program embracing all the members of the North Atlantic Pact who are already spending on armament 5 times the projected aid. But their program depends for its effectiveness on the activating spark which must be supplied by the United States. If we supply this spark we gain in the service of our own security and in exchange for our arms not only the manpower of our allies but also the courage and devotion which would make them fight. If we fail to supply the spark, we will not only stall the defense machinery of our European allies but will also, by our own apparent indifference to their fate, impair their willingness to fight in the face of odds then hopeless. Thereby we would pave the way to an easy Russian victory in Europe which would leave us completely isolated in a hostile world.

It is out of such considerations that General Marshall stressed the value of the timing of the program and the danger of rejecting it. We hope that Congress will pay heed to his words, and in debating secondary issues will not forget the main issue involved.

[From the Dayton (Ohio) Daily News of July 26, 1949]

IF WE BREAK FAITH

A half loaf may be better than none in a great many circumstances. In a great many other circumstances it is no better than none; sometimes it is even worse.

A good many Republican Congressmen are now saying the European arms program proposed by the President should be cut in half.

If the program were cut in half it would beyond doubt be ineffective. Worse than that, it would be dangerous. It would create a false sense of righteousness and an equally false sense of security in our own people. Among the people of Europe it would create a disastrous moral let-down. It would convince them that we spoke fair words with the Atlantic Pact but, with our deeds, abandoned them to their fate. In the Kremlin the act would register with a joyous clang. The Americans don't mean what they say when they declare their readiness to resist us. Whatever aggressive plans are afoot in Moscow would reap a fine impetus.

In the suggestion of Senator VANDENBERG, seconded by Senator DULLES, that interim aid be provided while the next Congress be left to work out the final program after more spadework has been done by the military staffs, there is less danger and a certain amount of sense.

But here again we must make profound allowances for the psychology of Europeans. Already Europeans are nervous lest we fail to follow through on our tacit commitments. Delay might be nearly as fatal to their faith as an immediate decision to dilute the program. If there is one thing we must avoid in the interest of the strength and solidarity of the free world, it is a reaction abroad that parallels the Shakespearian washing of hands:

"And be these juggling fiends no more believed.
That palter with us in a double sense:
That keep the word of promise to our ear
And break it to our hope."

[From the Topeka (Kans.) Daily Capital of July 28, 1949]

INEVITABLE RESULT

Irrespective of how Congress may haggle over President Truman's stupendous program of spending money to arm countries of Europe, the passage of the Atlantic Pact—if it means anything at all—means that arms must be furnished. How else could the pact be worth the paper it is written on? European countries can contribute little toward their own defense and if the pact serves its purpose of frightening Russia it must be backed up with money—American money.

The truth of the matter is that we have now bound ourselves to fight Europe's wars and, if and when war starts, we will be unable to economize. Wars are never fought successfully on an economy basis. Congressmen who voted for the pact took the vital step then; quibbling now over money will not achieve any lasting good.

[From the Christian Science Monitor of July 29, 1949]

AN ELOQUENT VOICE FOR ARMS AID

Secretary of State Acheson has steered clear of both Scylla and Charybdis. His testimony before the House Foreign Affairs Committee in behalf of the President's European arms program is completely statesmanlike. It avoids the dangerous rock of complacency over American foreign-policy successes, and it keeps well out of the whirlpool of crisis talk.

Any one of a number of his statements could usefully be elaborated at length. But we shall offer just a few examples here, with brief comment.

"The proposed military assistance program cannot be regarded as an isolated piece of legislation unrelated to our whole foreign policy."

That foreign policy has consisted of the Marshall plan, aid to Greece and Turkey, opposition to Soviet blockade measures in Berlin, and other necessary but sometimes costly and risky measures. It began in a period of deep crisis, when Europe was an economic and political shambles through which no one knew what storms might blow clear to the Atlantic to the peril of the United States itself.

Those Members of Congress who now oppose substantial military aid to Europe can afford the luxury of doing so primarily because of the achievements of the American foreign policy Mr. Acheson espouses and for whose adequate support he now pleads. The Secretary of State did not overstate the case when he warned:

"Any sign of * * * irresolution on our part now would seriously jeopardize all the gains we have made so far toward the achievement of peace and security in the only kind of world in which we would want to live."

The totality of our effort, says Mr. Acheson, is what has given "renewed strength and vitality to the free world and has brought us thus far safely through dangerous waters." As Mr. Acheson pointed out, no one of the single measures of foreign policy would have succeeded alone.

A smooth-running machine depends on its smaller gears as well as on its big ones. The arms program is a small gear beside the Atlantic Pact. But it will add a necessary power factor to this agreement, as may be seen from the debate which preceded ratification of the pact by France.

Mr. Acheson had already made clear in a press conference before testifying before the House committee that the President's arms program is itself little more than a stopgap program. This is a fair answer to congressional opponents who have been urging stopgap aid in place of the arms program. It should be remembered that the aid Congress is now debating will not go into effect until mid-1950, and represents only a fraction of the effort Europe must make for its own and—inescapably—America's security. Mr. Acheson did not bar modification of the program, but indicated it should not be such as to endanger its purposes.

We share Mr. Acheson's belief that it is less expensive to take needed measures now than it will be to pay the bill for not taking them. And by that we do not mean that the bill will necessarily be the cost of some future war. But it could be a bill compounded of elements of military fears, economic uncertainties, internal dissension as well as external dangers for European nations. Years of half measures to cope with recurring crises might easily cost more than full-bodied measures now.

"The only kind of peace acceptable to freemen cannot be bought cheaply. I think the people of the United States are willing to pay the price."

We think so, too, Mr. Acheson.

On the Elevation of Hon. Judge Philip J. Finnegan to the United States Circuit Court of Appeals

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. SABATH. Mr. Speaker, I wish to take this opportunity to extend my sincere congratulations and best wishes to Judge Philip J. Finnegan, of Chicago, Ill., upon his elevation to the United States Circuit Court of Appeals for the Seventh Circuit.

In his appointment, the President has taken into account the long and useful service to the bench, bar, and country that Judge Finnegan has rendered. First, as a member of the Municipal Court of Chicago, known as the "people's court", and later, as circuit court judge of Cook County, Ill., Judge Finnegan demonstrated exceptional judicial qualities which added to the high standing of these courts.

His experience has been long and varied. He sat in the chancery law and criminal divisions of the circuit court. He has acquired therefrom, a huge fund of knowledge and resourcefulness which will serve him in good stead in understanding and deciding the many complex problems which he will be presented with in this high court.

It is interesting to note that Judge Finnegan will have the privilege and pleasure of serving with former Members of Congress who distinguished themselves in both the House and the Senate and who have established fine records on the bench, namely, Judge Earl Major of Illinois, who served in the House and who presently occupies the position of senior justice of the court, and Hon. Sherman Minton, former United States Senator from Indiana, who is also a member of the court. Also serving on the United States Circuit Court of Appeals for the Seventh Circuit is another great jurist and Illinoisian, Hon. Otto Kerner, considered by many to be the finest and most able attorney general ever to serve the State of Illinois.

Mr. Speaker, I wish to add my small voice to those many well-wishers of Judge Philip Finnegan on this added milestone in his judicial career. His endorsement by Mayor Martin J. Kennelly, of Chicago, and by our two able United States Senators, LUCAS and DOUGLAS, is indeed well justified.

I am certain that Judge Finnegan's long, varied and fruitful experience gained while serving on the bench, together with his judicial integrity and temperament, will enable him to maintain the present high position that the court holds among the legal profession, as such, and among the public.

The Challenge of Polish Relief, 1949

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. WILEY. Mr. President, yesterday afternoon it was my pleasure to address the tenth annual relief-day picnic of American Relief for Poland at Maple Grove Park in Milwaukee. At that time I discussed with this fine organization and its friends the humanitarian problem of relief for the sorely pressed people of Poland. The question of admission of worthy sons and daughters of Poland as displaced persons was also reviewed.

None of my colleagues need be told of the high esteem in which the American people hold the Polish people regardless of what we think of the present foreign-dominated government which has been inflicted upon the liberty-loving populace. We know however that behind the iron curtain the people of Poland still hold aloft the torch of freedom and that they will never yield in their devotion to the religious and cultural faith of their fathers.

I ask unanimous consent that the text of my talk be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF POLISH RELIEF, 1949

It is a great privilege to be here with you today, and to have the opportunity to discuss with you matters that are close to your heart and mine. I can think of no more inspiring work that has been done by any American organization than that which has been performed by American Relief for Poland.

I say that on the basis of contacts which I have had with Government authorities in Washington, our Nation's Capital. Within the last few days, I have received direct word from the United States State Department and from its affiliated Advisory Committee on Voluntary Aid. These organizations have confirmed for me once again what a truly great job you people are doing.

There is just no way, my friends, of estimating the tremendous meaning of the food packages, the clothing, the medicine, which you have sent in such generous measure to Poland.

BACKGROUND OF AMERICAN RELIEF FOR POLAND

Your organization was set up in 1939 right after the invasion of Poland which started the Second World War. Although the motherland was defeated by the invader, we are all familiar with the magnificent courage which was shown by the Polish Army and Government in exile which kept up the fight until victory at last crowned Allied arms.

By the end of this war, your organization was sending 12,000 food packages a month to the stricken population. You were sending 10,000 packages a month in conjunction with the American Red Cross to Polish prisoners of war. You were helping thousands of refugee colonies of Polish men and women, who had fled to the far corners of the world from the motherland.

THE BITTER AFTERMATH OF WAR

Peace came, but as we all know, it did not bring liberty and independence for the land which had first felt the blows of the invader. Instead, it brought the new tyranny of Communist dictatorship. In spite of that fact, American Relief for Poland through your generous contributions, continued to carry on. You know, friends, that at the end of the war there were upwards of two million Polish displaced persons. Many of these unfortunate individuals had been forced to work as slave laborers. They had undergone terrible hardship and privation. You helped keep them alive. You helped keep the spirit of freedom burning in them by your sending of war: clothing, of food, of sanitary supplies, and other items to these sons and daughters of Poland.

THE FOUR BASIC PRINCIPLES OF AMERICAN RELIEF FOR POLAND

In all of your aid you have followed four basic principles, and I think that these principles deserve the enthusiastic endorsement of all the American people. Let me cite them:

1. First has been the principle of American Relief for Poland that the distribution of relief supplies must be under the direct responsibility of American officers.

2. Next you set forth that everyone who received gifts had to be informed that the gifts came from the American people. (Too often, in other countries, the United States has not been given the credit it rightly deserves.)

3. You stipulated that the distribution to the needy was to go without discrimination as regards race, creed, or political belief. (What a wonderful basis for humanitarian action, my friends.)

4. Fourth, very wisely again, you made sure that the distribution was made in such a way as to permit acknowledgment of the gift by the recipient to the donor.

THE MEANING OF THE BOWL OF SOUP

My friends, here in this happy land of ours in which men and women of Polish descent have made such really great contributions, here in this blessed land of freedom, it is hard for us to know what it means to some ill-clad, ill-housed, ill-fed persons in devastated Warsaw or Krakow or Poznan to drink a bowl of soup, to receive a little first-aid attention, to get a bar of soap or some other donated item which you and I in Milwaukee or elsewhere in our State take as commonplace.

IT IS STILL MORE BLESSED TO GIVE THAN TO RECEIVE

However, those of you who have received letters from Poland and who know the gratitude in the hearts of your kin have experienced the greatest feeling that can come to anyone in the world—the feeling of giving generously and graciously. You have known the meaning of the age-old creed: "It is more blessed to give than to receive."

Yes; in what great measure you have given, my friends. During the years 1939 to 1945 American Relief for Poland, according to the statistics which I have available, gave over $11,000,000 in private relief aid. From 1946 through 1949 collections, including cash and gifts in kind, amounted to around $10,000,000.

THE PENNIES, THE NICKELS, THE DIMES, AND THE DOLLARS

Well, my friends, in these days of $40,000,000,000 budgets, this sum might not seem so large to some smug Government official, but you and I know that it came from the saved-up pennies and nickels and dimes and dollars which churches and families and individuals in Milwaukee joyously collected in order to bring a little happiness and a little

encouragement to the ill, to the unfortunate, to the bereaved in bomb-blasted cities abroad.

WE MUST INSIST ON FREEDOM FOR RELIEF OPERATIONS

Fortunately, you have not been working alone. The United Nations has been doing what it could, although it, of course, just like American Relief for Poland, has felt the problem of increasing restrictions placed by the Warsaw Government which in turn are due to the orders of the masters in the Kremlin. Of course, I insist that the American Government must speak firmly and insistently to the Warsaw Government on behalf of maximum freedom for American relief operations. After all, through UNRRA alone, our Nation—yours and mine—gave over $350,000,000 for Polish relief. We have a right to speak up rather than be timid.

WORK OF CHILDREN'S RELIEF

One of the finest jobs is being done by the International Children's Emergency Fund which is associated with the United Nations. This fund is trying to overcome the terrible sickness conditions prevailing among Polish children—malnutrition, tuberculosis, etc. In Poland, some 700,000 children have been receiving every day in schools, in hospitals, in children's homes, a supplementary meal from the Children's Fund, including items which the youngsters would not otherwise get, like milk, cod-liver oil, fats.

A FREE DEVOUT POLAND WOULD HAVE JOINED THE MARSHALL PLAN

Of course, this Nation invited Poland to join in the economic cooperation plan of the western nations. You and I know that had the Polish people been free to make their own decision, they would have, of course, decided to come in under the Marshall plan. Their sympathy is not with the east, but with the west. Their whole history has evidenced the fact that devout Catholic Poland will never yield to an atheistic foreign conqueror; that the land which gave to the world Copernicus, Sklodowska-Curie, Paderewski, Pulaski, Chopin, and many other patriots, will never lose its love of liberty, nor will abandon its religious faith, whatever foul deeds the Reds perpetrate against the church.

HUMANITARIAN CHURCH WORK WITH DP'S

And, now, my friends, I should like to discuss with you one of the most important fields of work of American Relief for Poland, and that is the great job that you have done and are doing in connection with Polish displaced persons. Some of you have received the special 1-page report on Polish displaced persons which I recently sent out. Let me review for a moment its highlights. With the passage of the Displaced Persons Act in August 1948, American Relief for Poland brought all its resources to bear to obtain home and job opportunities throughout the United States for Polish displaced persons. Up to this time, your industrious organization has over 42 resettlement committees operating independently or in cooperation with local councils of the National Catholic Resettlement Council.

CONGRESS MUST PASS NEW DISPLACED PERSONS BILL, S. 311 OR H. R. 4567

As you know, there are certain changes that are necessary in the displaced persons law. In February 1949 I introduced amendments (S. 1315, S. 1316, S. 1317) to achieve such changes. These amendments to liberalize the eligibility date, to liberalize the definition of orphans, etc., were endorsed wholeheartedly by the National Catholic Resettlement Council, the National Catholic Rural Life Conference, and all other leading church organizations engaged in this humanitarian work.

The House of Representatives has fortunately passed a bill which, while it is not perfect, will go a long way toward meeting the present need. It will admit some 339,000 individuals (over 120,000 more than are presently provided for). One of the most vital features of that bill is to admit refugees from the Red terror who have fled since 1945. Another provision secures the admission of up to 15,000 members of the heroic Polish Army which is still stationed in Great Britain.

In all the history of man's fight for freedom, there has truly been no greater saga than the story of this small but fighting band of men who, having fled their homeland because of invasion, went to fight in the far corners of the world in defense of freedom. The men of the Polish Army died with American boys at the slopes of Cassino, and all the way up the Italian peninsula. Their bodies may be found beneath the sands of north Africa and elsewhere wherever freemen fought the slaves of dictatorship.

MEN OF POLAND KNOW WHAT IT IS TO LOSE LIBERTY

How fitting it is that from their ranks should come the loyal new citizens of the United States. You know, my friends, some of us in this land have forgotten what it is to lose freedom. These kinfolk of yours abroad knew, however, the meaning of liberty because their homeland has lost liberty.

They know that every generation must keep up the fight for freedom. We can't lean on our laurels, because if we do, we will find that the enemies of this Republic will have termited the foundations of our land. This is particularly true in these days when agents of international communism are trying to penetrate throughout the civilized world in order to destroy freedom. And let me add, my friends, that right now there is pending before the Senate Judiciary Committee in Washington strong anti-Communist legislation which must be perfected and enacted in order to defend our land.

POLAND IS NOT YET LOST

I know that many of you are discouraged, as anybody would be, because 10 years after the start of the Second World War, Poland cruelly dismembered at Yalta, is still not yet free nor whole. Perhaps, however, I might recall at this time the words written by Adam Mickiewicz in The Book of the Polish Nation, in 1832. I think that his words are more meaningful today than ever before: "For the Polish Nation did not die. * * * Its body lies in the grave * * * but on the third day, the soul shall return to the body and the nation shall arise and free all the peoples of Europe from slavery."

Yes; let us recall another bit of history. Twenty-nine years ago tomorrow, August 15, 1920, occurred the miracle of the Vistula when the soldiers of Poland hurled back the Red hordes at Warsaw. No, my friends; do not lose hope.

CONCLUSION

I am grateful for the opportunity of having been with you here today. We have briefly explored the great work done by your organization during and after the Second World War, your work in connection with Polish displaced persons and in connection with the new displaced persons bill which we in the Senate hope to pass during this first session of the Eighty-first Congress, if it is humanly possible. In fact, we must pass this new bill lest we give another propaganda weapon by default to the Communists. Moreover, we must improve the bill. We must eliminate the provision which mortgages future quotas—a provision which operates cruelly against the small Polish immigration quota.

I hope that when I get back to Washington, you folks will be writing to me whenever you feel I can be of service and that if you are down to our Nation's Capital you will drop in and say hello.

In turn, as soon as this Congress is over, I hope to get back to Milwaukee and to meet with many of you in person to discuss problems of mutual interest dealing with the welfare of this city, our State, and Nation, and, yes, our international responsibilities.

Thanks again for your kind attention and good luck to you all.

Grass in the Streets?

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. SABATH. Mr. Speaker, since the House was not in session on Saturday, and since I had an opportunity to read some very interesting newspaper articles over the week end which should be of interest to the House and to the country, under leave granted me I insert in the RECORD an article which appeared in the Chicago Sun-Times under date of Thursday, August 11, 1949, entitled "Grass in the Streets?":

GRASS IN THE STREETS?

Herbert Hoover, observing his seventy-fifth birthday, last night had an ominous message for his countrymen. He said the huge increase in Government spending during the last 20 years is dynamite. He suggested it is driving us down the back road to totalitarian collectivism.

"There is no room for this spending and taxes except to cut the standard of living of most of our people," said Mr. Hoover.

In arriving at this conclusion Mr. Hoover said we must avoid looking at sunshine figures. But it is equally wrong to look only at cloud-and-shadow figures. In recounting the steep rise in Government expenditures, Mr. Hoover forgot to mention that the country has also witnessed a steep rise in national income.

The average citizen, said Mr. Hoover, paid a tax bill 20 years ago of about $50 per person. Today the total tax bill for all Government averages $372 per person.

That's a stiff increase, all right. But the increase in the Nation's earning capacity has been even stiffer. When Hoover was in the White House, in 1932, the national income was $41,700,000,000 or $333 per capita. Last year it was $235,600,000,000, or $1,581 per capita.

After paying his share of the tax bill in 1932, the average citizen had $245 a year left over. After paying his share of the tax bill in 1948, he had left $1,169.

In other words, it just isn't true that we have taken a cut in the standard of living because Government expenditures have gone up. We are able to sustain higher Government expenditures because we have increased our national earning capacity.

We cite these figures not to minimize the problem of Government spending, which is a real problem, but merely to show that it must be viewed in perspective.

When Mr. Hoover says the average citizen today works 61 days "for Government," it sounds pretty bad. But in 1932 the same mythical average citizen, earning much less than today, had to work 35 days for Government.

Mr. Hoover had some harsh words to say for what he calls the "welfare state," but it is not true that welfare expenditures account for the rise in Government spending since his day.

As his own figures show, of the 61 days which an average citizen works to support Government, 11 days go to pay obligations from former wars and 24 days go to pay the cost of defense and the cold war.

Excluding this last item from the comparison, it appears that the average citizen worked 35 days to pay the total tax bill in 1932, whereas today he works 37 days to pay the tax bill less the cold war budget. For those two extra working days, he's carrying the cost of the most expensive war in history and a lot of other things besides.

At 75, Mr. Hoover is a distinguished elder citizen whose views command respectful attention. But when he suggests that we must either cut Government budgets or cut our standard of living, he ignores the lesson of experience. The really important thing is to follow those policies that will enable us to maintain a steadily rising national income—policies that will never permit another Hoover depression to occur.

Many people worry about Government spending, as they should. But the great body of Americans cannot agree with Mr. Hoover's prophecies of doom around the corner. He is still the man who said, in 1932, that grass would grow in the streets if F. D. R. were elected. Remember?

Reorganization Peril

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Reorganization Peril," published in the Washington Post of this date. I sincerely hope that every Senator will read the editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REORGANIZATION PERIL

The fate of Reorganization Plan No. 1, creating a Department of Welfare, and plan No. 2, shifting the Bureau of Employment Insurance to the Department of Labor, hangs in the balance. Both plans will automatically become effective at the end of this week, unless the Senate rejects them in advance of the deadline, in accordance with recommendations of its Expenditures Committee. Failure to approve these important plans, as President Truman warned in his letter to Vice President BARKLEY, would imperil the rest of the reorganization program.

"Every special-interest group concerned with the operation of the Government," the President said, "will be encouraged to try to block further steps toward efficiency and economy." He also pointed out that former President Hoover shares his concern, thereby undercutting the argument that the failure to include all the Hoover Commission's recommendations for reorganization of the Federal Security Agency is a valid reason for rejecting Plan No. 1.

In our opinion there is no question that both plans would effect more efficient and economical administration of the agencies concerned. However, opposition will not be disarmed by stressing their merits. Critics fear that the establishment of a Department of Welfare would result in introduction of compulsory health insurance and that health functions would be assigned to the new department under the direction of the present head of the Federal Security Agency. As a Cabinet member, it is claimed, that official will have a great deal of influence over decisions as to the placement of health, hospitalization, and related governmental activities. Opposition to the shift of the employment services and unemployment compensation to the Department of Labor is likewise motivated by fear of the Department, which is said to be biased in favor of labor.

If the Senate were to act on the basis of such fears, the rest of the Hoover program would have hard sledding. For every proposal for strengthening the Government organization is necessarily based on the assumption that the officeholders who are responsible for execution of the reforms are trustworthy and reasonably competent. If Congress turns down reforms that experts regard as essential simply to keep officials in their place, wasteful and obsolescent organizational patterns cannot be discarded. Changes involve risk-taking and experimentation.

Besides reiterating arguments in favor of the jeopardized reorganization plans, the President assured the Senate that they would not change governmental policies with respect to employment or health matters. It is absurd, as he said, to jump to the conclusion that the creation of a Department of Welfare would limit the freedom of Congress to determine national health policies. He also pointed out that the Department of Labor administered the employment services of the Bureau of Employment Security quite successfully and without bias for a number of years. In thus seeking to dissipate what he referred to as imaginary difficulties, the President wisely avoided discussion of the question as to ultimate disposition of health services. The immediately important objective is acceptance of the programs now under consideration so as to pave the way for introduction of other equally important organizational reforms.

Reorganization Plan No. 1

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, tomorrow the Senate votes on Reorganization Plan No. 1. I hope that by then it will have become apparent to every Member of this body that the pressure to vote against the plan to which he is being subjected, stems from just one group in the country—a group whose every action is being dictated and directed by a team of hundred-thousand-dollar-a-year, so-called public relations experts in Chicago.

In order that Members of the Senate may be correctly informed as to why we should vote for Reorganization Plan No. 1, I ask unanimous consent to place in the RECORD at this point, first, the testimony of the American Public Welfare Association on the plan; secondly, a letter from the American Public Health Association; and, third, a Gallup poll taken just last week and showing how both Democratic and Republican voters favor Reorganization Plan No. 1.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

TESTIMONY IN BEHALF OF REORGANIZATION PLAN NO. 1 PRESENTED TO SENATE COMMITTEE ON EXPENDITURES IN THE EXECUTIVE DEPARTMENTS JULY 22, 1949, BY ELIZABETH WICKENDEN, WASHINGTON REPRESENTATIVE, AMERICAN PUBLIC WELFARE ASSOCIATION

My name is Elizabeth Wickenden and I am Washington representative of the American Public Welfare Association, organization of State and local public welfare departments and persons engaged in public welfare work at all levels of government.

I appear before you to express support for the President's Reorganization Plan No. 1 to create a Department of Welfare. Our organization has long been on record as favoring the elevation of the Federal Security Agency to departmental status on the grounds that the scope and character of its functions warrant this recognition.

We feel too that it is appropriate to leave the internal organization of the proposed new department to the Secretary as in other comparable departments. However, in this connection I would like to mention one possible misconception that arises from the dual use of the word welfare. In the title of the proposed department it is evidently used in the broad constitutional sense of General Welfare embracing all those specific functions which serve individual human well-being. One of these specific areas of service, along with health and education, is the narrower functional concept of public welfare now represented in the Social Security Administration with its programs for social insurance, public assistance and services to children.

In supporting a new Department of Welfare we wish to make it very clear that we look upon health, education and public welfare as coordinate functions with no thought that any one should dominate the other. On the contrary we hope and assume that the present internal structure in which the United States Public Health Service, the Office of Education, and the Social Security Administration maintain their separate administrative entities will be maintained.

On the other hand we do feel that there is every justification for and advantage in grouping these closely related functions into one department at the Federal level. Since the Federal functions in health, welfare and education are chiefly in the area of planning and the administration of grants-in-aid to the States rather than the actual furnishing of professional services to individuals it would seem that the administrative structure could not properly be compared to that at the State and local level where operational responsibility lies. On the contrary the desirability of working toward a comprehensive policy in dealing with the States on grant-in-aid relationships is self-evident and the work along this line which has been carried on in the Office of Federal-State Relations of the Federal Security Agency has been followed with much interest by the State agencies comprised in our association.

In addition to the over-all inter-relationships of Federal-State grant-in-aid policies there are many specific functional inter-relationships which can and are greatly facili-

tated by a common departmental grouping of administrative agencies. To take one example now very much to the forefront of public and inter-professional attention, I might mention the problem of medical care and related problems involved in chronic illness. On the professional side my own association, the American Public Welfare Association, has joined with the American Medical Association, the American Public Health Association, and the American Hospital Association in setting up a Commission on Chronic Illness for the study of this problem. This cooperation has been stimulated by a growing recognition of the close interrelationship between medical, social, and economic factors in chromic illness, an interrelationship which is, of course, of equal if not greater importance in the area of governmental policy. Similar examples could be cited in the fields of education, mental health, vocational rehabilitation, services to children, and others. The fact of the matter is that, while these functions involve professional specialties, the individual human beings whose welfare they serve are one and the same and deserve the benefit of reasonable coordinate planning from their Federal Government.

The creation of a Department of Welfare will not in itself either add to or substract from the functions of the Federal Government in the fields of health, education, and welfare. The scope and character of these functions depend as always on other legislation and on the appropriations made available to support them by the Congress. On the other hand, we feel that these functions can be more effectively and appropriately carried out if the Federal Security Agency is given recognition as an established department of Government with its head speaking from the prestige of a Cabinet office both to the country as a whole and within the President's circle of advisers in behalf of the welfare of individuals, not in their capacity as farmers, workers, or businessmen, but as human beings—the end objective of all government.

THE AMERICAN PUBLIC HEALTH ASSOCIATION,
New York, N. Y., July 20, 1949.

Hon. JOHN MCCLELLAN,
Chairman, Committee on Expenditures in the Executive Department, Senate Office Building, Washington, D. C.

DEAR SENATOR MCCLELLAN: The American Public Health Association wishes to place on record its considered opinion with reference to the proposal of the administration that there should be a Department of Welfare created from the present structure of the Federal Security Agency.

It is our hope that it may be possible for you to insert this opinion in the record of the hearings which I understand are scheduled for the near future.

The American Public Health Association, as a professional society of nearly 12,000 public health workers, believes it manifest that a structure of Cabinet rank is an essential to the importance of the task at the Federal level. The association recommends the prompt establishment of such a Cabinet department to be set up in a simple and flexible manner, allowing wide latitudes for the adaptation of administrative structure to scientific advance. We would prefer that this Cabinet department be designated as the Department of Health, Education, and Security, since it would comprise functions not ordinarily included under the term welfare.

The association believes that the Federal Security Agency should have departmental status in view of its broad scope and its character. This seems true whether it is regarded in terms of financial involvement, in terms of the numbers of persons concerned, or the importance of the functions of health, education, and welfare.

It seems appropriate to us that the agency dealing with health, education, and security at the Federal level should be thoroughly coordinated at the top because corresponding agencies at the local and State level are so generally separate and distinct. A first-rate example of coordination in the proposed Federal department would be useful.

The association believes it sound to transfer the powers and duties of the Agency to a new department and to its secretary. The matter of transferring any additional functions or units of other governmental agencies performing related services should be left, we believe, for subsequent legislative action.

The association believes that the functional operating divisions or other units of the department should be headed by career officers of high professional and administrative competence in their particular fields. These latter positions should be nonpolitical in character.

It is imperative, we believe, that suitable steps should be taken to insure freedom of State and local agencies, both public and voluntary. Of equal importance, however, it should be clear that this legislation permits the administration of Federal funds in an orderly and nonpolitical manner as provided, for example, by the 1939 amendments to title V of the Social Security Act.

In summary, the American Public Health Association supports the idea of Cabinet status for the Federal Security Agency.

Faithfully yours,
REGINALD M. ATWATER, M. D.,
Executive Secretary.

THE GALLUP POLL—PLAN FOR WELFARE DEPARTMENT GIVEN MAJORITY VOTER SUPPORT

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., August 11.—President Truman's plan to create a Federal Department of Welfare, headed by a Cabinet member, has a good deal of popular appeal throughout the country.

Creation of such a department was one of the recommendations made by the special commission headed by former President Herbert Hoover for reorganization of Government operations. Last week a Senate committee held public hearings on the plan, but turned in an adverse report to the Senate. A fight over the measure is expected on the Senate floor.

Opinion among a representative cross-section of voters in all the 48 States was sounded on the plan in the following survey by the American Institute of Public Opinion:

"It has been suggested that a Secretary (in the President's Cabinet) be appointed to head a new Department of Public Welfare in Washington which would include such things as social security, public health, and education. Do you approve or disapprove of this?"

The vote:

	Percent
Approve	54
Disapprove	26
No opinion	20

A fairly sharp division of sentiment along party lines was found in the survey. A substantial majority of persons who voted for Mr. Truman last November expressed favorable opinions on the creation of a welfare department.

Among Republicans, sentiment was much more closely divided as follows:

	Truman voters	Dewey voters
	Percent	*Percent*
Approve	61	45
Disapprove	20	38
No opinion	19	17

Lt. Gen. Joseph Lawton Collins

EXTENSION OF REMARKS
OF
HON. ALLEN J. ELLENDER
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Signal, Merited Promotion," commending the nomination of Lt. Gen. Joseph Lawton Collins to be Army Chief of Staff to succeed General Bradley, published in the New Orleans Times-Picayune of August 13, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SIGNAL, MERITED PROMOTION

Word came from Washington Friday that Lt. Gen. Joseph Lawton Collins had been named Army Chief of Staff to succeed Gen. Bradley, just appointed chairman of the joint Chiefs of Staff. General Collins' well-earned promotion will be hailed with satisfaction the country over—but nowhere else so enthusiastically as here in New Orleans, his "old home town." A native of New Orleans, he spent his boyhood here, leaving to enter West Point and begin his outstanding military career. He has relatives and countless friends in this city, has revisited it when his duties permitted and as recently as last spring.

Entering the Army in April 17, after graduation from the Military Academy and prior study at Louisiana State University, he saw active service during World War I. During the recent conflict he earned fame as "Lightnin' Joe" when he led his Seventh Corps, first of any American forces across the Rhine. Before his transfer to the European theater, he was the first brigade commander flown into the Pacific after the Pearl Harbor attack. He organized the Twenty-fifth Division in Hawaii and served at Guadalcanal and throughout the South Pacific campaign. Sent to the European front as a corps commander at the time of the Normandy invasion, he participated in the first landing on that coast and earned distinction by the skill and daring of his leadership.

Following his combat service, General Collins served as the first director of the War Department's new Office of Public Information. He was Deputy Chief of Staff under General Eisenhower and Vice Chief of Staff under General Bradley.

New Orleans naturally takes pride in the promotion of a native son to the high and responsible post of Army Staff Chief, and deep satisfaction in the fact that his honors have been earned on merits by his brilliant career as combat commander and efficient administration of his postwar assignments. No better selection could have been made, in our judgment, and we have no doubt that he will justify it abundantly by efficient and devoted service in his new post. All New Orleans joins in the tender of congratulations and good wishes to this distinguished "native Orleanian."

Rosy Economic Outlook

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. SABATH. Mr. Speaker, under leave given me, I insert an interesting article in the RECORD which appeared in the Washington Times-Herald on Sunday, August 14, 1949. I also wish to insert another article which appeared in the Christian Science Monitor under date of August 2, 1949, both on the general and important subject of our Nation's economic outlook. These articles bear out my recent statements that our future is very bright.

[From the Washington Times-Herald of August 14, 1949]

WALL STREETERS CONFIDENT ON TRADE OUTLOOK

NEW YORK, August 13.—Confidence is the word most frequently heard in Wall Street these days. Quite a number of brokers are using it. They mean that they have confidence in the immediate future of American business.

LIKE WHAT THEY SEE

They say they can see the course of business ahead pretty plainly, and they like what they see. Furthermore, they have kind words for some of the actions of the Federal Government and its agencies.

That doesn't mean that the men in Wall Street are running around throwing their hats into the air with joy. They can spot some stumbling blocks in the path of business and industry very plainly, but there still is a chance these barriers will be removed before they become too troublesome.

CITE STOCK PRICE TREND

The course of the stock market this week is a clear reflection of the attitude. The market had its ups and downs, but it ended the week a little higher than it started. And it kept within a fairly short stride of the 1949 high point established last January.

The outstanding cause for this discussion of confidence was the statement of Thomas B. McCabe, chairman of the Federal Reserve Board. McCabe proposed to Congress a number of ways to encourage business to raise the money it needs by selling common stocks. One was income-tax reduction in the middle and upper brackets. Another was easing the tax laws which result in taxing a corporation on the money it earns to pay dividends and then taxing the dividends as income after they are paid out.

Coupled with that was the reduction of reserve requirements by the Federal Reserve for city and country banks. That gave them more funds to lend to business.

INTEREST RATES CUT

Interest rates on loans against securities in New York City were cut a little by bankers who felt they had an excess of idle funds. For the week ended August 3 there was a decline of $60,000,000 in business loans throughout the country which canceled out the gain made the previous week.

Those who are confident the summer rally will continue pointed out that trading expanded markedly while prices were rising and contracted on the downside—a good sign to them.

Commonwealth & Southern again was the most heavily traded stock of the week, closing unchanged at $5, the highest price of the year. United Corporation was second on the list closing off 12 cents at $3.87.

[From the Christian Science Monitor of August 2, 1949]

BRIGHTER SIGNS SEEN IN ECONOMIC OUTLOOK

(By Harold Fleming)

NEW YORK.—Some observers here are beginning to note a number of unexpectedly favorable signs in the economic outlook.

They appear in such widely diverse forms as an upturn in steel operations, a revival in cotton textile markets, and new high records in airline transport of passengers and freight.

Such signs may perhaps be responsible for the excellent performance of the stock market in the last 6 weeks or so. After having threatened in early June to plunge through the lows of the last 3 years, the leading stock price averages have done a noteworthy about-face and have climbed back to the predominant levels of this spring. In fact, they are as high now as they were last November when the Federal Reserve Board index of industrial production registered its all-time high.

PUBLIC BUYING POWER IS HIGH

If there is any over-all explanation, it appears to lie in the fact that the public appears still to be willing to spend its money in substantial volume for the kind of goods and services it wants, and its spending is much steadier than the inventory policies of the distributors and retailers who supply it.

An instance of this was cited on this page recently in the case of the demand for lead for replacement batteries for automobiles. While a fair guess as to actual needs is about 16,000,000 batteries a year needing replacement in the country's 40,000,000 cars, shipments of lead for such purpose to battery makers hit a peak rate late last autumn of 30,000,000 pounds, then slumped to one-tenth that rate in April, May, and June. In consequence, lead dropped from 21½ cents to 12 cents, but now that the buyers' strike apparently is over it has recovered to 14½ cents.

Textile trade demand has shown somewhat the same course. This spring jobbers and retailers virtually stopped buying except on a hand-to-mouth basis instead of letting their inventories run off sharply, though consumer demand faltered only slightly. In consequence, mill production fell off sharply.

In cotton textiles the mills, with their leading costs—cotton and wages—almost frigid, refrained from their prewar custom of producing for inventory. It wasn't long before everybody's inventories appeared to have been cut to the point where they had to be replenished.

TEXTILE DEMAND STRENGTHENS PRICES

First pick-up came in woolens and rayon fabrics. Now it has appeared in cotton textiles. With buying for August white sales out of the way, bedsheet makers were the first to mark prices up again slightly.

Last week a buying wave in Worth Street moved out about 6 weeks' supply of printcloths, and resulted for the first time in many months in a small price advance. Leading cotton textile prices had slumped to levels in many cases below the 1946 OPA ceilings despite considerable mark-ups in both cotton and wages since that time.

Another such reversal seems to be shaping up in the heating oil market—one that, as the Journal of Commerce here puts it, "may be both swift and dramatic." Although the trade figures forecast at least a 10 percent increase in the number of new fuel oil users next winter over last, demand for heating oils fell below the corresponding 1948 month by 13 percent in April, 24 percent in May, and 30 percent in June.

Apparently both distributors and home owners have been putting off their purchases for next winter in the hope of further price declines. And so, comments the Journal, "it looks as though the deferred demand for heating oil may hit with a bang at the first cold snap—with such a bang as to quite possibly strain the [oil] industry's distribution and transportation facilities * * * [and] one thing looks pretty certain—in a relatively short time present depressed heating oil prices will vanish into thin air."

RETAIL SALES HOLD UP FAIRLY WELL

Such inventory situations caused Barron's magazine to comment last week that "sensitive price indices of raw materials have started to level off. Some of them have turned upward. Businessmen are beginning to wonder if inventory reductions haven't been overdone. With new buying coming into the market for needed replenishment, production is at such an ebb that further price rallies in a number of basic commodities are forecast."

Another such upturn appears in steel operations. After declining in every week from mid-April until the end of June, they have now moved up for two successive weeks (not counting the recovery from the customarily depressed Fourth of July week), and at 81½ percent are higher than a month ago.

One reason for this is that automobile demand is holding up better than expected. It was expected to slump around this time; traditionally, the best buying months are April through June. The independents were expected to feel the slump first. But there has been no slump.

The figures on retail sales by department stores, chains, and mail-order houses may have a more favorable implication than has recently been found in them. They show declines from last year varying (from week to week, city to city, and among the different outlets) from 5 to 15 percent below last year. But these are dollar figures. And they may be almost entirely accounted for by price reductions.

INDEX MAY MARK TURN IN TIDE

In this connection, the consumers' price index of the Bureau of Labor Statistics may be somewhat misleading. It shows no important decline this year at all. But this appears to be due to two important facts: First, the index includes rents and utility charges. Average rents have been moving up slowly as more and more areas are decontrolled or increases are permitted, and many utility companies have recently won belated increases from regulatory authorities to compensate for increased costs and wages. Second, the index does not adequately take into account such shopping facts as the housewife's ability or inability to buy low-priced lines or to take advantage of bargain sales and clearances. Hence, the index understated the 1946–1948 rise and now understates the 1949 decline in prices.

Whether such developments as those cited above ultimately prove to mark the turn or instead prove a flash in the pan remains to be seen. But if they prove to mark the turn, three comments may be in order:

1. This will be the first time that a downturn in business following a long boom has not fed on itself until it became a real depression.

2. Part of the credit may be due to the new flexibility of the Federal budget, which for the first time is not being sharply curtailed just at the moment when business outlays are being curtailed.

3. Another part of the credit may be due to the administered price policies of the leaders in various industries, who have refrained from marking prices up when demand indicated far higher prices could have been obtained.

United States Underground

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Underground," written by Malvina Lindsay and published in the Washington Post of recent date. The article is a very excellent commentary on matters of great importance now pending in Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANTIDOTE TO WORLD BLUES—UNITED STATES UNDERGROUND

(By Malvina Lindsay)

Two young men talking to me within the same hour have made me feel that perhaps the world does have a chance.

The first talked by telephone. His voice was of the under-35 kind—vigorous, enthusiastic. He told how before the first of the year 20 or more young men from as many different countries would arrive in Charleston, W. Va., to spend a year working in the town, living in Charleston families. By March the same number of young men from Charleston territory would be going abroad to work a year in the countries from which the visitors came.

This was a project of the Charleston Junior Chamber of Commerce, I was told proudly. Initiated by this group, it had been adopted by the National Junior Chamber of Commerce. Eventually the 2,000 junior chambers of the country might each be sponsoring 25 young men coming and going—a total of 50,000 each way. Travel expenses would be borne by each chamber for its own group. To my surprise, I learned there were junior chambers of commerce in India, Burma, China, New Zealand, and most European countries, who were paying the ways of the representatives they were sending to Charleston. What a uniform world it was, as well as a small one.

I thought of the teacher, student, worker exchanges already in progress, of how solidly they were building.

I thought of Americans who had come back from Europe, especially Germany, depressed over the future, and how often they had brightened when exchange of persons was mentioned. I had heard many of them say that bringing nationals of other countries here was "about the only thing that helped" in making the American system understood abroad.

Yet I warned my enthusiastic caller there were always some misfits, some mistakes in exchange projects. He brushed that aside with an "of course," went on to tell of how the project was expected to enrich the life of Charleston (population around 75,000) as well as help the foreign visitors.

When he hung up I had almost forgotten the croakings about tomorrow I had been reading and hearing on all sides—the pronouncements of men too old to fight on the inevitability of war; the resigning of the Nation by self-styled realists to nothing but a constantly growing world armament race; the vague declaimings of orators, male and female, on Americanism as a Chinese wall against all world unpleasantries. For here was a heartening example of grassroots action going on beneath the noisy, bellicose surface of American life.

Shortly afterward another young man, this time from the financial world, talked with me of the Nation's greatest fear next to an atomic war—a depression. We agreed the present decline in business wasn't "it." In fact, he didn't see it looming ahead anywhere. The decade of the 1950's, he declared confidently, should be the best yet in American life—barring, of course, war.

But I countered, what about all those cycle trends that converge at a low point in the 1950's on the cyclists' charts? What about this haunting shadow of overproduction that will grow more menacing when this country curtails its foreign-aid program? How could the great productive machine we built up in war be kept going with a continuing drop in exports in a dollar-starved world?

"Those are real problems," admitted the young man, "but we'll lick 'em. Listen," he went on in deep earnestness, "nothing can make me believe we won't be able to solve this overproduction problem. Why with our technical knowledge, our organizing brains, our initiative, our imagination, and with the whole world so desperately in need of our products, it's simply impossible to believe we'd sit back helplessly and let another depression take over. I tell you we'll find a way for the world to get our products, and it won't be on a hand-out basis either."

This was something different from the prosperity-around-the-corner pep talk of the 1920's. I felt new hope rising. Perhaps the time would come when Americans with a conscience would not feel guilty about overproduction in a world two-thirds full of want. Perhaps this country really would fulfill the destiny seen for it by its founders.

Perhaps, I thought as the young man walked away, I had been seeing and hearing too many of the wrong people. Perhaps I had been missing the real Americans.

Ninety Years After

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Ninety Years After," published in the Oil City (Pa.) Derrick of August 10, 1949. I call the attention of Senators to the fact that this is the anniversary of the drilling of the great well, which was the beginning of the oil industry in the world. Twenty-seven States now produce oil. I also call to the attention of Senators that in the Pennsylvania field where the first well was drilled there is a well which is still producing, which was drilled in 1861.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NINETY YEARS AFTER

There will be a highly symbolic touch to Drake Day this year. When the day is marked on August 27—90 years since the first commercial oil well in the world was brought in—oil again will be flowing from that famed hole.

Of course it won't be oil from the well—it stopped producing years ago—but it will be an arrangement whereby visitors will actually see Pennsylvania crude flowing from the first well in the world.

It has taken some time to make all the arrangements. But it will be worth the effort. The well casing has been cleaned out to a depth of 60 feet by Caretaker A. C. Brown and others. The old-time boiler and engine, donated to the Drake Well Memorial Park last summer by George Hilton, of Plumer, has been reinstalled.

Henry Woodcock, of Route 8, took his water well drilling machine to the replica of the Drake derrick over the well. He and Mr. Brown removed the original cast-iron casing. New and small casing was put down the well with tubing inside this with a working barrel and polished rod. Then the crude oil will be added. There is still some oil in the well, but there is too much salt water mixed with it.

That oil, coming from the original well, is symbolic, whether it was so intended or not, that the world's first oil field—the section between here and Titusville—is still producing. This is remarkable. Remember, hundreds of fields discovered since then have been abandoned and the oil men have moved on to other places. Pithole is an example in this immediate section. There are countless others in many places in this Nation and the world.

The production in this immediate area is not large compared with other fields. But there is a considerable dent in the incomes of the oil producers in this section when the price of crude is cut. And that reduction is felt by others as well.

There are a number of old wells here still yielding oil. The oldest pumping well in the world is McClintock No. 1, at McClintockville, the property of the Brundred Oil Corp. It was put down in 1861—the first year of the Civil war and 2 years after the Drake well. Its yield is small, in "pints and quarts," yet it is worth while to keep lifting oil from that old well.

This first field would likely have passed out of existence long ago, had it not been for the efforts of oil men to find new methods to lift the crude. They noticed there was a sharp decline curve in production when wells were operated on primary production—that is, each one pumped separately.

Then came secondary recovery, which increased the yield of oil sharply. The injection of some agent—air, gas, or water—into the producing sand forced more oil into the producing well. The producers are now in the process of shifting to "flowing wells." This lifts the oil in the producing well by the force of the injecting agent without the use of pumping.

Another great factor in keeping this original field alive was the quality of the product. Our Pennsylvania grade crude has the greatest yield of lubricating oil. That makes it more valuable. Thus the price of Pennsylvania crude is justly the highest in the land.

Without the aggressiveness of the producers and the value of the oil, this original field might have been economically unjustified long ago. But 90 years after the Drake well, the field is still going strong.

Philip M. Kaiser, Assistant Secretary of Labor

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. O'CONOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement

I have prepared in tribute to Mr. Philip M. Kaiser, whose nomination to be Assistant Secretary of Labor, was confirmed on Friday last.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. HERBERT R. O'CONOR OF MARYLAND

To one who has been privileged to work in close association with Mr. Philip M. Kaiser, his confirmation for the office of Assistant Secretary of Labor comes in the nature of a truly well-deserved recognition. I was exceedingly happy to lend my support to his approval, and can attest sincerely my conviction, born of close association with him over recent weeks particularly, that his elevation to this important position will be distinctly to the benefit of the United States Government and to all who are interested in the progress of labor in this country.

When, recently, I was designated to represent the United States at the International Labor Conference in Geneva, Mr. Kaiser was appointed the other Government representative. His long experience in the field of labor matters is well known. In conference his knowledge of and tact in handling every phase of controversies in this field were exceedingly helpful, to the point where I think that a great measure of the success achieved by the United States delegation can be justly ascribed to the efforts of Mr. Kaiser.

As may easily be understood, there were numerous occasions, in discussions between the representatives of the various nations at Geneva, when international interests were in conflict and controversy raged. It was particularly noticeable, and I might well say notable, that on such occasions it was Mr. Kaiser's tactful handling of the United States position in the matter that helped bring about the solution it was possible to achieve.

On the several occasions, likewise, that delegates from the Communist-dominated countries sought to inject propaganda and anti-American views, Mr. Kaiser was able, because of the respect accorded him by the representatives of the many non-Communist countries, to refute the unfounded accusations and to uphold basic American principles.

To put the case very briefly, I can say that from my personal contacts with Mr. Kaiser in the field of labor matters in this country, and from my observations of his tactful guardianship of United States interests at Geneva, he is in every way well qualified to accept and discharge the responsibilities attendant upon the position of Assistant Secretary of Labor.

President Truman could not have made a more fortuitous choice for this important post, which is so vital to the labor interests of the country, and to the general public as well. We can be certain that Mr. Kaiser will fulfill the duties devolving upon him with conspicuous success.

Get the Big Operators

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. SABATH. Mr. Speaker, under leave granted me, I wish to insert an article in the RECORD which appeared in the Sunday Chicago Sun-Times of August 14, 1949, and written by Thomas L. Stokes. This is one more instance of why a lobby investigation is needed.

GET THE BIG OPERATORS

(By Thomas L. Stokes)

WASHINGTON.—It is easy, though perhaps dangerous to morals and morale, to be blase about the smooth-talking gentry who constantly infest this city with their first-name chatter about the "insiders" they know in Government and how they can fix up the poor, down-trodden businessman.

Back in the early twenties, the prohibition era, one of the most profitable rackets was "protection" for bootleggers from the Federal Government.

In the late twenties the Caraway lobby investigation bared one gentleman's activities. Simple operations, but profitable. He hired himself a small office, bought a library of half a dozen books about taxes, tariffs, and the like, and milked gullible big corporations a thousand bucks a year easy for his "reports."

More recently we have seen the influence business of bright and engaging fellows, once insiders in the New Deal.

The recent war, and now the cold war, offer lots of suckers. So again we have a juicy, sensational story.

Inherent in all this, keeping it alive, is the mystery that's thrown around Government. Government is so tremendous that you don't know where all the pieces are all the time when you live with it daily.

The smaller-business man is helpless, innocent, and gullible where Government is concerned. A fellow in the know is a tempting lure.

Minor Government officials are gullible in their way, too. When somebody who's supposed to have influence at the White House comes in to get something done, or intervene for a friend, they sit up and take notice. They've got to protect their jobs, too.

What we'd like to see around here is an investigation of the really big operators, the quiet fellows you never hear about except perhaps in the society columns, who don't boast about it but do know the right people in Congress and really influence Government policy.

Such as, for instance, in the bill passed by the House to exempt so-called independent natural-gas producers who sell in interstate commerce from Federal Power Commission regulation, from which a few big oil companies will profit handsomely at the expense of the consumer.

Such as the Senate Appropriations Committee's elimination of Government transmission lines for public power projects from the Interior Department appropriation bill at the behest of several great private utilities which would thus be able to control power distribution themselves.

You don't find too many people in Congress who want to expose the really big and effective operators who get these things done. But there's a full hue and cry after the little operators who are, in the language of the poker table, "ribbon clerks" by comparison.

Small World Still Too Big for Uncle Sam To Support Single-Handedly

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. MUNDT. Mr. President, I ask unanimous consent to insert in the RECORD what I believe to be the shortest item ever incorporated in the Appendix of the RECORD. I submit, sir, that it is just as significant as it is short. It is a single sentence editorial from the pen of Sid Davison, editor of the Miner County Pioneer, published in Howard, S. Dak.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

We'll agree that this is a small world—but not small enough for the United States to take on the job of financing all of it.

The Welfare State

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. CAIN. Mr. President, the State of Washington is presently undertaking a significant experiment in the welfare field. The August 15 issue of Newsweek tells about it. I ask unanimous consent that the Newsweek article be printed in the Appendix to the RECORD where it may be read and considered by thoughtful and interested persons.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WELFARE STATE: EVERYONE'S FEELING MUCH BETTER—BUT THE POORHOUSE LOOMS IN THE STATE OF WASHINGTON

(By now the British welfare state is an old story to American readers, as is the charge that President Truman plans a similar set-up in the United States. But unknown to most Americans is the fact that a miniature welfare state is already incubating in this country. The following Newsweek survey of the State of Washington tells the story:)

Last November Santa Claus showed up on the ballot in the State of Washington. He came disguised as a measure called the Citizens' Security Act, which avowedly would assure Washingtonians "freedom from fear and freedom from want." Presented to the voters in a referendum, it would boost monthly minimum-old-age benefits from about $48 to $60 a person, giving Washington the country's third most liberal pension rate. More significant, it would guarantee anyone on the State relief rolls free medical care — physicians, hospitalization, even crutches and false teeth. It would in effect make Washington the Nation's first welfare State.

The experiment would last 2 years and cost the State $206,280,000, almost one-half its total expenditure for all purposes, including education. It was backed by the State's Townsend Clubs and by the Washington Pension Union, which had been under investigation by the State legislature as allegedly Communist-led. The Seattle Municipal League and both the Seattle Times and the Seattle Post-Intelligencer opposed the measure on the ground that, however desirable sociologically, it would make solvent government impossible.

But no one shoots Santa Claus. The voters approved; on January 1 the Citizens' Security Act became effective.

RESULTS AGAINST COSTS

Last week the evidence was that Washington's needy were in better health and were chewing better, seeing better, and feeling better than ever before. The old-age-pension hike was paying dividends in the shape of thousands of elderly men and women who were leading securer lives.

But after 7 months of the experiment its opponents were more convinced than ever that the welfare State was headed straight for the poorhouse. Health costs had zoomed more than 150 percent above a year ago. In King County alone, doctors' bills were running $18,000 to $20,000 a month over the amount the State had planned to pay. Thirty-one percent of the relief eligibles in that county—10,781 out of 34,800—went to a doctor in June.

Formerly only 20 percent sought medical aid each month. The average cost per person per month for medical care was now $13.76. A year earlier it had been $8.07. And the cost of the program was rising as the relief rolls grew. (In Washington, a man who has even as much as $200 cash and who owns his own home, car, and life insurance with a cash-surrender value up to $500, can qualify for relief.)

Even the present rate of payments, according to State officials, would exhaust the medical-care appropriation months before the act's expiration date. Gov. Arthur B. Langlie's request for additional taxes has already been turned down.

The way the program works, anyone on relief and needing medical care can visit a local welfare office and obtain a referral to a doctor of his choice who is participating. (Most doctors but few dentists have agreed to treat the indigents.) With no more questions asked, he then is supplied with whatever he needs in the form of operations, hospital care, drugs, hearing aid, plastic eye, X-rays, and therapy.

Doctors bill county medical bureaus as they would a private patient; the State in turn finances the bureaus at a rate of $2.50 a month for every person on relief. Dentists and druggists send bill directly to the State. The State pays hospitals up to $9.50 a day per patient, including meals, $20 for delivery-room service, and $12 for anesthesia. An X-ray may cost up to $10, a blood count not more than $3.50.

A Seattle physician computed that an employed person would have to earn an annual income of $5,000 to afford the medical care given the average welfare case.

CABBAGE JUICES

Opponents charge that inadequate checks and controls have encouraged a rash of abuses and absurdities. One man reportedly complained of stomach ulcers and his doctor prescribed lots of cabbage juice. A cabbage juicer cost $47; the doctor recommended that the State buy him one.

"A high percentage of doctors are taking the program for a ride, getting from it all they possibly can," a leading Seattle physician declared last week. "Patients are being overtreated. X-ray and laboratory work is being done with no regard for need but for the fee only. People go to a doctor for a prescription for aspirin which ordinarily could be bought for 15 cents."

A Tacoma woman called her doctor at 2 a. m., complaining of throat trouble, and was taken to the hospital in an ambulance. A staff doctor found only a slight redness of the throat and gave her some medicine and sent her home in a taxi. The State's transportation bill was $10 for something most people would have treated with a bottle of cough sirup.

Dr. Burton A. Brown, of Tacoma, resigning as medical director of the Pierce County Hospital, reported that "the morale of the intern and resident staff has sunk to an all-time low." After 24 years at the hospital, he returned to private practice.

Last week in a progress report on the welfare program, Roderic Olzendam, State social security director, conceded that "abuses have developed under which some people have drawn higher benefits than they are rightfully entitled to * * * that it is possible for a person in need and unemployed to draw more money than he earns producing."

To correct this and other admitted shortcomings, Olzendam planned to streamline his executive organization. He said he would strive henceforth to "administer the program within the budget" and run it in "an economical, sympathetic, businesslike manner." In other States and in the Federal Government many who had toyed lovingly with the notion of a welfare state would closely scan the results of his efforts.

The Doctor's Heart

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Lowry H. McDaniel, M. D., of Tyronza, Ark. It was given as the chairman's address, section on general practice, at the Southern Medical Association's forty-second annual meeting, Miami, Fla., October 25–28, 1948:

THE DOCTOR'S HEART

(By Lowry H. McDaniel, M. D., Tyronza, Ark.)

I have chosen as the subject of my address the unusual title "The Doctor's Heart." It is our idea, as well as other physicians prominent in southern medical circles, that the chairman's address before some sections should be of the inspirational type or in the words of the laity "something for the good of the order."

The subject, The Doctor's Heart, is to be approached from a different viewpoint from that ordinarily heard in a scientific program. Instead of a discussion on the frequency of cardiac disease in the physician, too often brought about by the strains of overwork, lack of sufficient rest and relaxation, exposure, anxiety over the condition and prognosis of his patients, long and irregular hours and habits, we wish to discuss the spirit, the ideals, the enthusiasm, the ethics, the soul, that inexplainable something that makes the noble physician ever carry on in spite of obstacles that would dampen the ardor or stop any man who did not have the doctor's heart, or some other human dynamo to inspire him to serve his fellow man.

One of the greatest characters in sacred history said, "Out of the heart come the issues of life." The speaker will bring out, that out of the doctor's heart come the will, the power, the stamina, to surge forward in medicine's and humanity's struggle against disease and death.

Much has been said about the strain imposed on the doctor's heart by the practice of his profession. The reference is usually to the physical organ. The doctor's heart of which I speak embraces the intellect, the sensibilities, the intentions, and conscience. In a deep, time-tested book which most of us revere, it is written that the heart thinks, meditates, reasons, doubts, believes, and understands. All of these are functions of the mind, hence the heart of which I speak includes the intellect. This same book also says the heart fears, hates, deceives, suspects, loves, trusts, sorrows, rejoices, and forgives. These are functions of the emotional nature, so the heart includes the sensibilities.

The great literature of the world, sacred and profane, refers to the heart as something which purposes, rebels, conquers, surrenders, or stands steadfast. These are functions of the will, so the term "heart" includes all of man's intentions. But that is not all. This spacious word includes something within us that may be made callous or kept tender, something that can restrain, approve, or condemn. These are functions of the conscience, so the doctor's heart, of which I speak, embraces the celestial spark called conscience.

Now, having seen that the heart includes the mind, will, emotions, and conscience, it is easy to see that as long as the doctor keeps his heart up he is a winner, and that when he loses heart he has lost everything. Bacon, the philosopher, was never wiser than when he said:

"All human actions take their color from the complexion of the heart, just as the landscapes take their changing hues from the light."

Out of the doctor's heart comes the power to triumph over failures, weariness, lack of appreciation, lack of remuneration, and all sorts of discouragement. The years take their toll of the body; the heart is all we have that we can keep forever young. The ancient Norsemen said that "vain is the strong oak in our ships without strong hearts in our men." One day the poet Longfellow read the words in the Book of Proverbs ascribed to King Solomon, "Keep thy heart with all diligence, for out of it are the issues of life," and made it the basis of an inspiring poem. Everywhere in life, everywhere in human relations, everywhere in man's conduct toward his fellow man, there stands towering that great truth:

"Out of the heart are the issues of life."

May I now tell you a true story, for truth is always stranger than fiction, that aptly describes the noble physician who puts service to humanity above personal gain or glory. The story has it that a very fine person who was a doctor lived in the suburban section of the city of New Orleans. He did a great deal of practice for the poor French people of that city. But he did not always reside in the suburban section and certainly did not have his office out there. He had his office in one of the most up-to-date office buildings in downtown New Orleans for some years and enjoyed one of the very best practices in the city. His patients during that period of his life were from the richest families in that city. He made large amounts of money and saved a great deal of it.

He was a Christian gentleman. He became very much interested in the poor of the city and began by giving a part of his time and ability to the poor who could not pay him. As time went on, he gave more and more of his time to the poor and often neglected his other practice. His paying practice began to leave him. He, in time, lost his paying practice and began to spend his savings. He moved his offices into less expensive space in the office building, and later on moved into still less expensive space and finally moved his offices out in the suburban section up over a corner grocery store with steps on the outside of the building leading up to his offices. His practice then was almost all charity. He had a sign printed on tin and tacked on the lifts of the steps leading up to his office. The sign read "Dr. M. E. Moffett, office upstairs." He never tried to stage a come-back with the rich. He finished his mission on earth with the poor who paid only small and occasional fees. He died wholly without funds and was buried in an unmarked grave.

A group of the poor but appreciative people for whom he had rendered valuable service, headed by a poor woman for whose son he had performed an operation and corrected a club foot, went about trying to collect funds to purchase a small marker for his grave. They worked long hours and hard to this end, but could not get enough money to erect even the most modest marker, so this lady for whom he had performed the operation on the foot of her son conceived the idea that she would go back to the store over which his office had been located, which building was then vacant both upstairs and down, and take a portion of the old steps and take them to his grave as a marker. This she did with the aid of two small boys.

She took an old hand saw and sawed off a section of the steps and nailed two upright pieces on the steps and took that section of the steps to his grave and set it up at the head of the grave. On the topmost lift of this section of the steps was one of the tin signs which read, "Dr. M. E. Moffett, office upstairs." He had moved his office from over the little old corner grocery to that "office upstairs." I have little doubt that this story will apply some day to many if not all of the physicians in attendance here today.

I know of a man whose hobby is unique and unusual oriental tapestries. He has a piece that he prizes above all others. Throughout the design of this tapestry there is a strand of brightest crimson. The history of this tapestry is this. It was made by a Persian girl who was deeply in love with a young man. Her family had died while she was very young, leaving her little or nothing. His family preferred and looked for a more favorable match for him. While not working at making carpets, as others of her family had done before her, this girl busied herself with this tapestry to give to the one she loved. When in the design she came to a certain strand, instead of camel's hair, she used hair from her head, and then dyed it with her own life's blood.

As the tapestry grew larger and larger, she seemed to be waning away; as it became redder and redder, she became paler and paler. Then one night when it was finished, she stole out and spread this tapestry dyed by her own life's blood over the one whom she loved while he slept, to keep him warm.

I know a profession, composed of men like you and like me, who know and love men and women and boys and girls, who have woven a tapestry of character in their life's blood, thinking not of themselves but of those who call them to serve, men who have dedicated themselves to a life of service to a suffering humanity, men who as the days come and go give of their best, and then in the end, when life's sun is low, can look back down the long path they have ascended with the satisfaction that they have given their life's blood in order that others might live.

There are professions and professions, but none more noble than the one you are a part of. Through tireless days and nights you have been as devoted to your profession as the North Star has been in its course through the heavens. Had you not have been, research, discoveries, and the advancement of medical science would be where they were a hundred years ago. And with the rapid increase of the world's population men and women would not have been afforded the opportunity of bringing to pass the world's advancements, necessary with the increase of the world's population.

The first attempt to dig the Panama Canal resulted in failure not because of a lack of manpower nor machinery but because medical science was not employed to keep men on the project from dying like flies. The second effort of this gigantic undertaking was successful for the simple reason that manpower was joined with medical science; the two working together accomplished this great engineering feat. Mark you well, had it not have been for these two great elements working together, such a task would never have been successful. And thus it has been all back down the stream of time, and thus it shall be as long as men shall labor and love on this earth.

"Out of the heart come the issues of life." I mean simply this, that which flows or passes out of the heart signifies the true worth, the true value of any man. It tells what he is and what he stands for. Values are often overlooked; for it is too often that we value a man by what he possesses. I would remind you, "that a man's life consisteth not in the abundance of the things which he possesses." I am happy that our profession does not value the man according to the number of his dollars. Dollars do not mean character, the greatest of all jewels; dollars have no place for heroic efforts, nor for service given nor devotion to duty; they have no way of expressing the long hard hours spent in helping men and women from death into life. Not dollars, but the heart that pulsates in a breast of love is the driving force that carries the noble physician from one sacrifice to another and by the same token from one crowning glory to another.

George Elliott, in the Mill on the Floss, gives the legend of St. Ogg. Ogg was a boatman who gained a scant living by carrying passengers across the River Floss. One evening when the winds were high, there sat moaning on the river's bank a woman with a child in her arms. She was clad in rags, and there was a worn and haggard look on her face. She begged to be rowed across the river. Others bade her wait till morning, and asked her why she desired to cross. Ogg came to her and said:

"I will ferry thee across; thy need is most urgent and thy heart above all desires it."

Battling with all of his power against the wind and waves, he ferried her across. As she stepped ashore, her rags were changed into a robe of flowing white, her face became exceedingly beautiful, and her brow was hallowed with a light, like the brightness of the moon, until it cast a silvery light upon the water.

She said:

"Ogg, thou art blessed in that thou didst not question the heart's need, but wast smitten with pity and didst straightway relieve the same. Henceforth whosoever steps into thy boat shall be in no peril from the storm, and when it puts forth to rescue, it shall save the lives of men and beast."

When the floods came many were saved by the blessing on the boat.

The legend goes on:

"When Ogg's spirit was parted from his body, his boat slipped its mooring at the river's bank, and went drifting rapidly to sea with the tide, until it was seen no more. Down the years in times of storm, a phantom boat might be seen in the river. At the oars sat Ogg, and in the prow a woman dressed in a robe of flowing white, and around her a halo of light, like the brightness of the moon, that cast a silvery light upon the water. As the toilers saw this vision of the phantom boat and the Madonna, their arms were made strong and their hearts brave for the work of rescue."

I like to compare the everyday general practitioner with his heart of gold, with "The Doctor's Heart," if you please, to the good St. Ogg.

I feel that I do no violence to truth when I say that the Southern Medical Association's beloved secretary, who has been stricken while in harness after 35 years of duty to southern medicine, has also acquired, partly from association but mostly because that spark of love for his fellowmen was already there, this human dynamo of goodness that we today call the doctor's heart. After this meeting may we not grasp his hand a little more firmly, a little more warmly to show our appreciation for his past successes in steering our Southern Medical to its present eminent position as the outstanding medical association of our land.

Let me tell you another story and I am through. A group of American tourists in Dublin, Ireland, passed three workers, each at a rockpile, scattered along the roadside a block apart. In order to make a happy conversation, a tourist said to the first man, "My good man, what are you doing?" Without looking up, and murmuring, Pat said, "Breaking rock." As he approached the second man, the tourist again plied his question, and the answer from Mike was that he was working for the equivalent of a dollar a day. As he approached the third man, who seemed to be watching his rock, rolling it over in his hands and measuring distances as he worked, the tourist said, "My good man, what are you doing?" And the laborer replied, "Building a cathedral to the glory of God." I like to ponder over that true story and realize that the noble physician who is ever alert to serve his fellowman is constantly "building a cathedral to the glory of God."

My friends of the profession, we, the physicians of our Southland, have an obligation to uphold, an obligation to those great men of medicine whose lives and services stand out brightly in our history. We pledge ourselves to be true to the ideals of Frank Vinsonhaler, the greatest name in Arkansas medicine; Turner Wootton; Sid Wolferman, also of Arkansas; Crawford Long, of Georgia; Marion Sims, of Alabama; Walter West, of West Virgina; Irvin Abell, of Kentucky; Frank Boland, of Atlanta; and his neighbor, Stewart Brown, of Royston, Ga.; Dean Robert Wilson, Sr., of South Carolina, along with those other two great souls of the Palmetto State, Adams Hayne, of Columbia, and W. L. (Buck) Pressly, of Due West, S. C.

The mention of one name instantly makes others flash into our minds: Rudolph Matas, of New Orleans; E. H. Cary, of Dallas; W. D. Haggard, of Nashville; Jeff Miller, of New Orleans; Seale Harris, of Birmingham; William S. Halstead, Hugh Young, and Howard Kelly, of Baltimore; R. L. Sanders and J. B. McElroy, of Memphis; W. S. Leathers, from Mississippi and Tennessee; W. H. Anderson and Felix Underwood, of Mississippi; C. C. Bass, of New Orleans, and W. C. Gorgas, of Alabama.

Will you forgive me for becoming personal when I list five other noble physicians in whose breasts there pulsates a heart of purest gold, L. A. Yarbrough and G. B. Gillespie, of Covington, Tenn.; A. G. Henderson, of Imboden, Ark.; Edward C. McDaniel, of Tyronza, Ark.; and J. L. Baard, of Marked Tree, Ark. Intimate association with this last group prompts me to compare them favorably with that previous group of great and noble physicians.

I like to name those great souls in whose breast there pulsated that tender, that mysterious, that unfathomable doctor's heart. I could name many others in that group just as deserving who are not mentioned for lack of time, that group of men who answered the call of duty to palace and hovel alike, that group of men who heard secrets and confessions not breathed to other mortals, that group of men who were often called upon to whisper consolation to a poor suffering soul on the brink of this earthly silence, that group of men who labored through love under a system we know as medical ethics, the ideals of which are not surpassed by any organization, religious or otherwise, that system which in its ultimate analysis is but a continuation of the Sermon on the Mount by the Great Physician, that One who ever directs the internist's diagnosis or the surgeon's hand. Gentlemen of the profession, if every physician here rededicates his life to the ideals of those great men named a moment ago, this meeting has been well worth while.

May we daily and hourly answer the call of duty to our fellow man in pain or sorrow. May we ever be alert lest we overlook some wound that needs to be healed, some bruise that needs to be soothed, some fevered brow that needs to be cooled, some despondent heart that needs to be revived, some troubled mind that needs to be cheered. May we sum up our attitude as did that great doctor's poet, Gresham, who said:

"LET ME WALK WITH THE MAN IN THE ROAD

" 'Tis only a half-truth the poet has sung
Of the 'house by the side of the way;'
Our Master had neither a house nor a home,
But He walked with the crowd day by day.

"And I think, when I read of the poet's desire,
That a house by the road would be good;
But service is found in the tenderest form
When we walk with the crowd in the road.

"So I say, let me walk with the men in the road,
Let me seek out the burdens that crush;
Let me speak a kind word of good cheer to the weak
Who are falling behind in the rush.

"There are wounds to be healed, there are breaks we must mend,
There's a cup of cold water to give;
And the man in the road by the side of his friend
Is the man who has learned to live.

"Then tell me no more of the house by the road,
There is only one place I can live.
It's there with the men who are toiling along,
Who are needing the cheer I can give.

"It is pleasant to live in the house by the way
And be a friend, as the poet has said,
But the Master is bidding us, 'Bear ye their load,
For the rest waiteth yonder ahead.'

"I could not remain in the house by the road
And watch as the toilers go on;
Their faces beclouded with pain and with sin,
So burdened, their strength nearly gone.

"I'll go to their side, I'll speak in good cheer,
I'll help them carry their load;
And I'll smile at the man in the house by the way,
As I walk with the crowd in the road.

"Out there in the road that goes by the house,
Where the poet is singing his song;
I'll walk and I'll work midst the heat of the day,
And I'll help fallen brothers along.

"Too busy to live in the house by the way,
Too happy for such an abode;
And my heart sings its praise to the Master of all,
Who helps the doctor to serve in the road."

State of The World

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. SABATH. Mr. Speaker, under permission granted, I insert an article in the RECORD which appeared in the Chicago Sun-Times of August 14, 1949, and which I hope the membership will read with the same interest that I have in this very able and well-written editorial.

STATE OF THE WORLD

Every January, the President reports to Congress on the state of the Nation. Last week Trygve Lie, Secretary General of the United Nations, reported to the 58 Members of that body on the state of the world.

Mr. Lie found international tensions somewhat relaxed and the fear of war lessened. The most interesting part of his message was that dealing with the ideological conflict between Russia's eastern bloc and the American-led western bloc.

Insofar as anybody can, Mr. Lie is able to approach that conflict impartially. By the terms of the UN Charter, he and his staff are forbidden to seek or receive instructions from any government. They are responsible to the UN organization and to nobody else.

Let us listen, then, to the thoughts of an uneasy bystander in the cold war.

It is Trygve Lie's opinion that the ideological conflict between East and West is not the one great issue of our times. He believes there are at least two other developments of first importance: (1) the rise of millions in Asia and Africa from a position of dependency toward a position of equality; and (2) the growing strength of the movement to extend the observance of human rights everywhere in the world.

"If the importance of these developments were correctly assessed," says Mr. Lie, "I believe that the world would find it possible to approach the present East-West difficulties with less hysteria, for they would be more easily seen in their true perspective.

"I believe that the rise of dependent peoples and the human-rights movement will, in the long run, have far more significance and give rise to greater events in the second half of the twentieth century than will the present ideological struggle. * * *

"The days of dependency or inferior status are fast coming to an end in Asia. Its peoples are the inheritors of some of the world's greatest cultures; they are building their own new worlds on the foundations of the old. * * * The idea that all this vast diversity of ancient peoples stirring to new life and power could ever become the mere reflection of any form of society in other parts of the world is unrealistic"

What Trygve Lie is saying to Russia and the United States may be paraphrased in this way:

"You two great powers have been behaving as if your ideological rivalry would settle the fate of the world. It won't.

"You have been conducting your national policies solely with a view to strengthening your own power positions; but your own ultimate safety lies in strengthening the position of a universal world organization.

"The world of the future is not going to be a Communist world, for the idea of human rights is gaining ground everywhere. It is not going to be a capitalist-democratic world, for the emerging peoples of the East will insist on building their own lives according to their own cultural patterns.

"The time has come for both great powers to learn to live together in the same world—a diverse world on which neither can impose its own system.

"A war between the two ideologies would result in the destruction of both. In a world governed solely by the politics of power, both Russia and the United States would ultimately be outclassed by the growing strength of the colonial peoples.

"Both, therefore, have an interest in building now a world governed by law. Both, therefore, should make the United Nations the cornerstone of their foreign policies."

What the application of this principle might mean it well illustrated by the case of Italy's former colonies.

Three years ago the United States proposed that these colonies be turned over to the United Nations for administration until their peoples should be ready for self-government. At that time, Russia, flexing its muscles, was trying to grab off some of the colonies for itself.

As the cold war intensified, our Government changed its position. In the General Assembly this year we supported a plan to parcel out the colonies among Britain, France, and Italy.

This plan was defeated in the Assembly. It was defeated, not by Russia, but by the Asiatic and Middle Eastern nations which are only just emerging from colonial dependence themselves. They wanted Italy's former colonies to have the same chance at freedom.

Trygve Lie says the United States was right the first time. He would turn over the Italian colonies neither to East nor West, but to the UN—and thereby, to the native peoples themselves. Thus one dispute in the cold war would be settled without strategic advantage for either party, and at the same time the United Nations would be strengthened in the eyes of the colonial peoples whose opinion of it may some day make the difference between world chaos and world law.

It is a simple but profound principle, this idea of giving first priority to the interest of the UN as a whole. It is the principle on which the organization was founded in such high hopes. Some of those hopes might be recaptured if out of the cold war there should emerge the statesmanship and the will for peace that would reestablish the principle.

The North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. JOHNSON of Colorado. Mr. President, since the Senate vote on the Atlantic Pact I have received a great volume of mail—a nice mixture of bouquets and brickbats. One of the letters goes a few years back in history for the basis for a conclusion that is interesting and pertinent. I ask unanimous consent to insert it in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ROCKY FORD, COLO., *July 22, 1949.*

Hon. EDWIN C. JOHNSON,
Senator from Colorado, Senate Office Building, Washington, D. C.

DEAR SIR: About 30 years ago I sat in Tremont Temple in Boston. The occasion was a meeting of Senators Borah, Beveridge, and Thomas of Colorado. The subject was the League of Nations.

With masterful oratory Borah and Beveridge discussed the covenant. Lastly, Thomas got up and in language we could all understand, dissected it article by article. Lastly, in discussing article 10 of that document, he said "All I am politically I owe to the Democratic Party, but far above that is my duty to my country. They say article 10 does not mean what it says. My experience as a lawyer is that there is nothing so wrong as an article that does not mean what it says or infers. I hope my country will live up to what she signs but that she will be careful what she signs."

When Thomas finished, a well-dressed man in the front of the audience stood up facing the rest and said, "Let us give three cheers for Colorado." The applause was deafening.

We swelled with pride. I can assure you, Senator, that we again swelled with pride when we were informed of your vote. Congratulations and best wishes.

Respectfully,

BYRON B. BLOTZ, M. D.

Sold Short

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD a very splendid editorial entitled "Sold Short," published in the August 1949, issue of the magazine Partners.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOLD SHORT

The American businessman has done a marvelous job in selling the American people the products of free enterprise. Take the automobile, for instance—who would have believed it possible to sell this one product to practically every third person in the United States? Yes, and who would have believed it possible to install a bathtub in the home of almost every American? Or a radio in practically every room in every home? But such is the accomplishment of American business leadership—through a truly spectacular job of selling.

For this particular achievement the businessmen of this country are to be roundly congratulated. But there is another selling job on which these same businessmen can claim but scant success. They are not properly selling the system that makes possible the outlet for their products. They are not selling free enterprise.

A TRAGIC FAILURE

This blank in the total picture is not one we can afford to skip over lightly. It is one which requires immediate attention—if we are not to wake up some morning and find that we have all been "sold short."

Go to your radio today—or any day—and tune in on a debate on any subject affecting our economy. Listen carefully and before very long you will begin to appreciate the nature of our present peril.

Take, for example, the subject of socialized medicine—a topic which is being generally aired these days over the radio and from the public platform. Invariably you will find the speaker who supports state medicine to be not only a master of oratory, but a master of statistics as well—in short, you will find him a master at the art of distorting the truth impressively. At the psychological moment, he will raise his voice and rattle off a string of phony figures. "In the year 1948 alone," he may declaim, "3,285,961 persons lost their lives because of inadequate medical case." Here, he would give his audience to understand, is positive proof that private medicine should be abolished in favor of that which is Government-run.

His opponent, usually unsupplied with the true facts and figures, is left helpless at the microphone for want of effective argument. As a result, the American radio audience hears only one side of the statistics and are inclined to believe the words of the leftist "statistician."

Business, if it is to do an effective job in its effort to retain the free-enterprise system, had better wake up to the realization—and quick—that debating today is a business, and one of specialists. Men for this job should be selected less out of deference for their prestige as business leaders and more out of respect for their ability to debate an issue on its merits with argument that will meet the test under any and all conditions. Being a great business executive is one thing, but being a sound economist with the ability to put the truth across is quite another.

WHOLE STORY MUST BE TOLD

The proponents of communistic doctrine—or of socialism, as the stepping stone to Red power—know very well that they are selling intangibles. They have no real samples of their bill of goods and must therefore resort to trickery if they would put their sales talk across. And chief among the tricks thus used is the introduction of phony statistics. Such figures are quite effective, because, unless they can be disproven the moment they are presented, they are likely to be swallowed by the audience as the truth, the whole truth, and nothing but the truth.

It's about time these phony statisticians were challenged every time they make an utterance. For instance, a speaker for the left will boldly toss in the statement that, "according to statistics, poverty and destitution have risen 25 percent since the turn of the century." What he fails to tell his audience is that, according to further statistics, the population of this Nation, over the same period of years, has increased by 50 percent—hence, that what actually has taken place is a reduction in poverty, not an increase.

In this instance, as in every other, it is necessary only to present the total picture to expose the fraud of leftist figures.

The Communists have schools where their speakers are trained in the art of deceptive argument, so as to make easier the sale of their phony bill of goods. This being the case, doesn't it seem reasonable that we who believe in our system of free enterprise and our American way of life should be at equal pains to sell these tangibles? Against the intangibles offered by the competition, we have a bulging sample case. Ours to hold forth and demonstrate is a whole array of human rights which have functioned to deliver us the highest standard of living yet known to man, which function today as well as ever before, and which are ours to use and to exercise under constitutional guaranty. Here is our official stock in trade which, with proved performance to back our claims for it, brooks no reasonable competition—let alone competition from the dream world of the Muscovites. All we need today is a corps of well-trained and fluent salesmen.

EDUCATIONAL FACILITIES NEEDED

I therefore suggest that all agencies interested in preserving our American free-enterprise system wake up to the fact that it's about time they, too, had schools for training speakers to cope with the shenanigans of their opponents. Given the proper educational facilities, plus adequate training programs, such speakers would go forth prepared to challenge at every turn the oratorical maneuvers, the statistical gymnastics of their opponents—whether before a microphone, from a public platform, or in the course of an ordinary conversation on the street.

Unless such an educational program be set up immediately, the life of free enterprise on these shores will be strictly limited. For we here in the United States are being handled exactly as were the people of the vanquished satellite nations whose loyalist leaders were at no time equipped to cope with their opponents.

This is too serious a matter to be taken lightly. It's later than we think. Unless we act now, we may all wake up some morning (and it won't be a fine one, either) to find that our American system of free enterprise has been sold short.

Frankly yours,

MAURICE R. FRANKS, *Editor.*

Memorial Address

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial address by L. H. McDaniel, M. D., given at the annual session of the Arkansas Medical Society, April 15, 1949:

Another year has passed since our memorial services 12 months ago when we paid our humble and heart-felt respects to those physicians of our group who had responded to that eternal summons that knows no refusals and accepts no delays—another year with its sunshine and its shadows, its laughter and its tears, its sowing and its reaping, its cradle songs and funeral hymns has passed, bringing each one of us here today nearer the fateful hour when we, too, will join that lamented group of honored physicians and brothers in the profession whose names our good President-elect has just read to you. Surely the few moments we ponder on the lives, the accomplishments, and the achievements of that group whose earthly endeavors have been laid down—leaving us the memories of those lives of service to their fellow man or recollections of their tenderness to those in pain or distress—surely, I say, those moments spent in the reverence and honor of our departed brothers are moments that should be cherished forever.

That textbook of the Christian religion which we call the New Testament refers to one of its writers as "The Beloved Physician." Most physicians could still be designated by that title even during their active lives. And though the community takes them and their services as matters of course, when death removes them from this earthly scene they are then viewed in a clearer light, and to them then is applied the greatest of all titles, "Beloved."

It was said of Him whom millions called Saviour that He saved others, Himself He could not save. These same words, in a very real sense, may be spoken of the beloved physicians whom we memoralize today. The list as read by our President-elect shows that Death has not been idle this past year. We rejoice that the auxiliary has very few members to include in our eulogy today. In a way that goes to show that the good wives are spared some of the worries and hardships that take their toll of our physicians. In the performance of their duties they were unable to save themselves from long hours, physical weariness, mental anxiety and other exactions which many men escape. But because they did not seek to save themselves, others were saved.

These departed physicians whom we memorialize today exhibited as little of the defects of their environment and as much of its virtues as any group of men we could find. They had the kind of generosity which seems to thrive among men who practice an art

and not among men who drive bargains. They had discretion tested by the keeping of a thousand secrets. They had a tact which developed out of many embarrassments. Their cheerfulness brought courage to the sick room even when they could not bring healing.

They knew the rich as well as the poor, and they did not truckle to the one nor spurn the other. They knew the people called good and the people who were called bad, and their penetrating eyes saw more than mere anatomy. They saw how vice and virtue intertwine, how the bold are often weak, and the meek are often strong and courageous. For all alike, they had compassion. They saw and realized that their mission was not to condemn but to serve.

They were "beloved" physicians because men and women clung to them as they drew back from the Valley of the Shadow.

"And they held the trembling hands,
And kept fear at bay and faith alive,
They watched while others slept,
They held their tears while others wept;
With nerves as true as tempered steel
They felt, yet dared not seem to feel;
With steady hands that dared not quake
They played the game, with life the stake.
While others engaged in petty strife
Theirs was the war of Death and Life.
They gave to the new-borne babe its breath,
They folded the hands growing cold in death
Ah! Death, that ruthless foe which they had to meet,
A foe that knows no full defeat,
But makes a seeming retreat today
And returns tomorrow to the fray."

As we look back today upon our comrades in the practice of medicine, and search our minds for words and figures of speech to voice our appreciation of them, we discover that we are quite indifferent to externals. It matters not so much with us whether their faces still were fair, or "lined and grayed to mark the slipping years!" Our interest lays hold on their honesty and dignity with which they graced our profession.

"They made the crooked straight and healed old sores;
They made the blind to see, the wounded clean and whole.
Fears fled, hope came wherever they touched the doors.
To serve their suffering fellow men was aim and end and goal."

We honor ourselves today, even more than we honor our departed fellow-physicians, when we make a place in our program for this tribute to their memory. In a very real way we have entered into their labors and our service to mankind is strengthened because they lived.

From the Castle Rock which dominates the city of Edinburgh, four buglers blow the last post at the sunset of every day. As you know, the last post in the British Army is equivalent to our taps. There is a tradition that in ancient times it was customary for five buglers to blow the last post. But on a March end long ago one of the buglers was murdered, and since that day the buglers have been limited to four. And there is a sort of half belief among Edinburghers that on every March 31, when the last notes of the four buglers have died away, listeners in quiet places, if their hearts are quiet, and their minds are receptive, can hear the faint, far-off notes of the fifth bugler sounding as of old. This, of course, is a tender fancy, but it illustrates a noble truth, namely, that from the Castle Rock of our profession there are vanished buglers calling. Ah, my friends, as I listen I fancy that I hear each of those vanished buglers we honor today in this memorial service, sounding the clarion call—distant, yea, but still so distinct—for us to carry on the fight against human disease and human misery. Ah, my friends, does not that distant note come from Frank Vinsonhaler, G. W. Warren, C. W. Garrison, Turner Wooten, Sid Wolferman, A. G. Henderson, Ira Ellis, J. L. Baird, Edward C. McDaniel, Thad Cothern, R. H. T. Mann, Sam Tompson, Val Parmley, C. M. Lutterloh, W. H. Bathurst, Morgan Smith, J. T. Altman and many others just as deserving who are not mentioned for lack of time—that group of men who answered the call of duty to palace and hovel alike—that group of men who heard secrets and confessions not breathed to other mortals—that group of men who were so often called upon to whisper consolation to some poor suffering soul on the brink of this earthly silence—that group of men who were trusted with everything mortal that this life affords—that group of men who labored through love under a system we know as medical ethics, the ideals of which are not surpassed by any organization, religious or otherwise—that system which in its ultimate analysis is but a continuation of the Sermon on the Mount by the Great Physician—that One who ever directs the internist's diagnosis or the surgeon's hand.

Several months ago, I was present during a serious operation in St. Bernard's Hospital in my neighboring town of Jonesboro. Near the climax of the operation the skillful surgeon temporarily lifted his eyes to a large plaque hanging over the entrance into the operating room. After 4 or 5 seconds a new light of confidence seemed to radiate from the face of that Christian gentleman—your present State president—and he went on and rapidly completed the successful operation. The poem on that plaque has made a tremendous impression upon my mind and heart—and I have had the sisters duplicate that plaque many times as gifts to my physician-friends. I am sure they would duplicate it for any of you. May I now quote that poem entitled "The Physician's Prayer":

"Lord, Thou on earth didst minister
To those who helpless lay,
In pain and weakness hear me now
As unto Thee I pray.
Give to mine eyes the power to see
The hidden source of ill,
Give to my hand the healing touch
The throb of pain to still.
Grant that mine ears be swift to hear
The cry of those in pain;
Give to my tongue the words that bring
Comfort and strength again.
Fill Thou my heart with tenderness,
My brain with wisdom true,
And when in weariness I sink,
Strengthen Thou me anew.
So in Thy footsteps may I tread,
Strong in Thy strength always,
So may I do Thy blessed work
And praise Thee all my days."

George Eliot, in the Mill on the Floss, gives the legend of St. Ogg. Ogg was a boatman who gained a scant living by carrying passengers across the River Floss. One evening when the winds and waves were high, there sat moaning on the river's bank a woman with a child in her arms. She was clad in rags, and there was a worn and haggard look on her face. She begged to be rowed across the river. Others bade her wait till morning, and asked her why she desired to cross. Ogg came to her and said, "I will ferry thee across, thy need is most urgent and thy heart above all desires it." Battling with all of his power against the wind and waves, he ferried her across. As she stepped ashore, her rags were changed into a robe of flowing white, her face became exceedingly beautiful, and her brow was hallowed with a light, like the brightness of the moon, until it cast a silvery light upon the water.

She said, "Ogg, thou are blessed in that thou didst not question the heart's need, but was smitten with pity and didst straightway relieve the same; henceforth whosoever steps into thy boat shall be in no peril from the storm, and when it puts forth to rescue, it shall save the lives of men and beast." When the floods came many were saved by the blessing on the boat.

The legend goes on: "When Ogg's spirit was parted from his body, his boat slipped its mooring at the river's bank and went drifting rapidly to sea with the tide, until it was seen no more. Down the years in times of storm, a phantom boat might be seen in the river. At the oars sat Ogg, and in the prow a woman dressed in a robe of flowing white, and around her a halo of light, like the brightness of the moon, that cast a silvery light upon the water. As the toilers saw this vision of the phantom boat and the Madonna, their arms were made strong and their hearts brave for the work of rescue." I love to compare the every-day general practitioner with his heart of gold, those departed physicians we honor today, if you please, to the good St. Ogg.

The story is told that a noted actor in London, England, was retiring after a number of years of great popularity on the stage and radio. He was beloved and admired by all in that country who had heard him or seen him in action. On the eve of his retirement a huge banquet was given in his honor at the largest hotel in London and a great throng had gathered to pay him honor. He was attempting to thank those assembled for their presence in honoring him and was continually being interrupted by those in the audience with the request that he again recite the Twenty-third Psalm. It seems that he had been noted for his rendition of this Psalm on the stage and radio on numerous occasions. I would compare him with the noted actor in this country, Lionel Barrymore, who has on so many occasions played the part of Scrooge in the beautiful play, "A Christmas Carol," or our own Dr. Willie Mock, if you please.

Finally the actor stopped what he was saying and told the group that he would again recite the Psalm for them if, following his recitation, they would listen to his old minister friend, who was seated at his right at the table, give his rendition of the Twenty-third Psalm. With this understanding, the actor, with all the ability he possessed through his years of experience, started with, "The Lord is my shepherd, I shall not want, He maketh me to lie down in green pastures: He leadeth me beside the still waters: He restoreth my soul: He leadeth me in the paths of righteousness for His name's sake. Yea, though I walk through the Valley of the Shadow of Death, I will fear no evil—" and so on through the Psalm. When he had finished there was thunderous applause that lasted for minutes, and finally the actor raised his hand to quiet the group and said, "Remember now, you were to hear the Psalm recited by my old minister friend. It was he who taught me the Psalm, who baptized me, and although I feel that I have not lived up to all that he has taught me, I give him credit for much of my success in life. Listen now to him."

The old minister was very feeble with the weight of many years, and with a cracked voice that was in direct contrast to the melodious voice of the actor, he stood before the microphone of the public address system and started the Psalm: "The Lord is my shepherd, I shall not want, He maketh me to lie down in green pastures: He leadeth me beside the still waters: He restoreth my soul: He leadeth me in the paths of righteousness for His name's sake. Yea though I walk through the Valley of the Shadow of Death, I will fear no evil, for Thou art with me: Thy rod and Thy staff they comfort me. Thou preparest a table before me in the presence of mine enemies. Thou anointest my head with oil: my cup runneth over." The mind of the old gentleman wavered. In

spite of the fact that he had recited the Psalm thousands of times, the last line slipped him, but he was not perturbed. There was a smile on his face that radiated reverence. He went back and picked up the previous sentence and then finished with, "Surely, goodness and mercy shall follow me all the days of my life: and I will dwell in the house of the Lord forever." When he had finished, there was no applause. There was instead a reverence of silence. It was as though an angel had whispered in the ear of all present. "Do not applaud. This is too reverent a time to applaud." After a long silence, the actor went to the microphone and said, "Now, my friends, do you understand why I wanted my minister friend to give you the Twenty-third Psalm? I knew the Psalm—he knew the Shepherd."

My friends, it is my belief and my prayer that each one of those lamented physicians we mourn today—those "departed buglers," if you please—knew the "Shepherd."

Irish Potatoes

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. BECKWORTH. Mr. Speaker, I include in the CONGRESSIONAL RECORD an article which appeared in the Washington Post this morning, August 15, 1949:

IN A SINGLE YEAR POTATO PRICE SUPPORT TOPPED $65,000,000 IN ONE COUNTY

(This is the first of a series of articles on the Government's potato price-support program.)

(By John W. Ball)

PRESQUE ISLE, MAINE, August 14.—Uncle Sam poured more than $65,000,000 into this one Maine County, Aroostook, last year to hold up the price of potatoes.

One or two, maybe more, Aroostook County potato growers got Government checks of around half a million dollars apiece for their 1948 crop. A dozen or so got more than $150,000 each.

Newall Smith of Ashland, Maine, and Francis Reardon of Charlestown, Mass., a wealthy Boston food broker, partners in the Maine Seed Potato Growers at Ashland, sold 99 percent of their crop to the Government for $495,000.

The Reeds of Fort Fairfield got around $426,000. One of the Reed firms, Walter M. Reed & Sons, sold about $202,000 worth to the Government, while Reed Brothers, Inc., of which Walter M. Reed is a stockholder with his two brothers, sold $225,000 worth.

The late Harold S. Marks of Limestone (he was stricken with a fatal heart attack a few weeks ago) sold $276,000 worth of potatoes to the price-support program.

Here are some other estimates:

Rudolph Blier, Van Buren, Maine, got about $216,000 for 90 percent of his crop.

Parent Bros. of Van Buren, just less than $200,000 for 70 percent of their harvest.

Edward Edmunds, Jr., operator of the farms of his late father-in-law, C. A. Powers, of Fort Fairfield, $179,000 for half of his crop.

F. H. Vahlsing of Easton, $170,000 for one-third of his harvest.

Fred Z. Pelletier of Fort Kent, $160,000.

Paul and Adrien Marquis of Fort Kent, $150,000 for half their crop.

The 1940 census fixed Aroostook County's population at 85,000. Wartime growth plus other attractions has raised this to an estimated 100,000 today. One of the greatest of these other attractions is digging potatoes, which corresponds in financial return to digging gold in the Homestake lode.

In the year ending June 30, the Commodity Credit Corporation bought $67,082,900 worth of the 1948 crop potatoes, virtually all in this one county.

Thus the Government paid about 40 cents for every man, woman, and child in the 48 States into this one northern Maine county to hold up the price of potatoes. Those payments amounted to about $670 for every person in the county.

SIXTY PERCENT OF ENTIRE CROP

The Government bought 25,612,500 100-pound sacks or about 60 percent of the entire crop.

Of the 5,213 commercial potato growers (those growing 3 acres or more) 4,503 qualified for price support. To qualify they had to pay, by August 1, 1 cent for each 100 pounds on which they wanted price support.

The average Government payment to each potato farm in the State eligible for price support was just a trifle less than $15,000.

The scheme was designed to hold up potato prices. It worked.

In June the average retail price of potatoes in the United States, according to the Bureau of Agricultural Economics, reached the highest peacetime figure known. Ninety-three and six-tenths cents a peck or more than 6 cents a pound.

Aroostook County is about as far north as you can get without stepping into Canada. Canada surrounds it on three sides. It has a total acreage of 4,209,053 but only 193,000 were planted last year in potatoes.

The take won't be as great this year.

First, Secretary of Agriculture Charles F. Brannan dropped the price-support level from last year's 90 percent of parity to 60 percent this year.

ACREAGE CUT TWENTY-THREE AND ONE-HALF PERCENT

Second, Maine growers have voted marketing agreements and acreage restrictions. This year the acreage was cut 23½ percent below last year or from 193,000 to 151,000 acres.

But the farmers, although obeying the acreage allotments, are squeezing a little. Potatoes are being planted in rows about seven inches apart instead of 12, 14, and 16 as in the old days.

Fertilizer is used either in greater volume or greater strength. Most growers estimate that they are using 175 pounds of fertilizer for every 100 pounds used a few years ago.

The biggest boon to high yields, several told this reporter, has been DDT. This pest killer, originally used to kill the old-fashioned potato bug, has been death to the small aphids. The result in yields has been amazing.

A number of farmers will harvest 550 bushels an acre this year, barring any unforeseen calamity in the next 6 weeks to 2 months. Only blight or early frost or some other act of God can keep this country from having the biggest yield per acre it ever knew. On August 1, the average yield in Maine was officially estimated at 400 bushels per acre, up from 380 last year—the previous high record. Although the planted acreage has been cut 23½ percent, the total harvest may be only 10 to 12 percent below last year.

BAD WEATHER HURTS

Although crop prospects here are for a new record crop, bad weather elsewhere, particularly a drought on Long Island, in New Jersey, etc., has cut down the national yield. Perhaps the surplus will be only about half that of last year, or about 40,000,000 hundredweight. That is about 66,000,000 bushels.

The support price will average about $1.80 per hundredweight this year as against $2.92 last year. That will mean $72,000,000 this year, compared with about $200,000,000 last year. Added are freight and distribution costs, which last year brought the total cost of the potato program to more than $225,000,000. That will mean a total cost this year of almost $100,000,000. Some people still have a wholesome respect for $100,000,000.

The amazing thing is that Congress has held to the potato program although it has been warned time and again against it. Not only did former Secretary of Agriculture CLINTON P. ANDERSON repeatedly protest, but his successor, Brannan, also sounded the warnings. The potato industry itself urged that price supports be cut. But Congress held fast. Even as late as 2 weeks ago the House, under leadership of Representative ALBERT GORE, of Tennessee, voted to keep supports.

Address Before American Legion Convention by Hon. Scott W. Lucas, of Illinois

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Monday, August 15 (legislative day of Thursday, June 2), 1949

Mr. LUCAS. Mr. President, on last Saturday in the city of Chicago the American Legion, Department of Illinois, held its annual convention. The senior Senator from Illinois was privileged to address the group. I ask unanimous consent to incorporate in the Appendix of the RECORD the speech I made upon that occasion.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

When I rise to speak at an American Legion meeting, I realize very deeply the true value of my 30 years of membership in this splendid organization. I am proud to belong to the Legion, because the Legion stands for the principles of good Americanism—brotherhood under the flag of freedom, a fair opportunity for every citizen, and loyalty to the fighting creed of patriots.

Through these years of struggle and progress, I have been fortunate enough to take part in the magnificent work of the Legion. You are well aware of how much I appreciated the honor of serving for a time as commander of the Illinois department, and the privilege of being national judge advocate for several years. I regret that my activities as a public servant in Washington during the last 14 years have kept me from participating in Legion affairs as actively as I would like to do.

I have found some of my finest friends and closest comrades in the ranks of the Legion. I am happy to have the opportunity to give my greetings to every one of you, to wish you well, and to tell you some of the things I have been thinking about during my days and nights of senatorial battles in Washington.

It was my fortune to be placed in a position of leadership in the Congress now struggling with the problems of our national destiny. Because every man can speak most truly from his own experience, I want to say to you—to my steadfast friends and comrades of the Legion—that I have awakened many nights to think of my obligations to the veterans of America, the youth of America, the families of America, the good and faithful people who count upon me to represent them intelligently, diligently, and honorably.

I have thought much about the future of the country which has given me so many splendid gifts. Let me assure you that every conscientious servant of the public in this Congress is very much aware of the fact that his actions will affect the lives of men, women, and children all over the inhabited earth.

As members of the American Legion, as men who have offered their lives for the Nation, you are concerned about the welfare of the free people of the world and the welfare of American veterans who have made the greatest sacrifices to preserve and advance the cause of freedom.

In many ways, these things are linked together. As veterans, we place the preservation of democracy above any other goal—above any group, any organization, any individual. As citizens, we know that the rights of veterans are the well-earned rights of those who have met the tests of complete devotion to the ideals of democracy. Veterans have given the best years of their lives to America, and the Americans are eager to acknowledge the high worth of those who went forth to face hardship and danger for the glory of freemen.

During the first session of the present Congress—the session still in progress—we have tried to fulfill the twofold responsibilities of American legislators in a time of world crisis.

Our first responsibility is to increase the living standards and security of all Americans. Our second responsibility, which cannot be separated from the first, is to carry forward a national policy which will strengthen American leadership in a world of turmoil.

I believe that we have made important strides toward a stronger and safer America during this session of the Eighty-first Congress. I also believe that we have taken actions which have lifted the morale of the free people of the world and have given us solid reasons to hope for the maintenance of an honorable peace.

In the field of domestic legislation, the most significant single achievement is the passage of a general housing bill to remedy the serious housing shortage which afflicts millions of Americans, to clear away the slums, and to advance toward the objective of a decent home for every American family. This bill had the energetic support of the American Legion.

This housing law is founded on the principle of encouraging private enterprise to serve as large a part of the total need as it can. If the urgent need of low-income groups cannot be met by private builders, the new housing law provides for governmental aid to enable private enterprise to serve more people, and to assist local public bodies in undertaking the development of well-planned residential neighborhoods.

You can be sure that the Housing Act contains specific provisions for the protection of veterans. Section 302 of the act describes the order of preference among veterans, and gives first consideration to the families of disabled veterans and second preference to families of deceased veterans and servicemen whose deaths were service connected. There is also a provisions which makes it clear that servicemen of World War I are to be treated on exactly the same basis as the veterans of World War II.

Because of the successful operation of the comprehensive program we laid down toward the close of World War II in the GI bill of rights, of which I was one of the original sponsors, we have not passed a great deal of legislation directly affecting veterans at this session. It may be of interest to my fellow Legionnaires that one of the very few laws enacted for the benefit of veterans' families was a bill I introduced to adjust the effective date of certain awards of pensions and compensations payable by the Veterans' Administration. The purpose of my bill was to authorize retroactive awards in the cases of certain persons who were prevented from filing their claims at an earlier date because of interment or other enemy action. The President signed this bill last Monday.

I sought the passage of this bill after I received letters from widows of veterans who had been held for several years in enemy internment camps. Under previous laws, benefits were payable in disability cases from the date of discharge if claims were filed within 1 year from discharge, and in death cases benefits generally were payable from the date of death if claims were filed within 1 year from death. I found that there were hardships among a number of widows who had been unable to make application for compensation or pensions because they had been held in enemy camps.

At this point I would also like to tell you that I was able to persuade the Departments of the Army and Navy to change their regulations to permit allotments of pay for premiums on the lives of dependents of military and naval personnel. Under the old regulations, fathers who were in the service, were unable to make allotments for the establishment of an insurance and savings account for their children. Such allotments were permissible only if the insurance contracts were or the life of the servicemen making the allotments. I felt that it was the intention of the Government to assist the members of our armed forces in saving money and in protecting their wives and children. Permitting a member of the armed forces to purchase insurance on the lives of his children and wife through the simple allotment plan certainly seemed to me in full accordance with the ideals of American philosophy. As veterans, you are well aware of how difficult it is to get the Army and Navy to change their regulations. I must confess that my success in this instance was an unexpected pleasure.

I cite these two examples of my efforts in behalf of veterans and their families simply to indicate to you that Members of this Congress are always concerned about improving and extending the benefits available. No other country in the world can match the record of America in expenditures for veterans. Let me give you a few figures which show the vast size of our appropriations up to the close of the 1949 fiscal year. At that time our total expenditures for the relief of veterans of all wars had reached in round numbers the sum of $54,500,000,000. For the fiscal year just beginning, we will spend an additional $5,500,000,000 which will bring the total to the impressive aggregate of $60,000,000,000.

No one begrudges any amount that we spend for those who fought for America in hours of peril. No one wishes to deny any essential service or any desirable benefit for veterans who are incapacitated by illness, disability, or old age. We are going to make our program for veterans better and better as the years pass and new needs become evident to the American people.

I think it is a good thing to review what the Federal Government has done for veterans in recent years. There are four principal fields in which the Government has given major assistance to veterans—speeding their adjustment in civilian life; caring for the wounded, the sick, and the widows and orphans; providing education, job opportunities and vocational training to open wider roads of advancement; financial assistance in establishing homes, launching businesses, and beginning new careers.

When we created the vast program for veterans now well under way, we studied the experience we had after the First World War. We realized that we had not given the World War I veterans enough assistance in the chaotic years after the armistice. As one of those who helped to push the GI bill of rights through Congress, I know that the many Legionnaires who were then Members of Congress, were determined to extend assistance on a much wider scale in the postwar period after World War II.

Now, let us look at what has been done for veterans up to the end of the 1949 fiscal year. More than 6,000,000 have received some type of education and training under Public Law 346. That total includes school training, on-the-job training, and training on farms. Veterans still in training at the end of June 1949 numbered 1,630,000 men and women.

Under Public Law 16, the act designed to give rehabilitation to disabled veterans, approximately 650,000 had applied for one kind of vocational rehabilitation or another, and more than 100,000 had been completely restored to active work.

Under the section of the GI bill providing for readjustment allowances, 8,000,000 veterans had received benefits for one or more weeks, and nearly 700,000 who were struggling to get established in business or to launch careers as professional men had received self-employment allowances.

When we consider cases of disability compensation or pension awards the figures are equally enormous. Active cases at the end of June 1949 totaled 2,280,000. Cases involving death compensations or pensions numbered more than 635,000.

In addition to all the laws already enacted, there have been many measures introduced in Congress which would call for the spending of many more billions for disability claims and pensions.

I can assure you, as majority leader of the Senate, that all Members of Congress are very conscious of the inadequacy of many pensions and disability payments. I wish to point out, however, that there are nearly 19,000,000 living veterans in America. With their families, veterans comprise nearly one-half of the population of the United States. Because veterans are the most vigorous and the most energetic group in the whole population, veterans are the ones who will be earning most of the income of the Nation in the coming years. It should never be forgotten that large increases in expenditures for veterans' benefits will be largely paid in the years to come by veterans themselves.

At a time when the deadly threat of Communist aggression casts a shadow over the world, forcing America to spend $15,000,000,000 a year for national defense and many additional billions for aid to the free nations, I believe that it is the solemn and patriotic duty of every American veteran to think very deeply about the financial burdens of his country. I believe that we must strive even harder than we have striven in the past to find a balance between the needs of veterans and their families and the absolute need for a sound financing of the Federal budget. The financial strength of the American Government is the massive rock of Gibraltar upon which our destiny and the destiny of free men everywhere must now depend.

We all wish that the Communist menace did not exist. We all wish that we did not have to take upon our shoulders the heavy weight of world responsibility. We all wish that we could use our huge national wealth to wipe out poverty in America, to give every veteran a really adequate pension, to give every disabled man a sufficient sum to live in dignity, to give every widow and orphan freedom from the grinding pressure of worrying about buying bread and milk.

My good friends and loyal fighters of the Legion, we know that the bloody conspiracy called communism cannot be swept away by the fervent wishes of men who have peace in their hearts and a free spirit toward all.

Late one evening, not long ago, the Members of the United States Senate gravely assembled and voted upon the North Atlantic Treaty, signed by 12 free nations. Angry arguments against that treaty had been raised by a few Senators who looked wistfully backward toward the golden days when it was possible for America to be safely isolated between two broad oceans.

Other Senators, refusing to face reality or deceived by Communist propaganda, expressed many misgivings about the pact.

Every man had a chance to speak. Every man had an opportunity to be heard. But, when the hour of decision came upon that momentous evening a very short time ago, the Senate ratified the North Atlantic Pact by the overwhelming vote of 82 to 13. Eight out of nine Senators present and voting thereby declared themselves in favor of this well-considered alliance for defense as another pillar in the structure of world security.

The Senators recognized the truth which rose upon the horizon of the world. The Senators knew that we were the architects of the pact. Our diplomats labored to create it. Our Foreign Relations Committee studied it, invited and pondered the testimony of many citizens, and approved it finally with one unanimous voice.

We knew that the issue was too fundamental, too vitally American, to be decided along partisan lines. We were aware that the pact offered us our best hope of voiding war. We knew that it was a vital step toward permanent peace. It had been nonpartisan since its inception in Senate Resolution 239 to its presentation through the unanimous report of the distinguished Senators on the Foreign Relations Committee. This was nonpartisan-foreign policy at its best. This was America at her best, because our security, our homes, our lives, and our fortunes were all involved.

Before the vote upon the pact, I told the Senate:

"We who uphold and defend the forces of freedom and the dignity of man must keep ourselves united and strong.

"There must be vigilance. There must be vision. There must be courage. We must demonstrate to the world collectively and decisively that we propose forcibly to resist the attack of any aggressor.

"Only by doing so can we avoid war. Only by doing so can we keep the torch of freedom burning until its light penetrates the darkness behind the curtain, and the freedom which all people everywhere so fervently desire can burst the deadly chains of tyranny."

My fellow legionnaires, we knew that failure to ratify the pact would have destroyed the towering structures of our American foreign policy. We know that failure to ratify the treaty would have made a mockery of the valiant deaths of free men who fought for the peaceful ideal of mankind and the future of our civilization.

Before it adjourns, the Congress must deal with another essential program requested by the President to aid our friends in the free nations to stop the assault of any aggressor. I refer to the military assistance plan. There will be much debate and much argument about the details of that plan, but I am convinced that the Congress of the United States will give it overwhelming approval in the end.

I believe that more than 99 percent of the American people are definitely determined to prevent any further expansion of communism. Members of Congress know that our fellow Americans want us to take whatever steps may be necessary to create a strong shield of protective power to safeguard our homes and our institutions.

The program of military aid, recommended by the President, is not a program of war. It is a program for peace. It will enable our friends abroad, who stand in danger from Communist treachery, to move forward with us toward a more secure world.

The Congress will carefully examine the arms program against the background of recent history. We have learned the lessons of these perilous postwar years, while we have watched the Communists take over one country after another. We are ready to defend ourselves and we are ready to help our friends to strengthen their armed forces against any possibility of a sudden and unprovoked attack.

We are fully aware of the fact that American resources, although greater than thase of any other country in the world, are not inexhaustible. In the light of that knowledge, there will be a thorough examination of every phase of the arms program by both Houses of Congress. We will approve a military assistance plan which will provide the necessary arms for our friends without straining the productive system of America which has placed us in the forefront of world progress.

America has potentialities for progress even greater than the magnificant advances we have made in the past. Every intelligent man and woman in this country realizes that America will have the greatest future of any nation in the world today. Ours is the leadership, ours is the responsibility for the forward march of the free world.

Our triumphs in war and peace, our accomplishments in science and technology, the expansion of our democracy—all these things prove beyond any doubt that Americans have a rendezvous with destiny. With the continued faith and the continued efforts of American veterans in the cause of freedom and the cause of America, we cannot fail. We will lead mankind into a new age of peace and plenty.

Electric Transmission Lines and the Profits of the Middlemen

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. WHITE of Idaho. Mr. Speaker, one of the biggest issues before Congress today is whether the power companies will be successful in their plan to block the construction of power-transmission lines to deliver Government-produced power from the plant to the point of distribution where the Government-produced power can be sold wholesale for distribution and resale by municipalities—towns—and cooperatives—REA—to the consumer, or whether the power companies by blocking the construction of the necessary transmission lines can obtain a monopoly and buy all Government-produced power wholesale and resell this power to all the consumers, including municipalities and cooperatives, which is more fully explained in my correspondence with a veteran Oklahoma editor, inserted herewith:

THE DUNCAN BANKER,
Duncan, Okla., August 9, 1949.

Hon. COMPTON I. WHITE,
Member of Congress,
Washington, D. C.

MY DEAR CONGRESSMAN: This will acknowledge your letter of August 6, addressed to the editor of the Duncan Banner, in which you start off by asking:

"What is behind the statement made in your release in the circular entitled 'Today's Comment' sent to me under date of July 21?"

Here is your answer:

I sent you no release. I have not published any circular, nor did I send you the one referred to in your letter. I haven't even seen it. If you care to send me a copy of it, and could tell me where it was mailed, perhaps I could trace the matter for you.

The Duncan Banner is a 57-year-old newspaper, published daily in Duncan, and I am the editor. As editor, I write the daily editorial column headed "Today's Comment," and on July 21 the editorial dealt with Senator THOMAS, Senator KERR, Federal power, and transmission lines. It represented the personal opinion of the editor, whose opinions are not for sale to power companies, and have not been intimidated in the past by local pressure or Congressmen in Oklahoma—or elsewhere. They are, I hope, independent, and if you care to ask Congressman TOBY MORRIS, Sixth Oklahoma District, who may know something about them, he can give you his opinion. Sometimes we support his stand, sometimes we don't.

As to what is behind the statement: Nothing to justify the suspicious attitude your letter seems to take. An editor, and a Congressman, may have honest opinions, and unbiased ones. Sometimes they are firm convictions. Sometimes persons who do not agree with them suspect an ulterior motive.

Your letter, for instance, refers to power monopolies and trivial expense of building the transmission lines. That is a matter of personal opinion. I do not believe the people down here regard any such unnecessary expenditure of the taxpayers' money as trivial, but you certainly have a right to call it that if that's the way you feel about spending your money and mine. In this instance, I do not suspect you of an ulterior motive, although it is disturbing to note the tone of your letter is so antiprivate capital when referring to the power companies who like to identify themselves as taxpaying concerns.

I say "disturbing" because I would regret to see American industry socialized like that in Great Britain and, to me, duplication by the Federal Government of expenditures already made by private power companies in this area is nothing less than a step in that direction. I am aware of what has happened to private companies in Nebraska and Tennessee, and that I, as a taxpayer, contributed money toward putting them out of business.

I note your statement about buying the power for a quarter of a cent, 2½ mills, and retailing this same power for 1¼ cent to industry. My impression was that the selling rate could be, or at least should be, whatever the seller agreed. Inasmuch as I try to keep informed to some extent about power (we have a municipal plant and also a private utility serving customers in Duncan) I also know that about 5 mills out of every kilowatt-hour's cost in 1948 went for taxes in the case of the private company here. I mention that only to give a more complete picture of the instance you cited, because anything so controversial as public power ought to have a fair and complete presentation of facts to help determine its cost and value.

I, too, hardly believe the public is going to be fooled by specious argument, and can assure you for the record that the public is going to get all the facts about power, regardless of who generates or supplies it, that my newspaper can present to them as accurately, as concisely, and as fairly as those facts can be determined and passed along to the people who must pay the bill.

Sincerely,

B. L. ABERNETHY,
Editor and Manager.

AUGUST 15, 1949.

Mr. B. L. ABERNETHY,
Editor and Manager,
The Duncan Banner,
Duncan, Okla.

DEAR MR. ABERNETHY: It was a privilege to receive your letter of August 9 in response to my reply to a reprint of your editorial entitled "Today's Comment," under date of July 21, a communication which I assume was received by all the Members of Congress in their regular mail.

Let's see. You are the editor of an Oklahoma paper in a district where the issue has been raised as to whether the power produced on Government projects shall be sold and delivered by the construction of the necessary power transmission lines to the point of delivery for resale by municipalities (towns) and cooperatives (REA), or whether the Government, on the other hand, shall sell the power at the plant wholesale to the local power companies. By this second plan, which you advocate, all the costs of producing the power is borne by the Government and the bulk of the profits from the sale of the power will be made by the local power companies having a small investment in the transmission lines and distribution system.

In support of the profit motive of the local utility companies, you place emphasis on the taxes paid by the privately owned companies and the unnecessary and useless duplication of transmission lines. In considering this contention, I believe the record will disclose that the Government is following a well-established plan to contribute a part of the revenue received from the sale of power to the local taxing units in lieu of the taxes that would be received if the power facilities were privately owned and paid taxes.

Now as to the duplication of transmission lines. In looking over the field of privately owned transmission lines we find that many of these transmission lines are of light construction and low-voltage capacity, and that in order to handle the heavy power load to points of distribution, these old transmission lines, to carry the increased load, would, of necessity, have to be replaced by the construction of new high-tension and high-voltage lines either by the privately owned power companies or the Government, in any event.

You say, "It is disturbing to me to note the tone of your letter is so antiprivate capital when referring to power companies."

It is disturbing to me to witness the success of the private power interests in blocking the construction of Government transmission lines, so that the privately owned power companies can have a monopoly on the sale of power and make a maximum of profit with a minimum of investment, when the law specifically provides that municipalities and cooperatives shall have preference in the purchase of Government power.

It was disturbing to me to find that by financial and political manipulation a privately owned power company at San Francisco has been successful in obtaining a monopoly on the purchase and sale of the power produced by San Francisco's municipally owned plant. After San Francisco, on the plea of obtaining water necessary for domestic and city use, had been successful in getting a law passed by Congress which authorized the construction of the Hetch Hetchy Dam in the Yosemite National Park, and the related hydroelectric-power plant, the bill contained an express provision of law that prohibited the sale of the power generated by San Francisco for resale. After the project was built and the construction of the transmission line had reached the point opposite the privately owned power company's big transformer station, litigation was started that stopped the further construction of San Francisco's municipally owned power line, with the result that the local power company was successful in purchasing all the power produced by San Francisco's Hetch Hetchy plant at, according to my recollection at the time our congressional committee made the investigation, around $1,500,000 per year, and retailed this power to the consumers at $9,000,000 per year, including San Francisco, which paid around $1,500,000 per year for electricity for city lights and to run the city-owned streetcars.

Certainly the P. G. &. E. Co. paid its taxes—I mean the citizens of San Francisco contributed the money in excess profits, a small part of which the local utility passed on to the Government, and kept for themselves the lion's share of the profits they made on San Francisco's investment.

Doubtless, the American people were disturbed by the financial and profiteering manipulation of the famous, or infamous, holding companies and the operations of their profit-milking mechanism as applied to privately owned power companies throughout the country. You, being a veteran editor, no doubt are familiar with the unsavory record of these utility holding companies, and I need not review the record here which was so fully presented and considered by the Senate of the United States. No doubt you remember when legislation was passed limiting the right of these power utility holding companies to the ownership of integrated power utilities, and requiring these holding companies to divest themselves of the control of scattered and unrelated power companies. No doubt you heard the piteous pleas of these magnanimous taxpaying exponents of free enterprise to be saved from the barbarous "death sentence" that would make them disgorge and return the control of the scattered power companies back to their stockholders and rightful owners.

Time marches on, and the American people are advancing. I believe, by utilizing the God-given gift of the power resources of our streams and rivers for the benefit of all, they are advancing in the right direction.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

Will Germany Be a Military Threat?

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely editorial which appeared in the August 13 issue of the Worcester Evening Gazette. The article follows:

WILL GERMANY BE A MILITARY THREAT?

It is only logical for Americans, as well as Germans, to be concerned about a revival of German nationalism, particularly as it relates to a possible renewal of German military strength. This concern has been bolstered recently by (1) persistent reports from Germany that individuals and political parties are showing a distinct nationalistic flavor; (2) speeches of politicians in the current election campaign, in which vilification of the Allies has been the one thing on which all parties have agreed; (3) the number of ex-Nazis—estimated at 30 percent—who are now, largely for lack of anyone else qualified, holding top Government jobs. Left-Wing Williams Prof. Frederick Schuman went so far as to predict the other day that Russia and the United States may well be allied with each other by 1961 against Germany.

This concern, however, is often out of perspective. Let's admit the existence of Nazis in the German Government. Let's admit the tremendous revival of the German economy, a revival which has exceeded in its pace that of the other countries of Europe, though Germany, because of the relatively greater war destruction, still is producing at a rate of only 80 percent of prewar. Let's grant, too, the probable failure to date of our ambitious program to reeducate the Germans toward democracy. That's no doubt a harder job than it was made out to be. Germans (or anyone else) don't suddenly change from aggressive nationalists to peace-loving democrats.

Even granting these things, there is no good evidence to date that Germany is likely to be for the conceivable future a military power. Existing international agreements on Germany are unanimous in providing for demilitarization of Germany and for keeping her demilitarized. True, the United States failed in its effort to work out a four-power 20-year treaty to keep Germany disarmed, failed because of Russian opposition, but a treaty is not needed for that purpose. What is needed is an attitude, and the attitude is there. Neither France nor England, nor the smaller German victims, will countenance a semblance of German revival. There is no German Army and no prospect of one, and though the dismantling program has been revised downward several times, most recently by announcement of 159 plants or parts of plants that are to be retained in Germany, no direct war plants remain and none are contemplated.

Critics charge that over-all economic strength is the important thing in war potential. That is true, but we cannot, because of a nebulous fear of German militarism, let the European economy go to rot for lack of German goods. Most important of all, the current hopeless division between Russia and the western powers seems to portend military occupation of Germany almost indefinitely. As long as occupation authorities are present, no German rearming can possibly take place.

Much as we may regret a revival of German nationalism, it may be a blessing in disguise in the sense that it keeps Americans alert to the fact that Germany is still a potential threat. As long as we realize the existence of the threat, there is little danger that it will become more than potential.

Fast Man With a Gun

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. FURCOLO. Mr. Speaker, I want to call the attention of Members of Congress to an article entitled "Fast Man With a Gun," appearing in the Saturday Evening Post for August 13, 1949.

The man about whom the article is written is one of the most unusual men in America, Carl Hallstrom of Springfield, Mass. His story, and the story of the Smith & Wesson plant, should be of interest to all and I urge all Members to read it.

What Is the Future of the World?

EXTENSION OF REMARKS
OF
HON. E. H. HEDRICK
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. HEDRICK. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an article written by Mr. Soterios Nicholson, entitled "What Is the Future of the World?":

WHAT IS THE FUTURE OF THE WORLD?

(By Soterios Nicholson)

Every country in the world is short of dollars, which means that the recovery will be slow and the rehabilitation in some countries will retard. The question is, What are the real factors?

First, peace has not been restored. The two ideals of government do not seem to get in unison for a working order, so that free enterprise and commerce may be on its way. Without the exchange of goods and services, there cannot be a real recovery. The hindrance of the progress comes from the Soviet and its satellites. The rest of the world desires to return to its normal business and living conditions, but nothing is firm without peace and neither capital is invested for improvement nor labor is willing to return to reasonable wage cuts. On the one hand, expansion is curtailed, businessmen, manufacturers, employers in general are moving slowly, watching prices, wages, and world conditions, and on the other, employees and wage earners, because of the high cost of living, they still demand higher wages and voting to strike at any time.

Second, the destruction inflicted in some countries by the last World War is such that, without financial assistance from the United States, they will never recover, especially when the danger of the Reds taking over such countries is apparent. Whether one calls it "lend-lease" or "one-way loans," Marshall or Truman "plan," the plain truth is that dollars and goods leave this country for assistance to every part of the world. What comes in our way back? Materially, very little. Good will? Yes, much, but what is the result? Dollar shortage. The drain is heavy, but eventually it will out—if the nations of the world were to unite on one point, namely, to mind their own business and leave the idea of converting neighbors to their own philosophy of government. Trying with subversive methods, spying, spreading lies to the poverty-stricken peoples, endeavoring to convert them to believe that only through the Communistic theory they will be happy, and finally taking over countries and taking possession of the main administrative offices does not create prosperity. If every country would have the system they wish—democracy or monarchy—only within their own boundaries, and respect the form of government of other nations, the improvement would be apparent. This applies to all countries whatever their ideals are.

Third, if Government spending is the criterion of returning to prewar normalcy, then the United States Government is in line, for in recent years, namely, from 1940 to 1949, it has spent more than $177,000,000,000. For, from 1789—George Washington's first inauguration—to 1940 the United States Government spent about $167,000,000,000—a space of 152 years. Of course, the World War II expenditures are included in the first figure, that budget in the neighborhood of $100,000,000,000. All nations are spending more than their prewar budgets. Nations are inclined to spend more and more, even with the falling of the money value. The tendency is to create the state as the real boss and not the people that create the state. Thus, a Government is given the power to dictate to the people what they should or should not do. Without noticing it, the people are given more power through legislation, to create something different than the word "democracy" or any other name known. Perhaps it resembles socialism, but it is not quite the same. We should find a new word for it, for all the names we have now do not fit the description for the new government the people are striving to create. We are always thinking to uplift the workmen, the poor, the underprivileged, etc., which is right and proper, but at the end we fail to do so. Our legislators are human and are trying to perform their duty as they see it best. They receive ideas from other people, from all stratas. They try to work them out. In the process of discussion, they bring out something that is not the original thought of the author of such legislation. Good or bad, it is placed in the statute books. Later it is found that it does not work out, and it is modified, or repealed. But one idea brings another and we are in a worse condition than we were in the nineties. The tendency, however, is still going on toward the creation of "state-bossism." Maybe that word does not describe the present situation, but "state-bossism" will do for the present.

Fourth every war brings catastrophe to the world, whether it is victory or defeat to any state or nation. It retards the progress of all nations whether such nations were participating or not, with a few exceptions, it is felt, because the world can now be traveled within a few hours, and can be communicated with radio, telephone, etc., instantaneously. No nation is so far away now that its people do not know what is going on in all parts of the world. With this in mind, we are wondering how long it will take some nations to conform with the wishes of the majority and create a world federation through the United Nations? We will discuss this in a subsequent article.

Must We Modify the Charter of the United Nations To Make It an Effective Vehicle To Bring Peace to the World?

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. JOHNSON. Mr. Speaker, one of the most penetrating writers on international affairs is Dorothy Thompson. In the Washington Star of August 11, 1949, she had an interesting article concerning the weakness of the League of Nations as a peace vehicle. Under leave to extend my remarks I include this article, which I hope every Member of the House may read. It makes one shudder to think that this organization on which the world pinned its hopes for peace may not be able to do the job.

Last year I appeared before a House Foreign Affairs Subcommittee which was considering proposed amendments to the League of Nations Charter. I suggested that it needed amendment to make it effective. I pointed out that in the world today we were in somewhat the same situation as the United States was after several years trial of the articles of confederation. We found our fundamental law ineffective to bind the States together into a strong national union. Consequently we had the courage to discard the articles and write a Constitution. It was adopted in 1789 and under it we have grown in national strength and unity. I pointed this out as a precedent for changing the Charter of the United Nations. Certainly we should have the courage to offer the leadership to suggest and try to have enacted the necessary changes in the Charter so that it will be an aid to working out stability and lasting peace. Otherwise all the suffering, sacrifice, and effort of the devastating war will have been futile. That is the purpose of House Joint Resolutions 64, 94, and other similar resolutions.

The article mentioned follows:

ON THE RECORD—FAILURE OF THE UNITED NATIONS HELD DUE TO LACK OF INTELLECTUAL HONESTY

(By Dorothy Thompson)

In public as in personal life a decision to start a new life implies acknowledgment of past errors. But in politics it is the habit of administrations never to admit shortcomings. The people are told that the government or its predecessors of the same party were right in the past and are right in the present, even when policies currently advocated contradict the past, and even if past policies have logically produced the crises which new policies are designed to meet. Someone else, then, is always held responsible, and not the policy itself. This leads to apprehensive confusion in the public mind.

The recent report of the Secretary of State to the House Foreign Affairs Committee in support of the European arms program is an illustration.

The Atlantic Pact and the arms program are obviously necessitated because the United Nations has failed. Yet, according to Mr. Acheson, there is nothing wrong with the Charter of the United Nations. On the contrary, "the United States took the lead in the most ambitious and comprehensive attempt in history to organize the nations of the world for peace and progress on a universal basis." And the United Nations has only been "unable to function as it was intended because of the obstruction of a small minority of its members."

This is not accurate nor honest. The United Nations has failed because it never established a genuine system of collective security with equal protection for all. Its basic premise was unsound. The United Nations structure was based on an alliance of great powers, and the principle of unanimity amongst them. In this claim the Russians are correct. But though the Charter might have been designed for a designing great power, its author was the State Department. The veto right, which reserved only to permanent members of the Security Council full sovereign authority, was approved by the United States, though it obviously granted to great powers privileges denied smaller states.

The Charter provided no principles of international law to be previously accepted by all and not subject to veto. It failed to define aggression or preparation for aggression. It did not establish an effective international tribunal or provide for common defense against a lawbreaker if the culprit were a great power. It could, therefore, conceivably work only as long as the great powers were in agreement, and it has not been obstructed by a "small minority," but policies advocated by the United States and

governments following American leadership have been opposed by the Soviet Union and its satellites, who, far from being a "small minority," envelop the greatest unified power complex on earth.

FAILURE PREDICTED

The failure of the United Nations to establish collective security was inherent in its structure and, therefore, predictable. There is no historical precedent where great powers with unrestrained sovereign rights have remained in agreement except against a common enemy; and to believe that great powers between whom existed no common basis of principles would continue to agree without a common menace was childish. When they "fell out" the United Nations, as an instrument of universal security, collapsed.

This comment is not hindsight. A small minority, including this columnist, warned from the beginning that the San Francisco Charter would not work. This minority was accused of "sabotaging the peace." Indeed, in the first years after the war, to suggest that there was anything inherently wrong with the United Nations was regarded as blasphemy and branded as "isolationism."

Now, although there is no use crying over spilt milk, there is profound abuse in pretending no milk was ever spilt. Unwilling to make an honest diagnosis of the illness of the United Nations, sponsors of the Atlantic Pact now present it as "strengthening the United Nations" and furthering "collective security."

It does nothing of the kind. It is a limited military alliance between sovereign states to counter the Soviet Union's military alliances. It does not "strengthen" the United Nations but tacitly admits its powerlessness. If the intention were to strengthen the United Nations, American leadership would have exposed faults in the structure and recommended the creation of a law, a judge, and a policeman to all nations and open to all.

Address of Eugene C. Pulliam

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Editor and Publisher Eugene C. Pulliam before the Rotary Club of Muncie, Indiana:

One time when I was a staff correspondent for the Kansas City Star, I was on a train with Teddy Roosevelt, who in my day I thought was about the greatest guy that God had ever created in America in my time, and I was very fond of him and got quite well acquainted with him. One day going out from Kansas City to Topeka he said, "Young man, I want to give you a good definition of a good newspaperman, and if you will follow it you'll be a success. A good newspaperman is half St. Paul and half St. Vitus." Well, I've thought about that a great deal. I ought to know something about St. Paul; my father was a minister. But sure as hell I found out what he meant by St. Vitus on this last trip I made. We were on the jump constantly. We were either talking to somebody, writing a story, or flying some place. We made the entire trip by air except in places where we had to drive.

As Walter told you, I have been in all of the Atlantic Pact countries. We went to Ireland first. There is something in the divine scheme of things I am fairly convinced that has preserved Irish independence and Irish liberty, because today Ireland is the only country in Europe that approaches having anything at all comparable to the freedom we have here. There isn't another free country in Europe with the possible exception of Denmark, and even the Irish are freer today than the British, the French, or any of the other countries of Europe. Possibly the good God in His mercy has preserved freedom in Ireland so that eventually the Irish can go over and free the British. And if you could see Britain today, you'd know what I am talking about.

I was very much in favor of the Marshall plan. I was in Europe on a previous trip at the time General Marshall made his speech at Harvard. I saw Europe in complete economic collapse. They had to have a shot in the arm. In 22 months Europe, with the exception of England, has made very remarkable recovery. Economic recovery of Europe has been almost miraculous. Undoubtedly the Marshall aid plan and the Atlantic Pact gave these people confidence; gave them something to tie to. You know for 200 years Europe has depended either upon Britain or France. Well, they are both down. The British Empire is gone. France is weak. And we come along with the Atlantic Pact. It gave the people of western Europe tremendous confidence to go ahead, to plan their work, to plan their business. So the Atlantic Pact, just the mere fact of the Atlantic Pact, had just as great a stimulating effect in the recovery of Europe as did the Marshall plan. I supported both.

But today Europe is on the way to recovery and just as definitely as the Marshall plan was needed to help Europe we would be a Nation of suckers to continue the Marshall plan at its present level. It is just utter damn foolishness to do it. I've talked to the heads of Government. I know what they are expecting, what they are fearing. Of course what they are afraid of is that we will cut the whole thing out. They know that Europe could get along of 50 percent of the Marshall plan and still recover. They hope we won't cut it more than 25 percent, but they are expecting a cut of somewhere between 25 and 50 percent, and are having a hard time in Congress getting a 10 percent cut when the people of Europe, the governments of Europe, are expecting a 25 to 35 percent cut. There is no reason in the world why the whole Marshall plan could not be cut 40 percent. I haven't time to go into my reason for that except that it is based on my discussion with the government leaders of Europe, the businessmen of Europe, and our own people over there.

Socialism in England has turned out to be a noisy sham and a cruel delusion. As a way of life and form of government it has utterly failed the common working people to whom it offered salvation. Economically, England is in the worst position of any of the 14 countries which I visited—except Italy and the two countries behind the iron curtain. Conditions are much worse than they were 2 years ago, much worse than they were during the war, and they will not get any better for the next year, because economically Britain has run into a highly competitive export world market and is not able to sell her goods at the terrifically high prices which have been brought about by increased costs under socialized industry. The people are working harder and eating less.

Although England needed some form of public-health program—and needed it badly—socialized medicine is a farce. The abuses have been terrific. The whole system is bogged down with red tape and free service to everybody, although it costs $100 per adult person. Our Congress should send immediately a commission of not more than six members to England and Denmark to study the contrast in socialized medicine and public health. Socialized medicine in England is a very sorry, expensive flop. The health program in Denmark is an outstanding success. In England the Government runs the entire show. Doctors, dentists, everybody connected with the hospitals work for the Government, and it is the most colossal failure in social history. In Denmark the Government has practically nothing to do with the system, yet it works almost perfectly. Therefore, if Congress would look into these two systems it probably would mean that America would avoid making the tragic mistake that has been made in England.

Union labor leaders are leaving the Labor Party and joining the Conservative Party because they are completely fed up with high prices, austerity, and nationalization. Even the farmers, who have been the fair-haired boys under socialism, are bucking the system now because the Government has taken over just enough farms in England to prove to the farmers that they must play ball with the Government or get off their land.

The Conservative Party probably will win the 1950 election by a narrow margin. The Conservatives will not be able to abandon nationalization of mines, rails, and banking, but they will be able to modify socialized medicine and put in a health program similar to that of Denmark.

If Russia is allowed any voice whatever in the control of the Ruhr, the Soviet Union will eventually take over all of Germany. The national spirit in Germany is rising rapidly, and if the Allies relax their economic, political, and financial control over Germany, it will not take more than 2 or 3 years for a political system to develop in Germany which will inevitably bring about an alliance between Germany and Russia. That is exactly what the Russians are fighting for, and if we permit it, every cent we have spent on the Marshall plan and the North Atlantic Pact will be down the drain.

Tito's rebellion is the most important and significant thing that has happened in eastern Europe this year. Tito is getting away with it, and if we give him just enough help to keep him alive economically, let him build up small industry without war potentials, he will be able to thumb his nose at Stalin. If Tito gets away with it, every other little dictator in the satellite countries will be following suit. We could not bribe Tito to do the important job he has done for peace. The infallability of the Russians has been exploded and the iron curtain has been cracked.

Until Czechoslovakia and the other satellite countries begin to show some independence, they should receive no help of any kind from the United States or western Europe. We should not, under any circumstance, let the Czechs build up war potentials for the Russians to use. Czech industry is suffering badly because of lack of raw materials. But if we keep on the pressure, the whole Soviet scheme of aggression will blow up in their faces.

The tragedy of Europe, however, is that there is no real freedom in Europe. Country after country has tried out socialistic, communistic, and fascistic plans, and they have failed the people. All the elections for the past year have been turning from extreme left to the middle ground. Communists are losing out everywhere in western Europe. Western Europe is looking to America to preserve its economic sanity, also its freedom. If we do not preserve freedom here, totalitarian government will sweep the world. Freedom in its broadest application to human relations is the answer to most of the problems in Europe.

Any American traveling anywhere in Europe today is impressed with the terrific contrast between life in Europe and life in America. We have utopia here and do not appreciate it. The only difference between the United States and Europe is one word—freedom.

Self-Reliance Faces Extinction

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. PHILLIPS of California. Mr. Speaker, this Nation was not made strong on any theory of dependence, either on the Government or on other people. It was made strong on self-reliance and initiative and courage. You cannot make a muscle strong by carrying it in a sling. I hope the Members of this Congress saw the recent survey, in Fortune magazine, which showed that students about to graduate from American colleges showed more interest in old-age pensions and in various security measures, than in the possibilities of jobs, or what they could give in return for those jobs.

Security is the quicksand into which other nations have sunk. We should be honest enough to realize we are seeing the start in the United States. For that reason I have asked unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD and include an editorial which appeared in the Riverside Daily Press, of Riverside, Calif., on July 9. I hope it will be read thoughtfully by every elected Representative.

The editorial follows:

SELF-RELIANCE MAY FACE EVENTUAL EXTINCTION IN UNITED STATES

Fortune magazine's recent survey of college campuses shows graduating students more worried about old-age pensions and similar security safeguards than anything else in their future.

Add to these protections a job with a big, established company and a wife and a few children and you have what most college men in their twenties are seeking today.

It is alarming to realize that security-mindedness has gone so far down the age ladder that it now tends to dominate the thinking of our college youth.

It is too easy and too trite, however, to respond to this situation with the regular exhortations to self-reliance, and then let it go at that. The problem isn't that simple.

These youngsters have come of age in a world still staggering from the brutal blows of two world wars and a deep depression. The dilemmas that led to these disasters are still largely unsolved. The complexities of life, whether in war or peace, seem to have grown beyond man's comprehension.

While man nevertheless gamely continues the search for solutions, he is trying at the same time to insulate himself against a recurrence of disaster. This has been true in many areas of the earth.

This country's effort to protect its people against personal catastrophe was propelled swiftly forward by Franklin D. Roosevelt's program of social legislation in the 1930's.

Republicans fought the program at the time, but historians today say social and economic conditions were such that either major party probably would have had to find bold new answers to the call for security.

Since then, a struggle to widen the domain of secure living has waxed and waned, and it is still going on. But nothing has happened, or seems likely to occur, to upset the basic security framework of the country.

It draws its main strength from a mood born of haunting fear of another great depression. And the terrific dislocations of war and postwar years have lined up many more recruits under the security banner.

This is the atmosphere breathed by college students in 1949. It should enable us to understand how they can be thinking of pensions and a safe job instead of adventurous risk-taking.

But it should shock us anew into realizing that in all this necessary attention to security measures we have indeed ignored the vital need to build a society of resourceful individuals.

How to have security and self-reliance side by side is admittedly a hard nut to crack. But the evidence indicates that most politicians are not even facing the problem earnestly. It is high time they stopped ducking it.

We owe to the masses of men a higher duty than merely to make them secure against disaster and basic want. We owe them a life where the human spirit is free and eager to grow to its fullest height, where the sum of that individual growth will be a society of constantly widening economic and social horizons.

British Aid Problem

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. VELDE. Mr. Speaker, today the United States is confronted with one of the most important decisions in its long history. It is a decision which will affect every citizen of our great country.

Here are several vital questions before each one of us today. How much can this country afford to give away before going broke itself? Are we to throw good money after bad in the hope that we can bail out the world from its economic doldrums? What is the price that America is paying to underwrite British socialism? What is the answer to the ever-increasing money crisis abroad? And more specifically at this moment—Can we keep Great Britain afloat in the crisis which has overcome her?

No matter what decision we make, it is going to be a painful one for somebody.

No one can deny the sacrifices that England made during the war. Her wartime property losses alone, at home and abroad totaled $30,000,000,000—one quarter of her wealth. During this same time, the British were forced to liquidate and consume their overseas investments which they had accumulated over centuries. We must face the facts. Great Britain came out of the war broke. No one knew this better than the British themselves. Only years of hard work and sacrifice could replace that wealth.

But what has happened?

Great Britain voted for a socialistic government in 1945 when she was in no condition to start a costly and ever-expanding social welfare program. The already crippled British industrial machine was bogged down with socialistic regimentation. And under this system of bureaucrats, they bought all kinds of material at high prices in bulk and stockpiled them. Today in a market of falling prices, they are obligated by agreements to pay for these materials at the old top prices.

The British are not lazy. Today British production is the highest in their history. Exports are as high as they have ever been and half again as much as 1947. But, in spite of all this, England is broke and on the brink of bankruptcy. Despite this record production and record exports—and $4,750,000,000 in American aid and loans—England will sink into an even greater crisis unless something is done.

Let us go back for a moment to see just what has been done to help England.

In 1944 at the Bretton Woods Monetary Conference, Churchill and Beaverbrook stated that Britain could not go back to her normal free-trade relations after the war. Finally they agreed to free-trade principles, provided Britain received a loan from this country. In 1946 Britain received a loan of $3,750,000,000 from this country, provided she would abandon the "sterling-dollar pool." This pool was an arrangement by which the British colonies and dominions sent their dollars to London and could only spend them where and when London said so. Under this arrangement Australia or New Zealand or any of the countries in the British Empire could not buy from this country unless they first cleared with London. In 1947 England went back to the "sterling-dollar pool" idea again. They appealed for help once more. Then the Marshall plan was worked out with England receiving the largest amount of cash assistance and remember that this money has averaged a billion dollars a year since the end of the war—to England alone.

Now you may ask—Why, with all this aid and the highest production in her history, is England facing bankruptcy?

Well, every country has to back its money with gold or it becomes worthless. We have our large gold reserve in Fort Knox. Because of our immense production and natural resources, in addition to our gold reserve, the American dollar is the firmest money in the world today.

Other money is rated in comparison with the dollar. The English pound is backed up by a certain amount of gold and is rated at present against the American dollar as being equal to about $4.02. But the English gold reserve has fallen so low that it has reached a point where it may cause a collapse of the English pound. With present gold reserves, the English pound is in reality only worth about $3. In fact, in the Paris black market it is worth about $2.80.

That brings up to the question, Why is not the pound revalued then at $3?

This, Sir Stafford Cripps refuses to do, even though it would sell more goods abroad. Here in the United States, for instance, we could buy British goods a fourth cheaper than we do today and that would encourage British business, in addition to giving them more dollars to buy the imports which they must have to keep their heads above water.

However, the socialist government of Britain argues that it does not dare do

this for it would, in effect, lower wages in England and in addition would make everything they buy from the United States cost a fourth more than they are now paying.

For many months, as I have stated before, the British have been demanding that Americans pay $4 a piece for pounds. Now they are confronted with the unfortunate fact that buyers who will pay that price are few and far between. The only large-scale customer seems to be an ultraliberal gentleman, known as Uncle Sam, who buys annually hundreds of millions of pounds at $4 a piece. His readiness to do this is occasioned by the fact that he gets his dollars rather easily by extracting them from his nephews and nieces?

But, lavish as are Uncle Sam's purchases, they still do not furnish the British with enough dollars to buy all the foreign products they would like to have. If Uncle Sam were to stop paying for pounds more than they were worth in the open market, Britain's dollar shortage would soon become even more serious than it is.

Now why is England's Socialist Government in such serious financial straits?

There are a number of reasons, but chiefly, heavily populated England needs to import foodstuffs to feed her people, and the British Government, itself, has taken over responsibility for prices, wages, production, and the welfare of the masses. The labor unions were largely responsible for voting into office Britain's present rulers. Now that the Government controls industry, the unions naturally demand, and get, higher wage rates and fewer hours of work per week. The result is, of course, low production, and a small volume of exportable goods, priced high in order to cover inflated expenses of production.

The British Government is also responsible for providing food enough to cover the millions of ration cards outstanding. And the unions demand that this food be sold at low prices. To meet this requirement the Government must sell food below cost. It attempts to charge the difference to the taxpayers. But it dare not tax the union members more heavily, and since it has cut profits to the bone, it cannot extract large revenues from business.

The end result is a growing Government deficit. If it prints more money to pay its bills, the difficulty of exchanging pounds for any reasonably stable foreign currency grows worse and worse. This means that it becomes even harder to obtain food from abroad. And the British people have long been complaining about their meager diet. Is it any wonder that Sir Stafford Cripps is seeking frantically for some way to dray his Socialist government out of the morass in which it is sinking deeper and deeper? This is why he is insisting so vehemently that Uncle Sam continue the make-believe that a pound is worth $4, and keep on buying each year, at that figure, two or three hundred million pounds.

England's present dilemma has been summed up admirably by Mr. Arthur Krock, the well-known Washington correspondent and authority on economics.

He has said that Britain can find no way out except by again tightening rationing and erecting a new barrier to world trade such as her treaty with Argentina for the trading of British products for Argentine grains and other products, and the recent trade agreement with Russia for course grains in return for English machinery.

Mr. Krock goes on to point out that although public opinion here and abroad blames a great deal of the British troubles on their socialistic program, the British Government blames everybody but itself. The chief reason, Mr. Krock states, is that at least $2,000,000,000 of our loans were used in the nationalization of British industries. With the highest production in their history, they are actually insolvent because the socialistic government is determined to pursue its policies, whatever the cost. As Mr. Krock points out, this leads to the conclusion that United States resources are being used to keep in political power a government in opposition to the American free-enterprise system while using our money to keep it in power.

But those in power in this country refuse to question this policy because we might be accused of interfering with the British right to have any kind of government it wishes.

Altogether, according to the United States News and World Report in its July 8 issue, the United States has given or loaned to other countries the huge sum of $28,000,000,000. And they still want more. In 1950, it is expected that we are to be asked and perhaps obligated for $8,000,000,000 more in aid.

How far can we go and stay out of bankruptcy ourselves?

The distinguished Washington commentator, Mr. Albert Warner, puts it clearly in one paragraph:

> A strange part about these currency difficulties abroad is the way they are inspiring some Washington observers to the conclusion that the only road to American economic salvation lies in bigger American loans and grants all over the world. It is their prescription that we preserve our own health by giving away the surpluses of our great productive machine.

Most of the other nations of western Europe are in the same boat with England. They are trying to operate socialism on a democratic basis, and no one has yet discovered a formula which will permit such a government to balance its budget, establish a sound currency, and let exchange rates seek their own levels in free competitive markets.

I hope this system is not destined to continue indefinitely. But whether the outcome of the financial crisis in Britain and western Europe will be the establishment of totalitarian government ruled by the Communists, or whether the friends of economic freedom will gain strength, throw out the socialists, and reestablish free enterprise, sound money, and free exchange rates is anybody's guess. Time alone will tell.

Some Employment Data

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. BECKWORTH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following three letters I have recently received:

DEPARTMENT OF LABOR,
Washington, July 21, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BECKWORTH: This is in reply to your letter of July 7, 1949, regarding the possibility of employment of displaced farm workers in industry.

I did not intend to imply in my previous letter that industry could absorb substantial numbers of workers beyond the normal additions to the labor force in any one year. It was done during the war years but, of course, that was highly abnormal. The reference was to a gradual process over a period of years as the economy expands through the growth of population and the raising of the standard of living. In the decades since 1929 agricultural employment has decreased by almost one-fourth while employment in nonagricultural activities has increased by more than a third.

It would be highly speculative to attempt to predict whether a half million or a million farmers could be absorbed in industry during the next year or two. If the current downtrend in industry continues, it will, of course, be difficult for such a large number to find nonagricultural jobs. On the other hand, if the trend is reversed, many displaced farmers may obtain employment.

Yours very truly,

MAURICE J. TOBIN,
Secretary of Labor.

DEPARTMENT OF LABOR,
Washington, July 28, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BECKWORTH: You asked in a note at the bottom of my letter to you of July 21 whether I see any reason at this time to assume that the current downtrend in industry will be reversed.

Yes, there is considerable discussion now as to when there may be an upturn in the business situation. I have seen estimates ranging from some time this fall until as late as next summer. But the general expectation of the economists is that there will soon be a revival of the business situation and industrial employment.

Farm employment is high this summer—considerably higher than last year. It is possible, however, that the downtrend since 1929 in agricultural employment, of which I spoke in my July 21 letter, will be continued in the summer of 1950, but it is also possible that an industrial revival would give employment to the displaced farm workers at that time.

I am returning my letter of July 21.

Yours very truly,

MAURICE J. TOBIN,
Secretary of Labor.

FEDERAL SECURITY AGENCY,
Washington, July 28, 1949.

HON. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BECKWORTH: You have asked me to comment on the hypothetical employment situation which would result if 500,000 farm families should be forced off the farm, and to indicate whether they might be absorbed by industry.

First of all, let me make it clear that I do not believe that adoption of the Brannan plan would have this result. There is no reason to believe, however, that the ratio of agricultural to industrial employment will not continue to decline, as it has for more than 80 years. This tendency is clearly illustrated by the attached data.

So long as the income of all workers does not decline, but in fact increases, persons who leave agricultural pursuits can and do find employment in nonagricultural occupations. For instance, within the last 30 years we have seen a marked increase in the number of unskilled and semiskilled workers employed in service activities, many of which were formerly performed in the home and many of which result from technological changes. Laundry and dry cleaning work, only to mention homely examples, are services formerly performed in the home. In 1919 these services employed approximately 148,900 persons, and in 1939, approximately 331,800 persons. Likerwise employment in the professions and in commercial recreation has boomed. New professions have developed and are rapidly expanding. To mention only the health professions, there is a critical shortage of all trained health personnel at the present time, including laboratory technicians, dental technicians, practical nurses, graduate nurses, dentists, and physicians.

It is evident that increasing numbers of workers will have to be absorbed in the nonagricultural economy. This can be accomplished only by maintaining reasonable farm incomes as well as other incomes. Total income from all farm sources in 1948 was 22.3 billions or 10.6 percent of the total national income. Maintenance of farm income to at least this proportion of the national income is one of the key factors in maintaining full national employment. In the last 6 months, farmers' cash receipts have fallen approximately 7 percent below the comparable period in 1948. In dollars and cents this drop is $890,000,000 of purchasing power and is, of course, reflected in lower sales of nonagricultural products and in less employment.

Sincerely yours,

JOHN L. THURSTON,
Acting Administrator.

Percentage distribution, by general division of occupations, of gainful workers 10 years old and over in the United States, 1870 to 1930

General division of occupations	1930	1920	1910	1900	1890	1880	1870
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Agriculture	21.4	27.0	31.0	37.5	42.6	49.4	53.0
Forestry and fishing	.5	.6	.6	.7	.8	.6	.5
Extraction of minerals	2.0	2.6	2.6	2.4	1.9	1.7	1.4
Manufacturing and mechanical industry	28.9	30.3	28.5	24.8	23.7	22.1	20.5
Transportation and commerce	7.9	7.3	7.1	6.7	6.0	4.8	4.2
Trade	12.5	10.0	9.7	10.6	8.8	7.9	6.8
Public service	1.8	1.7	1.2	1.0	.9	.8	.7
Professional service	6.7	5.1	4.6	4.1	3.8	3.2	2.6
Domestic and personal service	10.1	8.0	10.1	9.7	9.6	8.8	9.7
Clerical occupations	8.2	7.3	4.6	2.5	2.0	.9	.6

Source: Table 22, p. 101, ch. XII, Sixteenth Census of United States, 1940 Population, Comparative Occupational Statistics for the United States, 1870-1940. The reference terms used in collecting the 1940 census data were different from those used in previous censuses. Accordingly, the above table does not include 1940 data. However, for the period 1929 through 1946 the following data is pertinent:

	1929	*1946*
Wage earners (in millions):		
Manufacturing industries	10.5	14.9
Trades	6.2	8.3
Finance and miscellaneous services	4.2	5.2

The Bureau of Agricultural Economics of the Department of Agriculture reports that the annual average of total farm employment in 1929 was approximately 11,289,000 and in 1948 was approximately 10,089,000 persons. "Farm employment" is defined as the number of persons who work on farms 2 or more days per week. This includes farm operators, unpaid members of their families, and paid farm workers.

Well, Here Come the British—For More Billions

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Sears Henning, from the Washington Times-Herald of August 15, 1949:

WELL, HERE COME THE BRITISH—FOR MORE BILLIONS

(By Arthur Sears Henning)

The stage is being set for another American campaign to save the Socialist government of Great Britain from downfall and to initiate a new American foreign policy to protect British interests in the Far East.

The State and Treasury Departments have nearly completed preparations for the conference here beginning September 6 on Britain's financial problem. The solution of this problem sought by the British is one that would tap the American Treasury for more billions to bolster up the tottering socialistic structure of the current British economy.

WANT FIFTEEN BILLIONS

The Socialist labor government went through the American $3,750,000,000 gift loan in a couple of years, though it was supposed to last 5 years. It is now drawing down more than $1,000,000,000 a year supplied by American taxpayers under the Marshall plan. But these amounts fall far short of the funds necessary to meet the Socialist government deficit produced by the colossal costs of welfare programs and the losses accruing from socialized industries.

Current rumor has it that the additional amount to be sought is about $15,000,000,000—not all at once but "over a period of years."

If the British Socialists get what they want in Washington they will be sitting pretty in London for several years. Their chances of winning the forthcoming British parliamentary election and remaining in power would be greatly improved, for the American handout would wipe out their defict and enable the British Government to moderate the austerity regimen it has imposed on the British people. If they fail to get an adequate hand-out they probably will lose the election and Churchill and his conservatives will return to power.

HEADED BY BEVIN, CRIPPS

British foreign minister Bevin and Sir Stafford Cripps, British chancellor of the exchequer, the Socialist economist who recently fled to a Swiss sanitarium from the Socialist fiasco, will head the British delegation.

The British also wish to get a waiver of clause 9 of the gift-loan agreement, known as the nondiscrimination provision. Britain agreed in consideration of the loan not to buy supplies in other countries when citizens of the United States had a surplus of the same commodities and were willing to meet the competitive price. The British Government already has repudiated this promise by concluding a trade treaty with Argentina for exclusive purchase of beef, grain, and other commodities in exchange for British manufactured goods, the net result of which is a loss of trade to American farmers and manufacturers.

On the currency question Treasury Secretary Snyder conducted preliminary conversations a few weeks ago in London and other European capitals. The British were disappointed in Snyder. He was not the sort of New Dealer they were used to. He brought a banker's fishy eye to the conferences and evinced critical views of the overvalued pound sterling, economic controls, etc. The British were a bit apprehensive of Snyder presiding over the September conference.

ACHESON WILL PRESIDE

But their fears have been allayed. It will not be Snyder who will preside but State Secretary Acheson, a son of a British-born Church of England clergyman and an Anglophile to whom Britain is deeply indebted for the American foreign policies he has shaped.

There will be negotiations between Acheson and Bevin on the formation of a new American foreign policy in the Far East to take the place of the Truman policy on China, the failure of which was confessed in the recent State Department white paper. The British will aim to shape the new American policy around defense of Hong Kong, principal British interest remaining in China. There have been hints that expediency may bring about an accommodation between Britain and the Chinese Communists.

American foreign policies have long served British interests. To go no farther back than the turn of the century, State Secretary John Hay was credited with the authorship of the open door policy in China. But the real author was Britain, whose purpose was to curb the expanding power of Russia in Asia.

WILSON AIDED BRITAIN

Woodrow Wilson took the country into World War I ostensibly "to make the world safe for democracy" but really to save Britain and France from defeat.

Franklin Roosevelt accepted the British thesis that they could not pay their World War I debt and besides it would be ruinous to the United States, if they could pay. When World War II opened Roosevelt fell under the influence of Winston Churchill. More than 2,000 secret messages now under lock and key that passed between them record the development of this influence which was to bring America into the war, with Churchill telling Parliament that was what he had worked for.

Rather than commit the folly of plunging into a two-ocean war with a one-ocean Navy, Roosevelt wanted to settle with Japan but the British wouldn't hear of it. They in-

sisted on the policy that precipitated Pearl Harbor and Roosevelt yielded.

ACHESON URGED LOAN

At the close of the war the British sought a $6,000,000,000 continuation of lend-lease. When they failed to get it they sought a loan of the same amount. They finally got 3¾ billions. Acheson was one of the principal negotiators and potently aided in getting the loan through Congress.

In 1947 with their empire dwindling and a socialist economy sapping their resources, the British sought to lighten ship. The Labor Government asked Mr. Truman to take the protection of Greece and Turkey off British hands. Advised by the old soldier George Marshall, who viewed it as strategy against Russia, Mr. Truman accepted. But it remained for Under Secretary Acheson to rationalize it as the Truman doctrine of America's obligation to protect free people everywhere on the globe.

Boy Scouts of America a Great Institution—Arthur Guns a Marvelous Scoutmaster

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. JOHNSON. Mr. Speaker, last Friday H. R. 5342 was passed by the House. This bill provides for the loaning of certain Army equipment to the Boy Scouts of America for use at their fortieth anniversary jamboree to be held at Valley Forge Park, Pa., next year. My friend and colleague, BROOK HAYS, of Arkansas, and I introduced companion bills.

In the Eightieth Congress a bill with similar provisions and the additional one of providing Army transportation to France for the Boy Scouts of America to attend an international jamboree held in that country; that bill happened to bear my name as the author, but my friend and colleague Mr. HAYS also had a companion bill. Since the Eightieth Congress was a Republican Congress and since the bill was referred to the Armed Services Committee of which I was a member, it was deemed appropriate that the bill bearing my name be passed, which is what happened.

Likewise, since this is a Democratic Congress it was deemed appropriate to have the bill bearing Mr. HAYS name passed and in moving to have the bill approved by the Armed Services Committee, I made the motion apply to Mr. Hays' bill, H. R. 5342.

It has been a great pleasure to join with Mr. HAYS in these two efforts in behalf of the Boy Scouts of America.

We know that the Boy Scouts have hundreds of friends in Congress and it was a distinct privilege to have the organization honor us by requesting us to give them our help in getting the use of the camping equipment above referred to for use of the jamboree to be held at historic Valley Forge, Pa. The Boy Scout organization will pay all expenses incurred in moving this equipment to Valley Forge and back to its original location.

Both of us have been active in the Boy Scout movement for a long time. I wish to pay my tribute to the Boy Scouts of America. All those connected with it are a distinct asset to our country. But I wish to be a little more specific and give special mention to the Scoutmasters. They are the men who handle the individual troops. They are in close contact with the boys. On the character of these boys is found the imprint of the influence and example and effort of the Scoutmaster. He has all the headaches of handling a group of lively and sometimes mischievous boys; but he has more he has the challenge of helping mold the character of those boys. He has the satisfaction of seeing these boys develop into good citizens and respected and successful men. The work of the Scoutmasters is typified, for me, in one Scoutmaster whose name is Arthur Guns. He lives in Stockton, Calif. He was a Scoutmaster for a quarter of a century. Not a single boy who was in one of the Boy Scout or the Sea Scout troops directed by "Art" failed to be benefited by the companionship. Since Mr. and Mrs. Guns had no children, they worked at this scout business together. Art saw his boys fight in every theatre of this last war. His boys have entered almost every kind of employment and many of them have been conspicuously successful. All of them have turned out to be clean and vigorous citizens. He practically devoted all of his spare time all during these years to Boy Scout activities and I know that he got a great kick out of it. He is typical of many thousands of others, although there are very few who kept at the job as long or who were as effective as he was. Such an organization deserves a good turn occasionally. I know I speak not only for myself but also for Mr. HAYS when I say we are pleased to have had a small part in getting this bill through Congress.

A Question for President Truman

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. PHILLIPS of California. Mr. Speaker, a news item appeared in the local papers a few days ago, under the date line of Quito, Ecuador, August 8. It described an earthquake which, according to the report, would leave 100,000 people without homes. It had destroyed 50 cities and villages. The death toll would be over 2,000. I now quote the last paragraph of the news item:

The President's secretary said the government had asked the American Republics to rush tents to the area, and that the United States already was sending emergency shipments of canned foods, and indispensable items of relief. An emergency airlift is hauling supplies into the quake-stricken zones and bringing out survivors to cities where hospital facilities are available.

I rise to ask the President of the United States if the people of Hawaii are not just as much entitled to consideration and to aid as the people of Ecuador. We are proud to have American aid sent by President Truman to the people of our sister Republic to the south. We just want to know why aid is not being given our own people, in an emergency of almost equal seriousness. Perhaps Ecuador should start an airlift and send food and help to Hawaii.

General Fixit

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of August 15, 1949:

GENERAL FIXIT

General Vaughan evidently believes that he has set everything right by his explanation of how the deep-freeze units happened to be sent to Mrs. Truman and to a small group of the President's intimate associates, and how the bill for them was paid by the head of a perfumery concern deeply involved in the import trade. Viewed in the light of the general's behavior since he became military aide to Mr. Truman, the explanation is altogether plausible. It reflects that extraordinary combination of officiousness, naivete, and political ineptitude that make General Vaughan's friendship and devotion so dangerous and troublesome to his crony and patron.

It was just another occasion on which General Vaughan could not deny himself the pleasure of playing Mr. Fixit. It was about 4 years ago when the deep-freezing mechanism was an innovation, and the subject just naturally came up in the course of a conversation between the general and his two old friends, the Messrs. Hoffman and Bennett. General Vaughan told of his desire to possess one of these gadgets for himself and to send another to the Truman household at Independence. Mr. Hoffman, an advertising man, and something of a Mr. Fixit himself, observed that if the general would be content with experimental models that were not to be put into commercial production, he could arrange the matter. And that was that. The refrigerators were personal gifts from the general to his friends; but since Mr. Bennett was present at this arrangement, it doubtless seemed only courteous to let him have a hand in it; and so, as it appears from the testimony of Mr. Albert Gross, he was permitted to pay the bills.

The general saw no impropriety in all this, nor, apparently, did the recipients of the gifts. After all, the sending of gifts of one kind or another to important public personages is an old American custom, and hardly a day goes by that gifts are not delivered to the White House. What to do with these gifts is one of the perennial problems of Presidential housekeeping.

Thus the acceptance of the deep-freeze units from General Vaughan, or General Vaughan's business friends, need not suggest any disposition on the part of the personages concerned to grant official favors in return. Indeed, the value of the gifts is

not great enough to arouse suspicion of venality. There is certainly nothing here to suggest a scandal on the proportions of the Teapot Dome, nor even such a shocking example of the abuse of a privileged position as were the financial adventures of Mr. Elliott Roosevelt. It is an even farther cry from the grandiose varieties of graft associated with the business of military procurement in the days of Secretary Cameron and Secretary Alger, for example. The truth is that such financial irregularities as were once tolerated in a man like Daniel Webster would mean political death to any modern statesman of comparable rank.

It is General Vaughan's irresistible urge to interfere, with what are doubtless the best of motives, in the affairs of all Government departments, that is basically responsible for the embarrassment he has brought on his friends. For it has raised an ugly suspicion that his gregarious nature and his incurable meddlesomeness were easily exploited by men whose purposes were less pure and amiable than his own. In an interview with Mr. Edward T. Folliard, published in the Washington Post last February, General Vaughan related what the President had said in his presence to General Eisenhower when that officer succeeded General Marshall as Chief of Staff:

"Whenever you have anything to take up with me, I'll appreciate it if you will take it up first with General Vaughan. When I have any matter to take up with you, I'll take it up through General Vaughan."

Then turning to Vaughan the President said: "At other times you mind your own business."

It would have been well for General Vaughan and for his patron had he been temperamentally capable of obeying such an order.

The Tables Turned

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. POTTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Columbus (Ohio) Evening Dispatch of July 21, 1949:

THE TABLES TURNED

The funniest thing to develop from the Hiss case—if anything connected with that trial can be considered funny—is the lather the New Dealers and so-called liberals find themselves in as the propriety of Judge Kaufman's conduct of the case is being questioned.

This questioning of motives, they say, is very dangerous. The presumption of a few Congressmen in suggesting an investigation of the judge's fitness and conduct is an ominous sign of bitter and destructive rivalry between the legislative and judicial branches of the Government which must be squelched at once.

Let us see, now. Aren't these excited ones the same people who a few years ago cheered President Roosevelt on in his openly avowed effort to destroy the Supreme Court? Aren't they the ones who drummed up Nation-wide contempt for the judicial branch of the Government by labeling the members of our highest tribunal "the nine old men"?

There wasn't much sanctity about the courts then. But, of course, at that time the Federal judiciary was not a New Deal judiciary. It was, in fact, more or less widely opposed to the Executive grab for power over the legislative and judicial branches of Government.

It is amusing now to watch them cry, and become, oh, ever so perturbed over the fact that someone, somewhere might find even the slightest reason to criticize a New Deal judge who so bravely shows his bias for even the worst in the international-welfare-reform state instead of remaining objective. Apparently, the sanctity of the courts depends upon whether they acknowledge the virtue of the Roosevelt-Truman system of centralization or not.

Second Class Postal Rates

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. NORBLAD. Mr. Speaker, Under leave to extend my remarks, I include herewith an editorial from the Canby Herald, of Canby Oreg., on the subject of the proposed increase in newspaper mailing rates:

DONALDSON ASKS CIRCULATION-RATE HIKE

Postmaster General Jesse Donaldson, the first experienced postal worker ever to hold that important Cabinet post, is determined to persuade Congress to enact his new schedule of postal rates, one of the chief features of which is a whopping increase in the rates for second class matter, under which newspapers and magazines are delivered to regular subscribers.

He has gone so far as to figure out how much weekly newspapers will have to increase their subscription prices in order to meet the proposed new schedules. It will be from less than 25 cents to not more than $1 on an annual subscription basis, the average being around 50 cents. Daily newspapers delivered by mail will have to take it in the neck for about six times that much. Many magazines will have to cease delivering by mail altogether if the schedule goes through.

Mr. Donaldson, being a practical mail-handler from way back, has a common feeling with the men and women in post offices who have to sort and handle tons of bulky publications.

Up to this time he seems to have said little or nothing about the fundamental reason for establishing low second-class rates: that the people of the United States might have ready access to information at low cost; that an informed and enlightened public opinion be encouraged as a bulwark of a free Government. The Postmaster General may regard that as a lot of hooey, he being a practical mail handler, for he told Congress:

"What the publishers know—but what most folks do not know—is that the present second-class rates are a survival of one of the early congressional acts made under conditions that have long since ceased to exist."

What conditions ceased to exist he doesn't say, but there never was a time in the history of the United States when it was more vitally necessary than now that the people be well and correctly informed. Any obstruction or disruption of the flow of information now would make the work of subversive propagandists just that much easier. Choke the newspapers out of the country mail boxes with higher subscription rates, and their place to some extent will be taken by "box-holder" propagandists with axes to grind.

We can well imagine that the original fundamental purpose of the second class rate structure is a matter of national policy toward which the practical Postmaster General takes a dim view. It is sometimes the penalty of long experience that one learns too many things that cannot be done, or fails to evaluate the total effect of his own efforts.

Next time we meet Carl Elligsen or Pete Brachmann or Bill Flick loaded down with Santa Claus-size mailbags we're going to ask them what they think they're doing.

We'll bet a new hat none of them will put on that exalted look of patriotic fervor and say: "Son, I'm enlightening public opinion."

Neither would Jesse Donaldson.

Let's Call the Veterinary Before the Horse Dies

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. KEATING. Mr. Speaker, H. R. 4328, sponsored by the distinguished ranking minority member on the Committee on Ways and Means, the gentleman from New York [Mr. REED] deals with the excise tax on photographic apparatus. It exempts X-ray cameras. It abolishes the discriminatory 25-percent tax on certain photographic equipment and substitutes for the present 15-percent tax on film and sensitized paper a 10-percent tax applicable to roll films. It reduces from 25 to 10 percent the tax on certain still and motion picture camera lenses.

On July 12 I spoke to the House regarding the injustice and unfairness inherent in the present tax on photographic supplies. Thousands are being thrown out of work through the stubborn opposition of administration leaders to any relief from the burdensome Federal sales taxes.

One of the most effective statements I have seen on this subject is contained in a letter from Attorney Harold F. Hopper, of Rochester, N. Y., which, under leave to extend my remarks, is included below.

This letter specifically deals with H. R. 4328, but the sentiments expressed have a wider application generally to the disastrous effects of blind adherence to existing tax policies and stubborn unwillingness even to conduct hearings on possible changes.

ROCHESTER, N. Y., *June 2, 1949.*

The Honorable KENNETH B. KEATING,
The House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN KEATING: Congress is, I hope, cognizant of the desirability of enacting such soundly conceived economic measures as will, while preserving unimpaired the system of free enterprise, untrammeled by bureaucratic dictation, which has in the past made this Nation the greatest on earth, aid in preventing the present recession in prosperity from becoming a calamitous depression.

Declining demand for manufactured products has already produced increasing unemployment and the continuance of eco-

nomically unsound taxation policies further retarding sales will lead to increasing unemployment, which, when coupled with increasingly extravagant spending and wellnigh punitive taxation, will, in my opinion, inevitably bring about a serious depression. There may well be some members of the ever-growing governmental bureaucracy who would welcome a depression as an excuse for the substitution of bureaucratic regimentation for free enterprise in order to entrench themselves in power, regardless of the consequences to the welfare of the Nation or of its citizens as a whole. I trust that the Members of Congress are aware of this domestic peril which, I believe, outweighs the dangers of armed conflict with foreign nations.

The continuance of unconscionably high and inequitably burdensome excise taxes is, in my opinion, a factor contributing to the decline in sales. As an example, I cite the personal reaction of my wife and myself as consumers. For more than 2 years, my wife has desired to purchase a fur coat. And I, in turn, have been badly in need of a new typewriter. But both my wife and I are not disposed to make the purchases as long as high excise taxes are maintained. We feel that, when an income earner is taxed in excess of 25 percent for earning his income and then is taxed, in some cases, 25 percent for spending it, it is time to call a halt, and, if Congress will do nothing, then it behooves the consumer in his individual interest to confine his buying to irreducible necessities of life. These instances appertaining to myself and my wife are, I firmly believe, multiplied many, many times over throughout the country and are one of the prime factors contributing to the current business recession.

Once considered principally a means of recreation, photography has become a business machine or tool of prime importance, yet, while business machines are taxed 6 percent, the equally important photographic apparatus is subjected to the highest excise tax presently imposed, namely 25 percent. The inequity, in my opinion, needs no discussion.

I am well aware of the difficulties faced by Congress in curbing the ever growing extravagant Government spending. The report of the Hoover Commission, which unfortunately the great mass of voters will not read or fully appreciate, is a striking example of how the Government prefers to waste and tax than to operate efficiently and encourage business by lowered taxation. But, notwithstanding the political attractions of such a program, those who have the welfare of this Nation at heart should bear in mind the irresistible economic law of diminishing returns. If Congress perceives the wisdom of reducing high taxes, of which the photographic excise tax is a striking example, the resultant increase in sales would, I believe, produce more and not less tax revenue. Throughout history bureaucrats have unsuccessfully sought to circumvent the law of diminishing returns with disastrous results to the welfare of the nation concerned.

Many of those who write to you from time to time may have a selfish ax to grind. I too have a selfish ax to grind—I do not wish to join the unemployed.

I sincerely trust that you will do everything in your power to bring the subject bill to early consideration and quick passage by Congress. Remedial tax legislation is needed now and not at some vague future time. It does not do much good to call the veterinary after the horse is dead. I shall appreciate your giving consideration to this matter and would be very glad to have a brief expression of your views in reply.

Very truly yours,

HAROLD F. HOOPER.

Arms Aid to Europe

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Walter Trohan, of the Chicago Tribune, is substituting for Fulton Lewis, Jr., and in the past several days has made some very interesting reports regarding the arms-aid-to-Europe program. In view of the fact that we are about to debate this measure within the next day or two, I am sure that all the Members will find it profitable to read the remarks made by Mr. Trohan. I am inserting his broadcasts given on August 8, 9, and 10, at this point:

(August 8, 1949)

This week and next the accent will be on the military in the House and the Senate. A House subcommittee will launch an investigation into the controversy over the B-36, the world's largest and longest flying plane. I hope to bring you this story later. The Senate Foreign Relations Committee continues to study the $1,450,000,000 arms assistance program, which President Truman submitted, as you know, to provide weapons for our allies under the North Atlantic Pact.

Fortunately this military accent is something I can speak on with some authority or at least some background. For 15 years I have been close to the Army, Navy, and Air Force. I have known in some intimacy every chief of staff from General MacArthur and every chief of naval operations from Admiral Standley. I have discussed at great length national security and the world military situation with General Bradley, Army Chief of Staff; Admiral Denfeld, Chief of Naval Operations, and General Vandenberg, Chief of Staff of the Air Force, and many of their subordinates. All three return tomorrow from Europe, where, as you know, they discussed the military situation with the chiefs of defense of our allies under the Atlantic Pact. I hope to give you the world picture as they might give it if they were to walk into your homes for a neighborly chat. I will, of course, give the picture considerably less formally than they might, but I am sure they would not seriously quarrel with the facts or conclusions.

While much of what I have to tell may be startling to some of you, I assure you I am giving no information which might be of comfort or aid to any potential enemy. I know you would want me to be careful in this so I have cleared all I have to tell you with responsible officers of high rank. And please do not be frightened or depressed by what I have to say. I will give the darker side of the picture first and then the brighter side. War is not a pleasant business. Someone must get hurt—individuals and nations are maimed or mortally wounded as we know. It will take me some days to unfold the story, but I will let you in on the end—I can win world war III if it all comes, but let us all pray God that it never comes.

Military leaders are agreed that if Soviet Russia should declare war tomorrow, the Red Army would be in control of Europe and the Middle East in 90 days. The Red Army now has about 50 divisions along the Western Front from Finland to Turkey. Fifty divisions, as you are aware, means about 750,000 men. Another 150 divisions or another 2,250,000 men are in reserve. In World War II, 11,000,000 Red soldiers were thrown against the Nazi invaders before a single piece of lend-lease reached the Soviets. At the end of the war Stalin had 502 divisions in the field or about 7,500,000 men. The Allied strength was less than a fifth of that, or 91 divisions—something over a million and a quarter men. Of these, 63 were American divisions, 12 were British, 11 were French and 5 were Canadian. Our contribution was more than twice that of our allies. In addition we had 26 divisions in the Pacific theater.

The Soviet legions would be aided by large bodies of Communists within the western powers. There are about 2,000,000 Communists in France, about the same number in Italy and a goodly number in Britain. The vast organized Red-Fascist fifth column could paralyze several western powers by strikes, sabotage and uprisings as the Red army began to roll. Military leaders believe that within 60 days the Red Army could sweep across western Europe to the North Sea and the Pyrenees. In another 30 days they could overrun Spain. Portugal and Italy, brush into Scandinavia and dip into Turkey, Iran, and Iraq without calling up the full strength of 500 trained divisions or raising perhaps 90 trained divisions from satellite states—a trained army of about 9,000,000 men. Russia now has about 20,000,000 men available for war service. The Red Army might not be halted at the North Sea which balked Kaiser Wilhelm and Adolf Hitler. Five thousand of the Soviet air fleet of 19,000 planes are troop carriers. These can drop 75,000 men on England at one time. Other waves could follow. Such an air invasion might or might not be successful, but it or its threat would keep the British Air Force and British divisions at home if war should come and properly so. That is the dark side of the picture as military leaders have painted it to me. It is grim and terrifying enough, but I must amplify it in evenings to come. However, do not start digging a bomb shelter in your back yard or start running up the white flag of surrender just yet. War has not begun. And if it should we would still win, as I will later explain, even if all Europe and the Middle East were to fall into Soviet hands.

There is a bright side to the picture and I give a preview. Every military leader I know is confident that Stalin does not want war any more than you or I do. There are a number of reasons for this. First, the United States has a powerful deterrent to aggression in the atomic bomb and the intercontinental bombers which can deliver them. Our top commanders permit me to tell you that Soviet Russia does not have the atomic bomb and that if the Soviets had this powerful weapon they do not have planes to loose it on us with certainty and accuracy. Second, Stalin does not want to send his soldiers into western Europe. There they would see a way of life which would turn them to revolt against totalitarianism. On highest authority, I can tell you that Soviet desertions reached a high of 9,000 a month after Red soldiers were exposed to life even in bomb-battered Germany and the strait-jacketed freedoms of the Nazis. That is more than half a division a month. Stalin shuttling his occupation forces in the Baltic and the middle of Europe with clock-like regularity. Just as soon as a division gets a taste of the new way of life they are transferred. They are not returned to their homes again. Such is the way of dictators. Stalin does not want western thought to permeate his villages. I will return to this thought when I tell you that world war III will be won by a thought campaign, psychological warfare, and by air, with adequate ground and naval support.

A third reason deterring Stalin from invading western Europe is that it is an area of

intense nationalism—people feel their national ties strongly and would stoutly resist regimentation even as you and I. Fourth, Stalin has his eyes on Asia. China is almost in his hands and he is eyeing India, Malaya, Korea, Indonesia, and even Japan. Fifth, Stalin is the greatest Russian of them all. He has surpassed the wildest dreams of the czars. The fate of Hitler and Mussolini is green in his memory. He knows what happens to dictators who go to war once too often. He is a realist.

To sum up the brighter side, I am permitted by our military to tell you that as long as we maintain our powerful deterrent to aggression, so long as we maintain the lead in bombs and bombers, backed by adequate ground and sea forces, so long are we likely to keep the peace.

(August 9, 1949)

Tomorrow marks the seventy-fifth birthday of a great American. As he reaches the three-quarter-century mark, the Nation hails him as one who has graduated from partisanship to statesmanship. Democrats and Republicans alike rejoice that he was not embittered by defeat but rose above it to be acclaimed by no less a personage than President Harry S. Truman as a good and faithful servant of the Nation and of humanity. Tonight I want to quote from a speech this American made in his native Iowa village on his seventy-fourth birthday a year ago:

"America means far more than a continent bounded by two oceans; it is more than pride of military power, glory in war, or in victory. It means more than vast expanse of farms, of great factories or mines, magnificent cities, or millions of automobiles and radios. It is even more than the traditions of the great tide westward from Europe which pioneered the conquest of this continent. It is more than our literature, our music, our poetry. Other nations have these things also. I have seen America in contrast with many nations and many races. My profession took me into many foreign lands under many types of government. I have worked with their great spiritual leaders and their great statesmen. I have worked in governments of free men, of tyrannies, of Socialists, and of Communists. I have met with princes, kings, despots, and desperadoes. I have seen the squalor of Asia, the frozen class barriers of Europe. And I was not a tourist. I was associated with their working lives and problems. I had to deal with their social systems and their governments. And outstanding everywhere to these great masses of people there was a hallowed word—America. To them it was the hope of the world. The meaning of the word America flows from one pure source. Within the soul of America is freedom of mind and spirit in man. Here alone are the open windows through which also pours the sunlight of the human spirit. Here alone human dignity is not a dream but an accomplishment. Perhaps it is not perfect, but it is more full in realization here than any other place in the world."

These words came from our only living ex-President. A most happy birthday to you, Mr. Hoover, from all of us. Those of you who subscribe to this creed of Americanism may want to send personal greetings. If so, you can address them to Herbert Hoover, Waldorf Towers, New York City.

And now I should like to continue discussion of the administration's plan to send arms to our allies under the North Atlantic Pact and discussion of what our best military minds consider are the implications of such help on our national security.

In the cold war of today, Stalin strikes and we parry the blows. He attacks the sovereignty of Greece through his satellites and we counter with the Truman doctrine. He blockades Berlin and we assume a costly air lift. His fifth columns honeycomb Europe and we counter with the multi-billion-dollar Marshall plan. His Chinese Communists engulf China and we counter with a 1,054-page white paper saying it would have all happened no matter what we might have done. His pride and his power, the Red Army, faces west and we join an alliance with 10 western European nations, all small in area and most of them small in population. We also come up with a proposal to send one billion four hundred and fifty million in arms to these nations, although our military minds agree, as I told you yesterday, that we cannot stop the Soviet Army in Europe. Many good and intelligent people are insistent on the military-aid program. With General Marshall they say it would be dangerous not to send arms to our allies and that we must preserve the momentum we have gained. They also say that weakness invites attack. You are familiar with the arguments for the arms-assistance program. I want to give you military thinking on the fallacies and weaknesses of the program. None of this is mine. Every point comes from responsible military sources or Members of the United States Senate.

The first of these false concepts of supporters of the arms program, I am told, is that our European allies can or will fight an organized and sustained war. This is no reflection on the courage of our allies, but a realistic approach to stopping Soviet Russia. Military leaders know Russia could place 500 trained divisions in the field before allies could assemble 25. I hope you will permit me to amplify this subject in a later broadcast. A second fallacy, military men tell me, is that the quality of leadership and morale in Europe is better than it was in 1940 when our allies were battered by Nazi legions. Military men agree morale is worse. Still a third fallacy is that our military equipment will be maintained up to American standards by our allies if it is given to them. Military leaders tell me Europeans do not have the mechanical know-how to keep material at the American level of fighting perfection. It is only natural that they should feel there is more where the original material came from and prefer to get new arms to keeping up the old.

A fourth fallacy developed by Senators, is that the United States can afford to rearm Europe. Arming 10 nations is an expensive business and, again, I hope to detail this phase of the program in a later broadcast. A fifth fallacy, military men say, is that the war against Russia can be won solely on the ground; that allied forces on the ground can somehow defeat the Red air force and that air supremacy is not essential to ground victory. Military leaders tell me that the great lessons of World War II are that ground troops cannot survive unless they control the air above them and that air power can only be defeated by air power. A six major fallacy is that the arms program is being pushed on the premise that war with the Soviets is inevitable. Our military high command does not believe this to be true, for which we can give thanks. And we can also give thanks that they firmly believe we can win world war III when and if it comes. Military leaders feel there are grave risks in the arms-assistance program. They are concerned that our weapons might be used against us and that our weapons might be used to enslave colonials. And there is concern that we might denude our Army, Air Force, and Navy of needed weapons. Our top military minds recall that General MacArthur was required on orders from Washington to ship arms to Singapore from his meager store of supplies in the Philippines. These weapons fell into "ham" hands when 100,000 British at Singapore surrendered to 30,000 Japs, as you recall Winston Churchill reported in his memoirs. In the dark days when MacArthur was crying for help, millions upon millions of dollars of military supplies were being shipped to the Soviet Arctic port of Murmansk. Eight out of 10 ships were sunk by Nazi planes or subs. I can tell you tonight one of General MacArthur's first letters from Australia, after he was ordered to leave the Philippines by the President, said he would have been able to hold Bataan if he had not been abandoned. This letter has never been published. Military men recall we shipped millions of tons of TNT to Britain, stripping our stores to the last pound in 1940.

Brig. Gen. Bonner Fellers, now retired, solemnly warned Congress that the proposal to arm Europe is loaded with more explosive danger than Pearl Harbor. General Fellers served General MacArthur in the Pacific for 3 years. Fellers sounded his warning to the House Foreign Affairs Committee and may be called before the Senate Foreign Relations Committee. If he is, he told me this afternoon, he will say:

"The proposed military-assistance program places the State Department in the role of determining military strategy, in that it has invited our allies to requisition military equipment to hold their frontiers. Assistance to this program commits us to ground combat should war come. This situation parellels Pearl Harbor. It was a diplomatic rather than a naval decision that the fleet be stationed at Honolulu to deter Japanese aggression. Then the Hawaiian commanders were not advised an attack was imminent. The proposed administration program could lead to far greater humiliation than the Pearl Harbor debacle. The task of the Eighty-first Congress is to make sure that our allies understand precisely what help we intend and do not intend to give them. We cannot be placed where we can be accused of welching on the treaty. Clearly the administration has not found the formula for lasting peace. Its failure magnifies the responsibility of Congress."

(August 10, 1949)

By day and by night, top defense planners in the army, navy and air force are conducting a constant, searching analysis of the military capabilities of our allies under the North Atlantic Pact. As you know, these are Norway, Denmark, Holland, Belgium, Luxemburg, France, Britain, Italy, Portugal, and Iceland—every nation in western Europe with the single exception of Spain, which is in our diplomatic doghouse. Canada is a member. Germany was not allowed to be a member. Sweden, like her most famous actress, Greta Garbo, has decided she wants to be alone. No one blames Sweden in this decision because she is closer to Soviet Russia than any of her European neighbors. She has no will, with only three divisions, to fight the Soviet juggernaut of 500 trained divisions.

I have not found a single responsible military leader who believes that any of our allies has the will to fight an organized and sustained war today. Not a single responsible military mind believes the French would fight tomorrow. No one believes Britain would do more than protect itself against invasion by air. This is in no sense intended by our military to be disparaging of our allies. It is no reflection on their love of country or their bravery. It is simply a statement of the fact that the Soviet Army is too big and too powerful to be stopped at the Elbe or at the Rhine. We must not be too hasty to condemn our allies if they, too, take the realistic approach. At the top of our military command there are many who believe that it might be better for our allies to let the Reds swarm over their countries than to suffer the devastation that would follow resistance. One more sweep of ground forces across Europe might be the mortal blow for western civilization. Others in the high command feel that we and our allies should hold whatever can be held, at any cost. In this, our military are at loggerheads with the State Department over Spain.

The military would accept Spain as an ally. The mountain barrier of the Pyrenees is a formidable one. Spain has some 20 divisions of men. The Spaniards must fight because they are aware extermination faces them at Red hands. Our high command recalls that we accepted Soviet Russia as an ally against Hitler; they are willing to take Franco to check Stalin. The State Department and the White House say no and no it is. The White House and State Department also say no to suggestions within the defense establishment that consideration be given to arming Germany, under controls, as a check to the Soviets. Hitler almost defeated Russia. It is argued that the Germany, under allied control, might check Soviet aggression. The heaviest opposition to this proposal comes from France, which suffered three German invasions in 70 years. France does not want Germany ever to approach a threatening role again. It has been reported in Washington, that the true purpose of the 1,450,000,000-military-aid program is not to stop the Red Army. It is to arm France against the new Germany which will emerge on the withdrawal of occupation forces. As you know, Germany was thoroughly licked and stripped of industrial capacity. Under the Morgenthau plan, Germany was to be reduced to an agricultural nation, as an example to aggressors for all time. The example has not deterred the Soviets. The double-barreled policy of defeat and revenge in Germany is said by some to have retarded the recovery of Europe through creation of an economic and military vacuum in central Europe. Many military minds are convinced that there can be no containing the Soviets without considerable rebuilding of Germany. It would be paradoxical if we were to adopt a policy of building up an enemy to hold off a far more formidable potential enemy. Our military chiefs have just returned from a consultation with military leaders in Europe on their defense problems. General Bradley, Admiral Denfeld, and General Vandenberg, as you know, head our Army, Navy, and Air Forces. They reported to Congress today on what they learned on their flying visit to Europe.

Our leaders have given careful examination to the part played by our North Atlantic Allies in World War II, when the powerful Nazi war machine was loosed against them. For the most part they had no chance. It is the concensus that they would have even less chance against the Soviet hordes if in two brief campaigns. The Scandinavian campaign continued sporadically from April 9 to June 10, 1940, but in reality was over in 1 day. Denmark offered no resistance. The principal cities of Norway were all occupied on the first day of the campaign. The Nazis used no more than 25,000 men in this campaign. The Norwegian Army of 114,000 was never wholly mobilized. Only six divisions took the field. These were confused and unprepared. The second campaign against the western Allies was opened at dawn May 10, 1940, with simultaneous attacks on Holland, Belgium, and Luxemburg, and then against France. Luxemburg offered no resistance. It did not have a regular army and couldn't put a regiment in the field today.

The Germans used 150 divisions, about 2,000,000 men, in the campaign. The French had 2,700,000 men. The British had an expeditionary force of 350,000 men in France. The Dutch and Belgians had about 900,000 men. In 5 days Holland .surrendered. In 19 days the Belgians gave up. On June 22, after 40 days, the French sued for peace. The British expeditionary force retreated to Dunkerque. In the dark hours of 5 nights, May 29 to June 2, a third of a million men were evacuated to England. This was considered a minor triumph at the time, but since the war it has been disclosed that Hitler called off Nazi air forces from Dunkerque and permitted the evacuation. He was interested in the capture of France and the coming battle of Britain. The British record on land in the war was an unhappy succession of calamities—Narvik, Dunkerque, Singapore, Greece, Crete, and north Africa. Not until they were joined by Americans in north Africa were the British able to halt and defeat the Nazis. For 2 years General Rommel, witn only three German divisions and seven or eight Italian divisions, had shuttled back and forth across north Africa almost at will, using the Italian divisions as a screen similar to a football line and his German troops as a backfield to sweep the ends or dart through the line. The great British victory was the air battle over Britain. Canadian pilots played a major role in this victory. Polish squadrons also contributed. You remember, I am sure, Churchill's stirring tribute to the victorious airmen: "Never in the field of human conflict was so much owed by so many to so few."

Today, Britain is wisely concentrating on the building of an air force. The aim is to make the Royal Air Force what the Royal Navy was from the time of the defeat of the Spanish Armada in 1588 to the growth of the American Navy in our time. American military experts are aware that the British would use their air power to protect England in the event of war. In fact, our high command concurs in this decision because Britain would be an invaluable air base in the event of war with the Soviets. At the close of the war Britain had 12 divisions at the front. If she had this number of divisions today (and she does not have), they would be kept at home to fight off possible paratrooper attack. The Soviet Air Force today can drop 75,000 men from 5,000 transport planes. At the close of World War II, the French had 11 divisions at the front. Canada had 5 and the United States had 63 in Europe and 26 in the Pacific. Today France has seven divisions. The best of these are in colonial service in French Indochina and north Africa. Since the United States equipped these divisions, American arms are going to hold the French empire. Military leaders discount the Italian Army, such as it is. The Italians failed on both sides in the last war. Under Mussolini and with the Nazis they were not a success. Italian troops who joined in with American forces in the Italian campaign were not effective. The Portuguese Army is regarded as a doubtful quantity by our experts. Portugal did not fight in World War II and was only a nominal ally in World War I. The Dutch Army today is interested in holding together the Dutch Empire. The Belgians claim to have an army corps which would be three divisions. But, only one of these divisions is active. Each division has only one active brigade. The brigades are active with only one regiment, and each regiment is active with one company. The Belgian Army is a house that Jack built in reverse.

So, our military leaders do not expect too much of our allies. They are fully aware that our allies cannot stop the Soviets on the ground or in the air, anymore than you or I could stop an express train with a butterfly net. Military leaders have great doubts that, with all our resources and reserves, we could build up our allies to strength to stop the Soviets on the ground. Their answer is air and psychological warfare. Many top military observers believe that it would be wise not to oppose Soviet occupation of Europe. This would avoid destruction of the Continent. It would draw the Soviets from home bases. It would confront them with underground warfare. Most important of all it would open the eyes of the Red soldiers to a way of life, to freedom and foods, to dignity and comforts beyond their wildest stretch of imagination. How is Stalin going to keep them behind the iron curtain after they've seen Paree?

Military Assistance for North Atlantic Pact Countries

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. McCORMACK. Mr. Speaker, the passage of effective legislation to implement the North Atlantic Pact, to provide military assistance, and understanding, cooperation, and coordination between and among the signatory nations is a matter of vital concern to the world, present and future, as well as to all of the countries comprising the North Atlantic Pact. Such legislation and action on the part of the United States is in the national interest of our country.

Until world conditions change for the better, it might also well be said it is a part of our national defense as well as directly a part of the national defense of each one of the pact members nations.

The main purpose of the North Atlantic Pact, and of the pending military assistance bill, is to meet and stop aggression. While its purpose is purely defensive, its success will be mainly dependent upon the power of the pact nations being developed so that the Soviet Union and its dominated countries, the Soviet Union principally, will recognize the existence of such power and respect it.

While for defensive purposes we cannot overlook the historical meaning of the old saying or maxim "that the best defense is a good offense."

The affirmative policies and actions of our country through ECA, have already shown remarkable results. The conditions in western European countries against aggressive communism are many times better off than they were one and one-half years ago.

The North Atlantic Pact was born out of the pain, suffering and danger of the signatories thereto following a recognition of the world domination designs both ideologically and imperialistically of the Soviet Union and of world communism. The pact has strengthened the excellent work of ECA.

The military assistance bill passed in form substantially as recommended by President Truman will be of unestimable value in carrying out and completing successfully our forward-looking, affirmative foreign policy in Europe and in the Middle East.

Who is there who will say or take the position that if communism took over all of the countries on continental Europe and dominated them and their people, as they would, in a vicious, inhuman manner, that such domination of continental Europe would not be harmful to the national interest of our country and therefore, adverse to the best interest of each individual loyal American?

Of course, these activities cost money, but they are for our own best interests.

Assuming we had done nothing or we cease our active interest in the immediate future, and as a result country after country is taken over in Europe by

the Communists, thereby becoming a probable satellite of the Kremlin, what do you think it might cost us later on?

Another old saying, "An ounce of prevention is worth a pound of cure" might well apply to the present situation.

President Truman has recommended effective military assistance be extended to certain European nations.

Secretary of State Dean Acheson strongly supports this recommendation. Secretary of our Military Establishments, Louis Johnson, also strongly supports this recommendation.

General Bradley and the other members of the Joint Staff strongly recommend the passage of effective legislation. They have all testified, giving strong and powerful reasons in our own best interests why this should be done.

I submit that if any Member of the Congress has a doubt in his or her mind, that the doubt should be resolved on the side of strength of the free nations still existing in Europe and in the Western Hemisphere, and not on the side of weakness.

This is the time when we should vote for greater strength and power. We cannot afford to take a chance.

For we must remember that while the Congress can appropriate, or fail, in whole or in part, to appropriate, that the Congress cannot appropriate time.

I heard a great American, one of the greatest military leaders of all time, recently make that statement.

It made a deep and lasting impression upon me.

There are some Members who do not believe any appropriations should be made for military assistance to the pact members.

I hope they will realize the significance of the world conditions of today, and appreciate the broader issue and struggle involved; that our way of life—all of it—means and stands for to you and this generation, and also to countless generations to come, is probably at stake; that there is a definite and planned challenge directed at us and our civilization, and that we cannot let that challenge to our future and the future of other free nations, and of people who want to be free, to win.

There are other Members who favor such legislation, but who feel that we should only authorize and appropriate enough money now to go until next March, and between next January and next March Congress will be able to survey the results and the picture at that time.

To such of my colleagues, I call attention to the danger of time. Congress cannot appropriate time.

This program is different than the original ERA, when we could take a chance.

The building up of military forces is a continuous problem and matter. We must govern our thoughts by foresight, not hindsight. As I see it, we cannot afford to take a chance.

We should pass legislation that will enable the giving of effective military assistance for the fiscal year, rather than taking a chance and break it up into two parts.

Secretary Dean Acheson, Secretary Louis Johnson, our famed military, naval, and air leaders, those charged with the responsibility of leading our country in the event of another war, have all strongly urged a continuous plan rather than one broken up into two parts.

This is the time for a manifestation of strength, not even partial weakness.

It, in my opinion, will be a great paying investment to the United States, in American lives as well as dollars, if we act immediately and effectively in carrying out the military assistance program now under consideration.

As I see it time is on our side for the time being, but not for too long.

This is the time to act with determination.

The only force the Soviet Union respects is power.

I agree it is unfortunate we must think in such terms, and along such lines, but it is necessary.

We are living in one of the most dangerous periods of the world's known history. We must think and act realistically in the national interest of our own country.

The national interest of our country calls for effective action now.

We cannot afford to wait too long, and take a chance. There is too much at stake.

The effective way for the pact, as stated in an editorial appearing in the New York Times, July 22, to "really to fulfill its purposes and become the great deterrent to aggression which it is, designed to be, the treaty will have to become more than a diplomatic paper instrument," and further "It will have to become a living and functioning reality, ready and able not only to repel aggression, if that dire necessity arises, but to prevent aggression by making the alliance so strong, militarily, politically, and economically that not even the most reckless power will dare to attack it."

It is through the passage of effective military assistance legislation, followed by necessary appropriations, that this will be done.

Minimum-Wage Bill

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. LANHAM. Mr. Speaker, during debate on the Lucas bill, H. R. 5894, under the 5-minute rule, when I offered an amendment that section 13A–4 should be stricken out of the Lucas bill, I stated that the section as written was an invitation to return to sweatshop conditions; because it would permit the J. C. Penney Co. or any other chain store to manufacture goods without paying a minimum wage.

In my colloquy with Mr. LUCAS, I also used the name of Schwob Clothing Co.

As the Chair will recall, at the time this amendment was offered, debate had been limited and each speaker was allotted something less than 2 minutes. It was therefore not possible to make very clear my allusion to the J. C. Penney Co. and the Schwob Clothing Co.

It should be obvious to all that I was simply using these two names as illustrative of what could happen and without meaning in the slightest to suggest that either of these companies would take advantage of the invitation to manufacture their goods under sweatshop conditions.

Both of these organizations have honorable merchandising records and so far as I know have never manufactured their goods under sweatshop conditions. I had no idea at all when I used their names that any such inference would be drawn. I was using them as illustrations only.

I do this to make it clear that I did not intend in any manner to say anything uncomplimentary about either of these large business organizations.

Housing Shortage

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. POTTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper editorial:

COMMENT—AND NO COMMENT

At one time or another the President has had a great deal to say about the housing shortage and about those whom he blames for the inability of veterans and others to get homes at prices they can afford to pay.

On January 7, 1948, Mr. Truman appealed to Congress for action in behalf of the "millions of our youth who live in city slums and country shacks." He demanded that every American family have a decent home within 10 years. Some 8 months later, on September 20, he was blaming the Republicans and the "real estate lobby" for the housing shortage. He said that the lobby controlled the Republicans and that the latter wanted to leave housing under the control of "profiteering big business."

That was rather vigorous comment on Mr. Truman's part.

Between the two dates, however, something else was happening.

On January 9, 1948, 2 days after the President's appeal to Congress, his military aide, Major General Vaughan, was busy in behalf of friends interested in California's Tanforan race track. Some time previously construction work at the track had been stopped after veterans and others protested that the building materials were needed for housing. But on January 9 General Vaughan got in touch with Tighe E. Woods, the President's Housing Expediter, and told him that he wanted "fair treatment" for his friends. Three days later, less than a week after the President's address to Congress, General Vaughan called Mr. Woods to the White House and asked him to "please hurry" action on the race track matter. The next day Mr. Woods issued the long-denied permit to rebuild the track.

On Thursday of this week Mr. Truman was asked what he thought of this business. He replied with emphasis that he had no com-

ment. And he went on to say that nothing which has been brought out in the investigation of General Vaughan's activities had changed his opinion of his aide.

If that was a considered statement on the President's part it is the more disturbing. For if his opinion of General Vaughan, presumably a very favorable opinion, has not been changed by these disclosures, then the President evidently approves of what General Vaughan has been doing. And if the President approves, there is no reason to expect anything better from General Vaughan. This may strike the President as being a situation which does not call for comment. But most people will feel otherwise, and will regret that he has not spoken out against the activities of his aide with a vigor at least equal to that which he employs when denouncing the Republicans and the real-estate lobbyists.

Survey of Last Election

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. ASPINALL. Mr. Speaker, the matter of making surveys of public opinion is a very difficult and highly specialized undertaking. Many of us recall the misleading and unsuccessful program of the Literary Digest of many years ago. More recently, the pollsters misled the people of our country in their attempts to forecast and, perhaps, influence the last general election.

It is admitted, of course, that such programs are of no real worth to our Nation and may become very dangerous in our exercise of the right of franchise. I, personally, am of the opinion that the only value that any preelection voting poll may have is to fill up newspaper space and cause the spread of news items which are more spectacular than they are trustworthy.

Since the fiasco of the pollsters of last preelection days, many surveys have been made to determine how and why people voted as they did—most of which surveys were made for the purpose of finding out why the pollsters went wrong. It is refreshing to find a survey of the last general election which has for its purpose the scientific determination of who went to the polls and who failed to discharge their duties as American citizens. Such a survey has recently been conducted by the University of Michigan and a release of its results were published this last month in one of the papers of my State—Colorado. Believing that Members of Congress and, perhaps, others who did not see the original release may be interested in the findings of the survey, I am pleased to have the article printed under my name in the RECORD:

A DIFFERENT BUT INTERESTING SURVEY ON LAST ELECTION

The survey research center of the University of Michigan has come up with some interesting figures on the 1948 election that will be of value to those who try to analyze political trends.

The center, in a test sampling, reports that it found that 56 percent of labor union members voted for President Truman, 11 percent for Governor Dewey, and 5 percent for Wallace, while 28 percent failed to go to the polls. Nonunion workers on the same jobs gave 37 percent of their votes to Truman, 17 percent to Dewey, and 4 percent for Wallace, while 42 percent stayed home.

THE PARTY DIVIDING LINE

The $3,000 to $4,000 a year income group marked the dividing line between Republicans and Democrats. Within that income range voters were split just about 50–50 between the two parties. Below $3,000 a year a majority of voters were Democratic, while above $4,000 a year a majority were Republican.

MORE OLDER PEOPLE VOTE THAN YOUNG

More voters under 45 years of age are Democrats while above that age a majority are Republicans. However, the older groups returned a higher percentage of ballots. In the 45–54 age group only 25 percent failed to go to the polls. In the 21–34 age group, by contrast, 44 percent did not cast a ballot. In the 35–44 group the percentage of nonvoters was exactly one-third. In the group above 65 nonvoting was higher again, reaching 41 percent. However, that still means that more of the oldsters, infirmities of age notwithstanding, went down to cast their ballots than did those in their twenties or early thirties.

LABOR GROUPS VOTE

The evidence suggests clearly that labor unions were effective in getting out more of their members to vote and getting a large number to support Truman than among nonunion workers in the same classification.

REPUBLICANS DID NOT PERSUADE ENOUGH PEOPLE TO VOTE THEIR TICKET

A number of Republicans are blaming their stay-at-home vote for Dewey's defeat. It is true that more voters, proportionately, stayed home in 1948 than in other recent elections, but it is interesting to note that among men in the white-collar ($5,000 income) 45 to 54 years of age, 90 percent cast ballots in 1948 according to the Michigan survey. That is just about as high a percentage as could be obtained. However, among their wives nearly 40 percent stayed home.

Although the survey figures are not quite complete, they suggest that the business and professional men who constitute the bedrock of Republican strength did go out and vote in 1948 in very high numbers. They did much better than the labor unions who got only 56 percent of their numbers out to cast a ballot for Truman.

But they didn't persuade enough other people to go with them.

CVA Issues Reviewed By Northwest Writer

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. MITCHELL. Mr. Speaker, the Seattle Post-Intelligencer has published a series of four articles on CVA, written by Mr. Stub Nelson of the newspaper's staff. These articles discuss issues involved in pending CVA legislation and I believe they will be of interest to the Members.

CVA—IS IT MENACE OR BLESSING?—SERIES TO INFORM JOHN Q. PUBLIC

(Columbia Valley Administration—menace or blessing? Because of its vital effect on the economy of the State of Washington and the Pacific Northwest, the Post-Intelligencer believes its readers should be fully informed of the provisions of the proposed Federal legislation creating an Administration or Authority for the development of the Columbia River Basin. Stub Nelson, Post-Intelligencer staff writer, was assigned to write a series of objective articles on CVA of which the first is presented herewith.)

(By Stub Nelson)

Establishment of a Columbia Valley Administration would affect all of Washington, nearly all of Oregon and Idaho, the western part of Montana, and small portions of Wyoming, Utah, and Nevada.

Also, the proposal in its present form makes it mandatory that the United States Government cooperate with Canada so that the development of the entire Columbia River watershed in both countries may be synchronized.

It is the most important single piece of legislation in Pacific Northwest history.

After many years in the discussion stage, the proposal finally is headed for a showdown decision. The very serious problem of considering its merit soon must be realistically faced.

ACTION LATER

While CVA hearings are under way currently, no action is expected during the present congressional session.

But it should hit the Senate and House floors after the present Congress reconvenes next January—and it will be a big issue in the 1950 elections.

Democrats will support President Truman's proposal. Republicans—although they, too, favor full-scale Western development—will not accept the CVA merchandise as it is presently packaged.

Statements and resolutions by various organizations and individuals—some for, some against—appear almost daily in the press. Seldom has a plan had more ardent support or violent opposition.

Under the barrage of conflicting presentations, it is only natural that Mr. John Q. Public should be confused.

WHAT IS IT?

What is this thing, he asks—a menace or a blessing?

The bill's sponsors praise it as a vehicle which provides for the coordination by a single agency of the resources-development activities now handled by many Federal agencies operating in the Columbia Valley region.

Proponents say the present divided authority threatens western progress.

On the other hand, opponents blast it as "socialistic and autocratic." It would, they contend, place just about everything in the State under the control of an all-powerful three-man Federal board—and thus encroach on individuals' and States' rights.

The opposition favors continuation of the Columbia River development program by existing Federal agencies—chiefly, the Interior Department's Bureau of Reclamation, the Corps of Army Engineers, and the Bonneville Power Administration.

LONG HISTORY

First, let us delve a bit into CVA history. Party and even intraparty politics constantly have cropped up. There has been talk of a CVA since the birth of the Tennessee Valley Authority.

Spasmodic pushes kept the ball rolling until Hugh B. Mitchell, Democrat, took his place in the Upper Chamber early in 1945 as Washington's junior Senator.

Mitchell's first policy statement after being appointed to the Senate by former Gov.

Mon C. Wallgren was a promise that he would make establishment of a Columbia Valley Authority one of his prime objectives.

In those days it was called an authority, not an administration. Supporters readily agreed to a word change, conceding that "authority" sounded too autocratic.

True to his pledge, MITCHELL promptly introduced a CVA bill in the Seventy-ninth Congress. But it floundered when his own party's majority gave him little assistance.

MITCHELL, with so many Democrats, was snowed under in the GOP landslide in 1946. The measure remained practically dead in the Republican-controlled Eightieth Congress, with Senator GLEN TAYLOR, of Idaho, recalcitrant Democrat who turned Progressive, its lone loud adherent. Naturally, TAYLOR had little power.

The pendulum swung back to the Democratic side in the 1948 elections, and MITCHELL went back to Washington, D. C., as a House Member.

MITCHELL was still CVA-minded on his return to "Capitol Hill," notwithstanding the fact that he represented only the first (Seattle-Kitsap County) district, somewhat removed from the Columbia Valley country.

Quickly, intraparty maneuvers developed on the Democratic side. MITCHELL frankly realized that a partial revision of his 1945 bill was needed.

But before the Seattle Congressman could swing into action, Representative HENRY JACKSON, Everett, of the Second (northwest Washington) District tossed MITCHELL'S old measure back into the congressional hopper.

POLITICAL ANGLES

MITCHELL didn't like this move, particularly in view of JACKSON'S failure to push the CVA cause in the Eightieth Congress when MITCHELL was outside.

JACKSON and MITCHELL both are looking ahead to the 1952 Senate race. Both would dearly love to knock out Republican Senator HARRY P. CAIN. CVA is a State-wide issue, so both want to be in front seats on the CVA bandwagon.

In the interest of party harmony, MITCHELL forgot that JACKSON had jumped the gun and on April 14 of this year, the two Democratic Congressmen collaborated in sponsoring a CVA bill fashioned along the lines of President Truman's proposal—which had been outlined the day previous in his message to Congress.

Further political plays quickly followed. The very next week, Senator CAIN made a surprise introduction of the administration CVA bill in the upper Chamber. This, despite the fact is was common knowledge that Democratic Senator WARREN G. MAGNUSON was ready to offer the legislation.

CAIN DOUBTS

Somewhat miffed, MAGNUSON, in conjunction with a flock of Democratic colleagues, dropped the same bill into the Senate hopper a day later.

CAIN emphasized his doubt about the bill, but said it was worthy of consideration and thorough study because of its aspects.

This undoubtedly will be Republican strategy throughout the CVA battle. Washington is the most vitally affected of all States embraced in the far-reaching proposal and no Senator from this State, Republican or Democratic, can afford to be anti in any western development program. It must be remembered that Republican Congressmen HAL HOLMES and WALT HORAN hail from the heart of the CVA country.

If Republicans shoot at the President's proposal, they must have an alternative ready.

HUGE POWERS, RESPONSIBILITIES GIVEN TO CVA OVER NORTHWEST AREA IN PROPOSED SET-UP

(By Stub Nelson)

Achievement of unified water control and resource development "on the Columbia River, its tributaries and surrounding lands" is the prime objective of the Columbia Valley Administration.

In seven Pacific Northwest States, the proposed single administration designed to take over the function of numerous existing Federal agencies would have broad powers and duties, many of them only remotely related to water resources.

The Columbia Valley region specified in the act includes all of Washington, all of Oregon except the Klamath River and Goose Lake basins in the southern section of that State, nearly all of Idaho, the western part of Montana and smaller parts of Nevada, Utah, and Wyoming.

In short, it covers all Columbia River watershed areas within the United States boundaries.

ALL-IMPORTANT

The two words "surrounding lands" are all-important—because they would place hundreds of thousands living a considerable distance from the Columbia River under CVA jurisdiction.

A declaration of policy in the bill makes it clear the CVA would function throughout the vast area.

In is stated that the "relevant powers and activities of the Federal Government in the Columbia Valley region shall be so organized, directed and administered so as to assist to the greatest possible extent in achieving the full and unified conservation, development, use of water, land, forest, mineral, fish and wildlife, and other natural resources of the region."

Easily the most far-reaching single piece of legislation ever proposed for the Northwest, the act further specifies the administration would be "for the purpose of fostering and protecting commerce among the several states, strengthening the national defense, developing the lands and preserving the property of the United States and promoting the general welfare."

VITAL CENTER

With the CVA sphere of activity planned to extend to its every county, Washington would be the most vitally affected area of all States embraced in the proposal.

Citing specific tasks, the CVA would be authorized in this State to construct, operate, and maintain projects for:

1. The generation, transmission, and disposition of electric energy.
2. The promotion of navigation (except for channel and harbor improvement work in tidal waters tributary to the Pacific Ocean).
3. The control and prevention of floods.
4. The conservation and reclamation of land and land resources.
5. The conservation of forest resources.
6. The conservation of mineral resources.
7. The conservation of fish resources.
8. The conservation of wildlife resources.
9. The development and conservation of recreational resources.
10. The promotion of sanitation and pollution control.

ON PROGRAMS

The CVA also would be authorized to prepare programs for:

1. The most efficient conservation and sustained-yield management to assure: (a) the protection of watersheds; (b) the permanent and increasing usefulness of cultivated lands, grazing lands, and forests; (c) the occupancy and use of flood plains in the region to minimize damage by floods.
2. The conservation and use of the waters of the region in such manner as to reconcile and harmonize the requirements for various purposes, including agriculture and public health.
3. The development and improvement of cultivated, grazing, and forest land by irrigation, drainage, clearing, reforestation, reseeding, or otherwise.
4. The conservation, management, and rehabilitation of birds, fish, and other wildlife through the development, protection, and management of such wildlife and their habitat, and the control of losses from diseases or other causes.
5. Fostering the use of the mineral, forest, land, water, fish, and other resources of the region to assure a balanced and stable economic development.

THREE-MEMBER BOARD

The CVA would be managed by a three-member board, with the salary of each $17,500 a year. Two of the three directors would have to be bona fide residents of the region at the time of their appointment by the President and confirmation by the Senate. Terms would be staggered—for 2, 4, and 6 years. The board would, in turn, name a chief executive director.

The board would be authorized to employ and fix the compensation of all employees without regard to civil-service rules and regulations, but in keeping with provisions of the Veterans' Preference Act of 1944.

It is provided that employees would have rights with respect to security of tenure "comparable to those provided by the civil-service laws and shall be protected to substantially the same extent as persons subject to such laws." But it also is provided that "any employee of the Administration may be removed at the discretion of the board."

The board would be required to submit to the President, for transmission to the Congress, a report covering the activities of the Administration during the preceding fiscal year.

The proposal calls for the transfer to the CVA of the work now carried on by the Department of Interior's Bureau of Reclamation, the Corps of Army Engineers, and the Bonneville Power Administration.

At the present time, dams and appurtenant structures on the Columbia are constructed by the Corps of Engineers or the Bureau of Reclamation. Congress decides, on the basis of studies and reports by these two agencies, what structures shall be built and which agency shall build them.

The Bureau of Reclamation currently builds and operates all irrigation and reclamation projects.

The Bonneville Power Administration markets the electric energy generated by projects built and operated by the other two agencies.

CONTRACT CLAUSE

A CVA fund would be established in the United States Treasury if the proposal is enacted into law. The Secretary of the Treasury would be required to make advances to the CVA fund in such amounts as the administration may deem necessary to meet construction and operating costs, such advances to be repaid over a reasonable period of years.

CVA would not have to turn over all its receipts to the fund in the Treasury—but only the balance after paying costs incurred in connection with such projects and activities for which advances are authorized.

Indication of the broad powers it is planned to grant the Administration is reflected in the bill's section which states it "shall carry out its construction work by contract so far as it is practicable."

This is followed, however, by a proviso which reads:

"That nothing herein shall be construed to prevent the Administration from undertaking construction work directly in case of emergency or unusual circumstance, in cases where no reasonable bids are received from contractors, or where necessary to provide steady employment for maintenance crews."

There are provisions covering relationships with State and local governments and other organizations and persons.

CVA is directed to seek the advice, assistance, and cooperation of local agencies and

to rely upon it "to the fullest practicable extent."

At the same time, the agency is directed to coordinate its activities "with national policies and programs. This could be interpreted to mean that where the views of local agencies are, in the opinion of CVA officials, impracticable of adoption or contrary to national policies, such views are to be disregarded.

A thorough study of the bill leaves little doubt that it is a proposal to create a government corporation following, in a general way, the Tennessee Valley Authority pattern. The chief variations are provisions which tailor it to the needs of the Pacific Northwest—where so many conditions are unlike those existing in the deep South.

CVA BACKERS SAY IT WOULD SPREAD PROJECTS—CROSS PURPOSES OF CONFLICTING AGENCIES NOW EXISTING, TO BE ENDED

(By Stub Nelson)

Charging that a multiplicity of bureaus is a breeding ground for conflict, Columbia Valley Administration adherents claim there now are some 30 Federal agencies working at cross purposes on various phases of the great river's development.

Each agency, the backers of a single over-all controlling administration contend, labors in the vacuum of its own limited authority, with little regard for what the others may be doing on closely related problems.

CVA will mean, they argue, that economic decisions regarding Pacific Northwest development will be made here—not in faraway Washington, D. C.—by men (a three-man board of directors) whose sole responsibility will be the protection and development of the area's resources.

Bickering over projects, jealousies over authority, duplication and delays in planning will be eliminated, CVA supporters predict, with faster development certain to result under single and unified administration.

BEHIND SCHEDULE

Describing the present Federal Government program as piece-meal and uncoordinated, CVA champions argue that the proposed construction schedule of the Columbia Valley region dams is years behind schedule.

Interagency confusion is cited as the prime cause of what they term is the snail-like progress on McNary Dam, linking Washington and Oregon on the Columbia below Pasco. It is the CVA group's claim that construction on the dam already is 2 years behind the goal originally set for its power production.

Chief Joseph Dam, to be built on the Columbia in north central Washington, and Ice Harbor Dam on the Snake River in eastern Washington are among other lagging projects, assert CVA sponsors.

In view of the Pacific Northwest's present power shortage, these construction delays are held to be appalling—"because the Columbia and its tributaries have 42 percent of the Nation's hydroelectric energy potential, only one-eighth of which is developed."

FLOOD USE CITED

"For years a dam has been needed at Hell's Canyon," the League for CVA reports. "Had it been built by 1948, it unquestionably would have held back a major portion of last year's Columbia River floodwaters and provided many kilowatts.

"Yet the project has been stalled by a bitter struggle between the Bureau of Reclamation and the Army engineers to see which agency would build the dam. Each drew up separate dam-site plans. Each survey cost $250,000—a needless waste of money."

The fact that 22 dams have been built on the Tennessee River under the Tennessee Valley Authority is telling proof, the CVA people declare, that "things really are accomplished under the single-agency plan."

The CVA proposes a Government corporation, similar in its general pattern to TVA.

It is the sponsors' contention, however, that the CVA is not as all-embracing as the TVA and that the CVA is tailored specifically to suit the particular situation in the Columbia Valley region, which differs in many respects from the Tennessee Valley.

COORDINATION

Answering charges that CVA would create an all-powerful socialistic superstate dominating the economy of the entire region, its advocates stoutly insist that it merely provides for coordination by a single agency of the resources development activities now undertaken by many bureaus.

"The CVA legislation definitely does not add any functions not now authorized by Congress and not now exercised by Federal agencies," says Congressman HUGH B. MITCHELL, Democrat, of Washington, whose name is on the bill to carry out President Truman's CVA proposal. "It is a reorganization act."

The CVA will not take over "lock, stock, and barrel" all the resources functions of the present agencies, MITCHELL continues.

Conceding that it calls for the transfer to CVA control of the Reclamation Bureau, the Army Corps of Engineers, and the Bonneville Power Administration, MITCHELL asserts it will cooperate with, rather than usurp the duties of the Forest, Soil Conservation, the national parks, Fish and Wildlife Services and the Bureau of Mines.

ON LOCAL RIGHTS

On the violently-argued question that the CVA would wash out State and local rights, MITCHELL asserts:

"The bill specifically directs the administration to arrange for consultation and interchange of views with appropriate representatives of State and local government units, agriculture, labor, and business interests, as well as the general public.

"Establishment of advisory councils is mandatory. These councils may make their own reports on the operation of the CVA, which must be included in the annual reports of the administration to the Congress and the President."

Rightfully, Mr. John Q. Public has expressed grave concern over the loss of revenues which would result if CVA is enacted into law and starts a wholesale acquisition of property—something it would have the power to do.

Assurance is given by its sponsor that the bill provides for payments in lieu of taxes and that other payments may be made to State or local governments to defray expenses of any special requirements for services resulting from the administration's activities.

RIGHTS PROTECTED

Existing water rights would be protected, it is further stated, and future rights would be acquired in accordance with the provisions of State laws and the Reclamation Act of 1902.

Missing no bets in their advocacy of CVA, its boosters warn of what happened in the past and what may transpire in the future. They emphasize the vividly remembered Columbia River floods of last year and the possibility of another depression.

In 1948 the rampaging Columbia and its tributaries created unparalleled havoc taking at least 50 lives and destroying thousands of homes, farms, and orchards. Losses amounted to many millions of dollars.

Most spectacular river tragedy was the complete destruction of war-born Vanport, Oreg.

Such a flood could surge again, and CVA adherents assert the various Federal agencies—working separately and unable to proceed on an over-all program—have made little headway on flood control since the high waters of 1948 receded. The solution, they add, can be found only under the administration of a single agency with broad powers.

ON DEPRESSION

The seasonal character of most Pacific Northwest industries—lumber, canning, and fishing—would make this region particularly vulnerable if depression once again rears its ugly head, it is argued.

Quickly and urgently needed, the CVA people continue, is additional hydroelectric energy to serve year-round manufacturing industries desirous of locating here. Otherwise, they warn, progress will stop and breadlines will move.

CVA supporters concede a considerable amount of discretion would be vested in the three-member board of directors and that there is no money-back guaranty that any human institution will operate exactly as anticipated.

But they believe CVA would begin operations under carefully drawn legislation spelling out its powers and limitations, and that the history of TVA, a similar Government corporation, points toward success.

CVA FOES CHARGE IT WOULD CREATE THIRD GOVERNMENT BESIDES STATE, UNITED STATES

(By Stub Nelson)

Unhobbled bureaucratic powers clearly written into Columbia Valley Administration legislation would give its directors free rein to build a political machine of almost limitless scope, opponents of the proposed Federal unifying agency claim.

Once it gets rolling, the antis predict, the single coordinating authority could, in addition to establishing a planned state and economy for the entire Pacific Northwest, open the door for a regional WPA with fewer shackles than the great New Deal national experiment of the 1930 depression days.

Here is one of the bill's provisions alarming many people:

"The administration shall carry out its construction work by contract so far as practicable: Providing, that nothing herein shall be construed to prevent the administration from undertaking construction work directly in case of emergency or unusual circumstance, in cases where no reasonable bids are received from contractors, or where necessary to provide steady employment for maintenance crews."

LITTLE WPA

There, in plain English, opponents assert, would be the authority for a "little WPA."

CVA adherents seldom refer to that proviso in boosting their proposal. They do, however, picture CVA as a bulwark against future unemployment.

Quoting directly from the bill's language, CVA opponents express the conviction that it would not be restricted to developing the Columbia Valley region, nor to a mere reorganization of existing Federal agencies operating in the area.

It is their contention that the broad CVA proposal empowers an extension of its authority to unrelated economic, industrial, social, and cultural activities—not only adjacent to the river basin, but to all of Washington State and a large part of the entire Pacific Northwest.

Fears are voiced—and understandingly so because of many general provisions in the bill—that CVA would be insulated alike from the direct controls of Congress and the people.

LINES DRAWN

Throughout the Northwest, party lines are clearly drawn in the raging CVA arguments. Opposing Democratic standard bearers who are pitching strongly for the single agency plan, are Republican leaders, with Gov. Arthur B. Langlie out in front.

At recent congressional hearings, Governor Langlie was joined by GOP chief executives

of adjoining States, Gov. Douglas McKay, Oregon, and Gov. C. A. Robins, Idaho, in spearheading opposition to CVA.

"In substance and essence, the (CVA) proposal is for a violent and unprecedented departure from the dual Federal-State form of government contemplated by the Constitution, and treasured by the people," declared Langlie.

The CVA, Langlie asserts, would impose a dangerous third form of government on the people.

A glaringly untenable position of the CVA champions, opponents insist, is their present cry that many, existing Federal bureaus operating in the Columbia River sphere, have been unable to do the development job, and that a unifying agency suddenly is the only solution.

GET GREEN LIGHT

These many bureaus, constantly encouraged and expanded, have been given the green light for 16 long years, opponents point out, by a friendly Democratic administration—encouragement which has been topped with frequent praise, they add.

Under CVA, functions now performed by three important development units—the Reclamation Bureau, the Army Corps of Engineers, and the Bonneville Power Administration—would be transferred to CVA.

"Why is it necessary to change this general arrangement?" asks Langlie. "We have heard some vague generalities that the present setup is cumbersome and inefficient; that functions of one agency overlap and duplicate the other. But we have never seen a bill of particulars, a detailed specification, of these alleged defects.

"We know the present agencies performed magnificently during the stress of war. Why is it necessary to junk an arrangement which has worked so well, and launch out on this new experiment?

"On the other hand, if there is some need of unifying Federal functions pertaining to the Columbia, why it is not sufficient to spell out, in precise terms, functions and responsibilities of each such Federal agency—and stop there?"

NOT NECESSARY

Carrying the unification discussion further, opponents assert that if an authority is necessary to coordinate agencies working on Columbia River development, legislation might as well be passed to combine the Departments of Agriculture and Interior, and even others.

The logical solution, they argue, would be firm congressional insistence on cooperation, something that body can demand, because it doles out funds.

"All of us favor full development and utilization of our natural resources," says Langlie. "Perhaps in the past the State governments have not taken the leadership in these matters which is theirs as a matter of right and duty.

"If so, it is up to us to provide effective, intelligent, constructive leadership now, so that these functions of government will not, like so many others have in the past, pass by default into the ever-ready grasp of Federal bureaucracy."

Grave concern frequently is expressed over the potential danger of permitting such broad leeway as the proposed CVA bill's general provisions seemingly grant.

MANY WONDER

Many people who are not violently partisan in the CVA debate, wonder if it isn't an experimental hybrid which easily could grow into something its sponsors do not envision.

These on-the-fencers are asking whether it would be an agency:

1. With Federal powers, but without customary Federal controls.

2. With the flexibility and freedom of private business, but without the restrictions which Government and competition place on business.

3. With almost carté blanché authority, but subject only to the most general specifications of the act.

4. With discretionary powers to take or leave the recommendations and views of elected State and local government officials, and deal directly with individuals and organizations of its own choosing.

A casual reading of the bill leaves little doubt that such industries as farming, cattle raising, forestry, mining, and fishing could be affected by CVA planning. Even recreation, pretty far removed from Columbia River problems, would be touched by CVA jurisdiction.

Fundamental functions of State government also would be subject to CVA programing, the bill indicates.

LANGLIE ASKS

Explaining that he is propounding searching inquiries as to what CVA would or would not do, in the hope that the general public will become increasingly conscious of the all-important issue, Governor Langlie also asks:

"What would be left of State and local government when such an agency gets into full swing? Is it not plain that the great State of Washington would revert to almost territorial status, with all important government functions supervised by Federal officials?

"What would we do with the State departments of agriculture, conservation and development, fisheries, game, and health when CVA gets rolling? What State function would be next on the list—would it be our department of highways or our department of education?"

Among other doubts about the proposal voiced by CVA opponents are:

1. Whether vested water rights would be fully protected.

2. Whether CVA powers are so limited and circumscribed that the agency would keep its hands off the local electric-distributing systems, public and private.

The door is open, the opposition insists, to permit CVA to dictate, through threat and propaganda, when and where public power would replace private power, a decision, they add, which obviously ought to rest with the people in the affected area, without Federal interference.

Pros and cons of the controversial CVA issue—a proposal almost breath-taking in scope—are well worth the serious study of Mr. John Q. Public throughout the Northwest. And everywhere, for that matter.

After all, it should be remembered there are rumblings about proposals to divide the Nation into 16 regions along a CVA pattern.

J. Wilmer Morris

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. MILLER of California. Mr. Speaker, few men go through life without being tainted with selfishness. It renews one's faith in people to come in contact with the all too infrequent man who enjoys that reputation. Such a man is J. Wilmer Morris of Washington.

Mr. Morris has won success in business, but he has been more successful in the field of human relations and in winning friends. Bill Morris has a heart as big as himself. He is always doing nice things for people and people to Bill exist without rank or distinction as to class. Bill never wants to be repaid for his kindnesses directly or indirectly. His is a full life.

During the war Bill entertained, at his own expense, wounded and disabled men at his pleasant retreat in Mayo. He brought these boys down in busloads to give them a day of relaxation and let them enjoy his wonderful hospitality.

Last Friday a group of Bill's friends from the Hill helped him celebrate his birthday at an informal dinner in the Speaker's dining room. This is the first time, as far as I know, that a non-Member of Congress has been entertained as the guest of honor in that dining room.

Under leave to extend my remarks, I wish to insert at this point the following clipping from the Washington Post under date of Saturday, August 13, 1949:

HOUSE DISTRICT OF COLUMBIA UNIT TURNS TABLES, FETES MORRIS AT LUNCHEON

House District Committee members yesterday played host at a Capital luncheon to J. Wilmer Morris, Washington seafood broker.

The lunch was planned to celebrate Morris' sixty-second birthday and to reverse the more frequent roles in which Morris is host and members of the District Committee are his luncheon guests.

Yesterday's celebration was arranged by William N. McLeod, Jr., clerk of the House District Committee.

McLeod explained that Morris frequently plays host to District Committee members and others at luncheons aboard his boat, the *Canvasback*, anchored off Maine Avenue SW.

With McLeod and Morris at the luncheon in the Speaker's Dining Room at the Capitol were three Senators: Styles Bridges, Republican, of New Hampshire; Guy Cordon, Republican, of Oregon; and Kenneth Wherry, Republican, of Nebraska.

House District Committee members who attended included Chairman John L. McMillan, Democrat, of South Carolina; Thomas G. Abernethy, Democrat, of Mississippi; Oren Harris, Democrat, of Arkansas; Olin E. Teague, Democrat, of Texas; George P. Miller, Democrat, of California; Paul C. Jones, Democrat, of Missouri; George J. Bates, Republican, of Massachusetts; J. Glenn Beall, Republican, of Maryland Joseph P. O'Hara, Republican, of Minnesota; Henry O. Talle, Republican, of Iowa; A. L. Miller, Republican, of Nebraska; and John J. Allen, Jr., Republican, of California.

Other guests included Representatives E. Edward Hébert, Democrat, of Louisiana; Lansdale G. Sasscer, Democrat, of Maryland; Dewey Short, Republican, of Missouri; Karl Stefan, Republican, of Nebraska; and Inspector Clarence Talley, acting Metropolitan Police Superintendent.

The Spots on the German Leopard Will Not Change

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. KLEIN. Mr. Speaker, the people who think that generous hand-outs of Marshall-plan money and patting the Germans on the head will change the spots on the German leopard received

a salutary jolt in the campaign preceding the colorless German general elections Sunday.

The fact is that the German nation suffers from some mass hallucination—you will remember that Dr. Bricker attempted to explain the group hypnosis in terms of mass paranoia—which prevents their being able to take a place in the family of nations on any basis except that of confirmed delinquency.

The shock of reality is reflected vividly in an editorial from the Washington Daily News of Monday, August 15, a newspaper not celebrated for its liberal editorial policy since the resignation of Lowell Mellett as editor a decade ago, and which I insert in the RECORD under consent:

THEY'RE STILL GERMANS

Some American observers have expressed their dismay at the extreme nationalism and the bitter attacks upon the occupational authorities which characterized western Germany's first postwar parliamentary campaign.

Radical rightists even revived Nazi songs and "Deutschland Uber Alles," the imperial anthem, and heiled Hitler with a fervor reminiscent of the Munich period.

"Not a single party had a good word for all of the positive work the western Allies have accomplished during the past 4 years," one military government official lamented.

What else did he expect? These political parties were bidding for the votes of people who had been steeped in German nationalism for generations. These same people went all out for Adolf Hitler only 10 years ago. They have accepted our food, to be sure, because without it many of them would have starved. But to most of them this must have been a humiliating experience, for the Germans are, after all, Germans.

Given guns, in all probability, they would prove to be the same Germans the world has known since Frederick the Great and his legions began to prey upon their weaker neighbors.

The peace-loving nations must see to it that the Germans do not get guns until there has been convincing proof of their country's complete regeneration. The fact that we are confronted by a more immediate and pressing Russian problem must not blind us to the fact that Germany, too, could again become a threat to peace. Indeed, the greatest menace that could be imagined would be a German-Russian partnership. Its prevention should be the cornerstone of our European policy.

Labor Extension Service

EXTENSION OF REMARKS
OF
HON. JOHN R. WALSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. WALSH. Mr. Speaker, on August 3, 1949, I received a letter from Carroll Hutton, of Anderson, Ind., who is president of the United Automobile Workers of America, Local 662, of that city. Mr. Hutton's letter was written urging me to support H. R. 1380, a bill creating a labor extension service.

I urge the membership of this House to read Mr. Hutton's letter as it is a clear example of present-day thinking of the leaders of organized labor, especially those at the plant level. Mr. Hutton's letter shows clear thinking and presents a strong argument for the enactment of this bill.

I am proud, Mr. Speaker, that we have men in America who take active part in labor affairs, and who desire to receive additional education and training so that they can do better jobs. Many of the opponents of organized labor try to point out that the leaders in many instances are un-American and uneducated, and not qualified to represent their members, and this letter from Mr. Hutton refutes these persons.

I herein insert the letter from Mr. Hutton into the RECORD:

UNITED AUTOMOBILE, AIRCRAFT, AGRICULTURAL IMPLEMENT WORKERS OF AMERICA (UAW-CIO),
Anderson, Ind., August 3, 1949.

Hon. JOHN R. WALSH,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN WALSH: The members of our organization, Local 662 of the United Auto Workers, CIO, urge you to work for the enactment of H. R. 1380 creating a Labor Extension Service.

As you know we are a local union of several thousand members who work in an automobile plant for our livelihood. We elect people from our own membership to represent us at the bargaining table and to argue our grievances with management. At the bargaining table our representatives come face to face with management's hired representatives who are highly trained technical specialists in their field, most of them with a number of years of college or university education.

We often find ourselves handicapped in trying to reach a settlement with management, on the local level in disputes involving such technical subjects as time and motion study. Too often we suffer from a lack of facts and information at the local shop level which the management representatives have at their fingertips to be used in a one-sided way. This situation results in long, unnecessary delays until we can obtain similar information or call in our already overworked international representatives who are better equipped than we to handle such cases. Such delays and lingering unsettled grievances result in prolonged ill feelings which at times grow to such proportions that it is impossible to maintain industrial peace and harmonious relations with management.

We feel that this situation of delayed settlement is in such cases unnecessary since it is largely the result of a great inequality between management and worker in the matter of facts, information, and specialized training.

This situation, we feel, could be largely remedied if we men and women and our elected representatives at the local plant level had available to us the training facilities, information and facts which would in part measure up to those available to local plant managements and their college trained representatives. Such facilities, we believe, are provided for in a Labor Extension Service as would be set up under H. R. 1380.

You need not have the least doubt about the willingness of our people to make use of such facilities, since our local union has repeatedly made numerous efforts on its own initiative and with our own comparatively meager resources to correct our lack of information and training.

At every opportunity our local union sends men and women to take a week's training at schools and training institutes conducted by our national organization. Much as we desire to do more, we are never able to send more than four or five students to these schools, usually conducted at Indiana University once a year.

We have established a local library, in cooperation with the public library, for use by our members and their families. In cooperation with the public schools we have conducted literacy classes to help a few of our members who lack a fundamental education. We conduct training schools in collective bargaining in our own local hall several times a year with national officials of the United Auto Workers as instructors. We have hired a full-time education director who regularly arranges classes in collective bargaining procedures, community relations problems, American Government and civic problems, public speaking, and numerous other topics which will aid our membership in conducting the affairs of our organization which has one of the largest memberships of any civic group in our community.

We are proud of our educational program and feel that we are making a maximum effort with our limited resources, yet we are ever conscious of the fact that so much more could be done educationally if we are to meet management on equal terms across the bargaining table. We realize that it is through such efforts that we can minimize friction and disruption in industrial relations and we would greatly welcome the facilities which would be made available to us through a Labor Extension Service as proposed in H. R. 1380. Congressman, we urge you to do all in your power to secure the passage of H. R. 1380.

Sincerely yours,
CARROLL M. HUTTON,
President, Local 662, UAW-CIO.

The Great Swindle: How the Grave Diggers Operate

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which will appear in the magazine, Prevent World War III, issue No. 31, published by the Society for the Prevention of World War III, 515 Madison Avenue, New York City.

I feel that this information should be brought to the attention of the American people, as it deals with the intrigues of the key officials of the United States Steel Corp., and their efforts to discredit and undermine the German reparations program. The article follows:

THE GREAT SWINDLE: HOW THE GRAVEDIGGERS OPERATE

Underlying the Allied reparations policy in Germany is a callous cynicism which can hardly square with the great sacrifices made by the young men and women of this country and our Allies during the late war. It finds its roots in the business-as-usual forces who are ready to grasp the blood-stained hands of the Germans again. Toward this end, every means is justified by the proponents of a Germany-first policy.

In his novel, Penguin Island, the great French writer, Anatole France, discusses the mysterious ways of justice in the mythical land of Penguinia. The characters involved are Pyrot, member of the Penguinian army; the minister of war, Graytauk; and General

Panther, chief of staff. Graytauk had a pathological hatred for Pyrot, and when 80,000 trusses of hay intended for the cavalry disappeared, Graytauk exclaimed: "It must be Pyrot who has stolen them. The more I think of it the more I am convinced that Pyrot has stolen those 80,000 trusses of hay, and I know it by this: He stole them in order that he might sell them to our bitter enemy, the Porpoises. What an infinite piece of treachery."

General Panther replied: "There is no doubt about it—it only remains to be proven." They were unsuccessful in finding the evidence, and General Panther bemoaned the fact that Pyrot persisted in professing innocence. This exasperated Graytauk, and he shouted: "Panther, the confessions of a guilty man sometime result from the vehemence of his denials. To deny desperately is to confess. Pyrot has confessed; we must have witnesses to his confession—justice requires them."

The Graytauks are not legendary. We have them in our own midst. All one has to do is to read the four reports on reparations sponsored by the ECA and the Department of the Army to see how neat a job was done to convict the original reparations program before the evidence was in. The background of the men who wrote these reports could be regarded as sufficient proof that reparations would be victimized as was Anatole France's Pyrot.

The earliest report was prepared by Mr. George Wolf of the United States Steel Corporation. Recently, Drew Pearson stated that: "the United States Steel and other big American steel companies were playing hand in glove with the European steel cartel, including the Nazis, prior to the war." Mr. Pearson's information can easily be confirmed by consulting numerous Government reports on the cartel activities of certain powerful interests in this country during the war.

Among the United States Steel officials who helped Mr. Wolf in this important project were Werner P. Naumann, Ian F. L. Elliott, and Ronald Clark. According to Mr. Pearson, their full background is contained in the "files of the Justice Department regarding United States Steel's secret conversations with the Nazis prior to the war." These were the gentlemen who were given the mission by General Draper to find out how quickly Germany could be put back on her feet.

Speaking of cynicism, Mr. Benjamin Fairless, president of United States Steel, wrote former Secretary of the Army Draper on June 2 that the United States Steel officials who were designated for the job should be reimbursed "for whatever may be our out-of-pocket expenses in this matter." It appears that Mr. Fairless & Co. were doing the Government a favor. Nothing could be further from the truth. As a matter of fact, it makes more sense the other way around.

The Wolf report of September 1948 is a very elaborate document which can be summed up by its attitude toward the German steel cartel: Integration of the German steel industry when not carried to excess is a basis for maximum efficiency and low cost, while disintegration (decartelization) is exactly that which the word connotes.

Mr. Wolf and his party traveled throughout the Ruhr consulting with such stalwarts of free enterprise as Heinrich Dinkelbach, Dr. Walter Rohland, and other bigwigs of the German Steel Trust. They were anxious to obtain the views of these German experts who very graciously supplied them with data for the preparation of the report.

Mr. Wolf's report, however, was kept under lock and key for many months, but it became the bible of subsequent investigations by Mr. Wolf and his associates, the Humphrey committee, and a group of engineering firms who were supposed to deal with the technical aspects of reparations.

When one compares the later reports with the original made by Mr. Wolf, one wonders why it was necessary for the Humphrey committee and the other groups to have left Washington. Just why it was necessary for subsequent investigating committees to spend a few weeks in Germany surveying the situation, while all the time they had the Wolf report at their disposal, is a mystery unsolved. As a matter of fact, the members of the Humphrey committee boasted that it was fortunate to obtain the assistance of Mr. George Wolf and his group of associates. Again we ask why did the Humphrey committee leave Washington at taxpayers' expense when they had such an able assistant as Mr. Wolf at their beck and call?

The Humphrey committee, consisting of men whose businesses have very close financial ties with German industry, was told to conduct studies relative to the practicability of retaining in Germany equipment scheduled for reparations for the purpose of aiding European recovery.

In a letter to Mr. Paul Hoffman on January 12, 1949, the committee declared that after its careful study and consideration of the Wolf report and that of the industrial engineers, we are satisfied that their recommendations as to plants to be retained or released were carefully prepared and can be relied upon. In other words, the Humphrey committee, did not make an independent investigation but merely rubber-stamped the findings of other investigating committees.

The Humphrey committee's so-called objectivity can best be gaged by the following statement: "The problem of the effect upon the German people of the incongruity of dismantling and removing equipment at the same time that we are trying to promote their industrial recovery was kept primarily in mind."

Does this sound as though these men came to Germany free of prejudice? Certainly the terms of reference which were supposed to have guided their mission did not mention the attitude of the German people regarding reparations. In another part, the committee states: "We had prominently in mind that those plants, which can contribute not only to the internal German economy but to supply the exports which they must have and which the German people have been proficient in developing in the past, should be retained." Does this sound as though these men had no preconceived plans as to how they would regard the reparations program?

The members of the committee admitted that theirs was primarily a business approach to the problem of reparations. These gentlemen should have been told that more than business is involved. The State Department, in December 1945, explicitly declared that it was necessary to impose a severe reparation obligation on Germany in order to weaken effectively the economic base from which war industry can be derived and to provide material assistance to UN countries which have suffered from Nazi aggression and which now face tasks of rehabilitation and reconstruction from the damage of war.

One of the reports upon which the Humphrey committee based its own findings was that prepared by a group of industrial engineering firms among which was the F. H. McGraw Co.

The gentleman who signed the report for McGraw & Co. was Mr. Clifford S. Strike, its president. Mr. Strike, in early 1947, wrote an article for the American Magazine, in which he denounced the whole program of reparations. Could such a man be depended upon to scientifically appraise the reparations program?

The answer is made plain from the report issued by these engineers. In one passage, they declared, "In the chemical field, western Germany has always shown unusual resourcefulness which in the interest of world progress should not be suppressed." Were these scientific experts referring to I. G. Farben and its gas chambers perchance?

They admitted that time did not permit them "to make a comprehensive study of the economy of western Europe"; yet, in the same breath, they declared: "We believe that the plants recommended for retention will contribute more to the recovery of western Europe if left where they are than they would be if moved." Now this is supposed to be a scientific conclusion, but how did they know that these plants, if retained in Germany, would help in the recovery of western Europe when they admit that they made no study whatsoever of the western European economy? All of this goes down as the scientific approach.

The second Wolf report was merely a rehash of the original. Together with the other reports mentioned, the theme song played up the old line that Germany's economic machine is the key to European recovery and that by scrapping reparations the German economy will be able to produce for all of Europe. The Pan-Germans and pro-Nazis in the United States say so every day.

When Hitler's Panzer divisions were running roughshod over Europe a book was published in England entitled "The Greatest Swindle in the World." The book dealt with the German reparations story after World War I and showed how through cunning and duplicity the Germans duped the Allied Powers so that when the final count was taken Germany had received three times as much from abroad as she had given in reparations. This book contains a preface by Lord Vansittart, who warned of past follies, and urged the Allies to avoid the pitfalls which would give new life to Germany's war potential. That warning has not been heeded, and for this the people are becoming the pawns of a greater swindle.

The Germans, in their repeat performance of cunning and duplicity, have found valuable and powerful accomplices in the United States.

The New Look of the Constitution

EXTENSION OF REMARKS
OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. DAVIS of Georgia. Mr. Speaker, at the annual meeting of the Virginia State Bar Association, which was held in White Sulphur Springs, W. Va., on July 29, 1949, the principal address was delivered by Donald R. Richberg.

Mr. Richberg formerly held an important position in the Federal Government. He is a lawyer of recognized ability, of such ability in fact, that his views regarding the Constitution deserve more than ordinary attention.

I read his address to the Virginia Bar Association with great appreciation. It is a timely address, and deals in statesmanlike fashion with current problems which face the American people.

In my opinion, not only the lawyers, but the laymen also, will find this address to be of great interest, and under leave previously granted, I insert it herewith:

Long, long ago, when the sages of today were sweet 16, there was a Constitution of

the United States which looked like the spirit of 1776. Today that Constitution has a new look. In fact, to many it has the look of the beckoning spirit of national socialism.

What has happened to the dear, old Constitution? Have the gland treatments, the face lifting, and face saving of big and little politicians actually endowed it with new vigor, or have they merely sapped its mature vitality in trying to make it over in the image of headstrong youth?

For the moment it appears that even Communists are impressed by this appearance of rejuvenation. They may be half-sincere in asserting that it is no longer necessary to overthrow our Government in order to establish their slave Utopia. All they need to do, apparently, is to take over the Government, whose stumbling advances into socialism are, step by step, being sanctified by Congress and courts as within the constitutional objectives of the National Government.

The impediments to tyrannical authority, created by a division of powers between the executive, legislative, and judicial branches, have been gradually destroyed by creating commissions in which laws are made, interpreted, and executed by one body of men. It will soon be only a short step to the designation of the President as Lord High Commissioner of the General Welfare, invested with authority to regulate the business, the agriculture, and the labor of the Nation, and to establish economic security—and slavery—from the cradle to the grave.

We made a tentative step in this direction in the late, never-to-be-forgotten NRA, with which I had some experience. But neither the Congress nor the Supreme Court had been sufficiently liberalized in 1935 to approve this noble experiment. The Congress knocked it down; and the Supreme Court sat upon it so heavily that it suddenly expired. Nevertheless, the subsequent validation of the Agricultural Acts, the Wagner Act, the Wages and Hours Act, the Price Control Acts, the Social Security Acts, and other socializing laws indicates that the destruction of the NRA was only a stumble in the onward march of paternalism.

With constitutional barriers laid low we may now go forward to establish enough national commissions to regulate all our economic and social activities. Eventually, with farmers, businessmen, and workers, and their political leaders, all completely dependent upon the Federal Government for a livelihood, the President and his Cabinet, as a politburo, should be able to lay down the party line and have it followed by all who prefer economic security to liberty—which is currently assumed to be a vast majority of the people.

But, what of the guaranties of individual liberty which are written in the National Constitution? Will they not stop the march of regimentation and prevent the enforcement of laws that compel individuals to live and work under the direction of an all-powerful National Government? Many years ago the Supreme Court laid down the law in this clear language:

"The liberty mentioned in that amendment (the fourteenth) means not only the right of the citizen to be free from the mere physical restraint of his person, as by incarceration, but the term is deemed to embrace the right of the citizen to be free in the enjoyment of all his faculties; to be free to use them in all lawful ways; to live and work where he will; to earn his livelihood by any lawful calling; to pursue any livelihood or avocation, and for that purpose to enter into all contracts which may be proper, necessary and essential to his carrying out to a successful conclusion the purposes above mentioned" (*Allegeyer* v. *Louisiana*, 165 U. S. 578).

Is that the law today? Ask the farmers, the businessmen, the workers, unionized or independent. Do they enjoy such liberty, or are they working under a multitude of restrictions enforced directly or indirectly by the National Government? Ask them what percentage of their earnings are taken by the National Government, and spent for them as a father might take and spend the earnings of his immature children.

It is true that the Supreme Court has recently reasserted in strong language the rights of free speech, freedom of the press, freedom of assembly, freedom from police oppression and unfair trials for crime. The constitutional liberties of the actual, or probable, or prospective enemies of society, criminals, revolutionaries, and fanatics, are still jealously, even tenderly, protected. No one but a Communist (with his tongue in his cheek) could deny that our Constitution still provides a stout shield for every wrongdoer.

Every criminal can have his day in court; and if he engages in profitable crime it is a long, long day. Gangsters may slay and torture; but even the most notorious must be handled with kid gloves by a policeman. Thieves and spies and crooked gamblers may misuse the telephone; but policemen may not intrude on the privacy of their conversations. Communists may picket courts and seek to intimidate juries; but policemen must not interfere with their free speech. Massed armies of pickets may terrorize workers, destroy business and beat up men who want to work; but the National Government must not interfere, unless citizens outraged by lawlessness take the law into their own hands. Then there is a great clamor for the National Government to move in to make sure that the constitutional rights of the original lawbreakers are protected.

Please do not misunderstand me. I believe that the constitutional rights of every man accused of crime should be protected. I believe that officers of the law first of all should be compelled to obey the law. But, I do detest the political hypocrisy that proclaims that murders and organized crime by gangsters and labor gorillas in northern cities must be dealt with by local police, because a Federal law would be unconstitutional; and in the next breath demand the passage of a Federal law to curb the comparatively rare outbreaks of lawlessness in the South.

There is another new look of the Constitution affecting civil liberties which I deplore; and that is the tendency to subordinate the civil liberties of a majority of the people to special privileges which are granted to a politically strong minority. Every lawyer knows that the Constitution does not grant a single right to any minority of persons. It only grants rights to individuals; and every liberty guaranteed is the liberty of an individual. And so it follows that your right and mine must be exactly the same. Yet, we hear solemnly proposed, and endorsed by political party platforms, a Federal law to compel businessmen to employ workers whom they do not want to employ and to compel workers to work with men with whom they do not want to work. This is called in unconscious irony a "Fair Employment Practice Act."

The announced purpose of such a law is to protect the alleged civil right of persons to employment which might be denied to them because of race, color, or religion. There is not one word in the Constitution establishing any such right. And so the drafters of the Federal bill thoughtfully wrote in a provision by which Congress would undertake to establish this nondiscrimination in private employment as a civil right. However, there is not one word in the Constitution giving the Congress power to create such a new civil right. On the contrary the tenth amendment provides that—

"The powers not delegated to the United States by the Constitution are reserved to the States respectively, or to the people."

And, most decisively, the ninth amendment provides that—

"The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people."

There is no more elementary right of any free people than "freedom of association." There is a fragment of this right specifically preserved in "the right of the people peaceably to assemble," which is protected by the first amendment. But, the over-all freedom of association in work or play is clearly a right retained by the people of the United States. This is an individual right which not only protects voluntary association but also must forbid any compulsion to associate. Otherwise it would be meaningless. If I could force my companionship on you, then I could destroy your freedom. You and I must have equal rights to accept or to refuse association with each other.

FEPC legislation, which would compel one man to employ another whom he does not wish to employ, also violates the constitutional liberty of contract to a degree never before attempted. Laws have been enacted making certain contracts illegal, or controlling the form or substance of contracts. But, so far as I am aware, this is the first instance of an attempt to compel a man by law to make a contract with a person with whom he does not wish to make a contract.

Indeed, a contract under which an employer would be forced to serve an unwanted employee so closely resembles a contract under which an employee would be forced to serve an unwanted employer, that involuntary servitude appears to be the result in both cases. Even labor laws, which require bargaining and affect the scope of contracts, do not compel a man to make a contract. But FEPC laws, making it an offense to refuse to hire an applicant because you don't like him, would cut the heart out of liberty to contract. If such a law be held constitutional then where is the constitutional barrier to complete political control of labor?

Organized labor may in time learn this lesson, as it learns so many lessons—too late. Labor fought successfully for years to stop discrimination by employers against union members. But, when recently laws were passed to forbid a closed-shop discrimination in favor of union members, the unions appealed in vain to the Supreme Court to declare such laws unconstitutional. So, if tomorrow it should be held that an employer has no right to exercise his free will in selecting his employees, then day after tomorrow it may be held that the employee has no free will to select his employer. Would this be involuntary servitude? Apparently not, if the Supreme Court should approve the present arguments of the FEPC advocates, because in a law forbidding discrimination against an employer the employee would have the same right that an employer now has under FEPC. He would not be actually compelled to make a contract of employment, because he would be free to stop earning a livelihood.

Perhaps I have said too much about FEPC, but since this horrible prospect is riding high on the tidal wave of the future, it seems well to point out how rapidly our ancient landmarks will be washed away whenever this wave breaks over the few constitutional barriers that still remain between us and the deluge.

The greatest constitutional barrier against the tyranny of national socialism has been so battered by storms of reform in the last 50 years that when its broken reef occasionally appears even scholarly critics refer to it as "the anachronism of States' rights." The new look of the Constitution has been fashioned in the image of headstrong youth. The young man in a hurry commonly assumes that the fourteenth amendment, plus the national money power granted in the sixteenth amendment,

plus the judicial enlargement of the national commerce power, have made the States hopelessly subordinate to, and dependent upon, national lawmaking. In youthful ears any assertion of States' rights sounds like a voice from the tomb wherein John C. Calhoun, Henry Clay, Jefferson Davis, and all their ideas of State sovereignty are supposed to be forever and completely buried.

Strange to say the political principles of Thomas Jefferson are still regarded as so vital and enduring that political partisans of every stripe from conservative to radical acclaim his wisdom. Yet no man exceeded Jefferson in hatred and fear of the inevitable tyranny of centralized government. It was Jefferson who wrote that "A single consolidated government would become the most corrupt government on earth," and who prophesied that the road to destruction of the United States would be "by a consolidation first, and then corruption as its necessary consequence."

Also he wrote: "It is not by the consolidation or concentration of powers, but by their distribution, that good government is effected. Were not this country already divided into States, that division must be made that each might do for itself what concerns itself directly, and what it can so much better do than a distinct authority." (Writings of Thomas Jefferson; H. A. Washington ed. VI–543, VII–216, 223.)

In his first inaugural Jefferson called for "the support of the State governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwarks against antirepublican tendencies."

The principle of local self-government was written into the Constitution, not merely to induce the separate colonies to agree to the creation of a Federal Union, but primarily to maintain the democratic responsibility of a government which resides close to the people who are governed and which is immediately subject to their scrutiny and their control. Let me quote the penetrating wisdoms of Charles Warren, a profound student of our Constitution:

"The framers knew from experience, and they intended to preserve the principle, that a local government is a responsible government—a government which can never long be conducted in defiance of the opinions, the desires, or the prejudices of the governed; they knew that a distant and centralized government had been and could be conducted otherwise; and they were not inclined to authorize such a central government to interfere with or administer their local affairs, unless absolutely necessary for the safety, welfare, and permanence of the Nation as a nation."

How has it come about that today this profound principle is ignored and we have national laws regulating such matters of intimate and local concern as labor relations, wages and hours of work, agriculture, the growing and marketing of crops, manufacturing, merchandising, mining, and housing, with national tenacles stretching out to control education, the practice of medicine and the unknown, glimmering, beckoning objectives of social and economic security.

No one can doubt that such an extensive field of operations for the National Government was never contemplated by the authors of the Constitution. No one can doubt that they deliberately denied any general police power to the National Government which might authorize the extension of its authority into such realms. It was James Madison who wrote in The Federalist (January 29, 1788): "The powers reserved to the States will extend to all the objects which, in the ordinary course of affairs, concern the lives, liberties, and properties of the people and the internal order, improvement, and prosperity of the State."

But, we are told that the social and economic conditions of 1787 have disappeared. We live in an industrialized civilization, with the lives and industries of 150,000,000 people woven into one national enterprise by transportation and communication facilities unknown to our forefathers. We have become so interdependent upon one another that, it is argued, only national laws can insure that cooperation and harmony which are essential to our safety, health, and welfare. In a word, we are told that the National Government must exercise a police power superior to the police power of the States; and by legalistic magic such a power is being transmuted out of the national power to regulate commerce among the several States, or out of the national power of taxation, or—with the ghost of Madison violently protesting—out of the "general welfare" clause.

If, however, we should "recur to fundamental principles," we would see that, while these social and economic changes may seem to call for more national lawmaking in order that the American people may be efficiently governed, they more insistently demand more local lawmaking if the American people are to continue to govern themselves.

A central government of 150,000,000 people has already become, and will remain, a government of pressure groups and political traders. A central government, gathering and spending billions of dollars for national defense has a clear objective and unquestioned responsibility. But, a central government, gathering and spending billions of dollars to advance the general welfare, has the dubious objective and the questionable responsibility of taking from one man to give to another, of robbing Peter to pay Paul, of satisfying those pressure groups that may deliver more votes than the pressure groups unsatisfied, of feeding citizens who are vocal and organized at the expense of citizens who are dumb and unorganized, of paying for the votes of classes and communities that will support the party in power, out of the pockets of the opposition. This is, bluntly, that present corruption of government which Jefferson warned was inevitable after centralization.

Isn't this also a defect of all local governments? Certainly it is a defect of all popular governments. But there are many redeeming virtues in misgovernment by cities, or counties or States. First, they provide the kind of misgovernment which the people who are governed want, or deserve. Second, they are so close to the people that their misdeeds are easily seen and exposed. Third, the responsibilty of their public officials is direct and obvious. Fourth, a bad local government can be changed as soon as a majority of the people are informed and anxious to have a change.

On the other hand national misgovernment, entrenched in one part of the country, spreads its evil authority over another part where the people neither want nor deserve such government. For a pertinent example, Virginia is a State whose citizens as a whole believe in economical government. But, its Senators and Representatives in Congress are powerless to save citizens of Virginia from the taking and spending of their incomes by the National Government in a spendthrift paternalism that would not be tolerated within their own State.

Consider for a moment the regulation of labor relations by the Federal Government. The pressures of organized labor come from the industrial centers of the Nation, and largely from a few great industrialized States. The people who inhabit the vastly larger area of the United States are economically and socially antagonistic to the monopolistic demands and oppressive practices of labor unions. As freemen they should be permitted to live and work free from the remote controls of remote labor organizations which are endowed with special privileges and protected in evil practices by special immunities granted by a remote national government.

It is a bitter complaint of organized labor that 16 States have made the closed shop unlawful. It was argued to the Supreme Court that these were States where organized labor was not strong enough to defeat such laws; so the Supreme Court was asked to hold them unconstitutional. The Supreme Court happily declined, being fortified by the provision of the Taft-Hartley Act which graciously permitted the States to enact such laws. Now in the battle against the Taft-Hartley Act we have seen the full power of the President and a national party machine exerted to impose upon the States a renewed tyranny of national labor law enacted to advance the special interests of organizations of a minority of the people, living and working in a small fraction of the total area of the United States.

This discussion could go on indefinitely. Let me terminate it abruptly with a few general observations. As an active practitioner, and a prospective teacher, of constitutional law I must make a clear distinction between what the law is and what the law ought to be. The Supreme Court is the final arbiter of what the law is. But the people are the final arbiter of what the law ought to be and eventually shall be. If they believe that the National Government should have and exercise greater powers to promote the general welfare they will find the way to enlarge its authority. If they believe that more local self-government is essential to their liberties and their pursuit of happiness, they will find the way to enlarge the authority of the States and the municipalities.

It was Herbert Spencer who said that "No philosopher's stone of a constitution can produce golden conduct out of leaden instincts." If the leaden instinct for economic security so dominates the common thought that men and women are willing to accept the paternalism of a national welfare state, then the golden dream of individual liberty and genuine self-government will fade out of the Constitution and out of the lives of the American people. But, if that golden dream, which inspired the writing of the Constitution, and inspired the American people to lead the advance of civilization for more than 150 years—if that dream still inspires them, they will reestablish home rule as the only trustworthy guardian of their liberties; and they will never cease to fight against that centralization of power which, as Jefferson said, "has destroyed the liberty of man in every government which has ever existed under the sun."

They're Still Germans

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial that appeared in the Washington Daily News of August 15, 1949:

THEY'RE STILL GERMANS

Some American observers have expressed their dismay at the extreme nationalism and the bitter attacks upon the occupational authorities which characterized western

Germany's first postwar parliamentary campaign.

Radical rightists even revived Nazi songs and Deutschland Uber Alles, the imperial anthem, and heiled Hitler with a fervor reminiscent of the Munich period.

"Not a single party had a good word for all of the positive work the western allies have accomplished during the past 4 years," one military government official lamented.

What else did he expect? These political parties were bidding for the votes of people who had been steeped in German nationalism for generations. These same people went all-out for Adolf Hitler only 10 years ago. They have accepted our food, to be sure, because without it many of them would have starved. But to most of them this must have been a humiliating experience, for the Germans are, after all, Germans.

Given guns, in all probability, they would prove to be the same Germans the world has known since Frederick the Great and his legions began to prey upon their weaker neighbors.

The peace-loving nations must see to it that the Germans do not get guns until there has been convincing proof of their country's complete regeneration. The fact that we are confronted by a more immediate and pressing Russian problem must not blind us to the fact that Germany, too, could again become a threat to peace. Indeed, the greatest menace that could be imagined would be a German-Russian partnership. Its prevention should be the cornerstone of our European policy.

I also wish to include an excerpt from an editorial which recently appeared in the Philadelphia Inquirer, as follows:

A German town in which Nazi tendencies merit watching is Wolfsburg, in the British occupation zone. Wolfsburg was founded by Hitler in 1938 as the site of the Volkswagon automobile plant.

It appears that there are strange goings-on in Wolfsburg. The Nazi straight-arm salute has been seen and the Horst Wessel song, Nazi anthem, heard. The swastika, presumably, is just around the corner.

Furthermore, in a city election a few weeks ago the Nazi-like Deutsche Party polled a popular majority, 12,619 votes as against 7,800 by the Social Democrats and 4,009 by the Christian Democrats. Later the two Democratic parties swung together and with the aid of—of all things—the Communists, kept the Fuehrer-heilers from taking over.

All of this should be a sharp warning, not only to the British, but to all other occupation forces, against a revival of nazism either openly or underground.

Hospital Beds for Veterans

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. ANDERSON of California. Mr. Speaker, these remarks are headed "Hospital beds for veterans." It would probably be more appropriate to title them "No hospital beds for veterans."

If anything is needed to emphasize the lack of adequate veterans' hospital facilities in California, the two following letters should do the trick. First a communication from the chairman of the California Veterans' Board and second, a letter from the regional office of the Veterans' Administration in San Francisco.

When is the Federal Government going to recognize the acute and growing need for additional hospital facilities in my State, and when is something going to be done about it?

The letters follow:

STATE OF CALIFORNIA,
DEPARTMENT OF VETERANS AFFAIRS,
August 8, 1949.

Hon. JACK Z. ANDERSON,
House of Representatives,
Washington, D. C.

DEAR SIR: In January of this year proposed construction by the Veterans' Administration of a 200-bed general medical and surgical hospital in San Diego was halted as a part of the 16,000-bed cut-back in national construction ordered by Presidential directive. At the January meeting of the California Veterans Board, action was taken by the board opposing the cancellation of the proposed San Diego hospital, and the Director of Veterans Affairs was requested to solicit the assistance of the United States Senators and the Representatives in Congress from California in an appeal to the President to rescind this order insofar as it applied to this State.

The San Diego hospital was one of six Veterans' Administration hospital projects long authorized for construction in California. Construction is underway on the additions to the hospitals at Livermore and San Fernando, which will increase the number of tubercular beds by 250, and on the new 250-bed general medical and surgical hospital at Fresno. With the San Diego hospital eliminated from present consideration, there are but two planned hospitals on which starts have not been made.

Unfortunately, it is these two hospitals that are most urgently needed at the present time. They are the 1,000-bed neuropsychiatric hospital for the Los Angeles area and the 1,000-bed neuropsychiatric hospital for San Francisco. Long waiting lists for hospitalization at present NP facilities at Palo Alto and Sawtelle have existed for several years. It has been virtually impossible to gain admittance to either of these hospitals unless the veteran's psychiatric disability has been previously adjudicated as service-connected. The result has been that veterans are being admitted to ever-increasing numbers to the State mental institutions, already overcrowded to an alarming extent, and are being denied the right to the superior care of the Veterans' Administration facilities to which they are entitled by law.

There were in our State hospitals as of March 31 of this year 2,441 patients who were known to have had military or naval service (an increase of nearly 500 over June 30, 1948), and it must be borne in mind that the State has no information on the personal backgrounds of many of our most acutely disturbed patients. Over 200 veterans are being committed each month to the State hospitals and now constitute a proportion of current admissions that is out of balance with the ratio of veterans to the total population. Undoubtedly adequate psychiatric examinations would disclose many whose mental disabilities were attributable to their service, but since our State department of mental hygiene is shamefully understaffed with qualified professional personnel, it is impossible to afford the needed individual treatments.

The hospital construction authorized for California was based on the needs of our World War I veterans. Since World War II the California veteran population has more than quadrupled. It has increased from 400,000 to 1,750,000. Obviously we must plan for new and additional construction of medical and psychiatry units on a long-range basis, but it is of immediate, paramount importance that construction commence now on these two 1,000-bed neuropsychiatric hospitals which have been authorized, since even if they were presently operating, their facilities would be insufficient to provide beds for all the veterans now receiving custodial care in the State mental institutions.

To date, a site for the 1,000-bed NP hospital at San Francisco has been selected, but at this point all activity seems to have stopped. There has been no call for bids for construction. A site has not yet been selected for the Los Angeles 1,000-bed NP hospital.

At the meeting of the California Veterans Board in Santa Barbara on July 29, it was the unanimous action of the board that the above condition be brought to the attention of our congressional representatives from California, and that they be respectfully requested to lend every effort to persuade the Veterans' Administration to begin immediate construction on the neuropsychiatric hospitals already authorized for California. We of this board wish to assure you that we stand ready to carry out all assignments within our power to assist you in carrying through in the above request.

Very truly yours,
D. J. CALLAGHAN, Jr.,
Chairman, California Veterans Board.

SAN FRANCISCO, CALIF., *August 9, 1949.*

Hon. JACK ANDERSON,
House of Representatives,
Washington, D. C.

DEAR MR. ANDERSON: Your letter, dated July 21, 1949, and addressed to Paul B. Magnuson, M. D., Chief Medical Director, Department of Medicine and Surgery, Veterans' Administration, Washington, D. C., has been referred to this office for reply.

With reference to Elbert G. Schofield, serial No. [redacted], the files of this office do not contain any record of this veteran.

The records of this office indicate that VA Form 10–P–10 recommending hospitalization for Burton Edward Hazelton, C8223541, was received and forwarded to the VA hospital, Livermore, Calif., for necessary action.

It is regretted that at the present time there are no beds available in this area for non-service-connected disabilities falling within this category. Consequently, it is necessary to maintain a waiting list. The veteran's name is on such a list at the VA hospital, Livermore, Calif., and he will be hospitalized when his name is reached on the list.

Very truly yours,
ROBERT P. SHIELDS,
Regional Manager.

Gen. Omar N. Bradley Topman for Top Post

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. EVINS. Mr. Speaker, as much as any man in the history of our country, Gen. Omar Bradley gives meaning to a rarely applied term—that of "soldier-statesman." This Nation—and, indeed, all of the peace-loving nations of the world—are thankful and grateful that in these critical times there has arisen within our midst a man of superlative and proved military skill and genius which is coupled with a statesmanship of the

highest order. Such are the talents of General Bradley, whom we all applaud and commend today upon his recent appointment to the position of Chairman of the Joint Chiefs of Staff. This high honor could be bestowed upon no man more able, farsighted, and brilliant than General Bradley.

In this connection, Mr. Speaker, I ask unanimous consent to have printed in the RECORD a commendatory editorial which appeared in the Nashville Tennesseean, Nashville, Tenn., on August 13, last.

The editorial is as follows:

TOP POST FOR TOPMAN

President Truman could not have filled the new post of Chairman of the Joint Chiefs of Staff with a better man than the able and scholarly Gen. Omar N. Bradley.

Hardly known outside of Army circles before the war, he who now becomes the highest ranking military officer soon distinguished himself in the North African campaign. From the time of the Normandy invasion, he was recognized as an outstanding leader who had a way of getting things done without fuss or confusion. At the end of the war he was in command of the Twelfth United States Army group of more than 1,300,000 combat soldiers, and had played a leading part in the crushing German defeat.

He was a soldier's general then, just as he was when later placed in charge of the Veterans' Administration. Eventually his abilities were needed as Chief of Staff of the Army, from which position he graduates to the role of arbiter over the Joint Chiefs of Staff. He will be the link between that group and the President and his Defense Secretary, just as General Eisenhower has been, on a temporary basis, for many months.

The Nation has endless confidence in General Bradley, and so, we judge, have all branches of the armed services. He has all the qualities necessary for his role under the newly enacted Unification Act, and there is every hope that the rivalries that may have existed in the past will be erased by his counsel and understanding.

China

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Evening Tribune, Lawrence, Mass., Wednesday, August 15, 1949:

THE WHITE PAPER ON CHINA

The white paper on China is not a happy document, but it at least faces the facts—over a thousand pages of them. The picture which emerges from Dean Acheson's voluminous report to President Truman is that the United States has spent a couple of billion dollars in a futile attempt to give flaccid Generalissimo Chang Kai-shek fiber and sinew. In spite of this, the generalissimo and his cohorts have revealed such a degree of wan ineffectualness that they have been the best allies the Communist forces have had. The Communists, on the other hand, artfully putting on a semblance of purposefulness, have succeeded in implanting in the minds of millions of Chinese the belief that the Red solution of the nation's problems is the only solution.

The United States cannot derive much pleasure from its contemplation of the situation in China. Secretary of State Acheson admits, in effect, that the policy which has been followed up to now must be abandoned and that some new, and as yet undisclosed, tack must be taken. As in every country where communism is in the ascendancy, the United States must continue to take the attitude that China's future is inextricably tied in with the future of this country. Mr. Acheson, of course, recognizes how important it is to formulate some more effective method of helping China attain stability; he says he is not defeatist; he says there are plans in the works—plans which he hopes will enable China eventually to throw off the chains of subservience to Soviet Russia.

The American people have not got much for their money out of the very costly aid-to-China program. But they can take from the experience a couple of valuable lessons, aptly presented in Mr. Acheson's report to the President. He said: "The National armies did not have to be defeated; they disintegrated. History has proved again and again that a regime without faith in itself and an army without morale cannot survive the test of battle." He said, also: "A large proportion of the military supplies furnished the Chinese armies by the United States since VJ-day has, however, fallen into the hands of Chinese Communists through the military ineptitude of the Nationalist leaders, their defections and surrenders, and the absence among their forces of the will to fight."

These two quotes are highly significant in the light of the drive which is now under way to arm Europe as a follow-up of the Atlantic Pact. President Truman wants to spend $1,450,000,000 for this purpose, holding that the essential purpose of the Atlantic Pact—which is to bolster democracy abroad—can be implemented in no other way. The Chinese white paper makes it rather hard to go along with this view. What happened in China, with particular reference to absorption by the Communists of Nationalist matériel, doesn't encourage the feeling that the same thing could not occur in Europe. It is certainly an objection which should be considered very seriously. The white paper admits that weapons aren't much good without morale. The money freighted to China from the United States quite apparently went down a rat-hole gnawed by imcompetence, indecisiveness, and paralysis of the will to resist. Are these symptoms of internal decay present in Europe? If there is the slightest sign that they are, it would not be a good thing to tempt disarter by carrying out a program of European armament. There is nothing which says that it is not possible for this country to spread itself too thin, to extend its resources beyond the point of their ultimate elasticity.

More Than Lip Service Needed for Effective Reorganization

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. EVINS. Mr. Speaker, the Congress has signified its willingness to have a program of reorganization put into effect by the executive branch of the Government. Numerous bills have been passed by the present session of Congress with the hope and expectation of providing through Executive reorganization not only economy but improved efficiency in the operation of our Government. The called-for reorganization should, therefore, save many millions of dollars in tax money if the lines of the measures approved by the Congress are adhered to strictly. In this operation, however, the executive branch of the Government must assure its own cooperative effort in the name of economy—and take every possible step in this direction wherever such can be achieved without impairing our defenses or abandoning vital services of the Government.

In this connection, Mr. Speaker, I ask unanimous consent to have printed in the RECORD a well-written and timely editorial from the Nashville Banner, Nashville, Tenn., which appeared on August 13 last.

The editorial is as follows:

MORE THAN LIP SERVICE NEEDED

The specific savings forecast by the Hoover Commission as possible via Defense Department reorganization—this week signed into law—ran to $1,000,000,000, with another $250-000,000 to be saved through the general services bill (to combine and simplify purchasing, records management, building management, and disposition of war surplus) which became law on June 30.

Secretary Johnson promised as the bill was signed to go to work immediately on the job of trimming that branch of the budget tree of every excess encumbrance; of cutting out the system of waste, duplication, etc., which the Eberstadt subcommittee found had cost at least 10 percent of the defense, or military expenditure.

The will to save is, however, the essential ingredient to any program of economy; and it should not be forgotten that imperatively-needed economy, no less than over-all efficiency, was the objective of public and congressional supporters of executive reorganization. It should go without saying that had the will for economy existed on the part of executive stewardship, or any concern for solvency maintained within the ability of the taxpayers to pay, the enormous drains occasioned by wastrel policies would never have occurred, even without a law to prevent them. So it is going to take public watchfulness and heavy, enforceable restraint, to reverse the spending orgy, even with reorganization ordained and economy ordered.

Superficially, at least, the administration has sanctioned this phase of savings. But proof of that pudding will reflect in the budget, if it exists. If a $1,000,000,000, or $1,250,000,000 are to be saved, they should show up in cut-backs of spending.

We would add to that observation the further point: It will not suffice to simply economize at one point of the budget, and increase the spending by that amount at another point.

The purpose of saving is to save. And the savings should be reflected in an over-all reduction of the expenses of Government, and resultant reduction of the drain on every taxpayer. Only thus can the trend exceeding even the highest costs of history be reversed. Lip service can't do that. Cute tricks of governmental bookkeeping and reabsorption at one place of savings achieved at another place, won't do it. Only the enforced mandate of the public demand—to cut out policies of programed waste—can do it; and the final responsibility for that enforcement rests with Congress.

National Health Program

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. YOUNG. Mr. Speaker, it is to be regretted that the question of a Nation-wide health program will not be debated in Congress or voted upon before the coming session, which convenes next January. I had hoped that this matter of such great importance to so many millions of our people would be acted upon during the present session.

The object of the administration's health program is twofold, first, to make available enough medical service to go around; and, second, to see that everybody has a chance to obtain medical care at reasonable cost. American medical science provides the best medical care in the world. European nations are many years behind us. It is contended that this service is now provided for anyone who can spend unlimited funds for treatment and for charity patients who can spend nothing whatever. Millions of families in the small-income group go without adequate medical care because they lack funds to meet emergencies, such as accidents or serious or prolonged illness. It would be beneficial to all were your Government to provide more medical training facilities and try to have trained medical men and clinics available everywhere in our country. Public health facilities and scientific research should be expanded. Preventive medical care should be encouraged. Increased Federal aid for hospital construction should be provided. Federal health aid should be expanded. A program of this sort could be enacted without making doctors employees of the Federal Government. The main purpose of the administration public-health program is to bring medical care within the reach of all.

A Nation-wide health program can certainly work best when it is applied to the whole population and that can only be done by Government. Debt should not be the penalty the majority of people pay for adequate medical care.

Mr. Speaker, I include as a part of and add to my remarks a letter to the president of the Academy of Medicine of Cleveland by Dr. Hugo Hecht, a prominent physician and surgeon of Cleveland of long experience and a member of that academy:

CLEVELAND, OHIO, *July 29, 1949.*

Dr. HERBERT B. WRIGHT,
President, Academy of Medicine of Cleveland, Cleveland, Ohio

DEAR DR. WRIGHT: In answer to your letter I state I favor Federal compulsory health insurance. My experience in working for Government-sponsored health insurance in Czechoslovakia from 1919 to 1938 convinced me that it is the only way to provide adequate medical care for the low-income groups. I am opposed to charity in the matter of health.

In my opinion, doctors are health missionaries of their own free will. As such, our guiding thought should be the old saying, "Salus aegrorum suprema lex (the supreme law is the health of the sick)." Therefore, the welfare of the sick must be the primary consideration of the doctor and his private interest secondary. Even if we live in a society wholly dedicated to private enterprise, health problems must be considered an exception since only a healthy nation can sustain a high position in this world of keen competition. Everyone has the right to profit from the progress of medical science.

The low-income groups simply cannot pay the comparatively high rates of private health insurance policies which include hospitalization, doctors' fees, medicines, etc. It is obvious that private health insurance is more expensive than Federal insurance because (1) private insurance companies operate only for profits which must be paid for by the insured; (2) under Federal health insurance legislation, the insured pays only half of the premium, the other half being paid by the employer. I quote from a statement regarding GI life insurance (Plain Dealer, July 24, 1949, p. 1): "The ex-GI profits by a number of cost factors not open to holders of private insurance policies. The major favorable item is the fact that the Government absorbs all administrative expenses instead of prorating them among the policyholders." The same is true of health insurance.

Federal health insurance must be made compulsory for low-income groups because they never have enough money left to pay voluntarily for a private health-insurance policy. Of course, they pay for tobacco, drinks, baseball tickets, bowling, etc., by the billions, but nobody prevents them from doing so, and, therefore, nothing is left for medical care, especially when there is always a possibility of getting free medical care in case of an emergency.

The other day I had an interesting conversation with my grocer:

He asked, "How is business? People always need doctors."

I: "Yes; but when my patients cannot pay at my office they go to my hospital and get the same service from me free of charge."

Grocer: "That is as it should be."

I: "Could you give me the address of a grocer where I can get my groceries free of charge when I cannot pay you?"

To which the grocer had no answer.

Under compulsory Federal health insurance, even the poorest patient would be a paying patient to his doctor. Perhaps the main reason for the support of Federal compulsory health insurance by many doctors is the fact that they would not be forced to treat patients gratis in hospital dispensaries. At present 60 percent of American doctors are forced to do so because they must, for obvious reasons, be connected with a hospital.

In regard to the matter of free choice of doctors, most patients today cannot have the doctor of their choice because they cannot pay him, and a small-premium, private health policy will not cover the cost, since the smaller the premium the less service allowed.

The young doctor would find Federal compulsory health insurance a godsend. From the very start of his practice he would be sure of having enough income to cover his expenses. Many young doctors today spend years of anxiety and hardship. This is especially true in times of business recession.

Everywhere in the world where government-supervised compulsory health insurance exists it was introduced against the will of the doctors. Instead of taking the lead in organizing the complicated set-up of a federal health-insurance machinery, the doctors opposed it, with devastating results for the doctors.

Why didn't the American Medical Association take a secret ballot on this question? Why weren't the doctors in Cleveland called together for more discussions about this very important phase of public health?

There is still time for the American Dental and the American Medical Associations to sit down together with the Government and work out a health-insurance organization without the mistakes, defects, and blunders of the European systems. If they don't, health insurance will become law anyway without their consent and to their disadvantage.

You now can understand why I refuse to spend money for a cause I regard as unjustified and which I oppose.

Sincerely yours,

HUGO HECHT, M. D.

Amendment of Natural Gas Act

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. HALE. Mr. Speaker, during the present session of Congress I have had the honor to serve on the Petroleum Subcommittee of the Committee on Interstate and Foreign Commerce. The chairman of that subcommittee is Mr. OREN HARRIS, of Arkansas.

During the present session, the subcommittee has been largely occupied in considering amendments to the Natural Gas Act. Mr. HARRIS has been a very devoted and able subcommittee chairman. He has brought to the consideration of natural gas legislation much familiarity with the industry and a conspicuous capacity for patient work in resolving the many technical difficulties involved in legislating. It is gratifying to me to see editorial recognition of Mr. HARRIS' work and I direct attention to the following editorial appearing in the El Dorado (Ark.) Daily News:

CHECK CONTROL MOVES

The Harris bill to amend the Natural Gas Act has been passed by the House, and it is now in the Senate where similar legislation has been introduced.

The vote on the bill was 183 to 131 in face of strong opposition from the executive branch of the Government and the Federal Power Commission.

Exemption of the independent producer and gatherer of natural gas from regulation of the Power Commission is the purpose of the bill. It is designed to enable the independent to drill and produce gas and to dispose of the product without the FPC fixing the price or imposing any type of control before the gas enters interstate pipe lines.

The bill definitely is a blow against further extension of Federal control or new steps to bring about controlled economy in one of the Nation's important industries.

One of the big issues is whether Congress will write the law or a commission may exercise control through regulation, going beyond the provisions of an act which has been on the books for 11 years.

The legislation is in line with the fight of the oil industry against Federal control.

The House action is a definite forward step in the interest of free enterprise. There is no need of Federal price fixing or control hanging over the heads of independent gas producers, and it is high time for Congress to check agencies and commissions bent upon setting up and extending their own controls.

Congressman OREN HARRIS, chairman of the Subcommittee of Interstate and Foreign Commerce Committee, wrote the amendment and pushed it to passage in the House. HARRIS conducted hearings on the bill and served as leader of the measure's proponents. He has served the gas industry and at the same time has taken the lead in a fight to preserve good old American principles.

This fight for the independent gas producer is not strictly nor solely for their benefit. Control in any form hits many others in addition to those involved directly. It is just not the American way and more people need to realize that they must fight for their rights.

We want to commend OREN HARRIS for his good work on this bill, and at the same time call upon Arkansas' two Senators to go down the line for the free-enterprise system when the measure comes before the Senate.

This fight for the gas industry should be won. If it is lost, another industry will become a target for the bureaucrats and there would be no telling where controls might end. It must be nipped now.

Insurance Refunds Due Veterans

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. VELDE. Mr. Speaker, I should like to call attention to the resolution I signed along with a number of other veterans of World War II several weeks ago. We have strongly urged all members of Congress to support the resolution so that what obviously has been a raw deal to the veterans can be corrected as speedily as possible.

The Government of the United States owes 16,000,000 veterans of World War II $2,800,000,000 as a result of overcharging them for their service insurance. The Truman administration refuses to refund this money until 1950. This obvious maneuver causes us to arrive at the following conclusions:

This is a scandalous political performance. The Government first overcharged the veterans for their insurance and now refuses to refund the overcharge until it suits the political purposes of the Truman administration. Certainly the United States Government should discharge a debt of honor to its veterans above any other it has incurred, and if for no other reason, to set an example of good faith for all debtors.

Aside from the basic question of governmental integrity and good faith there are other reasons why this huge sum should be speedily put into circulation. The $2,800,000,000 will go to 16,000,000 veterans. Its circulation will have a beneficial and legitimate economic effect; could mean the difference between a depression and simply a healthy business readjustment. It would help the veteran by returning money to his pocket which is rightfully his.

The Veterans' Administration describes the insurance refunds as "dividends." This is deliberately misleading and untrue. They are not "dividends"; they are refunds on an overcharge. Imagine the speed in which Mr. Truman's Department of Justice would swing into action if private enterprise had overcharged 16,000,000 people $2,800,000,000 on their insurance policies.

The record shows clearly and beyond dispute that the administration is deliberately holding up the money until 1950 because it is a congressional election year. The record: Two years ago Republican members of the House Veterans Committee formally requested that the insurance refunds be made immediately. The Veterans' Administration said the refunds could not be issued until the Supreme Court ruled on a test case, but solemnly promised that within 6 months after the Court made its ruling the payments would be made. The Court ruled in June 1948. It is now more than 14 months since the Court ruled. Now the Administration tells the veterans they will not even start the refunds until January 1950, or 19 months later—if the promise is kept.

We hesitate to subscribe to the possibility that General Gray, the head of the Veterans' Administration is responsible for holding up the refunds. We believe he is a prisoner of politics and that his agency is the victim of political pressure by the higher-ups in the Truman administration.

Hoover Achievements as Ex-President Are Called Unprecedented

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Washington Evening Star of August 16, 1949:

HOOVER ACHIEVEMENTS AS EX-PRESIDENT ARE CALLED UNPRECEDENTED—INTEGRITY, FAITHFULNESS TO NATION RECALLED BY RECENT CELEBRATION

(By David Lawrence)

Herbert Hoover has just been the recipient of an amazing tribute from his fellow countrymen. From everywhere messages of congratulations have poured in on him on the occasion of his seventy-fifth birthday.

But there was something more significant in this than the celebration of a birthday or the manifestation of the popularity of a prominent man. It is the tendency to be more objective about his record in office.

An entirely new generation has been born since Herbert Hoover was President. Twenty years have elapsed since he took the oath of office. Only a part of the adult population of today remembers the Hoover administration and its trials and tribulations through a period of world-wide depression and economic convulsion.

Only a part of the reading public of today recalls how Herbert Hoover was abused as being responsible for the depression in America, when, in fact, the United States was caught in a whirlpool of economic currents that affected every nation in the world.

FIGHT IS RECALLED

As history is written, Herbert Hoover's courageous fight against the depression was virtually won by the time he was leaving office. It was only in the interval between election and inauguration that panic seized America because of the uncertainty of what the new administration would do and the apparent inability of the outgoing and incoming administrations to collaborate in a nonpartisan way.

President Roosevelt distrusted the Hoover administration because it was Republican. Something of the same distrust permeated the Republican administration about the Democratic regime that was to come into power. The responsibility for collaboration was plainly imposed upon the incoming President. Many books have been written about that fateful period, and, of course, hindsight is better than foresight. Yet, contemporaneously with the happenings, many people familiar with the moves that were made behind the scenes in an attempt to avoid the financial collapse felt that the bank holiday could have been prevented as late as January 1933.

Actually, the United States was solvent and the frozen assets in the banks could have been liquidated in an orderly fashion. The record shows that in subsequent years the liquidation of those assets did occur and the losses to depositors were relatively small. In fact, it was a higher average of return to bank depositors than had been experienced in bank losses of a half century before. The operating plan for the bank holiday was drafted by Mr. Hoover's associates in the Treasury Department in February 1933, and was accepted by the incoming administration.

FAITHFUL TO PARTY

Herbert Hoover is faithful to his Republican Party, but he has shwon again and again how to rise above partisanship. What he has done since he has left the White House has proved conclusively that he knows how to be first an American and second a partisan.

Even now, at the advanced age of 75, Herbert Hoover has not ceased his labors in the nonpartisan cause. Both political parties paid him honor by supporting resolutions in both the Houses of Congress. A Democratic President sent him a message of congratulation.

What Herbert Hoover has done as an ex-President is unprecedented. Other ex-Presidents have performed some service but Herbert Hoover has been in almost continuous public service. This has not been entirely for the Government directly because the late President Roosevelt declined to make use of Mr. Hoover's services. The friction that developed in the interval between the election in 1932 and the inauguration in 1933 apparently was never healed. It is regrettable that the services of Mr. Hoover were lost to the country so far as the Government was concerned from 1933 until Mr. Truman took office.

INTEGRITY IS CITED

One characteristic that will always be written on the pages of history as outstanding in the case of Herbert Hoover is his integrity and character.

Men can win public office, they can amass votes, they can make speeches lambasting their opponents, they can be great orators, and they can be bitter partisans—and the Nation will not disapprove of any of these. But let a President lack anything in character or integrity, let him exercise bad taste and violate what is conceded to be public morals and he will go down into oblivion.

Herbert Hoover's name will shine because his character is unblemished and his record as custodian of the people's funds and the people's interest stands untarnished through the years.

Address of Capt. R. M. Watt, Jr.

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD I include therein the remarks of Capt. R. M. Watt, Jr., commander of the Boston Naval Shipyard at a recent convention of the Massachusetts Federation of Labor, which I think is significant in emphasizing some of the activities of the Boston Naval Shipyard, the skill, ability, and versatility of those faithful employees:

On the 18th of June, I relieved Rear Admiral Hague as Commander, Boston Naval Shipyard, which is the third largest employer of labor in the New England States. One of the questions uppermost in my mind was what kind of support I was going to get from the Charlestown Metal Trades Council. I knew they were a strong, aggressive group and considerable influence among our personnel, but I didn't know how that influence would be exerted or exactly to what degree it would help or hinder my hopes and ambitions for the shipyard.

Well, I didn't have long to wait. On the 27th of June a Bulletin of the Charlestown Metal Trades Council was widely circulated. This bulletin stated very clearly that in their efforts to secure more and more permanent jobs for the people of this community, the theory sponsored by them and the American Federation of Labor was more production and better work. The Bulletin encouraged the men to produce more, to produce faster, to produce better. It stated the wise facts that in the long run the way to ensure permanent jobs in the Boston area was to get busy and demonstrate such superiority in quality production that neither the Navy nor any good businessman could overlook it.

Needless to say, I am more than happy to have such sound ideas spread throughout the shipyard for whose performance I bear the responsibility.

Your metal trades council have also been leaders in obtaining better working conditions and sponsoring worth while activities such as the Children's Hospital collection.

As Fred Claus, Bill McCarthy and Eddie Hines have undoubtedly told you, we are proud of our shipyard. We firmly believe it is the best shipyard in the world. We can build cruisers, destroyers and submarines. We can repair and drydock anything from the largest aircraft carrier to the smallest submarine. Our good New England mechanics make the world's best and cheapest rope, the best chain and many other products which you have seen in the exhibit outside.

But what I am most proud of is not the material products you see in our exhibit, but the fact that we have a bunch of boys and girls who have the life and fight in them to jump in and do any job which the Navy and United States need done.

We had a good illustration of that over the weekend. Friday night the destroyer *Livermore* ran aground in Pollock Rip. Nearby ships were sent to help her and when the shipyard offered to help, it was thanked for its offer and told that it was not needed at that time. Sunday morning with the situation getting steadily worse, Boston Naval Shipyard was called. We flew down immediately in a PBY Amphibian and tried to land alongside the grounded vessel. The water was so rough that it would have broken up the plane and we had to go back and land at Hyannis. Then we got a small private plane to fly us to Chatham. Finally, we had a slow, rough ride in a Coast Guard picket boat. We arrived about 5 p. m. Sunday.

While the Boston Shipyard team was in transit, dispatches from the stricken destroyer indicated that the situation was getting more critical, and Washington called in Merritt, Chapman & Scott, the world-famous salvagers, with the idea that no possible effort should be spared to get the destroyer off before she was ruined, with possible loss of life.

As soon as we arrived, we found that a great many things were needed to speed the job. Admiral Thebaud, commandant of the First Naval District, had a helicopter waiting for us at the end of Monomoy Point, which proved invaluable. He sent us immediately an amphibian plane, additional tugs, light-draft vessels, landing craft, and everything else we needed. With such perfect support from headquarters, with some fine help from the Coast Guard and Navy ships assembled at the scene, with some kindly advice from Merritt, Chapman & Scott's wrecking master, and with a lot of good luck we got the destroyer afloat less than 24 hours after the Boston Naval Shipyard team arrived at the wreck.

There was one little incident I remember quite happily. At noon on Monday the rough water became calm and we could see that near low tide there was so much sand piled around the vessel's stern that you could walk on it without getting wet much above the belt. The propeller shafts were completely buried and only the top inch of the uppermost propeller blade stuck above the sand. Merritt, Chapman & Scott were friendly to our Boston plan of salvage, but they felt the situation was so bad that ships could not get her off and that it was a job of beaching gear. They were rushing ahead with the unloading and preparation of this equipment. Their acetylene burner was being encouraged to work at top speed and was sweating profusely. The burner had just completed the first hole in the deck for bolting down the beaching gear. Then we got the big rescue tugs pulling with all they had and put the little ships alongside the *Livermore*, with engines running at full speed to scour out the sand—as he started to burn the second hole, the ship slid free and floated. He threw his torch on the deck with disgust and said, "Damn it, all that sweat for nothing." So we boys from Boston felt a certain pride in pulling this job out from under the noses of the world's finest and most experienced salvagers.

Master Rigger Joe McDonald, who is a member of your metal trades council, did not stop to sleep or to eat more than a sandwich from the time we started until the ship was afloat. His skill and drive played a large part in the success of this operation.

And so at Boston we feel that we are well qualified to do, not only the things you see in our naval shipyard exhibit, but to take on any tough or difficult job which the Navy or the United States wants done.

Our ability to do those jobs swiftly and well will be increased by the influence you are exerting for faster and better production and for better working conditions which mean better men. I wish you much luck and I look forward with pleasure to working with you in the years ahead.

Thank you.

Signal, Merited Promotion

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. BROOKS. Mr. Speaker, Louisiana is truly proud today of the appointment of a distinguished son as Chief of Staff of the United States Army. This is the first instance in history, as far as I know, in which a Louisianan has been appointed to this high position in our Defense Establishment.

I am a member of the Armed Services Committee, and I know of the splendid record of Gen. J. Lawton Collins. It is a record to which any military man may point with great pride; and it is a gallant record of service, both in war and in peace. During the course of his European command during the last war, he earned the very descriptive title of "Lightning Joe" for his daring and speed in opening holes in the enemy's line through which the armed columns of Gen. George Patton passed to wreak devastation and destruction upon the rear installations of the Germans.

As Deputy Chief of Staff, General Collins has served our country with credit to himself and to his country. His promotion is well-deserved and applauded by the country. I am sure his older brother, a retired general officer with an outstanding record to his own credit, and former commanding officer of the Carribean defense command, will rejoice with us in this recognition of his distinguished brother.

Mr. Speaker, I present an editorial from the New Orleans Times-Picayune of August 13, 1949, entitled "Signal, Merited Promotion":

SIGNAL, MERITED PROMOTION

Word came from Washington Friday that Lt. Gen. Joseph Lawton Collins had been named Army Chief of Staff to succeed General Bradley, just appointed Chairman of the Joint Chiefs of Staff. General Collins' well-earned promotion will be hailed with satisfaction the country over—but nowhere else so enthusiastically as here in New Orleans, his old home town. A native of New Orleans, he spent his boyhood here, leaving to enter West Point and begin his outstanding military career. He has relatives and countless friends in this city, has revisited it when his duties permitted and as recently as last spring.

Entering the Army in April 1917, after graduation from the Military Academy and prior study at Louisiana State University, he saw active service during World War I. During the recent conflict, he earned fame as "Lightnin' Joe" when he led his Seventh Corps first of any American forces across the Rhine. Before his transfer to the European theater, he was the first brigade commander flown into the Pacific after the Pearl Harbor attack. He organized the Twenty-fifth Division in Hawaii and served at Guadalcanal and throughout the South Pacific campaigns. Sent to the European front as a corps commander at the time of the Normandy invasion, he participated in the first landing on the coast and earned distinction by the skill and daring of his leadership.

Following his combat service, General Collins served as the first Director of the War

Department's new Office of Public Information. He was Deputy Chief of Staff under General Eisenhower and Vice Chief of Staff under General Bradley.

New Orleans naturally takes pride in the promotion of a native son to the high and responsible post of Army Staff Chief, and deep satisfaction in the fact that his honors have been earned on merits by his brilliant career as combat commander and efficient administration of his postwar assignments. No better selection could have been made, in our judgment, and we have no doubt that he will justify it abundantly by efficient and devoted service in his new post. All New Orleans joins in the tender of congratulations and good wishes to this distinguished native Orleanian.

GI Refunds

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Ithaca (N. Y.) Journal of July 20, 1949:

GI REFUNDS

Because the drain on the system was not as heavy as forecast, the veterans' insurance fund has a surplus. The idea, then, and a fair one, is to cut down the premiums charged the former soldiers who paid them in. But here arises a political angle which is as blatant as we've seen in some time, even in Washington.

Early this year it was known that refunds would be made to veterans on their insurance premiums. But when the talk had circulated around for a while, Veterans' Administrator Carl R. Gray said in June that he hoped distribution of checks would start by next January and be substantially completed a year from now.

Frankly, these $2,800,000,000 in overcharges belong to the veterans, now. It was excess money paid in and should be returned without delay. Even Washington should move fast enough to get this money back to its owners by October 1949, as Representative KEATING, of Rochester, has demanded.

But the $2,800,000,000 appear to be slated to stay in Federal coffers until next year, when they will roll out and payments will be substantially completed by the time the voters are going to the polls in 1950 congressional elections. If veterans look that one over, they'll be insulted and also sore that they've been held up a year on money that's rightfully theirs now.

The Late H. R. Knickerbocker

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. DOLLINGER. Mr. Speaker, Mr. H. R. Knickerbocker, Pulitzer prize-winning WOR commentator, was one of the 14 correspondents who died in the recent Bombay plane crash. The following story appeared in the World-Telegram of August 13, 1949. I think it only fitting that this be inserted in the CONGRESSIONAL RECORD, and that his message quoted therein, sent to Mr. Victor Lasky, staff writer for the World-Telegram, be considered as the last word of a great American newspaperman.

GETS CARD FROM PAL, DEAD IN BOMBAY CRASH

A postcard sent from Singapore on July 6 by H. R. Knickerbocker, a week before he died in a Bombay plane crash with 13 other correspondents, was received today—more than 5 weeks later—by a World-Telegram staff writer.

Almost to the last the Pulitzer prize-winning WOR commentator, who had covered the trial of the 11 Communist leaders, had been concerned with the Communist menace, the postcard indicated.

The postcard, bearing a photograph of Singapore's Raffles Museum, was addressed to Victor Lasky of the World-Telegram. It declared:

"DEAR VIC: Tell the comrades that all Commies are arrested and held, without trial, indefinitely in Singapore prison. Always room for 11 more.

"KNICK."

Mr. Knickerbocker, one of the Nation's top foreign correspondents, had won the Pulitzer prize for his Moscow coverage in the early thirties. He was buried in Bombay.

Greece

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, August 14, 1949:

GREEK OFFICIAL ON HUB VISIT SAYS PEACE IN PROSPECT FOR HIS COUNTRY

(By Jay Bridgton)

For four long and bloody years the Greek Army has battled desperately against thousands of Communists who have attempted to set up a Red regime. The Communists, banded together in guerilla groups, have been well equipped and well led, and most of them have been receiving aid from Greece's Soviet-dominated neighbors to the north.

Now, with Tito's regime in Yugoslavia in bad grace with the Kremlin, the possibility looms that the Greek Government will be able to give the insurgents the coup de grâce soon and that peace will return to the stricken country, according to a high Greek Government official now visiting in Boston.

Aristides E. Basiakos, member of the Greek Parliament and former Governor General of the war-torn area of Macedonia and Thrace, in an exclusive Sunday Post interview, declared that "the situation is better than at any other time since the end of the German occupation" and that "we hope in a few months to be all through" with the civil war still raging.

RED FRONT BREAKS

While the vast improvement of the Government position in opposition to the guerrilla bands that once held sway over the larger part of Greece is a tribute to the determination of the Greek people and their army to be free, and to the American aid that has been received, the immediate prospect of peace and victory is due to Marshal Tito's difficulties with his erstwhile friends in the Kremlin, says M. Basiakos.

For Tito, in bad grace with Stalin and with his Soviet-dominated neighbors to his east, west, and north, is worried about being surrounded, and wishes to keep his southern flank free, the Greek political leader points out.

Tito has been the principal source of aid to the guerrillas who have conducted a 4-year reign of terror along the Greek border. Greek guerrillas, many of them not even Greeks, have been armed and trained on Yugoslav soil and then sent to battle against the Greek army, and they have returned to Yugoslav territory to rest or to escape the pursuing Greek Government forces.

But now Tito is in difficulty with the Soviet Union and is feeling the pressure being put on him by his Red-dominated neighbors. So he has initiated an about-face policy with Greece. It is a policy based on expediency alone, and the Greeks recognize this as they prepare to benefit by the break in the Red front in the Balkans, he told a Post reporter.

"Tito has made an official statement that in the future he will not allow the guerrillas to operate on Yugoslav territory," the Greek member of parliament said: "The American people should know that that statement does not mean a friendly expression toward Greece, but that more than anything else he wishes to prevent his southern border from an encirclement by the Soviet Union."

SETTLEMENT EXPECTED

There are still things to be worked out with Tito before the Greek Government will be satisfied that she has nothing to fear from the Yugoslav leader, he points out. But his prediction that within a few months "we will be all through" indicates that a settlement is expected. In fact M. Basiakos indicates that the Greeks will be willing to forget a great deal in order to achieve the settlement, which, he points out, would make the two countries friends but not allies.

"We Greeks have no hate against the Yugoslav people, neither do we have any differences over our common frontiers. Neither do we have the right to criticize any kind of government that Yugoslavia wants. We do have, though, the right to demand that Yugoslavia not interfere in our internal affairs, and not to help the guerrillas opposing our government forces.

"If Yugloslavia returns the Greek children which the guerrillas have taken from our people across the Yugoslav border and if she exiles these guerrillas, then we are ready and willing to work with her for the betterment of our peoples. Greece today is a country on the defensive, with no demands upon anyone."

But while Tito seeks to neutralize his southern border against the possibility of trouble with Moscow and the Soviet-dominated countries of the Balkans, he cannot expect any aid from Greece in such a situation, he warns. "If Yugoslavia has difficulty with Russia, we are not willing to interfere."

This is the time for American and the other western democracies to put the pressure on Yugoslavia in behalf of Greece, in his opinion.

"At least Tito made the statement about the guerrillas. If he were pressed a little by the western allies, particularly by America, then he might be willing to return the children."

STOLEN CHILDREN

The children that Greece seeks to have returned by him are those taken forcibly by the guerrillas from the Greek villages, particularly in the north, and spirited across the border into Yugoslavia, Albania, and Bulgaria during the past 4 years. These children have been kept, and many of them

trained to hate their own people and to embrace the Communist philosophy.

The older boys and girls, he explains, would be kept for a few months, trained to handle firearms and given some Communist indoctrination. Then they were sent back into Greece to fight in guerrilla bands. If a boy or a girl was slow to accept the teachings, they were assigned to the most dangerous posts, and so many of them have been killed in the fighting. There have been some 40,000 Greek children kidnaped.

Those too small to be sent back to fight are being brought up as Communists, and the Greek Government is faced with the dreadful possibility of fighting these unfortunate children in the years ahead, if there is no return soon. One of the criticisms of the Greek guerrillas has been that relatively few of the willing members have been Greeks, and that so many of them have been Slavs and not Hellenes.

If Tito resolves his difficulties with the Greek Government, as Mr. Basiakos expects he will shortly, then the end of the war with these guerilla bands will soon come to an end, in his opinion.

If Greece and Yugoslavia reach an agreement, then the Greek Government will be able to withdraw its troops from the Yugoslav border area and employ them against the guerillas still operating from across the border of Albania in the northwest and from Bulgaria in the northeast.

BEGIN TO CRUMBLE

At the present time, because of the valiant effort of the Greek people, and because of the invaluable aid given by the American Government, the Communist guerillas are on the run anyway, even without the Yugoslav settlement, he declares. In the Peloponnesos the guerillas have been cleared out—the first such announcement to come from a Greek official. In the north their power is on the decrease.

If the government feels that it is strong enough it will seek to encircle the Communists and wipe them out, thus ridding the nation from any further threat from them. But if it feels that it does not have sufficient power to achieve this quickly then the government may seek to push them back without encirclement to Albania. This is less desirable because the Albanian Government will rest them, rearm and reinforce them, and send them back into Greece again, if it continues the policy it has pursued in the past, he points out.

Once the situation on the Albanian frontier is taken care of, then the Greek Government could quickly wipe out the guerillas operating from the Bulgarian border, he predicts.

As it is, the Communist strength is beginning to crumple in Greece. Mr. Basiakos says that during the German and Italian occupation many members of the professional classes became fellow travelers, convinced that the Communist Party would bring them and their nation security and a higher standard of living. These professional people were promised the leadership of the proposed Communist Government in Greece.

"They wanted to better their condition, and they were promised a socialistic state such as England has today. They were promised, to use a Greek expression, 'the bakery and the loaves of bread.' But in December of 1944 thousands of them became disillusioned men and women. For when the Communists tried to seize the Government by force, and slaughtered thousands of Greeks in the attempt, then they were shocked. They had thought that the change in power would come peacefully by due process of law, when the majority wanted it. Thousands left the Communist Party then. And thousands of others who did not leave then did 4 months ago when Macedonia and Thrace were promised by the Communists to Albania and Bulgaria.

"Take 10 guerillas today. Two will be Communists—real Communists who will do anything for Moscow. Then there will be three of these fellow travelers. And there will be five Greeks who are neither Reds nor fellow travelers who are forced to fight. The two Communists, with machine guns and grenades, force the five to do their bidding. In addition, the five are kept separated, so they cannot band together.

"When there is fighting the five unwilling guerrillas are the first to run away or to surrender. The three fellow travelers are next, and they are coming over to our side more and more. The two Reds seldom surrender. This sort of organization is showing signs of strain, as more and more surrender."

MARKED FOR DEATH

Mr. Basiakos has a long and unpleasant acquaintance with the Communists of his native land. A member of the Greek Parliament before the war, and a leader in the Greek underground during the German and Italian occupation, he was selected for massacre by the Communists during their abortive attempt to seize the Government in December of 1944.

He was arrested by the Communists in Athens, taken to a building and held. He was taken to a room for questioning, and then told to step into the next room. He went into the corridor, found a door open leading outside, and slipped out into the dark night. It was raining hard and the mud was deep. He made his way to a forest, and for three and a half hours he walked along lonely roads, getting a little shelter from the trees that lined both sides of the road. He walked until he reached a small village where he obtained an old auto, and then drove on to his native city of Thebes.

Later, when he was governor general of Macedonia and Thrace at the most critical period since the war, a grenade tossed by a Communist blew a leg off his bodyguard, but he escaped injury. And on Christmas Day of 1947 guerrillas bombarded the town where he had his headquarters with mortars, but again he escaped.

The 44-year-old Greek legislator was born in Thebes, and is a graduate of the University of Athens. He was elected to the Greek Parliament in 1933, being the youngest member of that body. He was 28 then. He remained in Parliament until that body was dissolved by the late Premier Metaxas.

He returned to his law practice, but when the king and the dictator-premier said "No" to Mussolini in 1940, he joined the army, as did many of the other critics of the dictatorship. He had the rank of private, and served on the Albanian front until Greece was forced to give up to the Germans 6 months later.

Back in Thebes he worked on his family farm and became a leader of the underground. Both the Germans and the Italians threw him into prison for several months when they became suspicious, but they were never able to obtain any evidence.

When the elections were held in 1946, he was returned to Parliament as a member of the Popular Party. He was appointed governor general of Macedonia and Thrace in March of that year, and it was he who instituted the investigation into the murder of George Polk, the American newspaperman whose trussed-up body was found on the shore of the Aegean south of Salonika.

He is a cousin of Angelo Bassett, the maitre d'hotel at the Hotel Somerset. He arrived in this country August 26 to visit his friends and relatives and to thank various Greek-American organizations that have helped his country during an hour of peril. He plans to return to Greece on September 9.

Is the Eighty-first Congress the Tung Oil Congress?

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. VURSELL. Mr. Speaker, the Fair Deal is becoming more "balmy" every day. New schemes are being figured out to waste more and more of the taxpayers hard-earned dollars. The high wartime excise taxes are still being maintained on the necessities of life.

It was only last week that the House passed the tung oil bill. The United States production for 1948 was 16,000,000 pounds and we imported 133,000,000 pounds without duty. The House bill supports tung oil at 90 percent of parity, which is to help the producers in the United States, but at the same time this also means supporting the 133,000,000 pounds imported. This is not good common horse sense.

Now, I note that the proposed Senate agricultural bill provides a support of 60 percent to 90 percent of parity for tung oil, while hogs, a $3,500,000,000 crop, and poultry, a $3,000,000,000 crop, are to be supported from 0 percent to 90 percent of parity, "if," and it is a big "if," there are any funds left after supporting tung oil and other crops like peanuts and rice that do not represent one-tenth of the 1948 farm income derived from hogs and poultry.

These Fair Dealers will have to use oil on their tongues if they wish to promote such insane legislation as supporting tung oil, a $4,000,000 crop, and ignoring the great livestock industry of the United States.

Hurrah! Hurrah! Now that the "tongue oil" situation has been taken in hand and the $4,000,000 industry has been placed on the preferred list, we also note that the Fair Deal is making another great contribution to the advancement of agriculture by placing mohair of whiskered Texas goats a $7,000,000 crop in 1948, on the same legislative pedestal, while the poultry and hog industries with a combined 1948 value of over $6,500,000,000 are being left out on the proverbial limb with an "iffy" support. The New Deal and Fair Deal programs are always for the favorite special groups instead of for the welfare of the many.

China Policy

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. MANSFIELD. Mr. Speaker, I am inserting in the RECORD an article by Joseph C. Harsch and an editorial on

China. Both of these are carried in the Christian Science Monitor of August 15, 1949.

I would urge the Congress to study this material carefully because the writers are impartial in their outlook and they seek to look at the China situation in a way with which no American can find fault.

The times call for a bipartisan attempt to solve a very difficult problem.

STATE OF THE NATION—AMERICA NEEDS A CHINA POLICY

(By Joseph C. Harsch, chief, Washington News Bureau, the Christian Science Monitor)

WASHINGTON.—It certainly would be nice if, in the aftermath of that document on China called a white paper, there might emerge a nonpartisan or bipartisan American policy toward China and the Far East.

And several further improvements could be built quickly on a policy which had the sanction of both Republicans and Democrats. For example, once the two American political parties had stopped squabbling over China policy, the State Department would be able to discuss serious coordination of British and American action toward China.

As things are, of course, none of this is possible. Britain can't possibly coordinate its China policy with Washington's since Washington's continues to be as unstable and uncertain as at any time since it became a favorite political football. Nor can Washington proceed with any certainty down any one of the various lines of action it might theoretically pursue since the moment it starts one way, political pressures build up for a contrary movement.

The price of such vacillation, and imposed irresolution, shows up all through the record of recent weeks in China. American diplomats are insulted. American businessmen are blackmailed and in effect imprisoned. Neither American diplomacy nor American business can operate in China or withdraw from China.

This condition is in marked contrast to the position of British and other western representatives in China. They have had their troubles, but it is nothing compared to those of the Americans. All the time the British sloop *Amethyst* was having its private war with the Communist batteries on the Yangtze River, British businessmen were doing some business—a lot more than Americans could do. And Britain holds Hong Kong which, in theory, every Chinese resents as an infringement on Chinese territory, yet no British diplomatic mission has been insulted as have the American. The early withdrawal of American naval forces from Shanghai led to more trouble for Americans than the late and reluctant British withdrawal did for British.

Behind the difference of treatment of British and American nationals lies the difference of foreign policy approach. Britain has one policy toward China. It is the Foreign Office policy. If the Foreign Office lays down a line of policy, that becomes the policy. There may be grumbling—and perhaps the captain of the *Amethyst* exceeded his authority when he slipped his cable and got his ship away. But, by and large, there is a single British policy on China, and the two factions in China know what it is, know what they are dealing with, and show some respect for it.

America enjoys no such simplicity of approach to the China problem. No faction in China has ever been able to know from one day to the next what the American policy would be. Right now there is a wonderful exhibition of how documents can be made to prove anything. Administration friends and spokesmen have used the China white paper to prove that the failure of China policy has been Republican fault. And Republican friends and spokesmen have been just as apt at using texts from the same paper to prove the fault lies with the administration.

The truth of the matter, of course, is that the failure of China policy stems from the division of policy. Had the two parties ever been able to agree to support the Chiang regime, regardless of the cost, the debacle of policy might have been prevented. The experts differ as to what the cost would have been. General Wedemeyer thought he could do it with 10,000 American troops and about half a billion dollars a year. Others think the cost would have gone very much higher.

There was always the possibility that it would involve the United States in war and the certainty that it would involve the United States directly in China's internal problems, including the economic problem. But, in theory, it could have been done. That was one line of American policy. The Republicans, who were not in office, tended to favor it. The Democrats, who were in office, opposed it.

Then there was the other way it might have been played. That was the way of bipartisan agreement to support the Chiang regime only if that regime would first make itself acceptable to the Chinese people by reform. This was always the preferred State Department line—on the theory that in the long run no regime can survive which fails to win and hold a substantial popular base. And this was the way the State Department tried to play the China game. But every time it seemed to be getting somewhere, the play would be spoiled by political disagreement in Washington.

So it is not correct to say that America's China policy failed. It is correct to say that, because of domestic political disagreement, America has not yet succeeded in evolving a China policy and that as a result to this day America's voice in China is ignored and America's hand is ineffective and the object of scorn.

The bill for playing domestic politics with China policy has already run to two billion American dollars, plus the loss of most of China to the Communists, plus heavy loss to all American commercial interests in China, plus what little prestige Americans had left in China.

Politics, beyond the water's edge, is expensive.

FAR EASTERN POLICY

The only point in looking backward is to see better how to go forward. If United States policy in the Far East since the war has been a failure, then what can be done to avoid similar failures in the future?

Most retrospective analysis of the subject today stops at Yalta, the point at which Russian influence enters the scene. Yet, even more profitably Americans could look back a full century to the great Taiping rebellion for an understanding of the indigenous peasant roots of Chinese revolution.

Communism has given leadership to this native revolutionary tide in our own day, as nationalism in its later phases has resisted it. But behind it, now as in 1850, is the nonpolitical but crucial fact of population pressure, abetted monumentally by drought, flood, famine, and disease. Ten times as many American arms and dollars as have flowed into China in recent years could not hold back indefinitely the vast historical change made inevitable by these factors, plus the swollen tide of Chinese antiforeignism.

The problem has been to ride the historical current, not fight it. Unfortunately, Nationalist leadership has chosen the latter course. By default, the revolution has passed to the iron-handed direction of men who received many of their methods and most of their ideas from Moscow. The mistakes at Yalta and later American vacillations (occasioned by the lack of bipartisan agreement) have helped Moscow to tighten its relations with this revolutionary leadership and at the same time have put the United States in the position of supporting half-heartedly the ineffectual representatives of reaction.

More aid, with stricter American supervision, might have staved off the collapse for a time. But it would also have added vastly to popular Chinese resentment against American interference and to the moral weakness of the Nationalist Government. By giving the latter the fleeting illusion of strength from the outside, it would have concealed a little longer the fact that real strength is to be found only in moving with the dynamic forces of history—in this case particularly toward basic land reforms.

The truth is that American policy can support a strong, progressive, anti-Communist leadership in China when such leadership exists, but cannot create it when it is nonexistent.

Now, as Nationalist resistance dwindles, the victorious Communists are faced with forecasts of the greatest famine of the century following the gigantic floods and dislocations of this year. Their bold plans and promises will be put to a severe test. If they fail colossally as the self-appointed leaders of the revolutionary drive for a more abundant life, the revolution will in time grind them down, as it has ground down the Nationalists.

Shall American policy, by renewed aid to the discredited Nationalist remnant, help the latter—through its blockade of coastal ports, for instance—to swell the accumulating miseries of the masses, hoping thus to bring chaos down on the Communists? Or would such a policy divert the wrath of the people from their Communist masters to American imperialism and its Nationalist running dogs?

The answer to this dilemma must rest on moral as well as pragmatic grounds. To fight communism in China, it is necessary above all else to have a vital alternative leadership for the people to turn to. The finding and fostering of such leadership should be a continuing aim of American policy.

Public-Power Policy

EXTENSION OF REMARKS

OF

HON. GEORGE H. CHRISTOPHER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 16, 1949

Mr. CHRISTOPHER. Mr. Speaker, early in the session of the Eighty-first Congress the House passed the appropriation bill for the Department of the Interior. This measure carried funds for the Government transmission lines from projects in California, Oregon, Idaho, Montana, and Colorado as well as money for two Government power plants and six substations. It likewise carried an appropriation for the Southwestern Power Administration in Missouri, Oklahoma, Arkansas, and Texas and provided for marketing of Government-generated power from flood-control projects in eight Southeastern States. When the measure reached the Senate the Appropriations Committee of that body deleted most of these appropriations for public power and reduced others almost

to the vanishing point. Thus, the Senate Appropriations Committee yielded to the great private power utilities involved who want to obtain an absolute monopoly on all power generated in the United States, both public and private. This issue is being fought out today in the Senate, where an attempt is being made to restore the funds voted by the House for Government construction of transmission lines. The issue is basic. If the private utilities win, it will reverse a policy for equitable and adequate distribution of power from multipurpose projects that was laid down by Congress as far back as the Reclamation Act of 1906 and reaffirmed by Congress many times and as recently as 1944. This transmission-line battle represents the latest strategy of the private utilities to take over the public-power program in its entirety. For many years they tried to prevent Congress from approving multipurpose projects. They are still fighting against the CVA in the Northwest and TVA in Tennessee. They are attempting to hamstring these and prevent the authorization of others unless they can obtain the entire output of electric current at the bus bar at dump rates and resell the current generated at these dams at three times TVA rates.

If private utilities control the distribution and sale of all power as would be authorized in the cases involved in the Senate bill, then private power would have an absolute monopoly on all electric current and could fix its own rate since it would be the sole purchaser of power from the Government and the only source of power for REA. The Government without transmission lines of its own could not move to prevent this monopoly. The lines are clearly drawn and the issue is set out. Shall the consumer have the benefit of the power created by the flood-control dams that have been built and will be built by the taxpayers' money or shall the private power companies be allowed to continue to exploit the consumer even with the power generated at public expense. To allow private power companies to pick up current at the bus bar at dump rates is equivalent to building the dams at public expense and making the private power companies a present of the dams and generators when they are completed.

I include an article from the Missouri Farmer, as follows:

CONGRESS WILL DECIDE WHO GETS THE POWER

(By H. E. Klinefelter, M. F. A. Legislative Committee)

Some 53 percent of Missouri's farms are electrified. The other 47 percent of our farm families are interested in obtaining electricity. In many instances REA cooperatives have the material on hand and the necessary capital to extend electric service to additional farm homes. Down at Sikeston, for example, the money and materials have been available since 1945 to serve 3,000 more farm families. Many farmers cannot understand why the service is not being extended more rapidly, and why rates in many instances are so high.

Just what is the cause of this seeming delay? The cause is a power shortage. Who is responsible for this power shortage? The big power companies must shoulder that responsibility. Notwithstanding their statements to the contrary, they have either been unwilling or unable to furnish adequate power to REA cooperatives, and at reasonable rates.

Before an REA-financed cooperative can extend its lines to additional farms it must have the power to energize the new line, plus some additional power to take care of added burdens when farmers buy more electrical equipment and thus increase the load.

This power shortage has brought about a big fight in Washington before congressional committees, and REA-financed cooperatives and the Missouri Farmers Association have been right in there pitching for you, the farmers of Missouri. The big power companies have been right there pitching, too, but against you and your REA-financed cooperatives.

The fight in Congress has revolved around an appropriations bill for the Southwestern Power Administration, which is the marketing agency Uncle Sam has provided to sell power produced by Norfork, Bull Shoals, and other dams being built in this area by the Corps of Army Engineers.

At Norfork Dam, for instance, a 35,000-kilowatt generator is producing power which is being sold to the Arkansas Power & Light Co.—which incidentally is one of the big contributors to NTEA to fight farmer cooperatives—and another new generator of the same capacity is now being installed. At Bull Shoals, where a big dam will not be completed for another 2 years, enough new power will be produced to light three cities like Little Rock, Springfield, and Tulsa.

The whole question is: Will these new sources of power be turned over to the big utilities or will it be made available to REA-financed cooperatives in Missouri and Arkansas? If the appropriation bill for SPA is approved, the Government will build transmission lines from these dams and sell the low-cost power to REA-financed cooperatives. REA cooperatives, owned by farmers, will pay back the money with interest.

On June 6, F. V. Heinkel, president of the M. F. A., testified in your behalf before the Senate Appropriations Committee in Washington. He told the committee that "the reason why electric service has not been expanding satisfactorily in Missouri is due to an acute power shortage. Just why the power shortage does exist in my section of the country where sources of power such as coal and water are relatively abundant, I have been unable to determine. But a power shortage does exist. It is acute. And it is definitely retarding the progress of Missouri agriculture."

Mr. Heinkel made the point that "the lack of electricity on Missouri farms, which makes it almost impossible for farm families to have running water in their homes and modern conveniences such as refrigeration, is contributing mightily toward the elimination of the family-size farm. As the older generation passes on the young folks leave for the city's bright lights, and the farm is sold and merged into larger holdings. The young farm people of today who are educated in town high schools and colleges simply refuse to live with the primitive conditions which prevail on nearly half of our farms.

"I submit to you that this trend bodes no good for our country in times when democracy is on trial throughout the world. It is axiomatic that a nation where the small people own homes and family-sized farms has an anchor that it otherwise could never have. Where the small people have no visible stake in the country, and hard times descend upon us as happened back in the 1930's they are susceptible to ideas that are not good for our Nation."

The Power Trust's lobby testified voluminously before the committee, leaving the impression that they love the farmer and his REA-financed cooperatives. In response to this line of talk, President Heinkel told the committee: "Now, yesterday, we heard quite a bit of testimony here which would indicate that these private power companies in Missouri are gracious, benevolent, and magnanimous companies. Gentlemen, the record is otherwise in the State of Missouri. It has not been all peaches and cream and love and affection.

"In the first place they have failed, refused, or neglected to serve the farmers, or there would not have been any REA. In the next place they have failed, refused, neglected, or are not in position to serve the REA cooperatives, or these cooperatives would not be getting their power from municipalities that do not want to serve them.

"If adequate power was available, we would not have situations where 3,000 farmers are waiting for power with money and materials available but no energy available. Yet, the representatives of the private power companies come here and one would get the impression from their nice, pleasing testimony that they are friends of the farmer. The record does not show that."

President Heinkel said "the Union Electric Light & Power Co. furnishes power to Sho-Me, and Sho-Me furnishes this power to the cooperative that serves my farm in Franklin County where I pay $2.75 a month minimum charge. This same Union Electric Light & Power Co. came within a mile and a half of my farm where REA had acquired right-of-way and built what some call a spite line, furnishing farmers at an 80-cent minimum charge. My power comes from the same company in the background, and I pay $2.75. I do not know what their justification is for furnishing these neighboring farmers at an 80-cent a month minimum charge unless it might be to demoralize some of us fellows that get our power through REA, thinking that we might not look behind the scenes."

The big power companies are hostile toward farmer cooperatives of all kinds. As evidence of this, 15 of the 43 big contributors to the NTEA during the first quarter of this year were power corporations, one of the big ones, as already mentioned being the Arkansas Power & Light Co. which is now receiving all the power from Norfork Dam and is covetous of the power that will be produced by the new Bull Shoals Dam on White River.

Just how the big fight for power will turn out Congress will soon determine. Meanwhile farmers now know for sure that the Power Trust is their implacable enemy, and the only means farmers have of defending themselves against such enemies is to stand behind their REA cooperatives and the M. F. A.

Here's the big question: Will the new power from these dams be made available to farmers through REA-financed cooperatives at low cost to run washing machines, milking machines, to pump water, and generally lift the drudging burdens from the backs of Missouri farm families? Or will it be turned over to the big power companies so that they can sell it at a big profit to themselves?

Norfork Dam has one 35,000-kilowatt generator in operation. This power is now going to the Arkansas Power & Light Co., some of which is resold to REA-financed cooperatives at high rates. Another 35,000-kilowatt generator will be in operation next December, and there is room for two more generators of that size.

Bull Shoals Dam will be completed some 2 years hence. When completed, it will furnish enough new power to supply three big cities like Springfield, Tulsa, and Little Rock. Who will benefit from this great project? Will it be the people? Or the big utilities that hate farmer-owned cooperatives? Congress will decide?

Opinion in Dorothy Bailey Case

EXTENSION OF REMARKS
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. MURRAY of Tennessee. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the opinion of Judge Alexander Holtzoff, district judge for the United States District Court for the District of Columbia on July 27, 1949 in the action brought by a Government employee, Dorothy Bailey, against the members of the Loyalty Review Board of the Civil Service Commission.

I commend this decision to the attention of the Members because it deals with a very important problem—the loyalty of Government employees and the necessity of preventing persons who are disloyal or persons who are bad security risks from entering or remaining in the Government service.

OPINION OF COURT

Judge Holtzoff. This case involves a very delicate and difficult problem of interrelations between the utmost fairness to Government employees and the necessity of preventing persons who are disloyal, persons who have ideologies inimical to American institutions, or persons who are bad security risks, from entering or remaining in the Government service.

The Government must be protected, but, on the other hand, Government employees must be dealt with fairly. The Court feels, however, that the problem is not one for the judiciary but for the executive and legislative branches of the Government in the first instance. No one has a constitutional right to Government employment. The Government has a right to fix standards for entry into Government service, and it may go further and employ any person or refuse to employ any person arbitrarily. The Government similarly may fix methods for discharging employees, or it may do so in a haphazard way. The courts have no function to perform in connection with the hiring and firing of Government employees. If however, Congress prescribes certain methods to be followed and certain procedure to be applied, or if the Executive by a valid Executive order does so, then the courts do have a right to determine whether the law or the Executive order, as the case may be, has been complied with, but beyond that the courts may not go.

This court has already had occasion to hold the President's loyalty order to be valid and constitutional. The only thing that remains to be determined in this case is whether there was any failure to comply with the order. The plaintiff claims that she is entitled to the protection of section 652, United States Code, title 5. Admittedly, the requirements of that provision of law have not been complied with in this case. The Court is of the opinion, however, that this plaintiff is not entitled to the protection of section 652, because, under the regulations of the civil service, she was a conditional appointee. The word "conditional" is more or less synonymous with "probation." The civil-service law authorizes the Civil Service Commission to prescribe periods of probation before permanent employment is entered upon. It seems to the court that this authority exists not only with respect to the original appointment to civil service but also to any subsequent appointment. The statutory authority conferred on the Commission by title 5, section 653, subsection 2, paragraph 4, is sufficiently broad to cover both original appointments and subsequent appointments. It is the court's conclusion, therefore, that section 652 does not apply to this plaintiff because she was a conditional appointee. The procedure followed by the Loyalty Board in this case is that prescribed by part I of the loyalty order which relates to investigation of applicants. A conditional appointment is classified with applicants, and properly so.

The next objection raised is that the board is required by the Executive order to act on all the evidence that is presented to it, and it is contended on behalf of the plaintiff that the board did not act on evidence. To be sure, it did not act on evidence if the word "evidence" means evidence admissible under the common-law rules of evidence. Obviously, this is not the case. The common-law rules of evidence prevail in jury trials. Originally they did not prevail in the court of chancery. More recently they have been applied, and are being applied, in equity cases as well, but the common-law rules of evidence do not prevail in administrative agencies. The term "evidence" means any proof that may lead to a conclusion. It is not limited to such evidence as is admissible under the common-law rules of evidence. For example, French courts receive hearsay evidence, which our courts exclude. Surely one would not say that because of this circumstance the French courts convict persons without evidence.

The third paragraph of part I of the Executive order specifically provides that reports of the Federal Bureau of Investigation, reports of any intelligence and investigative agency of the Government, as well as the files of the House Committee on Un-American Activities, shall be available to the body making the investigation. The only difficulty from the plaintiff's standpoint is that she was not confronted with the evidence against her, and was not informed of the names or the identity of the witnesses who gave the information against her. We must bear in mind, however, that a Government employee is not entitled to an open trial under the Constitution. His connection with the Government may be severed without any hearing of any kind, and there would be no violation of the Constitution or of law except as section 652 otherwise provides. But even section 652 does not require an open hearing. It merely requires charges and an opportunity to file a written reply. Whenever a hearing is accorded it is a matter of grace rather than a matter of right.

Counsel for the plaintiff has argued that the conclusion was reached by the board on the say-so of the Federal Bureau of Investigation without any evidence being presented to the board. The court does not so understand the transcript of the hearing. The chairman of the appellate board summarized the information against the plaintiff. The information is that the plaintiff was a member of the Communist Party in the District of Columbia as early as 1935; that in the early days of the war period she attended Communist Party meetings; in 1936 she was a known member of the so-called inner group of the Communist Party operating in the District of Columbia and was one of those responsible for establishing a minority group in the Central Labor Council; that she was or is a member of the Communist Party, or is dominated and controlled by the party to the extent she follows its instructions and has been doing so for a period of 8 years. The chairman of the board then states, after counsel for the plaintiff emphatically denied the charges, "I can only say to you that five or six of the reports come from informants certified to us by the Federal Bureau of Investigation as experienced and entirely reliable." In other words, it is a reasonable inference that the board had before it statements of five or six persons substantiating these charges, and that the Federal Bureau of Investigation certified that the persons who made these statements were both experienced and entirely reliable. It does not appear that the board did not have any information as to the identity of these informants. All that appears is that the chairman of the board stated he did not know whether those informants were active in a Federal employees' union, or how active they had been in it. That is a far cry from saying that the board had no evidence before it.

The plaintiff offered evidence controverting these assertions. The board weighed the evidence in support of the assertions and the evidence offered to controvert them.

I see no way in which this court, under the circumstances, has any right to review the conclusion of the board or to set aside its findings. The court realizes that it is most unusual not to disclose to a person the evidence against him, but this is an administrative proceeding. There is no legal or constitutional right in plaintiff to have a hearing of any kind. Here the plaintiff received a partial hearing. Under the circumstances the court reaches the conclusion that the plaintiff has no cause of action.

The plaintiff's motion for summary judgment is denied, and summary judgment is granted in favor of the defendants.

Gen. Joseph Lawton Collins

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the New Orleans States and the New Orleans Item and a newspaper article regarding the nomination of Gen. Lawton Collins as Army Chief of Staff:

[From the New Orleans States]

COLLINS' NOMINATION

Nomination of Gen. Joseph Lawton Collins as Army Chief of Staff is, to home-town New Orleanians, well merited. As Vice Chief of Staff for the past year he was alter ego for Gen. Omar N. Bradley, whom he succeeds.

What New Orleans thinks of its four-star general was well demonstrated when he came home in October 1945. Tens of thousands of residents turned out to welcome him vocally and with a snowstorm of confetti and ticker tape.

General Collins is admirably equipped for his new assignment by personal quality and experience. After Pearl Harbor he went to the Pacific theater in command of the Twenty-fifth Division and saw rugged fighting on Guadalcanal and other points in the island-hopping campaign. From the fast thrusts which distinguished his leadership he earned the nickname, "Lightning Joe," which still persists.

Then came England and leadership of the Seventh Corps, one of the first to establish command posts on the Normandy Beach on D-day. Liberation of Cherbourg was followed by the drive to encircle the Ruhr and meet the Russians at the Elbe.

General Collins, a fighting man's general, has a keen insight on domestic and world military problems and is no saber-rattler. That a man of his caliber has been nomi-

nated for Chief of Staff is reassuring in these momentous days.

[From the New Orleans Item]

SUCCESS STORY

The boy who used to run errands and make deliveries for his father's small neighborhood grocery in Algiers today stands at the top of what became his chosen profession. Joseph Lawton Collins, of New Orleans, the beloved "Lightning Joe" of his World War II troops, has been made Chief of Staff of the United States Army.

The entire story of continuing opportunity in a free land is packed into those few lines. The Collins family was one of very moderate circumstances. Its breadwinner found it no easy task to provide for 11 children from the revenues of a small store. But Joe was graduated from the Boys' High School, where, incidentally, he starred in the 1912 class play, Julius Caesar.

The fact that his uncle, Martin Behrman, was mayor of New Orleans in 1913 undoubtedly played its part in securing for him a nomination to West Point. But thenceforth he was strictly on his own. And it was on his own that he made a brilliant record in both the Pacific and European theaters during World War II. Among other things, he "opened the door" for General Patton's break-out in Normandy; yet he was quite content to let the colorful Patton receive virtually all the glory for the spectacular dash across France that followed.

New Orleans is understandably proud. "Home town boy made good" in a very big way when "Lightning Joe" Collins was elevated to the Army's highest position.

"LIGHTNING JOE" AND HIS BELGIAN BLITZ

(By Hal Boyle)

NEW YORK.—Gen. J. Lawton Collins, the new Army Chief of Staff, earned his nickname—"Lightning Joe"—on many battlefields.

The graying, 53-year-old soldier—one of the handsomest men in the Army—was one of the most colorful and energetic field commanders of the Second World War.

He was tough and cool and won his battles first-hand. He ran his famous Seventh Corps as effectively as any top business executive. An all-around soldier, he could plan a battle, fight it through—and encourage his own front-line troops with his presence.

This was his battle formula:

"Outguess the enemy, keep him off balance, and never stop driving."

Some generals are boxers, and some are punchers. "Lightning Joe" is a puncher. It was his faculty of sustained drive that led Gen. Omar Nelson Bradley to give him the critical battle assignment that built his fame.

FINE COMBAT RECORD

And few generals in American history can match his combat record. His victories stretch from Guadalcanal to the Elbe. Collins came to Europe after successfully completing the mop-up of Japanese on Guadalcanal and New Guinea.

His Seventh Corps seized Utah beach in Normandy. It freed Cherbourg, the first French metropolis liberated from the Nazis. It broke the crust at St. Lo. It was first to crack the Siegfried line and capture a major German city—Aachen. It took Cologne, too, expanded the first bridgehead across the Rhine at Remagen, and at war's end linked up the Russians along the Elbe.

But "Lightning Joe," who never dodged a scrap, once got into a fight he wasn't looking for.

ON RESERVE MISSION

It happened in the Battle of the Bulge in Belgium in December 1944. The German break-through imperiled the American line of communications, and General Eisenhower temporarily put his First and Ninth Armies under the field leadership of Field Marshal Montgomery.

Monty immediately named "Lightning Joe" to head a reserve corps. This corps was to be used as a counterblow at the right time—when the German drive had been contained. But in the meantime it was under strict orders to refrain from attack.

One of the outfits in the reserve corps was the "Hell on Wheels" Second Armored Division, led by Maj. Gen. Ernie "Old Gravel Voice" Harmon.

After a spectacular 100-mile night march, Harmon's tankers reached their assembly area near Celles, Belgium. Then they started to run into German outposts. Moving more swiftly than expected, the Nazis were only a few miles from the Meuse River. If they reached it and took Dinant the American armies would be split in half.

Harmon immediately relayed this information to Collins, who asked:

"What do you want to do, Ernie?"

"I want to attack, but we're under orders not to," said Harmon. "And there isn't time to get the orders changed."

"Go ahead, Ernie," said Collins. "I'll take the responsibility."

In a great grinding battle, fought in snow and fog, Harmon's division annihilated the German armor—and halted the German thrust.

Field Marshal Montgomery, angered at first because he thought his orders had been disregarded, sent a rebuke through channels. But when he learned the full story he sent his compliments to Collins and Harmon.

The battle had turned out to be one of "Lightning Joe's" best blitzes.

The Real Indictment of the White Paper

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 16, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Bishop Fred Pierce Corson, of the Methodist Church, Philadelphia, Pa.:

THE REAL INDICTMENT OF THE WHITE PAPER

(By Bishop Fred Pierce Corson)

Because of my advocacy, both prior to and following my visit to China in 1947, of a constructive and aggressive policy on the part of the United States against the spread and dominance of communism in China and the hearing my statements have received both within and outside of church circles, I offer the following personal appraisal of the State Department's white paper on China.

First, let me say that unless the American people, through all the avenues for transmitting information and for the development of public opinion, study this report carefully and critically, it will be of little value in forcing the Government in Washington to the formulation of a sound and effective policy on communism in the Far East. We have been facing an emergency there. The administration in Washington has been torn between so many conflicting influences that it has simply done nothing by its own admission. To proceed now with a "leisurely study" is unthinkable and the American public by the democratic processes available should force the immediate declaration of some policy on the part of the Government which has had 4 years to produce it already. This is basic to our own economic, political, military, and ideological safety.

In the study of the white paper the public must understand its exact nature and purpose. This the New York times stated editorially when it said that "one of the vital interests of (the white paper) is self-justification which certainly is an enemy of objective analysis." "It will not take the position it (the administration) has been mistaken." "This complete disclaimer," the New York Times continues to say, "of any responsibility for what has happened to China not only obscures the truth, it puts the mark of very special pleading on the whole document." "It will make the reader wary rather than sympathetic." It concludes by saying that, "This white paper, on attempt at vindication, is actually a sorry record of well-meaning mistakes."

Therefore this statement on China should be studied both for what it does and does not say.

First, let us consider what the paper implies was the Government's policy during these 4 years of Communist aggression toward Government representatives and others of outstanding reputation on Far East affairs, who advocated help for the only force in China at that time available to fight communism, namely, the Nationalist Government. Gen. Patrick Hurley, sent to China on a Government mission, advocated a policy of help. He was discounted and shunted off. General Wedemeyer was sent to China to make a survey. He advocated a practical policy of help. It was kept even from Congress for 2 years and nothing was done to determine whether or not China would accept it. General MacArthur, who knows more about the Far East from a military and political standpoint than any person in Government service and who is known personally to advocate an active policy against communism in the Far East, beginning in China, has not been called in for conference and has not been questioned in any way which would permit, as a military officer his opinions on China, to get to the public. At least, by negation the Government in power did have some policy during this period. It was to let the one organized power in China fighting communism die.

Second, the effort to make a scapegoat out of General Chiang and thus divert criticism from the State Department policy on China needs, if for no other reason than good sportsmanship and common moral decency, to be carefully analyzed from the standpoint of its justification. The impression during these years which the Government encouraged the American people to have of Chiang, that he was hopelessly tied to corruption, contributed to his discrediting which relieved the pressure of public opinion on the Government to do something for China. It also lost us China. Now to this charge of corruption the Government adds that of contrariness. There was corruption in the Government of China but not in Chiang. An outstanding American, whose word the Government validates by keeping him in office, said in 1947 that in all the years of his intimate knowledge of China there had never been a time when there were more men of the highest integrity and caliber in the Chinese Government than at that time. There was wartime corruption in the American Government, "awful and appalling" as one high official described it.

The issue in China is not Chiang. It is much greater than one man. It has been and still is how, for the safety of the world, to curb communism in China. Chiang has been and still is the only force which has shown any ability, power, or possibility to do anything about this. But, in order to eliminate Chiang, who according to the white paper, has not been challenged by the United States Government with any definite proposals of help since 1947 when communism

was still confined to Manchuria and its environs which by agreement our Government had given to Russia, our Government has sat by and let communism overrun all of China, with only Formosa, which Chiang saved as a possible base of operation, against it. How different from this same administration's policy toward the Communist threat of Greece. When the United States deliberately bolstered up the regime of an unpopular King whose government had been notorious for its corruption and its disregard of the people's interests.

To say now that the Chinese people must realize that the Communists do not serve their best interests but those of Soviet Russia is a weak defense for a do-nothing policy which permitted communism to get a strangle hold on all of China. The Secretary of State should know by this time that the first precaution that communism takes in a conquered country is to remove all means of rebellion and revolt.

In further defense of the do-nothing policy and as a means of quieting the fears of China's neighbors in the Far East, as well as the people in America, the Secretary of State declares that, "should the Communist regime lend itself to the aims of Soviet Russia's imperialism and attempt to engage in aggression against China's neighbors, we and the other members of the United Nations would be confronted with a situation violative of the principle of the United Nations Charter and threatening international peace and security." From the standpoint of stopping Soviet absorption of Far East countries this statement in effect says nothing important. We sat by and let the imperialism of Soviet Russia take over China, thereby establishing the base for its infiltrating operations on neighboring countries. The policy of Soviet Russia is not open attack but revolt from within. When Communist-fomented trouble starts in Japan, will we, according to the Secretary's statement, attack Russia?

Then to the pious hope expressed in the paper that, without actual aid from the United States, of course, "China will ultimately throw off the yoke of communism," is hardly worthy of a Nation which poses as the only vigorous champion of democracy in the world. The administration in Washington knows that it did not take such an attitude toward the overthrow of communism in Europe. It also knows that communism destroys first all the means of revolt in a nation it takes over. They also know that while the Chinese people have great resistance powers to an unwelcome regime that it took them over 200 years to throw off the Manchu yoke. What will happen if communism rules the Far East for 200 years?

The real question which the people expected the white paper to answer was: What has permitted communism to take over China and what shall America do about it? In whatever answer the paper has attempted for this question, its defense or its own mistakes and the attempted assessment of the blame on a man and a Government which we used to deploy 2,000,000 Japanese troops from attack on our armies and praised for his effective and patriotic service on behalf of democracy have only brought out more clearly America's responsibility for what has happened in China.

The place and time to stop trouble is at the source and in the very beginning, yet the administration took Manchuria with its concentration of Japanese industry and war supplies away from China to which it had been promised and gave it to Russia.

In 1947 when communism was still confined to the north of China and top American military experts were saying that Chiang must have a mobile army to reduce the cost of his infantry organization and transport, and to strike quickly and often at the centers of Communist trouble, and that 1,000 American war surplus planes without the use of one American soldier would do this, our Government ignored their advice and did nothing except to tell Chiang he must form a coalition government with the Communists and permit them to keep their local armies which, with good sense and statesmanship, Chiang turned down.

When we were withholding help to China for the reason that there was a one-party system there, we ignored the fact that Chiang was insisting that the minority party be represented in the legislative Yuan even though they had not elected their men and that our Supreme Court in a two-party country at that time had only one Republican with eight Democrats on it.

While China was suffering the economic corruption of inflation, the administration by the price fixed for silver, which was the standard of Chinese currency, was draining off China's silver and thus removing the one hope of maintaining economic stability in China.

The important part of the white paper is the Wedemeyer report and what the administration did with it. A full consideration of this important document must not be overlooked in the devious defenses of the rest of the paper.

The Wedemeyer report represents an on-the-spot survey by an accredited Government representative. It offered a definite program which was ignored, suppressed and never proposed to the Chinese Government. Why? Was the representative poorly chosen, or was he sent there simply to confirm a policy already determined upon and to find plausible reasons to defend such a policy?

The Wedemeyer report put the finger on the source of the trouble—Russia in Manchuria—and offered a practical proposal concerning it. It did not minimize the changes which would have to take place in the Chinese Government but offered a plan to achieve them. It saw clearly the type of aid which would be both inexpensive and immediately effective and urged that it be made available. However, none of these proposals were ever formally offered to the Chinese Government. Nothing was done about Communistic domination in Manchuria; no definite offer of aid in return for changes in government were ever made to General Chiang. I was in China following the survey made by General Wedemeyer. Both the Generalissimo and his Premier—Cheng, as well as numerous other Chinese in places of influence, assured me of their willingness to accept what the Wedemeyer report proposed.

The most disappointing phase of the white paper lies in the total absence of a constructive policy so immediately needed in what has come to be a really international emergency. The best it can offer is to write off an authenticated proposal like General Wedemeyer's, ignore such experts on the Far East as MacArthur, Judd, Rhee, Quirano and propose a leisurely study by some good men who have not been in close touch with the Far East in recent years, if at all.

What further delay will cost us in men, money, prestige, and economic disadvantage is not touched on. What will happen to political freedom in China because of the do-nothing policy is passed over. What is happening to real religious freedom once enjoyed under the Chiang regime is not even considered. Communistic changes already taking place in the educational system of schools and colleges in China are not mentioned. The effect of our avowed intention to do nothing for the only forces in China fighting communism, to discourage the fight for freedom and encourage the making of terms with the Communists, is not brought out. Nor is our responsibility to do something in China to protect the other friendly nations in the Far East anywhere in the paper acknowledged.

The white paper is a blank paper or a whitewash paper insofar as a constructive and effective policy is concerned. It is an admission of ineptitude on the part of a State Department which cannot produce a policy after 4 years of dealing with the Chinese situation. It is a depressing attempt at political whitewash when the democratic structure of the world is threatened because statesmanlike identity with what is right continues to yield to politicianlike deference to what is expedient.

My Report to the People

EXTENSION OF REMARKS
OF
HON. JOHN McSWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. McSWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to take this opportunity of reporting to the good citizens of the Sixteenth District of Ohio an account of my stewardship as their Representative in this honorable body for this, the first session.

INTRODUCTION

Friends, the first session of the Eighty-first Congress is about over. I feel that you, who have so kindly sent me down to represent you in Washington, have a right to know not only how I have voted but also what my feelings have been in regard to each piece of major legislation that has either passed this House or been defeated. On August 16, I sail for Europe. While there, I plan to make my personal observations concerning the effect of the Marshall plan on the participating countries. This tour of mine will be of no expense to the Government, as I am personally paying for it. Before I sail, I am taking this opportunity to give you a résumé of my activities during this session of Congress. This report will be necessarily long as it covers numerous pieces of legislation, all of which may not be of special interest to you but, inasmuch as I am your Representative in Congress, I feel that you will bear with me in reading this report carefully and giving me the benefit of your views on it.

OPENING DAY

On January 3, opening day, I had the pleasure of casting my first vote for the election of my good friend and colleague, the Honorable SAM RAYBURN of Texas as Speaker of the House. Mr. RAYBURN has served the State of Texas and the Nation for over 33 years. During this time, he has earned and kept the respect of all Members of the House regardless of party affiliation. On this same day, I voted to liberalize the rules under which the House operates by weakening the power of the Rules Committee to the extent that a measure not acted upon after 21 days by that committee could be discharged from that committee by a majority vote of the House membership. This move enables

controversial legislation to be brought before the floor of the House, where it will receive open and adequate debate on its own individual and relative merits.

PRESIDENT'S PAY INCREASE

On January 5, we heard our President, Mr. Truman, deliver his inspiring message on the state of the Union to a joint session of both Houses. In this message, President Truman outlined the program which he expected to have enacted by the Eighty-first Congress. This program was based on the wishes of the people as expressed in the great victory at the polls on November 2, 1948. One of the first measures that we were called upon to approve was a raise of the President's salary and that of the Vice President and Speaker. I voted for this measure because as a history teacher and as an Army officer overseas, I knew first-hand how the salaries of not only the heads of foreign states but also of their ambassadors far exceeded that of our President, who is the executive of the greatest country on earth. Heads of private industry receive as much as 10 times the salary of our President. Some foreign ambassadors not only were given a house complete with servants and china and silverware, but several limousines complete with footmen, while our ambassadors were struggling to pay the rent for their quarters abroad. I might also add that it was a Republican Congress that granted the President his present salary back in 1909 to William Howard Taft. Fifty thousand dollars in those days had a purchasing power of almost six times that voted the President this year, and we must remember that this was before the advent of the income tax. This measure was one of the first recommendations of President Truman's Commission on Reorganization of the Executive Departments, headed by former President Herbert Hoover, to be adopted.

On February 7, I voted for H. R. 2361, the reorganization bill, which paved the way for the adoption of all recommendations of this Commission. Since that date, one other recommendation has been adopted: the reorganization of the Department of State. Subsequent to this, the President submitted many other commission recommendations to the Congress, which will become law on August 19.

RECIPROCAL TRADE TREATIES

On February 9, I voted to renew the reciprocal trade agreements, recalling that former President William McKinley, as one of the Nation's leading and outstanding tariff experts, in his last speech before he was assassinated, advocated reciprocal trade treaties because he believed that the tariff policy prevalent at that time had gone as far as it could go for the purposes for which it was enacted.

WAR ASSETS AND FREEDOM TRAIN

On February 14, I brought out the rule for the consideration of H. R. 2402, which would extend the War Assets Administration to carry on its activities to June 30, 1949. This legislation gives the War Assets Administration sufficient time to dispose of the war materials still on hand. I spoke on behalf of this measure, and, in this connection, the RECORD will show that I stated:

War, from beginning to end, is waste, a waste of human life, a waste of the matériel of a country, and a waste of the natural resources of a country. To me, this bill is merely an effort on the part of our Government to try to salvage as much as possible and to get it back from war purposes into peace purposes.

On this same day, February 14, I had the pleasure of voting for governmental operation of the Freedom Train up to July 4, 1951. In this conection, the RECORD will show that I stated:

I feel this train is, in reality, almost a mechanized Paul Revere, carrying into every Middlesex village, and farm, the things we want the people of our communities to see. I have been a history teacher much of my life, and I always hoped that every graduating class from the high schools of America could come to Washington and there see the great fountainhead of our democracy and the fountainheads of our freedom.

Now, it is possible for those same high-school students to see these precious documents at their local railway yards.

TVA STEAM GENERATING PLANT

On February 16, I voted for the first deficiency appropriations bill, which included among many other things a provision for the construction of a steam generating plant at New Johnsonville, Tenn. The private power interests fought this measure but I believe that you will agree with me that a tremendous investment such as TVA should be protected. The generating plant will serve as an auxiliary power unit when the waters in the dam and in the river are low. It would have been criminal negligence not to have protected this great investment that is TVA.

On February 17, I voted to extend the President's powers to regulate exports by licensing as this is a national defense measure that was originally given the President in 1940 to protect our stock pile of critical materials from being sold to potential enemies in a strife-torn world. On this same day, I introduced H. R. 2851, which provides for the relief of Mr. Carl L. Sexauer, of Canton, Ohio. Mr. Sexauer suffered personal injuries as a result of objects thrown from the window of a speeding troop train while on duty as a railroad switchman at the Canton drop forge plant at the west end of the city of Canton. The bill provides for the payment of $5,000 to Mr. Sexauer. The Department of the Army has turned in a favorable report and it is my hope that the Judiciary Committee will approve it and that final action can be taken in the session beginning in January of 1950.

MY CONFINEMENT AT THE NAVAL HOSPITAL

On March 15, I was stricken on the floor of the House with an abdominal attack and was taken to the United States Naval Medical Center at Bethesda, Md. The doctors there were very efficient and I received excellent care. I was fortunate in that it was not necessary to have an operation. Although I have served in combat overseas with the Army in both world wars, I wish to state here that the Navy took very good care of me. I might add that the costs of my medical care were paid by me personally and were of no expense to the Government. During my 2 weeks of hospitalization, two important pieces of legislation were acted upon.

A. RENT CONTROLS

On the very same day that I was taken to the naval hospital, the House voted on the rent-control extension bill. I wish to state that all my investments are in rental properties. I have tried to acquire houses that became available in my own city of Wooster and to have them converted into apartments. Therefore, rent controls resulted in financial losses for me, especially in those apartments where heat and hot water are furnished. The price of coal during and since the war has increased and in some cases doubled. Despite this personal loss, I am for rent controls because I can think of nothing more serious that could happen to a man of moderate means with a family than to have these controls suddenly lifted especially with the existing and very acute housing shortage. I did, and still do, feel that where services are furnished by the owner and where taxes have increased considerably that proper adjustments within limits should be made with the owner. The principle of rent control is fundamentally wrong but controls were needed critically as a war measure. The controls were extended for the sole purpose of gradual and orderly decontrol in proportion to the amount of new housing construction. In regard to adjustments, I voted for the amendment offered by the gentleman from Georgia [Mr. BROWN] that provides for a reasonable return on the reasonable value of property rented as far as is practicable.

On March 16, I was paired for Senate Joint Resolution 36 calling for a special contribution of $16,000,000 for the United Nations Relief for approximately 500,000 Arabs and 7,000 Jewish refugees of the Palestine war.

B. SEVENTY-GROUP AIR FORCE

On March 22, the House passed the Army and Air Force Act. One of its provisions called for a 70-group air force. I was paired for this measure. Even though I have served in the infantry in two world wars, I realize the vital and destructive role that the Air Force plays in modern warfare. This was best exemplified in the recent war in the gigantic struggle to resist and overcome the Nazi aggressor.

C. VETERANS' PENSIONS

On March 24, the House voted on the motion of the gentleman from Texas [Mr. TEAGUE], to recommit H. R. 2681, which would have provided $90 a month to every veteran of World War I and World War II at the age of 65. Still confined to my bed at the naval hospital, I regretted very much not being on the floor of the House to listen to and take part in the debate on this issue. As a combat veteran of both World Wars and as a Legionnaire ever since the American Legion was first formed in Paris, I am vitally interested in all legislation that is

beneficial to my former comrades. I believe in an adequate pension system for those who served our country in her greatest hour of need and to the heirs of those who have paid the supreme sacrifice.

MY RELEASE FROM THE NAVAL HOSPITAL

On March 28, I was released from the naval hospital and immediately resumed my seat in the House. I wish to thank all of you good people sincerely for your fine expressions during my illness. The many kindnesses that you showed me during this time were a source of inspiration and made me feel what I already knew: that the Sixteenth District of Ohio is representative of the finest people in America.

SIXTEENTH DISTRICT FLOOD-CONTROL PROJECTS

On March 29, the House considered the civil functions of the Army appropriations bill. Included in this measure was the amount of $2,133,700 to be used for the completion of the levee system at Massillon, Ohio, and the construction of pumping stations there at an estimated cost of $457,000. The appropriation for the Muskingum project of 14 reservoirs, which included low earth levees for local flood control at Zoar and Magnolia, Ohio, was $1,800,000. All these figures were cut 26 percent in recognition of falling prices and lower construction costs. I voted for this measure as it was extremely beneficial to the people of our district. I also supported on that day the District of Columbia revenue bill, the conference report on the rent-control bill and, on the following day, the Interior Department appropriation bill. I voted for the amendment to the Interior Department appropriation bill that called for a 15-percent horizontal cut in the appropriation, resulting in a very large saving to the taxpayers.

On March 31, I supported the conference report on H. R. 2101, which authorizes the Regional Agricultural Credit Corporations to make emergency loans to farmers.

OLEOMARGARINE BILL

On April 1, the House considered H. R. 2023, introduced by Mr. ANDRESEN, on the subject of oleomargarine. The House adopted the Poage bill instead, which provides that all colored margarine be served in a three-sided shape in public eating places in order to distinguish it from butter. This bill also repeals the discriminatory taxes on oleomargarine and provides for the movement of colored oleomargarine in interstate commerce and requires the posting of signs in public eating places where oleomargarine is sold. In this connection I answered letters by stating that "I believe that butter should be able to hold its own in an open and competitive market and that the consumer should be the judge as to whether he is willing to pay the same price for colored oleomargarine that he pays for butter or whether he wants to buy oleomargarine at any price."

MY NATURAL GAS BILL

On April 4, many bills were passed on the Consent Calendar. Among those that I supported and which were adopted were H. R. 2944, which provides survivorship benefits for widows or widowers of persons retiring under the Civil Service Act; H. R. 997, which extended certain benefits to employees of the civil service, who were involuntarily separated from July 1, 1945, to July 1, 1947, after having served 25 years but prior to attaining the age of 55 years; H. R. 1823, which establishes a Women's Reserve as a branch of the Coast Guard Reserve; and H. R. 3830, voted on by roll call, amending the China Aid Act of 1948. This in turn amends the ECA Act of 1948 in order to waive its provisions and authorize the reappropriation of $54,000,000.

On April 5, I supported House Joint Resolution 212, which authorizes the Federal Security Agency to provide for meeting emergency needs of crippled children for the fiscal year of 1949, and H. R. 3997, the Department of Agriculture appropriation bill. Both of these measures passed. On this same day, I introduced H. R. 4028, which would amend the Natural Gas Act of 1938 by clarifying the powers of the Federal Power Commission in the distribution and consuming end of natural gas after it has left the interstate pipe lines. This measure has received the support of the State public utilities commission, gas companies, and natural gas workers' unions in the State of Ohio in view of the number of days of work lost in the city of Canton alone in the winter of 1948.

On April 7, I supported H. R. 4016, which contained the State, Justice, and Commerce Departments appropriations for the continued operations of those Departments.

EUROPEAN COOPERATION ADMINISTRATION

On April 11, during the debate on the ECA authorization bill, I stated on the floor:

> May I say, Mr. Chairman, that never, in my humble opinion, in the history of mankind was so much given to so many by so few. When I think of 140,000,000 Americans trying to bring rehabilitation and help to practically the rest of the civilized world, in my opinion, it is one of the finest concepts of true charity I know of in the history of the world.

On April 12, the bill was passed. On the following day, I supported the VA deficiency appropriation bill and the Military Establishment appropriation bill.

On April 14, I supported the independent offices appropriation bill.

MY STAND ON TAFT-HARTLEY LABOR LAW REPEAL

On April 26, the House began debate on the proposed repeal of the Taft-Hartley Act. In this connection, I wish to clarify a few points concerning my stand on this measure. I was elected on a platform that called for the outright repeal of the Taft-Hartley Act of 1947. My office received several hundred questionnaires put out by the General Electric Co., the Timken Roller Bearing Co., and the Hoover Co. These questionnaires were not an original expression of the views of my constituents. I always have and always will welcome individually written letters from our people of the Sixteenth Ohio District giving me their own honest views on important issues. I voted for the resolution that called for the outright repeal of the Taft-Hartley Act and the complete reinstatement of the Wagner Act with no amendments because I felt that only in this way would I be carrying out the wishes of the majority of the voters in our district as expressed at the polls on November 2, 1948. As a member of the Committee on Rules, I sat in on all the hearings concerning the granting of a rule for both the Lesinski and the Wood bills. The Wood substitute not only was the Taft-Hartley Act renamed, but it never had the endorsement of the Committee on Education and Labor, which did hold extensive hearings on the Lesinski bill. The chairman of the Education and Labor Committee requested that a closed rule be granted on this bill, the Lesinski bill. I opposed this, in line with my policy of providing open rules on controversial legislation in order that it receive adequate and open discussion on the floor of the House. On May 3, I voted against the adoption of the Wood substitute for the reasons given, and on the following day, I voted for the recommittal of this bill. The motion was carried and the Wood bill was sent back to the Committee on Education and Labor.

In the meanwhile, I introduced H. R. 4419 on April 27 for the relief of the George H. Whike Construction Co., of Canton, Ohio, due to losses sustained on the Jackson Park homes housing project as a result of Executive Order 9301, which changed the workweek from 40 hours to 48 hours. The amount of loss was $14,483.45.

On May 4, after the Wood labor bill was recommitted, I defended our President in reply to the article written by Columnist David Lawrence, asking whether the President should be impeached for withholding patronage from southern Members of Congress, who did not support the President in the last election. I also spoke in tribute to the establishment of the Free State of Israel.

HOUSING CENSUS

On May 9, I supported H. R. 2203, which calls for a decennial census of housing for the year 1950 and further provides for separate housing statistics with respect to World War II veterans. In this connection, when the public-housing bill was considered later on in June, I was unsuccessful in introducing an amendment which would have compelled the use of these figures by local housing authorities in determining actual housing needs before new construction could be built. On this same day, my good friend and colleague, the Honorable STEPHEN M. YOUNG, of Cleveland, introduced an amendment to H. R. 4392, the Swiss War Claims bill, which would have authorized payment of damages with an interest rate of only 1 percent rather than the 5 percent asked by the Swiss. I supported this amendment on the ground that the Swiss have profited greatly in both world wars and even though American aviators did do some damage to Swiss property unintentionally, it was my opinion that the amount they were seeking was exorbitant and the interest rate unheard of in international adjustments. This amendment was defeated; however, the interest rate was reduced from 5 to 2 percent. Also

on this day, I supported H. R. 3005, a bill that increases the per diem allowance for travel from $6 to $9 and increases the payment for use of private cars on Government business from 5 to 7 cents a mile. This alleviates a pressing condition on the part of many Federal employees who are required to drive their own cars on Government business at greatly insufficient rates.

GRAIN-STORAGE FACILITIES

On May 11, the House began its discussion on H. R. 2682, which would amend the Commodity Credit Corporation Charter Act. This act, among other things, provides for the storage of surplus agricultural products under the Government price-support program. The President made the acquisition of additional storage facilities a major issue in the last campaign. However, I have always felt that the Government should not go into competition with private warehouses that are equipped and have facilities available for the storage of this grain. In this connection, I supported the Sutton amendment and the amendment offered by my colleague the gentleman from Cleveland [Mr. YOUNG], which would prevent the construction of warehouses in those areas already adequately served by private warehouses. The bill was passed without these amendments on May 11.

On May 12, I addressed the House on the merits of the Civil Air Patrol stating in part:

All of us as citizens should be grateful for the fine, unselfish and inspiring service which these officers of the CAP are giving for America.

On this same day, I supported H. R. 3559, which strengthens and improves the organization and administration of the Department of State as recommended by the President's commission headed by former President Herbert Hoover.

On May 16, I was pleased to vote for H. R. 2737, which establishes the Medal for Humane Action for award to the gallant young men who participated in the Berlin Air Lift. On this same day, I introduced H. R. 4715, which authorizes the transfer of the Don Mellett Homestead, Sherrick Court, and Jackson Park Homes housing projects in the city of Canton to the Canton metropolitan housing authority for use in low-rent housing.

On May 17, I supported H. R. 195, which requires the Federal Government to assist the States in the collection of sales and use taxes. This bill is designed to prevent avoidance of State sales and use taxes on cigarettes through their shipment directly to consumers in taxing States from sources outside their borders.

On May 19, I had the pleasure of bringing out the rule on H. R. 4591, which dealt with pay, allowances, and physical disability retirement for members of the armed forces. I stated that—

Those of us who have had an opportunity to serve in the armed forces realize that there will be many men who have devoted their lives to this service and are underpaid, and at all times subject to the lure of going out into private industry and there giving their talents at a much higher compensation. Many of us know what has been done by the Army engineers, for example. Men who, like Goethals, could build the Panama Canal, as you know, would be at a great premium in private industry; yet these same men because of their devotion to duty and country have elected to remain in the armed forces.

This pay bill was recommitted for further study.

PROPOSED NEW POST OFFICES IN THE SIXTEENTH DISTRICT

On May 23, I supported H. R. 3662, which authorizes an orderly program for site acquisition and advance planning for Federal building projects considered necessary and desirable. Actual construction would be delayed until a more propitious time. A provision was included for a 3-year program of major repair and renovation of Federal buildings. Post office buildings scheduled for the Sixteenth District of Ohio include: the extension and remodeling of the post offices at Massillon and Millersburg. It also provides for the acquisition of sites and buildings for new post offices at Brewster, Canal Fulton, East Canton, Hartville, Navarre, and Rittman. It is my hope that the actual construction of these buildings will get under way soon although it is planned to start these in case there should be a critical decrease in employment.

On May 26, I supported H. R. 4830, the ECA appropriation bill extending this program for an additional 13½ months. I did this knowing that many of the central European countries would have voted Communist in their general elections had it not been for the aid rendered on this program. I call to your attention the gallant struggle of the people of Italy in the general elections of April 12, 1948, and the fact that the total amount of money appropriated under this bill would equal the cost of only 27 days of war.

WAR CONTRACT SETTLEMENTS ACT

On May 31, the House considered and passed H. R. 834, which amends the Contract Settlement Act of 1944 to compensate persons contracting to deliver strategic minerals or metals in case of failure to recover reasonable costs. Several persons in our district suffered large losses and would be compensated under the provisions of this bill. I voted in support of the measure. However, the President vetoed this bill. I am attempting to get support among the Members in order to override the veto as I feel that the President was misinformed as to the meaning of this measure.

VETERAN PENSIONS

On June 1, I voted for H. R. 4617, introduced by Mr. RANKIN of the Veterans' Affairs Committee. This measure liberalizes the requirement for payment of pension in certain cases to veterans, their widows and children. This bill merely legalizes existing Veterans' Administration regulations and does not call for additional funds.

DISPLACED PERSONS

On June 2, I voted for H. R. 4567, which amends the Displaced Persons Act of 1948. This bill changes the cut-off date of prospective immigrants from December 22, 1945, to January 1, 1949; eliminates certain percentage preferences; authorizes issuance of 339,000 visas to displaced persons through July 1, 1951, and authorizes advances, not to exceed $5,000,000, by the RFC to the DP Commission. I wish to state that as chief welfare officer for the AMG in Italy during the recent war and later as foreign representative of American Relief for Italy, I had a first-hand opportunity to witness and study the plight of the thousands of persecuted persons then in the DP camps in Italy and also in Germany and Austria. This bill, as passed, received my wholehearted support. On June 7, I supported H. R. 2785, which provides for the unused balance of funds on a matching basis to the International Children's Emergency Fund for the fiscal year 1950. This permits the shipment of milk for these children among other services.

On June 8, H. R. 4754 was passed receiving my support. This bill simplifies the procurement, utilization and disposal of Government property, in order to reorganize certain Government agencies and establishes a General Services Administration responsible to the President.

MILITARY PAY RAISE

On June 15, the House passed H. R. 5007, the uniformed services pay raise. This bill was reported out by the Armed Services Committee as a follow-up and revision of H. R. 4591, the original pay bill that was recommitted on May 24. The committee struck out those features that were objectionable in the original pay bill and included provisions that would raise the salary of the lower enlisted grades. It also cut down the percentage increase for the higher ranking officers.

PUBLIC HOUSING AND SLUM CLEARANCE

On June 29, the House passed H. R. 4009, the Public Housing bill. This measure was one of the major issues in the 1948 Presidential campaign. The Senate passed a similar measure by an overwhelming nonpartisan vote. As I stated previously in this report to you, I tried to introduce an amendment to title II of the Housing bill, which would have required local housing authorities to utilize to the fullest extent possible the figures contained in the 1950 population census relative to housing in order to eliminate duplication and the expenditure of additional funds to determine local housing needs. I have always advocated and in my letters to you stated that I believe in the principle of reallocation of already appropriated Federal funds, where a surplus in one department of Government should be used to make up a deficit in another. This principle also applies to information acquired by one department being used by another. In my letters to you on the subject of Federal housing, I stated that practically all the units built since the war have been for sale and not for rent; that there is always a large number of persons in the country who would rather rent than own their own homes; and that private industry has not met the acute housing need of the low-income groups and that the need for slum clearance has long been recognized by responsible officials and individuals throughout the country. In regard to housing for low-income groups, I introduced H. R. 4715 on May 16, authorizing the transfer of the Mellett

Homesteads, Sherrick Court, and Jackson Park homes from the Housing and Home Finance Agency to the Metropolitan Housing Authority in the city of Canton. It is my understanding that the present occupants of some of these units are now in a higher income group and can afford their own housing. It was my purpose to keep these projects in the hands of local housing authorities for low-income groups and prevent the disposition of these projects by the Federal Government in accordance with the provisions of the Lanham Act, under which authority these projects were built. My bill was referred to the Committee on Banking and Currency. It is my hope that this transfer can be accomplished in the next session of Congress which convenes in January.

ANNUAL AND SICK LEAVE

On June 30, I had the privilege as a member of the Rules Committee to call up for consideration H. R. 2619, which extends the benefits of the annual and sick leave laws to part-time employees of the Federal Government. In this regard, I stated on the floor of the House:

Those benefits have always accrued to the other employees of our Government. This bill merely does justice to many of the people, who, I might say, work at the disadvantageous hours of the day when it upsets their regular programs. I see charwomen coming from our offices when I go to work in the morning, realizing that they have been there 3 or 4 hours doing their tasks. We are merely providing this extra security for them.

This measure was adopted on the same day.

BASING-POINT PRICING SYSTEM

On July 7, the House passed S. 1008, which defines the application of the Federal Trade Commission Act and the Clayton Antitrust Act to the basing-point pricing systems used by the steel and cement industries. The Kefauver amendment to this bill in the Senate was adopted by the House. This amendment bars absorption of freight charges to meet a competitor's price where it might substantially lessen competition. This amendment was a modified version of the original Kefauver amendment. I might add that this legislation is one of the most highly technical and complicated pieces of legislation that was considered during this session. Many Members were frank to say that they did not fully understand the implications and purpose of this bill and especially the basing-point pricing system adopted by the steel and cement industries after they had discarded the Pittsburgh-plus formula. I voted to recommit this measure with the hope that the committee would give it further study and clarification, and allow small business to be heard by the Select Committee on Small Business. When this move failed, I then voted for the passage of the bill in the hope that during the period from the passage of this bill to July 1, 1950, Congress will have an opportunity to further study the pricing systems and determine what permanent legislation it will adopt in view of the recent Supreme Court decision, which outlawed this price system as a violation of the antitrust laws.

DEPARTMENTAL PAY RAISE

On July 8, I supported H. R. 1689, which increases the rate of pay for the heads and assistant heads of the executive departments and independent agencies in line with the recommendations of the Hoover Commission as it has been extremely difficult for the President to secure or retain men of ability to head the various departments of government due to the insufficient pay that they now receive.

RURAL TELEPHONES

On July 12, the House began consideration of H. R. 2960, the rural telephone bill. On July 13, the bill was passed by a vote of 282 to 109. At this point, I wish to state that I voted against this measure. The RECORD for that day will show that I attempted to offer an amendment to this bill but was unable to do so because I was unavoidably detained in a meeting of the House Rules Committee. However, I supported the Allen and Brown amendments. In this connection, I stated on the floor:

Mr. Chairman, * * * I do not want it to appear that I am obstructing legislation and I do not wish it to appear that I am going along with the opposition, but I do reserve the right to defend my own concept of what I think is just and equitable. I cannot vote to make this money available at 2 percent for establishment of telephones in rural sections when those same farmers, who might get the telephones, have to pay 4 percent for the money that they borrow from the Government for the purchase or improvement of their farm properties. I cannot vote to lend money to private corporations or other groups at 2 percent while my comrades are paying 4 percent on their homes through the Federal Housing Administration. I am opposed definitely to our Government lending money to any individual citizen, to any group of citizens, or to any corporation or partnership at a lower rate than the highest rate which our Government has to pay for this money. * * * With the loss of these two amendments, I am constrained to vote against this bill.

INDIAN RELIEF

On July 14, the House passed H. R. 5208, which provides for the rehabilitation of the Navajo and Hopi Tribes of Indians and the better utilization of the resources of the Navajo and Hopi Indian Reservations. The plight of these Indians prompted the Secretary of the Interior, Julius Krug, to issue a special report which portrayed graphically the lack of medical and educational care of these Indians. This report caused Mr. Truman to ask the Congress on two separate occasions to pass beneficial legislation. My office has received many letters from members of the True Big White Mothers Club, the Sorosis Club, and the Woman's Club, all of Canton, Ohio, requesting that I give my support to this legislation. On this same day, I supported H. R. 5178, which protects consumers and others against misbranding, false advertising, and false invoicing of fur products and furs.

UNITED NATIONS

On July 15 I supported H. R. 4708, which amends the United Nations Participation Act of 1945. The general purpose of this bill is to improve United States participation in the activities of the United Nations by strengthening representation at the top level; by affirming and clarifying the legal basis for the armed services to furnish noncombatant assistance to the United Nations and by making secondary changes in detail in the basic statute under which the United States participates in the United Nations activities.

POSTAL LEGISLATION

On July 21 the discharge petition No. 8 to discharge H. R. 4495 from the Post Office and Civil Service Committee received the required number of 218 signatures. I did not sign this petition, as I had requested time before the Post Office Committee in order to testify in behalf of this much-needed measure. My testimony was given on Friday, July 22. My statement was reproduced in the local Ohio papers. I felt that it would have been a discourtesy to sign the petition after I had already requested and been granted time to testify in behalf of the measure before the Post Office Committee.

POLL TAXES

On July 21 I voted for the repeal of poll taxes still existing in seven of our Southern States, with the firm belief in the principles of Thomas Jefferson, who believed in granting suffrage to all who would otherwise qualify without restrictive legislation.

SCHOOL RELIEF

On July 27 I had the pleasure, as a member of the Rules Committee, of reporting out a rule on the floor for the adoption of H. R. 3829, which calls for an appropriation of $7,500,000 for the next fiscal year for assistance to local school agencies in furnishing educational opportunities for children on Federal reservations or in areas overburdened by migration of defense-plant workers. A good example of this overburdening of the local school system is in the city of Dayton, with the huge air terminal at Wright Field nearby.

On Monday, August 1, the Rules Committee was considering the granting of a rule to several bills dealing with irrigation and reclamation. In this connection I stated to my fellow members that—

I do not want to obstruct legislation for irrigation and reclamation of western lands, but I do feel it is unwise to spend public money at this end to bring into cultivation by irrigation four or five million additional acres when, at the same time, we spend vast sums of money to support crops now being raised on lands presently being farmed. When European purchasing power is restored and our food can be bought by those abroad, then, to my mind, will be plenty of time to plan for these projects, which will add productive acres to our country.

UNIFICATION OF THE SERVICES

On Tuesday, August 2, 1949, I voted for the conference report on H. R. 5632, which provides for the reorganization of fiscal management in the National Military Establishment in order to promote economy and efficiency. I am pleased to report that the measure carried by an overwhelming nonpartisan vote of 356 to 7. This bill will save $1,000,000,000 the

first year of operation and an additional $1,500,000,000 in the succeeding 18 months.

That same day the House paid tribute to former President Herbert Hoover on attaining the age of 75 years. In this connection I stated on the floor of the House that—

I would like to say that Mrs. Hoover was a native of my home town of Wooster, Ohio. She came to us frequently and gave us inspirational help in the past. She was interested in our college and our city. In President and Mrs. Hoover we had a personal interest and knew them not as public officials only, but we knew them as genial, kindly friends. I would like, therefore, just to add my humble tribute.

On this same day, I presided as Chairman of the Committee of the Whole House on the State of the Union for the consideration of H. R. 29, which provides for parity price on tung nuts and honey. The main source of our supply of tung oil before the war was from China. This was practically cut off during the war. Since then, we have developed tung orchards in our Southwest which produced almost 17,000,000 pounds in 1948. Tung oil is a critical ingredient in the manufacture of paint and electrical insulation. I supported this measure.

VETERANS' LEGISLATION

Also, on August 2, I voted for the omnibus veterans' bill, H. R. 5598, which increases compensation for World War I presumptive service-connected cases; provides for minimum ratings for service-connected arrested tuberculosis; increases certain disability and death compensation rates; liberalizes the requirements for dependency allowances and redefines the term "line of duty" and "willful conduct." This bill corrects quite a few inequalities that now exist in present legislation, and should be of great benefit to the veteran and his family.

On August 3, I supported H. R. 1161 which provides for the conversion, merger, or consolidation of National banks into State banks. Also on this day, I voted for H. R. 5738, which amends the Agricultural Adjustment Act of 1938 relative to cotton-acreage allotments and marketing quotas.

NATURAL GAS ACT

On August 5 I voted for H. R. 1748, which amends the Natural Gas Act of 1938 to clarify the jurisdiction of the Federal Power Commission in the production and gathering fields of natural gas. You will recall that on April 5, 1949, I introduced H. R. 4028, which would also amend the Natural Gas Act of 1938 in order to clarify the jurisdiction of the Federal Power Commission in regard to the consumption and distribution of natural gas after it had left interstate pipe lines. This measure received the support of Governor Lausche and members of the Public Utilities Commission of Ohio, the natural gas companies, and the natural gas workers' unions throughout the State of Ohio. Realizing the similarity between the Harris bill and my bill, and in view of the many discussions that I have had with the supporters of the Harris bill, I voted for the measure. The opponents of this measure failed to conclusively show that the Harris bill would increase the price of natural gas to the consumer as they contended. The Federal Power Commission itself, when the Rizley bill was introduced in the Eightieth Congress, testified on the bill. The FPC stated that the act of 1938 needed clarification in order to remove the cloud of doubt now existing as to the jurisdiction of the FPC in relation to the public utilities commissions of the various States.

MINIMUM-WAGE LEGISLATION

On Monday, August 8, the House began consideration of minimum-wage legislation. The debate lasted for 3 days on this measure. The original administration bill was H. R. 3190. The administration decided to compromise a little and offered H. R. 5856, a committee-modified version of H. R. 3190. The gentleman from Texas [Mr. LUCAS] offered amendments, the principal one being a flexible minimum wage based on the consumer index published by the Bureau of Labor Statistics. I am opposed to a flexible wage, as neither the employer nor the employee would know what wages he was to pay or to receive from month to month, resulting in endless confusion.

The Lucas amendments with the exception of the flexible wage were adopted on August 10. The bill as passed raises the minimum wage to 75 cents per hour to those employees covered.

REORGANIZATION

On August 11, I voted against House Resolution 301, which would veto the President's Reorganization Plan No. 2, transferring the Bureau of Employment Security from the Federal Security Agency to the Department of Labor. These recommendations were made by the Hoover Commission, which have received Nation-wide approval. If the economy proponents are sincere, they will give their wholehearted approval and support to the President's reorganization plans.

LOBBYING

On August 12, I voted for House Resolution 298, which calls for the creation of a Select Committee on Lobbying Activities. In this connection, the RECORD will show that I proposed the establishment of an independent agency of Government that would publish a daily report of all invitations on bids by all the departments of Government and the daily publication of awards on all bids. The small-business men in general would support this program by subscription to the publication, thereby eliminating the basic conditions that create "5 percenters." I intend to introduce a bill in the next session of Congress that would create such an agency. On this same day, I took the floor in order to protest the fact that a great State as Ohio is only allotted the sum of $950,000 of the total of $85,000,000 set aside for production and subsistence loans for the fiscal year 1950 by the Department of Agriculture. In this connection the RECORD will show that I stated:

I in no way want to be too critical of the people who must make the allocations of public funds, but I do feel that it is wrong to predicate future allocations entirely upon past consumption, because, as I said before, it penalizes the careful administrator and encourages unwise and extravagant use of Government funds.

FEDERAL AID TO EDUCATION

Although the Senate passed a $300,000,000 Federal aid to education bill during this session, the House Education and Labor Committee has not reported out any measure on aid to education in the light of the recent and unfortunate controversy over aid for parochial schools. On the question of aid to parochial schools, I would like to reproduce in this report the letter that I have been sending out to the persons who have written to me in support of parochial aid. The letter follows:

I can readily sympathize with parochial-school officials, who feel that parochial-school children are justly entitled to funds on an equal basis with public-school children. The Supreme Court in the Oregon case has held that the education of a child is a parental and not a State right. In other words, parents have the right under the Constitution of determining the type of school their children will attend. However, the State does have the right of determining the standards of education in schools supported by public funds.

Although I realize that parents of parochial-school children are taxpayers, I know that you will agree with me in that these parents have the freedom of choice between sending their children to a public or a parochial school. I wish to point out also that there is always the possibility that parochial schools would lose their identity, as such, should they receive public funds since public-school officials are entrusted with the task of establishing educational standards which may run counter to the teaching of the particular church sponsoring parochial schools. This would result in clashes of ideology. I firmly believe that a great danger would be encountered by parochial schools should they receive public funds and thereby come under the control of State boards of education.

I will support legislation that will provide public transportation for parochial-school children, free medical and dental services and school lunches, as these are programs for children's welfare and have nothing to do with educational standards and curricula.

"FIVE PERCENTERS"

On Friday, August 12, during the debate on the resolution to create a Select Committee on Lobbying Activities, I stated:

Mr. Speaker, at present the Senate is engaged in investigating the activities of certain self-styled management counselors, or who are more popularly known as 5 percenters. It is my belief that such persons are a result of the lack of adequate and centralized dissemination of information on bids and awards by the various governmental agencies. Government procurement is vast, and many small-business men who cannot afford to avail themselves of the services of high-priced representatives in Washington have no way of knowing the status of any particular bid that they may have submitted to a Government agency.

Continuing my thought on this timely question of the obtaining of Government contracts by private industry, I would like to say that my suggestion is as follows:

That a small agency be established which would gather from all of the departments and bureaus of the Government regular information as to the needs of these several departments, what materials are to be purchased, and what contracts are to be let. A daily report could be made and printed in booklet form by the Public Printer. This

publication would not only contain requests for material and the call for bids on proposed building programs, but it would also show each day what contracts have been awarded and to whom, so that individuals or firms which had bid on a certain contract would know when it had been awarded and could submit bids on other proposed work. As we all know, the small concerns cannot risk bidding on two or three Government projects at one time because their capacity would not make it possible for them to carry out more than one project at any one time. The regular report of this agency would keep them informed so that they could bid on the different projects as they appear on the record.

This whole program would be entirely self-supporting. The businessmen of the country would subscribe gladly, because they would have before them constantly the needs of the Government and all of its ramifications. An initial fund might be necessary to set the program in operation, but this would be a revolving fund and would be liquidated by the contributions of the subscribers. Those who join with me in feeling in that too often bureaus are set up and become almost self-perpetuating would be relieved of that fear, because the moment the businessmen of the country were not willing to support this service it would automatically be discontinued. Again, I must repeat that we can all see that the ramifications of a tremendous operation like our Federal Government do, of necessity, create what we call 5 percenters. The small-business men in the several parts of the country would find it cheaper to pay 5 percent to some man to keep them informed on what was happening. However, we can all see that this type of program does lead to discrimination and to injustices and, if carried far enough, to dishonest procedure.

My program, which would be embodied in a bill which I shall introduce in the next session of Congress, will entirely eliminate this.

I ask for your kindly consideration of this proposition and hope that when the time comes it will have your whole-hearted support. I am sure it will be welcomed by the fair-minded businessmen who are trying to find outlets for their products and who are trying to find continuous employment for their employees.

CONCLUSION

This report has been long, but I hope that it has aided you in better understanding my position on all major pieces of legislation during this first session. Upon my return from Europe I shall give you another report on the operation of the ECA in the participating nations. I shall attempt to show the rate of reconstruction and rehabilitation in order that you may decide whether the ECA program is serving the purpose for which it was inaugurated.

New England, the South, and Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 16, 1949

Mr. PATTERSON. Mr. Speaker, I have compiled further information relating to the contemplated use of Federal funds in the several States. The information contained herein relates to the Federal aid to education measure adopted by the Senate (S. 246) and demonstrates further evidence of Government beneficence to the Southern States. I have no desire to legislate or to debate issues on a regional basis, but do feel that the preservation of a high standard of living in New England is a substantial factor in the economic stability of America.

It is extremely difficult to argue economics in a given situation without being branded a reactionary who opposes the economic betterment of the less fortunate. I assure my fellow Members that that is in nowise the truth, as I favor the enactment of suitable Federal aid to education. I wish merely to demonstrate that our neighbors to the south might better expend their individual State incomes in the furtherance of educational facilities, rather than in offering inducements of tax-free operations to New England industries to locate in the South.

The accompanying tables show more convincingly than I can argue, the disparity between the New England and southern regions in educational expenditures. At a glance one can see that Connecticut in 1947–48 spent $220.92 per pupil on education as compared with $85.32 for Arkansas. The average annual salaries for teachers in Rhode Island for the same period were $3,085 as compared with North Carolina's $2,125. The amount which would be contributed in taxes by the people of Massachusetts under S. 246 is $11,280,000 as compared to $2,444,000 for South Carolina. On the other hand, the people of Connecticut would receive in Federal benefits $1,685,000 as compared to $14,443,795 which would accrue to citizens of Alabama.

It is admitted that the Southern States have need for educational aid as ignorance cannot be quarantined. An uneducated or ill-educated American citizen is of little use to our country, no matter where his home State may be. The argument lies not with that point, but with the continual raiding of established New England industries and subsequent loss of employment to its many citizens. We cannot long countenance this practice and continue to support purely State functions in other areas of the country. New England is wealthy only in the sense that its people are zealous, capable, and intelligent. Its wealth lies in the qualities of its people—not in bank deposits.

[Information from the Forty-eight State School Systems, issued by the Council of State Governments and from hearings on Federal Aid to Education, House Committee on Education and Labor, 1949]

Current expense per pupil in average daily attendance 1947–48

Connecticut	$220.92
Massachusetts	197.47
Rhode Island	220.65
Alabama	99.06
Arkansas	85.32
Georgia	80.79
Kentucky	118.34
North Carolina (estimated)	110.40
South Carolina	110.09

Proposed allotment to States under S. 246

Connecticut: $1,685,000 or $5 per child ages 5–17.
Massachusetts: $4,115,000 or $5 per child ages 5–17.
Rhode Island: $645,000 or $5 per child ages 5–17.
Alabama: $14,443,795 or $19.09 per child ages 5–17.
Arkansas: $11,713,269 or $23.43 per child ages 5–17.
Georgia: $14,150,688 or $17.51 per child ages 5–17.
Kentucky: $13,378,371 or $19 per child ages 5–17.
North Carolina: $20,500,589 or $21.16 per child ages 5–17.
South Carolina: $13,349,921 or $24.50 per child ages 5–17.

Proposed contribution by States under S. 246

Connecticut	$5,469,000
Massachusetts	11,280,000
Rhode Island	1,980,000
Alabama	3,734,000
Arkansas	2,211,000
Georgia	4,476,000
Kentucky	3,595,000
North Carolina	4,884,000
South Carolina	2,444,000

Average annual salaries of teachers 1947–48

Connecticut	$3,067
Massachusetts	2,960
Rhode Island	3,085
Alabama (estimated)	1,909
Arkansas	1,548
Georgia	1,715
Kentucky	1,865
North Carolina (estimated)	2,125
South Carolina	1,762

The Truth About the Army Engineers and North Dakota's Garrison Dam

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 16, 1949

Mr. BURDICK. Mr. Speaker, the members of the Mountrail County Farmers Union in North Dakota recently passed and sent to the Army engineers a resolution urging that the pool level of the Garrison Dam, now being built in that State, be limited to an area of 17,000,000 acre-feet as authorized by law, instead of the larger pool which the engineers want.

The Army replied to Mrs. A. N. Winge, the secretary, in a letter signed by Col. J. S. Seybold, of the Corps of Engineers. The colonel's letter was forwarded to me for comment, and I believe the issue is of such significance that it would not be improper at this time to insert my reply to Mrs. Winge in the RECORD:

AUGUST 15, 1949.

Mrs. A. N. WINGE,
Secretary, Farmers Union of Mountrail County,
Van Hook, N. Dak.

DEAR MRS. WINGE: I am in receipt of your report on the response the Army engineers made to the resolution adopted by the Farmers Union of Mountrail County. I am surprised at the many, many misstatements of the facts contained in the letter of the Army engineers to you under date of July 22, 1949.

I wonder why it is necessary for these engineers to misrepresent the case? I had supposed they were engaged to build a dam in accordance with the act passed by Congress. Just to show you how deliberately they have misstated the facts, let me answer each paragraph of that letter:

The first paragraph deals with the law creating the authority. As you know, House Report No. 475 was a plan submitted by the Army engineers themselves and in it the capacity of the dam was fixed at 17,000,000 acre-feet.

The next report was Senate Document 191 which was submitted by the Bureau of Reclamation, and did not include any dam across the Missouri at Garrison, but outlined what was later called the Sloan plan of diverting water from below Fort Peck around through Grenora to the Mouse River, and on through the Devils Lake canal to the headwaters of the Sheyenne River.

Thus, you see Congress was confronted with two plans, entirely dissimilar.

The Bureau of Reclamation, and the Army engineers then were sent out to agree on one common plan, which they did in Senate Document 247. That document was the agreement reached by both agencies, and in it the capacity of the pool was furthed fixed at 17,000,000 acre-feet.

There was this significant clause in the agreement—that if the capacity of the pool was ever changed, it would have to be changed by agreement between the Bureau of Reclamation and the Army engineers. It has never been changed by agreement to this day. The capacity law stands as it was agreed upon—namely, 17,000,000 acre-feet. When these Army engineers now say the pool level was fixed at 1,850 feet, it is a barefaced misstatement of the facts. One thousand eight hundred and thirty was not mentioned; 1,850 was not mentioned, but the capacity of 17,000,000 acre-feet was mentioned. Reducing this pool to another equation in height, we arrive at approximately 1,830 feet.

It doesn't make any difference now what maps were printed and contained in Army Report 475, because that plan was merged with No. 191 (Sloan plan) and the united plan, later called the Pick-Sloan plan, was agreed to in Senate Document 247. In that agreement, the Army engineers signed up to a pool of 17,000,000 acre-feet.

In the next paragraph, these engineers (in their letter) state that a lower pool level would jeopardize the production of power at the dam. Let us see what they now plan. They not only plan power development, but also irrigation and diversion and have gone ahead and purchased lands for that purpose. They were not authorized to engage in irrigation and diversion in the agreement reached in Document 247. That was left to the Bureau of Reclamation But in spite of that, they are going ahead with planning for irrigation and diversion to Devils Lake, contrary to law. The question which I now ask is material:

If they propose this irrigation and diversion, where will they get the water? They will get it out of the Garrison Dam—not below the dam, but from the dam. If they persist in this, the water taken will lessen the power development. So when they say full power development and also irrigation and diversion at the same time, they are stating something that is impossible, if the Missouri project (Sloan plan) is to be carried out. They say now that the Sloan plan will be carried out because Congress put the project back on the construction stage.

The Sloan plan has not been changed from the original agreement in Document 247. The Bureau has kept its word to the letter. This plan will divert water from the Missouri River in a way that will not interfere in the slightest degree with the power development at Fort Peck, because the Sloan diversion does not take the water out of the water pool at the dam, but from below the dam, thus not interfering with the power development at all.

The Army engineers, however, in their irrigation scheme and diversion scheme, take the water out of the pool at the dam, and not below it. There will be no more power developed at a pool level of 1,850 feet than at a pool level of 1,830 feet, if the engineers are going to take water enough for the great irrigation project that they have so carefully outlined on the map. They are also going to take water out of this pool for diversion purposes.

There isn't water enough in the Missouri River to provide for the irrigation project of the Bureau of Reclamation, and also for the project demanded by the Army engineers, and at the same time provide any power. There isn't water enough in the Missouri River to carry on two diversion schemes to the headwaters of the Sheyenne River.

Why are two of these schemes necessary? Isn't one diversion enough? Why do the Army engineers flagrantly violate agreement 247 that they signed?

In paragraph three of this letter, the engineers say:

"For this reason (power development), flood control and other associated uses, it is apparent that a higher pool is necessary."

These associated uses are irrigation and diversion, therefore the conclusion is unescapable, that the reason why the Army engineers advocate a high pool level is to provide, in addition to power development, for the associated uses.

Paragraph 4 refers to levees, and their argument here is probably the most senseless of any they have yet put forward. They claim now that the proposed levees (none of which have been authorized by law) will protect the presently operating irrigation projects that are in danger of being swept away by the natural overflow of the river. The river has been riprapped in the vicinity of these projects and no damage has yet been done and never can be if the banks are protected as they have been. But set those irrigation projects out in a lake that would be created by a 1,860-foot water level, and they can say those projects are in danger. Any levee built around the projects could not prevent seepage and seepage will sour the land on the inside and make it unfit for cultivation. Levees along the Mississippi in Minnesota and Iowa have clearly demonstrated this fact.

In addition to this, the Army engineers entirely ignore the John Martin Dam catastrophe of this year on the upper Colorado River. I have pointed out several times that when a lake is created and a body of still water is formed the streams flowing into the lake carrying heavy silt deposits will immediately drop the silt to the bottom of the lake and in time (a very short time) the lake basin will fill and the water, therefore, will have to overflow.

A 1,850-foot water level will create a lake extending over 11 miles up the river from Williston, and the west end of this lake will be at about the point where the Yellowstone joins the Missouri. The Yellowstone carries more silt deposits than any river on the American Continent. Approximately 40,000 acre-feet of silt pass Williston every year. It passes because the current is strong enough to carry the load. Take away this current and let the heavily loaded silt water from the Yellowstone strike the upper end of this lake, and we do not need any expert to tell what will happen.

The Army engineers built the John Martin Dam. Newspapers heralded the fact that at last the people of that area were now protected from floods. They had a grand celebration on April 1 dedicating this dam. The Army engineers were looked upon as wizards of the present age. Well, what happened? In less than 3 months the silt deposits piled up in this river, causing an overflow and the worst flood in the history of that country. Fields and farm houses were washed away, and in dollars and cents over $5,000,000 was lost. As colossal as this damage was, and with all of the construction being under supervision of the Army engineers, it would seem that these engineers would take notice of their own errors and not try to experiment further.

In paragraph 5 the engineers make an observation that is as far from the truth as the North Pole is from the South Pole. They admit that 90,000 more acres will be destroyed. That part is correct, only the fact is that the actual land required is close to 100,000 acres. The Army says: "Their contribution (lands above 1,830) to North Dakota's present agricultural and livestock industry is small, percentagewise, of the total acreage of similar lands of the State." Now let us see what the facts are:

This land is all river-bottom land and land along small streams. The soil is inexhaustible, being made by silt deposits for centuries. While there is some timber on these lands, it all can be utilized for lumber, and the brush land is rich beyond description. This land is being gradually cleared, and alfalfa and all other crops grow luxuriantly. It is a haven for livestock in the hard winters which we sometimes encounter, and along this river, in this area that the engineers want to convert into a lake, thousands of cattle are found in winter. No better cattle country has yet been discovered, but the engineers say this contribution is small. The pioneers in this country first settled along the river, where fuel and feed were plentiful, and there they made their winter homes. All of their work for 60 years must be destroyed to satisfy the Corps of Army Engineers who want to demonstrate that they and their plans are infallible and never to be questioned. They propose to regiment us in time of peace as they do in time of war.

Paragraph 6 tries to assuage the people of Williston from a fear from living behind dikes. They say that the railroad does not have to leave Williston. They know more about this, of course, than the officials of that railroad, who have filed a statement with the Appropriations Committee that, in case of a high level of water, they will move out. They now tell the people of that area that they can rest assured that these Army dikes will protect the people. This advice coming after the John Martin Dam catastrophe doesn't appeal to anyone who knows what is taking place. I haven't yet seen any story from the Army engineers excusing their blunder on the Colorado. They just don't like to talk about it. I have noticed only one statement and that is that it is thought by the Army engineers that they must suck this silt deposit out of the bottom of the lake to keep it from overflowing. If they do this they will have to buy more land to put this silt deposit on, and more public funds will be spent. This hinted project of removing mud is just another foolish scheme with which these Army engineers seem to be well filled.

Paragraph 7 alludes to the loss of taxable land. The engineers say the recreational features of this large lake will offset any loss in taxes. Well, wouldn't it be a good thing to see just what the recreational advantages of one of these lakes are. No solid shore can even be obtained. As soon as the gates are opened at Fort Peck, down comes a small flood. The water rises and then subsides and the shores at the Fort Peck Lake are in a constant state of up-and-down, quicksand shores, and totally unfit for stock water purposes or for boating. I just don't know where, outside of the Army, anyone could be found who would want to construct any

valuable property on the shores of a lake without a shore. According to these engineers, one is led to believe that when this great lake is established, there will be a rush to build summer resorts that would far surpass anything Minnesota has to offer. From this rush of people to this spongy lake, we in the Williston area will derive the taxes which we have lost by reason of the destruction of this 100,000 acres of land.

The letter concludes:

"While the above explanation has been rather lengthy, I have tried to explain the matter in some detail as it is felt many people have obtained an erroneous understanding of the matter. I would be pleased to answer any further questions that you may have and which have not been covered in this letter.

"Very truly yours,
"J. S. SEYBOLD,
"Colonel, Corps of Engineers,
"District Engineer."

Yes; I think the people will ask more questions before they let this gang of engineers run roughshod over the inhabitants of this territory.

If the Army engineers could be believed, if their word was good, their opinions sound, the people might reasonably have some spark of confidence in them. But as it is now, they haven't earned the right to be believed. Of this one dam—the Garrison Dam—these engineers, in their first report, said it could not be built with safety. It remained unsafe until General Pick came along and said, in effect: "Rats to the experts—I will build a dam. It is all right—it is safe—it is a good thing. Just let me do the work without interference." The law was passed authorizing the dam. The law didn't suit Pick and he went right ahead buying up a third of McLean County, N. Dak., without any authority whatever.

The engineers said, "Let us build a dam on the upper Colorado and we will stop these floods." The people believed them and they built the dam. In 3 months, the people suffered the greatest flood in the history of their region.

The people of Williston will not rely on the safety of Pick's proposed dikes, neither will the people who occupy the irrigation projects. If the Army engineer schemers cannot be stopped in their determined demand for a high-water level, the consequences cannot be blamed to me.

Here is a peculiar thing about the desire of the Army to create power: The Fort Peck Dam has not been harnessed to full capacity. It has a power capacity of 525,000 kilowatt-hours, but the engineers, themselves, reduced one unit and by so doing will lose 100,000 kilowatt-hours. Why they deliberately did this is not clear, for they knew all along that the Sloan diversion plan would in no way interfere with power development at Fort Peck. The Sloan plan takes the water out of the river below the dam.

Let's follow this argument for maximum power development a little further: The capacity for power with a reservoir of 17,000,000 acre-feet is 1,425,000 kilowatt-hours. The capacity for power at Garrison with a pool of 23,000,000 acre-feet will be 1,500,000 kilowatt-hours. The difference is, therefore, 75,000,000 kilowatt-hours and not a loss of 200,000,000 kilowatt-hours as the engineers claim. Now, let's see if there is any loss of power development at all. The Garrison Reservoir at 23,000,000 acre-feet cannot, under the present plan of General Pick, be used at full capacity, for water is to be taken out of this dam from the pool and not below the dam.

Assuming that General Pick has his own way about irrigation and diversion, does he dare to say that this withdrawn water will not affect the full power or possible power development? The fact is that the greater part of this extra 20 feet of water will be taken out of the dam for irrigation and diversion purpose. Why the Army engineers keep holding up this great power capacity, when they know they cannot obtain it with irrigation and diversion attached to it, is a mystery.

If power development is what General Pick wants, why does he not use the 100,000 kilowatt capacity which he deliberately refuses to take at Fort Peck? Have the two experiences of trouble at that dam deterred him from using the dam at full capacity?

If that power at Fort Peck were used as authorized, then the Fort Peck Dam and the 1,830-foot-level dam at Garrison would produce 25,000,000 kilowatt-hours more than he claims it will lose in not having an 1,850-foot level at Garrison. That presupposes that the Garrison Dam can be used at full capacity at a pool level of 1,850 feet. Of course, it cannot be used at full capacity if Pick's irrigation and diversion plan is carried out. The people know this and it is useless for the engineers to try to explain away something that is impossible.

The talk about power development is made, and dishonestly made, and spread around the country to influence power users to support the plans of General Pick. He is trying to scare them into submission on the charge that if he cannot have a high elevation at Garrison they will not get power. I have answered this matter in detail because it is important and because I want the truth told to the people.

Sincerely,

USHER L. BURDICK,
Member of Congress.

Indian Land Claims in Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. BARTLETT. Mr. Speaker, the Alaska Territorial Federation of Labor in a resolution addressed to the Congress of the United States, the Secretary of the Interior, the Governor of Alaska, and the Delegate in Congress from Alaska has called attention to the need for resolving Indian land claims in Alaska at an early date and has suggested the mechanics for such a settlement. The resolution is set forth below:

Your petitioner, the Alaska Territorial Federation of Labor, having duly considered the matter concerning aboriginal rights in the Territory of Alaska presents:

Whereas the protocols attached to the treaty of cession pursuant to the purchase of the Territory, the treaties and claims sustained by Congress in behalf of the American Indian, and the past consideration shown the Alaska native seem to indicate that such claims may rightfully exist; and

Whereas the Alaska native has proven himself capable of following modern ways of living when given opportunities of education and advancement, both of which are desirable factors in the stable development of our Territory; and

Whereas the granting of claims would not dislodge any possessor of patented lands; and

Whereas witnesses whose valuable testimony could affect a just determination are reaching the age when life is of short duration; and

Whereas an unjust and delayed determination can cause undue expense and hardship to all concerned and hinder development of the Territory; Be it therefore

Resolved, That Alaska Territorial Federation of Labor do petition the Congress and the President of the United States to take immediate and necessary action to create a three-man commission with authority to hold quick, economical, and fair hearings on the evidence at hand in Alaska concerning native land claims; be it further

Resolved, That Congress pass the necessary legislation to activate said committee findings into law.

And your petitioner will ever pray.

Drafted at the request of the Juneau Central Labor Council and approved by the same council June 10, 1949.

BETTY CASPERSON,
Secretary, Juneau Central Labor Council.

Approved by the Anchorage Central Labor Union June 21, 1949.

JOHN FERKO,
Corresponding Secretary.

Approved by the Sitka Central Labor Council July 5, 1949.

FLOYD BROWN, JR.,
Secretary-Treasurer.

Approved by the Fairbanks Central Labor Council July 6, 1949.

LAURA SHANKS, *Secretary.*

By authority of office and sanction of the above endorsements representing the wishes of 90 percent of the federation membership the official seal is hereby affixed signifying full endorsement and support.

ALASKA TERRITORIAL FEDERATION OF LABOR,
T. B. ERICKSEN,
Executive Secretary.
JULY 12, 1949.

Ohio Drive

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. JENKINS. Mr. Speaker, as we travel about Washington, the most beautiful city in the world, we pass over many streets and avenues bearing the name of some State. Not for many years has there been an Ohio Street or Avenue.

I am proud to announce that the National Capital Park and Planning Commission only a few days ago changed the name of the most beautiful drive in Washington from Riverside Drive to Ohio Drive. This was a distinct recognition of the standing of Ohio in the Great Union of States.

Ohio Drive begins at the Lincoln Memorial and at the eastern end of Memorial Bridge. The Washington Monument is in full view directly to the left as one begins the 5-mile ride around Potomac Park, the White House is only a short distance away, and the stately Capitol Building is clearly visible in the distance. Arlington Cemetery and the Tomb of the Unknown Soldier are directly across the Potomac. The drive takes tourists near the historic Jefferson Memorial on the shores of the Tidal Basin, which is the setting for one of the picturesque cherry-blossom scenes. Continuing down Ohio Drive are hundreds of cherry trees whose gorgeous beauty entice untold thousands of visitors to Washington every year.

Continuing down the 3-mile stretch covered by Ohio Drive along the Potomac River, the tourist can see the mammoth Pentagon Building, which houses the Secretary of National Defense and his thousands of assistants. Visible, also, is mighty Washington Airport, which, in these days when oceans are spanned with the greatest of ease, is the scene of virtually continuous departures and arrivals of personages of national and international fame.

After running down the Potomac the 3 miles, Ohio Drive circles Haines Point and continues 2 miles up the Washington Channel, where all ships to and from Washington travel. In this harbor are anchored many beautiful yachts. Coming up the channel, the tourist can see over in Maryland many governmental enterprises which have cost many millions of dollars, Bolling Field, the great naval aircraft base, and many large warehouses; Washington Navy Yard, probably the largest industrial plant in operation in Washington; and the Army War College, where generals are made.

Ohio Drive terminates as it intersects Fourteenth Street, which is also designated as United States Route No. 1. Over this thoroughfare passes heavy traffic north and south through the city of Washington. Near this intersection are the great buildings which house the Bureau of Engraving and Printing on one side and the Department of Agriculture on the other side.

The people of Ohio, both in Washington and back in Ohio, appreciate the recognition that has been given to our great State by the National Capital Park and Planning Commission. I, as a humble Representative of a congressional district in the great State of Ohio, most cordially invite everybody to take a ride around Ohio Drive, Washington's most beautiful thoroughfare.

The word "Ohio" is an Indian word, meaning "beautiful river." It is a fitting name for a beautiful drive along a beautiful river.

I have been greatly pleased with the enthusiastic reception that the press has welcomed Ohio Drive. I have been especially moved by the comments of Mr. Charles Collingwood, of CBS, one of America's great radio commentators. His statement, from which I quote, speaks for itself:

There is one Congressman, though, who's feeling pretty good today, weather or no weather. That's Representative JENKINS, of Ohio. Representative JENKINS has just won a notable victory. The gentleman from Ohio has been in Congress for 25 years. He's the dean of the Ohio delegation. He must like Washington, because he keeps coming back. But there's one aspect of our Nation's Capital which has long distressed Mr. JENKINS, and that is the fact that Washington has no street named after the great and sovereign State of Ohio. Every other State in the Union has an avenue named after it in Washington. There's Pennsylvania Avenue, where the White House is; and Massachusetts Avenue, where the foreign embassies are; Connecticut Avenue, lined with smart stores and hotels. A whole cluster of avenues named after States up around the Capitol. There's even an Alaska Avenue, but no Ohio Avenue. Congressman JENKINS determined to right this injustice. Every year now, for a long time, he has bombarded the National Capital Park and Planning Commission with suggestions that this or that street be named after Ohio, and always they found some reason for turning him down. But Representative JENKINS is not a man to give up easily. He's known as one of the hardest-working Congressmen in Washington, and he worked hard on this. And now he's won his fight. Ohio is going to get one of the most beautiful streets in Washington. It's the avenue at present called Riverside Drive, which runs from the Lincoln Memorial, along the Potomac and around Haines Point—it's where the famous cherry trees grow. At 9:30 tomorrow morning, Congressman JENKINS is going to be there by the Lincoln Memorial, to give the street its name, Ohio Drive—a long and valiant struggle by the dean of Ohio's delegation. But after tomorrow, every State in the Union will have its avenue in Washington.

Shorn Wool Production at All-Time Low

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. HILL. Mr. Speaker, only yesterday I noticed a very interesting news item from the Denver (Colo.) Record Stockman, which I wish to enclose as part of my remarks.

As a member of the Committee on Agriculture, I have been following closely the continuous reduction of the western sheep herds. This news item bears out my contention that something should and must be done if we are to save our sheep and wool industries.

The news item follows:

SHORN WOOL PRODUCTION AT ALL-TIME LOW

WASHINGTON.—Shorn wool production this year will be 215,635,000 pounds, which is 8 percent under last year, the Agriculture Department reported Tuesday.

The production is the smallest since the Agriculture Department started keeping records in 1909. The estimated production is 37 percent less than the 10-year average of 342,784,000 pounds. Much of the drop is blamed on last winter's blizzard.

The Department estimated the number of sheep shorn or to be shorn this year at 26,941,000 head, down about 7 percent from last year and about 37 percent below the 10-year average.

The estimated weight per fleece is 8 pounds compared with 8.05 last year and 7.99 for the 10-year average.

Production this year and last, respectively, by major producing States, included:

Montana, 15,575,000 and 16,629,000; Wyoming, 18,071,000 and 20,083,000; Colorado, 9,358,000 and 9,766,000.

Old Man's Birthday

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the News and Observer, Raleigh, N. C., for August 13, 1949:

OLD MAN'S BIRTHDAY

As a venerable ex-President of the United States, Herbert Hoover is entitled to respectful felicitations on his seventy-fifth birthday. Also the occasion was important as the celebration of the only seventy-fifth birthday any President has lived to celebrate since James Buchanan, who seemed as unequal to his times as Herbert Hoover was to his.

But while such a President on such a birthday is entitled to the birthday greetings of a younger Nation around him, there is no reason to pay serious attention on his seventy-fifth birthday to the same ideas which he not only expressed but stubbornly adhered to when he led the Nation into deeper and deeper tragedy in 1932. The Nation which repudiated those ideas then as out-of-date has no good reason to give serious attention to them when they are repeated by an old man now.

It should be perfectly clear that Mr. Hoover on his birthday was not talking merely about economy in Government. Everybody is in favor of that. Those who believe that the resources of this Nation should serve the people of this Nation are as much opposed to waste in government as any man whose idea of economy was not to use the resources of the Nation when the salvation of the people required them in the great depression over which he impotently presided.

"We are," says President Hoover now, "on the last mile to collectivism through Government collection and spending of the savings of the people."

Well, there are few people in America who cannot count this last mile with Hoover as better than the first miles they traveled with him. Most of them realize that the costs he is counting, with the exception of those for past wars and preparations for defense in any possible wars to come, are those which have made it possible for farmers to secure a proper share of the national income, which have set up some security for the old and the unemployed, which have provided protections for the national health, which in a variety of ways guard the Nation from the national and personal tragedies which Hoover stubbornly and impotently faced in the Presidency. Not even the old gentleman himself suggested in his birthday speech that these processes for people have made business less productive or profitable.

Even those Americans who most righteously joined in the utter repudiation of Hoover as a President will hope that the old gentleman had a happy birthday. In our times when great Presidents give their lives to the terrible responsibilities they bear, it is proper to pay national attention to the birthday of an ex-President who gets to be 75 years old. But it is exactly the same sort of attention which Buchanan deserved after his failure either to prevent the Civil War or arm his country for it. The world pays polite deference to the aged but it gives its heart and its faith to the Lincolns and the Roosevelts whose leadership never grows old.

Mr. Hoover himself struck the only sour note in his birthday celebration, which had the good wishes of people of all shades of political and economic opinion. He would have been much better advised had he kept the occasion on a noncontroversial level and had not yielded to the temptation to use a radio audience collected in a noncontroversial spirit as a sounding board for his own political views. If Mr. Hoover found the urge to speak on controversial matters irresistible, he should have confined himself to the recommendations of the commission which bears his name.

Instead, he made a speech which was nothing more nor less than a rehash of his speeches to the last four Republican National Conventions. His birthday speech deserves and will receive precisely the same consideration given to those four speeches.

Everybody's Business

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 16, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks, I am pleased to insert the following prize-winning essay on constitutional freedom in the 1949 contest sponsored by the New York State Bar Association. The essay was written by Lawrence W. Krieger, Esq., of the New York bar and an associate in the office of Philip Sheridan McNally, of 40 Exchange Place, New York City. The essay follows:

EVERYBODY'S BUSINESS

(By Lawrence W. Krieger)

This year of 1949 finds these United States standing alone as the last bastion of constitutional freedom, in a world bent on embracing various forms of collectivist society. In this divided world it is essential that we reexamine the basic document of our freedom, study it, understand it, and reaffirm our faith in the principles there spelled out. Freedom cannot be taken for granted. Freedom is a hard-won heritage which must be fought for constantly to be preserved. As a well-known radio announcer says, "Freedom is everybody's business. Let's work at it." Nationwide interest in the history and philosophy of the Constitution must be revived and rekindled or we shall not long continue to enjoy the blessings and benefits which that immortal document guarantees to every American.

Those of us who have grown up in the past 20 years have had it hammered everlastingly at us that liberty without security is valueless. Our teachers have failed to point out that the only security worth having is the security the individual obtains for himself by honest labor under the constitutional protection devised by the founding fathers, for, whatever degree of security is provided for us by a paternalistic government, a commensurate amount of individual freedom must be sacrificed in payment therefor. The ultimate in such security clearly means the destruction of freedom completely, because it is the government that pays the piper and therefore is privileged to call the tune. Such a security is that of a totalitarian state. We are drifting toward an unwitting sacrifice and destruction of the most highly prized of all values, individual freedom for the false idol of security.

Just one thing has made so many people value security above liberty: The idea that you really can get something for nothing. Actually there are but three ways in which any of us get anything in this world: we buy it (with money, labor, or services); we steal it (in which case we must pay our debt to society); or we receive a gift (for love and affection, past services, in satisfaction of a moral obligation, etc.). All other ways are merely refinements of these three main categories. Where does government-provided security fit in? In the first, for we pay by abdicating some or all of our priceless heritage of constitutional freedom. Such a security is based upon the ethically indefensible theory that the individual is entitled to something he hasn't earned. Freedom cannot be found in the politically unsound doctrine that society owes each of us a comfortable living whether or not we do our fair share of the work as payment.

What basic tenets of freedom are inherent in the Constitution? Probably the most important concept of our Constitution lies in its recognition of the dignity of man as an individual with natural rights. That dignity is supreme—it is God-given. The Constitution commands for each and every one of us the political and economic rights which protect the dignity and freedom of the individual. This concept is as fundamental as the atom.

History tells us that our forefathers founded our Nation on a system of checks and balances. We have an executive head who has authority to act promptly. This is designed to make government efficient. Legislative power is vested in Representatives who study, consider, and deliberate on proposed laws. The selection of Representatives is reserved to the people themselves. The next balance is among the three departments of the Government: The executive, legislative, and judicial. Each balances the other so that there can be no fusion of any two. The electorate chooses executive and legislative officials at stated intervals, and the acts of both branches are subject to judicial review. The third branch, the judiciary, is established as an independent branch with authority to restrain abuse of power by other governmental agents. Strict limitation of the judicial function by the Constitution prevents the judiciary from exercising arbitrary power. There is still another balance conceived by the framers of the Constitution. This is between State and National Governments. Federal action is restricted to matters of national concern, expressed or implied in the Constitution itself. All else remains in the hands of the States, each to legislate as it sees fit on its own local problems.

With a foresightedness that amounted almost to clairvoyance, the founding fathers recognized that not only must there be a central government, but that such a central government must be strong enough to command the respect of foreign nations; efficient enough to justify its own existence; flexible enough to leave wide initiative powers to the States and limited, by statute, enough to prevent encroachment on the rights of the States or undue accretions to its own authority. Hence the system of checks and balances and the now famous doctrine of the separation of powers—all designed to preserve to the people, in perpetuity, the liberty they had so justly earned.

Our Declaration of Independence says that "all men are created equal." Precisely what does that mean? Does it mean social equality or cradle-to-grave security as advocated by Lord Keynes, Harold Laski, and others of collectivist mind? I cannot accept either one. Rather it means to me that all men have equal rights, equal duties, and equal obligations. This is in keeping with the dignity of man, his free will, his God-given rights to make a choice, his obligation to provide for himself and his family, and thus to make himself a citizen worthy of the privileges the Constitution grants him. This seems a reasonable conclusion in view of the fact that each and every one of us is clearly different in the physical and mental traits of man. Even identical twins rarely have the same skills to an identical degree. Distribution of talent and ability can never be controlled by any man-made law.

Today we hear the word "liberal" bandied about so freely that probably no two of us have the same understanding of the word. To my mind, a "liberal" is a man who believes that freedom is the right to do what man should do, not the right of a man to do as he pleases. Historically, the old liberal wa one who believed in, among other things, freedom of speech, press, religion, and no taxation without representation, within the framework of the Constitution. Generally today's so-called "liberal" wants the same freedoms, but he does not want to be bound by any responsibility to constitutional or any other law. In other words, he wants "to have his cake and eat it too." The liberal of our early days worked to free the economy from state control; today the same principle of liberalism is invoked to extend the control of the state over our economy. Certainly two such contradictory theories cannot both be sound. Even persistent polishing of this veneer of paternalism cannot make brass into gold. Traditional American liberalism is based upon a competitive enterprise system under a government "of the people, by the people, and for the people."

We have come to realize that political, social, and economic forces are so interwoven and interdependent that consideration of one alone is impossible. Yet our legislators often seem blissfully unaware of this vital fact. Statutory enactments of the last 10 or 15 years have effectively hampered the growth of private industry. Yet the Government expects private industry to provide the financial and economic wherewithal for extensive social and political progress (ironically called benefits) which in turn operate to deprive individuals of varying segments of their freedom. In this trend of the times away from constitutional government and freedom, the more serious strides toward socialism have been made in the field of economics.

The frontal attack on the economics of a capitalist system generally is aimed at the so-called business cycle, or boom and bust psychology. Attempts have been and are being made to lessen the severity of these busts (nobody wants to lessen the severity of a boom) in the interest of the social factors involved. This is all very well, provided we do not destroy freedom of incentive and freedom of will simply to accomplish some form of social justice. One of our well-known lawyers said a short time ago: "It appears that the Government's concept of social justice is to take from the diligent and give to the indigent." Unfortunately, for the diligent, he is more than half right. In a country that has attained the general level of wealth which is ours, a certain limited security against physical privation, and a minimum sustenance may be guaranteed without danger to individual freedom. The difficulty comes in deciding where the dividing line should be drawn. Our current troubles are traceable in large part to legislative and executive attempts to overrule basic economic laws, all in the name of security. In fact, some security is essential if freedom is to be preserved, but it must be provided outside the market place and competition must be left unobstructed. As Benjamin Franklin said, "Those who would give up essential liberty to purchase a little temporary safety deserve neither liberty nor safety."

On many sides we hear the argument raised: "Oh, yes, but capitalism and free enterprise must defend itself." Are we blind—can't we see the forest for the trees? Since 1776, with our system, we have built from nothing to the greatest Nation on earth, economically, socially, and financially. This country has but one-sixteenth of the earth's population, yet we own 50 percent of the world's electric power, 50 percent of the radios, 85 percent of the cars, and 63 percent of the life insurance policies. Freedom of choice and opportunity to investor, producer, and consumer is responsible. Here each and every one of us who has a savings account, a life insurance policy, or a share of stock is a capitalist. Freedom is born of hard work, seeking to provide so much goods that in the end all of us may have enough of everything, whereas collectivism is the parent of poverty and hunger bent upon distributing equally

the short supply of goods so that finally no one has enough of anything. Let's work at freedom.

The rise of big government is the obvious development that makes us fearful for the American system of individual freedom under law. For a century and a quarter our Government has kept pace with the country's expanding frontiers and multiple-business interests, but the last two decades have seen a development that is alarming to all thinking and responsible citizens. In 1930 our Federal budget was $4,000,000,000, less than 20 years later it is upwards of $42,000,000,000. In the same time the Government pay roll has increased from 500,000 to over 2,000,000 permanent employees. The giant to be feared is not the large efficient corporation but rather the large inefficient Government as it encroaches more and more upon private lives and private economy. Vast agencies of the Government itself emit an unending stream of propaganda calculated to make big government bigger and to extend the authority of the state over the lives of all of us. Big government as it grows becomes a Frankenstein of high taxes, wide corruption, and little freedom. The nation that values anything above freedom will lose its freedom and acceptance of governmental paternalism in return for surrender of our own responsibilities leads us down the road to self-destruction.

This continuing drift toward a self-perpetuating centralized bureaucracy can mean only one thing, that the central government will eventually take over all private property. The right of private ownership of property is one of the basic postulates of our Constitution. However, in conjunction with this right of private property there is a corresponding responsibility * * * the responsibility of honorable citizenship. To participate in those rights, you as citizens must also conduct both yourself and your business as to deserve those rights. The two are inseparable. Yet, today the demagog on the soap box shouts that the owner of private property is to be condemned as a baron of privilege. The poor fellow either can't read or won't read. If he could or would, he would soon discover that we can all acquire private property under the same set of rules. The fact that only some of us, through industry, saving, and farsightedness succeed in acquiring it doesn't mean it is a privilege. The only privilege is being born in a country where such a right is guaranteed. To protect this privilege we must evince certain qualities: honesty, loyalty, courage, and self-sacrifice. If we do not have such qualities, then we have only ourselves to blame for loss of our freedom.

I do not believe that the people of this country want to change the economic system that has made us the greatest nation on the face of the earth. Bureaucracy, remember, was not born of two world wars. It has grown with the expansion of government in the past two decades. War merely increased the tempo and the planned purpose of top officials to build a tremendous backlog of Government jobholders whose loyalty to the job could be depended on to keep each and every one of the two-million-odd office holders in line. The prize example of the folly of bureaucracy and its results is seen in the management of our railroad systems in two world wars. In the first, when the Government operated the roads, the losses were gigantic—nearly $2,000,000 a day. In the second, when they were privately operated, they made substantial profits even after paying over $3,000,000 a day in taxes. Today's bureaucrat, who claims to be a liberal, is full of plans and bright ideas that will make the state the final arbiter in every field.

Our liberty is slowly slipping away. There are at least four clearly defined areas today where we see the erosion of our freedom. No policy of "watchful waiting" will suffice. Rather it is a time for action, for vigorous opposition, and for a Nation-wide effort to awaken the people to what is happening to their cherished freedom before their very eyes. First, there is the problem of monetary and fiscal policy, for no government can remain strong if its financial structure is other than sound. We are loaded up with a gigantic Government debt. True, the war is in part responsible, but we had absurd attempts at deficit financing in the thirties and may be headed in that direction now. Such policies cannot go on indefinitely, for fiat money is good only so long as the people have confidence in the Government. When that confidence is lost, the Government's credit is no longer good and bankruptcy ensues. We require our banks and insurance companies to meet rigid standards of solvency, yet we allow our duly elected Representatives in Congress to tamper with the financial structure of the Government, as though it had nothing to do with the freedom, security, and prosperity of the Nation.

Next we are faced with regimentation, wholly or in part. This regimentation, actual or proposed, touches the multiple activities of our daily lives and includes, among other things, price control, wage control, rent control, Federal subsidy of education, and socialized medicine. These are the tools of a planned society. Price and rent controls create scarcity, thereby forcing the Government to attempt by rationing, or other means, some sort of equitable distribution of goods or space. The result is that no one has enough of anything. But in the free market, prices are always at work. They call for production where there is scarcity and restrict consumption until the scarcity is relieved. Wages are really the price men sell their skills for, and the same rule holds true. History has proven that attempts to control the law of supply and demand bring national decay. Witness the Roman Empire. Its fall was directly due to the institution of a planned economy. Success of a controlled economy is confined to intensification of depressions, and a myriad of relief applicants. Regimentation spells loss of freedom.

Thirdly, wherever there is Federal participation there has to be Federal control. Farmers accepted subsidies and got controls. If the Government is to pour money into schools, it will not be long before the bureaucrats tell you not only what you may teach but when and how. Any doubt one may have of the truth of these statements can be cleared away by examining the decision of the Supreme Court of the United States which, through Justice Jackson, ruled in a test case on control of subsidized farmers that: "It is hardly lack of due process (under the Constitution) for the Government to regulate that which it subsidizes." The Supreme Court gave sanction to regulation of our economic freedom in another recent decision in which the Court allowed Congress to impose its regulation on an individual farmer, even to the extent of regulating the amount of wheat grown by himself on his own land for his own consumption. Is this the freedom the founding fathers handed down to us?

It is truthfully said that "The power to tax is the power to destroy." The ever increasing burden of taxes of all kinds has been brought home to rich and poor alike. Almost nothing we buy or sell today is free from either a visible or invisible tax. Our income and estate taxes are set at confiscatory levels. High taxes encourage Government spending. Whatever is expended by the Government has to come in esse from the earnings of our labor. Taxes can be paid only from what the people earn. They can be paid only out of production and are a burden on production. Our present system of taxation is fast killing the goose that lays the golden eggs. Confiscatory taxation is an attempt to redistribute wealth in order to create a classless society, but incentive to produce is removed thereby, and taxation becomes a weapon of class struggle. In an ever-changing world our economic life cannot afford to be frozen if we are to be free. Equality of income is a high-sounding political platitude that lulls the thoughtless and tempts the predatory. For us it means a reduced standard of living with the Government's fingers in every man's pocket to provide bed and board (equal to what you have) for those who will not work to earn it. The obligation that is upon every man to work to support himself is as old as the Christian religion, for it was St. Paul writing to the Thessalonians who said: "He who will not work should not eat." I am not talking about the sick, the aged, or the insane, but about the able-bodied one who wants what the other fellow has without working for it and about a paternalistic government that would hand it to him all in the name of "equality." If we are to remain a great Nation, it is imperative that we reexamine our entire tax structure and rewrite our tax laws with an eye to elimination of encroachment of Federal, State, and municipal taxes on one another, to provide for a continuing flow of free capital into a dynamic economy, and to insure sufficient funds for the operation of an economical trustworthy Government geared to render necessary services under constitutional mandate. This is the road to freedom.

Last November we had a national election. It has been said that the result of this election was a mandate from the people to the Government to follow further along the line of state socialism. To my mind this is a gross misrepresentation of the facts. We had no chance to vote for our own freedom, since both candidates endorsed the principles of big government. No wonder people stayed at home from the polls in droves. We had no chance to vote for our convictions. The future of every job, home, bank deposit, insurance policy, or business enterprise depends upon whether you, the public, understand and care enough to support and work for the American way of life. Every American must rise and defend this system with all his strength. If we would protect the future freedom of our children, we must start now. Democracy is not God-given, it is something we have to work for. Each of us must make it for himself. All experience indicates that the worst mistake a country can make is to trade its freedoms, including the freedom to be wrong, for the phony security and frozen static serfdom of dictatorship. The strength, principles, and vitality of our system which has produced the highest standard of living in history is beyond challenge. The most priceless heritage in life is freedom.

Freedom since time immemorial has been a word of inspiration. It is a glorious thing. Our forefathers fought for it; the Constitution established it; the years have sanctioned it. But to safeguard it with eternal vigilance is everybody's business.

Registration for Voting

EXTENSION OF REMARKS

OF

HON. ANTHONY CAVALCANTE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 16, 1949

Mr. CAVALCANTE. Mr. Speaker, under leave given me by unanimous consent, I insert an interesting article which appeared in the current issue of the Capital Comment, dated August 13, 1949, published by the Democratic National Committee.

This article shows the handicap under which the Democratic Party must per-

form its patriotic duty of educating all persons of voting age to participate in the election of public officials. It is common knowledge that in all areas where the Republican Party is firmly entrenched in public office, it shuns all efforts that might add to the voting lists the names of those who constitute the vast liberal thinking mass of American life.

This article is a splendid tribute to the able and patriotic efforts of Hon. Michael J. Kirwan, chairman, and Capt. Victor Hunt Harding, executive director, of the Democratic Congressional Committee, in directing the efforts of that committee along lines that will bring to the election polls of America those Americans whose liberal thoughts are the cornerstones of our American way of life.

The article is as follows:

The Democratic National Committee has constantly sought to spur registrations throughout the country in the belief that a large vote means Democratic victory.

What can be done in a practical test of registration drives is shown in a report received by the Democratic National Congressional Campaign Committee from Somerset County, Pa.

A Republican lead of 1,210 registrations in the test area was wiped out in a 10-week campaign and Democrats now lead in registrations by a net of 323 votes.

All at very low cost.

The test came about through the activity of Congressman ANTHONY CAVALCANTE, of the Twenty-third Pennsylvania Congressional District, which comprises the Pennsylvania counties of Fayette and Somerset.

Fayette County is a strongly organized industrial county which had been strongly Democratic.

Somerset County has been traditionally Republican. In 1948 the vote was 18,599 Republicans to 10,553 Democratic.

Through the years it has been customary to dismiss Somerset County as hopelessly Republican. Then Congressman CAVALCANTE asked: Why?

He conferred with Congressman MICHAEL J. KIRWAN, chairman of the Democratic Congressional Committee, and Capt. Victor Hunt Harding, executive director. A test was decided upon.

Somerset County was divided into three sections—the northern section was that area of the county north of the Lincoln Highway. This is a coal-mining section, with many of the workingmen commuting to nearby Johnstown to the steel mills.

The central section between the Lincoln Highway and the Pennsylvania Turnpike is a somewhat sparsely settled area, in which the main industrial activity is coal mining.

The southern section, south of the turnpike, is mainly agricultural.

The test was made in the north. The central and southern sections were left completely alone to allow a fair comparison between the three zones.

Two men were entrusted with carrying out the test: Gerald Zeigler, secretary of the Somerset County Democratic Committee, and Anthony Rulli, Windber City Democratic chairman.

The plan was one that excluded outside "big name" help. There was no outside aid in the way of advertising or publicity. The entire effort was in the hands of the Democrats in the area of the test.

First, a working list of all unregistered voters by street and house was drawn.

Second, local Democratic clubs were organized in each registration area.

These Democratic clubs supplied the workers who supplied the elbow grease and shoe leather that made the tests successful.

Local leaders handled local publicity. Newspapers were enlisted to boost interest. Radio stations in the area were approached for spot announcements.

The list of unregistered voters in each community was broken down into working assignments and the club members went to work. Result:

The Republican lead in the area of the test was completely erased and a total net gain of 1,318 Democratic registrations was achieved for the entire county.

Comparison of the test area with the sections where no organized drive was made is as follows:

NOVEMBER 1948

	Republicans	Democrats	Difference
North (tested)	7,082	5,872	(R) 1,210
Central (no test)	7,786	2,499	(R) 5,287
South (no test)	3,731	2,182	(R) 1,549
Total	18,599	10,553	(R) 8,046

SEPTEMBER 1949

North (tested)	7,293	7,616	(D) 323
Central (no test)	8,096	2,644	(R) 5,452
South (no test)	3,917	2,381	(R) 1,536
Total	19,306	12,641	(R) 6,665

Note that the 1948 lead of the 1,210 Republicans in the north of the county has been wiped out, and the Democrats now lead by 323.

In the central part the Republicans have boosted their lead by 165.

In the South the 1948 Republican lead has been cut 13.

These figures reflect the difference between effort and noneffort.

Total cost of the test was $200, or approximately 10 cents per newly registered voter.

Previous estimates for the cost of a registration drive in Pennsylvania have been at the rate of 50 cents per new registration.

The work was done by the Democratic club members and the money that was spent was only for the purpose of paying for gasoline to drive registrants to the registration office.

It should be remembered, too, that the county commissioners being Republican gave little aid or comfort to this drive and opened few special registration booths, making it more difficult for these results to be attained.

The lessons learned in this test are to be applied to the entire county.

They can well be applied to every county. It is a real example of how results can be achieved when time and energy are expended in an organized effort.

Registration is the key to Democratic victory in 1950.

Spot Therapy

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely editorial which appeared in the August 13, 1949, issue of the Waltham (Mass.) News-Tribune.

The article follows:

SPOT THERAPY

Heads of a number of Federal departments and agencies are being notified by John R. Steelman, Presidential assistant, of a system of spot therapy for certain cities in the country which are badly off economically. These are cities and areas in which unemployment has reached the critical stage—12 percent and up of the population.

The therapy will take the form of channelling Government contracts, if possible, into certain selected geographical points where new business activity is needed. It has been rumored the majority of the cities on the list are in New England, but cities in Michigan, Tennessee, and Pennsylvania have also been singled out for help.

Many people believe this experiment in putting the needle in business is a better idea than the Employment Expansion Act of 1949, which was introduced in the Senate on July 15, the day after President Truman announced a program of Government spending in areas where unemployment is acute. The bill was slanted mainly at reviving that old cure-all for unemployment—public works construction. Incidentally, the chief lobbyists for the bill were the Americans for Democratic Action, who adhere to the belief that the Government must spend itself silly (through deficit financing) in times of stress. In the drive for recess of Congress, it is doubtful that the bill will even get to the floor of the Senate.

There are signs pointing to an upturn in business activity in the fall. Credit for expansion and development of business has suddenly been made easier by the action of the Federal Reserve Board. With these forces at work, it would seem that the President's plan, which requires no congressional action and no additional Federal appropriations, would be enough to start thawing business out. It should be given a chance before the Congress tries to legislate the country out of a recession.

Provisions of Civil Functions—Rivers, Harbors, and Flood Control Appropriations Bill as Passed by the Senate Should Be Approved at Once—Projects Necessary To Relieve Unemployment

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 15, 1949

Mr. RANKIN. Mr. Speaker, the civil functions appropriation bill, which passed the House some time ago, was very carefully considered at the other end of the Capitol.

The Senate committee, after extensive hearings, reported the bill with many amendments, all of which, in my opinion, are improvements. These amendments were approved by the Senate.

That body passed the measure unanimously, and yet we find it stymied in the conference by certain House conferees.

It would be a shame on Congress if we let one or two men on that conference block this bill and deprive the American people of the great benefits which it provides.

These projects are necessary also to relieve growing unemployment.

Surely if Congress can give billions and billions and billions of dollars to foreign countries, we can improve our own natural resources for the benefit of the American people who fight the Nation's battles in times of war and sustain its

institutions in times of peace, and provide employment for them in times of stress.

The civil functions appropriation bill, as passed by the Senate, if concurred in by the House, will do more to relieve unemployment for the next few years than anything else that has been done or proposed.

The Senate provided funds for various and sundry projects throughout the country that are absolutely necessary, but which some of the House conferees are now trying to block.

I am inserting the various rivers and harbors projects at this point, showing:

First. The States in which they are located;

Second. Total estimated cost of the project;

Third. The amount appropriated to date;

Fourth. Estimated unobligated balance due June 30, 1949;

Fifth. Amount of budget estimate;

Sixth. The amount allowed by the House as allocated by the Corps of Engineers;

Seventh. The amount provided by the Senate.

The Senate approved these recommendations without change.

I hope every Member of the House will scan this list carefully and see what it means to the people he represents.

The list referred to follows:

Rivers and harbors

Project (Projects that can be completed with amounts recommended by Senate committee are marked with asterisk in columns (1) and (7)) (1)	Total estimated Federal cost (2)	Amount appropriated to date (3)	Estimated unobligated balance, June 30, 1949 (4)	Amount of budget estimate (5)	Amount allowed by House as allocated by Corps of Engineers (6)	Amount recommended by Senate committee (7)

[4] $200,000 for planning allowed by House shows under "Alabama," construction table.
[5] Includes $9,000 for maintenance dredging at Havre de Grace, Md., and $400,000 for realinement of authorized channel of the Hudson River in the vicinity of Kingston, N. Y.
[6] Includes $496,000 for Gulfport, Miss., included in bill on House floor and carried in separate paragraph in bill, leaving in the lump-sum appropriation for "Rivers and Harbors" as passed by House $176,034,270 and the amount of the lump-sum appropriation for "Rivers and Harbors" as recommended by the committee $229,098,290. These totals exclude the item for "Alteration of bridges," for which the House allowed no appropriation and the Senate committee recommends $100. They also exclude $12,000 allowed by the House and approved by the Senate committee for "Miscellaneous civil works."

Next I am inserting a similar list of flood-control projects, by States, which also has been approved by the Senate. Check over it and see what it means to the people of your own State. The list referred to follows:

Flood control

[38] $75,000 included under construction.
[39] $25,000 included under construction.
[40] Based on current cost estimate. Present monetary authorization for the project amounts to $1,038,309,500.
[41] Includes budget estimate of $70,000,000, which is to be allocated in accordance with allocation figures submitted to the committee of the budget estimate total, an additional $3,000,000, which is to be allocated by the Corps of Engineers, and $500,000 for the Devil's Swamp project.

You will note that these projects affect every State and every locality in America, and so far as I am concerned, I am willing to adopt the Senate amendments, and pass the bill as approved by that august body.

By doing so we will be rendering a great service to the American people.

Good Government Is Good Politics

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 16, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, Wisconsin's son-in-law, the Honorable J. ALLEN FREAR, Jr., the junior Senator from Delaware, has recently restated the case for ending deficit financing by the Federal Government. His statement is the subject of an editorial in the Milwaukee Sentinel. I commend the editorial to the reading of my colleagues, especially those on the administration side of the aisle. It follows:

GOOD GOVERNMENT IS GOOD POLITICS

Senator J. ALLEN FREAR, Jr., Democrat, of Delaware, was elected to the United States Senate last November not only with the support of the Truman administration forces in his State but with the endorsement of the political action committees of the major labor organizations.

Since taking office he has supported administration policies consistently, undoubtedly in accord with his honest convictions as well as in fulfillment of his campaign pledges.

But Senator FREAR made a radio address the other night which suggests that his honest convictions respecting certain major administration policies—specifically those concerned with excessive expenditures and taxation and debts—are at variance with his campaign pledges as his political supporters may have understood them to be.

They are certainly at variance with the administration policies of reckless and extravagant expenditure and of unnecessary and useless employment which are creating enormous new Federal deficits and debts of ruinous proportions despite excessive and almost confiscatory taxes against the wages and resources of the people.

"I think it is incumbent on me to say now publicly, as I have privately written and said to hundreds of business people since last January," said Senator FREAR, "that I definitely and wholeheartedly favor a reduction in Federal spending and I cannot stress too strongly the need for a balanced budget."

There is sharp refutation in this forthright statement of the theory that all opposition to excessive expenditure, taxation and debt in the Federal Government is to be found in the Republican minority in Congress.

There is also proof in the statement that a willingness to be extravagant with the people's money and wasteful of their resources is not necessary to a political candidate to qualify for labor support.

Senator FREAR has given ample evidence of his standing as a Democrat and of his prestige with organized labor, and he still does not believe in the dissipation of national resources through profligate expenditure, and he has improved rather than impaired his standing as a Democrat and his prestige with labor by his honest declaration of this belief.

It is not as Republicans or Democrats but as honest and sensible and patriotic Americans that Senator FREAR and his many colleagues of the same mind are trying to keep the expenditures of Federal Government within the means of the American people, in order that the progressive and productive and prosperous life of the people may be sustained.

It is not by increasing taxes over and over again that the balance between Federal expenditures and revenues should be achieved, as Senator FREAR asserts, but it is by the reduction of expenditures and employment and thus eventually of taxes and debts that this necessary thing should be done—and in fact it is the only way it will ever be done.

"Failure to carry out adequate reductions in Government spending will certainly result in prolonged deficit financing," says Senator FREAR.

"I am definitely opposed to a condition such as that.

"I believe we must cut down on Marshall plan spending and substantially in the number of Government employees on Federal pay rolls.

"Cuts must be made to keep within the Government income.

"That is just sound business principles applied to the Government, which is the biggest business in the world."

Senator FREAR has given an impressive and convincing demonstration of the fact that good government is the responsibility of all Members of Congress and that the keeping of that responsibility is good politics.

Happy Birthday, Herbert Hoover

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 16, 1949

Mr. ANGELL. Mr. Speaker, we in the State of Oregon are especially proud of the outstanding record of Herbert Hoover. We are glad that universal recognition is given to the outstanding qualities and achievements of this great American.

Herbert Hoover spent his boyhood in Oregon and the home where, as an orphan lad, he spent his boyhood years with his uncle, John Minthorn, in Newberg, Oreg., which is a short way from my congressional district, still stands. There is a movement on foot to restore this building and to preserve it as a museum in order to keep fresh in the minds of the oncoming generations the brilliant career and great achievements of this orphan lad from Oregon. The old swimming hole where Herbert Hoover used to swim as a boy in Chehalem Creek on the outskirts of Newberg still is used by the youth of that neighborhood and the pool is known as Hoover Pool.

I include as a part of these remarks editorials from the two metropolitan dailies in my congressional district, the Oregonian and the Oregon Journal in extending congratulations to Mr. Hoover on his seventy-fifth birthday. I also include an article which appeared in the Oregon Journal on August 10, 1949, entitled "Thirty-first President Remembered as Good Student in College," by Robert Stein.

[From the Oregonian, Portland, Oreg., of August 10, 1949]

A HAPPY BIRTHDAY, HERBERT HOOVER

This is the seventy-fifth birthday of Herbert Hoover, thirty-first President of the United States, whose relation to the Republic is that of an honored elder statesman. One of the greatest of Americans, and as evidently among the greatest humanitarians of all lands and times, he is of those rare spirits who, on being given the cup of bitterness, refused to be embittered. The leader who was denied reelection, and, by the usages of practical politics, made the whipping boy of hard times, has in defeat and political retirement won the confidence and affection of the democracy which once repudiated him. How the heart of the gentle philosopher and friendly counselor must be uplifted by the outpouring today of the Nation's affection and gratitude.

It is idle to speculate on what our present day America would be if Herbert Hoover had been chosen to succeed himself in the White House, but the jeers that were his portion in defeat seem now as cruel as they so surely were, while the sustained consistency of the ex-President's wisdom warrants an opinion that he would have dealt wisely and well with the national problems, and to the retention of national prestige. In this we make no comparisons, nor resort to might-have-beens, but limit language to the evidence. And the evidence is that Herbert Hoover is a statesman in the fullest sense of a term often abused. Gradually an awareness of this dawned upon the American people. We can but feel that the ex-President realizes how completely he is at last in popular favor and how surely in the general affection.

The confidence his countrymen have in Herbert Hoover found its expression in his selection by President Truman as head of the Commission—now called by Mr. Hoover's name—on Organization of the Executive Branch of the Government—a task in itself gigantic, with its requirement of exceptional knowledge of the problems of the country, in their manifold ramifications.

Yet without important dissent Americans approved the assignment and since have received the report of the Hoover Commission almost as gospel. The name of the statesman who devised it is to the American people the guaranty of its patriot wisdom, backed by much knowledge. May we digress here? Some have wisdom but little knowledge. Some have knowledge but little wisdom. He that has both, and who is enlisted in the public service, as Herbert Hoover, is a statesman.

Time was when Herbert Hoover was thought cold, but in this also time has shown us the error. What was so casually and unfairly believed to be chilliness of spirit now is seen to have been something of shyness and something of dignity, alike native to the man's character. When it is considered also that he could not feign camaraderie, which so often is a political art, it is not to be wondered that the people his generous heart so truly wanted to serve, with patriot devotion, flippantly and callously misjudged him. They were blinded by the disasters of the period. They requited his fidelity by naming him scapegoat. Now they know that they were wrong, as their attitude toward him bears witness. And, too, there's no gainsaying the fact that the years have mellowed his dignity, which never was truly austere, and that he has mastered in great part his shyness. Against the background of the present Herbert Hoover looms as an amiable and devoted giant. We can think of none to compare with him except perhaps Winston Churchill.

Herbert Hoover has given more than thirty years of his life to America, in one way or another. Never a moment of these, we dare say, was spent save in utter sincerity and unselfishness. He has made the United States of America his career as few men have done. Now in the autumnal years his countrymen regard him with admiration and fondness, and it no longer matters that once they would have none of him. This is victory, isn't it?

The Oregonian gladly joins with the press of the Nation in birthday greetings to the ex-President on Herbert Hoover day, and counts it a privilege to congratulate both Mr. Hoover and America.

[From the Oregon Daily Journal, Portland, Oreg., of August 9, 1949]

AT THE THREE-QUARTER POST, ACCLAIM

Herbert Hoover, our only living ex-President, will celebrate his seventy-fifth birthday anniversary Wednesday.

Despite opinions, attitudes, experiences, and jests, there is one thing everyone knows now. Mr. Hoover is a truly big man.

Mr. Hoover demonstrated the bigness that is in him in one of the finest personal triumphs in history. He was the "goat" of the depression. As President he was the target of cruel jests, bitter criticism, and loud abuse that should have turned any man sour on the idea of public service. He lacked the showmanship, the magnetism, the power to sway the emotions—the human touch—that were needed at a time when we learned the almighty dollar had feet of clay.

A lesser man might understandingly enough have retired in bitterness to ponder on the ingratitude of the public. But Hoover showed that his service was not to politics but to humanity. He offered his services again—and they have been outstanding—in again feeding humanity in a war-shattered Europe, in heading a comprehensive survey for reorganization of our mushrooming Federal Government, in establishing a remarkable library on World War I at Stanford, in just dropping a word of advice on events that often travel with more speed than design.

Hero worship is not in Mr. Hoover's line. He is not in our tradition of the swashbuckling leader. He doesn't know how to rattle a sword or play the Stars and Stripes Forever up and down the spine of an audience. But he wears and weathers as nicely as the old town hall.

When the record of personal service to the United States, to the world, to humanity is totted up for the twentieth century the name of Herbert Hoover will be right up toward the top. The record speaks for itself.

Congratulations, sir, on 75 years of productive living.

[From the Oregon Journal, Portland, Oreg., of August 10, 1949]

THIRTY-FIRST PRESIDENT REMEMBERED AS GOOD STUDENT IN COLLEGE

(By Robert Stein)

Westward to Newberg in 1885 came an orphan lad destined to become the thirty-first President of the United States.

He was only 11 and lonely when he marched up the steps of Uncle John Minthorn's home. Herbert Clark Hoover, 75 today, now is recognized as one of the Nation's elder statesmen.

The Minthorn house where Herbert lived 3 years while attending Pacific Academy now George Fox College, is Newberg's most famous landmark. An old bachelor friend of Hoover, Frank Vestal, 76, now lives in one of the two apartments in the dwelling.

The Herbert Hoover Foundation, headquarters at the college, purchased the house 6 years ago and plans to restore and furnish it as it was when Hoover was a Newberg boy. It will be turned into a museum. High construction costs have delayed the work.

Another famous spot is an old swimming hole in Chehalem Creek, on the outskirts of Newberg. There Herbert used to romp and swim with his schoolmates. The spot still is called Hoover pool.

"Hoover was a studious lad," Vestal recalled. "He wouldn't play with the kids during recess. He used to stay and study. He was also hard to get acquainted with, but did like to swim."

Molded by the elemental conditions of a rural village in which manual labor for all was the rule, Hoover was trained to piety and the principle that work well done and pursued to its goal was worth while. Uncle John was a strict disciplinarian whose motto was, "The meanest thing a man can do is to do nothing."

Hoover was born August 10, 1874, in West Branch, Iowa, a town founded by his ancestors. His father, a blacksmith, died when Herbert was 4.

Three years later death claimed Herbert's mother, a licensed Quaker preacher and dauntless crusader for her faith. She contracted pneumonia after having tramped 2½ miles one wintry day to comfort a distressed family in a nearby town.

West Branch relatives looked after Herbert for 4 years. Then Uncle John, first president of the Quaker school at Newberg, sent for the lad to come west. Herbert registered in September 1885 as one of the first students at Pacific Academy.

STUDIED HARD

In Newberg, and later in Salem, Herbert studied and worked hard. He was employed as a chore boy at the academy where two professors termed him "a wonder in mathematics." But when it came to translating Latin versions of Caesar's exploits in Gaul or tangling with complicated English sentence structures Herbert's mind began to wander. Because of this his cousin, Mary, had slight regard for Herbert's mentality.

Young Herbert lived with another uncle in Newberg when Uncle John moved to Salem in 1886 or 1887 to become vice president of the newly organized Oregon Land Co. He completed his courses at the academy and moved to Salem to join Uncle John and his family.

Uncle John bought property in North Salem, first built a barn in which the family lived while a house was under construction. Their beds were made in mangers in a loft. After the house was finished Herbert used the attic for sleeping and study until he left for Stanford in the fall of 1891.

DID EVERYTHING

While in Salem Herbert was office boy and general roustabout for the Oregon Land Co. He did everything his young hands could do. He opened and cleaned the office in the mornings, opened correspondence, drove "hacks" to show lots to numerous prospects, tended horses at home, watered the cow, split and carried firewood. He would study "during slack moments."

In the evening after saying prayers with Uncle John and the family, he would scurry to his attic room for more study. Herbert went to night school, too, to prepare for Stanford.

A Stanford scout visited Oregon in 1891 and Herbert became a member of the university's famed "pioneer class of '95." During his treks about the Oregon countryside he developed a passion for rocks and enrolled in the new university's department of geology and mining.

Although he had less than $300 when he left Oregon, Herbert took many odd jobs in Palo Alto and helped put himself through school, just as he had done at Newberg and Salem.

Take It Easy, Harry

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. JENKINS. Mr. Speaker, I am glad to report to the House that our popular colleague, Hon. J. HARRY MCGREGOR, is fast recovering from a very serious operation which he underwent a short time ago. I am pleased to report that he has gone back to his home in Ohio and is preparing to carry on a program which he has been carrying on for several years.

Heretofore annually he has arranged public meetings in all of the county seat towns in his district where he has invited his constituents to come in to see him. These meetings have brought out a large number of his constituents with whom he has talked over the important problems of the Nation and also over any personal business matters in which his constituents were especially interested.

The Mount Vernon News, one of the progressive papers in Mr. MCGREGOR's district, has recently printed an editorial concerning the work and popularity of Mr. MCGREGOR. This editorial is eloquent and forceful in that its crowning virtue is that it speaks the truth. I am glad to include this editorial in my remarks and to give it my complete and most sincere concurrence:

TAKE IT EASY, HARRY

For several years Representative J. HARRY MCGREGOR, of the Seventeenth Ohio District, has been making an August tour of the six county seats in his district, spending a couple of days at the courthouse in each city to listen to complaints, receive suggestions, and to answer questions for the residents of his district. No appointments are necessary, and the plan has been strictly informal, with all comers welcome. The visits serve a dual purpose. They enable the citizens of the district to talk face to face with their Congressman, and they give the Congressman a chance to find out the feeling and opinions of the people back home.

For a time it appeared Congressman MCGREGOR might not be able to make his tour this year. In July he entered Bethesda Naval Hospital for a serious operation for an infection of the inner ear. First word from Washington was that he might be in the hospital for several weeks, but the Congressman now writes that his doctors have advised he can make the tour if he takes it easy.

Congressman MCGREGOR has many friends, admirers, and supporters in the Seventeenth District, and even those who are against him politically admit without hesitation that he has been a hardworking and conscientious Representative through his many years in Congress.

The Seventeenth District as a whole is glad to see the Congressman back on his feet again, and happy to know his illness will not prevent his annual visits. But the voters say, with the doctors, "Take it easy, Harry."

Trials and Tribulations of an Iowa School Teacher Who Seeks to Build and Own a Home

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. GROSS. Mr. Speaker, the following letter tells of some of the handicaps under which our citizens labor in their efforts to construct and own their own homes.

The House of Representatives has given its blessing to a so-called slum-clearance and low-rental housing measuse, but in that multi-billion-dollar measure nothing was done for those who seek to help solve the housing shortage in the American way—by home construction through the process of free and private enterprise.

Government agencies must cut red tape to the irreducible minimum to encourage home ownership. Every citizen, who has adequate finances for the construction of a new home, ought to have the utmost cooperation instead of constantly being harrassed with red tape and other obstacles. And in those sections of the country where the season for construction is short, expedition on the part of Government agencies should be the watchword.

Following is a most interesting letter on this subject:

DYSART, IOWA, *July 29, 1949.*

Hon. H. R. GROSS,
House Office Building,
Washington, D. C.

DEAR SIR: Once in a while when I feel I have something of value to report I like to get in touch with my Senators and Congressman concerning it. This letter is not one of complaint but I hope that it is one with some constructive criticism of one of our Government agencies, the Federal Housing Authority.

Briefly, here is what has happened to me: Last spring in April I knew that I would have to move from our present apartment by September 1 so I immediately arranged to construct a home here in Dysart under FHA regulations. Mr. R. O. Hutchinson, of the Leavitt & Johnson Co., in Waterloo, whom you may know, helped me get all the necessary forms ready. After about 5 weeks it was turned down as being too expensive for my income. Then I arranged for another house, costing over $2,000 less, built by a contractor from Parkersburg, Andy Knock. I had already about 10 percent of the total cost invested in the lot and several incidentals and applied for a loan of $8,500 FHA plus a Veterans' Administration loan of $500. That all happened about June 15. Now, 6 weeks later, the entire thing still has not come back from the Des Moines FHA office in final approval. One time they sent everything back for a cupboard change; a second time for something else, and finally the third time they lost my credit-rating report and sent back to Waterloo for another.

From what I now hear, everything is pretty much in order except that with all this fooling around they still have not appraised my lot and that is the one thing still holding up everything. Next week might see everything finally confirmed but we have been expecting that every week now for a long time and September 1 is beginning to get pretty close—almost too close to get the house finished enough to move into. I had hoped to cut costs a little by helping out the contractor's carpenter crew but school here will begin before I can do that and then I will have to go back to my teaching job while waiting an entire summer for FHA.

My criticism is this: A lot of public housing is being contemplated which may be all right for the cities. However, in the more rural areas why can't people get FHA approval or disapproval in a little quicker time when they want to build and pay for their own houses. For over three months we have been getting more and more bound in red tape until now everything looks less desirable every day. A good part of the trouble is the fact that FHA employees of specialized ability, such as architects, are paid so little that they will not work for the Government and those who will work have ability that probably is in accordance with the pay they receive. I am not blaming the Des Moines office entirely since I think the situation is caused by the entire set-up from top to bottom. FHA is not one of our high-cost relief agencies of which we have many; it is supposed to be one of our nearly self-sufficient organizations but that should not cause it to be second rate and inefficient.

Sincerely,

ELMER C. GAST.

The China Crisis

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. LODGE. Mr. Speaker, there have been so many misunderstandings in connection with the China crisis and the events leading up to it that I believe it is important, especially for members of the Congress, that the facts be brought out.

In order for public opinion to be enlightened, people must have access to accurate information. We who rightfully believe in a free press and freedom of expression must not become the victims of slanted attitudes designed rather to justify mistakes than to bring out the truth.

In an effort to illuminate some of the salient facts involved in the dangerous disturbance in the Far East, I am inserting in the Appendix of the RECORD two editorials from the Washington Daily News of Friday, August 12, and an article by Clyde Farnsworth dated August 9. They follow:

[From the Washington Daily News of August 12, 1949]

DELAY IS DANGEROUS

General Bradley told Congress this week that military planning for the defense of the Western World can begin in 90 days, if we provide money for the tanks, planes, and guns.

Until this money is provided, he said, the North Atlantic Pact is merely paper.

It is foolish and dangerous to delay this program. We had a recent example in the case of the China program.

On April 3, 1948, Congress—over the protest of the State Department—appropriated $125,000,000 for Chinese military aid. For reasons never satisfactorily explained the program bogged down.

President Truman waited 2 months until June 2—before he signed a letter outlining how the money could be used. The State Department waited another 26 days before sending a copy of the letter to the Chinese Embassy, just a mile and a half away.

The the President's letter had to be revised, and on July 28 he signed a second one. The program finally started to move on August 4. Only then could the Chinese begin buying supplies sorely needed by their hard-pressed troops.

The first two shiploads of military equipment reached the Chinese Nationalists on January 4, 1949—9 months and 1 day after the money was voted. By then the Communists had crossed the Yangtze and the ships had to go to Formosa.

If Congress needs testimony on what delay can mean it should call Chiang Kai-shek. He can qualify as an expert witness.

DON'T RECOGNIZE CHINESE REDS

When the smear, the whitewash, and the window dressing are eliminated from the State Department's white paper on China policy, it can be seen the essential issue between Chiang Kai-shek and our Government was communism.

Chiang knew the Chinese Communists were Moscow-directed, and wanted nothing to do with them. Our Government insisted he could and should do business with them.

Chiang was right. Our Government was wrong. Great damage has been done by its mistake. But what do we do now?

The basic issue remains unchanged. It is communism. Our alternatives are to oppose it, as we are doing in Europe, or to appease it, as we have done and are doing in China and the rest of Asia.

It is quite obvious what the State Department wants to do. It wants to recognize and do business with the Chinese Communists. Don't ask us why. Ask the State Department.

American policy has been pointed toward that objective for 4 years. The Marshall mission was designed to further that purpose. The Wedemeyer report was suppressed because it offered an alternative to that program. Our official attitude was revealed when the Communists were advancing on Nanking months ago. Although our Ambassador was accredited to the Nationalist government, on State Department orders he did not follow that government when it fled to Canton. He remained in Communist-held Nanking and attempted to establish relations with the new regime. He was unsuccessful only because the Communists weren't ready to do business with us.

British Foreign Minister Bevin will visit Washington next month. One of the purposes of his visit is to seek to coordinate American-British policies on China. That is nothing new. The State Department and the British Foreign Office have been discussing the subject for months. Now a statement of policy may be in the offing.

Britain wants to placate the Communists if it can, to protect British investments in Shanghai and to prevent an attack upon the crown colony at Hong Kong. Why the United States should consent to be the catspaw in such a futile venture has not been revealed. But we may be sure the State Department will have a glib answer when the time comes to let the public in on its intentions.

Recognition of the Chinese Communists would confirm Russia's title to Manchuria. It would give Russia another vote in the Security Council and in the Japanese war settlement. It would permit the fifth column in China to obtain the things it needs to complete the Communist conquest of Asia.

Congress can prevent this, if it will. But it should act, and act now, by serving notice on the State Department by joint resolution that it will not submit to any such betrayal of American interests.

[From the Washington Daily News, of August 9, 1949]

ACHESON'S AUTOPSY ON NATIONALIST CHINA DIDN'T HELP PATIENT

(By Clyde Farnsworth)

CANTON, August 9.—Secretary of State Dean Acheson's autopsy on the Chinese Nationalist government while the body is still warm may not in itself be fatal. But it didn't do the patient any good.

Chinese Nationalists—and there's still a hard core of them, the only effective anti-Communist force in China—have been left to wonder just what Mr. Acheson's purpose was, or more broadly the purpose of the Washington Administration in issuing the white paper on China.

Their speculative answers include:

It was a tacit eleventh-hour invitation to the Chinese Communists to welsh on their debts and commitments to the Soviet Union in return for American recognition.

It was intended to shush increased criticism and misgivings at home over the Washington administration's failure in China. It's generally regarded here as the best possible face that could be put upon American performance from Yalta down to the hamstringing of the United States military advisory group.

It was an implicit though somewhat premature acceptance of the Chinese Communist conquest of China with which the United States could couple a warning, however toothless, that the Chinese Reds must keep their revolution in China and not mess around with neighboring countries.

But, whatever its purpose, the white paper has in an unpredictable way given new impetus to the Nationalist disintegration.

I know an American businessman in Canton who cut short a Hong Kong holiday after the white paper was published to rush back to Canton to liquidate and get out before the Reds get here. He was sure the white paper had sharply limited Canton's weeks of grace.

There probably will be a Chinese Nationalist Government—in name, at least, somewhere on Chinese soil for a long time to come.

Actually, the white paper hasn't reached this side of the world yet and reaction is based on press reports. These are extensive, however, including texts of Secretary Acheson's covering letter and his five-point statement of basic principles of China policy.

ODDITY

Mr. Acheson's letter presented at least one glaring oddity—the statement that the Nationalists did pretty well for China from 1927 to 1937 and during the same time started to run down. That was the period between Chiang Kai-shek's break with the Communists and the war with Japan.

"During this period the Kuomintang (Nationalist Government Party) made considerable progress in its efforts to unify the country and to build up the nation's financial and economic strength," Secretary Acheson wrote, and then added oddly:

"Somewhere during this decade, however, the Kuomintang began to lose the dynamism and revolutionary fervor which had created it, while in the Chinese Communists fervor became fanaticism."

The first sentence was a statement of fact readily documented. The second sentence was an exercise in clichés which not only fitted the general thesis of the Nationalists' incipient weakness but might have been matched almost word for word in any one of several pro-Communist books that have come out of China.

That's been a dominant theme of fellow travelers.

PRETTY AND PAT

It goes pretty and pat: The Chinese revolution was self-generating among the masses; the Kuomintang and Communists vied for leadership; Communists, being more dynamic, won.

Secretary Acheson's letter is sprinkled liberally with that idea in various forms. It's an argument for which there is no proof. If there is any pertinent evidence, it is that the Chinese as a whole are the least revolutionary people in the world.

Democratic Committee Takes Issue With Power Suggestion

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 16 (legislative day of Thursday, June 2), 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article published in the Union-Bulletin, of Walla Walla, Wash., by Charles Luce, a very prominent attorney of that city.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEMOCRATIC COMMITTEE TAKES ISSUE WITH POWER SUGGESTION

Charles Luce, Walla Walla attorney, takes issue on behalf of the Democratic central committee with one aspect of the proposed Federal power policy advanced by Herbert G. West of the Inland Empire Waterways Association. Luce's comments take the form of a letter to the Union-Bulletin, which follows:)

(By Charles Luce)

Two recent articles in the Walla Walla Union-Bulletin have set forth the proposals of Herbert G. West for what he chooses to call a Federal power policy.

With most of what Mr. West has to say, we completely agree. When he favors a network of Federal power transmission lines, and the

"postage stamp" regional power rate, he is approving the program of the Democratic Party for the past 20 years—a program that has been written into the Bonneville project act and reaffirmed in the pending legislation to establish a Columbia Valley Administration.

And when Mr. West declares it "essential" that "the distribution of the federally developed power (be) at the lowest possible cost to all," he is accepting the principle that advocates of publicly owned power systems have asserted for more than 20 years.

WOULD RETAIN CLAUSE

But we must take issue with Mr. West when he proposes to abolish the principle of "preference and priority" that is established in the Bonneville Act for REA cooperatives, cities, and utility districts.

In simple terms, this principle means that all power contracts between the Federal Government and private power companies contain a clause which says that, in the event of power shortage, nonprofit distributors, such as REA cooperatives, will have first rights to the Federal power.

The principle of preference and priority for nonprofit distributors is a necessary corollary derived from the basic premise, which Mr. West himself says he accepts, that distribution of federally developed power to be at the lowest possible cost to all. The river belongs to the people, not to any private group of stockholders.

CALLED APPEASEMENT

The sole justification offered for elimination of the principle of preference and priority is that it might reduce the opposition of the private utilities to new power dams and transmission lines. In short, Mr. West would base his Federal power policy on the principle of appeasement—appeasement of the same forces that have tried to prevent regional development from the earliest days when they fought the expenditure of $20,000 for core drilling at Coulee Dam.

Appeasement seldom works, and we do not believe it would work in this case either, for the following reasons:

Because of preference and priority for public utilities, the private utilities now have a strong incentive to support the building of more dams and transmission lines. The private utilities get what is left over after public utilities have met their needs. The more power that is left over, the more the private utilities will get. When the power shortage is entirely licked, preference and priority will therefore be meaningless.

WOULD ELIMINATE INCENTIVE

To eliminate preference and priority would be to eliminate this incentive. If the private utilities were allowed to contract without reservation for all of the Federal power they need, they would absorb all of the power not now neded by REA cooperatives and other nonprofit distributors. This would mean that no power would be left for new cooperatives or public utilities, even though the people of the area wanted them. Nor would there be power left for expansion of existing cooperatives, cities, and utility districts.

By contracting for all the available Federal power, the private utilities could, by a single act, freeze the status quo and stop public power in its tracks for as long as the power shortage continued to exist.

So that Mr. West's proposal to eliminate the long-established principle of preference and priority would not appease the utilities. It would do just the reverse. It would give them a compelling incentive to oppose more dams, because so long as they kept the region in a condition of power shortage, just so long would they be able to contain the public power program which they have always bitterly fought.

NO PERCENTAGE FIGURE

Mr. West's attack on the Bonneville Act is based partly upon misinformation. Contrary to what he says, that act does not now reserve 50 percent, or any other percentage, of the Federal power for preferred customers.

And though he states that the Bonneville Administration has used "all of its power and its resources for the elimination of private utilities," the fact is that the Bonneville Administration for the past several years has been the main support of private utilities. P. P. & L. gets about 50 percent of its power from Bonneville. If Bonneville would pull the switch on P. P. & L., its system would fall apart within a few seconds.

Finally, Mr. West says that CVA is "not wanted." Not wanted by whom? Practically all the major farm organizations, labor organizations, and public power groups—the same people who backed Bonneville and Grand Coulee Dams when the utilities said they were a waste of money and dangerous socialism—are now backing CVA. For whom, then, does Mr. West speak?

Address by Hon. Edward Martin, of Pennsylvania, Before Annual Convention of the American Legion, Department of Pennsylvania

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 16 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered to the American Legion of Pennsylvania, on Friday, August 12.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is always an honor to be invited to address the American Legion.

The American Legion is the world's greatest organization of veterans. It grew to its present strength, power and prestige because it was established on principles that are enduring.

The preamble to our Legion constitution sets forth a way of life—a real American way of life.

In it are embodied the fundamental principles of all religions—faith in God. That is the first essential of a free people.

The very first words of that preamble are a statement of high principle. They are—"For God and country we associate ourselves together for the following purposes."

I repeat, "For God and country." It is a pledge of patriotism, a guidepost to honorable citizenship and the hope of a greater, happier America.

You are all familiar with the purposes set forth in the Legion constitution but they are worth repeating at meetings such as this. They are:

1. To uphold and defend the Constitution of the United States.
2. To maintain law and order.
3. To foster and perpetuate 100 percent Americanism.
4. To preserve the memories and incidents of our association in the Great Wars.
5. To inculcate a sense of individual obligation to the community, State, and Nation.
6. To combat the autocracy of both the classes and the masses.
7. To make right the master of might.
8. To promote peace and good will on earth.
9. To safeguard and transmit to posterity the principles of justice, freedom, and democracy.
10. To consecrate and sanctify our comradeship by our devotion to mutual helpfulness.

That, my comrades, is a guide for individual conduct that can preserve American freedom in all its greatness and glory. It is a lesson in patriotism for young and old.

Above all it expresses the true concept of a free people as set forth in the Thirty-third Psalm, in these words:

"Blessed is the nation whose God is the Lord."

So long as we remain steadfast in loyalty to those principles we can keep inviolate the sacred ideals of liberty and justice on which our Republic was founded.

But the principles expressed in that philosophy are mere empty words unless they are accepted and practiced as part of our individual lives.

They place upon us an obligation that each of us must share. A republic, for its life, depends upon the soundness of its citizens.

A chain, a brick wall, or a fine piece of machinery is no stronger than the weakest part. And a nation is no stronger than the average strength and character of its citizenship.

We must face the tragic truth that there has developed among some of our people a spirit that is not in accord with the ideals enunciated in the preamble to the Legion constitution.

It is a philosophy that is contrary to those principles that were responsible for the building of this, the greatest Nation of all time.

Its destructive influence has invaded high places in our Government. It has corrupted officials upon whom we relied to defend and support the Constitution, to maintain law and order, and to foster and perpetuate 100 percent Americanism.

In recent months we have been shocked and outraged by disclosures of treasonable disloyalty, plotting against America to serve Communist Russia.

We have read the disloyal utterances of the Paul Robesons and others of his ilk who have repaid with base ingratitude the advantages and opportunities that America has extended to them so generously.

If they love the Communist system so much why don't they go to godless Russia? I am sure we would all rejoice in their departure—provided they had a one-way ticket.

I am glad to say that Robeson is not a true representative of his race. He does not speak for them. He has been denounced by his own people.

More recently we have been equally shocked and outraged by charges of fraud and dishonesty in Government contracts and the bartering of influence for selfish advantage and personal gain.

Again turning to the preamble of the Legion constitution and we find ourselves pledged to inculcate a sense of individual obligation to the community, State, and Nation; to combat the autocracy of both classes and the masses; and to safeguard for posterity the principles of justice, freedom, and democracy.

Are those principles being carried out today?

The present trend of our Government is to discard the doctrine of individual responsibility and to replace it with the false premise of security without effort—an easy way of life to be provided by a benevolent, all-powerful Government.

Our citizens have permitted their local communities to shift a large part of their functions and responsibilities to State government. And the States have surrendered many of their powers and responsibilities to the Federal Government.

Too many of our people have been misled by the false and dangerous idea that what they get from the higher level of Government costs them nothing.

They forget that the Government has nothing to give except that which it takes from the people.

They also forget that when they are relieved of the individual responsibility they are deprived of a portion of their individual freedom.

Under this philosophy we have seen a huge bureaucracy built up in Washington at tremendous expense.

We have seen the cost of Government go higher and higher until today it is proposed to spend $42,000,000,000 to operate the Federal Government for a single year.

This is in spite of the fact that we ended the last fiscal year with a deficit of nearly $2,000,000,000.

What is the reason that Government spending is not kept within the limits of its income?

The outstanding reason is that we have shirked our individual responsibility.

We have failed to demand with vigor and determination the saving of billions of dollars now being squandered in waste and extravagance.

We have permitted the expenditure of vast sums of money to promote socialistic programs which can eventually destroy our freedom.

We have submitted to the demands of pressure groups serving selfish interests.

Sectional and regional advantage has been placed above the welfare of the whole country.

The result has been a reckless, drunken, spending spree which can bring us to national bankruptcy unless the American people come to their senses and put a stop to it.

If continued it would mean that the American Legion could not possibly carry out its avowed purpose "to transmit to posterity the principles of justice, freedom, and democracy."

In a bankrupt nation there is no freedom, no justice—only poverty, dictatorship, and slavery.

Are the American people so attracted by gaudy promises and glowing pictures of a care-free future, that they are willing to close their eyes to the most terrible waste and extravagance our country has ever known?

Are the American people so indifferent to the real facts that they are willing to be fooled?

Can America be awakened to the danger?

Can the fighting spirit of American people be aroused to save America from the socialistic system that has brought other great nations to destruction?

Unless we learn and apply that lesson of history, American freedom will be wiped out.

If America is to be preserved as the greatest Nation in history, our people must stop leaning on the Government and stand once more on their own feet as our forefathers did.

I am confident that the 3,000,000 loyal and patriotic members of the American Legion will be in the front line of the battle to save American freedom.

We must restore a sense of individual integrity and responsibility.

We must think more about our duties as citizens than our rights and privileges.

We must drive out corruption at all levels of Government.

We must rid ourselves of racketeers and profiteers who demand something for nothing.

We must clamp down on law evaders and law violators.

We must crush the poisonous influence of communism and every other subversive element that is undermining loyalty to America.

We must resist the efforts of those who would replace our free Republic with the planned economy of the welfare state.

We must safeguard the national economy against abuses by big business, big labor, and big government.

We must strengthen the moral and spiritual vitality of our people.

We must depend more upon ourselves and less upon the Government.

We must practice honesty, self-reliance, thrift, tolerance and above all, faith in God.

As soldiers we are taught that before we go into battle we must have an estimate of the situation and a plan of action.

First we learn about the enemy and his possible action, also information about our own troops. I believe I have given you an accurate estimate of the situation and a plan for action.

In this conflict we know that our enemies abroad are the godless treacherous and aggressor nations. We know here at home that our enemies are those treacherous foes who would overthrow this Government by force if necessary. In addition, we have the careless and selfish American. He is not a well-trained soldier.

We know we must be prepared. We must be equipped and we must be trained.

I humbly submit for your consideration the following training program:

First, we must strengthen the influence of the family and the home. There are few juvenile delinquents in good families. The morale is high. They possess a high degree of integrity.

Second, we need fine schools presided over by men and women imbued with the highest ideals of this Republic. Their job is a sacred trust. They should teach the young to be self-reliant, tolerant, and unselfish. They should teach the glories of the American way of life and what it has accomplished.

Third, we need militant and tolerant churches. We should all be generous in support of our synagogues, cathedrals, and churches. They should teach the dignity of the freedom of the individual. They should provide for the Boy Scouts, Girl Scouts, the YMCA, the YWCA, the Knights of Columbus, the Jewist organizations and all the other great groups that have stood for Americanism at its best.

My comrades, one of our most important duties as Legionnaires and as Americans is to mold the minds of youth so as to build men and women of character, principle, and integrity.

We should teach our boys and girls to be grateful for the strength and loyalty of the men who, in the name of liberty, created this powerful Nation. It was the first time in history that a government had as its prime purpose the preservation of the God-given right of freedom of the individual. Our Government was consecrated in the blood and tears of stalwart men and women for that purpose.

The rich soil, ore, fuel, and other natural resources were important in the development of the America we enjoy, but the great factor was the iron spirit in the hearts and minds of the men and women who founded, created, and developed the United States.

Let us work and fight to preserve the heritage they have so gloriously given us.

Merger With the United Kingdom?

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 16 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, several days ago the junior Senator from Nebraska stated to the press that the British Government was sending Sir Stafford Cripps to the United States to negotiate for new and more aid from the American taxpayers for Great Britain.

This Senator stated that he had been informed indirectly over the grapevine that Britain wants the United States to give her a large loan—in the billions—with installments every year for 5 to 7 years; also, that Britain wants to tie the pound sterling to the dollar, and divide markets with the United States, and open wider American markets for British goods.

This report, which was passed along to the press, was immediately denied by a spokesman for the British Embassy here.

Subsequently the newspapers and so-called confidential information services in Washington have carried statements substantially similar to the information revealed by the junior Senator from Nebraska. This Senator does not vouch for the accuracy of the reports; but since it appears that Congress soon may be told there is another crisis and that more billions and more sacrifices must be made by the American people in the interest of keeping Great Britain afloat, it would be well to keep abreast of developments.

Today's Wall Street Journal carries a story by Ray Cromley stating there is discussion in State Department circles on proposals to merge the United States and British economies. The heading reads: "Merger with United Kingdom?—United States officials talk of economic union to end persistent British crisis—First, link the currencies; later, free movement of goods, labor, capital—Many a ticklish question."

I ask unanimous consent for insertion of the article in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MERGER WITH UNITED KINGDOM?—UNITED STATES OFFICIALS TALK OF ECONOMIC UNION TO END PERSISTENT BRITISH CRISIS—FIRST, LINK THE CURRENCIES; LATER, FREE MOVEMENT OF GOODS, LABOR, CAPITAL—MANY A TICKLISH QUESTION

(By Ray Cromley)

WASHINGTON.—An economic union of the United States and Britain.

That startling idea is being seriously discussed privately by a growing group of key State Department officials as "the only way out" of Britain's "permanent" dollar shortage.

These officials think Britain could but won't solve her own problems. For political-military reasons, they figure, the United States must solve them for her, permanently.

Their thinking is not official State Department policy now. There is no certainty it will be brought up in the talks here next month among the United States, England, and Canada on Britain's needs for dollars. A whole series of proposals will be made at these sessions for temporarily easing Britain's current "crisis." But officials are seeking a permanent solution and some of them believe financial union may be it. This rather desperate idea is due for official consideration within the next year, at least inside the State Department.

Any such program would, of course, have to be approved by Congress and by the British Parliament. Even with these O. K.'s, the

plan would take several years to get going. And there would be a great deal of opposition, based on formidable difficulties.

Maybe the idea will be abandoned in the end, as some other ideas of global reshuffling have been. Whether it matures or not, this sensational proposal is significant, for it shows how little faith the administration now has that England can be rescued by any mild or temporary aid.

NATURE OF THE PLAN

What do officials mean when they talk about economic union—or, as they call it, financial union—of the United States and Britain? They've written nothing down—and each man thinks somewhat differently. But here is a sort of composite of what they are thinking:

Sterling and the dollar would be welded into one currency. This would be done by making them completely interchangeable. Both pound notes and dollar bills would be retained, but either could be freely swapped for the other at a fixed rate of exchange.

Free trade would be instituted between the United States and Britain. That would mean no tariffs and no import quotas.

Free movement of manpower would be permitted between the two lands. That would mean British labor would be free to work in America; United States labor would be free to work in the United Kingdom—just as Californians can work in New York or Kansans in Missouri.

Capital could move as freely as commodities and manpower. Americans would be allowed to invest their funds freely in England, and then take them out again at any time. Englishmen could ship their capital to the United States, and withdraw at any time.

The British dominions and colonies, and the American Territories and dependencies, would have the same preferred relationship to the merged economies as they now have to Britain or the United States.

Any such plan, officials believe, would have to be put into effect gradually to prevent serious effects on the United States and British economies. They believe the currency link must come first. That's why they call it a financial union. Economic mating—in the form of free trade and the free flow of capital and labor—would come more gradually. They would be deemed necessary to make the financial union work.

This gradual approach would be designed to lighten blows on American firms which would lose tariff protection, for example. The tieing in of the British Dominions and the freeing of blocked sterling now held by many countries are two other problems which would take time to solve. These are among the important difficulties that officials here haven't completely worked out, even in their own minds.

POLITICS WOULD BE SEPARATE

This all adds up to the proposition that the two countries should merge their economies almost as completely as those of the 48 United States. Yet the two nations would keep their political independence. How this could work out is a question the State Department men have not quite cleared up. For instance, they can foresee that if Britain's socialism frightens British investors there could be a flight of capital to the United States.

Those who are discussing economic union say the idea is politically impossible right now. But, as one of them argues, "it may not be later." They expect most of the opposition would come from the United States. As one official puts it, "Britain is in such a position that we can call the tune when we choose."

The State Department men reason like this:

September's Anglo-United States talks on Britain's dollar shortage will get nowhere; England by itself will never take the hard-boiled steps necessary to get on her feet and the United States is not likely to force her. Without British self-help, continued United States aid to Britain will go chiefly for relief, not recovery. Thus Britain will be in a perpetual crisis being held up by United States aid forever. And financial union is the only thing that will solve the problem.

Why solve it at all?

These men answer that Britain's recovery is the key to European and world recovery. "It's partly psychological," expounds one official. "Britain has always been a major power; when she weakens, the rest of Europe becomes panicky and retrenches. But Britain's recovery would also give a real economic boost because her financial interests spread so far and so deep. When the whole commonwealth is counted in, you're dealing with a good share of the world."

These same men declare the United States must depend on Britain as a military kingpin in the Atlantic Pact. They say if Britain weakens, the pact loses much of its value.

COSTS AND BENEFITS

What would financial union mean to Britain and the United States? Here's what the State Department men who've been discussing the idea think:

A financial union would be extremely costly to the United States taxpayer in its early years. To keep the pound and the dollar freely exchangeable, the American Government would have to give dollars for all the pounds anybody wanted to get rid of—with certain limitations as on blocked sterling. If—as expected—Britain imported far more than she exported, she would pay for the excess in pounds which would probably be promptly cashed for dollars at the United States Treasury. If there was a flight of capital from Britain, the American Government would swap more of its dollars for more pounds.

This would cost billions of dollars in the first few years—no one has even estimated how much. It would leave this country holding big quantities of sterling, and perhaps no very clear idea what to do with it for a time.

But the cost—according to theory—would go down as the British and American economies integrated as a result of free competition and the free flow of capital, goods, and labor. Eventually, the men in the State Department suggest, Britain would be no more of a drain on the union than any part of the United States is a drain on the other States.

British firms would be forced to modernize or go bankrupt when they got into direct competition with American companies. "That's the only way we'll ever get them to do it," says one official.

WORLD'S BIGGEST FREE MARKET

It is argued that expanding the area of free trade would give producers bigger and more lucrative markets. The United States farmer would be able to sell wheat, cotton, tobacco, and fruits directly to the British. The British producer could sell his whisky, textiles, or chinaware in the United States without restriction. This would mean some painful readjustments but on the whole an upsurge of commerce and new prosperity for both lands, proponents say. Officials hope the free trade could gradually be extended throughout the commonwealth—to Canada, South Africa, India and other regions totaling a fourth of the world's area.

There are as yet no conclusive answers here to some of the question which might be raised by opponents of the scheme—including perhaps ones like these:

Would there be an overwhelming rush of Britons to get out of the "austerity" living standard on their islands? And would low wages in Britain arouse the hostility of unions here, if their products were sold with tariff walls destroyed?

Could British socialism and American capitalism work together within an economic merger? Would some state purchasing—as in Britain—restrict free trade after tariffs and quotas were gone? Would the British political campaign to nationalize more industries continue? If so, would that frighten away the American capital needed to modernize English technology? Or, on the other hand, would the financial union weaken socialism?

The Air Corps and Secretary Symington

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 16 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial published in the Nashville Tennessean of August 14, 1949, commending the Air Corps and its very able Secretary, W. Stuart Symington, in connection with the B–36 investigation. This editorial expresses the opinion of many of us who have such high confidence in the Air Corps, its officials, officers, and its procurement policy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BLASTED RUMORS

Representative JAMES E. VAN ZANDT does himself little credit by charging whitewash, now that the B–36 investigation has failed to uncover evidence substantiating rumors reflecting on the integrity of Air Force leaders.

As the instigator of the probe, the Naval Reserve officer from Pennsylvania has had ample opportunity to support his position that there was something crooked in the letting of contracts for the big bombers.

He has failed to do so, and his plaintive cry now indicates that he sees this anticipated scandal blowing up in his face. Under the circumstances, an apology would serve a better purpose than an unconvincing alibi.

Air Force views were forcefully expressed before the committee by Air Secretary W. Stuart Symington when he accused the Representative of disgraceful use of congressional immunity in repeating the rumor that politics was the controlling factor, or at least an important one, in the B–36 purchases. Such a reaction was to have been expected by men in the armed services who, by implication, had been charged with playing fast and loose with the Nation's defense.

A further cause for resentment was the fact that Mr. VAN ZANDT did not directly assail the Air Force on grounds of venality, but chose the course of issuing something like a white book on rumors which had been whispered around. This report was broadcast to the Nation, but in a manner which sought to protect the author from direct responsibility.

Once the reputation of the Air Force had been so openly questioned, a full investigation became a matter of necessity and justice. It was demanded by the airmen whose

names had been so smeared; and the result has been that conspiracy still is nothing more than an ugly rumor.

Because of the immunity he enjoys, Mr. VAN ZANDT cannot be held accountable in the courts for what the Air Force believes to be flagrant misrepresentation, but he has been invited to repeat his charges elsewhere so that he can be dealt with. This is a challenge that he will find it difficult to disregard if he really thinks that the congressional investigation has adopted the policy of whitewash.

Whether or not the B–36 is the indispensable weapon it is supposed to be by the Air Force still is a matter of opinion and debate. But if there ever was a doubt that its approval was made on a basis of heralded performance, rather than for political reasons, it has been resolved.

While believing its decision to be correct in this case, the Air Force still makes no claim to infallibility. But it draws the line at being pictured as an organization which would sell the country out for political, or other, preferment. Failing to do this, it would not have merited confidence.

Comment on Speech by Senator Matthew M. Neely, of West Virginia, Against the Taft-Hartley Law

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, August 16 (legislative day of Thursday, June 2), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "NEELY on Taft-Hartley," published in the Montgomery (Ala.) Examiner of August 11, 1949. The article relates to the speech of my colleague [Mr. NEELY] against the Taft-Hartley law.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PULPIT ECHOES

NEELY ON TAFT-HARTLEY

From the point of view of oratorical craftsmanship a speech made recently in the United States Senate by Senator MATTHEW M. NEELY, Democrat, of West Virginia, against the Taft-Hartley law is outstanding. Regardless of how one may feel about the issues involved, this address is illustrative of the highest standards of public speaking.

The first rule of effective speaking is an arresting introduction. Mr. Neely's introduction commands immediate attention and thus measures up to rule number 1. He began his remarks with these word:

"Mr. President, it has been recorded that the old Goths of Germany in their primitive assemblies debated every important question twice, once when drunk and once when sober—sober to assure wisdom and decorum; drunk to promote courage and vigor of action. I have no first-hand information concerning either the decorum or sobriety that prevailed during the passage of the Taft-Hartley law with which we struggle and under which millions suffer humiliation and distress. But certainly those who voted for this act must have been wholly free from the influence of any stimulating liquor or soothing drug. Otherwise they would, by accident or design, have failed to make this measure the most tyrannical ever placed upon the statute book of the Nation."

Unequaled sarcasm

Sarcasm when skillfully used is an effective oratorical technique. Scarcely could any sarcasm surpass that used by the Senator from West Virginia as he paid his respects to the Senator from Ohio [Mr. TAFT]:

"Mr. President, let me * * * say a word about the distinguished Senator from Ohio, Mr. TAFT, for whose character and courage I have great respect. I deeply appreciate his happy faculty of occasionally helping to make possible a great national Democratic victory. The Senator has just achieved a new distinction. If certain Democrats in high places whom I have in mind, but must not name, could be classified as fish, the Senator from Ohio should be considered a greater angler than Izaak Walton ever was or ever hoped to be. Izaak could catch nothing without bait. But the Senator from Ohio has, on Capitol Hill, with nothing but a stark-naked Taft-Hartley hook, caught himself a string of fish that defies comparison and makes the surviving, pining remnant of the Republican Party shout for joy."

Homespun wisdom

Every experienced public speaker makes free use of homespun wisdom, old adages, and salty sayings. Here is an example of such in the NEELY speech:

"An unlearned old woman was asked what she thought about the King James version of the Bible. She replied, 'if it was good enough for King James, it's good enough for me.' (Laughter.) So with the Thomas bill; it is good enough for me. And in spite of the world, the flesh, and the devil, I intend to support the bill against all appeasers, compromisers, and violators of platform pledges and campaign promises."

Denunciation

According to Senator NEELY one Robert Denham, general counsel for the National Labor Relations Board, used the power of injunction provided by the Taft-Hartley law in a devastating way against labor. It will be hard to find any language of denunciation comparable to that used by NEELY as he dealt with Mr. Denham:

"In my opinion, it has been conclusively shown that Mr. Denham is a tyrant such as has not lived on this earth since the days of the ancient Roman Empire. In my judgment he is the only Federal official, past, present, living or dead who ever entertained a desire similar to that of Caligula who wished that Roman people had only one head so that he could chop it off with a single blow. Apparently, Mr. Denham's wish concerning working men and women is similar to that voiced by the heartless Roman oppressor."

Use of history

A good orator makes free use of history and NEELY dips into history to find words sufficient to finish his indictment of Denham:

"The only language in any literature with which I am familiar that expresses what I believe to be the opinion of Robert Denham held by the toiling men and women of America is the language which was used by Martin Luther in describing the great philosopher Aristotle. It is as follows:

" 'He is truly a devil, a horrid calumniator, a wicked sycophant, a prince of darkness, a real Apollyon, a beast, a horrid imposter on mankind, one in whom is scarcely any philosophy, and a goat—this twice execrable Aristotle.'

"I wish there were a modern Martin Luther to characterize Denham according to his deserts. The effective way to dispose of him and the labor injunction is to pass the Thomas bill."

All great orators draw heavily upon the Bible for figures of speech. NEELY makes apt use of the Book as he brings his powerful speech to a close:

"Mr. President, I shall continue to do everything in my power to bury this infamy known as the Taft-Hartley law, regardless of the good faith of those who enacted it. I will endeavor to hide it in a grave so dark and deep that, like the sepulcher of Moses, no man will ever see it and no trumpet will ever resurrect it from the dead.

"It is my hope that the Thomas bill will be passed and the blessings of the Wagner Act restored. When I speak on the final question of repealing the Taft-Hartley law, I purpose to prove by facts as convincing as the demonstration of a problem in Euclid, that not only labor but the great corporations and every class of the American people for a dozen years under the Wagner Act enjoyed the greatest prosperity, freedom and happiness ever since God first said, 'Let there be light.' "

Atlantic Union Resolution

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Tuesday, August 16 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Into a Golden Future," published in the Daily Missoulian, of Missoula, Mont., under date of July 27, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTO A GOLDEN FUTURE

As was foretold some time ago, the National Legislature now has before it a resolution authorizing the calling of a convention of nations to set up a Federation of Atlantic Democracies. It is the latest step in the movement that began with Clarence Streit's Union Now, a widely read book published well over a decade ago. The idea then expounded was to form a union of western democracies and this is still the main purpose of Mr. Streit and other devoted believers in democracy and the possibility of its application to international affairs in the pattern of the United States of America. Mr. Streit and his followers are convinced that what the Colonies in a still wild and raw country could accomplish by federation could be repeated in a modern day by nations believing in freedom and government by law rather than by force and pressure. The original Streit roster held most of the nations that now are united in the defensive alliance we know as the North Atlantic act, with the thought that any other nation that might want to come in would be welcomed.

The convention of the nations now called for would be the first step toward actual implementation of the Streit plan. It is to be hoped that the resolution now before Congress will be adopted and that the convention will be called. The rest would be up to the good sense of the nations involved, their recognition of the needs of the moment, political, economic, and military—and, of course, to American willingness to participate. Many plebiscites would be required in other nations, as well as the approval by three-fourths of the American States of the constitutional amendment that would be

needed. And it would be necessary to allay the suspicions of millions now imbued with the spirit of nationalism and filled with fear of losing that evil thing men know as "sovereignty." Much the same arguments, pro and con, would be made as were when the 13 struggling Colonies on the eastern fringe of a then almost unknown continent were sane enough and sufficiently courageous to form the Union from which has sprung not only the finest democracy but also the strongest nation in all the world.

So it is plain that a long and winding road to the top of the mountain lies before the proposed Atlantic federation. The path will be difficult and rough, but at its end will be found flaming the torch of liberty—and probably a great gate opening into a golden future in which there could be just government for all of the world and its many peoples. For it must seem plain to all thoughtful and honest men that in the strengthening and expanding of real democracy lies the hope of mankind. An earnest of this hope lies in the resolution newly laid before the United States Senate.

Pennsylvania's Minerals

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 16 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Pennsylvania's Minerals," published in the Harrisburg News, showing that in 25 years the value of the mineral production of Pennsylvania exceeded $25,000,000,000 in value, with the next nearest State being Texas.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PENNSYLVANIA'S MINERALS

In an era when warnings have been sounded time and again about the profligate waste of our national resources and more especially as this is applied to the Commonwealth of Pennsylvania, it is highly interesting to note the position held by our State in the mineral-production value.

For example, in the period covering several years before World War I to the end of World War II, Pennsylvania's mineral-production value exceeded twenty-five billions, with the next nearest State being Texas, whose production was only slightly more than fifteen billions. The neighboring State of Ohio claimed mineral-production value of about six billions, and Louisiana was at the end of the parade with but little more than three billions.

Yet while we are inclined to expand our chests at the high position of our State in producing these essential elements, the State planning board and the department of commerce continue to warn us that unless we learn to conserve our natural wealth more successfully than did our wasteful forebears, the time is not far distant when we will be hitting the bottom of the barrel.

Everyone has pointed with pride to our coal and oil production and our fine record in steel and allied manufacture, but it must never be forgotten that the elements making these splendid records possible are not inexhaustible. Proud we should be, but it is prudent to temper that pride with caution.

Failure of the Single Gold Standard

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. WHITE of Idaho. Mr. Speaker, the return to the gold standard is being seriously advocated in many influential quarters. The financial history of this country since silver was demonetized has conclusively demonstrated that the use of gold alone for our supply of money of ultimate redemption is insufficient for our country's money needs, in other words, that the gold standard will not work. First we tried national banknote currency with a 40-percent gold coverage—then we tried the Federal Reserve note currency scheme. Paper money based on convertible assets and secured by a 40-percent gold coverage, and then we were forced to abandon the gold standard, that is, gold redemption for our paper money. Then to save business and bolster our banking system we had to draw on the collective credit of the American people by creating a Government credit agency—the Reconstruction Finance Corporation, which was established to finance business with funds procured from the sale of Government bonds. By taking the gold reserves of the banks in exchange for gold certificates issued by the Treasury which gold certificates are now held by Federal Reserve banks as the legal gold reserve for the paper Federal Reserve notes now in circulation the Government is now in possession of around $22,000,000,000 in gold, which is not owned by the Government but is held for and is the equivalent of the gold certificates owned by the Federal Reserve banks. It should be apparent to anyone that with inflation prevailing in all parts of the world, coupled with the insatiable demand for gold in most countries, that once we return to the gold standard and make our paper money redeemable in gold our gold reserves would be drawn out and leave this country in a very short time. The analysis of money and the gold standard as presented in Economist Willford I. King's book, the Keys to Prosperity, from which the following extract is taken, is illuminating:

Many able economists believe that the wisest monetary policy for the Nation to pursue is to define a fixed weight of gold as a dollar, and leave the rest to laissez faire. However, most of those taking this position either ignore or gloss over the fact that we experimented with this policy for most of the century preceding 1933, and that the results were decidedly unsatisfactory. During this period, the price level fluctuated widely, and many serious depressions occurred.

As we have seen, booms and depressions are usually caused by oscillations in the volume of net new spending power, and such oscillations are commonly the resultants of changes in the volume of circulating medium. These changes are caused either by governmental printing or retiring of money, or by the banks expanding or contracting deposit volume. Hence, if governments could be stopped from issuing new money to pay their bills, and if commercial banks could be prevented from enlarging or reducing their respective deposit volumes, a prime cause of depressions of the modern type would be eliminated. Therefore, to make their position sound, those advocating monetary laissez faire ought to insist upon a constitutional amendment abolishing both the right of the Government to expand credit money volume, and the privilege of banks to have outstanding demand deposits in excess of their holdings of monetary metals. In other words, they should demand that the Nation be placed upon a strictly "hard money" basis.

The general tendency in recent years has, of course, been to depart further and further from such a basis. One of the arguments in favor of establishing the Federal Reserve System was that the world's gold supply was not keeping pace with the growth in the world's volume of trade, and that, therefore, credit money was needed to make good the deficiency. Another reason for demanding such a central banking system was to make our money supply elastic. In reality, of course, the system has produced a money supply which stretches when it ought to contract, and contracts when it ought to expand.

Since, as a matter of fact, expansion in the world's joint supply of gold and silver would, apparently, have been able to keep pace with the growth in trade volume, our economy might have made satisfactory progress if we had never had either credit money or banks. However, both are highly convenient instruments. Both are thoroughly woven into our economy. It, therefore, appears to be more feasible and more desirable to subject them to national control than to abolish them.

Mr. Speaker, in making the above analysis, Economist King seems to have overlooked a fundamental principle of economic law—to maintain a stable price level new money must flow into the currency system at a rate that will increase the volume evenly with the growth of population and commerce.

Report to the Folks Back Home—A Complete Official Record of All Legislation Passed by a Roll-Call Vote in the House During the First Session of the Eighty-first Congress Up to and Including August 15, 1949

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. BREHM. Mr. Speaker, when this session of the Eighty-first Congress opened last January I announced to my constituents that periodically I would submit a factual report of all legislation which had passed the House and how I had voted on these measures, as well as a brief synopsis of why I had so voted. Naturally limitation of space will not permit me to enter into any detailed discussion of these various measures. However if anyone is interested in receiving a further analysis of the legislation as reported in debate and will so notify me, I will gladly comply with his request.

My reason for deciding to submit this authentic report taken from the public record was twofold. First, I felt that

the folks back home were entitled to know my position on any given issue and secondly, I felt that by submitting the correct report it might prevent the circulating of a false report regarding my vote as has been done in times past.

It should be kept in mind that many bills are passed or defeated on which no public record is available. A Member could state that he had voted either for or against any measure which passed by a voice vote, but he could not prove his statement from the official public record. Therefore, neither can anyone speaking in opposition to a particular Member prove statements which he might make regarding a Member's attitude on any measure unless it had been determined by a roll-call vote.

As everyone perhaps knows a Member may either vote "yes," "no," or "present." A person may vote "present" for any of three reasons. First he might be undecided in his own mind on a particular issue and the debate having failed to resolve his thinking definitely for or against, he may vote "present."

The second reason for voting "present" is that a Member might have thought that he was going to be absent when the roll call came and had therefore agreed with another Member, who was going to be absent and who held an opposite view to his, to pair his vote with him so that each would be stating his position publicly. Now it might happen that one of the Members discovered at the last minute that he would be present when the vote was taken. In order to keep his word with the Member who is absent and with whom he had agreed to pair his vote, the Member who is present will vote his sentiments either for or against. However, before the result of the roll call is announced he arises and explains that he had a pair with another Member and therefore in keeping his word with the other Member he withdraws his vote as recorded and simply votes "present." Even though the roll call lists this Member as voting present, nevertheless the official record shows the position of both Members who were paired either for or against.

The third "present" vote is simply to determine if a quorum is present for the transaction of business. Those votes are not listed in this report but will be taken into consideration when the official report is issued by the Clerk showing my attendance percentage.

A vote to recommit means that the Member wants the bill returned to the place from whence it came. In other words return it to the committee which reported it. Various reasons are ascribed by Members as to why they favored recommitting a particular bill. So far as I am concerned a motion to recommit usually means that I am not fully satisfied with the bill in its present form and yet I do not want to kill it outright because I favor the over-all objective contained in the bill. Therefore in the hope that the bill will be reported at a later date with certain corrections, I might vote to recommit. A vote to recommit could result in killing a particular bill, but not necessarily so.

Before submitting the report I would like to state that if the title of a resolution is self-evident such as an appropriation bill naturally I will simply list my vote. Of course I have supported all appropriations which I deemed essential for the proper operation, maintenance, and preservation of our Government. At the same time I have voted for all measures which in my opinion tended to effect economy in Government without curtailing efficient services.

Now with this explanation I am inserting a true copy of all legislation which passed the House on a roll-call vote during this session up to this date. The report will list the number of the resolution, the date on which the vote was taken, the total vote for or against, how I voted and a brief statement indicating my reason for so voting.

The record follows:

JANUARY 3, 1949

House Resolution 5: Adoption of rules of the Eightieth Congress as the rules of the Eighty-first Congress with an amendment designed to permit chairmen of committees reporting bills favorably to move the adoption of resolutions for consideration of such legislation if the Rules Committee fails to report them within 21 days.

Yes, 275; no, 142. BREHM voted "Yes."

For several years the present administration has been telling various minority groups that the powerful Rules Committee has kept it from passing legislation which it had promised during the campaign. I decided that it was time to remove this alibi and give them the chance to make good on their promise and accordingly voted "Yes." I presume that they will now put the blame for their broken promises on a coalition of Democrats and Republicans on other committees or in the House. Well this alibi will be correct and I may say that if this country finally withstands the socialistic influences which are attempting to drag it down, it will be this alliance of Jeffersonian Democrats and Lincoln Republicans which will turn the trick. One reason why certain factions are attempting to smear and belittle Congress is because this coalition stands in the way of their taking over.

FEBRUARY 7, 1949

House Concurrent Resolution 22: Suspension of the legislative budget until May 1, 1949.

Yes, 230; no, 142. BREHM voted "No."

The Democratic-controlled Seventy-ninth Congress passed the Reorganization Act which among other things provided that Congress shall submit a budget estimate of receipts and expenditures not later than February 15 of each year. The Republican Congress complied with the law and were ridiculed by the opposition because of the figures which were submitted. The figures represented an over-all objective toward which we were striving and the question was not whether we exceeded or fell below our objective. The question was that we complied with the law. The question up for decision on this vote was to extend the date for submitting this estimated report from February 15 to May 1. Due to the fact that this Democratic-controlled Eighty-first Congress had made no effort to submit a report on the date required by law, I refused to extend their time and voted "No." The fact is that as of this late date they still have completely ignored the law and refused to submit a budget estimate.

H. R. 2361: Reorganization of the Government agencies.

Yes, 358; no, 9. BREHM voted "Yes."

This was on agreeing or accepting the report of the Hoover Commission.

FEBRUARY 9, 1949

House Resolution 78: Authorizes $200,000 for the Committee on Un-American Activities.

Yes, 353; no, 29. BREHM voted "Yes."

I was first publicly assailed by the radical left-wing element of the CIO in 1943 for supporting this committee which was exposing communistic and other subversive influences. At that time evidence showed that the CIO was permeated with Communists and their sympathizers and naturally they did not want to be disturbed or exposed and they tried to defeat me at the next election by spreading malicious stories through their local officers who knew none of the facts, but in true parrot fashion repeated what they were told. I will continue to support this committee as long as I am in Congress.

H. R. 1211: Extension of the Reciprocal Trade Agreements Act.

To recommit: Yes, 151; no, 241. BREHM voted "Yes."

On passage: Yes, 319; no, 69. BREHM voted "Yes."

I tried to send this bill back to committee in the hope that an "escape clause" or "peril point" would be inserted in an effort to protect American workers and American industry against the importation of cheap foreign products. Since this time I have received hundreds of letters from workers and also many letters from management complaining that they were being financially hurt by these cheap imports. I still say that a reasonable protective tariff as proposed by the Republican minority is the best guaranty against this evil.

The motion to recommit failed and I then voted "Yes" on final passage as I did not want it to appear that I was opposed to trading with friendly nations.

FEBRUARY 15, 1949

H. R. 2632: First deficiency appropriation, 1949.

On agreeing to the resolution for consideration of the bill: Yes, 242; no, 121. BREHM voted "No."

I voted "no" due to the fact that the rule under which this bill was to be considered "waived all points of order against the bill." This meant that money was being appropriated for various functions of Government which had never been authorized by legislation. I believe that the function of an Appropriations Committee is only to provide money as authorized and that it is illegal to legislate in an appropriation bill since it bypasses the regular legislative committees of the House. This explains my vote against taking up the bill.

FEBRUARY 16, 1949

H. R. 2632: First deficiency appropriation, 1949.

On Sadlak motion to recommit with instructions to increase the appropriation for grants to States for unemployment compensation and employment service administration from $4,987,000 to $14,000,000: Yes, 148; no, 237. BREHM voted "Yes."

On passage: Yes, 367; no, 19. BREHM voted "Yes."

I voted "yes" to recommit and increase the amount of money available to the States for unemployment insurance and services. The State director was requesting this increase due to increased unemployment. The question was not whether Congress was for or against the principle of unemployment insurance but whether we would provide sufficient money to carry out a law which had previously been enacted. This was a Republican proposal to try and help those out of work, but our Democratic leadership who claim to be the great champions of labor, succeeded in defeating it.

After the vote to recommit failed I naturally voted "yes," as most of these appropriations were necessary.

FEBRUARY 17, 1949

H. R. 1661: Export Control Act of 1949.

On motion to recommit with instructions to report back with an amendment providing for a 1-year extension of the present controls and with an amendment covering commodities in surplus supply: Yes, 139; no, 222. BREHM voted "Yes."

On passage: Yes, 260; no, 102. BREHM voted "No."

This vote is self-evident by the title. I tried to limit the exporting of scarce supplies out of this country to any foreign nation. When the motion to send it back to committee failed, I then voted against the bill on final passage as in my opinion the bad features exceeded the good.

FEBRUARY 21, 1949

H. Res. 75: Authorizes the Committee on Education and Labor to conduct studies and investigations relating to matters within its jurisdiction.

Agreeing to resolution: Yes, 331; no, 4. BREHM voted "Yes."

MARCH 1, 1949

H. R. 199: Makes immigration quotas available to Asian and Pacific peoples.

On motion to recommit with instructions to report back with an amendment exempting the West Indian Archipelago from the 100-entrants limitation upon colonies: Yes, 39; no, 336. BREHM voted "No."

As everyone knows quotas are set up under which a given number of people from various nations may annually enter the United States. In this instance the figure of 100 was set for Asian and Pacific peoples. This amendment if adopted would definitely have discriminated not only against the other countries included in the 100 quota but in the final analysis against the very people which it purported to help. The vote of 39 in favor of the amendment to 336 against, bears out this statement.

MARCH 7, 1949

H. R. 2663: Administration of the Central Intelligence Agency.

On motion to suspend the rules and passage: Yes, 348; no, 4. BREHM voted "Yes."

This is a most important step for the United States and gives us some protection in the field of combatting espionage. The vote is significant.

MARCH 14, 1949

H. R. 3347: Provides additional revenue for the District of Columbia.

To recommit: Yes, 163; no, 181. BREHM voted "Yes."

On passage: Yes, 166; no, 178. BREHM voted "No."

This set up a sales tax for the District of Columbia. I tried to have it recommitted for various changes and when this failed I voted against it. The bill was defeated.

MARCH 15, 1949

H. R. 1731: Housing and Rent Control Act, 1949.

On Williams amendment to permit State, county, or local governments to abolish rent controls in their areas: Yes, 227; no, 188. BREHM voted, "Yes."

On Rains amendment eliminating from the bill the authority to recontrol apartment hotels: Yes, 237; no, 175. BREHM voted "Yes."

On Wolcott motion to recommit with instructions to report back with provisions extending the act until June 30, 1949: Yes, 154; no, 260. BREHM voted "Yes."

On passage: Yes, 261; no, 153. BREHM voted "No."

My votes here are self-evident. Personally, I do not feel that Congress has any constitutional authority, at least no business, to fix prices in time of peace. Certain wartime controls may be necessary, but they should not be carried on 4½ years after the war is over under the familiar slogan of "emergency," which has been used to such good advantage since 1932 in order to maintain one political party in power.

MARCH 16, 1949

H. R. 1437: Army and Air Force Act of 1949.

On agreeing to H. Res. 148 providing for consideration of the bill: Yes, 368; no, 1. BREHM voted "Yes."

This provided for increasing the Air Corps to a 70-group force.

MARCH 21, 1949

H. R. 1757: Extension of the District of Columbia Rent Control Act.

On passage: Yes, 247; no, 117. BREHM voted "No."

For reasons previously given I voted "No."

MARCH 22, 1949

H. R. 1437: Army and Air Force Act of 1949.

On passage: Yes, 395; no, 4. BREHM voted "Yes."

This provides for our common defense.

H. R. 2681: Pensions for World War I and World War II veterans.

To recommit: Yes, 187; no, 223. BREHM voted "No."

On recommendation of the Committee of the Whole House that the enacting clause be stricken out: Yes, 120; no, 291. BREHM voted "No."

MARCH 24, 1949

H. R. 2681: Pensions for World War I and World War II veterans.

To recommit: Yes, 208; no, 207. BREHM voted "No."

This proposed legislation was terribly misrepresented to the public. Some of those who want to turn all functions of this nature over to the Social Security Administration fought it tooth and nail and their arguments appeared so plausible on the surface that they finally succeeded in sending it back to committee by one vote 208 to 207. The strange part about it is that before it was recommitted we had succeeded in amending it so that it was actually set up on a "basis of need" and the amount reduced from 90 to 72 dollars per month. This removed the charge being made that it was a pension grab but evidently some of the Members had not followed the debate closely and did not know that these changes had taken place and just followed their leader or someone who they thought was a leader. Relief on a basis of need is never a grab.

MARCH 28, 1949

S. 135: Daylight-saving time for the District of Columbia.

On passage: Yes, 223; no, 130. BREHM voted "No."

I have always been opposed to this. In fact the first speech which I ever delivered in Congress was against daylight-saving time.

MARCH 29, 1949

H. R. 3734: Civil functions, Department of the Army appropriation 1950.

On Celler amendment to bar the use of funds for acquiring land in connection with Garrison Reservoir, N. Dak.: Yes, 194; no, 203. BREHM voted "Yes."

On Dondero amendment to provide $500,000 for the Red Run–Clinton River project in Michigan: Yes, 256; no, 138. BREHM voted "Yes."

On Passman amendment to raise the funds allotted to flood control on the Mississippi River from $57,000,000 to $63,000,000: Yes, 277; no, 117. BREHM voted "No."

I voted "No" on increasing this money due to the fact that the committee which reported it, produced testimony to show that it was not necessary and could not be used.

H. R. 3704: District of Columbia Revenue Act.

To recommit: Yes, 177; no, 218. BREHM voted "Yes."

On passage: Yes, 216; no, 180. BREHM voted "Yes."

This was the second attempt to set up a sales tax in the District. I voted to recommit it but this failed. Then after several changes had been made, to which I objected in the original bill presented on March 14, I voted "Yes."

H. R. 1731: Housing and Rent Control Act, 1949.

On agreeing to conference report: Yes, 263; no, 144. BREHM voted "No."

I previously stated my position on this subject.

MARCH 31, 1949

H. R. 2023: Repeals certain taxes on oleomargarine.

On agreeing to House Resolution 168 providing for consideration of the bill: Yes, 382; no, 9. BREHM voted "Yes."

This simply meant that we would agree to discuss the subject.

APRIL 1, 1949

H. R. 2023: Repeals certain taxes on oleomargarine.

On Poage substitute amendment which inserted the provisions of House Resolution 3: Yes, 243; no, 137. BREHM voted "No."

On passage: Yes, 288; no, 89. BREHM voted "Yes."

This provided for removing all Federal taxes on oleomargarine and is as far as the Congress should go. It is entirely up to the States to decide on whether or not colored oleo shall be sold within their borders. The citizens of Ohio will decide this question by ballot in November 1950. I voted "Yes" to remove all Federal taxes.

APRIL 4, 1949

H. R. 1823: Establishes a Women's Reserve as a branch of the Coast Guard Reserve.

On Marcantonio amendment providing that there be no segregation or discrimination in the Women's Reserve because of race, color, or creed: Yes, 193; no, 153. BREHM voted "Yes."

The amendment is self-explanatory. I voted for it.

H. R. 3830: China Aid Act.

On motion to suspend the rules and passage: Yes, 279; no, 70. BREHM voted "Yes."

I voted in favor of help for China in her fight against aggression.

APRIL 7, 1949

H. R. 4016: State, Justice, Commerce, and Judiciary appropriation, 1950.

On agreeing to House Resolution 180 for the consideration of the bill: Yes, 246; no, 137. BREHM voted "Yes."

To adjourn: Yes, 145; no, 212. BREHM voted "Yes."

APRIL 8, 1949

H. R. 4046: Second deficiency appropriation, 1949.

On motion to recommit and report back with an appropriation of $100,000 for the War Claims Commission: Yes, 149; no, 190. BREHM voted "Yes."

APRIL 12, 1949

H. R. 3748: Extension of the European recovery program.

On passage: Yes, 355; no, 49. BREHM voted "Yes."

Last year when I asked the voters what action they wanted me to take on the Marshall plan, the vast majority said to try it for 1 year and see the results. I followed their instructions and so voted. The report definitely indicates that the program has been successful in stopping the spread of communism in Europe and so I again voted "Yes" this time.

APRIL 26, 1949

H. R. 2032: National Labor Relations Act, 1949.

On House Resolution 191 for consideration of the bill: Yes, 369; no, 6. BREHM voted "Yes."

MAY 3, 1949

H. R. 2032: National Labor Relations Act, 1949.

On Wood amendment to substitute the provisions of the Wood bill, H. R. 4290: Yes, 217; no, 203. BREHM voted "No."

MAY 4, 1949

H. R. 2032: National Labor Relations Act, 1949.

To recommit: Yes, 212; no, 209. BREHM voted "Present."

These last three votes all pertain to the Taft-Hartley Act, and naturally this subject cannot be adequately discussed on paper.

The first vote was whether we would agree to take up the subject and discuss it. I voted "Yes." The next vote was to substitute an entirely new bill in the form of an amendment by Congressman WOOD, of Georgia, for the Taft-Hartley Act. Quite a few provisions in the Wood substitute were O. K. However, in my opinion it did not lend itself toward establishing peaceful, harmonious relations between labor and management. Attempting to realize this objective is my chief concern. I, therefore, voted against substituting the Wood amendment.

The final vote was on recommittal, and in accordance with my earlier interpretation of recommittal I voted "Yes" on sending it back to our committee. Now, in this instance my colleague from Ohio, Congressman CLEVENGER, was in the hospital with an eye condition and was very desirous of being recorded on this vote. Therefore, in an effort to help him get on record I agreed to pair with him. I voted "Yes" to recommit, but before the Speaker announced the results I arose and explained the previous arrangement with Mr. CLEVENGER and accordingly withdrew my vote of "Yes" and voted "Present." In this way both of us are on public record as to our position on this issue.

A motion to repeal the Taft-Hartley Act and substitute the Wagner Act was defeated in our committee by a vote of 19 to 6. The same motion was defeated in the House by a division vote of 273 to 27.

MAY 5, 1949

H. R. 2989: Incorporation of the Virgin Islands Corporation.

On passage: Yes, 273; no, 62. BREHM voted "No."

My chief objection to this proposition was the manufacture of rum for shipment into this country, and I voted "No."

MAY 9, 1949

H. R. 2203: Provides for a decennial census of housing.

On passage: Yes, 224; no, 50. BREHM voted "Yes."

This provides for a census and report every 10 years on the housing situation in this country. I believe this is essential in order that we may know the true picture and not have our thinking clouded by any group expressing their own particular views.

MAY 10, 1949

H. R. 4392: Provides for payment of claims of the Swiss Government.

On amendment barring payment of any interest on Swiss war-damage claims: Yes, 172; no, 191. BREHM voted "No."

In my judgment the testimony showed that we owed this interest and should pay it. I so voted.

MAY 11, 1949

H. R. 2682: Amends the Commodity Credit Corporation Charter Act and the Strategic and Critical Materials Stock Piling Act.

On passage: Yes, 325; no, 53. BREHM voted "Yes."

MAY 16, 1949

H. R. 2632: First deficiency appropriation, 1949.

On previous question on conference report: Yes, 292; no, 17. BREHM, general pair.

I favored this report.

MAY 17, 1949

H. R. 195: Assisting States in collecting sales and use taxes on cigarettes.

On agreeing to House Resolution 190 for the consideration of the bill: Yes, 323; no, 24. BREHM voted "Yes."

This is intended to prevent bootlegging and black marketing in cigarettes which would deprive the State of its just revenue.

MAY 18, 1949

H. R. 1036: Relief of R. C. Owen and Roy Owen.

On overriding the President's veto: Yes, 318; no, 49. BREHM voted "Yes."

This provided a refund to these men for Internal Revenue Tobacco stamps which evidence proved had been destroyed in a fire.

MAY 24, 1949

H. R. 4591: Pay, allowances, and physical disability retirement for members of the armed forces.

To recommit: Yes, 227; no, 163. BREHM voted "No."

My theory is adequate pay for good men rather than mediocre pay for mediocre men.

MAY 26, 1949

H. R. 3704: District of Columbia tax bill.

On agreeing to conference report: Yes, 184; no, 152. BREHM not voting.

On this motion and any other votes listing me as having a general pair, I was in Ohio seeing my mother who was seriously ill with a broken hip.

JUNE 1, 1949

H. R. 4617: Pensions for veterans of World War I and World War II.

On passage: Yes, 365; no, 27. BREHM voted "Yes."

JUNE 16, 1949

H. R. 4963: Appointment of additional circuit and district judges.

On Curtis motion to recommit and report back with the Keating amendment that not more than two-thirds of the judges appointed be of the same political party: Yes, 135; no, 195. BREHM, general pair.

I favored this amendment.

JUNE 21, 1949

H. R. 4332: Amends the National Bank Act and the Bretton Woods Agreement Act.

On passage: Yes, 293; no, 55. BREHM voted "Yes."

Permits Federal banks to take certain action regarding mergers with State banks under certain conditions. No real opposition to it.

JUNE 29, 1949

H. R. 4009: Housing Act of 1949.

On Rees amendment to strike out title II providing for low-rent public housing: Yes, 204; no, 209. BREHM voted "Yes."

On Jensen amendment barring payment of salary to any employees who fail to sign an affidavit stating that they are not members of a subversive party: Yes, 283; no, 129. BREHM voted "Yes."

On motion to recommit: Yes, 170; no, 241. BREHM voted "Yes."

On passage: Yes, 227; no, 186. BREHM voted "No."

This was one of the most bitterly fought measures which came before this Congress. Naturally, I favor adequate housing and, if necessary, some Government assistance in getting it. However, the record not only shows that private enterprise was adequately meeting the problem but that the fling which Uncle Sam took in attempting to secure more homes, resulted in failure to produce and a 30-percent increase in cost of those which were produced by Government. I am unalterably opposed to Government getting into business in competition with private industry. In other words I am opposed to socialism and this legislation wherein the Government will own, rent, and collect money from the tenant is socialism and nothing more. I voted against it in all its phases.

JULY 6, 1949

H. R. 4406: Provides for the settlement of certain claims of foreign governments.

To recommit: Yes, 151; no, 177. BREHM voted "Yes."

This provides for setting up a commission of three at $15,000 each annual salary in order to divide $17,000,000 due from foreign countries, among thousands of American citizens. This commission is not necessary as the Court of Claims could and should handle this. In this instance my vote to recommit was made in the hope of killing the bill.

S. 1008: Application of the Federal Trade Commission Act and the Clayton Act.

On agreeing to House Resolution 277 for the consideration of the bill: Yes, 305; no, 22. BREHM voted "Yes."

JULY 11, 1949

S. 937: Payment of certain noncitizen claims against the United States.

On Jennings amendment to strike out that section of the bill providing payment of a claim of $3,024.38 by Great Britain on behalf of John Bailey: Yes, 167; no, 143. BREHM voted "Yes."

A British sailor, off duty in a city in the State of Washington became involved in a brawl with other persons over a woman. This vote was to deny payment to him by the United States Government for his injuries. The Printing Office might refuse to print any further comment which I made on this subject. Suffice to say I voted against assessing the American taxpayers for his personal pleasure or rehabilitation.

JULY 13, 1949

H. R. 2960: Amends the Rural Electrification Act to provide for rural telephones.

On passage: Yes, 282; no, 109. BREHM voted "Yes."

After this bill was amended to prevent parallel lines in competition with existing facilities and also provided for loans to private telephone companies to extend their service—I voted for it.

JULY 21, 1949

H. R. 5345: Agricultural Act of 1949.

On Gore amendment to embody the text of H. R. 5617 which extends the present farm program 1 year: Yes, 239; no, 170. BREHM voted "Yes."

On passage: Yes, 384; no, 25. BREHM voted "Yes."

The title is self-explanatory. This was really a vote to substitute a farm program in preference to the Brannan plan. The vote is significant.

JULY 25, 1949

On motion to adjourn: Yes, 102; no, 243. BREHM voted "No."

On previous question on approving the reading of the Journal: Yes, 259; no, 88. BREHM voted "Yes."

On motion to approve the Journal as read: Yes, 286; no, 54. BREHM voted "Yes."

On motion to adjourn: Yes, 113; no, 243. BREHM voted "No."

H. R. 3199: Federal Anti-Poll-Tax Act.

On previous question on adoption of House Resolution 276 for the consideration of the bill: Yes, 262; no, 100. BREHM voted "Yes."

On motion to adjourn: Yes, 110; no, 252. BREHM voted "No."

On motion to adjourn: Yes, 265; no, 100. BREHM voted "Yes."

JULY 26, 1949

H. R. 3199: Federal Anti-Poll-Tax Act.

On motion to recommit to the House Administration Committee: Yes, 123; no. 267. BREHM voted "No."

On passage: Yes, 273; no, 116. BREHM voted "Yes."

These last 9 votes all deal with the subject of poll taxes. Various Members from poll-tax States were delaying action as long as possible. I voted that the payment of a tax should not be required as a prerequisite for voting.

JULY 27, 1949

S. 1184: Military rental housing.

On motion to recommit conference report: Yes, 52; no, 289. BREHM, general pair.

I was against recommitting.

AUGUST 1, 1949

H. R. 3282: Repeals certain acts of Congress known as Indian liquor laws in parts of Minnesota and Wisconsin.

On motion to suspend the rules and passage: Yes, 131; no, 168. BREHM paired against.

H. R. 5602: Providing for relief of Chinese students in the United States.

On motion to suspend the rules and passage: Yes, 254; no, 46. BREHM, general pair.

I favored this motion to suspend and pass.

AUGUST 2, 1949

H. R. 5598: Increases compensation for World War I presumptive service-connected cases, etc.

On passage: Yes, 356; no, 0. BREHM voted "Yes."

H. R. 5632: National Security Act Amendments of 1949.

On agreeing to conference report: Yes, 356; No, 7. BREHM voted "Yes."

H. R. 29: Parity for tung nuts and honey.

On agreeing to House Resolution 289 for consideration of the bill: Yes, 335; no, 21. BREHM voted "Yes."

AUGUST 4, 1949

H. R. 1758: Amends the Natural Gas Act.

On agreeing to House Resolution 310 for the consideration of the bill: Yes, 233; no, 113. BREHM voted "Yes."

AUGUST 5, 1949

H. R. 1758: Amends the Natural Gas Act.

To recommit: Yes, 124; no, 187. BREHM voted "No."

On passage: Yes, 183, no, 131. BREHM voted "Yes."

This removes the small, independent producer from authority of the Federal Power Commission wherein activities are really in the field within the State. The Federal Power Commission has full authority once the gas enters into interstate commerce. The real purpose of this measure was very much misrepresented by the opponents.

AUGUST 8, 1949

H. R. 3190: Increases the minimum wage.

On committee amendments to House Resolution 183, providing for the consideration of the bill, to make the rules applicable to H. R. 5856 a modified version of H. R. 3190: Yes, 249; no, 124. BREHM voted "Yes."

On agreeing to House Resolution 183 as amended: Yes, 351; no, 17. BREHM voted "Yes."

This legislation is intended to amend the Fair Labor Standards Act. The big issue was over whether the Lucas substitute, House Resolution 183 would be substituted for the Lesinski bill 5856. The Lesinski bill brought more people under the coverage of the act while the Lucas removed some fringe employees. Both bills raised the minimum wage from 40 to 75 cents per hour after amendment of the Lucas substitute.

AUGUST 9, 1949

H. R. 4830: Foreign aid appropriation.

On Cannon motion to instruct the conferees to insist on disagreement to the Senate amendment No. 1, continuing the watchdog committee: Yes, 210; no, 164. BREHM voted "No."

The Eightieth Congress set up a watchdog committee, so-called because of its duty to watch over the spending activities of the huge five billion ECA fund. It had already recovered over $3,000,000 in contrast to the small amount of $200,000 which it had spent. In an effort to destroy the committee by withholding funds for its activities, the House Appropriations Committee refused to allow any money. The Senate committee, however, realized the importance of this committee and refused to deny them funds. This motion by Congressman CANNON, of Missouri, insisted that we give them no money to supervise this huge spending program. This in my opinion is a perfect example of penny-wise and pound-foolish. I voted to continue the watchdog committee, but as happens so many times in this present Congress I lost my vote.

AUGUST 11, 1949

House Resolution 183: To amend the Fair Labor Standards Act.

On passage: Yes, 361; no, 35. BREHM voted "Yes."

This was the final vote on passage of the Lucas substitute which had previously been adopted and amended.

AUGUST 12, 1949

House Resolution 311: Authorizing President to provide for performance of certain functions of the President by other officers of the Government.

On agreeing to Hoffman (Michigan) amendment to strike certain words which were felt would permit the President to delegate authority which should not be delegated to others: Yes, 114; no, 162. BREHM voted "Yes."

AUGUST 15, 1949

House Joint Resolution 339: Amending an act making temporary appropriations for the fiscal year 1950, and for other purposes.

On motion to suspend the rules and passage: Yes, 176; no, 145. BREHM voted "No."

In order to suspend the rules, two-thirds of those voting must vote "yes." In this case the motion lost since it required 214 Yes votes to suspend. My chief objection to this motion was that it fixed no definite date on which temporary appropriations should cease. Some of these appropriation bills have been pending in conference since March 30. Two temporary extension dates have already been granted. Now it is past time to act.

H. R. 2734: To amend an act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914 (38 Stat. 730), as amended.

On motion to suspend the rules and passage: Yes, 223; no. 92. BREHM voted "Yes."

Two-thirds having voted in the affirmative the bill passed. In my opinion the evidence showed that this bill should become law in order to help protect small business.

Mr. Speaker, this concludes all roll-call votes on legislation up to and including August 16. Any which come later will be included in the report of the second session.

Naturally I do not expect everyone to agree with all my votes or my reason for so voting. However, I will appreciate it if those who receive this report will put it away for future reference in order to keep my record straight.

During the next year we will see in operation the most highly organized propaganda machine ever devised in America. Every technique known will be employed by those who seem determined at all cost to gain control of Congress in order to put over their program. I trust that the foregoing official report will help serve to counteract their efforts. At least it will leave no doubt as to my position on various issues.

Reorganization Plans

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 16 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD excerpts from an article by Marquis Childs, which appeared in the Washington Post of August 12, 1949.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WASHINGTON CALLING

(Marquis Childs)

REORGANIZATION PLANS

Happy birthday, Dear Mr. Hoover, happy birthday. The chorus sounds across the country as Herbert Hoover observes his seventy-fifth birthday and, having taken so much public abuse, he must be genuinely surprised at the volume of praise and congratulation.

While they speak kind words about him here in Washington, the evidence grows that the birthday present which would mean most of all to Mr. Hoover may be denied to him. Or it finally may be served up in such a distorted and misshapen form as to be worthless.

That present is, of course, the carrying out of the recommendations contained in the report of the Hoover Commission on the reorganization of the Federal Government. The former President considers the report to be the crowning work of his long career. If he could think that he had brought efficiency and economy to the sprawling bulk of the Federal bureaucracy, Mr. Hoover would indeed be happy.

Next Tuesday the Senate will consider plan No. 1 and plan No. 2, embodying Hoover Commission recommendations. Plan No. 1, creating a Department of Welfare, combining various agencies and bureaus, seems to have little chance of approval.

Plan No. 2 which, in Mr. Hoover's own words, is intended to "revitalize the much-denuded Department of Labor," has a slightly better chance of being approved by a majority—at least 49 Members present and voting—of the Senate. But if this happens, it will be in spite of the strenuous efforts of a lobby backed by those who in the past have professed to love Mr. Hoover most dearly.

An organization calling itself Unemployment Benefit Advisors, Inc., of Milwaukee and Chicago, has been lobbying intensively against plan No. 2. Unemployment Benefit Advisors has had a fund of $200,000 contributed by large corporations throughout the country and especially the big auto and oil companies.

Chief change effect by plan No. 2 would be to transfer the bureau administering the United States Employment Service and the Unemployment Insurance Service from the Federal Security Agency to the Department of Labor. The big corporations are fearful that the Department of Labor might alter the present system of experience rating under which they get large rebates for stabilizing employment.

They apparently have been encouraged in this fear by Stanley Rector, chief lobbyist for Unemployment Benefit Advisors. In a recent issue of his propaganda letter, the Advisor, Rector referred disparagingly to Hoover's traits of character that had not served him so well politically.

"I do not think any reasonable employer would have prejudices on that account," Hoover told a Senate committee when asked about the danger of pressure from the unions to alter present regulation. "* * * We have to believe that the departments of Government are going to act on behalf of all the citizens of the country * * *."

"I might have to believe it," Rector noted in the Advisor, "but I won't until I have to."

Experts in the Department of Labor say that regulations covering experience rating, fixed by the separate State legislatures, could not be changed by Executive order. The Senate Committee on Expenditures in the Executive Departments voted 8 to 3 to disapprove plan No. 2, although some Members indicated they were reserving judgment until it came to the floor.

The citizens committee for the Hoover report claims that recommendations already put into effect will permit annual savings of $1,250,000,000. This is based on $1,000,000,000 saved by the armed services and $250,000,000 in the general services bill.

World Trade and Commerce Is the Road to Peace—United States Licensing Restrictions on Exports Should Be Lifted

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to include an interesting letter that appeared in the New York Times. The writer of the letter, George S. Wuchinich, is an executive engineer with the Twentieth Century Industrial Exports Company. Mr. Wuchinich writes his letter in support of the program and plan advanced by the Quakers or American Friends.

With the oncoming economic storm, many capital-goods makers are anxious to do business, and are expressing their strong opposition to our present policy of restrictive licensing provisions on our export trade. They are dismayed to see export and world trade business which should normally be ours, slipping away from us and being taken over by English and other European traders.

It is difficult for me to understand a national policy on our part which will deny American merchants and businessmen an opportunity to trade in world markets, and compels our merchants and business people to wait until English, German, and Japanese business houses gobble up the business. Who are these people who insist that the workshop of America must stand idle while even the normal trade and commerce which we enjoyed before the war must be sacrificed to our competitors?

It is true that the Government has played Santa Claus with the United States Treasury for the benefit of various European and Asiastic countries. But what right has any Government official to deny American business the right to trade and commerce, and even go so far as to sacrifice their prewar business contacts for the benefit of English, German, and Japanese firms?

Thousands of tool and machine shops throughout the Nation are on a curtailed production basis. Unemployment is increasing, because export privileges are denied to our manufacturers. The people of the world are asking for our tools and machinery, and our officials tell them that they must wait and purchase this needed equipment from other markets.

Shall it come to pass that the name "Made in U. S. A." will only means guns, bombs, and tanks? Why are export restrictions placed on American peacetime goods?

The industrial potential of Germany and Japan has been completely restored. These two countries, together with England, were our greatest rivals for world trade before the war. They can produce goods with cheaper labor and undersell us in most cases. Who is it in our Government that is responsible for the present stupid policy that we are pursuing—a policy which ties the hands of American manufacturers and American exporters, and deprives them of the right of competition?

When we have 15,000,000 unemployed, then I am sure that the labor organizations will take up the cudgels in this fight for American markets. I hope that we shall not have to wait until then in order to have a change in our export licensing policy.

SUPPORT OF FRIENDS' PLAN—RECOMMENDATIONS FOR WORLD COMMERCE BELIEVED SERVING OUR INTERESTS

TO the EDITOR OF THE NEW YORK TIMES:

It was with much interest that I read the full report of the American Friends' plan regarding American-Russian relations. Their conclusions are, in my estimation as an engineer and businessman, steps which must be explored if the world is to get out of the present quagmire.

The section dealing with world trade is extremely significant. Half the human race lies in what our foreign policy chooses to call the iron-curtain areas. These are markets which, if met on a free, equal, and sovereign basis, can develop into an era of good feeling on both sides that will insure a real solid beginning for peace. I am sure that this is the intention of the Friends.

It will be recalled that in 1929 when the great depression struck we had no relations, diplomatic or full commercial, with the Soviet Union. It was not until 1932–36 that large orders for capital goods were received from that nation. In 1929 the Soviets announced their first 5-year plan, and it was 5 years later that industry here began to receive orders which during the blackest years of 1933–34 accounted for as much as 40 to 50 percent of their production. What is relevant is not that orders were placed, but that the Soviets managed to complete their first 5-year plan without any American industrial participation.

MANPOWER SHORTAGE

The new governments of eastern Europe as well as of China can, it seems to me, do the same. According to news that reaches me from these areas in the normal course of my business, the indications are that they are doing well. The Prague news letter of July 21 shows a manpower shortage of 300,000 in Czechoslovakia and a fulfillment of their plan by more than quota, or 101.9 percent.

If this is the case, it would be wise to take the gentle steps suggested by the Friends. Any embargo of these large areas over a period of years will lead to an estrangement which American industry can ill afford. Less than 2 weeks ago the British concluded a million-ton grain trade-equipment deal with the Soviets; and the British did somewhat the same for a period of 5 years with the Argentine Government.

Political considerations have compelled our administration to foresake the economic. But now in this present period of distress, if we continue to the same course, we may find ourselves shut out of markets. Already the new Chinese Government has announced that it will prefer to deal with other industrialized nations rather than our own.

It is in our own national interest that we look into the Friends' report. We may be left high and dry because the dollar shortage is being replaced by barter.

Writing to you as a businessman from an industrial city whose main interest is prosperity and peace for our people, along with friendship and good will among nations, I believe that the Friends' report did a service for all of us.

GEORGE S. WUCHINICH.
PITTSBURGH, PA., *July 27, 1949.*

Valley of the Dammed

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. LEMKE. Mr. Speaker, I include in the extension of my remarks part 14 of the Valley of the Dammed, by Mr. Bigelow Neal, of Garrison, N. Dak.

In this part Mr. Neal points out that he has no quarrel with the individuals of the real-estate division nor with the negotiators. He points out that his quarrel is with the policy that has grown up in our various governmental bureaus and departments—the policy of "the home owners and the public be damned."

In this series of articles entitled "Valley of the Dammed," Mr. Neal has done a great service to the Nation. He has performed a great human service to those who live in the "Valley of the Dammed" and whose property has not yet been condemned.

Here is part 14:

VALLEY OF THE DAMMED
(By Bigelow Neal)
PART XIV

As we come down the homestretch, I propose to present three viewpoints of a land-acquisition program. The first, and least important, will be my own. I offer it not out of faith in my own judgment but as representing the viewpoint of the landowner.

Next, I shall present my interpretation of the policy of the Real Estate Division of the Army Engineer Corps. And, after that, I have a little surprise for you, at least it was to me—something in the nature of a punch that should land hard in the solar plexus of the Real Estate Division. I honestly believe that their policy never has been hit before so hard as I shall hit it in the last paragraphs of this installment.

But, first, I want to talk about some items that have been overlooked. One is the mat-

ter of buildings on the lands taken for the dam.

In all cases that have come to my knowledge, the Real Estate Division has offered to sell all buildings and improvements back to the owners at not unreasonable figures. But don't be misled into believing this is generosity. Part of it is fear—for once operating in favor of the landowner. You see if the Real Estate Division were to put these buildings on the market at a price calculated to sell them, the entire lumber industry of the United States would wrap itself around their necks. The only way they could get out was to offer the buildings to their former owners at a price those owners would be likely to pay, especially in view of the fact that the landowner could not rent his own land unless some arrangement was made to cover the buildings.

Also before I sign off, I want to pay a little tribute to some very fine men. Speaking of them as "negotiators" I have been raking them over the coals for nearly 4 months. I have no apologies for what I have been forced to say. But taking them from under their orders, out of their professions and back into the realm of ordinary men, I want my readers to know that my hat is off in real reverence to a group of men who, under the final test of sportsmanship, passed with a very high mark indeed. No matter what I have said, you are not to believe that outside of their professional work, they are not a grand bunch of guys.

From several sources over the last few months, I have heard that I was out after the scalp of the chief of the real-estate division. By virtue of his position and because, once or twice he has lost his temper when he needed it—he has had to absorb a certain amount of shock, but that was something I could not help. I am not here to punish, even had I the power. I am not here to hate. If he were fired because of anything I have said, I should feel bad indeed. I could and do wish that he might adopt a kindlier attitude toward my neighbors. Perhaps, sometime, when he goes home at the end of the day, maybe with some little presents in his pockets for his wife and for his children, he may think of all the other wives and children along the Valley of the Missouri. You see, they like to be happy, too.

Now we come to the deadline on apologies. Believe it or not, in the 4 months these articles have been running I have received only two critical letters. One of them was very mild. One was a "rip-snorter" from another real-estate division chief who felt called to the side of his brother-in-arms. In his case, however, I have only a copy of a letter he wrote to someone else. I elect to say that I don't have to answer an attack from the rear.

Within the ranks of the Real Estate Division there are, as I have told you before, many splendid people. From their ranks, all the way from Riverdale through Omaha to Washington have come letters and suggestions and expressions of good wishes. To them, as well as to all those fine people in the Department of Justice, go my sincere thanks. When the time comes that it is safe to credit you with your stand in the interests of justice and good citizenship, the editor and I will go into a huddle and maybe tell just how the thing was done.

Having confessed that we got bawled out once, and right well too, maybe you'll forgive your editor and me for quoting a few lines from one of another kind. This comes from a man the Government thinks is worth $20,000 a year:

"So you see, your articles are doing a great deal of good, not only in the Valley of the Dammed but also in future operations of the Government. Future generations will owe you a debt of gratitude."

The editor will live longer than I shall. I hope he collects.

The editor and the writer have had a surprising number of requests for the Valley of the Dammed in book or pamphlet form. The fact that many of these requests come from lawyers all over the United States attests to the widespread activities of land-acquisition agencies operating under the policy we have described. Our answer to these requests is that the editor will print a limited edition to meet these demands. For those of you who are interested, the address is either the Independent Publishing Co. or the writer at Garrison, N. Dak. Now back to business.

In beginning this week's copy, I started out by saying I intended to take a real solid punch at the policy of the Real Estate Division of the Army Engineer Corps. I did. But, in the process, my copy got too long for one issue and I'll have to hold that punch under my ribs until next week.

Here, then, seems a good place to comply with the many requests I have had to say something about the treatment of the Fort Berthold Indian tribes by—whoever did it. To do it, I shall quote a little history without taking time for reference work in the matter of exact dates.

Along about 1854 the Government of the United States entered into a treaty with the Iowa and Minnesota divisions of the Sioux Indians for the purchase of lands in those States. Payment was to be made in stock, farm machinery, bedding, and food.

The goods above-mentioned were supposed to be issued to the Indians from the Red Lake Agency. Somebody stole the goods and the Indians never received them. When the Indians became hungry, they cried for help but nobody answered. When they were starving, they broke into the warehouses at the Red Lake Agency to find them empty. At that the Indians literally went crazy. The result—the Minnesota Massacre.

Later, after General Sibley had chased most of the Sioux west of the Missouri River at Bismarck, our Government made more treaties. One of them at Fort Laramie in—I believe—1858, gave the Sioux certain lands to hold forever, including the Black Hills which, for some reason or other, were held sacred by the Sioux. There was a solemn promise in the treaty, duly signed and ratified by Congress—that no white man would ever enter the Black Hills without the permission of the Sioux.

In 1874 Lt. Col. George A. Custer violated that treaty by leading an exploring expedition into the Black Hills. As a result, in 1875, Colonel Custer with 207 of his men died on the hills above the Little Big Horn River while hundreds of settlers were called upon to pay the price of the white man's dishonor.

In 1825 the Arickara Indians, now of the Fort Berthold Reservation, straddled the Missouri in the middle of Dakota Territory and promised to make things difficult for white men carrying their cargoes of hides, whisky, smallpox, and syphilis up and down the river. But the Arickara Indians had a weak spot in their armor. No matter how much they hated the white man, they hated the Sioux worse and so another treaty, this one signed by a council fire on Grand Island, a pact of eternal friendship between the white man and the Arickara in which—to cut it short—each party promised to help the other against the Sioux.

Later, at Fort Laramie—I believe this also was signed about 1858—a second treaty elaborated the first and set aside certain lands for the Arickara, Mandan, and Gros Ventre Indians and, in this treaty, so I understand, there is a clause which says that the Indians would be protected in the ownership of these lands—by the white man's Government—"as long as the sun rises and sets."

That's quite a while, isn't it? And rather high-sounding language, too. But nevertheless our Government made that promise to the Arickara and it was also ratified by the Congress of the United States.

Now if you want to build a dam across the Missouri River and flood the homes of these Indians, how are you going to do it under that treaty? The answer is that you can't do it under that treaty, not even on the fictitious claim that the Indians are wards of the Government, because that treaty was signed by the white man, not with wards of the Government, but with an independent foreign nation.

Again, how are we going to build that dam under that treaty and without the consent of the Indians? Why it's the easiest thing in the world. For a white man there's absolutely nothing to it. All in the world that we have to do is to violate our sacred word. Just forget and deny that there ever was such a treaty. Just smear one more black blot on the pages of our history on the theory that where we have smeared so many, another will never be noticed.

Here I hear a voice: "I thought you weren't going to say a word against building the dam that is going to make us all rich?" And my answer: "I'm not saying a word against the dam. I'm merely saying that it is being built on a foundation of dishonor when it might have been built on honest pride." There was a way to have built that dam with the full consent of the Indians. How? That, too, is very simple. All we had to do was to ask the Indians for the land instead of demanding it.

I have lived as a neighbor to these same Indians and I have been old enough to know them for over half a century. I have been adopted as a grandson by so many Arickara Indians that I can't remember half of my own names. Among them I have lifelong friendships. I know them well enough to know that this land program, as applied to the Indians, has been bungled from start to finish, just as it has been bungled in dealing with the white man.

To deal with them in a matter such as this, we should know some things:

1. It is contrary to every instinct of an Indian to refuse a favor asked by a friend. It is actually true that you can take away from him highly valued property simply by asking for it.

2. Indians are steeped in the spirit of sacrifice, especially the sacrifice of one for the good of all. The young men used to torture themselves, even to death, that the Great Mysterious One might bring rain to dying crops.

3. While you can take things from an Indian by asking for them, you cannot take by demand.

4. That unlike white men, when an Indian gives his word as in a treaty, it becomes a solemn obligation and a part of his religion.

5. We should remember a speech of Chief Gall's in which he replied when asked what lands his people claimed. "My friends, our lands are wherever our dead lie buried." In other words there is no property so valued by an Indian as the soil in which he has buried his dead.

6. We should remember that these people led McLean County in oversubscribing and overcontributing their quotas in war loans and Red Cross drives when McLean County led North Dakota and when North Dakota led the Nation.

Remembering, then, that they are not savages, that they are not fools, that they are not children, that they have played their full part in making the West safe for the white man and that their dead lie buried—not only in that sacred cemetery at old Fort Berthold but on every battlefield of every war we have fought since 1870—we should go among them and tell them frankly we are asking them to make one more sacrifice for their children and ours. We should tell them that we will not break the treaty but that we want to lease their lands along the river for a thousand years and that we will pay them so many

millions for the first 3 years and a dollar a year thereafter. We should tell them that we will bring water from Fort Peck or pump it from the river to make their fewer acres produce as much or more as their original holdings and that, far up against the sky, on the highest hill of all, we will build a great monument to the Indians who have given their lives in the service of the flag. And that we will build there a great national cemetery where we will rebury their dead and where the red warrior and the white who have fought together can sleep forever side by side.

Then they would have signed.

As it is the treaty is broken and there will be lawsuits for thousands of tomorrows to pay for the stupidity of today.

Ethel Barrymore

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. JAVITS. Mr. Speaker, the significance of theater to the people of America is well demonstrated by the widespread feeling evoked by Miss Barrymore's seventieth birthday. She has emphasized for the country the fine creative aspects of the theater, which has endeared her personality to every American. The aim of the National Theater bill sponsored by Senator IVES, Senator THOMAS of Utah, and myself is to bring the richness of this part of American culture to all of our people, many millions of whom are now either not reached or reached infrequently by the living theater. The following editorial is from the New York Times of August 15, 1949:

THE BARRYMORE MAGIC

Happy birthday, Miss Barrymore! According to vital statistics, she is 70 years of age today; and a nation that does not ordinarily take much formal notice of its artists is going to salute the queen of the theater's royal family. After more than half a century of the familiar panic of theater life Miss Barrymore is reported to be quite content in Hollywood, which respects her eminence, keeps her busy and is able to pay a regular salary in negotiable currency. But today millions of Americans are affectionately remembering the great lady with the radiant personality and the woodwind voice who has trouped throughout the country, carrying the magic of one of the public arts to communities everywhere.

No doubt it is wise for an actress to be born into a famous theatrical family and to be endowed by God with winning personal beauty. Every aspirant for the stage should try to make these advantageous choices. But Miss Barrymore's eminence comes from many years of hard work in many parts of different caliber. She began at the age of 14 when she joined with her grandmother in Joseph Jefferson's production of "The Rivals" in Canada. Some slight difficulty over hotel bills persuaded the members of the company to leave their trunks behind when they returned to the United States. The occasion was not perceptibly glamorous.

And before Miss Barrymore achieved prominence in Clyde Fitch's "Captain Jinks of the Horse Marines" in 1901 under Charles Frohman's judicious management, she had worked hard for 7 years in whatever parts she could find. She has been working hard ever since. Fortunately for her and for us, the hard work has included the whole range of drama, light and heavy, frivolous and grave.

Among other authors, she has played Shakespeare, Sheridan, Ibsen, Pinero, Barrie, Galsworthy, and Maugham. One of her most memorable performances was one of the last she has played on the stage—Miss Moffat, the complacent but sentient school teacher, who learned so much about the wild torrents of human life between the first and last acts of Emlyn Williams' "The Corn Is Green." That was a notably compassionate characterization because Miss Barrymore was sensitive enough to understand it, mature enough to put it in its proper proportion, and skillful enough to express it. There is nothing mystical about those qualities. They are the fundamentals of fine and distinguished acting.

Apart from the radiant personality which is the instrument of her acting, she is energetic, keen-minded, sharp-witted, and resilient. It has been a fabulous career founded on constant work. To revise one of her most famous lines: That's not all there is; there is going to be more. Many happy returns, Miss Barrymore. And thanks.

Socialism, Under Labor, on the Rocks in Britain

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, August 15, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the Washington News is running a series of articles on Britain's Socialist Government in action. Mr. E. T. Leech, editor of the Pittsburgh Press is on the scene and his description of events in Britain are truly historic. Here is a story that the people in the United States must understand as we move in the direction of State socialism. This is the second of the series and I call it to every Member's attention. Under leave to extend I include it as part of my remarks:

UTOPIA ON THE ROCKS—BRITISH SOCIALISM IN ACTION—STATE GUARANTEES SECURITY BUT BRITON IS MOST INSECURE

(By E. T. Leech, editor, the Pittsburgh Press)

LONDON, August 15.—Nobody else on earth has greater guarantees of security than has the British citizen.

The state starts serving him before he is born. From the first knowledge of his mother's pregnancy, government steps in to guide and shelter him. During all his years it will continue to do so. And it will provide for his burial, and for his family after he dies.

It is the world's best publicized system of complete social security outside of either an institution or a dictatorship.

Yet today, one of the most insecure of the world's people is this same British citizen.

If he studies or thinks about such matters at all—and millions of English do not—he is worried, disappointed, and fearful.

He bears, and has long borne, great burdens. Now he faces still heavier ones. He has lived in a state of crisis, sacrifice, and uncertainty almost constantly since World War I. Now another trying and painful era seems to lie ahead. The security he seeks so passionately always is in the future.

The Englishman lacks many things. Much of what he produces—and virtually all of the best quality—is for export, not for him.

Nobody else on earth pays such heavy taxes. Forty percent of the whole British income goes for taxes.

Britain's standard income tax rate is 9 shillings to the pound—45 cents to the dollar. Some millions of people, at the bottom income level, are exempt, and there are deductions for family burdens and smaller incomes. An Englishman making $4,000 a year with wife and two children pays $720 income tax against $266 for an American of the same status.

As incomes work upward, taxes quickly take more than one-half, until they reach a total of 97½ percent in the upper levels. The well-to-do are being wiped out, and as they use up past savings and capital, will almost completely disappear.

SALES TAXES, TOO

But, on top of income and local taxes, there also are purchases—or sales—taxes which take a terrific swipe at the buyers' pocketbooks.

Beer and cigarettes—for which the British public is spending around 18 cents out of each dollar—are the tax collectors' best friends. Twenty British cigarettes cost 70 cents; weak beer is 20 cents a pint. Sales taxes on many other items run from such rates as 33 percent up to 100 percent on luxury goods. Tourists save big sums on purchases by buying under an export plan, which lets them escape these taxes—as a means of encouraging export sales.

What happens is that the state largely spends the Englishman's income for him—on what government planners think is best for him. To do this requires a vast and growing army of civil servants and bureaus. It is their job to make the plans and carry out the directing of people's lives.

Britain, with something over 40,000,000 people, has 2,000,000 employees to run its national and local political machinery, not counting those who manage or work in the nationalized industries. On a population ratio, this far exceeds the public employees in America.

And the number grows. Government costs have gone up around 18 percent in the last 2 years.

With what is left after taxes, there is little the Briton can buy or own. Such things as buying a home or an auto or any of our standard household appliances are out of the realm of possibility for the average worker or middle-class white-collar man.

Food is sufficient for living, but scanty and monotonous—and much of it rationed. There is plenty of food only a little way off, in Ireland or on the Continent, but there are many handicaps to keep the Englishman from getting it.

DOLLAR SHORTAGE

Now, for a reason called the dollar shortage, there is to be less food and tobacco and numerous other things. This term is largely a public mystery. But it is used so much and is such a popular alibi for any shortage, that it sounds like Uncle Sam was taking something away.

So Sir Stafford Cripps—the man who runs British finances and whose name is heard more often than any other in England—is calling for greater austerity, which is a British synonym for doing without. Sir Stafford—who himself uses no meat, tobacco, or strong drink—is Mr. Austerity to the British public.

Britons were surprised—and nettled—recently when he went to Switzerland for his health, instead of using England's health plan. And also because he went through special allowance by Premier Clement Attlee under the strict rules which sharply restrict use of British money for outside travel.

An Englishman is constantly exhorted to work harder and sacrifice more. He lives in a world of slogans and appeals—a democratic substitute for the propaganda of dictatorships. His is a world of crises—labor disputes, financial dilemmas, shortages and fast-changing rations and regulations. These call for new slogans—until all of them lose their force.

It is a constant story of what the state will do for you. Also what you must do in return.

BEGINS BEFORE BIRTH

These state services start with prenatal care for mothers. They deliver the child and provide milk, orange juice and vitamins. Undoubtedly this has done much good.

Parents after their first child, get $1 a week for each additional one, regardless of need. For the growing child there also are free school lunches, health care and free school clear through college. But a strong and slowly dying class spirit causes millions of middle- and upper-class families to strap themselves so their children can go to private (or, as they call them, public) schools.

The state finances or runs many youth services. It stands ready to direct the boy or girl into the first job.

Once on a pay roll, there begins an elaborate insurance system in which all are enrolled. The employer pays part and also deducts a tax from the worker's pay envelope. This system covers maternity benefits, widows' pensions, allowance for orphans, benefits for unemployment, accidents and illness, retirement pensions and death grants.

The man worker pays around $1 a week for this insurance; a woman pays about 70 cents, and self-employed persons pay at higher rates. These payments rank rather large in proportion to wages, which are far lower than wages for similar work paid in America.

Then, of course, there is the highly discussed national health plan—with medical, dental and eye care and unpaid drugs—even, on occasion, such things as corsets, wigs, and medicinal spirits—for everybody.

IT ISN'T FREE

It isn't free—not by a long sight—save for such visitors as American tourists. They are entitled to any part of it—if they can find it and wait long enough.

These, and many other minor services, promise the Briton full security. Yet today, actually he is most insecure. For the all-giving British Government is going broke. There can be no security for people when the government is insecure.

To Be Frank

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 16, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article written by Frank Kingdon which appeared in the New York Post of August 15, 1949:

TO BE FRANK

(By Frank Kingdon)

We all wish the costs of government were less. The argument starts when we start telling each other where the cuts should come.

Herbert Hoover wants the Government to economize. He wants it to economize in the social services. This is what fixes him for the manner of man he is, and explains why, in office or out, he has no remedies for the difficulties we face.

The nonmilitary part of our national budget is not much over what it was 10 years ago. The jump has come in military expenditures. Hoover said not a word in criticism of these.

Any public man can create a sensation by telling us we work one-fourth of our time to pay taxes and that we have one out of every seven people on public pay rolls. This is the tried and true stuff of political propaganda. The rub comes when he begins to tell us just which dollars he would save and which public servants he would cut off the pay roll.

Hoover wants to cut the dollars and the people out of social security, public-relief programs, public works, conservation, and such peacetime activities. The regulation of the stock market, subsidies to agriculture, river valley authorities, social insurances, and labor arbitration machinery are the projects he considers radical. He is still the advocate of unregulated business and the wage earner's insecurity.

He has now attained the eminence of 75 years of age. This puts him in the same class with George Bernard Shaw. The most important fact about him from now on is another birthday. We may expect each August to have a speech from him.

We need not expect to hear anything new from him. What he said in this year 1949 was a repetition of what he was saying in 1932. It is hardly more than a paraphrase of the speech he made to the Republican convention in 1936. He presents the amazing spectacle of a man who has lived through one of the major revolutionary periods in the history of mankind without changing his mind or getting a new idea.

If anybody wants economy in our national budget I can tell him how to get it. Find some way of reducing the tension between West and East so that we do not have to put $14,000,000,000 a year into arms. It's as simple or as difficult as that. The most damaging criticism of Hoover's speech is that he didn't even mention this.

We are spending $14,000,000,000. The other countries of the Atlantic Pact are spending $5,000,000,000 on arms programs. If Hoover or anybody else can tell us how to cut this expenditure in half we shall save among us better than $9,000,000,000 a year. What such a saving would mean to economic rehabilitation and social stabilization is something to make the heart leap.

If there is any danger that we are taking either a main or a back road to bankruptcy it by no means arises from any splurge of spending too much money on assuring freedom from fear to our less privileged fellow citizens. It comes from only one source—the billions spent for armaments.

Hoover thundered on every front but the main one.

Let's Have Two New Daughters in the Sisterhood of States

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. DOYLE. Mr. Speaker, while I am not upon the committee of this House having to do with the matter of whether or not the Territory of Alaska and the Territory of Hawaii should be now cordially considered for admission to membership in the sisterhood of States, I believe that I have observed the progress of these two geographical areas and of their peoples sufficiently to state that I believe that the time is here now when we should do so.

It appears to me, for the best interests of our Nation and of the peoples who are citizens of the Territory of Alaska and of the Territory of Hawaii, that the bills that are pending should be brought to the floor for the information of and the consideration of the full membership of this Congress, and that the same be done as promptly as possible.

Address by Hon. Francis J. Myers, of Pennsylvania, Before Annual State Convention of the American Legion, Department of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, August 17 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me before the annual State convention of the American Legion, Department of Pennsylvania, in the Syria Mosque, at Pittsburgh, Pa., on August 11, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

With almost 4 years behind us since the shooting ended in World War II, we've had a chance to settle back more or less and get our second wind.

Generally speaking, we're in pretty good shape now. I think we're in mighty good shape. But I remember in the last year or two of the war there were a lot of people who freely predicted we weren't going to be in good shape when war production came to a sudden halt and 14,000,000 or so veterans came home to look for jobs. There was a lot of depression talk going around in those days, and a postwar goal of 60,000,000 jobs in America seemed decidedly optimistic.

Well, we've got about 60,000,000 people at work now, and we've discovered that the goal we set wasn't high enough. We're concerned—and we ought to be—over the fact that about 4,000,000 people haven't got jobs right now. So we're raising our sights and going to work in earnest to see to it that we keep this economy of ours expanding, and by constantly increasing job opportunities we're determined to make a place for all the new people who come on the labor market each year. This is an entirely different kind of approach from the kind we had back in the twenties, when we floated along with quite a bit of unemployment in spite of all the prosperity the rest of the people were sharing.

We're determined not to have another depression, and it's pretty clear that the American people are watching the signs carefully to make sure that we do something about it before things get out of hand the way they did in the late twenties and early thirties. And, believe me, I'm certainly convinced our attitude now is a lot healthier.

In connection with this, I think it's reasonable to ask whether America has kept faith with the veterans this time. I ask this rhetorically, but I think it's a good question.

Now you know—and I know—that you fellows didn't go into the service because you expected to get something out of it. (You went in because there was a dirty job which had to be done.) I doubt seriously that many of you will ever say, looking back on it, that the years you spent in the service during the war were the happiest years of your life. They were tough years.

You gave up a lot when you went in. Some of you traded off good jobs for $21 a month. And it wasn't a much better bargain—for you—when the starting pay got raised to $50 a month. But in fighting total war there was an essential job for almost everybody, and that was certainly true for all the able-bodied.

Those who stayed home and worked in essential industry made good money. The ones who went off to war lost out on that, and many of them had to take a lot more besides; had to take it in boredom, in tough work, in danger, in injury, and in death.

I don't think there was much question in the mind of anyone during the war but that we'd do something to try to square accounts with the veteran for the things he'd been forced to give up. Maybe there was not much agreement, or even much thinking about just what would be done, but it was pretty generally agreed that something would be done.

The first big step we took was the GI bill, and by and large, it appears to have worked out pretty well. The education provisions in the bill have undoubtedly been a big success. For some, it meant continuing an education interrupted by the war—for others, it meant getting an education they would never have been able to get otherwise—and for many, too, the in-job training provisions did a lot to help them on their way to better jobs through new skills they were able to acquire.

I don't think the home-loan provisions we set up in the GI bill have worked out nearly as well as we'd hope they would. When we wrote the bill into law we had some effective curbs on inflation, and of course those got wiped out in 1946 and the prices of everything skyrocketed. When that happened, it put the veterans in about the same spot most other people were in. You couldn't get a decent house at any kind of reasonable price, and the inflation really cut down on what we might have been able to do.

Inflation hit everybody indiscriminately. Millions of families had their war-time savings wiped out, and millions of stored-up war bonds were liquidated. It affected veterans and nonveterans alike, and put many of them in the same boat—broke, so far as savings are concerned.

As matters stand now, most of you who are working probably have a pretty decent job, but you are finding that it takes just about everything you make to keep going, and it is sort of hard to put anything away. While it is true that working Americans are living better now, on the whole, than they ever have before, most of them are finding it pretty difficult to accumulate enough to make a down payment on a home at the present high level of construction and material costs.

The Eighty-first Congress has undertaken to do something constructive about the housing problem, and I feel quite encouraged that we are going to do a lot to ease the situation. As you know, the Public Housing Act was signed by President Truman the middle of July, and for the people with the lowest incomes of all, this is going to be a big help. And you can take a lot of pride in the fact that the veterans were among those whose efforts in behalf of that bill made it possible to get it through the House of Representatives this year after two previous attempts to do so had been blocked.

Just this week, the Senate Banking and Currency Committee reported favorably on a middle-income housing bill—$4,500,000,000 measure to provide for private home construction—which should go far to aid many of our people in getting a house of their own at prices they can afford. If that bill passes in its present form, veterans will be able to borrow up to $7,500—instead of $4,000 on a GI loan as provided in the present law—and what is more, there is a guaranty that the veteran will be able to get the loan. Too often in the past, the veteran who is a perfectly sound credit risk has been unable to find a private lender who would advance him the $4,000 at 4 percent. Under this new bill, the Government will guarantee to buy up the mortgage from any private lending agency that takes it up—and further, if no private loan can be obtained, the veteran can go directly to the Government for the loan after showing that no one will help him even though he is a good credit risk.

There is another provision in the middle-income housing bill that I believe all of you will be especially interested in. You remember that up to now, only the veteran himself could apply for a GI home loan. That was perfectly all right, but there were a few very deserving people who really got hurt by this, and they were the widows of veterans who died as a result of service-connected disabilities. This is indeed a startling paradox, and I'm really quite surprised that we've been so long in doing anything about it.

Right after Senator SPARKMAN introduced the middle-income housing bill, I saw in it a chance to correct this. I recalled, too, that Senator MCMAHON had put in a bill which would extend to these widows all the provisions of the GI bill, and that the Pennsylvania department of the Legion had enthusiastically supported it. Of course, since this was merely a housing bill, it was impossible to amend it to include all the benefits provided in the McMahon bill, but I invited Senator MCMAHON to join me in sponsoring an amendment to the housing bill which would allow the unremarried widows of World War II casualties to obtain the same home-loan privileges that veterans themselves could get.

I am happy to report to you that the Senate Banking and Currency Committee adopted the Myers-McMahon amendment in reporting out the middle-income housing bill the other day, and if the Congress passes the bill—as I certainly hope it will—this will be the first instance in which any of the GI benefits have been made available to these deserving young women who have given so much.

What we've done up to now is still short of what has to be done. There are a number of places where we've got some more work to do. For example, inflation had the effect of making disability pensions grossly inadequate in a good many instances, and legislation has already gone through to correct some of the worst spots, and more legislation is on the way. I don't see how anyone can disagree that we owe it to those who were incapacitated by the war.

All of you know about the cut that has been proposed in the Veterans' Hospital program. You will recall that the cut—if carried out—will reduce the number of hospital beds in Pennsylvania by 1,400—killing off completely the 200-bed general hospital in Harrisburg, and making substantial reductions in hospital facilities available at Philadelphia and Pittsburgh.

The Pennsylvania Department of the Legion has followed this actively, and has been very helpful in getting the facts together on the effects this would have on our Pennsylvania veteran population, and I want to express my gratitude for the help I've received from you on this.

As matters stand, the Veterans' Administration still has the Congressional authority to carry out the program as originally planned if the President will allow it. I want you to know that I, and a number of other members of the Congress are watching this whole thing very closely, and are leaving no stone unturned in seeking to persuade the President to change his mind. The Congress refused, I might say, to cut back the authorization.

You may be interested, too, in the changes that are pending in the new social-security legislation. In it is a provision that will give you social security credit for the years spent in service. For most veterans, that won't mean anything for the present, but it will some day. And for those veterans who die before reaching the social-security retirement age, the survivor benefits are, of course, increased by this.

Most of this legislation I've been talking about has been criticized as being a raid on the Treasury to "buy the veteran." This is obviously silly. The veteran can't be bought. He isn't that kind of a person, and anyone who thinks he is, is dead wrong.

This legislation isn't a raid on the Treasury. It's simply decent legislation designed to do the decent thing—a small token payment for the gratitude America feels toward the veterans for their sacrifice and their service to their country.

The Congress hasn't raided the Treasury for the veteran; it doesn't intend to; and the veteran doesn't want it to.

I'd like to take time out for a moment to talk about the State veterans' bonus that you'll have a chance to vote on this fall. The State bonus is our own baby; it's a personal thing, just between us as Pennsylvanians. Anything the Federal Government does for veterans usually means the people of Pennsylvania have to pay more for it than the Pennsylvania veterans get out of it; that's so because incomes are higher in our State than they are in most States, and so we pay more in taxes, proportionately, than a lot of other States.

So far as the Pennsylvania bonus is concerned, it's different. Any bonus plan we may adopt will go to our own people. The whole thing is strictly home-grown. And we'll have to pay for it ourselves; there won't be any Federal help.

The bonus should be a big help for a lot of veterans. It may mean a big step toward a down payment on a house or a car—perhaps a new refrigerator, or something else important that's been needed but just about impossible to get because there hasn't been enough of a margin to put away quite enough to turn the trick.

It is, as you know, nothing more than a token readjustment for long years of unselfish service. It is not, and could not be, sufficient to repay you for that time and service. No price could pay for that.

Incidentally, speaking of this referendum, I notice that voting registrations in Pennsylvania have increased tremendously lately, and that a lot of the new registrants are veterans.

Frankly, I'm delighted about that. As a citizen, the highest privilege we have in a democracy is that of voting. It's a fine habit to get into—the habit of making your voice heard as to the kind of government you think we ought to have, and the kind of policies you think our Government should follow. So for all of you, and particularly those of you who will vote this year for the very first time, please let me encourage you to keep it up.

I have been very much impressed since the war at the wide-awake, active interest so many of our people are taking in Government—their Government. The kind of mail I get is a good illustration of this. I have spent about 11 years in the House and the

Senate, and the volume of my mail seems to have gone up steadily every year.

But it isn't just a matter of quantity. There is a tremendous amount of information in that mail—information that's based on knowledge of what's going on in our communities, in our States, in our Government, in the Nation, and in the world. The people are receptive, they're curious, and above all, they're interested. The veterans are really out in front, so much so that I feel perfectly safe in saying that of all our people, the veterans are the most active in watching what is happening in America and in the world.

I believe this is the best assurance we have that America is going to stay secure and free. So long as people are anxious to participate in their own destiny, so long as they are anxious to tack against the first signs of depression the moment they appear, so long as they are watching the world situation and insisting that America play an affirmative part in building a true and lasting peace, I think we can honestly say that America is ready, willing, and able to keep—and in fact, is keeping—its pledge to its veterans. We can say that we're on top of things, and that we intend to stay on top.

Happenings in Washington

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 17 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a broadcast entitled "Happenings in Washington—Program No. 5," made by me on August 15, 1949.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON—PROGRAM NO. 5

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another report on Happenings in Washington.

Two weeks ago I discussed the agricultural adjustment bill of 1949, better known as the Brannan plan. I pointed out how this socialistic something-for-nothing scheme could bankrupt the Nation.

In the course of my remarks I said this bill had been favorably reported by the Senate Agricultural Committee. That was an error on my part.

I am glad to report that the committee has not acted favorably. It is now certain that this bill is dead, at least for this session.

Here it is the middle of August, and Congress is still in session in spite of the fact that the law requires Congress to adjourn by July 31, except in time of war or other emergency.

Let me point out that the new fiscal year began on July 1, a month and a half ago. All appropriation bills should have been passed before that date. In the second session of the Eightieth Congress the last appropriation bill was passed on June 19, 1948.

But here we are, still in Washington, with billions of dollars in appropriation bills still awaiting final action.

Because Congress has not passed many of these bills, stop-gap legislation has been necessary to keep the Government services from shutting down.

What does that mean to the people who pay the bills—the workingman, the farmer, the businessman; in fact, everyone whose tax bill has been growing bigger and bigger?

It means that in the final rush to adjourn, when the appropriation bills are finally taken up, there will be no time to give careful consideration to each item of expense.

That is what the bureaucrats want. Millions of dollars that might have been saved will be handed over to the bureaucrats whose whole objective is to spend every dollar of public funds they can get their hands on.

You know how long you would last if you ran your affairs in such a slipshod fashion. Any businessman who tried it would soon find himself in bankruptcy and out of business.

But the Government does not shut up shop. It simply borrows more money. It piles more debt on top of a quarter of a trillion dollars we now owe.

That's what the Federal Government did last year. It spent almost $2,000,000,000 more than its income. At the rate we are now going the deficit in the current fiscal year will be five or six billions, or perhaps more.

While this reckless spending is going on the people are demanding lower taxes.

Tremendous pressure has been generated for the elimination or the reduction of the wartime excise taxes now levied on jewelry, furs, luggage, photographic equipment, cosmetics, electric light bulbs, telegraph and telephone service, railroad tickets, and many other items.

These taxes should not be continued any longer. As a member of the Finance Committee, I supported a bill to eliminate them. This bill is now on the Senate Calendar, but the administration recently announced its opposition to any reduction. We may, therefore, have no opportunity to cut the excise taxes during the present session of Congress.

Now let me make it clear that while I favor eliminating these oppressive taxes, I still insist that the budget can and must be balanced. Federal spending must be kept within the limits of Federal revenue.

Under the present financial condition of our country the only proper way to balance the budget is by cutting down Government spending.

I am sure if you had to make the decision that is what you would do. You would not increase taxes.

I would like to see the Government operated like you good housekeepers run your homes, with careful, prudent handling of the family budget.

But down here in Washington every proposal for economy, for greater efficiency, for better government at lower cost, meets with the most stubborn resistance.

Department and bureau heads, puffed up with their own importance, refuse to cooperate with any proposal that would save money for the taxpayers.

They appear before committees of Congress and scream their heads off when it is suggested that perhaps they could get along with a reduced appropriation.

Oh, no—they must have more. Never less—always more.

A few weeks ago I spoke about the Hoover Commission plans for streamlining the Government that would save up to $5,000,000,000 a year just by eliminating waste and duplication.

I received many letters from Pennsylvanians urging me to support those recommendations that would restore efficient, economical government.

You will recall that in my radio discussion of the Hoover recommendations I predicted that they would arouse determined opposition from every department, board, and commission.

Well, that prediction has come true.

Senator JOHN L. MCCLELLAN, chairman of the Senate Committee on Expenditures in the Executive Departments, sent out letters to the heads of all Federal departments and independent agencies, asking their opinions of the Commission proposals.

I have read carefully the replies he received. They are an illuminating study of how our Government works. They reveal why it is so exceedingly difficult for economy-minded Members of Congress to cut Federal spending.

With just a few exceptions, each agency supported every proposal that would increase its functions or authority, but raised the most vigorous objections to any curtailment of its powers, personnel, or appropriation.

The question of saving the taxpayers money did not enter into it at all. Every agency wanted to hang on to everything it had and get more. The bureaucrats were unwilling to let go of anything. "Bigger and more expensive" was the only slogan most of them seemed to know.

Now I am not saying that the Hoover Commission is 100 percent right on everything it recommended. Nor do I believe that every disagreement with the Hoover reports must automatically be 100 percent wrong.

But I think you will agree that the Hoover Commission was correct most of the time. Only the selfishness and arrogance of the sprawling Federal agencies can prevent the taxpayers from getting a break.

Let me give you some specific examples.

Several recommendations dealt with the Federal Power Commission. Among its functions is the planning of dams and reservoirs for projects which make electricity by water power.

The Hoover Commission found there was costly duplication in this work among the Federal Power Commission, the Army engineers, and the Bureau of Reclamation of the Interior Department.

Let me tell you about that. Last year two of these agencies made plans for the same dam on nearly the exact same site at Hell's Canyon, Idaho.

One dam was to be 710 feet high, the other 740 feet. The estimated cost of one was $358,000,000. The other was to cost $433,000,000, a difference of seventy-five million. Each agency spent about a quarter of a million dollars in preparing its own plans.

Another glaring example of duplication was the Pine Flat project in California. The same two agencies conducted separate field investigations, drew up separate reports and, in the end, each was authorized to construct the same project. Finally Congress caught up with this duplication.

Many more instances of duplication, confusion, and competition among Government agencies could be cited.

In order to eliminate this waste, the Hoover Commission recommended that all planning of dams and reservoirs for electric power, flood control, and irrigation be centralized in the Department of the Interior.

"No," said the Power Commission, in effect, "we don't want to surrender anything. We are an independent agency."

At another point the Hoover Commission suggested that the United States Bureau of the Budget make specific recommendations to save money.

The Federal Power Commission did not like that either. It said such recommendations should be advisory only and not binding upon the Commission.

But there was one proposal that the Power Commission endorsed heartily. It was—now, don't be surprised—salary increases for the members of the Commission.

Now consider the Federal Deposit Insurance Corporation, another of these independent agencies. Washington, today, is full of these agencies, not responsible to anyone at all except the President. Obviously, it is physically impossible for the President to give all of them his attention. So they go their own way—autocratic little bodies—each one a law unto itself.

The Hoover Commission thought that most of them should be responsible to someone who could keep an eye on them. This would prevent duplication. It would prevent waste. It would save money.

The Commission recommended placing the Federal Deposit Insurance Corporation under the general supervision of the Secretary of the Treasury—certainly a logical selection.

But this agency is strongly opposed to any such supervision and said so to Senator McCLELLAN.

Consider now the Reconstruction Finance Corporation. This is the biggest, most powerful loan agency in the world—which has certainly become a law unto itself.

The RFC dissented vigorously from every recommendation made by the Hoover Commission—every single one. The RFC wants no restrictions, no controls, no changes. It just wants to go its own way and do as it pleases with your money.

For example, the RFC objected to transferring to another agency the operation of a Government-owned tin smelter in Texas. The Hoover Commission suggested that running a tin smelter had nothing to do with the business of lending money. It said the plant should be transferred to the United States Bureau of Mines. But, to the RFC, those were fighting words. RFC insisted that it, and it alone, should operate that tin smelter in Texas.

This is what happens when Government grows too big. These Frankenstein monsters are created. They break the chains which hold them under control and go their own way.

I could go on multiplying these examples. But time is running short.

Let me emphasize, these are not exceptional cases. They are the rule.

That is the way things are run in Washington today.

That is why we can't keep down Federal expenses. That is why most of the Hoover Commission recommendations to save money will probably never be adopted unless the people demand them in a voice so strong that they cannot be denied.

Washington today is full of little czars, fighting to keep everything they control and to make their little kingdoms bigger.

They do not help Congress cut the cost of Government. They don't want to save money. They just want to grow to be bigger frogs in bigger puddles by having more people under them, more power and more money to spend.

That is the problem faced by those in Congress who are fighting for economy. It is a hard, tough fight.

Right now we are making a desperate, last-ditch stand to cut appropriations. A majority in Congress is supporting the bureaucrats.

The economy-minded members of both parties are losing the fight by a small margin of votes.

Like a retreating army, we need reenforcements. An aroused public, making its thoughts and feelings known, will be of great help in the battle for economy and efficiency.

I appeal to you to write to your Congressman. Let him know where you stand.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in two weeks. Thank you for your attention.

Arms Aid Bill

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including two broadcasts by Walter Trohan of the Chicago Tribune over radio station WOL, Washington, D. C. Mr. Trohan is substituting for Fulton Lewis, Jr., and he has been making a valuable contribution to public thinking on the legislation now pending before the House. I am extending his broadcasts of August 11 and 12, which supplement three previous broadcasts on the same subject:

(Broadcast of August 11, 1949)

Tonight I am going to answer the $66,000,000,000 question about the military-assistance program. I will not keep you in suspense long. I will put the question simply and answer it just as simply. The question is, "Who is going to pay for the arming of our western European allies?" The answer is, "Nobody else but you and me." And we won't get a chance to fumble the check. We haven't outfumbled any country on a check in our history and we have been picking up an awful lot of checks in the past 32 years. Perhaps one of the most often-used phrases in American life is, "How much does it cost?" It invariably comes up when you talk about that new car, the vacation, the new hat, or ordering a dinner. The cost is the important barrier that must be cleared. And clearing the hurdle somehow makes whatever we want more worth while. But it ain't that way in Washington. The cost is something to be hidden, a skeleton in the family closet. Only one subject is treated lighter than the cost in Washington and that's economy. Of course, there's a lot of conversation about economy just as there is about the weather, but nobody ever does anything about it. Maybe if we could buy that fur coat, or order that steak with other people's money, we wouldn't fuss about the cost, either. And now the administration is getting ready to spend more of our money.

As you remember, the pact with 10 western European powers and Canada was signed last April. Almost before the ink was dry, the Allies began lining up for hand-outs of arms. Last month President Truman sent Congress a message proposing we give them $1,450,000,000 worth of weapons. One of the first protests against the size of the proposal came from one of the stanchest supporters of the pact, Senator VANDENBERG. The Michigan Republican, as you know, is one of the chief architects of the so-called bipartisan foreign policy. After loosing some vocal fireworks against the size of the White House proposal, Sir ARTHUR, as he is known in the Senate cloak rooms, came up with a compromise this week. He declared himself against giving $1,500,000,000 in arms to the Allies—in 1 year. He would spread the arms over 2 years, which would still give our allies the full total. The Vandenberg scheme provoked able and genial Republican Senator GEORGE MALONE, of Nevada, to remark, "A few more of these Vandenberg savings and we'll be broke."

Now, I have followed every step of the aid program and I haven't found any thorough consideration of the cost. So I thought you might like to take a look at the price tag. I am able to report that the administration has marked it down. Upon inquiry at the War Department I learned that one-third of the total aid contemplated will consist of "surplus" arms. At first glance this would seem innocent enough. However, I was told that these "surplus" arms are valued at 10 cents on the dollar in the administration's tabulation of the cost. This means that the arms charged off at a half billion dollars originally cost $5,000,000,000. And who paid the $5,000,000,000? Nobody else but you and me. Advocates of the arms program say it would not be fair to charge the original cost of the arms against our allies. You and I can wonder what difference it makes what they are charged as long as they aren't going to pay anyway. This business of surplus arms is one of the fuzziest of the many Washington puzzles. As near as I can figure, when some nation wants any weapons we have, they immediately become surplus. And we give them away. Even now the British are asking us to give away atom bomb secrets. You will remember before Pearl Harbor we shipped guns and planes and ships and powder to Europe. When fears were expressed that we were cutting our defenses to the bone, we were told to rest assured—we were told that the stores were surplus even though the shipments meant we hardly had a pound of TNT in our reserves. At the close of this war billions of dollars' worth of weapons and supplies went to our allies. Other supplies were destroyed, including thousands of planes. But hardly had the echoes of the war's shooting died away when our armed forces were asking Congress for guns and ships and planes.

Not long ago I sat down with two lieutenant generals to discuss material stores in our Army. I was shown a list of every type of weapon and every type of ammunition. The list is regarded as top secret. So I can't give it to you. I can't remember it with accuracy, anyway. I can only tell you I was amazed to learn how short our Army is of critical weapons. Naturally I asked what had happened to our vast war stores. I got a lecture on surplus and supplies that set me dizzy. All I could say at the end was, if it ain't any good, why do other countries want it. And I say it again now. It would seem logical that if it's good for our allies it's just as good for us and it ain't surplus.

Figuring the cost of the surplus arms in the military assistance program at $5,000,000,000—that's what they cost you and me—and the new weapons to be sent abroad at $1,000,000,000—the total cost of the arms program is actually $6,000,000,000. So what the administration tells us is going to cost one and one-fourth billions has and will cost six billions. And that's only the beginning. Our top military leaders estmate it would take a vast peacetime garrison of 60 divisions to even discourage the Red Army of nearly 600 divisions. Today all our allies have less than a dozen divisions in Europe; and not one is considered in top combat condition. Now it costs more than $400,000,000 to get a division ready for combat. So those 60 divisions would cost about 25 billions. A minimum of air support for these divisions would cost about $15,000,000,000. This would not include long-range bombers. Military leaders do not believe our allies can, or would, provide a garrison of 60 divisions. If this peacetime garrison is to be created, our military leaders are confident we will be called upon to send troops. Advocates of the arms program will tell you it does not mean that a single American soldier will be called for garrison duty. Do not be deceived. These are the same people who told you that passage of lend-lease would mean that American troops would not have to be sent to European wars.

Let me quote from a debate in the French Parliament. On July 25 Deputy Montiel said, "We fear that we shall again have the glorious but dangerous role of being the advance guard. Our army cannot be of immense numbers, but must be of the highest quality. The Atlantic Pact can prove to be the best or the worst measure, dependent upon how military agreements are implemented. We have the right to await from our allies all the assistance we need in order to win the first battle." That, my friends, tells what the French expect in the way of American military aid. And, our top command knows it clearly implies troops. Now, if we are to garrison Europe, then military leaders agree we must have conscription. It has been estimated that universal military training would cost $4,000,000,000 a year, or $20,000,000,000 for 5 years. Let's take a look at the total—we have 25 billions for 60 divisions, 15 billions for supporting air, 20 billions for military training and 6 billions, which the administration claims is only one and one-half billions. The way I count the total for 5 years would be $66,000,000,000. These are not my figures, but the figures of men who have made a career of military planning. This is what they tell me the cost will be if the assistanee program is to approach a minimum of success. Some persons might argue 66 billions is too high. Let's cut the estimate of the military experts in half and say that this minimum program would cost 33 billions. That's still a lot more money than a billion and a half. And remember, too, that military experts do not guarantee it will stop the Soviets in Europe.

Furthermore, this does not take into account the other parts of the world where millions are being spent to contain the Soviets. Most of all, it doesn't include the cost of our own defense establishment at home, which now runs fifteen billions a year. Advocates of the arms assistance program can ask, "Have you a better program?" I think the best minds in our Military Establishment have. But they are muzzled. First, they can't speak, supposedly in the interests of promoting unification. Second, they cannot speak because our State Department, rather than our military, is determining strategy. Many of our finest officers must go along with a program to which they do not subscribe. Believe me, I know. They do not want to deceive the American people nor our allies. These men, who represent the best brains in our Military Establishment, say the job of restraining the Soviets can be done in 5 years—that it can be done without shipping arms to Europe.

They say it can be done with a strong American Air Force, supported by an adequate American Army and an adequate American Navy. They would spend six billions a year on the Air Force, three and one-half billions a year on the Army, and two and one-half billions a year on the Navy. This is a total of 12 billions a year as against fifteen billions a year now being spent on the Military Establishment today. It would need no huge expenditures in Europe. We must never forget Nikolai Lenin wrote in 1924, "Some day we shall force the United States to spend itself into destruction."

(Broadcast of August 12, 1949)

Tonight I want to tell you why our military leaders believe that war against Soviet Russia cannot be won on the ground. All week I have been giving you a rather gloomy picture of world war III, which we all hope will never come. Next week I will tell you how world war III can be won by ideas and through the air. Before we can look at the brighter side of the picture, we must consider the difficulties. It must be kept in mind that communism thrives on war. It was born in World War I. In World War II it swept over Asia, and into central Europe. It now threatens the world. If world war III is fought on the ground in Europe, it could end western civilization. Not one responsible military leader has told you that the $1,450,000,000 arms assistance program will work—that it will stop Soviet Russia. Instead they tell you, as General Bradley told Congress, it is important to lift European morale. You can lift European morale out of a bottle, if you pay for the bottle.

Not one responsible military officer has told you we can defeat Soviet Russia on the ground. No one in history has. Napoleon invaded Russia with a half-million of the best troops in Europe—troops which had won victory after victory. He captured, sacked, and burned Moscow. And then where was he? Out in the cold. Winter set in. Only 30,000 stragglers of the Grand Army escaped. And these were starved and diseased. Hitler threw 220 crack divisions against the Red Army in 1941. He had powerful panzer divisions and control of the air. He advanced to Leningrad and Moscow. Since the end of the war, Soviet sources have revealed that Hitler had Moscow but did not know it. His advance guard entered the city and turned back, not knowing resistance had withdrawn. Hitler poured into the Caucasus and dashed against Stalingrad. Again winter saved Russia. Hitler failed. He lost 5,000,000 men in Russia. Five million men killed or maimed. Five million men incapacitated. This does not consider superficial wounds. No one knows how many the Russians lost. Life is cheap in the Soviet Union. Statistics on casualties were not kept. The best estimates are that Stalin lost 10,000,000 men. Let me quote from a German general to tell you what an advance of the Soviet Army is like. General Manteuffel, who led many tank raids against the Soviets, said:

"The advance of a Russian Army is something that we westerners can't imagine. Behind tank spearheads rolls a vast horde, largely mounted on horses. The soldier carries a sack on his back, with dry crusts of bread and raw vegetables collected on the march from fields and villages. The horses eat the straw from house roofs—they get very little else. The Russians are accustomed to carry on for as long as 3 weeks in this primitive way of advancing. You can't stop them, like an ordinary army, by cutting their communications, for you rarely find any supply columns to strike.

"Some air officer, I believe it was Gen. Toohey Spaatz, told me how he got the answer to why Germany lost the war from a barber in Berlin. This barber had fought on the eastern front against the Russians and on the western front against Americans. The general asked him how he explained the German defeat. The barber replied: 'Too many Russians and too many American planes.'"

As you have gathered from what I have told you thus far, winter and manpower are two major factors favoring Russia. The Soviets can put 20,000,000 men in the field. This is almost twice our war mobilization. Another important factor favoring Russia is terrain—distance. In front of Hitler the Soviets retreated from the middle of Poland to Stalingrad. This would be comparable to a retreat from New York City to Omaha. And still they were not defeated, but were able to turn the tide. Military experts, as you know, concede that the Soviets could capture all of continental Europe in 90 days. The problem of fighting back on land would be an enormous one. Europe is a tapering peninsula on Russia's western frontier. It is something like a wedge of apple pie with a slice or two dangled out to form Italy and Greece and Scandinavia. This shape favors the Soviets. For, as they move westward, the front narrows for them. As armies move eastward against Russia, the front widens. If an invasion were to begin from the coast of France, the front would open widely to 750 miles between the Baltic and the Black Seas. At its widest in Europe—from Murmansk, on the Arctic, to the Caucasus, the front would be 2,000 miles wide. And the Soviets could retreat 6,000 miles to the east—twice the width of the American Continent.

We have seen the great allies of Russia are distance, winter, and manpower. Russia (without her satellites) is almost three times the size of the United States. Russian winters are so cold that Americans and western Europeans would have difficulty in withstanding them. Russia has vast stores of manpower. And Soviet leaders expend lives most willingly. Now we can ask our military leaders what sort of army is the Soviet Army? I can give the answers as far as they are known today. The army is considered far ahead of the Red Army which went to war in 1941. This means it is a better army than the one which smashed Hitler's crack legions. The Soviet Army is considered at a peak in the top command and in the lower echelons of combat officers. These junior officers are considered competent and capable. The top command, of course, proved its abilities in war. There is no short cut to experience in war. And Soviet generals have ground-war experience. In the middle echelons the officers are considered a bit weaker. This is because they must at all times be politically conscious. They must do as the commissars want them to do. The Russian soldier is believed to be improving steadily. Since 1941 the average Russian has learned much about the handling of military equipment. The Soviet Army is the pride of all the Russians. It is what the Royal Navy was to the British. The air force is considered subordinate to the army. The air force numbers about 19,000 planes, of which about 4,000 are first-line fighters. The best planes are considered good, although Russia is behind the west in the production of engines. This is a chance to start on a level with the west in this development. The British are selling jet engines to the Soviets. And these sales are being made as Britain is asking the United States for billions of dollars to strengthen herself against encroaching communism. The Soviets are also employing the services of German jet technicians in developing their own jet planes. The Soviet Navy is not at all formidable. It could not control the Baltic in the last war, or even the Black Sea.

The Reds are stressing the construction of submarines. They now have about 300 submarines. Of these, 30 to 50 are of the snorkel type. The snorkel sub, as you know, is equipped with a device which enables it to breathe under water. It is faster and can cruise farther than undersea craft which must come to the surface often. Soviet development of this craft would indicate that the Reds plan to repeat the German undersea campaigns of the First and Second World Wars. In this connection I can tell you that our Navy has the techniques to combat the snorkel sub.

So far as is known, the Soviets have not stressed strategic bombing—the long-range bombing far behind the lines. This is the bombing which shattered Japan and brought the Japs to thinking of surrender even before the atomic age was ushered in by the terrible mushrooms over Hiroshima and Nagasaki. The Soviets did intern several B–29's, the planes that bombed Japan. Even though we were their allies, the Soviets interned American planes used against the Japs because the Reds did not enter the war against Japan until it was almost over. It is believed the Reds are copying the B–29 and seeking to build a strategic air force. But we have no definite information. And now let me return

once again to Soviet manpower. There are 20,000,000 Russians available for military service. These are trained men. Most of them have had war experience. Some have had 4 years of war. Soviet satellites could provide other millions. Remember that in Russia women do the work of men. Labor and life are cheap. Women could and would be forced to release more millions of men for war service. And don't forget that now that China is falling to Communists the Soviets can and will recruit millions upon millions from the Orient. Recruiting is a simple problem in China. All the Soviets need to do is to give the Chinese food, warm clothes, and shelter, and the recruiting problem is solved. There are more than 200,000,000 Russians and almost 500,000,000 Chinese and more than 60,000,000 satellites. Remember, too, that the Russians are more oriental than European. I have been told that one must go to China to understand the Russians. At any length the Soviets will have no difficulty in securing cooperation from the Chinese Communists. In World War II we could have destroyed Germany eventually on the ground because we outnumbered the Germans. Also we could have destroyed Japan in ground combat because we outnumbered the Japs. But we do not outnumber the Russians. Billions for arms for our European allies won't alter this cold fact. We and our allies are outnumbered by the hordes of Russians and Chinese Communists. Our military leaders know we cannot trade off life for life with these barbarians. We must not trade American boys—life for life—with these godless barbarians.

Next week I am going to tell you how we can win and save American lives.

Expansion Opportunities for Railroads

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 17 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD excerpts from an address delivered by me at Altoona, Pa., on August 12, in connection with the Labor and Industry Day program of Altoona's centennial anniversary observance.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

MYERS FORESEES NEW EXPANSION OPPORTUNITIES FOR RAILROADS

ALTOONA, PA., August 12.—United States Senator FRANCIS J. MYERS, of Pennsylvania, chairman of the Senate's Transportation Subcommittee, tonight forecast dramatic new expansion in the railroad industry if railroad management and labor continue modernizing their thinking.

Addressing a Labor and Industry Day program as part of Altoona's centennial anniversary observance, the Pennsylvania senior Senator told residents of this railroad and car-building center:

"The railroads have been written off as dead ducks and dinosaurs these many years, as obsolescent, as a dying industry. In the 1930's, when many of the roads were in bankruptcy, all the estimates of future earnings were pessimistic, new capitalizations were made very low.

"Now, with the railroads suffering a temporary decline reflecting the falling off in manufacturing and business generally, the crepe hangers are out again predicting a slow death for the railroads.

"Yet, those of us who have watched the railroad industry gear to war needs—and do an impossible job with worn-out and used-up equipment—and who have seen railroad management and railroad labor more and more joining together to modernize their thinking have no doubts that this industry cannot merely come back but go on to dramatic new expansion."

MYERS said the railroads must strive to achieve the highest degree of courtesy and comfort to the traveler and to demonstrate to business and shippers, even at the expense of immediate earnings, the fastest deliveries it can possibly make.

"Railroading is in fast company," he declared, "but it can do a mighty fast job, too, when the will is there to do it."

Praising the steady improvement in management-labor relations within the industry over the last few generations, MYERS said "railroad labor long ago came to recognize that the best way they can help themselves climb up the economic ladder is to help the railroads do a better job.

"Management on its side learned, too, that well-paid, secure, and happy employees were alert and interested employees, were conscious not merely of today's pay check, but of tomorrow's opportunities in a healthy industry.

"Although the railroads have been hit pretty hard over the past few months by the slowdown in industrial activities generally throughout the country, although the car shops—after 2 years of break-neck, capacity production—are now practically closed down all over the country, I have noticed in the railroad industry an unusual degree of planning ahead and looking ahead to peak operations.

"The equipment which was used up and worn out during the war still needs replacement. The climate is ripe for this work now. New, faster, better equipment means new, better, faster, more reliable railroad service. This is service the country is going to continue to need for a good many years to come.

"A town like yours, a town synonymous with railroading, is a certain barometer of our national economic well being. When business begins to slide off, you feel it long before other towns, for a business slowdown starts, you might say, with a slowdown in railroad business—that's how basic this industry is. The upturns are reflected here in the same way.

"Your future as a community lies not just with the railroads but with the economic expansion of all America, an expansion in production and in distribution of consumer goods, guaranteeing full employment for all of our people. The economic future of America looks mighty good. It's up to all of us to keep it looking that way."

Agricultural Workers

EXTENSION OF REMARKS

OF

HON. ANTHONY CAVALCANTE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. CAVALCANTE. Mr. Speaker, a short analysis of H. R. 5557 will show that the bill authorizes the Federal Security Administrator to supervise and coordinate the contracting of agricultural workers from foreign countries for temporary agricultural employment in the United States; to require satisfactory assurances from prospective employers regarding wage rates and other conditions of work; to allocate such workers and coordinate their employment among agricultural employers in the negotiation or renegotiation; and in the carrying out of agreements with foreign governments relating to the importation of such workers into the United States.

Clearly, Mr. Speaker, if this bill should pass, it will be a long, shameful step in the direction of peonage here in America. It will blast wide open the gates to involuntary servitude and bring back to this land the colonial period practice of indentured labor. It will be a degrading reflection upon American labor and upon the American farmer. It will stigmatize the American laborer as unworthy of decent hire, and brand the American farmer as a miserly, cheap, and feudal landowner who would debase the standard of American labor by the importation of indentured peons from foreign countries to do the agricultural work of our Nation. Further, the bill will stultify our estimation of the dignity of labor in the whole of the Western Hemisphere. It is a contravention of the letter and spirit of amendment 13 of our Constitution which reads that—

> Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

It is a bill that we should defeat cheerfully and with duteous satisfaction.

The resolution that makes H. R. 5557 an order of this House also provides that after the reading of the enacting clause, it shall be in order to move to strike out all after the enacting clause and insert the text of the bill H. R. 5828. This does not mitigate the unpalatability of the original bill. The amendatory text is more sinister than the original. The legislative draftsman who drew H. R. 5828 has displayed a keen sense of ingenuity. He has shifted the onus of the original text from the Federal Security Administrator and the Secretary of State to the Secretary of Agriculture, the Commissioner of Immigration and Naturalization, and the Attorney General. He has exempted the importation of such foreign workers from those excluding provisions of section 3 of the Immigration Act of 1917 which relate to contract laborers, the requirement of literacy, and the payment of passage by corporations, foreign governments, or others. He has exempted such foreign worker from the provisions of the Alien Registration Act of 1940. He has exempted the importation of such worker from the provisions of sections 5 and 6 of the Immigration Act of 1947. He has established the indentured status of such worker by subjecting him to rules and regulations prescribed by the Commissioner of Immigra-

tion and Naturalization and to carry upon his person an identification card, with his photograph and fingerprints. This H. R. 5828 embraces all the unsavory implications of the original text and also numerous other objectionable features which were not in the thought of the draftsman of the original text. Let us examine the features that are imported into H. R. 5828 by reference to other statutes.

On page 2, lines 3 to 9 and lines 21 to 23 H. R. 5828, the importation of these foreign workers is exempted from the applicable provisions of sections 2, 3, 5, and 6 of the Immigration Act of 1917. The pertinent exemptions are as follows:

SEC. 2. That there shall be levied, collected, and paid a tax of $8 for every alien, including alien seamen regularly admitted as provided in this act, entering the United States. * * *

SEC. 3. That the following classes of aliens shall be excluded from admission into the United States: All idiots, imbeciles, feebleminded persons, epileptics, insane persons; persons who have had one or more attacks of insanity at any time previously; * * * persons with chronic alcoholism; paupers; professional beggars; vagrants; persons afflicted with tuberculosis in any form or with a loathsome or dangerous contagious disease; * * * persons who have been convicted of or admit having committed a felony or other crime or misdemeanor involving moral turpitude; polygamists * * *; anarchists, or persons who believe in or advocate the overthrow by force or violence of the Government of the United States * * * or who advocate the assassination of public officials * * *; prostitutes, or persons coming into the United States for the purpose of prostitution * * *; persons hereinafter called contract laborers, who have been induced, assisted, encouraged, or solicited to migrate to this country by offers or promises of employment, whether such offers or promises are true or false, or in consequence of agreements, oral, written, or printed, express or implied, to perform labor in this country of any kind, skilled or unskilled; persons who have come in consequence of advertisements for laborers printed, published, or distributed in a foreign country; persons likely to become public charges; persons who have been deported under any of the provisions of this act. * * *

All aliens over 16 years of age, physically capable of reading, who cannot read the English language, or some other language, or dialect, including Hebrew or Yiddish * * *: *Provided* * * * That skilled labor, if otherwise admissable, may be imported if labor of like kind unemployed cannot be found in this country, and the question of the necessity of importing such skilled labor in any particular instance may be determined by the Secretary of Labor upon the application of any person interested, such application to be made before such importation, and such determination by the Secretary of Labor to be reached after a full hearing and an investigation into the facts of the case: *Provided further*, That the provision of this law applicable to contract labor shall not be held to exclude professional actors, artists, lecturers, singers, nurses, ministers of any religious denomination, professors for colleges or seminaries, persons belonging to any recognized learned profession, or persons employed as domestic servants. * * *

SEC. 5. That it shall be unlawful for any person, company, partnership, or corporation, in any manner whatsoever, to prepay the transportation or in any way to induce, assist, encourage, or solicit, or attempt to induce, assist, encourage, or solicit the importation or migration of any contract laborer or contract laborers into the United States unless such contract laborer or contract laborers are exempted under the fifth proviso of section 3 of this act. * * *

SEC. 6. That it shall be unlawful and be deemed a violation of section 5 of this act to induce, assist, encourage, or solicit or attempt to induce, assist, encourage, or solicit any alien to come into the United States by promise of employment through advertisements printed, published, or distributed in any foreign country, whether such promise is true or false.

On page 3, lines 1 to 5, the bill gives the term "agricultural work" an unbounded meaning and adds to that meaning the services or activities included within the provisions of section 3 (f) of the Fair Labor Standards Act of 1938 or section 1426 (h) of the Internal Revenue Code, as amended. These sections are respectively as follows:

SEC. 3. (f) * * * "Agriculture" includes farming in all its branches and among other things includes the cultivation and tillage of the soil, dairying, the production, cultivation, growing, and harvesting of any agricultural or horticultural commodities (including commodities defined as agricultural commodities in section 15 (g) of the Agricultural Marketing Act, as amended), the raising of livestock, bees, fur-bearing animals, or poultry, and any practices (including any forestry or lumbering operations) performed by a farmer or on a farm as an incident to or in conjunction with such farming operations, including preparation for market, delivery to storage or to market or to carriers for transportation to market.

SEC. 1426. (h) * * * The term "agricultural labor" includes all services performed—

(1) On a farm, in the employ of any person, in connection with cultivating the soil, or in connection with raising or harvesting any agricultural or horticultural commodity, including the raising, shearing, feeding, caring for, training, and management of livestock, bees, poultry, and fur-bearing animals, and wildlife.

(2) In the employ of the owner or tenant or other operator of a farm, in connection with the operation, management, conservation, improvement, or maintenance of such farm and its tools and equipment, or in salvaging timber or clearing land of brush and other debris left by a hurricane, if the major part of such service is performed on a farm.

(3) In connection with the production or harvesting of maple sirup or maple sugar or any commodity defined as an agricultural commodity in section 1141j (g) of title 12, as amended, or in connection with the raising or harvesting of mushrooms, or in connection with the hatching of poultry, or in connection with the ginning of cotton, or in connection with the operation or maintenance of ditches, canals, reservoirs, or waterways used exclusively for supplying and storing water for farming purposes.

(4) In handling, planting, drying, packing, packaging, processing, freezing, grading, storing, or delivering to storage or to market or to a carrier for transportation to market any agricultural or horticultural commodity; but only if such service is performed as an incident to ordinary farming operations or, in the case of fruits and vegetables, as an incident to the preparation of such fruits or vegetables for market. The provisions of this paragraph shall not be deemed to be applicable with respect to service performed in connection with commercial canning or commercial freezing or in connection with any agricultural or horticultural commodity after its delivery to a terminal market for distribution for consumption.

As used in this subsection, the term "farm" includes stock, dairy, poultry, fruit, fur-bearing animal, and truck farms, plantations, ranches, nurseries, ranges, greenhouses or other similar structures used primarily for the raising of agricultural or horticultural commodities and orchards.

(NOTE.—Sec. 15 (g) of the Agricultural Marketing Act mentioned above is as follows:)

"As used in this subchapter, the term 'agricultural commodity' includes, in addition to other agricultural commodities, crude gum (oleoresin) from a living tree, and the following products as processed by the original producer of the crude gum (oleoresin) from which derived: Gum spirits of turpentine, and gum rosin, as defined in section 92 of title 7."

Hence, Mr. Speaker, it is evident from a careful study of both H. R. 5557 and H. R. 5828, that if this House passes either of these bills, it will have struck a degrading blow to the American standard of living, by permitting the invasion of our American labor market by illiterates, peons, and the scum of foreign countries.

I am sure that neither our proud American farmer nor our dignified American labor desire this stultifying blow to our enviable American agricultural economy.

Revision of Antitrust Laws

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. CELLER. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD the First Progress Report of the Subcommittee on Study of Monopoly Power, which functions under the House Judiciary Committee. This report recapitulates the series of hearings at which the subcommittee has heard many of the most distinguished legal and economic experts in the field of antitrust law. I feel sure that the report will be of great interest to the legal profession, industrial and financial circles, to colleges and libraries throughout the Nation, and to the people of the United States, and I especially commend it to each and every Congressman and Senator so that he may be apprised of the importance of what is under way in the nature of antitrust law revision.

The report follows:

FIRST PROGRESS REPORT—SUMMARY OF HEARINGS ON STUDY OF MONOPOLY POWER, COMMITTEE ON THE JUDICIARY, HOUSE OF REPRESENTATIVES, EIGHTY-FIRST CONGRESS, FIRST SESSION, JULY 11 TO AUGUST 5, 1949

Subcommittee members: EMANUEL CELLER, New York, chairman; FRANCIS E. WALTER, Pennsylvania; JOSEPH R. BRYSON, South Carolina; J. FRANK WILSON, Texas; WINFIELD K.

DENTON, Indiana; EARL C. MICHENER, Michigan; KENNETH B. KEATING, New York; WILLIAM M. MCCULLOCH, Ohio.

C. Murray Bernhardt, general counsel.

David C. Coyle, consultant.

Containing summarization of statements and recommendations of the following witnesses: Walter Adams, assistant professor of economics, Michigan State College; Ellis Arnall, former Governor of Georgia and president of the Society of Independent Motion Picture Producers; Thurman Arnold, attorney at law, Washington, D. C.; Herbert A. Bergson, Assistant Attorney General in Charge of the Antitrust Division, Department of Justice; Adolph Berle, Jr., professor of corporation law, Columbia Law School, Columbia University, New York City, N. Y.; John M. Blair, Chief, Division of Economics, Bureau of Industrial Economics, Federal Trade Commission; Hon. Charles F. Brannan, Secretary of Agriculture; John D. Clark, member of Council of Economic Advisers; Hon. Tom C. Clark, the Attorney General of the United States; Morris L. Ernst, attorney at law, New York City, N. Y.; Walton H. Hamilton, attorney at law, Washington, D. C.; Milton Handler, attorney at law and professor of law, Columbia University, New York City, N. Y.; Edward R. Johnston, attorney at law, Chicago, Ill.; Everett N. Kassalow, associate director of research, Congress of Industrial Organizations; Leroy Lincoln, president, Metropolitan Life Insurance Co., New York City, N. Y.; Hon. Francis P. Matthews, Secretary, Department of the Navy; Hon. Joseph C. O'Mahoney, United States Senator from the State of Wyoming; Donald R. Richberg, attorney at law, Washington, D. C.; Lazar Teper, director of research, International Ladies' Garment Workers' Union, New York City, N. Y.; H. A. Toulmin, Jr., attorney at law, Dayton, Ohio.

SUMMARY OF TESTIMONY GIVEN AT HEARINGS

The first series of hearings, July 11 to August 5, 1949, was planned to explore the subject of monopoly power, and to indicate points at which changes in the antitrust laws might be advisable. The subcommittee plans to hold further hearings in October on the general subject and on proposals for specific bills that may be introduced early in 1950, followed by a reexamination of the antitrust laws as a whole during the second session of the Eighty-first Congress.

The conclusions hereinafter presented are those of the witnesses who testified and are not those of the members of the subcommittee.

The list of witnesses for the first series of hearings does not include representatives of all important viewpoints, since about half of those who were invited to appear were unavailable until a later date. The majority of those whose opinions are summarized below are lawyers or economists, in either private practice or Government service. The position of business, therefore, is shown here mainly as it appears to legal counsel on both sides in antitrust proceedings, except for the testimony of Mr. Lincoln, Mr. Berle, Dr. Teper, the latter speaking for the ladies' garment industry, and some of the Government officials with business backgrounds.

NEED FOR REEXAMINATION OF ANTITRUST LAWS

The witnesses were generally in agreement that the antitrust laws are more or less unsatisfactory in their present form. The most frequent reason given for dissatisfaction was that economic concentration has not been prevented or sufficiently slowed down. The majority of the witnesses expressed the opinion that business concentration is politically dangerous, leading inevitably to increasing Government control. As Attorney General Clark said on July 11, "There is too much recent and tragic world history not to impress upon us the dangers in failing to meet the monopoly problem. In Italy, in Germany, in Japan, the same disastrous cycle of events transpired." Similar statements were made by Senator O'Mahoney, Mr. Ernst, Secretary Matthews, Mr. Berle, Mr. Kassalow, Dr. Adams, Mr. Richberg, and Professor Handler, and, as in the TNEC hearings, there was no expression of doubt as to the necessity of effective antitrust laws for maintenance of the American type of free institutions.

Many of the witnesses also criticized the laws granting special exemptions from the antitrust laws, especially the Reed-Bulwinkle, Miller-Tydings, and Webb-Pomerene Acts, which will be further considered by the subcommittee. The necessity for strengthening section 7 of the Clayton Act was also stressed. A bill for this purpose has already been reported out by the Judiciary Committee (H. R. 2734).

Specific criticisms of the present state of the antitrust laws were voiced by most of the witnesses. Examples were given of conflict with other laws and other Government practices, especially in taxation and in procurement. The relation between patent law and antitrust was criticized, especially by Mr. Toulmin. Lawyers for private business were critical of uncertainty in the law and of what they regarded as excessive lawmaking by the courts. Others, however, were fearful that too much detail in legislation would open loopholes through which the general purpose of avoiding undue concentration might be frustrated.

Enforcement officials were dissatisfied with the fact that though the law against conspiracy among separate firms has been effective, the escape by merger of previously competing companies has been thereby encouraged. They also complained that failure of competition because of price leadership is not adequately met by existing law, and several witnesses suggested that a Government agency be directed to diagnose and prescribe treatment for industries where price competition fails to operate, or where concentration appears to require some type of intervention in the public interest.

DESCRIPTION OF MONOPOLY SITUATIONS

Various witnesses gave expert testimony or general information on the forms and methods of economic concentration. Dr. Blair described the continued merger movements and showed typical cases of horizontal, vertical, and conglomerate integration. Senator O'Mahoney, Mr. Ernst, Dr. Adams, and Professor Handler emphasized the dangers of concentration by merger. The Attorney General and Senator O'MAHONEY stressed also the effects of cartels.

The loss of price competition where three or four large concerns are able to administer the prices for an industry, or where one concern is the price leader, was described by several witnesses, including Attorney General Clark, Dr. John D. Clark, Dr. Blair, Dr. Adams, Mr. Kassalow, and Mr. Bergson.

Testimony was given relating to some of the methods by which economic controls are concentrated. Mr. Berle pointed out that most of the funds available for equity capital investment appear in the form of undistributed income of large corporations, which can then choose either to expand internally or to buy up smaller concerns. Messrs. Ernst, Berle, and Kassalow discussed the growth of life-insurance assets, and the fact that these funds, which originate in small savings, are almost inevitably loaned to business only in large units. Mr. Bergson pointed out some of the other means of control, such as monopoly of raw materials, illegal use of patents and trade-marks, or control over market outlets. He also noted the common excuse that concentration is required as a protection in dealing with other concentrated organizations, commenting: "I do not believe, however, that the cancerous growth of concentration can be effectively combated by developing other cancerous cultures."

Mr. Berle and Mr. Lincoln testified, from different points of view, as to the methods by which the management of a large corporation is chosen, and the practical difficulties of effective voting by stockholders or policyholders. The subcommittee also discussed with Mr. Lincoln the interlocking directorates involved in the Metropolitan Life Insurance Co. Mr. Lincoln said, "There is no secret about it. We brag about it," and denied the TNEC inference that interlocking is used for purposes of influence.

The relation between patent monopoly and illegal forms of concentration was mentioned by several witnesses. Mr. Toulmin complained of allowing attacks on the validity of patents as an incident in an antitrust suit. He also opposed compulsory licensing, and cited the loss of value when enemy patents were freely offered at $15 by the Alien Property Custodian. Dr. Adams recommended compulsory licensing of patents abused or suppressed by large concerns. The Attorney General testified that patent abuses such as tie-in contracts, illegal price-fixing, and so forth, have now been largely eliminated. Professor Handler agreed, but suggested legislation to forbid a patent owner setting the price of goods manufactured by others under his license. The subject of patents will be further investigated by the subcommittee.

The relation of monopoly to agriculture was discussed by Secretary Brannan. Mr. Brannan listed the various laws under which the Department regulates certain indutries affecting farm income. He cited the Rural Electrification Administration as an example of Government intervention where a monopoly refused adequate service. Mr. Brannan suggested investigation of marketing charges, open-price quotations, stability of pulpwood prices, and the fertilizer industry.

Labor monopoly was discussed by several of the witnesses. The Attorney General stated that the present law brings a labor union under antitrust law when it conspires with employers to restrain trade. Dr. John D. Clark noted that the restriction of coal output without the express agreement of the operators was exempt from antitrust action, and the practice might be extended to other industries if found advantageous by the unions. Mr. Richberg discussed at length the original intention of the union exemption in the Clayton Act, and suggested that Congress should legislate to distinguish clearly between the allowable effects of legitimate union activity and efforts to use union power for monopoly profits not sanctioned by the public. He opposed industry-wide contracts and cited in contrast the company contracts of the railway unions. Mr. Arnold also discussed labor monopoly practices, referring particularly to the building industry. Professor Handler stated that in most cases of union monopoly practices collusion can be proved, and that the antitrust laws must not be carelessly used to control the legitimate activities of unions. Mr. Kassalow referred to the subject of labor monopoly as a red herring.

Several of the witnesses described specific examples of the difficulties that arise in maintaining an antitrust policy.

Dr. Teper gave details of the squeeze on clothing manufacturers because of concentration in the textile industry on one hand, and among the buyers and distributors of women's clothing on the other. Secretary Brannan stated that business concentration both in buying farm products and in selling to farmers has forced the concentration of certain features of agriculture, under Government auspices and regulation.

Governor Arnall testified that practically unregulated railroad rate-making placed the

South at a serious disadvantage, and that efforts to obtain a revision of rates had led only to the Reed-Bulwinkle Act, exempting the railroads from antitrust action. Governor Arnall also gave a description of restraints in the moving-picture industry, which he stated had been only partially relieved by recent court decisions. The Governor pointed out that the Webb-Pomerene Act, originally passed to enable American exporters to fix prices for commodities when sold abroad and thereby aid small business, has lent itself "not only as a shield against foreign competitors, but as a sword against domestic competitors here at home."

Messrs. Ernst, Berle, and Arnold referred to conflicts between the tax laws and the antitrust laws, in particular the effect of taxes in forcing small concerns to merge with large ones, or in penalizing any voluntary splitting up of large combines. The undistributed profits tax, with a $25,000 exemption, was favored by Professor Adams. Mr. Ernst noted the fact that postage rates favor catalogs of large firms over small.

Government procurement policies were criticized by several witnesses, especially by Messrs. Ernst and Berle. Secretary Matthews, speaking for the National Military Establishment, stated that an effort is being made to increase the facilities for doing business with small concerns. Professor Adams also criticized the policies of the War Assets Administration in the disposal of plants, with particular reference to steel.

Mr. Ernst cited several examples of incidental restrictions in one industry by the policies of another. He referred to practices of telephone companies placing small radio stations at a disadvantage, to advertising rates favoring large advertisers, and especially to the concentration of investing power in the large insurance companies.

RECOMMENDATIONS BY WITNESSES

The objectives of antitrust laws are commonly assumed to be, first, to protect consumers against high monopoly prices; and second, to protect independent businessmen against ruin or oppression by concentrated economic powers. Additional objectives were suggested by some of the witnesses. Dr. John D. Clark pointed out the purpose of Congress at the time of the passage of the Sherman Act also included as an objective the promotion of increased production through the maintenance of competition. Dr. Hamilton emphasized that concentration tends to render the management of an industry secure and to give it both the power and the inclination to exclude new men with progressive ideas. He cited Henry Ford as an example of a man whom the bankers would have obstructed had they been able. Mr. Arnold suggested that modern conditions call for more stress on decentralization of industry and for keeping absentee ownership of local enterprises to a minimum in order to preserve important social and political values.

There was also implied in the testimony of most of the witnesses the thought that free political institutions are now so much less secure than in 1890, that maintenance of a competitive and diversified economic system is imperative as one of the mainstays of political freedom. The weight of opinion seemed to place the safeguarding of political freedom in the first position, followed by freedom for technical progress and production growth, with the detailed protection of competing business operators and consumers as immediate means or methods for the underpinning of free political institutions and prosperity.

Further hearings may throw light on the relative importance of the objectives of the peculiarly American institution of antitrust legislation. The subcommittee hopes for wide public discussion of this feature of its work, since the formulation of the law and the expression of the intent of Congress as a guide to interpretation must be based as firmly as possible upon the actual will of the American people and their intentions as to their future course of development.

Specific suggestions for changes in the law dealt with various means by which its major objectives might be better attained, or with means for attaining the fundamental purposes of the law with a minimum of strain on business institutions.

The Attorney General pointed out that antitrust action is aimed at holding open the door for new competitors to enter any industry. Professor Adams suggested that separating the moving-picture companies from their exhibition outlets, for example, would promote the entry of independent producers, and that action against any concentration that has led to price leadership will encourage new enterprise. He advocated Government action to make credit more easily available to small concerns, a revision of tax laws favoring small enterprises, Government research in fields useful to independent business, and action to prevent the preemption of basic materials needed by small concerns. Testimony at these hearings, however, was generally directed more toward the control of concentration than toward specific actions to aid new or small enterprises.

Professor Adams suggested that in making laws to foster competition it is necessary to be clear as to the kind of competition to be fostered. Perfect competition is not possible or necessary. The definition should be in terms of the basic objectives of the law; protection of consumers, prevention of price or production controls based on size, protection of new technology from artificial frustration, and maintenance of legal and economic freedom of entry for new enterprise.

The treatment of size as such was touched upon by practically every witness. The Attorney General and Mr. Bergson both stated that the Department ha not attacked bigness as such, though it has often attacked illegal behavior based on concentrated power. Dr. Clark called attention to the connection of bigness with price leadership, which might be avoided where dispersal of industry is practicable. Mr. Ernst expressed a general opposition to bigness because of its leading to demands for Government control or nationalization, with consequent weakening of free political institutions.

Mr. Berle discussed the question of size at some length and suggested the principle that there is a top limit "beyond which mere size does become dangerous in and of itself." Dr. Teper "would not say that bigness per se is bad," but it becomes bad, for instance, when small manufacturers have to deal with unduly concentrated suppliers and distributors. Dr. Adams quoted Justice Douglas as saying that size which gives power to a handful of men is contrary to the philosophy of the Sherman Act and that "the fac that they are not vicious men * * * is irrelevant." Mr. Arnold suggested that if some one business service requires large size the business should be confined to that service alone and not permitted to control other features that can operate efficiently on a local scale. Mr. Johnston said that he had not observed any oppressive use of size, but "there might be a point where we should step in and place limitations upon * * * further growth." Professor Handler placed in the record his TNEC proposals for limiting new acquisitions by companies in accordance with their size.

Mr. Ernst suggested that it is time for more information on the relation of size to efficiency. Mr. Richberg stated that in his experience as enterprises grow they often lose efficiency, and that if smaller concerns are protected from oppression by economic power they can take business away from larger ones. Mr. Toulmin noted that "some of the greatest prosperity of the United States has come from the dissolution of large organizations." Dr. Blair quoted with approval the report of the Council of Economic Advisers of January 1949 that in many fields size appears to have passed beyond the point of optimum efficiency. Professor Adams pointed out that the most efficient size usually applies to the plant, and productive efficiency does not necessarily justify ownership of several plants by one mammoth concern. Mr. Bergson decried the common charge that dissolution of large concerns will threaten production, and quoted the recent report on German decartelization as showing increases in production when concerns were split up.

The chairman remarked on August 3 that "there seems to be a tendency on the part of most witnesses who appear before us to get a little jittery when they talk about size, as though they were worshiping size as a sort of sacred cow and that you cannot criticize it. * * * I am willing to criticize size." The testimony, when reviewed as a whole, however, reveals a considerable amount of disrespect for size as such, a matter of vital importance in the consideration of measures recommended for restraining concentration and monopoly power.

Acts relaxing the antitrust laws were condemned by most of the witnesses, though there was little testimony as to detailed operation of the acts. The Miller-Tydings Act was opposed by Dr. Clark, Governor Arnall, Mr. Bergson, Mr. Toulmin, and Professor Adams, but was supported by Mr. Ernst.

The Reed-Bulwinkle Act was condemned by the Attorney General and Mr. Bergson. Mr. Toulmin spoke favorably of it as a correction of a situation where enforcement of the antitrust laws went too far. Governor Arnall gave a detailed description of the raolroad rate-making process and its effect on the South. in explaining his opposition to the act.

In connection with the Webb-Pomerene Act, Governor Arnall described an attempt, by an association formed under the act, to monopolize bookings of American films in Britain. Mr. Bergson stated that the act had been involved in several cases where domestic antitrust violations were prosecuted. Dr. Clark suggested reexamination of the Webb-Pomerene and Reed-Bulwinkle Acts.

The testimony showed little dissatisfaction with the Robinson-Patman Act, although Dr. Clark suggested that the act be clarified, or with the Clayton Act, except for the loophole in section 7, which while prohibiting certain mergers by purchase of stock, permits action to the same effect by purchase of assets.

The methods now used by the Department of Justice for breaking up large concerns were discussed by the Attorney General and Mr. Bergson. Mr. Bergson explained that divorcement, divestiture, or dissolution are available as remedies under the present law, and stated that several cases, seeking these remedies, are now in the courts. Mr. Bergson regards the existing law as adequate, except in situations where monopoly power has not yet been fully achieved. The Attorney General expressed dissatisfaction with the amount of relief afforded by some of the court decrees.

Professor Adams suggested that industries where administered prices are found should be treated case by case, usually by breaking up the leading firms into smaller units. In moving pictures, independence of the theaters might suffice to bring new competition among producers. He suggested vigorous

dissolution proceedings in new industries where vested interests might be less well entrenched, and quoted Dr. Corwin Edwards as favoring new legislation enlarging the dissolution powers of the Government. Mr. Toulmin was emphatic in recommending divorce of distribution from manufacturing, divorce of manufacturing from sources of materials, and divorce of nonanalogous companies. Mr. Toulmin objected particularly to a large company waiting until small companies have developed a new product, and then entering the market with dominant economic power.

There was some testimony on possible improvements of the methods of law enforcement. Mr. Bergson did not believe any new legislation would be desirable for expediting the trial of antitrust cases. He spoke of various methods now being used to streamline the legal processes by stipulation with defense counsel. Mr. CELLER announced that Chief Justice Vinson has been asked to request the Judicial Conference of the United States to consider time-saving procedures in antitrust cases.

Senator O'MAHONEY suggested that antitrust enforcement would be simplified by Federal charters for interstate corporations on terms prescribed by the Congress, and specifying many of the limitations on concentrated power that otherwise must be imposed by regulatory commissions or through antitrust procedure.

The choice of criminal or civil process was discussed by the Attorney General and Mr. Bergson. The Attorney General stated that criminal action is most often used where there is intentional price-fixing, but that in attacking business methods that some lawyers have deemed to be legal, civil process is considered more appropriate. Mr. Bergson expressed a preference for civil action in borderline or uncertain cases, and also pointed out that actual reforms of business practice are best obtained in civil proceedings.

Penalties for criminal violation were generally held to be too small. The usual suggestion was to increase the maximum fine on each count from $5,000 to $50,000, though Dr. Hamilton would set no upper limit. Mandatory jail sentences were considered impracticable by many witnesses.

Several of the witnesses complained about the obstacles to collection of triple damages for a small concern injured by an antitrust violator. Dr. Hamilton discussed the triple-damage problem at length, and recommended that the courts be directed to treat these as public cases, and to frame the decree so as adequately to protect the public interest. Mr. Bergson did not agree with suggestions that damages might be assessed at less than treble at the courts' discretion. Professor Handler suggested that when the court has determined that the antitrust laws have been violated, it should appoint a special master to assess the damages of all injured parties without requiring further proof of the violation itself. The Attorney General, Mr. Bergson, and Dr. Hamilton suggested the advisability of legislation authorizing the Federal Government to sue for triple damages when injured by monopoly prices in its own purchase of materials.

FEDERAL CONTROL OF CONCENTRATION

Several witnesses recommended that some Federal agency be charged with responsibility for watching the development of concentration and either advising or taking action before conditions had extended so far as to be excessively difficult to correct.

Mr. Arnold suggested a continuing joint committee of the Congress, which would study the concentration problem and the antitrust laws, and would deal with cases where governmental policies or laws are inadequate or in conflict. Mr. Ernst would direct the Secretary of Commerce to act as advocate for the competitive system, with authority to call the attention of other agencies, the Congress, and the public to any situation that endangers the system.

Mr. Berle suggested that the Federal Trade Commission, or other commission with jurisdiction, be directed to examine any industry in which competition fails to operate, and impose public-utility responsibility upon it, with the alternative of allowing it to split up into enterprises of a size able to compete.

Professor Adams favored a case-by-case treatment of concentrated industries, probably by the Federal Trade Commission, and suggested that over-all policy be defined by an amendment to the Sherman Act. Mr. Richberg recommended that some agency have authority in cases of administered prices, to forbid excessive prices, with an avenue of escape for business that voluntarily limited its power to a level where it could operate free of public regulation. Mr. Johnston, while deploring the necessity of more Government controls, was of the opinion that undesirable combinations must be handled case by case rather than by general legislation. He thought that a commission with power to accomplish the necessary splitting up would be the most practical way to avoid an excessive amount of regulation of the public-utility type.

CONCLUSIONS

Those who testified in this first series of hearings were generally in agreement that the antitrust laws are in need of reexamination. The motive of protecting not only free enterprise but free political institutions was stressed by one witness after another as peculiarly important in the present disturbed state of the world. The study of monopoly power, proposed by the subcommittee, was again and again turned by the witnesses into a study of concentration of power, whether used for purposes now definitely illegal, or existing merely as an obstacle to new enterprice or free experimentation.

The chairman, in issuing this summary of the most striking features of the testimony, expressed the hope that public consideration and comment, together with the results of further hearings, will serve to clarify the American policy on these vital questions.

Minimum-Wage Legislation

EXTENSION OF REMARKS
OF
HON. WINGATE H. LUCAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. LUCAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dallas Morning News of August 14, 1949:

MR. LUCAS WRITES GOOD DEFINITION

You may question the advisability of minimum-wage legislation since it is a complicated subject economically, not a principle that can be provided arbitrarily by statute. You are hardly likely to question the soundness of the definition of interstate commerce which Representative WINGATE LUCAS wrote into his version of the minimum-wage bill, passed by the lower House Thursday.

Wage-and-hour administrations, the old NRA ahead of it, the courts, including the highest, have played ducks and drakes with any normal reading of congressional authority in regard to the regulation of interstate commerce. They are all agreed that under the Constitution, Congress cannot meddle with business that is strictly intrastate. But we have the absurdity of holding that a man washing windowpanes on a building that houses interstate business can be regarded as engaged in interstate business himself. Under the elasticity lent to the idea by the nimble thinking of Federal boards and bureaus supported by some courts there is practically no enterprise that is not interstate.

In the new minimum-wage law WINGATE LUCAS has sought to apply reason to the subject and provide a test. Is the act which is being performed essential to interstate commerce? The standard is a fair one. There is really no question about trade which actually deals across State lines, but there are not many other enterprises which can be fairly listed as interstate. Mr. LUCAS has provided a common-sense definition that, if fairly and accurately followed by administrative agencies and the courts, can dispel all doubt.

But will it? We will still have to rely on the good faith of the interpretation. Good faith is capable of a great amount of stretching where special pleading is concerned.

People Always Remember the Bad Ones and Never Tell You About the Good Ones

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, August 17 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, recently the Scranton Times carried a feature story on the application of Scranton Weather Observer Ralph C. West for retirement after nearly 42 years of service with the United States Weather Bureau. I found the article very interesting, partly because of its reference to an interesting career, and partly because, in my opinion, Ralph C. West is so typical of thousands of career Government employees who have spent lifetimes in the service of the public and of the Nation, who go about their jobs quietly, reliably, conscientiously, and generally with a passion for anonymity. When they retire, or when they die, they receive a kind word in their local newspapers, but while they are working at their jobs, and doing good jobs, they are taken for granted.

These are the men and women who by and large make up the career civil service. Depending upon their jobs and the cities in which they work, they are our neighbors, frequently our friends, usually trusted and respected citizens of the community. When we hear violent attacks made in the Congress or elsewhere about the lazy bureaucrats and the Government "pay-rollers," or when we make such attacks ourselves, we never associate these insults with individuals like our mailman, or the weather forecaster, or the FBI employees, or the flood-control engineer, or the mine inspectors, or the ICC railroad safety expert, or the aviation specialists who keep our airways safe, or the public health officers, or any

of those people—sincere, conscientious, patriotic citizens who do their jobs day after day, and do them so well, we seldom think twice about them.

Weather Observer Ralph C. West, at Scranton, looking back over 42 years of service with the Weather Bureau, had this comment to make on his job experience as a technician for Uncle Sam:

"People always remember the bad ones," he said, referring to the 7,000 forecasts he estimates he has made during his career as a weather observer, "and never tell you about the good ones."

I think that sentence sums up pretty much the experience of most of our career Federal civil servants. An occasional bad one who might be turned up gets all the attention in the public eye. The good ones are generally ignored, and seldom spoken of.

That being the case, I think this little article on Mr. West might well serve to remind us that there are many Ralph Wests in the service who are day after day doing their jobs quietly and well. I ask unanimous consent that this article be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEST, 66, TO QUIT AFTER 42 YEARS OF SERVICE; PREDICTIONS IN PAST FEW YEARS 80 PERCENT ACCURATE

Whether Observer Ralph C. West, veteran of almost 42 years service with the United States Weather Bureau, has applied for retirement.

Meteorologist at the Scranton Weather Bureau in the Federal Building since June 3, 1930, Mr. West said his decision to retire is based on his age, 66, and the fact that "I'm not getting any younger and 42 years on the same job should be enough for any man."

One of the pioneer observers of the United States Weather Bureau service—he is one of the oldest from the point of continuous service—Mr. West started in the bureau as assistant observer at Charlotte, N. C., June 17, 1907. Since, he has been stationed at St. Louis, Mo., Birmingham, Ala., Richmond and Lynchburg, Va., Helena, Mont., and Alpena and Lake Huron, Mich.

Since his arrival in Scranton—at that time the station was in the Connell Building—he's made by his own estimation almost 7,000 forecasts. "Some good and some bad," as he himself puts it.

Rounding out his long service, the white-haired observer still refuses to become excited one way or the other over comments on his forecasts, good, bad, or indifferent.

"People always remember the bad ones and never tell you about the good ones," he commented.

But from his assistant, Peter Pappas, came the information that a recently completed survey of forecasts over the past several years disclosed a record of 80 percent accuracy.

In weather bureau circles that's just about the equivalent of 100 percent.

As to the science of weather forecasting, Mr. West observed that while there's quite a difference in the science today as compared to 1907, no man—or machine—can accurately forecast the weather for more than 24 hours in advance.

Big difference in present day methods as compared to pre-World War I days, is the vast network of stations spread throughout the United States and Canada. Today, unlike his early days, weather stations dot the map with offices in every principal city and large airports to keep regional stations abreast of the latest weather conditions.

Yet to Mr. West—and it holds for the entire service—the time honored barometer is still ace high for the fine art of compiling a forecast.

Recalling that during his first years in the weather service two daily reports were received at local stations, and those from widely scattered stations around the Nation, today four daily reports are flashed into Scranton via teleprinter, Mr. West said that the element of chance has been greatly reduced.

"Of course forecasting, like everything else, is far from perfect," he smiled. "And I guess we'll never see the day we can predict tomorrow's weather with 100 percent certainty."

An old hand at listening to Monday morning quarterbacks, wise cracks about the weather forecasts seldom bother Mr. West.

"If they did I'd have chucked the whole thing a long time ago," he remarked with a smile.

SUMMER SEASON TOUGHEST

But he has had his painful moments when Mother Nature stepped in and completely double-crossed his prediction. In this respect the summer season is the toughest of them all.

Admitting it is impossible to estimate the number of telephone calls received at the station—both good and bad—Mr. West does remember one. In fact, he said, he'll never quite forget it.

"That call came at midnight and as the caller probably hoped, awoke me out of a sound sleep," he said. "It seems I had forecast fair weather and an unexpected thunderstorm came up to spoil the prediction.

"The call was apparently from the hostess of a garden party whose guests undoubtedly experienced a good drenching. Anyway the conversation was short and very much to the point.

"I can still hear a very indignant feminine voice dripping sarcasm with: 'Say, are you paid to give out false information?'"

What started Mr. West in the business of weather forecasting?

Two reasons.

"I always had a desire to get into the game," he said. "And I guess the second reason was because the monthly pay back in 1907 was $60. That doesn't sound like much these days—and it isn't—but it was a lot of pay back at that time.

"At any rate it was much better than the $36 a month I was getting working in a paper box manufacturing plant and I've never regretted joining the service."

As to future plans. Right now, he said, he just plans to take it easy for a while.

At the same time he admitted that when the day arrives—his successor has not yet been appointed—he hands out his final weather forecast, it won't mean the Scranton Weather Bureau will have seen the last of him.

"I guess I can safely predict," he commented with a smile, "I'll be dropping in to see how the boys are doing."

Russia Will Snatch Western America

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 17, 1949

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks I submit the following editorial from A-Day-Ahead entitled "Russia Will Snatch Western America," which points out the vulnerability of Alaska and the Western States from any enemy attack through Alaska:

RUSSIA WILL SNATCH WESTERN AMERICA

Let us stop worrying about western Europe and give thought to the Russian menace to western America. Strangely the speed-up in communication and transportation has made Washington seem to our statesmen nearer to Europe and farther from our own prairies. They seem to believe that the United States lies between the Mississippi and the Elbe. If they continue in this delusion Russia will lie between the Elbe and the Mississippi.

We have surrendered to Russia our great defense in the Pacific in letting the Communists take China. Now Russia is safe to fly air transports filled with trained troops and modern war material under escort of bat-speed jet fighters, down from behind the Arctic iron curtain, over Alaska and the Yukon, and down behind the Rockies. The Russian force would most likely land and base itself in Reno, Nev., where, protected by the surrounding High Sierras, it could defy ouster by our forces. It would then establish a Red line, north and south from Spokane to Yuma—and a west-east line from Reno to Cheyenne. Then they would operate a mighty pincers on the lands between, beating them down with the war hammer and the bloody sickle.

Russia is trapping us by its threat to western Europe. Russia wants American troops and equipment in Europe where they could be rendered useless by the hordes of Communists in the North Atlantic Pact countries and where they would be of no service in America.

Behind the Rockies we are vulnerable. Small far-flung communities, not integrated, could offer little resistance to mass power. Russia knows we would not use the atom bomb in our own land. The Government has shown up Russian propagandists and secret pilferers but nothing has been revealed about Russian saboteurs. They could keep the East busy while Russia is taking over the West, making slaves of our proud westerners and dragging their women screaming to Russian transports, destined for public defilement in Moscow. Send arms to western Europe but send arms and troops to western America. Save America first.

Business Is Good

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 17, 1949

Mr. TRIMBLE. Mr. Speaker, I am honored to represent the district in Arkansas which includes most of the Ozark area, which is noted for its fruit, poultry, dairy farming, small business, canning industries, and its thrift. They are an independent group. They do their own thinking. Nobody tells them how to vote. Few fuss at them after they have registered their judgment at the polls.

Because it is an example of the common sense of our people, I would like to place in the RECORD, as part of my remarks, the following editorial by my

friend, Ellis Stafford, of the Springdale News, published at Springdale, Ark., on August 11, 1949:

RURAL RAMBLINGS

(By Ellis Stafford)

I'm getting sick and tired of these birds who hang their heads, tighten up their belts, and mournfully wail that we are headed into a depression.

If you would believe them, the oncoming catastrophe would make 1929 look like a school teachers' picnic. These Weeping Willies gaze into their clouded crystal ball and see bread lines and soup kitchens and people dropping like flies on the sidewalks from starvation.

Some of them are self-appointed prophets of the Bible. Others claim possession of a mysterious formula which foresees business trends. A lot of them simply thrive on a steady diet of bad news.

As far as I am concerned, the whole kit and kaboodle can go jump into the nearest very deep lake.

Why not take a sensible look at the business situation?

Why not come to town and ask your merchants about their sales?

It is a sign of intelligence to be able to plan ahead. No one will argue that point. The squirrel is a pretty smart fellow for laying in a store of hickory nuts while hickory nuts are still to be had.

But it seems to us that persons who can find nothing but bad news and people who actually get a bang out of spreading the same bad news hasten any possible recession more than a genuine market break.

They start a vicious circle of rumors, doubts, and worries that accomplishes nothing whatsoever. They undermine the confidence of farmers and businessmen who heretofore had the idea that things were going along satisfactorily.

Actually, this recession phobia is more wind and wailing than facts and figures. Business is good. Nobody's getting rich like they did when war contracts fattened the files. But nobody's going broke, and nobody's starving to death.

Business is good.

Extravagance in Government—How Can It Be Financed?—That Is the Question

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, big government breeds a big bureaucracy which in turn breeds extravagance in every department. This, obviously, means that taxpayers' dollars are being wasted. The question is now presented, how can the people of this country finance governmental extravagance? Or to put the question another way, how long will the taxpayers continue to pay for waste in Government?

Mr. Speaker, we are proud of an economic system that has provided the people of the United States with the highest standard of living in the world. Yet we admit it is not perfect. This system is based on incentive to produce the goods and services which people everywhere want. It has not only furnished this high standard to us, but it has been providing food, fiber, and money for other people all over the world. It has been so since 1914 when American money financed World War I. Incentive to produce is the explosive element where men are free and can keep the fruits of their labor aside from a mere existence.

Two wars, Mr. Speaker, have destroyed a free economy in Europe and most of the world. In 1947 it was my privilege to have visited every country in Europe except three. It was an extended trip and everywhere it was evident that the people had lost their economic liberty and with it political freedom. There was no real incentive to work; taxes were oppressive. Governments had taken over; people were regimented; governments planned their lives. Why should they work beyond a point that provided a mere existence standard? They were concerned only with sufficient work to provide a living only, but not to produce more wealth.

We are on the road to confiscation of private property in this country, Mr. Speaker. When corporations and individuals are taxed so high that more than 25 percent of their incomes are taken and used for increased governmental spending. Government bureaucrats are extravagant because they are not called upon to pay the cost. This practice must stop or Government will be compelled to seize private property for its own use and make vassals of the people. It will come in the form of socialism or fascism, both enemies of a free people. Both are forms of totalitarianism and must be avoided in this country.

Mr. Speaker, many speeches have been made in this House condemning the executive department and the bureaucrats for wasteful conduct. Is it a fair criticism? In most instances it is the Congress that delegates its authority and appropriates the money. In all honesty, Mr. Speaker, we have no right to pass the buck. One writer correctly says that every legal limitation to political profligacy has been removed by the Congress. It all started with the devaluation of gold; and during the war the Government was empowered to force its paper into the banks and no one dare predict what might happen to the banking system of this country if the public suddenly lost confidence in them.

At this very moment, Mr. Speaker, we are hell-bent on a deficit financing program. This country was in the red almost $2,000,000,000 on June 30 this year. At the same time next year the experts say we shall incur an operating deficit of possibly $8,000,000,000. President Truman has said that deficit financing is absolutely necessary. Many people do not understand the meaning of deficit financing. It has been defined as a weasel expression to clothe depravity with the cloak of respectability. The time has come to speak very frankly. The people should clearly understand that deficit financing means the spending of money that the Government does not have. If you wrote a check to pay a debt without having money in the bank, you would be arrested, for forgery or obtaining money under false pretenses. Of course, the Government cannot be arrested but it actually piles up the public debt and thereby calls for more and more tax money. Someday it may not be available.

Cannot the most prosperous Nation civilization has ever known pay its way, day by day? What is it that has driven the annual cost of the Federal Government alone from about $4,000,000,000 a year two decades ago to more than $40,000,000,000 now? War and increased spending. The strange theory is evolved that, since everybody has work at high wages in time of war, it must be continued in time of peace. We are all for this if our economic system can stand it. And this can only be achieved through the production of goods. War is supreme waste, but its effects can be approximated by deliberate policy—just throw all excess production into the oceans and then use Government credit to augment that production so that here will be more to throw away. Or we could put premiums on unemployment, but who wants that? For sweat of the brow substitute the leisure of subsidized purchasing-power.

Mr. Speaker, this Government has become so big that nobody can properly visualize it, and this includes Members of Congress. Secrecy is the order of the day in committees of the Congress and in every executive department. This practice is the curse of democracy and a very real threat to liberty and freedom. Huge spending programs are submitted to the Congress for public welfare; for national defense; for the development of atomic energy and we are told to go along in faith and to ask no questions, because, say the Administration, it would not be in the public interest to divulge the details or operations of the programs. This is an abuse, Mr. Speaker, and the House should devote serious study to this situation and correct it. There must be an end to this hush-hush business for it undermines public confidence.

"The people never give up their liberties but under some illusion," said Edmund Burke, but certainly they ought now to be under no further illusion in this country as to the necessity for applying the brakes. They must realize that what is softly called deficit financing is in fact a slow approach to communism. To fight communism by bankrupting material and spiritual forces, that alone can successfully combat it is a fallacious method.

America is a commercial empire. The solvency of its institutions and the sanctity of its commitments are the bulwarks on which civilization depends. Its productivity is the supreme defense against communism and the riot of disillusioned populations. Above all, therefore, sobriety in finance is required and not even Stalin himself is so grave a menace to human well-being as reckless public spending.

The present business recession is a protest against the high cost of Government. Throughout the nonpolitical

economy natural readjustments are in process, as responsible managements strive to bring down costs and maintain markets through the age-tried device of fair prices. There must be similar good management in the Government or there will be disaster.

Address of Rt. Hon. Winston Churchill

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 17, 1949

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks I include the following address by Winston Churchill:

[From Parliamentary debates, House of Commons, July 20, 1949]

Mr. CHURCHILL. Another matter to which the Foreign Secretary referred, about which I do not by any means feel so confident in my conscience as to the judgment of my actions, is the Morgenthau agreement at the second conference—the document published by Mr. Morgenthau of the conference.

There is an agreement; it was initialed by President Roosevelt and by me, and it undoubtedly proposed treatment of Germany which was a harsh treatment, in respect of largely limiting her to an agricultural country. But that was not a decision taken over the heads of the Cabinet. It was not one that ever reached the Cabinet. It never reached the Cabinet because it was only ad referendum; it was disapproved by the State Department on the one hand and by my right honorable friend and the Foreign Office Committee on the other, and it just dropped on one side. I must say that it never required a Cabinet negative; it never had any validity of any sort or kind.

Nevertheless, I must say that I do not agree with this paper, for which I none the less bear a responsibility. I do not agree with it, but I can only say that when fighting for life in a fierce struggle with an enemy I feel quite differently toward him than when the enemy is beaten to the ground and is suing for mercy. Anyhow, if the document is ever brought up to me I shall certainly say, "I do not agree with that, and I am sorry that I put my initials to it." I cannot do more than that. Of course, many things happen with great rapidity, but to say it was done over the heads of the Cabinet, or anything like that, is quite untrue, and the Cabinet never agreed to it for a moment.

These two matters of great importance were brought in in order to justify the right honorable gentleman in pursuing the policy of dismantling, and some incidents connected with the trial of the German generals. I do not think the right honorable gentleman need have brought such artillery back from the past to fire at me on such matters. I do not put the case with hostility against him. I consider that in the air lift and the treatment of the Berlin difficulty the Government and the Foreign Office—no one more than he—showed the very greatest determination, skill, good judgment, and tenacity, and their exertions over a long period were crowned by unmistakable success which has been of the greatest advantage to Europe, and very likely played a part in the closer drawing together of Britain and the United States, which has found its manifestation in the Atlantic Pact.

I was very much struck at the way in which all Germany watched the air lift, and how all Germany saw the British and American planes flying to carry food to 2,500,000 Germans whom the Soviet Government were trying to starve. I thought that was worth all the speeches that could have been made by all the peace leaders of Europe to turn the eyes of Germany to where her true destiny lies, namely, in peaceful and honorable association with the western democracies and with the future into which they hope to lead the world under the auspices of the United Nations organization. I indeed thought that was a very great advantage.

I must say that I personally was instinctively disappointed and chilled when I saw the dismantling policy, which has draggled and straggled on for 4 years, being a cause of upsetting this strong drift and tide of German sentiment which may be of very great value in the future. I could not help feeling that it was untoward. Of course, these things must in some cases be done. They should have been done, or could have been done, 2 years ago. That would have been all right.

But now, 4 years after, when Europe is in the midst of all this feeling of hardship and pressure, and of hopes of coming out of it again, to go on tearing down these buildings and solemnly proceeding with methodical routine on some agreement which now no longer has any validity or application to current affairs was, I thought, an error: Not an error of major criminality, but a bad touch. I should have hoped that it would have been possible to have let that go. I should have thought it should have been brought to an end. I have said so several times in the last months, and I do not think it is a wrong thing for us to put that view.

Nor do I think that because I was present and supported President Roosevelt when he used the phrase "unconditional surrender" I am debarred from saying that at any time there should be a little give and take, and a different touch and handling in a sensitive manner of our relations with the German people. I am sure that the munitions which could be made by these factories which still remain to be dismantled would never do half the harm to the cause of peace, or to any future victory of the Allies against aggression, as is done by the great setting back and discouragement, out of all proportion, of the German movement toward western civilization and western ideas. I will not put it more than that.

William George Bruce

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 17, 1949

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial from the Milwaukee Journal in tribute to the late Hon. William George Bruce. Mr. Bruce, long a beloved leader in civic, religious, political, and educational life of the city of Milwaukee, passed away at the age of 93 years on August 13, 1949.

WILLIAM GEORGE BRUCE

William George Bruce was one of Milwaukee's builders.

His name will undoubtedly appear in the history of the city as often as that of any man.

Mr. Bruce was one of the first Milwaukeeans to realize that the city must develop to the fullest its fortunate situation as an inland port. So we have a harbor commission today, and harbor facilities, and plans for the future when St. Lawrence developments unite Milwaukee with tidewater.

Mr. Bruce conceived of Milwaukee as a convention city. But a convention city must have more than climate and friendliness and good situation. It must have facilities for people to meet. Could Milwaukee build an auditorium? Some said not. Mr. Bruce conceived a financial plan and made it work.

Because he himself had been denied educational opportunity in his youth, he was keenly aware of the need for education. He gave his service to the Milwaukee schools and, through the publishing firm which he founded, brought enlightenment to school leaders everywhere.

These are but some of the high points of his life. We mention them only as examples. The roll call of his activities would be a long one.

Here was a life of leadership—a life devoted to getting needed community things done.

As we see about us our splendid city—as we contemplate plans for an ever greater Milwaukee—our minds for years to come must inevitably run back to the native son who did so much to build the city of today.

If those plans for the future come to fruition, it will probably be because Milwaukee is blessed with another leader like William George Bruce.

Statement of Brig. Gen. Bonner Fellers Before House Foreign Affairs Committee on Military-Aid Bill

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 17, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am including the oral testimony of General Fellers, who appeared before our committee on the military-aid bill.

Members should read it in connection with H. R. 5895:

Mr. SMITH. Mr. Chairman, I am wondering if we may not have a statement from General Fellers as to his background, so that it can be in the record, to precede the statement he has made?

Chairman KEE. We would be very glad to have such a statement.

General FELLERS. I have been in the Regular Army most of my life. I graduated at West Point in 1918. I went through the usual schools, to include the Command and General Staff School and the War College.

From 1940 to 1942, I was military observer with the British in Africa.

I saw the Germans fight for nearly 2 years. I slept on the wrong side of the lines a number of times, and I am familiar with their power. That is why I warn you how strong the Red Army is to have withstood 220 German divisions.

In 1942 I came back to the States, lectured on desert warfare in training centers.

I joined the OSS for a short time and then joined MacArthur in Australia. I was a member of his staff from then until 1946.

I was in charge of planning for the New Guinea operations.

I was his combat observer at the front during the Philippine operation.

I was in charge of psychological warfare against Japan.

I was MacArthur's military secretary throughout the war, and then after the surrender I was Secretary General to the Allied Council of Japan.

I retired in 1946.

Mr. SMITH. Thank you.

Mr. MANSFIELD. Mr. Chairman, could General Fellers tell us what his position is today?

General FELLERS. I am a retired officer.

Mr. MANSFIELD. Are you holding any position in the Veterans of Foreign Wars at the present time?

General FELLERS. No, sir, except that I am a member of their national security council. I did work for them full time. I am no longer with them on that basis.

Chairman KEE. Are there any other questions?

Mr. VORYS. I have two questions.

General, your statement is very, very impressive. However, there is a ground struggle that has gone on in Europe that hasn't anything to do with the movement of organized divisions, apparently. It went on in Poland. It went on in Czechoslovakia, and was successful. It is infiltration from within by Communists who are armed and who are going against unarmed people.

I am wondering what you would think of the importance of making it possible for the people of western Europe at least to defend themselves against the guerrilla, you cannot say "unorganized forces," but not organized into divisions and a task force and striking force.

I am wondering what you think of the importance of keeping internal order so that Europe cannot be taken over without a declaration of war, but we can at least stop the sort of thing that has brought the Communists through Poland and Czechoslovakia.

General FELLERS. The answer to that is, they must have the weapons to keep internal order. If they do not have them in those countries, I think we should help them. But we should make it clear precisely what this help is for.

I know that the French think we are going to hold the Rhine or Elbe for them with American troops. I have given my reasons in my opening statement. Unless we make it clear just what help we will give, they are going to claim we welshed on the treaty, because they expect us to help hold the Rhine and they want to see our troops over there.

They are tired. They want us to do it for them.

Moreover, the equipment that we do give them, if it is to defend their frontiers against Russia, will never be enough. We will go broke before we can give them enough. They will blackmail us. They don't take good care of their equipment, anyway. They know nothing about preventive maintenance. They prefer to ask for a new piece of equipment than take care of an old one.

We cannot possibly satisfy them with a blank check. If we say, "We are going to give you certain small arms for internal order, and that is all," there is no harm in that.

I believe we should help if they need equipment for internal order. France had 11 divisions when the war ended. That is a lot of equipment.

Mr. VORYS. I wonder what your view is as to having apparently no military policy with reference to the Pacific and Asia, while we proceed with some sort of a military policy in Europe?

General FELLERS. It is wrong to endeavor to block Russia at one place and let her spill over her borders in other places. Russia can only be contained if she is viewed and handled as an entity. That is why I mentioned the bases in the Pacific from which you can base your air power and inflict terrific punishment on the Russians in the Orient, if a war comes.

Your air is so flexible that in 24 hours you can have it at any of those bases you want it. It is a matter of hours and not days.

The bases, of course, have to be serviced and defended. You must have a view of Russia as an entity. Otherwise there is no hope. If you block the Rhine, she goes into Iran.

An infantry division has no strategic mobility. It takes too long to move it. The party is over before you can pick it up and put it some place else.

I would like to say a word I forgot to say about tanks. The Maginot Line failed in the last war. We then got mobile-minded. Tanks are mobile.

The French are to have the highest mobility possible in warfare. That would be, of course, tanks, self-propelled artillery, and motorized infantry.

Well, the air is so much faster and more mobile than this stuff on the ground that tanks are actually immobilized in relation to the air power.

Moreover, a tank runs on a track which is made out of iron, and a near miss from a bomb breaks that track and the tank is immobilized.

The air can destroy the gasoline and a whole armored division is immobilized.

So I think that world war III is going to have its Maginot Line, if we don't change our thinking—and it is going to be this very thing we think is mobile—it will be these tanks, guns, infantry in trucks, that air power denies gasoline and thus immobilizes them.

Mr. VORYS. Thank you very much.

Chairman KEE. Dr. PFEIFER, have you any questions?

Mr. PFEIFER. I have no questions, other than I have been surprised by the general's statement that he is in favor of the military-aid program. However, he stresses air power. If he stresses it to that degree, how can he stop the present aggressive action on the part of China? How can air power at this time stop Russia?

General FELLERS. Do you mean without going to war?

Mr. PFEIFER. Yes.

General FELLERS. My view is this: That it is a great blunder to engage the Red army on the ground with American troops. I think we will fail. I think we can only win with air power.

Now, the technique of when to put the heat on Stalin to stop him from something is out of my hands. I am merely endeavoring to explain my views on how we can win a war.

Now, when the American people decide they want to fight for Korea, I still think you have to win it with air power, but there may come a time, if we don't want them to take southern Korea, when we are willing to go to war over it. My contention is we can only win it in the air.

Does that answer your question?

Mr. PFEIFER. It does. Only in the event of war.

Chairman KEE. Is there anything further? Mr. Smith, have you any questions?

Mr. SMITH. General, I appreciate your statement. I think it has been very enlightening.

As I gather your broad concept it is that you must not abandon Europe as such and the only quarrel you have with the present legislation is one of concept; is that correct?

General FELLERS. Yes, sir.

In that connection the treaty binds us. We have been obligated for 20 years to provide military assistance in case those countries are invaded. It is my contention that we can only win with that assistance through air power.

Mr. SMITH. Russia has served notice already, I believe, that she is going to build the greatest air force in the world. Now, you think it is up to us to take the initiative in that respect and say, "Mr. Joe, we are going to build the greatest air force and intend to maintain that supremacy."

General FELLERS. Yes, sir. If we do not build the greatest air force in the world, we will eventually be destroyed.

Mr. SMITH. Do you have any support, General, for your views among military people?

General FELLERS. Many officers feel the way I do. I guess they are a little restricted on telling it, but they feel that way.

Mr. SMITH. You are not unduly an air-power advocate?

General FELLERS. I am a ground officer.

Mr. SMITH. With the Infantry?

General FELLERS. Artillery.

Mr. SMITH. Have you any idea as to what the combat effectiveness is at the present time of our allies in Europe? Have you ever given that any thought?

General FELLERS. Yes, sir; I have given it lots of thought. It is so poor that we would have to do the fighting, I should say, 80 to 95 percent, if we go into ground combat.

The British are very courageous. I was with them for 2 years and I know them very well. They are brave. However, the British are going to have to defend their homeland. The Red army can be lifted in batches of 75,000 in one lift and the danger of an airborne invasion of England is so real that the British must defend their island. We need that base.

I do not believe that we should want them to put very much of a ground force in Europe.

On the other hand, the French, with 40,000,000 people, fought very well in the First World War, although not very long in the second. I believe they are courageous, but I do not believe they could even approach holding the Rhine. They will not have enough divisions—assuming they would fight a sustained war.

The Italians fought in both wars and were not any good in either one; Belgium, a few days; Holland, a few days in the last war; Norway, very little; Iceland, nothing.

If you hold on the ground in Europe, it will be done by American soldiers.

Now, there are two ways of holding the Rhine, I think, and that is to devote our entire industry and energy in America to that—have universal military training, a vast ground army, and possibly rearm the Germans.

Then you run the risk of being attacked before our forces get too strong.

I think, psychologically, it is a wonderful thing to have no great force on the Rhine—especially Americans—for the simple reason that as we build up with allies and Americans, Stalin will tell his people, "The Christian democratic countries are again after us."

We know we are not going to launch an offensive but it looks that way to the Russians.

I think it is bad psychology to put American troops over there because the Russian leaders are liable to be tempted to have a go at us. I believe it would be more likely to cause war than to deter war, to put American troops on the Rhine.

Stalin is the world's greatest psychologist. He fooled Hitler, he fooled the British high command, and he fooled the American high command.

I was in Egypt at the time. General Wavell's G–2 told me that the fight wouldn't last 3 weeks when Hitler went into the Ukraine.

I understand General Marshall had a press conference and said the same thing. Stalin wanted us to think he was weak.

The whole show against Finland fooled the world, and Finland played down the Red Army, hoping that Germany would attack.

Stalin is a psychologist. He is capable—I don't say he is doing it—but he is capable of opposing UMT in this country, in the hope we will have it to spite him. He wants us to fight this war on the ground—that is his only hope of victory.

He is capable of opposing the Marshall plan and he is capable of opposing military assistance, in the hope that we will go broke doing it. He hopes that we will be stubborn and say, "Well, if he is against it, we will show him."

I believe Stalin to be that clever.

Mr. SMITH. Thank you very much.

Chairman KEE. Mr. Richards——

Mr. RICHARDS. No questions.

Chairman KEE. Mr. Fulton——

Mr. FULTON. You have given figures on Russia's strength. From where do you get the figures? What is your source of the figures?

General FELLERS. I have no recent figures on Russia's strength. Nothing is available to me at the moment.

I believe I said they had some 6,000 or 7,000 fighters. That is the last time I knew about it.

Mr. FULTON. About when would that be? How recent are those figures?

General FELLERS. About 6 months ago, in conversation I got that figure.

Mr. FULTON. Then 6,000 transport aircraft would transport how many combat personnel apiece?

General FELLERS. About 12, I should say—12 or 15, equipped men.

Mr. FULTON. Then you say 60 divisions are needed by our friends in order to defend, if our allies are to defend. How many divisions do they have now?

General FELLERS. The Russians?

Mr. FULTON. No, our allies.

General FELLERS. I don't know.

Mr. FULTON. What is the deficiency, is really what I am asking.

General FELLERS. I do not know.

Mr. FULTON. How many line divisions do you believe the Russians have now?

General FELLERS. About 175 or 200, mobilized.

Mr. FULTON. Is antiaircraft included in that?

General FELLERS. In the 200, yes.

Mr. FULTON. Is cavalry included in that?

General FELLERS. I do not know.

Mr. FULTON. And tanks?

General FELLERS. Tanks, yes.

Mr. FULTON. You would say 175 line, but if you are including antiaircraft and tanks, you then say it is 200?

General FULTON. I would say so, but I must say I am not prepared on this strength.

Mr. FULTON. I am asking you to approximate for me, from your past experience, and your estimation as a professional witness is good. I want your judgment.

You said 175 divisions. Then I asked you what was in it and you then said when you had certain extra items it ran to 200, so then I added the whole thing up for you, and said line divisions, antiaircraft, cavalry, and tanks would then approximate around 200.

General FELLERS. The reason I hesitated on that is because I don't know how much cavalry they have; I don't know whether they have much or not.

Do you mean horse cavalry?

Mr. FULTON. Well, any type of cavalry they might have.

But 175 divisions is what you started with and then when I put these extra things in you said about 200.

I don't want to hold you down to it but I just want to emphasize that that is your thinking.

General FELLERS. I will say about that, but I am not an authority.

Mr. FULLER. Well, nobody is competent, really, because we do not have somebody checking their figures.

Do you have any idea as to the distribution of the Russian armed forces?

General FELLERS. No, sir; only in general terms.

Mr. FULTON. Do you know of anything they might be massing against Europe?

General FELLERS. I think there is no evidence they are.

Mr. FULTON. Are there any bases for aircraft that are being manned, particularly in the western end of the country?

General FELLERS. Nothing significant that indicates war, to the best of my knowledge.

Mr. FULTON. You are for this program, then, but you want to emphasize air power rather than infantry?

General FELLERS. I think it is suicidal to get engaged in a major operation against the Red army on the ground in Europe.

Mr. FULTON. I might just as a comment say that your estimate of the Russian forces is interesting, and I will put a "very, very" in front of it.

Chairman KEE. Mr. MANSFIELD.

Mr. MANSFIELD. General Fellers, you are for this program, I take it. I came in late and I am not too sure of your position, but as I understand it, if we replace this matter of ground protection with air superiority, you would be in favor of the program?

General FELLERS. We cannot afford piecemeal aid in European countries. In the first place, our aircraft would be destroyed in the first sneak attack; second, air force is only effective when applied in mass in combat and for us to dole out our air force to European countries would deplete us and we must not do it.

I am in favor of military assistance to Europe under the treaty but the striking force must be air power and I think we better keep our own air power in our own hands.

Mr. MANSFIELD. What sort of military assistance to Europe would you favor, General?

General FELLERS. In case of war we would come to the rescue of the countries invaded by destroying Russia's war potention by strategic bombing. That would be the initial assistance.

I would not piecemeal my fighters and medium bombers into Europe, because we will never get them back. They wouldn't even take good care of them in peacetime.

Mr. MANSFIELD. As I understand it, then, you would be in favor of building up a huge American Air Force for striking purposes in the event of war.

What would you advocate in the interim period, in the matter of building up western Europe?

General FELLERS. I would advise the western European countries that we will paralyze Russia in case of war, and I would leave them free to maintain their own internal security and proceed with economic recovery.

Mr. MANSFIELD. Your contention is that under the Atlantic Pact this would not be a 1-, 2-, 4-, 5-, or 6-year program, but would very likely be a 20-year program, a program for the full life of the pact?

General FELLERS. As long as the cold war is hot; yes, sir.

Mr. MANSFIELD. That is all, Mr. Chairman.

Chairman KEE. Mr. BATTLE——

Mr. BATTLE. I am a little bit confused. I do not see how you or anybody on the committee could say you are in favor of this program. It seems to me your testimony is based on the premise of how to win a war, and what we are trying to do is construct a program to prevent a war, and to prepare in case of an emergency.

Are you in favor of the program, doing it a different way, or are you against it?

General FELLERS. I am in favor of lending military assistance in case one of the countries is attacked. I am opposed to being committed into ground combat against the Red Army.

Mr. BATTLE. Would you wait until they are attacked?

General FELLERS. Yes, sir. I think, in other words, to prevent war, your chances are better by not putting troops on the Rhine or the Elbe than if you put them there. I think it is a temptation for the Russian leaders to step in when they know they can win.

Mr. BATTLE. It appears to me that we have a choice, here, of trying to contain the Red forces within Russia, or just writing Europe off the map and Asia, too, and turning it over to them.

General FELLERS. It is not a pleasant picture, but Russia has occupied eastern Germany and while I do not suppose the German people there are happy, I doubt if Russia would treat the French any worse. Russians are the enemy of Germany rather than France, so if the Red army in the war should occupy France, I claim the French will fare far better than if they resist.

Mr. BATTLE. I was amazed at your statement when you said the Red army would disintegrate in France.

General FELLERS. There is no question about it.

Mr. BATTLE. I have heard of Will Rogers and others who said an army would disintegrate in China; that it would evaporate, amalgamate, disappear, and so forth. But, I cannot follow you here. Do you figure that if the Red army came in, the leaders would suddenly become democratic and let the soldiers associate and mingle with western society?

General FELLERS. They would try not to let them mingle but there have been desertions even now in the German zone of as high as 7,000 and 8,000 Red soldiers a month.

The Kremlin constantly rotates its occupational divisions. They have even put Mongolian troops in the Baltic because they don't want them to find out about the western way of life and the liberty and freedom that we have, and they do not dare occupy Europe because they will lose control of their people.

Mr. BATTLE. I am afraid if we waited for them to disintegrate in France or anywhere else, that we would just be doing a lot of wishful thinking.

General FELLERS. I oppose ground combat with the Red Army purely on a professional basis. I merely add that as a byproduct of a peaceful occupation, I think the French people will fare better than if they resist, and that during the occupation the Russian Army would go to pieces.

Now, that is opinion, of course, but Stalin is rotating his occupational divisions, and when they take them back into Russia they do not demobilize them and send them home, they send them some place else, where they cannot tell their folks what they have seen in Europe.

Mr. BATTLE. It is your point of view we should stay out of Europe and also China and Asia unless there is actual war and unless Russia actually starts to take them over?

General FELLERS. Yes. I don't want to get involved in ground combat. It would cost too many lives and we would not win anyway.

Mr. BATTLE. You talked about the weather in Russia. How do you think that will affect our Air Force? Can our planes operate in that climate?

General FELLERS. Planes can operate just as well over the North Pole as they can in the Tropics. The great allies of Russia are distance, manpower, and winter and these are all impotent against air power. Distance and winter and manpower make no difference.

Mr. BATTLE. Please understand I am not arguing against your air-power theory, I am merely seeking information.

That is all, Mr. Chairman.

Chairman KEE. Mr. SMATHERS.

Mr. SMATHERS. General, I notice you say: "Were the Red forces permitted to see Europe, they would find there a way of life, a freedom, a human dignity beyond their widest stretch of imagination. Never again would they submit with docility to totalitarianism. Stalin fears this more than anything except our Air Force and the atomic bombs."

I assume that you do not think Stalin would ever attack any part of western Europe?

General FELLERS. I do not mean to make that conclusion from my statement. That statement is based on the desertions of the Red Army. It is based on the fact that when the Red Army is pulled out of Europe it is sent some place other than its home station. It is based on the fact that Mongolian troops have occupied some of the Baltic countries. It is based on the fact that the iron curtain is very tight, that they do not want the Russian people to find out about the outside world.

Mr. SMATHERS. If that is the way they feel, and if there would be that danger and if Stalin believed that, then there is no sense in building any defensive armaments at all; is there?

General FELLERS. Not on the ground; no, sir.

Mr. SMATHERS. Then why is there in the air, if they are not going to come in there?

General FELLERS. I think if we take down our guard, that it is just a question of time until we will be completely destroyed.

Mr. SMATHERS. In other words, you do believe in keeping the guard up?

General FELLERS. Stronger than it is now.

Mr. SMATHERS. Your whole point is that you don't believe that we should build up anything in Europe?

General FELLERS. No, sir; not on the ground. We cannot hold bases in Europe. Russia can take them, so there is no use to build those bases in Europe. We can hold bases in England and North Africa.

Mr. SMATHERS. Do you think weakness invites an attack?

General FELLERS. Do you mean weakness in Europe invites attack from the Red Army?

Mr. SMATHERS. Yes.

General FELLERS. Yes; I think it is conceivably possible.

Mr. SMATHERS. Then would you not think that if we do not do anything but let Europe stay completely helpless, that we are aggravating and accelerating an attack?

General FELLERS. No, sir; not if we build an Air Force and have atomic bombs.

Mr. SMATHERS. In other words, then, you do not think weakness in Europe will invite an attack?

General FELLERS. I think the atomic bomb and the strategic bomber is keeping the peace with Russia. I don't know how badly Russia wants to fight. I don't believe she does want a war at the moment. But the thing that keeps the peace and the thing that she fears in a military sense is not allied ground troops.

Mr. SMATHERS. Do you think we would have less to destroy of the Red Army, if they were centralized, we will say, along the Rhine, or if the European countries were to completely demobilize and were spread out all over Europe?

Which would pose the biggest problem for our Air Force?

General FELLERS. I do not believe the Air Force would attack the Red Army. I think it would attack the war potential that supplies the army. It would take out its communication, it would take out the war industry, it would take out power, it would take out oil fields and refineries and let that army dangle without supplies.

It is precisely what happened in Japan. We took out the industry and destroyed the shipping. They had 4,000,000 men outside Japan when they surrendered.

Mr. SMATHERS. Do you think if we built up a tremendous Air Force it would stop the Red movement in China?

General FELLERS. No.

Mr. SMATHERS. Why would it not stop it in China but stop it in Europe?

General FELLERS. I don't know that it would stop it in Europe but that is the only way we can win a war. I think it is also the best war deterrent. I cannot answer what Stalin's intent is.

Mr. SMATHERS. That is all for the time being, Mr. Chairman.

Chairman KEE. Mr. ZABLOCKI.

Mr. ZABLOCKI. No questions.

Chairman KEE. General Fellers, you have made a very interesting statement, but I think there are some matters that should be cleared up.

I understood you to say that it was your understanding that the quantities and characters of material to be supplied to the European nations under this program are determined by the State Department.

As a matter of fact, the evidence before this committee is that is not the case, that the quantities and the characters of assistance to be furnished to the nations of Europe were determined by a joint decision arrived at by representatives of the western union powers which have already gone into a union, together with the other powers to be assisted and in consultation with our military and civil authorities present in the United States.

It was not determined solely by the State Department.

As I understand, you said you would favor supplying these nations with sufficient military equipment to maintain their internal security. To what extent would you supply them with military equipment for that purpose?

General FELLERS. I would first want to know what they had on hand. It seems to me that those countries have enough of their own for internal security, and if they do not have and cannot get it, I think we should give it to them for internal security only.

I do not know what the situation is, but whatever it is, we must make it clear that our assistance is for internal security only and not to hold the Rhine or Elbe.

Chairman KEE. I understand further your position to be that, for defense against invasion or aggression, we should supply nothing whatever.

Is it not your view that by refusing to supply them with military aid, to enable them to defend themselves, we are losing a tremendous potential military strength in all of these countries that would be available in the event of war with Russia?

In other words, we have a very large part of the population in all of these countries available for military duty but they are at the present time unsupplied with sufficient military equipment to form an army of any strength.

You might organize an army, but an unarmed army would not be capable of defending any country.

General FELLERS. When you add the populations of the North Atlantic powers and the total of their industrial productivity, it is most impressive, but when you break it down country by country and compare the total to Russia's power, it is quite evident that our allies cannot prevent the occupation of Europe by the Red Army.

Therefore I claim it is better to build an air force that will destroy Russia if war comes and act as an effective deterrent now, rather than piecemeal supplies to a lot of ground forces which the Russians would not fear.

We wouldn't have the help of those countries anyway when war comes. They are going to be occupied.

Chairman KEE. You think that whatever we do it is a hopeless situation in Europe, according to your view?

General FELLERS. No; I think we can keep the peace of the world with air power.

Chairman KEE. By United States air power alone?

General FELLERS. Oh, no.

Chairman KEE. I understood you to state a while ago that you would not favor our sending any air equipment at all to these people, that they would not take care of it if we did.

General FELLERS. That is right.

Chairman KEE. Therefore, that would mean you merely favor building up a tremendous air power here in the United States?

General FELLERS. England builds beautiful aircraft. In jet propulsion they are probably equal to us or ahead of us. I think it is important that they continue their air program. I think it is important that the French build theirs, and Belgium, but I do not see why we should piecemeal our own Air Force over there and permit it to disintegrate and lose its effectiveness by doling it out. I do not know what it would accomplish. It would be destroyed the first night of the fight anyway.

Chairman KEE. You stated a while ago that by breaking it down—that is, breaking down Europe into individual or separate nations, they were more or less impotent. That is just the situation they are in now, is it not? They are in separate entities and there is no strength in them because there is no union at the present time, and even when they have union, unless they are supplied with military equipment there is no defensive strength nor offensive strength in them?

General FELLERS. When they had union and when they had all the ground equipment they need—we had a typical example in the last war; when it ended there were 93 divisions on the western front and 502 Red divisions on the eastern front.

I do not think we will have more than 93 allied divisions when the next war starts, even if we go at it full steam ahead. Therefore it seems to me it is a difficult thing to build up against the Red Army.

When you play football, you endeavor to play strength against weakness.

If you accept combat with the Red Army you play our weakness against enemy strength. In this every advantage lies with Russia. We can win in the air but I don't think we can win on the ground

Mr. VORYS. In view of your statement about how this is to be administered, I would like to point out that in the white book it is said on page 34:

"It is proposed that primary responsibility for direction of the military assistance program will be exercised by the President through the Department of State."

Chairman KEE. I was not discussing the administration; I was discussing the question of who determined the quantities and characters of the material.

Mr. VORYS. Let me give you another direct quote by the interdepartmental committee as to how this is going to be run:

"Responsibility for the direction of the operations of the military-assistance program (this is on p. 35) would be exercised by a director for military assistance who would also be the special assistant for MAP to the Secretary of State, and be appointed by the Secretary."

Now, under "Requisition and procurement," on page 37, it is done through the Embassies and the Department of State. It is screened by the National Military Establishment, but responsibility for the direction of the operations of MAP would be in the Department of State.

General FELLERS. That is not what I meant. The State Department invited these requisitions. The countries, not wanting to be invaded—and I am in complete sympathy with them on it—naturally requisitioned principally ground equipment because they want to hold their frontier. That automatically commits them to ground combat. We are committed to assist them, so we have to join in ground combat or they will say we welched.

So the State Department is fixing strategy. They did it at Pearl Harbor. They said, "We will put the fleet at Pearl Harbor and it will be a deterrent to aggression by Japan."

It was not a naval decision.

Chairman KEE. My correction was not as to either one of the questions you asked, Mr. Vorys. The statement was made that the State Department determined the character and quantity of materials to be furnished them. It is the statement of General Bradley and the Joint Chiefs of Staff that such matters were determined by consultation with the representatives of the western powers, together with representatives of the other powers to be assisted.

General FELLERS. I was not clear in my statement.

What I meant was that as a result of the State Department's procedure in inviting these powers to requisition equipment we find ourselves confronted with accepting the strategy of ground combat.

Chairman KEE. I do not agree with you there, General Fellers. I do not think by inviting them to request what equipment they need that that commits us to furnish the equipment they requisition.

Mr. SMATHERS. May I ask one other question, Mr. Chairman?

Chairman KEE. Certainly.

Mr. SMATHERS. General, you said a moment ago you felt weakness invites an attack, yet in your statement you also want to perpetuate their weakness now in Europe and want to overcome it by having a strong Air Force here in the United States.

If we allow western Europe to remain defenseless, at what point would you recommend we go to war with Russia? When they started moving westward?

General FELLERS. That is already fixed by the treaty.

Mr. SMATHERS. In other words, you would still say that the moment Russians started across the Rhine or infringing on the borders of any one of the Atlantic Pact nations, that that is when we start?

General FELLERS. Yes, sir; that is what the treaty means to me.

Mr. SMATHERS. In other words, then, you are willing to start a war at the point of the Rhine, but you do not want to put any troops in, or you want to have no defense whatever from the Rhine all the way to the Atlantic coast. You just merely want to let them start and go all the way and relax?

General FELLERS. I don't want to, but I cannot help it.

Mr. SMATHERS. You said a moment ago it is like playing football. It seems to me your analysis is, to take your comparison there, that you want to play football without having a line. You want to rely on a very wonderful backfield but give up immediately the opportunity you might have to have a line in front of you.

General FELLERS. If I thought the line could hold, I would be in favor of the line. The line will not hold, I assure you.

Mr. SMATHERS. If the line, however, deters and slows down, would you not then be in favor of the line?

General FELLERS. No, sir.

Mr. SMATHERS. You would not be in favor of the line under any conditions?

General FELLERS. No, sir; because in the final analysis we would be committed to ground combat against the Red Army and we can't win it and France would be destroyed.

Mr. SMATHERS. I have no further questions.

Mr. MANSFIELD. Mr. Chairman.

Chairman KEE. Mr. MANSFIELD.

Mr. MANSFIELD. Getting back to what Mr. Vorys said and the powers vested in the Secretary of State, it appears to me that on the basis of H. R. 5895, those powers are vested in the Secretary of Defense and the President, and I find no reference whatsoever in any part of the bill, after glancing through it hastily, which even mentions the Secretary of State.

Chairman KEE. I think we can argue that question out when we get to considering the bill.

Mr. BATTLE. May I ask one more question, Mr. Chairman?

Chairman KEE. Yes, sir.

Mr. BATTLE. General, are you in favor of the Marshall plan?

General FELLERS. I am in favor of economic aid to Europe. I am not qualified to discuss the Marshall plan in detail.

Mr. BATTLE. I was just thinking about your general approach as to how we can best help Europe, or do you think there is anything we can do?

General FELLERS. I am in favor of assistance in order to provide economic recovery. I think that is more important against communism than any one thing.

Mr. BATTLE. That is all, Mr. Chairman.

A Memo to Veterans

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, the following editorial recently appeared in the Milwaukee Journal. It speaks, oh, so very clearly, for itself. I ask my colleagues, especially those to whom the memo is addressed, to take the time to read it:

A MEMO TO VETERANS

We hope you saw the picture of the Tanforan race track that ran through all editions of the Journal of yesterday. It was on page 2. If you didn't see, go back and take a look.

Tanforan is quite a lay-out now. It is an old race plant, but was completely rebuilt in 1947 and 1948. The new grandstand section, built of steel and wood and concrete, is a dandy. It holds 7,000 spectators. The clubhouse, balcony, and enclosure holds 3,000. Tanforan isn't quite in the class of Santa Anita and Hialeah, but it will do.

Tanforan was built when building materials were scarce. It was built when many of you were hunting for places to live, when building contractors were trying in every conceivable manner to get steel and lumber and cement. It was built when President Truman was demanding tighter controls on building materials and an end to all but housing and the most essential building work. At that time, incidentally, he was blaming the Eightieth Congress for the lack of housing.

Tanforan, existing purely for pleasure and the profits of its owners—a race track that runs 40 days a year—was given clearance for the rebuilding project through the efforts of Maj. Gen. Harry Vaughan, President Truman's military aide. He acted in behalf of his friends, the Tanforan owners.

Now, how do you like that?

Taxes

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks I wish to include the following communication that I have received from Mr. Francis R. Powers of Winthrop, Mass., which reflects the opinion of thousands of our citizens and taxpayers throughout the country:

WINTHROP, MASS., *August 15, 1949.*

Hon. THOMAS LANE,
House of Representatives,
Washington, D. C.

DEAR SIR: On the front page of the Boston Herald this morning appeared this heading: "Aroostook potato farmers get $65,000,000 price support. Two producers paid $500,000 each."

I have heard from people from that part of Maine that the farmers in Aroostook County are going to have a very fine crop of potatoes this year.

Our present administration is constantly getting after companies to reduce their prices so as to reduce the cost of living, but the articles which hit us most—that is food—are being held up by the Government through subsidies and the farmers, both in the Midwest and Aroostook County, have had prosperous years.

We also heard that eggs are being stored to hold up prices. All of this at the cost of the taxpayer.

I am working nearly half a year just to pay taxes to the Government for such unsound practices.

You hear everybody blaming President Truman and his administration. I believe it is more up to our Senators and Representatives who we send to Washington to represent us.

I have just read Notes on a Trip to Europe, by Ernest T. Weir, chairman of the National Steel Corp., Pittsburgh, Pa., about our spending in Europe. I think every Member of Congress should read it.

The public is getting fed up with this burden of taxation and lack of proper steps by Congress to reduce it. The people have been very cooperative and patient but are getting restless and I hear it from all sides from loyal men and women of sound thinking. It is up to Congress to cut down this unnecessary spending—both in this country and abroad.

Sincerely yours,

F. R. POWERS.

The High Price of Doing Nothing

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mrs. DOUGLAS. Mr. Speaker, under permisison to extend my remarks in the RECORD, I wish to include the following article by Stewart Alsop which appeared in the today's Washington Post.

MATTER OF FACT

(By Stewart Alsop)

THE HIGH PRICE OF DOING NOTHING

LONDON.—Thoughtful American officials are now talking seriously of the time when the United States will be forced by the pressure of circumstances to offer the British something like common citizenship—at least a common currency and a free exchange of population. The parallel is obvious—Winston Churchill's desperate eleventh-hour gesture to the French in 1940.

That intelligent and informed men can talk seriously of such an offer being made is in itself a measure of the meaning to the United States of the British crisis. For an Anglo-American union is not, obviously, practical politics. It is even less practical politics in England, which already fears being transformed into a "forty-ninth State," than in the United States.

It is probably not even practical economics. It is true that such a union would open up the vast continental market of the United States. But most economists—especially British economists—believe that in the free competition that would ensue, the gigantic American economy would soon strangle the weaker British economy.

Yet the offer may some day be made, as it was made by Churchill in 1940, in sheer desperation, when it is already too late. If this is not to happen, some new and bold approach, which is both practical politics and practical economics, must be found to deal with the economic sickness which is weakening and splintering the Western World.

A plan which is at least new and bold is being widely discussed here by wise and powerful men. This plan is worth describing, if only because the ideas on which it is based are obviously influencing the thinking of men, including Chancellor of the Exchequer Sir Stafford Cripps, who are trying to grapple with Britain's desperate crisis.

This plan is designed to deal with the two factors which are seizing up the machinery of world trade. One factor is simply that you can buy more for dollars than you can for pounds or for any "soft" currency. This creates a single-minded world-wide thirst for dollars. And—this is the second factor—this thirst is accentuated by the fact that the soft currency economies, and especially the sterling area, have too little in reserve. Because there is so little left in the British kitty, people rush to get dollars for pounds, by hook or by crook, before it is too late. This leakage, mostly illegal, accounts in very large measure for this summer's economic crisis.

The first step in the plan would thus be to call an international monetary conference to devalue all European currencies down to their real purchasing power in terms of dollars. The pound, for example, would be reduced from $4 to $3.

This would pull down the standard of living in England, because the British people would get less from abroad in exchange for what they produced at home. But both the ECA and the British treasury have made independent studies of how great the drop would be, and both came up with the same answer—only about 4 percent. And this is better than the real misery which otherwise seems inevitably in prospect for the British.

This cut in living standards would be the British and European contribution to the plan. The American contribution would be far less painful. The American Treasury would raise the price of gold from $35 to $45 an ounce. This would automatically, and without touching a hair on an American taxpayer's head, raise the value of the huge American gold horde by about $8,000,000,000. This great sum would then be earmarked as backing to permit the free exchange of currencies and the freeing of trade.

With the pound and the European currencies at their real dollar value, backed by this great, confidence-inspiring reserve, there would be, it is argued, no run on the $8,000,000,000 bank.

Most if not all of the gold would remain in holes in the American ground. And the terrible process which is slicing the economy of the whole Western World into bits would be reversed.

So runs the argument. Whether or not this scheme provides a real way out (and to the layman it sounds too neat, too painless), neither this nor any other really bold attack on the crisis is likely to be proposed by Cripps when he comes to Washington next month. This is partly because the British planners are tired and lack their old confidence, and partly also because Cripps knows that Secretary of the Treasury John Snyder, and the conservative bankers for whom he speaks, would boil with righteous indignation if he proposed anything really far-reaching or unconventional.

Meanwhile, the facts to bear in mind are these. If nothing is done, it is wholly likely that by this time next year the entire economy of the sterling area will have begun to disintegrate. If this happens, the collapse of Britain as a world power will be inevitable. And if this happens also, the United States will be able to halt Soviet expansion in Europe and Asia in only one way—by going to war. This would be a high price to pay in the end for the luxury of doing nothing now.

Unification and Savings

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. VAN ZANDT. Mr. Speaker, the following article by Hanson W. Baldwin, which appeared in the New York Times, August 11, 1949, concerns a very interesting subject—savings effected by unification of our armed services.

Mr. Baldwin's article is as follows:

UNIFICATION AND SAVINGS—NEW LAW, BY ITSELF, DOESN'T INSURE CUTS IN SERVICES' "FAT" OR OVERSIZE COMMANDS

(By Hanson W. Baldwin)

The enactment of the new unification law by the signature of the President yesterday does not herald a golden era of efficiency, economy, and service unity.

The act provides certain improvements, particularly in the budget and fiscal field, in the basic law and it clarifies the already formidable powers of the Secretary of Defense. It provides the framework for closer integration and greater efficiency, but it does not automatically insure either economy or efficiency. The somewhat reckless promises made of a billion a year in savings as a result of the act will almost certainly not be realized. If they are, the act will not be responsible for such savings.

Sums measured in millions may well be saved by greater and more efficient administration in the armed forces, but sums measured in billions can be saved only by cutting the size of those forces.

There are, however, obstacles to both processes—the savings of millions and the savings of billions. There is no doubt, whatsoever, that there is considerable surplus "fat" in all the services. Only a fraction of our service manpower is in combatant units; the overhead is unbelievably large.

BULK OF NAVY MANPOWER IS ASHORE

The Army is able to get only about ten and a half divisions out of a requested 677,000 officers and men; the Italian Army, with a peace treaty limit of about 175,000, disposes of seven or eight divisions. The bulk of the Navy's manpower is ashore. The Air Force, with more than 400,000 men, disposes of somewhat more than one-eighth of this number as flying personnel.

Another comparison also shows some of the topheaviness of the services:

Strengths of general officers (or admirals) and enlisted men

	Army	Navy	Air Force
Today	350	259	204
	595,000	381,336	361,000
Peak of World War II	1,027	496	266
	5,474,000	3,004,811	1,901,000
Prewar, 1938-39	91	83	12
	153,000	110,196	21,000

The top figure in each row represents general officers or admirals; the bottom figure represents enlisted strength.

The figures above, if studied, illustrate graphically the tremendous growth of top-level rank. For the Army, for instance, there was a ratio of less than 1 general to every 5,474 men during the war; today that ratio is about 1 to 170; before the war it was about 1 general to every 1,681 enlisted men.

DEFENSE SECRETARY'S STAFF CITED

The top-level administrative and supply echelons of all the services are much too large; they have remained big while the combat forces have shrunk. The Office of the Secretary of Defense itself illustrates this; it is already much bigger than was ever contemplated under the original Unification Act, and it is still growing. The 1950 budget asks for more funds for that Office, and yet there has been no comparable decrease in lower administrative echelons.

Moreover, while the uniformed forces of the Nation demobilized, there was never any proportionate demobilization of the civilians employed by the armed forces. These civilians, unlike the military men, had the organized pressure of politics behind them. The great numbers of civilians in military employ, plus the large budget of the armed forces, have made the national defense budget one of the fattest "pork barrels" into which Congress ever has dipped.

The Navy, for instance, as a result of the war, found itself with hundreds of shore establishments—many of them not needed in peace. It has tried, but with scant support from Congress, to close some of these, but it now finds itself in the position in which the

Army was placed in prewar days—when the land service was forced to maintain a lot of useless posts inherited from Indian war days because of the pressure of local politics.

SAVINGS A TASK FOR CONGRESS

In other words, some of the "fat" of the services is due to pressure politics and congressional enthusiasm for the "pork barrel." Congress, and only Congress, can effect these savings.

But the Defense Establishment itself can reduce its top-heavy overhead and can funnel more of its energies into combat forces. The National Defense Management Committee, appointed by Secretary of Defense Louis Johnson yesterday to effect this, can be a good influence in this direction.

The idea of management engineering in the armed services is not, however, new; the late James Forrestal brought into the Navy Department one of the first groups of efficiency engineers utilized in Government departments. But such a group can go so far and no farther.

Blueprints and suggestions are fine, but in the last analysis the human equation—the willingness of individuals to remove, if necessary, their own little crowns and to break up their own little empires—is what will make or break economy and efficiency in the forces.

There is one sour note in Mr. Johnson's management engineering approach. A military man—Gen. Joseph T. McNarney, an efficient administrator—is placed at the head of a committee of which the Secretary of the Army and other civilian officials are members. This is a bad precedent; Gordon Gray, Secretary of the Army, should have the priority to which his position, title, and, above all, his civilian clothes entitle him.

Union of European States

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 17 (legislative day of Thursday, June 2), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "European Order of Sovereign States Called as Obsolete as Greek City-States," written by Dorothy Thompson. It is a very excellent article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE RECORD—EUROPEAN ORDER OF SOVEREIGN NATIONS CALLED AS OBSOLETE AS GREEK CITY-STATES

(By Dorothy Thompson)

For the most enlightened spirits of Europe, whether conservative, liberal, or socialist, the European assembly meeting in Strasbourg—on the Franco-German frontier—has a greater significance than the Marshall plan or the Atlantic Pact. These measures of American initiative represent a great response to the crisis, but they will not save Europe, shattered by two wars arising from inter-European tensions.

Europe has reached the lowest estate in their history. Divided, she is powerless, really what she has always been geographically, a peninsula of Asia, now even depending on the United States for her defense.

A European order based on relatively small, completely sovereign nation-states is as obsolete as the Greek city-states eventually proved to be in the antique world. The vast multinational state of the U. S. S. R., whatever its ideological content and despite its barbaric despotism, is, in one respect, consistent with the necessary developments of history—limitation of national sovereignties in the interest of large-scale integration. The power and prosperity of the United States rests less upon the superior initiative and skills of America's European descendents, than on the great room of the union in which they can be exercised.

UNION HELD ONLY SOLUTION

These facts have not been lost on intelligent Europeans for the past century and longer. When Winston Churchill declares "Europe must unite or perish," he is quoting Nietzsche and Romain Rolland, and much more remotely—Dante.

In the entire period between the two wars, there was one bright, sunny morning for Europe, when two European foreign ministers, Aristide Briand and Gustav Stresemann, recognized that the problem crying for solution was not "German" or "French," but European. Locarno, which opened the way for a confederation of Europe, foundered on France's alliances with Germany's eastern neighbors. Today those alliances are nonexistent. They did not check Germany and today the countries with which they were made have been absorbed into the Soviet system.

The union of Europe offers the only solution for the German problem in Europe. Everybody can see the menace potential in a German revival, with a sovereign German state able to bargain between east and west. The last Frenchman fears a Germany with its own foreign office, army, and sovereign rights. The last Frenchman does not, however, yet see that the solution lies in the sacrifice of such sovereignties by all European countries and the creation of a multinational European state.

The assembly, meeting at Strasbourg, can be the beginning of a long overdue renaissance of Europe.

TENTATIVE BEGINNING

It is certainly not more than a tentative beginning. Although it is a representative assembly, the governments of the participating states strictly limit its powers, and the proceedings and issues are being steered and controlled by the foreign ministers. Consideration of military matters has been ruled out by the Atlantic Pact—but this permits the participation of Sweden despite her policy of neutrality. A veto right is retained by the foreign ministers despite the experience of the UN. The meeting is thus a far cry from the American Continental Congress.

But it is a sounding board for the most constructive idea that has come out of the war. It demands that we think, not in terms of nation-states, but in terms of civilizations. Europe is a civilization, and it is European civilization—not France, or Britain, or Germany, or Scandinavia—that will rise in a new response to its greatest challenge, or decisively fall.

That issue has been drawn, but the outcome is by no means decided. That the United States supports European union is, incidentally, an answer to the charge that we seek world domination. Imperialism never fosters unions except to themselves. A united Europe would not only be less susceptible to Russian domination—hence the bitter Russian and Communist opposition—but it would also be less susceptible to American domination, and should ease the intolerable tensions and fears arising from a two-power world.

What Fear Does

EXTENSION OF REMARKS

OF

HON. HARRY. J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very fine article from the Los Angeles News by one of America's most liberal-minded and progressive businessmen, Mr. Charles Luckman, president of Lever Bros. Co. It is too bad that we do not have more business leaders talking in this fashion.

WHAT FEAR DOES

(By Charles Luckman, president, Lever Bros. Co.)

FEAR

Fear has won a beachhead in America. It is persuading the American people to talk themselves into a depression. By emotional arithmetic, viewers-with-alarm add two and two and get zero. * * * But the record they scan is their own fever chart, not the record of America's economic health and vigor. These individuals confuse fears with facts.

You and I know that, as a nation, we cannot afford to be economic hypochondriacs. A country, like an individual, can worry itself sick.

Too many of us have accepted dim and jittery estimates of what is wrong with America, instead of finding out for ourselves what is right with America.

FAITH

Only through lack of faith in America and in ourselves, could we mark down the world's most dynamic economy.

Faith in America is not blind acceptance of things as they are. It is the belief that we, in America, can make them better.

The history of America is an inspiring saga of great problems superbly overcome. I reject the thought that at the midpoint in this twentieth century we will reverse the course of this history.

ECONOMY

The facts of America's economic strength are known to everyone. We have: (1) 59,000,000 workers on the job; (2) $200,000,000,000 in liquid savings; (3) $215,000,000,000 personal income for 1949; (4) high purchasing power—53 percent greater than prewar. It would seem preposterous that anyone could manipulate these figures and come up with an answer that equals disaster.

For every minor symptom of decline, there are a hundred major elements of economic stability.

What we are witnessing today is the transformation of a sellers' market into a buyers' market. And this is as it should be.

NEEDS

Let's face some cold facts: 27,000,000 Americans have no kitchen sink; 18,000,000 Americans lack washing machines; 25,000,000 Americans lack vacuum cleaners; 1,000,000 American families need new homes this year; 40,000,000 Americans have neither bathtub nor shower. So, let's not talk about what we've got. Let's be more concerned with what we haven't got.

There is enough urgent work on hand for every business now in existence—and for industries yet unborn—to keep busy for generations to come. We have no excuse in common sense for a recession, let alone depression.

BUSINESS PLATFORM

Business must open its eyes to the facts of our economic strength. It's bound to look dark, if we close our eyes. Then, business must act with courage and determination to meet the opportunities these economic facts present.

The job of business is, as I see it: (1) To increase productivity in cooperation with labor; (2) to continue sound wage policies; (3) to lower prices wherever possible; (4) to devlop new products, new methods, new services; (5) to have an eagerness for enterprise, a willingness to expand, and a revitalized initiative.

This is the platform on which we can build, if we abandon our fox holes of fear and regain the faith that built America—faith in ourselves, faith in our ability, and faith in our future.

Lever Bros. has this faith and is putting it into action. It is my privilege to tell you that we are backing our faith in America with cash—$55,000,000.

Man-Made Troubles

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the business service called Economic Trend Line Studies:

MAN-MADE TROUBLES

One of the biographers of Samuel Johnson tells of a meeting in London in which a number of philosophers of the day were discussing the question as to the outstanding difference between human beings and the lower animals. When it came to Dr. Johnson's turn, he observed that the outstanding difference was that the lower animals experienced their vicissitudes from natural causes, but, in the case of man, most of his difficulties were the result of his own acts.

It is a fact that most of the lower animals fall victim to what might be called natural causes, such as freaks of weather and climate, but it does remain for man to organize on a grand scale the difficulties that, historically, he may be forced to face for years or generations. As one thinks of the last 25 years, the distinction outlined by Dr. Johnson certainly becomes impressive. One could not visualize an animal attempting to create the slaughter, the prejudices, the deep-seated cruelties that have been conjured by the so-called sons of God.

At the present time, both at home and abroad, practically all the trouble we face is, in the sense that Dr. Johnson used, "man-made." We have to grant that the lower animals at times are utterly selfish and ruthless, but it has remained for man to so systematize selfishness and ruthlessness that these troubles are not passing incidents between individuals, but have become great social upheavals. This pattern has persisted from century to century and has engulfed whole civilizations, and, to this day, tends to generate even our economic booms and busts.

As one reviews the international scene today, and the responses to the facts of our public through Washington, he cannot fail to be impressed with the strange mixture of idealism on the one hand, and unalloyed self-interest on the other. Every pressure group in this land and many of the lobbyists are seeking ends that outrun the bonds of good common sense. It is surprising how easy it is in this country to have large groups of people sponsor a program which satisfies their personal interest, where such sponsorship would be greatly resented if it were not deeply rooted in the self-interest of the individual. It would certainly seem that the democratic way of life has degenerated, both in western Europe and in this country, into government by groups seeking their own ends, largely for selfish reasons and with relatively little regard for the national good.

On the Continent, these specialized interests have reduced the so-called representative system to what, in the parlance of the day, is known as government by blocs. In country after country, there is no individual group in control of the ship of state, acting on a fundamental ideology of placing the general welfare first. Most every representative is indebted for his position to the activity of some organized clique whose sole purpose is to represent the unenlightened interest of the constituents. For this reason, we see in countries like Italy and France, legislative assemblies striving to direct the national affairs but at the same time swapping and trading between themselves, in order to establish a majority, even though the end sought is to a surprising degree based on the general background of individual or class self-interest.

We here in America, viewing the European scene from some distance, are probably far more sensitive to the weakness of their democracy than they are themselves. In like manner, it is quite easy to see how an intelligent European studying our scene would sense the same weakness although perhaps in rather modified guise. Forty years ago, the European process was not far different than that now practiced ourselves but the question is whether we are not moving in the same direction, even though we are lagging somewhat behind. To date, we have no party organizations definitely committed to the self-interest of particular constituents. We still have a two-party system. However, behind the scenes, we have a great many individual representatives, who in the composite, are the counterpart of what is going on in Europe. For instance it is questionable whether the day is not pretty well past when the committees in the House and Senate comprise a fair balance between parties. The process goes much further than that. Today, committees on labor are slanted toward labor, agriculture toward agriculture, and little business toward little business. This may not be an unfortunate process at present but it may mean the death ultimately of genuine statesmanship and the emergence of the professional politician on the European level.

In France, one often hears the query, "Who, in the last 20 years, has ever represented France as a nation?" It is a fair question and we are certainly at a loss for an answer. But, going a step further, the same question might be asked of us here in this country. I do not say that the day of the great statesman is over. If there ever was a need for broad and wise thinking on the part of our Representatives, it is today. But, the background of the work being done today in Washington is a depressing influence on the general characteristics that thinking people associate with statesmanship. I would think that to be a statesman today a Representative would have to have more character and wisdom than any of his predecessors ever needed. This is a broad statement, but I think it will bear analysis and that it can be simply accounted for. The facts are that, to an ever-increasing degree, elected Representatives are called upon to respond to the dictates of their constituents, often on the narrowest and most selfish grounds. Under such circumstances, is it surprising that decade after decade both in Europe and America, those elected to carry the responsibility of government face ever-increasing pressure to respond to their duties narrowly and to the liking of the home team, whatever that team stands for?

Perhaps, to a considerable extent, the root of these developments has germinated in a disregard for what political scientists have called the rule of law. Democratic processes were originally founded on the concept that once a law was passed or a constitution established in accord with majority wishes, then each individual modified his conduct to conform to this body of law. In recent years, the trend has been, not to discipline conduct in accordance with a few simple and fundamental laws, but to pass a new law which legalizes whatever action is desired, no matter how rash or impulsive. Thus, if one group wants the property and wealth of another group, the first objective is to pass a law, to make the seizure legal. This reduces the structure of law to a mere sham and, if allowed over a long period, eventually results in social chaos. Individual or group responsibilitiy does not reside in laws; it rather stems from proper conduct. Those, who in their own words, seek to strengthen democracy by destroying old institutions and replacing them by new ones, often are the worst enemies of the democratic processes.

Let us go back to the observation of Dr. Johnson with which we started these comments. We can assume of course that, his statement was a play on words, as it were, for there are many more important differences between man and the lower animals than he indicated; I am sure he would have been the first to make this qualification. Nevertheless, the fact remains that the statement is fundamentally correct, namely, that man, with all his intelligence and his spiritual possibilities, gets into more organized trouble of his own making than any of the more primitive inhabitants of this world.

Is it a fair question to ask whether this is a fundamental difficulty? For the longer pull, it is not necessarily so, but today we as groups tend to demand what redounds to our selfish advantage and we even more tend to demand the decisions from our Government that fit the requirements of today regardless of the expense being carried into the future.

In the abstract, majorities here and in many parts of Europe are clamoring for the maintenance of the democratic life and individual freedom. We all mean it very seriously, but the problem has never been thought through. In every sense of the word the well-being, the culture, the security of tomorrow, has to be paid for today by constructive efforts and forebearance. Subconsciously, democracy knows this to be a fact, but the temptation is very great to follow the primrose path in many different ways. We are still, as Dr. Johnson said, organizing our own difficulties. It is the greatest weakness of the democratic process. It is the fundamental clash wherein, for all past times, man faces a struggle between theoretical abstract, social morality, and the very human desire to get something for nothing, or for at least less than it is worth.

Report on the Acreage Limitation Provision of the Federal Reclamation Law as Applied to the Central Valley Project

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mrs. DOUGLAS. Mr. Speaker, one of the most important struggles against monopoly is the struggle to maintain the historic 160-acre water limitation of the national reclamation law. The organized forces of small farmers, laborers, veterans, and people with a deeply religious concern over the quality of American rural life have succeeded in beating back a series of attacks upon that law during the past 5 years. All of them were pointed at the Central Valley of California. Some of them included projects in Colorado and Texas in their target, trying to gain strength by logrolling. The legal protection against monopoly and speculation on every reclamation project in 17 Western States was threatened by these attacks. So far they have been repulsed.

In the present lull since the Eightieth Congress, in a period when the opponents of reclamation law are not daring to press their demands for repeal directly, thoughtful citizens are canvassing the situation again, and reviewing the foundations of their public stand.

Mr. Speaker, 2 years ago the General Assembly of the Presbyterian Church, United States of America, recorded its alarm at efforts then in progress to repeal the 160-acre water limitation in California, and the Synod of California joined with the general assembly. The next year, 1948, the committee on social education and action of the Synod of California said that having received several requests to change its previous strong stand in favor of acreage limitation in Central Valley, it would study the question afresh. So for a full year the committee has been engaged in what is probably the most searching study of the fundamentals of this reclamation issue yet made by any agency outside of Government.

The report from that year of study has now been made public. It was submitted to the annual meeting of the California-Nevada Synod of the Presbyterian Church. It was debated extensively in committee and before the synod and adopted by a heavy majority. By a second resolution the synod commended the work of the investigating committee and its chairman, Rev. Graydon E. McClellan, of Santa Rosa, Calif.

The report as adopted by the synod found that "There is a moral problem involved in repeal" and reaffirmed its faith in the 160-acre limitation. The finding of the committee and the declaration of the synod ought to go far toward the final defeat of those who have been seeking, and still seek, to undermine reclamation.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the report on the Acreage Limitation Provision of the Federal Reclamation Law as Applied to the Central Valley Project, made by a Subcommittee of the Committee on Social Education and Action, and adopted on July 29, 1949, at Zephyr Cove, Nev., by the California-Nevada Synod of the Presbyterian Church, United States of America.

REPORT ON THE ACREAGE LIMITATION PROVISION OF THE FEDERAL RECLAMATION LAW AS APPLIED TO THE CENTRAL VALLEY PROJECT

(Made by a subcommittee of the Committee on Social Education and Action of the Synod of California, Presbyterian Church, United States of America)

INTRODUCTION—REASONS FOR THE REPORT

The one hundred and fifty-ninth general assembly, meeting at Grand Rapids, Mich., in 1947, viewed with alarm the present attempt to urge upon our Congress the repeal of the 160-acre limitation provision of the Federal reclamation law for the Central Valley of California. The following reason was given: "This we believe would strike at the heart of the family farm; as the door would be opened for commercial operation of large areas, with Government subsidy in irrigation. If this happens in California, a dangerous precedent is set for Government-owned irrigated lands in other areas." (Minutes of the General Assembly of the Presbyterian Church, United States of America, 1947, pt. I, p. 198.)

The ninety-sixth session of the synod of California, meeting that same year in San Jose, united with the general assembly in the above action, adding the statement that to maintain the limitation would assure many veteran families of a promising start in agriculture.

In 1948 the committee on social education and action was requested from several sources to recommend to synod a change in stand in acreage limitation as applied to the Central Valley project. Feeling the need for further study, the committee presented the following recommendation, which synod adopted:

"VI. Rural life: We reaffirm our concern for the retention of the 160-acre limitation provision of the Federal reclamation law encouraging the family farm in America, but because of certain questions which have been raised by the application of this rule to the Central Valley project, we report to the synod that it is our intention to pursue studies concerning this project and to make report to the synod of 1949."

These findings therefore are in fulfillment of synod's authorization of further study. They are based mainly upon two general sources:

1. Printed matter, including the CONGRESSIONAL RECORD; congressional hearings reports; the Hoover Commission's task force report on natural resources; the Comprehensive Plan for Water Resources Development Central Valley Basin of the Department of the Interior; copies of water contracts between the Bureau of Reclamation and several irrigation districts; They Would Rule the Valley, by Senator SHERIDAN DOWNEY; the Thirsty Land, by Robert de Roos, Fortune; Bureau of Reclamation documents; the California Water News, publication of the Irrigation District Association (favoring repeal of limitation); newspaper clippings; and much correspondence.

II. A subcommittee hearing in Fresno April 20, 21, and 22, participated in by the following: The Reverend John Dillingham of Oakland, the Reverend Karl Myers of Clearwater, the Reverend R. Murray Jones of Inglewood, the Reverend Addison Moore (consultant to the committee regarding migrant labor), and the Reverend Graydon E. McClellan. Testifying at the hearing were: For repeal of acreage limitation, Elder Charles Kaupke of the First Presbyterian Church of Fresno, water master of the Kings River service area; Mr. Edson Abel, assistant director of the California Farm Bureau Federation's public-utilities department; Mr. R. F. Schmeiser, immediate past president of the Associated Farmers of California. In defense of acreage limitation: Mr. Phil Dickinson, Assistant Regional Director, Bureau of Reclamation; Mr. Kent Silverthorne, legal counsel for the Bureau of Reclamation's Sacramento office; Mr. Jack Rodner, in charge of the Bureau's Fresno office; and Mr. O. M. Davis, farmer and a Grange leader in the Fresno area. These men appeared at the request of the committee and were all gracious in their cooperation. In addition to the formal hearing the afternoon of the 21st, members of the subcommittee went with representatives of both sides to sample farmer opinion and to see first-hand some of the irrigation methods and problems of the area. Other members sampled independent opinion on their own.

Thus it can be seen that the subcommittee has endeavored to hear all sides and to search the basic resource material. They have sought to have but one bias—the bias for Christ.

Before presentation of the findings, the following summary should be made. The Central Valley project is a Federal project for navigation, flood control, irrigation, electric power, and salinity control covering both the Sacramento and the San Joaquin Valleys. Army engineers have built some features of the project, but the project as a whole comes under the United States reclamation law, and is being developed by the Bureau of Reclamation. It is a multipurpose project involving such widespread planning as pumping water from the Sacramento River for use in the interior of the San Joaquin Valley with power developed up north at the Shasta Dam. Sacramento Valley has one-third of the land and two-thirds of the water, and San Joaquin Valley has two-thirds of the land and one-third of the water. The project seeks to balance this with a major transfer of water to the San Joaquin, where the water table is receding alarmingly and where wells will go dry unless there is more water. The present project is the first stage of an even larger plan for water exchange and power development drawn up by the Bureau of Reclamation.

The acreage limitation is not a feature imposed by the Bureau of Reclamation, but a part of the Federal reclamation law which they are required to enforce. It requires that project water be delivered to no single landowner for more than 160 acres of land. (Under California community-property law a man and wife together can own 320 acres of land and get project water for all of it.) It is exemption from this limitation for the Central Valley which many California groups are seeking.

I. In order to give synod information upon which to base future action on this matter, the subcommittee sought to answer seven basic questions. The questions and findings are given below:

A. WILL ANY HARM BE DONE THE FARMERS IF ACREAGE LIMITATION IS ENFORCED?

1. The small landholder: The average farmer in the project area has far below the 160-acre limit, the average farm holding being between 50 and 70 acres, according to several surveys. Some charge that excess land owners will continue to pump water from strata replenished by project water, pay nothing for the project water, and thus get a free ride at the expense of the small farmer. But according to irrigation district law (water contracts are between the Bureau

of Reclamation and irrigation districts) members of a district (which include all who live in it whether getting water or not) can be taxed for benefits received to the district. If water is brought in to irrigate and replenish underground supplies where wells are going dry, all in the district can be taxed to pay the cost.

The real answer lies, however, in the fact that it is the large-scale owners who are fighting hardest against limitation.

2. Excess-land owners: The law is really water limiting not land limiting. An excess owner can get project water for 160 acres (320 with his wife) like anyone else. He can go on pumping his wells, and he will not have to sell his excess lands. If he wants project water for his excess lands, he can sign a recordable contract with the Bureau of Reclamation agreeing to sell his excess lands within 10 years for not more than their value before project water came in (to prevent land speculation on land watered by an interest-free Government project). After signing the contract, he can get project water for all his land until the 10-year period is up or he sells the land.

The limitation is on the amount of project water a single owner can get, and no one is forced to sell his holdings.

B. HOW WILL ACREAGE LIMITATION REPEAL BENEFIT THE FARMERS?

1. The small landholder: We can discover no definite benefits to the small landholder to be found in repeal.

2. The excess-land holder: With acreage limitation off, large-scale owners would get project water for all their acreages. In an area where dropping water tables are threatening land values, a stable water supply would increase land values—by means of interest-free Government money. Much of the excess land is outside of the present project area, but when the total Central Valley plan is carried out, water will be delivered to areas (e. g., the west side of the valley) where there are large holdings which would stand to make huge unearned profits. The antispeculation clause went into the reclamation law because of early speculation. In 1913 the Bureau of Reclamation found that, in 25 reclamation projects, unimproved land had increased in price an average of 759.2 percent after water was brought in. Antispeculation features became necessary, for settlers were paying inflated prices for the land sold by speculators because of water brought in by the Government, were paying interest on money borrowed with which to buy the land, and then were repaying the Government for building the projects through their contracts for water. They were paying for water several times over.

The value of lands in the San Joaquin that are being irrigated by pumping (with water tables going down alarmingly) would not jump so high proportionately, perhaps. But a west side corporation owning 20,000 acres would reap $2,000,000 in increased land values if its land increased in value only $100 an acre—through no effort on the part of the corporation.

The reclamation law, passed by Congress in 1902, was amended by Congress to prevent just this from happening, with the taxpayer's money. It is not fair for the whole United States to be taxed to provide these unearned returns to a few.

C. IS THERE COERCION IN ACREAGE LIMITATION?

There have been numerous reports of coercion in the acreage limitation provisions, but we found no justification for them.

The Secretary of the Interior cannot change the size of farms eligible for project water—that was fixed by law in 1926.

Excess-land holders cannot be forced to sell excess land, as we have pointed out.

Yet certain interests are doing everything possible to show that the farmers of the San Joaquin are being coerced by the Bureau of Reclamation. For example, the Irrigation Districts Association Water Economics Committee is giving wide distributon to a leaflet called, "Farms Loans and the 160-Acre Law, prepared by a subcommittee of the Statewide Water Resources Committee of the California State Chamber of Commerce." The leaflet consists primarily of a lopped-off quotation from the 1912 Reclamation Act following an introductory statement that "We think the matter is fully covered by" the section of the law from which the quotation comes. The quotation seems to say, in its emasculated form, that any excess land acquired by "descent, by will, or by foreclosure of any lien" can be held only 2 years and then must be sold, and that excess land held outside the provisions of the law will be forfeited to the United States. But the quotation leaves off the preceding part of the law which would show that it does not apply to the Central Valley project.

In addition, the pamphlet does not say that this 1912 law has been changed by the Omnibus Adjustment Act of 1926, that the changed law has no forfeiture clause, that the Bureau of Reclamation is writing contracts in the Central Valley under provisions of the new law, that the Bureau's Chief Counsel has signed a public document saying that the project is under the 1926 law, not the 1912 law, and that the assumption in the Congressional hearings, even by opponents of limitation, was that the 1926 law superseded the 1912 law.

No one but this little group, with motives that are hard to understand, has tried to say that an old law that has been superseded applies to the Central Valley. As has been pointed out, landholders will not be forced to sell excess lands, and can even keep them for 10 years, receiving project water, after they have voluntarily signed recordable contracts to sell. If they do not want to sell, they do not have to sign such contracts and can go on pumping or getting water from present irrigation systems.

At this point it would be well to deal with two other complaints.

Senator DOWNEY set the tone for the attack on acreage limitation when he entitled his book on the subject, "They Would Rule the Valley." The implication is that the Bureau of Reclamation moved in and is setting up unreasonable rules for purposes of Federal dictation. But the record must be kept straight. California asked the Federal Government to come in and do what the State did not have sufficient funds to do. And when funds were authorized December 2, 1935, by President Roosevelt, the President indicated that the funds were returnable under provisions of reclamation law. In 1937 the project was handed to the Bureau of Reclamation with express instructions that "reclamation law as amended shall govern repayment of expenditures." And the provisions of reclamation law have been widely known for years by leaders in reclamation and engineering. The Bureau is carrying out instructions for repayment given it by Congress. The fact that its employees believe in and defend the law they administer does not make them would-be dictators.

The other complaint is that excess land can be sold only at a price approved by the Secretary of Interior. "Dictatorial," say some. As a matter of fact, the law sets up conditions under which the price must be approved. Also, written right into the water contracts with the districts is the provision that there will be three appraisers, one appointed by the district, one by the Secretary of Interior, a third appointed by the first two appraisers, or by the district court of appeals if the first two cannot agree. Their appraisals guide the Secretary. In our democracy any Secretary ignoring the recommendation of three such representative appraisers would be held accountable by an angry people. We can see no occasion for charges of coercion or dictatorship.

In concluding this section of the report, we present two quotations, one a quotation from the original reclamation law of 1902: "No right to use the water for land in private ownership shall be sold for a tract exceeding 160 acres to any one landowner;" and the other a statement before a congressional committee by Commissioner Straus of the Bureau of Reclamation: "The Bureau always has, under present legislation, recognized and observed valid existing water rights, and always will do so; it does not attempt to enforce limitations on any farm or portion of farm that is not irrigated by Federal project water."

D. CAN ACREAGE LIMITATION BE ENFORCED?

The great burden of Senator DOWNEY's book, They Would Rule the Valley, is that it cannot, because of unique underground water storage and percolation features in the San Joaquin Valley. Senator DOWNEY says of the proponents of acreage limitation: "They had to show how project water could be kept separate from other water, once it had been placed in a common ground table. They had to show how excess-land owners could be prevented from freely and legally pumping that intermixed water—or, if allowed to pump it, how they could be assessed for that unknown fraction of which the project contributed."

DOWNEY seems to be throwing up a straw man at this point. The excess-land owner can get water for his nonexcess land. He can go on pumping from an underground replenished by water brought in by the project. No one says that project water must be kept separate underground, nor that intermixed water cannot be pumped by all. But no irrigation district is going to let excess-land holders go unassessed for project water which excess-land holders themselves are saying will benefit their lands by raising the water level. Enforcement lies in the Bureau's plan to deliver water to districts for their nonexcess land only (the districts agree to deliver project water to the nonexcess acreages as they have been designated by the owners, or by the district when the owners fail to designate them) and in the district's recognized right to assess and tax for improvements.

If the excess owner does not use water, he can be taxed for the distribution canals of the district (irrigation districts already do this). If he gets surface project water, then he can be required to pay his water toll for the amount of water he gets.

Enforcement may not be simple, but it certainly is not impossible.

Because of the difficulty of enforcement claimed by opponents of limitation, they ask that the Central Valley project be exempted from acreage limitation, and they cite the fact that other projects have been exempted. But only 3 projects out of some 60 reclamation projects have been exempted by law from this provision, representing some 4½ percent of the area of approved reclamation projects.

Opponents of limitation go further and say that limitation should not be enforced. They say that the acreage limitation was put in for public lands that were reclaimed, and was not intended to apply to private holdings. This is a complete ignoring of history. Senator Francis G. Newlands, coauthor of the original Reclamation Act, made the following statement before the Sacramento Valley Development Association in 1905: "We realized in the framing of that act that it would not be fair to apply it only to the public domain, for within reach of every governmental project lie lands in private ownership, thirsting for water to be supplied by national aid, and we felt that it was as much the duty of the National Government to supply agricultural communities that were thus imperiled as to create new agricultural communities.

And so we provided that water rights could be secured for lands in private ownership within reach of Government projects, to be guarded against monopoly by preventing any proprietor from securing water rights for more than 160 acres, the amount of land fixed in the bill."

As a matter of fact, the fixed 160-acre limitation was put into the law precisely because private lands were to be served. The Secretary of the Interior already had the power to fix the size of farms sold from public lands to 160 or less. But Congress in 1911 wrote into the law a specific limitation of 160 acres for private lands eligible for water (the Secretary cannot alter that figure) to remove all doubt that private lands were eligible for reclamation project water, subject, of course, to reclamation law (as specifically stated in the statute).[1]

E. HOW DO THE FARMERS FEEL ABOUT ACREAGE LIMITATION?

There has been no adequate sampling of opinion to give a complete answer. Here are some indications:

The Grange people generally favor limitation.

The Farm Bureau officially favors repeal.

In some irrigation districts directors who favor limitation won recent elections; in others they lost.

Representative CECIL F. WHITE of the Fresno area defeated the incumbent, Gearhart, in the last congressional election in which limitation was made a big issue. WHITE favored limitation.

Irrigation districts in the San Joaquin Valley that have voted on water contracts with the Bureau have ratified them by overwhelming affirmative votes: Lindsay-Strathmore, 188 to 1; Lindmore, 422 to 28; Orange Cove, 432 to 122. However, these contracts provide that in the event of repeal by Congress, the acreage limitation no longer holds.

F. WILL ACREAGE LIMITATION MAKE FARMS MORE AVAILABLE TO VETERANS?

Not appreciably so at the present time, for landholders do not have to sell for 10 years after signing recordable contracts. In addition, practically no public lands will be reclaimed through this project.

But the general trend through the years will be toward greater availability of farm land to small landholders at uninflated prices. This will eventually help all young couples desiring to farm. But this project offers little in the way of a quick solution to veteran housing and need for farm land.

G. SHOULD THE GOVERNMENT COMPLETE THE CENTRAL VALLEY PROJECT AND THEN STEP OUT OF THE PICTURE?

1. First, it cannot by law until the construction charges are paid and its installations are purchased.

2. Second, if the State raises bonds to buy the project, we shall have to raise revenue to pay interest on the bonds, whereas Federal money is interest-free (it is said that the interest-free feature saves an amount more than one-half the cost of construction.)

3. The project involves benefits to so many diverse groups through its multiple purpose features (especially those of flood control and irrigation) that one agency should administer its major installations to insure fair treatment to all interests. The Bureau of Reclamation is equipped to do this under a well-defined law.

II. We conclude with the following observations:

A. The issues are complex in this matter, but their complexity has been deliberately exaggerated to confuse the public and to intimidate lay opinon. B. There is a moral problem involved in repeal, regardless of other objections brought up. What right has California to take money from the Federal Treasury interest-free, and then ask to be exempt from the public-welfare features of the law by which she is benefiting? D. The pink herring of socialism is being dragged into the fight for repeal of acreage limitation. If the Central Valley project as it is now administered is an attempt at socialism, it is a brand of socialism approved by Congress in 1902 and reinforced by Congressional action many times since.

III. On the basis of these findings we recommend that the Synod of California reaffirm its stand of 1947 urging the retention of the 160-acre limitation feature of the Federal reclamation law as applied to the Central Valley project.

[1] Concerning whether the acreage limitation was meant to apply to projects including private lands, the following bit of testimony before a congressional committee in 1947 by Assistant Commissioner of the Bureau of Reclamation, William E. Warne, is pertinent:

"Some of the early projects included only privately owned land, and on nearly all of the projects there was a considerable portion of private land. More than one-half of all the lands included was private owned at the time the projects were authorized, and about two-thirds of all lands under water contract with the Government in 1924 were in private hands by the time water was ready for delivery on the projects."

Far East Is the Prize in World Struggle

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 17, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the column entitled "Thoughts on Export," from World's Business:

THOUGHTS ON EXPORT

Sometimes I am appalled by the apparent fascination Europe has for our statesmen. I use "fascination" in the most charitable sense. But I know of no other way to express the dogged determination of our Government to ignore the Far East and the parade of events that has taken place there since VJ-day.

We have somehow firmly implanted in our minds the belief that the economic struggle for world power during the next decade will be over Europe. Nothing, it seems to me, could be further from the truth.

The world power fight will be for the vast prizes of the Far East. Yet, a strange mesmerism has focused our national attention on the side show in Europe. The stark truth is that in the Far East we are worse off economically, politically, and commercially today than we were on December 7, 1941.

In October 1945 when hostilities in the Pacific ended we were the most powerful influence in the entire east. Since then we have allowed ourselves to be fascinated by an air shuttle in Europe while the Soviet Union consolidated its political and economic position in the Orient at our expense. We have been out-maneuvered, out-thought, and out-flanked.

A lot of us who sweated in the Pacific during the late unpleasantness were amazed at the lack of understanding of the east that existed in Washington even during wartime. It was apparent then that most of our people in power here were utterly incapable of understanding the size, the psychology, the latent power, the potential wealth of the Orient.

From Australasia through the Indies, the Philippines, Japan, China, and India lies the richest potential market in the world. Much of it represents the last frontier yet to be penetrated by twentieth-century economy.

That we could fall for the kind of hidden-ball trick Russia has pulled on us in Europe while the Kremlin made the big grab in the Far East only gives further testimony to the hypnotic effect which Europe has on our policy makers.

There is no place in the world where our economic, commercial, and political stake for the next 20 years looms as large as in the Orient. Vast potential markets for American products exist in an area that needs our goods. We in turn need the raw material resources with which the Far East abounds.

Millions of people there need constructive guidance in self-government and the economics of modern life. Nowhere else in the world can you find whole populations so susceptible to change.

We are the only power in the world which apparently does not understand that Asia can be a great political and economic ally or even a greater enemy. The power-politics manipulators at the Kremlin know it, but we apparently do not; 10 Downing Street understands it; and in Asia the native sell-out artists have realized it for years.

Let no one think for a moment that the greater east Asia coprosperity sphere is a dead political issue, or the Black Dragon Society a decadent political club.

All through the east there are men who see a great future for their countries through alliances with western technology. It is, in my opinion, getting mighty close to the time when these native leaders are going to have to decide whether they will build their countries the democratic, communistic, or the Black Dragon way.

Take the Filipino peasant, for example. Life so far for him is little more than a nipa hut, a couple of mahogany chairs, a Singer sewing machine, a wife to wash his clothes, and a fighting cock to bet on.

The strange and astounding truth is that he rarely cares whether he is governed in the Republican manner, the Democratic manner, the communistic manner or Black Dragon fashion.

If he can have a little more than he has been used to, and not much more at that, he will go along with most any ideology that grabs the power.

It is hard, I know, for us to conceive of millions of people who will settle for very little. This one thing makes Asia the powder keg of the world. It is a rich economic and commercial prize, too, because whoever dominates it controls a market for fabricated goods and a hig hunk of the world's natural resources.

It is incredible that we could have blundered the way we have in the last 15 years in almost every far eastern move we have made.

It is really time we had an economic and political policy in the Far East, listened to the facts, and curtailed the perennial fascination the Old World holds for us. If we don't, when the State Department's dust clears, the sight we will see might not be pleasant to behold.

River, Harbor, and Flood Control Appropriations

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 17, 1949

Mr. CANNON. Mr. Speaker, under leave granted to extend my remarks, I

am including a tabulation of items in the civil functions, rivers, harbors, and flood control appropriation bill, and amendments added by the Senate. The bill with amendments carries a vast number of projects and has been in conference since June 1.

Under the continuing resolution passed today, all projects under construction are continued in operation pending adoption of a conference report and final enactment of the bill. So no project is prejudiced in any way by time consumed in conference between the two houses.

For the information of Members of the House who have items in the bill I list below the individual projects to which the House conferees are agreeable and for which they favor appropriation of adequate funds.

Those projects to which there is no objection among the House conferees are set forth in the following tabulations which include, onto each project, the estimated cost, the amount appropriated to date, the unobligated balance on June 30, 1949, the budget estimate for 1950, the amount allocated under the House bill by the Corps of Engineers, the amount allowed by the Senate and the amount which the House conferees are agreeable to including in the bill for 1950.

We shall be glad to supply any other information available in which the Members of the House may be interested.

Rivers and harbors

Project	Total estimated Federal cost	Amount appropriated to date	Estimated unobligated balance, June 30, 1949	Amount of budget estimate	Amount allowed by House as allocated by Corps of Engineers	Amount recommended by Senate	Amount to which House conferees are agreeable

MVA Is Plan of Communists—Jensen Says National Control Is Aim

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. O'SULLIVAN. Mr. Speaker, the following newspaper article was copied from the news and editorial section of the Omaha (Nebr.) Sunday World-Herald of August 14, 1949, as prepared by its Washington, D. C., bureau, located at 1374 National Press Building. Heading the article was a picture of a stern, grim-visioned man of supererect stature, all of which was indicative of a sincere determination to meet and grapple with a world monster of no less proportions and designs than chaos-welcoming, liberty-destroying, people-enslaving communism.

MVA Is Plan of Communists—Jensen Says National Control Is Aim

Representative Ben Jensen, Republican, Iowa, envisions a situation in the United States where 33 men "could completely control America."

That would be if the valley authority idea were to become law in the 11 river basins of this country.

Figuring that would create 11 boards of three men each, Mr. Jensen says:

"The 48 States could very well be expected to lose their sovereign rights and identity, and we would have in their place 11 separate powerful regions or valley empires."

"HOPE OF COMMUNIST PARTY"

Whoever controls the waters and the power facilities of the Nation controls the Nation, he says.

Mr. Jensen charged that the program for 11 valley authorities is the "recommendation

and hope of the Communist Party of America. They know that so long as our Nation is composed of 48 States that are free and sovereign, whereby the people of the respective State elect their public servants, communism never can completely take over here."

The Iowa Congressman said a United States Senator told him that he got into a Communist meeting 21 years ago and heard the speaker declare that it was the party's aim to form 11 valley authorities.

SENATOR CONFIRMS IT

The World-Herald questioned the Senator, who said it was true—through an acquaintance he was able to get into a Communist meeting in 1928, when the speaker did make such a statement.

Since then, he said, he has sought to learn if the Communists have that as part of their platform. He said he had not been able to establish that it is.

Mr. JENSEN is vehement on the subject of valley authorities.

He recently told Assistant Secretary of the Interior C. Girard Davidson that, as a member of the House Appropriations Committee, he never would vote another dime for either the Columbia or the Missouri Valley if authorities were imposed on them.

TOO MUCH AUTHORITY

Some time ago, he said, he visited with the three members of the board of the Tennessee Valley Authority. He said he told them they had too much authority.

Later, he said, one of the board members came to him privately and told him that he was absolutely right.

"Don't ever let another authority be imposed on the country," Mr. JENSEN said he was urged.

After reading and considering the foregoing, one is reminded of the story of the frivolous, fun-loving shepherd in the fables of Aesop who cried "wolf, the wolf is coming," time without number, and sent the husbandmen and town folks a-scurrying to onslaughts which were nonexistent, until their senses of responsibility and awareness became so dulled that one day they failed to respond with the usual quota of clubs, scythes, pitchforks, axes, and so forth, when the wolf actually sprang in earnest from his lair upon the helpless sheep, not only to the great consternation and chagrin of the doltish shepherd, but to his personal and great financial loss, the wolf having killed his favorite ewe.

I agree with but one paragraph of the World-Herald statement attributed to my colleague, Mr. JENSEN, and that part of same concerning which I am in agreement is the following:

Whoever controls the waters and the power facilities of the Nation controls the Nation.

No one may correctly refute that statement as the happenings of the past unholy years by private power interests so abundantly disclose.

In fact I would amend that statement to read that "whoever controls the power facilities of the Nation controls the Nation."

Some of the unholy extreme right-winged private power brood all but had the stranglehold, or the "tramp-hitch," upon the Government of the United States and its people, when Senator George W. Norris, of Nebraska, a real political warrior for the people, and other colleagues of the Senator, and Congressman JOHN RANKIN, of Mississippi, and other colleagues of that Congressman, and many other American-loving people in private life, gave battle to the many-headed monster, these private power holding and other companies, and temporarily stopped their throttling endeavors.

To my way of thinking the most formidable enemy of the Republic and its people today is not the extreme left-wingers, but the extreme right-wingers, and in this group are to be found many of the private power interests and their financial backers. This group like all others who are mothered by the wicked brood of extreme right-wingers never sleeps. They are "day in and day out work around the clock boys" who are and have always been tireless and inexhaustible in the ways of glorious larceny, as distinguished from grand and petty larceny—that type of larceny which is above and beyond the law.

It is an interestingly sad day indeed when in this great and enlightened present we learn for the first time that the revered and respected Senator George W. Norris and all of his supporting stalwarts who have now joined the aristocracy of death were the tools of communism, wittingly or unwittingly.

It is also an interestingly sad day indeed when in this great and enlightened present we learn for the first time that our scrappy and meteoric colleague, JOHN RANKIN, and all of his supporting stalwarts who are still with us in the flesh, have been and are now the tools of communism, wittingly or unwittingly.

I would sooner believe that Michael, the archangel, and Lucifer had joined forces to execute a bipartisan plan to half save and half damn mankind than believe that these men, afore-mentioned, wittingly or unwittingly, would betray for reasons of betrayal only or otherwise, the form of government of their Republic for which they spent a lifetime of devotion and ceaseless endeavor. To accuse my colleague, JOHN RANKIN, of carrying out the plans of communism is a bigger lie than was ever conceived by the author of Mein Kampf, conceived 21 years ago.

No; these extreme right-wing private power interests can never make me believe that. I am not now and never was so gullible.

I am sorry that they were able to convince my honest, sincere, and fearless friend and colleague from Iowa, Mr. JENSEN, that such is the fact.

I believe that the Un-American Activities Committee of the House of Representatives should subpena the Senator named in the World-Herald article and the World-Herald reporter who interviewed him and all other witnesses who claim that the 11 authorities named in the article are the foundations of communism in this Republic. The people should know the names of these accusers and the basis of their accusations.

I for one am more inclined to believe that the extreme right-winged private-power groups are laying the foundations, unwittingly, of communism than that an authority of the people such as TVA, is doing so.

The people control the waters of the Nation and should control the power of the Nation also, so that progress and all of its many blessings may be enjoyed by the people instead of ruthless, brazen, un-American men and interests.

Up to this writing I was somewhat on the fence as to the propriety of creating additional public authorities, such as the Missouri Valley Authority, but now I am for the creation of a Missouri Valley Authority and all other additional authorities.

The deceitful and ignoble propaganda of these extreme right-winged private power groups has convinced me that we must drive them from their present vantage points and make them amenable again to the laws of truth and decency.

In Nebraska these extreme right-wing private power groups, though vanquished from the Nebraska scene during the lifetime of Senator Norris, have silently and stealthily sneaked back like the weed-vine "Creeping Charlie" and are trying to get a new foothold there by choking out public power. They have successfully blocked many power projects in one way and another at dam sites and want to own and operate all transmission lines and again fleece the power users as they did in yesteryears.

We must stop these un-American interests now and one sure way to drive them to their financial holes is to authorize by proper laws new public authorities like the contemplated Missouri Valley Authority patterned after the TVA.

In conclusion, I would like to quote the following from an article appearing in a recent labor paper:

WHAT PUBLIC POWER MEANS

This is what public power means to Americans:

In 1933, when the Tennessee Valley Authority was created, there were only 250,000 consumers of electric power in the TVA area. Today there are 1,000,000.

Sixteen years ago, only 15,000 farms in the Tennessee Valley had electricity. Today TVA serves 300,000 farmers.

TVA has benefited every American. Federal income-tax payments from the area have increased largely because of the prosperity which TVA has brought.

In the past year Tennessee Valley residents have spent $100,000,000 for electrical appliances made in the North and East.

These facts show what TVA has done for one section of the country and what a Missouri Valley Authority, a Columbia Valley Authority, or a Connecticut Valley Authority could do for other parts of the Nation.

Repeal of Excise Taxes

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein copy of a letter concerning the repeal of excise taxes which was re-

cently written by the distinguished majority leader of the Senate, the Honorable SCOTT W. LUCAS.

I believe that Senator LUCAS has accurately stated the views of a majority of the Congress and I earnestly hope that the administration leadership may see its way clear in the near future to take favorable action on the repeal of the unwarranted, onerous, and discriminatory war excise taxes.

UNITED STATES SENATE,
OFFICE OF THE MAJORITY LEADER,
Washington, D. C.

This will acknowledge your communication of recent date, with respect to excise taxes. I should like to give you my candid views about this matter.

As you know, we enacted into law during the war a number of excise taxes. Everyone agrees that some abominable inequities exist. Yet the Ways and Means Committee of the House of Representatives has not to date brought forth legislation which would strike from the books these wartime taxes.

In a recent message to Congress, the President of the United States suggested that one of the taxes be eliminated, namely the transportation tax.

It is true, the Senate committee voted 7 to 6 for the Johnson amendment, which seeks to remove 50 percent of the excise taxes placed thereon during the war. H. R. 3905, containing the Johnson amendment, is now on the Senate Calendar. My personal opinion is that this amendment will not do the job. I feel any reduction in excise taxes should be in full and not in part. My reason for believing we should have total repeal, if we are to repeal any excise taxes, is the stimulation such repeal would have upon business. If the job is only half done the consumers' buying power will continue to wait until the entire tax is removed.

There is a strong sentiment in the Congress for the repeal of most of the excise taxes. Personally I think it would be a tremendous stimulant to business.

In conclusion, I wish to say it is the duty of the Ways and Means Committee of the House of Representatives to consider tax measures in the first instance. From information I have, I feel certain that the Ways and Means Committee will not consider the repeal of excise taxes during this session of Congress.

With every good wish, I am
Yours most sincerely,
SCOTT W. LUCAS.

A. F. of L. Council Calls for Action to Aid Spot Unemployment

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 17, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the American Federation of Labor Weekly News Service for August 16, 1949:

A. F. OF L. COUNCIL CALLS FOR ACTION TO AID SPOT UNEMPLOYMENT—BACKS TRUMAN'S MOVE, CO-OP HOUSING BILL, PUBLIC WORKS

TORONTO, CANADA.—In an optimistic report on American economic trends, the executive council of the American Federation of Labor urged a 3-point program to combat sporadic unemployment.

First, the council gave its endorsement to President Truman's directive that Government agencies increase their purchases in communities seriously affected by factory shut-downs and unemployment.

Second, the council called upon Congress to approve the preparation of a "shelf" of public works projects which could be swung into operation promptly in localities needing a stimulus to business activity.

Third, the council emphasized the need of prompt congressional adoption on the pending housing bill which would authorize low-interest Government loans to cooperatives and nonprofit groups for the construction of moderate-rental apartments acutely needed by the Nation's workers.

At the opening session of its midsummer meeting here, the executive council hailed mounting evidence that business is picking up throughout the Nation.

A. F. of L. President William Green told his press conference that the council was especially gratified by reports that unemployment is leveling off and that the backlog of orders for manufactured products is increasing. The banner season in building construction, he said, is helping to revive industrial production generally.

Before adjourning its sessions here, the executive council will participate in shaping future plans for the 1950 congressional election campaign through the machinery of Labor's League for Political Education; review legislative developments affecting labor; formulate AFL's policies on the international labor front in connection with the forthcoming establishment of a world-wide organization of free-trade union centers, and draft its annual report to the October 3 A. F. of L. convention at St. Paul, Minn.

Because of the press of work, the council voted to hold regular night sessions in an attempt to wind up the meeting within 1 week.

The text of the statement issued by the council on economic conditions follows:

"The executive council is gratified by cumulative indications that business activity is increasing and that unemployment is l eling off.

"We wish to reiterate at this time that there is no justification for an economic depression in the United States. In fact, we attribute a good deal of the recession talk which was current earlier this year to a deliberate propaganda campaign designed to clamp the brakes on wages.

"While unemployment has now reached a total of 4,000,000 according to Government estimates, employment is still near the high 60,000,000 figure and serious dislocations have occurred only in relatively few localities and in few industries. As a whole business conditions are good and showing improvement.

"Nevertheless when unemployment reaches the highest point since prewar days, it is time for action. We commend President Truman's order to Government agencies to increase purchasing in communities which have been hard hit by factory closings and unemployment. We also emphatically urge that Congress authorize the preparation of a shelf of public works projects as a preparatory and precautionary step. Such projects could then be put into operation to stimulate business activity and create jobs in any locality which may encounter an emergency situation.

"Furthermore, the executive council calls upon Congress to approve before adjournment pending legislation to encourage the construction of moderate rental apartments for families just above the low-income group. This legislation, which would involve no Government subsidies but would authorize low-interest loans to cooperatives and nonprofit groups to build apartments, is badly needed to supplement the public housing and slum-clearance program already approved by Congress. The shortage of rental housing in the $50 and $60 a month level is acute and new construction activity in this field would serve as a stimulus to all of industry."

Middle Income Housing

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 17, 1949

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of the resolution recently adopted by the State convention, Minnesota Department of the American Legion, regarding the need for additional housing legislation for middle-income families and veterans. I should mention that some time ago I introduced H. R. 4639 which would implement this resolution, and I was pleased to learn that the Senate Banking and Currency Committee has recently reported favorably on S. 2246 which provides for such housing legislation.

RESOLUTION ON HOUSING

Whereas the prewar shortage of housing, intensified by the war, has created a housing tragedy in this country which especially strikes at veterans, millions of families live doubled up or in slums, or cannot afford a home of their own because of the failure of the housing industry to meet the needs of the American people, a recent survey shows over 10,000 families live doubled up in St. Paul. The majority are veterans. But Congress has now enacted Federal public housing legislation. This new law makes a beginning toward meeting the housing needs of the people. However, its slum clearance, public housing, and farm housing provisions will make only a dent on the problem of rehousing the millions of families who now live in slums, and in providing homes for families now doubled up with others. Its public housing provisions for only 810,000 units in the next 6 years falls far short of actual needs. Its restrictions that allot this housing only to those in the lowest 20 percent income group, mean that veterans in the middle-income brackets cannot avail themselves of this housing. No provision is made for families whose incomes are too small to pay the prices charged by private builders but who are above the limit set for occupants of public housing; and

Whereas Senator SPARKMAN has now introduced a bill—S. 2246—an omnibus housing bill enlarging the National Housing Act, increasing appropriations for loans to $1,250,000,000; and

Whereas this bill provides for financial assistance to be made available by the Federal Government in the form of long-term loans, at a low rate of interest, for housing projects undertaken by cooperative ownership or other nonprofit housing corporations. This means loans at approximately 3 percent interest with maturities not exceeding 60 years. This means that veterans in the middle-income group could afford a $10,000 home which at a 40-year, low-interest amortization would cut the cost of the monthly payments on such a home to about $40 a month; and

Whereas we are appreciative that our national vice commander, the American Legion, Walter E. Allesandroni, appeared before the Senate Banking and Currency Committee on July 27, 1949, in support of the general provisions of S. 2246: Therefore, be it

Resolved by this Minnesota Department of the American Legion, in convention assembled at St. Paul, August 11-13, 1949, That we actively work for and support this piece of legislation so urgently needed by veterans and their families, with the following addition—include direct low-cost Government financing to veterans where same cannot be obtained from private sources; that this resolution be forwarded to national convention of American Legion for positive action there, and that copies of this resolution be sent to our Minnesota Senators and Representatives and to the President of the United States.

Military Assistance Program

EXTENSION OF REMARKS
OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 16, 1949

Mr. LODGE. Mr. Speaker, in an effort to provide my colleagues with information regarding the military assistance program legislation, I am inserting in the RECORD a copy of a letter which I wrote to the Secretary of State, Mr. Dean Acheson, on July 27, together with a copy of Mr. Acheson's answer dated August 15. I hope that this information will prove helpful.

JULY 27, 1949.

DEAR MR. SECRETARY: In connection with the proposed military assistance program, the principle of which I support and advocated in a speech on the floor of the House on August 6, 1948, I should like to propound a few questions. I realize that these questions cover only a few of the vast and complex implications of this undertaking. They seem to me to be vital.

1. Is it the view of the Department of State that the military plan for western Europe should be based on European rather than on national considerations, thereby effecting significant economies, and furthering the goal of a European federation, which is also a principle objective of the European recovery program?

2. Is it proposed that insofar as practicable there should be a gradual standardization of arms in the countries receiving military aid from the United States in order to work toward (a) substantial economies in military budgets; (b) a simplification of the problem of rearmament, logistics, and the furnishing of spare parts; (c) greater strategical strength of the nations involved and particularly of "uniforce"; and (d) a European federation?

3. Is it the view of the Department that military aid to Korea is more important and urgent with relation to American national security than military aid to China?

4. Are the nations which are to receive military aid making a military effort comparable to that of the Soviet Union, taking into consideration their relative size and population, their economic strength, and the over-all objectives of the European recovery program?

5. Has the Council of Western Europe, acting under the Brussels Pact, evolved plans which make it appropriate that we should proceed at once with the full amount of the military aid required rather than, as has been proposed by certain Members of Congress, notably Senators VANDENBERG and DULLES and Congressman VORYS, proceed with an interim aid bill until the Council, to be established under article 9 of the Atlantic Treaty, shall have developed a comprehensive logistics, tactical, and strategical plan involving specific assignments?

6. Will the military aid to be furnished result within the period of the proposed legislation in a corresponding or substantial reduction of our domestic military budget as advocated by Dr. Nourse, Chairman of the Council of Economic Advisers, or will MAP be, in his words, "a simple addition to other military plans as they stood before the new alinement"?

It is my conviction that while the will of the Europeans to resist aggression must be stimulated by this tangible expression of our resolve to preserve the peace, MAP must be based on a prudent regard for our own resources and must be the implement of a global rather than a piecemeal foreign policy.

I believe that answers to the above questions will be helpful to the Congress in passing on this important measure.

With kind personal regards.

Sincerely yours,

JOHN DAVIS LODGE.

AUGUST 15, 1949.

Hon. JOHN DAVIS LODGE,
House of Representatives.

MY DEAR MR. LODGE: I refer to your letter of July 27, 1949, in which you raise certain important questions with regard to the proposed military assistance program now under consideration by the Congress. The questions which you have raised are indeed vital and I am grateful to you for the opportunity of expressing views with respect to them.

In your letter you ask:

1. Is it the view of the Department of State that the military plan for western Europe should be based on European rather than on national considerations, thereby effecting significant economies, and furthering the goal of a European federation, which is also a principal objective of the European recovery program?

The Department is convinced that military strength in Europe must be developed on a collective rather than on an individual basis. The military assistance program which is proposed is not designed to build up separate balanced military establishments. It is designed to strengthen the collective defense capacity of the nations associated in the North Atlantic Treaty by providing assistance to those European members which require such aid, in kind and amount appropriate to the role which each would play in a common collective defense. It is our belief that this procedure will make possible significant economies and that it should contribute materially to the creation of an atmosphere and experience of collaboration and cooperation which will further the development of a closer political and economic association in Europe.

2. Is it proposed that insofar as practicable there should be a gradual standardization of arms in the countries receiving military aid from the United States in order to work toward (a) substantial economies in military budgets; (b) a simplification of the problem of rearmament, logistics, and the furnishing of spare parts; (c) greater strategical strength of the nations involved and particularly of "Uniforce"; and (d) a European federation?

The provision of military assistance as has been proposed to the Congress is in itself a major contribution toward the goal of standardization toward which we must all work. In particular the provision of assistance which will enable the European countries to undertake additional military production affords an exceptional opportunity for achieving standardization on the production of new equipment.

Considerable success has already been achieved in reaching agreement on standardized procedures especially in the command and communications fields. It is our earnest intention to work as steadily and as rapidly as possible toward the achievement of the maximum degree of standardization.

It must be borne in mind, however, that in the present extremely weak condition of the European nations, insistence upon complete standardization might well result in a serious and extremely dangerous lessening of strength. It must also be borne in mind that standardization can never be completely achieved since, as each new development in research makes it possible to improve upon the equipment in existence, it becomes necessary to effect changes in order to be certain that the benefits of these developments is fully utilized.

3. Is it the view of the Department that military aid to Korea is more important and urgent with relation to American national security than military aid to China?

If military assistance to China could be made effective at this time, it would be more important to American national security to send such aid than to send aid to Korea. However, as has been stated, the executive branch of the Government is firmly convinced that further provision of military assistance to the Chinese National Government is impractical and unlikely to be effective. It believes that the white paper recently published, which documents the record of assistance previously given to China, fully supports this conclusion.

It is the Department's belief that the provision of military assistance to Korea will enable the Korean Government to maintain internal security and to deal with external pressures short of an all-out attack. In view of the policy of this Government of supporting the United Nations and its decisions with respect to Korea and since there is in Korea a responsible Government capable of utilizing the assistance provided, it is both important and necessary that such aid be granted.

4. Are the nations which are to receive military aid making a military effort comparable to that of the Soviet Union, taking into consideration their relative size and population, their economic strength, and the over-all objectives of the European recovery program?

The military effort being made by the European nations and other countries to whom military assistance is proposed is, in the opinion of the executive branch, the maximum effort feasible without the secrifice of economic recovery and the maintenance of a stable economic system. Details with regard to the size and scope of military effort being made by these countries have been provided to the Foreign Affairs Committee.

5. Has the Council of Western Europe, acting under the Brussels Pact, evolved plans which make it appropriate that we should proceed at once with the full amount of the military aid requested rather than as has been proposed by certain Members of Congress, notably Senators VANDENBERG and DULLES and Congressman VORYS, proceed with an interim aid bill until the council, to be established under article 9 of the Atlantic Treaty, shall have developed a comprehensive logistics, tactical, and strategical plan involving specific assignments?

The executive branch of the Government is in complete accord with the view that assistance should be provided to the European members of the North Atlantic Treaty only if thereby the collective defense capacity of the group can be improved. It believes that there does now exist in fact a sound and adequate basis for the provision of assistance which will assure the accomplishment of this purpose, and it further believes that it is by no means necessary or desirable to delay the provision of such aid.

The Brussels Treaty powers—the United Kingdom, France, Belgium, the Netherlands, and Luxemburg—have already agreed upon

a plan for the defense of western Europe and, subject to the limitations imposed by the agreed priority to be given economic recovery, are jointly engaged to the limit of their abilities in the creation of the defensive strength required by the plan. It is highly significant that by invitation of these powers, representatives of both Canada and the United States have observed and participated in the discussions which resulted in the agreement on a defense plan and in the discussions dealing with measures required in support of that plan. It is even more significant that the United States Joint Chiefs of Staff have examined this plan in detail and have found it to be in consonance with United States strategic thinking.

Norway and Denmark, in their requests for military assistance and in the discussions which have taken place with them regarding their requirements, have clearly indicated their acceptance of the principle enunciated by General Bradley in his testimony before the House Committee on Foreign Affairs that the man in the best position and with the capability should do the job for which he is best suited. The emphasis placed by these countries on the types of equipment most urgently needed clearly demonstrate a determination to improve and strengthen their capabilities for the roles which would inevitably be theirs in the collective defense effort. The Italian request for assistance and the informal discussions regarding it likewise show Italian plans to be in conformity with the necessary role of Italy in collective defense which is of course limited by the provisions of the peace treaty regarding Italian military strength.

In his testimony, General Bradley pointed out clearly that a sound strategic plan must be based on considerations of geographical position, industrial capacity, populations, the will of the peoples, and their military capabilities. It is the firm conviction of the executive branch that the military assistance program has been so planned and will be so executed as to assure that it will aid in the development of that kind and amount of strength appropriate to the role which each country should play in a collective defense effort based upon the principles enunciated above.

It is also the firm conviction of the executive branch that the solemn commitments undertaken by these European nations in joining with us in the North Atlantic Treaty, taken with the tangible evidence of the common plan of the Brussels Treaty powers and the plans of the Norwegian, Danish, and Italian Governments, provide a maximum of assurance that further common defense planning will progress as rapidly as can be desired. To refrain from aiding in the creation of the strength which will be essential to the execution of that planning, until the planning has been completely perfected, serves only to delay in improving the security of the area and to prolong the period during which our ability to resist attack is not commensurate with our stated determination to do so. Such delay will be likely to be interpreted as indicative of suspicion and distrust of our allies, and may serve to create doubts both in their minds and in the minds of the Soviet Union as to the sincerity and stability of United States policy. Thus, delay in taking action which is actually required in our own interests instead of stimulating common agreement and effort may well make cooperation more difficult and less effective.

6. Will the military aid to be furnished result within the period of the proposed legislation in a corresponding or substantial reduction of our domestic military budget as advocated by Dr. Nourse, Chairman of the Council of Economic Advisers, or will the military-assistance program be, in his words, "a simple addition to other military plans as they stood before the new alinement"?

The military-assistance program which has been proposed is a program for the fiscal year 1950. A considerable period of time will be required for equipment to be rehabilitated or produced, for it to be packed, shipped, and put in the hands of men who are to use it, and for them to be trained in its operation and maintenance. It is clear that a degree of strength which would diminish our own security-expenditure requirements will not be achieved within this period. However, as the Secretary of Defense has testified, it is anticipated that the development of a balanced and effective defensive Military Establishment in Europe will in the long term make possible a reduction in our own national defense budget. If, as we hope, the program, together with other parts of our foreign policy, succeeds in convincing the Soviet Union that a policy of aggression should be abandoned and it is, in fact, abandoned, it will then be possible to effect a substantial reduction in the military expenditures of the pact nations.

The proposed program of military assistance is designed to support and strengthen other elements of our foreign policy with a view to achieving peace and security. We seek to assist in creating world conditions that will make it possible for the United States to preserve and to continue to develop its way of life. The military-assistance program is but one of the courses of action which must be pursued toward this aim. Its principal contribution will result from the extent to which it serves to deter aggression and to promote that sense of security which is essential to the establishment and maintenance of economic and political stability.

Sincerely yours,

DEAN ACHESON.

England Entering a Full-Dress Depression

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 17, 1949

Mr. WHITE of Idaho. Mr. Speaker, despite all of our cash and material contributions to England it appears from current press reports that England is entering a serious financial depression. Many of us remember when, after the First World War, United States Government bonds dropped to 86 percent. At that time Government bonds did not support the money in circulation.

The Seventy-second Congress in the closing days of the Hoover administration changed the law and made Government bonds eligible for rediscount by the Federal Reserve banks and security for the issuance of Federal Reserve notes in legal tender money. We now have over $28,000,000,000 in circulation. I dread to think what would happen if the price of our Government bonds fell to 70 percent of par value.

There is inserted herewith a press report taken from this morning paper, the August 17 issue of the Washington Post:

FAITH IN POUND SHAKEN—GOVERNMENT BONDS UNLOADED BY BRITONS; SOME GO AT 70 PERCENT

LONDON, August 16.—British investors are shedding Government bonds with frantic haste.

Some kinds can be bought in the London bond market for less than 70 percent of what the Government promises to pay when they come due.

The faith of the British people in their once-proud pound sterling is sorely shaken.

During the first 17 weeks of the Government's fiscal year beginning April 1, they withdrew £22,250,000 (equal to $89,000,000) more from their national savings accounts than they put in.

Vast sums are being taken out of Government bonds and put into things like real estate and gold-mine stock.

During one 3-week period in July and August the total value of British Government bonds shrank $2,000,000,000 on the London exchange.

One explanation given is what the British call the dollar crisis. The Labor government has been unable so far to give assurances that Britain can go on much longer earning, borrowing, or obtaining American gifts of dollars it must have to buy food and raw materials. If the Government fails, Britain faces privation, unemployment, and a crippling drop in national income. All this would make it harder to pay off Government bonds when due.

Also cited is the constant talk that the official rate of about $4.03 for the pound must and will be cut—despite Government denials. To the people, bonds represent pounds.

Two other theories are less widely cited. One is that the Government has issued too many bonds in payment to former owners of nationalized industry. The other is that bear selling upset the market.

The Labor Party newspaper, the Daily Herald, blames bear raiders who sell Government bonds for deferred delivery with the hope of buying them at a lower price when actual delivery is due.

United States Relations With China

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 16, 1949

Mr. LODGE. Mr. Speaker, reports indicate that the white paper denunciation of the anti-Communist government in China is having a most alarming and disintegrating effect. In order further to illuminate this distressing topic, I am inserting in the Appendix of the RECORD an interesting article by Arthur Krock which appeared in the New York Times on August 12, 1949, and also an article by Dorothy Thompson which appeared in the Washington Star on August 16:

[From the New York Times of August 12, 1949]

IN THE NATION—SOME OMISSIONS FROM THE WHITE PAPER

(By Arthur Krock)

WASHINGTON, August 11.—Only a group of experts, with full access to all the official records in Chungking and Moscow as well as in Washington, could write a sequel to the State Department document, "United States Relations with China," which would comprehensively expose its shortcomings and omissions and those of our postwar policy in the Far East. The State Department's white paper was prepared by more than 80 persons with knowledge of the circumstances, and with a file before them which is not available to reviewers.

For these reasons alone critics of our China policy are at a disadvantage. And even if a competent group should prepare a book as large as the white paper it could not have the authority of the official report, and could not be made available for $3, the price the Government is able to fix. Because of the length of the white paper, none of the ordinary private media of public communication can find room for an adequate summary, and public opinion therefore must be formed on highlights and broad outlines.

Nevertheless, it is possible, after spending many hours on the one thousand and fifty-four pages of the white paper, to note certain omissions (though the latter are generally half-completed statements or avoidances of blame-fixing in a report which asserts that its motto is "Let the chips fall where they may").

A CONTRAST IN EFFORT

1. The account exposes an anomaly of foreign policy to which the present situation in China and southeast Asia may fairly be charged. This anomaly is that the United States failed after World War II to follow the two-front wartime policy by which though giving precedence to the reconquest of Europe, it fought an effective war in the Pacific at the same time. Military concentration on Europe was not permitted to preclude offensive tactics in the Pacific, but concentration on the Marshall plan was permitted to preclude coming to grips with the postwar situation in China.

2. In his letter of transmittal of the white paper to the President, the Secretary of State, Mr. Acheson, speaks of the Yalta concessions as the "price" paid to Marshal Stalin, and adds that "the Soviet Union when she finally did enter the war against Japan could in any case have seized all the territories in question and considerably more, regardless of what our attitude might have been." But though Mr. Acheson describes the report as "a frank record," he does not point out that this expedient, after-the-fact reasoning repudiates the high-minded Stimson doctrine of nonrecognition in 1932 and Secretary Hull's flat refusal in 1941 to reach an accord with Japan by accepting the Japanese fait accompli in China.

Mr. Stimson, in identic notes to China and Japan, said the United States would never recognize the legality of any situation produced by aggression or treaty violation, a doctrine to which the oncoming Roosevelt administration subscribed in advance. Mr. Hull, in his talks with Nomura and Kurusu before Pearl Harbor, insisted that Japan withdraw its forces in China and declined to recognize Japanese hegemony in the Far East. Though the Stimson doctrine soured Japanese-American relations, and the Hull doctrine provided Japan with its excuse for Pearl Harbor, both Secretaries scorned the argument, which proved correct, that Japan would do what she wanted to do anyhow.

THE AIR FORCE AT YALTA

3. "Although the unexpectedly early collapse of Japanese resistance later," wrote Secretary Acheson, "made some of the provisions of the Yalta agreement seem unnecessary, in the light of the predicted course of the war at that time they were considered to be not only justified but clearly advantageous." He pointed out that President Roosevelt considered the issues at Yalta predominantly military and quoted W. Averell Harriman as later saying that Admiral Ernest J. King was aware of the concessions to Stalin and considered them the most important outcome of the conference. The clear implication is that Admiral King approved them on the theory that Russian participation in the war against Japan was essential to shorten the conflict and save countless American lives.

This point of view on Yalta has many defenders. But a search of the white paper fails to disclose an account of the contrary military opinion which was offered there but never got beyond Harry L. Hopkins. An Air Force officer was dispatched to Yalta with a well-documented report of Japanese weakness designed to fortify President Roosevelt to resist Stalin's price for entering the war. Its purport was that the Russians were not required for a victory which would come much sooner than the high Army-Navy command believed (this also before the atomic bomb was ready for operation).

The officer who brought the report to Yalta had a star on his shoulder. But it was obscured by the obstructing galaxies of five. His entreaties won a promise from Mr. Hopkins to read the report and show it to the President; however, it seems that something prevented Mr. Hopkins from doing so. It could have changed the history of these times for the better, yet diligent search fails to find any mention of it in the white paper. If it was omitted on the ground of incomplete verification, this correspondent is informed the Air Force could have established the facts as above stated.

[From the Washington Evening Star of August 16, 1949]

ON THE RECORD—STATE DEPARTMENT OFFICIALS INVOLVED IN CHINA POLICY SHOULD BE REMOVED

(By Dorothy Thompson)

The headlines have been kind to the white paper on United States-Chinese relations, summarized in Dean Acheson's letter. The New York Times headline: "United States puts sole blame on Chiang regime."

Dean Acheson's letter does not do that, but it marshals every rationalization for a catastrophic failure, with bland assurance that the American people will dismiss it and continue to trust. But it is the policy followed by the State Department, and its Far Eastern Division, which has failed according to its own confession.

POLICY NOT ITS OWN

And whatever one thinks of the Chinese National Government, it cannot be blamed for the failure of a policy which was not its own.

The responsibility rests with Dean Acheson's department, and those subordinates whose activities led to such a disaster obviously should be removed from office. For either the responsible persons deliberately contributed to bring about this catastrophe from sympathy with the Soviet Union, and a secret desire for a Communist solution, or they are intellectually incompetent.

Every policy will fail if the assumptions on which it is based are erroneous. Mr. Acheson's letter reveals that every major assumption on which the State Department's policy was based was fallacious. These were basically three:

(1) That "a prime object of our policy" should be "to bring Russia into the struggle against Japan in time to be of real value in the prosecution of the war."

(2) That for this purpose it was necessary to remunerate Russia at the cost of China.

(3) That the Chinese Communists were not Russia puppets but simple agrarian reformers.

ASSUMPTIONS UNJUSTIFIED

None of these assumptions was justified.

(1) When the secret agreement was made at Yalta, reestablishing for Russia "substantially the position she had occupied there prior to 1904," Japan was already defeated—without the atomic bomb—and had, according to unpublicized rumors, already made peace overtures via Russia.

2. Anyone with knowledge of Russian far eastern policy should have known that Russia would never permit a China solution to which she was not a party, and that therefore at the appropriate moment for her own interests, Russia would certainly enter the far eastern war to protect those interests.

3. That China's Communist leaders had played an outstanding role in Comintern policies since the Russian revolution and had never been repudiated by Stalin, was known to every student of the Comintern.

What has happened in China has logically followed from these erroneous assumptions. And if the persons responsible for them had a feeling of honor they would resign.

First Anniversary of the Republic of Korea

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, August 18 (legislative day of Thursday, June 2), 1949

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by President Syngman Rhee, of the Republic of Korea, on the first anniversary of the proclamation of the Republic, August 15, 1949.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF PRESIDENT SYNGMAN RHEE, OF THE REPUBLIC OF KOREA, ON THE FIRST ANNIVERSARY OF THE PROCLAMATION OF THE REPUBLIC, AUGUST 15, 1949

The first anniversary of the inauguration of the Republic of Korea marks the fourth anniversary of our liberation. Both the security and the stability of our nation have been greatly improved during the first critical year despite the difficulties that have beset us.

A year ago many among our friends, as well as our critics, were unconvinced that after a generation of foreign rule we Koreans would have the skill and experience to govern ourselves. Few expected that we should be able at once to start making headway against economic and military problems as serious as those existing anywhere in the world. As our first year of restored independence ends, the record speaks for itself.

NATIONAL SECURITY

When the Government of the Republic of Korea was inaugurated, Cheju Island, with its 300,000 population, was largely in the hands of brutal Communist terrorists. The election of May 10, 1948, could be held in only one of the island's three districts. By last spring, however, the Communist forces had been eliminated and the election was held peacefully.

Communists who had been allowed in the name of neutrality to infiltrate into our armed services before the government was in our hands, have been largely weeded out. The rebellion instigated by these Communist elements in the army at Yosu and Sunchon last October was promptly put down. The rebels who fled into the Chiri Mountains were captured and their attempts to inflame the people against the government failed.

Repeated Communist attacks across the thirty-eighth parallel have all been repulsed,

despite the aid which they have received from Russian and Chinese Communist forces.

Despite our limited supply of arms and ammunition, our army has been steadily and substantially increased in size and improved in quality. In the test of difficult mountain fighting on Cheju Island, in the Chiri Mountains, on the Angjin Peninsula, and all along the thirty-eighth parallel, the high morale and fighting ability of our troops have repeatedly been proved. The seamanship and courage of our Coast Guard have thrown a thin but determined shield around our long coastline. The police cooperating with the local officers and general public have proved their high sense of loyalty and responsibility.

Following the withdrawal of the last American troops, my statement of last April that the Republic of Korea would be fully capable of maintaining internal security—except in the case of a full-scale attack from outside—has been fully substantiated by the event.

In the homes and villages, in the cities and country districts of southern Korea, our people have remained loyal and steadfast, despite the propaganda, threats, and murderous attacks of our Communist foe.

Bolstered by the same love of freedom and independence that kept us a liberty-seeking nation under 40 years of Japanese rule and which kept us determined for self-rule during 3 years of division and occupation, the people of Korea have not faltered during the difficult first year of the Republic.

We have met the challenge of establishing a new government of our own under men and women unused to the technical administrative processes of large-scale democratic operations. We have woven together the long traditions of our 4,000-year-old history and the new formulations of modern democratic theory into a solid fabric of successful government. And we have done it while under a threat as great as that faced by any people anywhere in the world.

NATIONAL REHABILITATION

Even before our new government was inaugurated, the puppet Communist regime unlawfully operating in the northern part of our country shut off the flow of electricity across the thirty-eighth parallel. This loss of 80 percent of all our electric power was intended as a death-blow to destroy the Republic before its official life had even commenced. But today, a year later, we have neutralized that cowardly blow completely by generating as much electricity as we had before the power flow from the north was cut off.

With patriotic devotion our miners doubled and then quadrupled the amount of coal mined in south Korea. Our textile mills have almost tripled their production. Our railway transportation system is working better than ever before. Our stevedores and labor union have cooperated to reduce the average time of unloading ships from 1 month to 1 week.

Staggered by the ruinous division of our country and by 3 years of deterioration of our industries, our people have literally lifted themselves by their own bootstraps. Determined to have a better way of life for themselves and their children, our laborers have endured high prices and low wages. They have worked to fill our shops with the products of household industries, to replenish our markets with the teeming produce of the seas, and to feed our city workers with the harvests of the fields.

Despite the presence of almost 4,000,000 refugees, plus the natural increase of population, we have achieved better levels of health, nutrition, education, and public safety than a year ago seemed within the realm of foreseeable possibility. Without most of the basic essentials of life there has not been enough to supply all our people with all they need; but through sharing and sacrifice, the welfare of the great masses of our citizens has been hopefully advanced.

INTERNATIONAL RELATIONS

The Republic of Korea received overwhelming approval in the General Assembly of the United Nations as the only lawful government in Korea. In full cooperation with the United Nations Commission in Korea, we have sought by every means in our power to extend to our oppressed fellow countrymen north of the thirty-eighth parallel the full right of self-representation and free participation in their country's government. This effort, however, has been nullified by the ruthless refusal of the Communist puppet regime in the north to cooperate either with the United Nations or to follow the will of the 9,000,000 captive Korean patriots held under their police control.

During this first year of our national existence, full diplomatic relations have already been established with the United States, the United Kingdom, China, France, the Philippines, Canada, New Zealand, Brazil, Chile, the Dominican Republic, Cuba, the Netherlands, Greece, the Vatican, and Bolivia. During the coming year we hope to enter into the same friendly and formal relations with the other free nations of the world.

In accord with the other democratic nations of the Pacific area, we look forward to even closer cooperation in meeting the common problems of security, stability, and mutual prosperity. We welcome the initiative taken by Generalissimo Chiang Kai-shek and President Elpidio Quirino in calling for a Pacific pact—a step which I have long advocated for both security and economic reasons.

With the United States, the chief of our liberators from Japan, and the Nation that carried to the United Nations a fight for the restoration of Korea's unity and independence, our relations have been particularly cordial and beneficial. American military cooperation in our defense program and the economic support granted through the ECA are the principal factors enabling us to reestablish ourselves as a free nation and to make the fullest possible contribution of our own in the global struggle to safeguard democratic freedom against the aggressive drive of totalitarian communism.

In the world-wide alliance of peoples determined to be free, we believe that in our first year of renewed independence we have done our share. We intend in the future as in the past to stand shoulder to shoulder with the friends of freedom against every totalitarian threat.

GROWTH OF REPRESENTATIVE DEMOCRACY

The constitutional guaranties of freedom and well-being for every citizen have been the guiding stars of our policies.

We have carried out a land-reform measure that ranks in the forefront of economic democracy as practiced anywhere in the world. Under our new land laws, farm tenantry is in process of reduction almost to the vanishing point. The foundation of our new Republic has been solidly established upon a base of free agriculture by which all but a small fraction of our farmers are becoming owners of the land they farm.

With a zeal for democracy of which any nation could be proud, over 90 percent of all our adults—men and women—have taken their part at the polls in choosing the officers by whom they are governed. Freedom to run for public office and the freedeom of the secret ballot have been safeguarded for all. Few other governments, anywhere in the world, have been so solidly based upon so broad a representation of an unhampered electorate.

With no prior opportunity to establish a disciplined system of responsible political parties, this first year of the Republic has witnessed a growing consolidation of political views, without abridging the right of dissent within the broad framework of representative democracy. The necessary elimination of traitors seeking to betray our country into foreign control has been achieved while avoiding the opposite danger of creating a one-party state.

During this past year two world-wide surveys by a great American newspaper association have placed Korea in the very forefront of nations refraining from censorship of news reporting. We have thrown open our doors to press representatives from all the free nations of the world and have given them every possible access to the news and complete freedom from any kind of supervision in the stories they have chosen to write. Far from feeling we have anything we wish to conceal, we have welcomed and encouraged the fullest possible reporting of the news.

On this first anniversary of the inauguration of the Republic, I say again what I have repeatedly declared before, that we are striving to create a society that is free internally and free from foreign interference. We want every individual to have the utmost liberty of word, thought, and act, with the single restriction that none must be allowed to destroy the freedom of all in the false claim of freedom for himself. In this goal the administration, the national assembly, and the people of Korea are wholeheartedly united.

OUR FIGHT AGAINST COMMUNISM

Our joy in celebrating the anniversary of our national independence cannot be complete until the northern half of our beloved country is completely reunited with us. It is the Communists who are keping north Korea, after 40 centuries of unity as an inherent and integral part of one of the most homogeneous peoples in the world, from rejoining with us as brother to brother, sister to sister, and without bloodshed. We pledge ourselves here today never willing nor wantonly to shed a drop of Korean blood except to repulse an invader from beyond our borders or to resist and keep under control misled Koreans who, listening and succumbing to the false voice of communism, seek to overthrow our government by violence.

The voice of communism is a voice of empty promises. It promises you food, it promises you land and wealth, and it promises you freedom. How can they give what they have not?

These promises, if you accept them, are your submission to slavery. It matters not whether you live on an isolated farm or in a distant village or have your home in a town or in a city, you will be found and made a part of the Communist scheme of things and you will cease to exist as an individual and a free man.

Slavery, actual and effective, is the price of communism.

Your Buddhist shrine, your Confucian temple, your Christian mission, all will go the way of your other freedoms. In the place of the God you worship, you will have to abide by the remorseless dictates of a little group of men far away. These men search and skulk for power. We know their weapons. And I, as chief of state, can speak from experience. Assassination is the number one tenet of their attempt to seize control of the entire world.

Torture, arson, suspicion, the degradation of God and religion, the forcible degeneration of the individual to a mechanical assent of their actions through the horrible fears they implant in him—all these are only a few of the weapons they use from their arsenal of terrorism.

They strive to produce anarchy and chaos so that the citadel of oppression they rear upon the ruin of mankind may endure for the personal benefit of their limited number. For they, the few, prosper in direct ratio to the labor and obedience of the millions they have in their power.

Let me repeat: this is the anniversary of our independence. It is a new chapter in our long record as a free people.

We can balance, from the past, more than 4,000 years of life as a nation against our brief renaissance as a republic dedicated to the preservation of democracy.

There were prophets of gloom about us, as I have mentioned already. They said when our Government came into being that it would not live for 3 months. There were others who said that we will never escape from being a part of the United States colonial scheme. Little do they know the Korean people.

What do you suppose it was that kept us continuing the fight for Korean liberation for almost half a century? It was our faith in ourselves and also our faith in the ultimate victory of justice and right that kept us fighting—until we have come into our own.

The world today is at the crossroads of a momentous decision. The great victory won by American arms in the Pacific is in peril. We, of Asia, ponder the course of western diplomacy. The fires of communism, which may have been allayed in Europe, rage unhindered in the Far East. Korea may seem the "end of the line," correspondingly unimportant in what, to the Western World, has been a cold war.

To us Koreans, we are in the front line and battle formation. The fight we may be called upon to fight is the fight of all decent men everywhere. As we are helping the cause of global freedom at the risk of our lives, we are not ashamed to call upon the rest of the world for aid. If the democracies are left to face the whole weight of the Communist attack, one by one, they will inevitably fall. It is only standing together that the safety of all can be assured.

To quote Benjamin Franklin, who said in 1777: "Our cause is the cause of all mankind and we are fighting for their liberty in defending our own." We shall fight alone, if necessary. But I assure you we are not fighting alone. All the democratic nations in Europe and Asia are our allies, who have come to realize that the time has arrived when they have to decide either to fight for their existence or to succumb.

The Three Dangers: Government Spending, the Welfare State, and Government Wage Fixing

---

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. MASON. Mr. Speaker, the so-called Fair Deal, President Truman's substitute for the defunct New Deal, is fighting a battle along three lines in order to bring about and establish a form of government that its supporters now term "the welfare state." Call it what you will, socialism or the welfare state, it is simply leading us into a totalitarian government, or dictatorship. The three lines that have been activated and are being pushed are: first, Government spending; second, social security expansion including socialized medicine; third, labor control and wage fixing.

SPENDING OURSELVES INTO SOCIALISM

Mr. Speaker, the Eightieth Congress—the worst Congress in history according to the President—was the first Congress in 18 years to balance the budget and pay off part of the national debt. The people last November, because they were bamboozled and fearful, either voted against the Republicans nationally or stayed away from the polls in droves. The Eighty-first Congress has started us again on the road to national insolvency. That road may appear to many as a flowery road without thorns—a paradise in disguise—but in reality it is a road full of obstacles, hidden pitfalls, and economic ills that lead to financial chaos, national bankruptcy, repudiation, and dictatorship.

It is not necessary for our Fair Dealers to vote to put economic shackles upon the people. All they have to do as they well know is to vote for bigger Government expenditures, to keep adding to the national debt, to continue getting the Federal Government into business. Given a little time they can socialize the Nation through this process just as surely as the sun rises and sets.

Will the people ever awaken to the fact that they can spend themselves into difficulties from which they cannot escape? They cannot do this and still retain their representative government. England has taken this road and cannot turn back. Let us hope and pray that our people will see the light before it is too late.

THE FAMILY WELFARE STATE

Mr. Speaker, today we are hearing much about the "welfare state" wherein Uncle Sam is to do everything for everybody and it is not to cost anyone a red cent. History records that the first real welfare state existed during the days of the Roman Empire, when people wanted to eat their cake and have it too. Justice Douglas of the Supreme Court is quoted as saying at a labor union meeting recently, "The human welfare state is the greatest invention of the twentieth century." Apparently Mr. Douglas never heard what happened to ancient Rome and how it died by suicide. President Snyder of Northwestern University says we should learn from the collapse of the Roman Empire. He states, "Rome was quite literally the mistress of the world. The Roman citizen, like you and me, enjoyed freedom within the law of his own making, and Rome maintained peace wherever her eagles gleamed in the sun. Then, not swiftly, but steadily, as darkness wraps itself around the earth after sundown, the Empire crumbled."

Rome fell because a hardy race succumbed to the insidious poison of the idea that "government will do it"; because rulers bought power at home and favor abroad by gifts of treasure and food. Roman politicians gave their citizens bread and circuses. Are we too being lulled to sleep by the promises of false security and the artificial belief that everything will be "heaven on earth" if the Congress will but put the human welfare state into being? Congress and the country should carefully survey present-day trends. They should study the road we are traveling. Promises of the "walfare state," with everything for nothing simply means that freedom and liberty go out the window, and the common people lose their freedom. Take warning! Look at Russia today.

LABOR CONTROL AND WAGE FIXING

Mr. Speaker, the danger confronting us today in connection with the efforts of the administration to take over and control American industry, and especially to establish wage fixing as a Government function, is so well expressed in a Chicago Tribune editorial contained in the issue of Monday, August 15, 1949, that I insert same as a part of these remarks. The editorial is entitled "Mr. Randall to the Steel Board."

MR. RANDALL TO THE STEEL BOARD

The powerful statement made by Clarence B. Randall, president of Inland Steel Co., to Mr. Truman's fact-finding board in the dispute between the CIO steelworkers and the steel industry is a classic of straight thinking and clear expression. It could become a landmark in the struggle to reassert liberty in America in the face of the gradually extended encroachments and usurpations of big government.

As Mr. Randall asserted, what the board may say or do is of small importance compared to "the fact that you are here at all." Collective bargaining is a process between management and workers. If agreement is not reached by direct negotiation, the Taft-Hartley Act, the statute on the books, provides that a strike can be deferred while a Presidential board investigates the issues. Such a board has no power of recommendation.

Mr. Truman deliberately refused to avail himself of the law. He dragooned the steel companies into accepting a board of his appointment after Philip Murray, of the CIO, had studiously refused to entertain the offers of a single steel company. The intention of Mr. Murray and his political ally, the President, was to maneuver 63 steel companies into a position where all of the force of the Government could be put behind the union in its attempt to impose a dictated industry-wide settlement affecting wages.

Mr. Randall told the board to its face that "no thoughtful person should be deceived by the naive suggestion that your findings are to be recommendations only. * * * If management in a particular steel company feels it must take exception to your findings, an attempt will be made to forget the word 'recommendations,' and to whip up public opinion to force company acceptance. This I say my company will resist."

But these prospects, Mr. Randall observed, are of far less significance than the fact that Mr. Truman, by decreeing the formation of such a board, was, in fact, "announcing an industrial revolution in America. * * * Through this means, whether he knew it or not, he has proclaimed that wages shall be fixed by the Government. This step is always the first one taken by those who set out to establish a socialist or corporative state. The fixing of profits comes next, and then when incentive is killed and production falls, the final step of nationalization follows.

"If the collaborative strategy of Government and a union monopoly succeeds this time," Mr. Randall stated, "collective bargaining will never come back. The precedent attempted, reflecting the similar attempt made by Mr. Truman in 1946 to break down

the Railroad Labor Act, would commit the Nation to Government wage fixing in perpetuity."

Mr. Randall ended with a direct appeal that the three members of Mr. Truman's board rise above their petty political function and declare of their own motion "that the very establishment of this steel fact-finding board is in itself a bad thing for the United States."

It has often been said that industry has failed to represent itself well to the people because it lacks articulate and persuasive spokesmen. Mr. Randall is a denial of the merit of that contention. An industrialist and manager has come forward to fill the vacuum created by the weakness of the political opposition to oppressive big government. An individual has fixed a line of attack to which the people may rally when the party in opposition has, by its silence, allowed the greatest issue before the Nation to go by default.

Now, Mr. Speaker, the final result, if our Fair Deal administration's efforts are successful, will be what they have in England today, namely, socialism in action. The following newspaper article gives the essential facts covering the situation:

SOCIALISM IN ACTION

Let's put away all the $10 words and call a spade a spade. Socialism—in plain English—is nothing more nor less than political management of the lives—the total lives—of people.

Somewhere back in history—around 1776—it seems we polished up some muskets, rammed 'em with gunpower, and stopped the first attempt to manage our lives. And again in 1917. And again in 1941.

What manner of people are we who will fight at the drop of a hat to prevent control from the outside—and submit blindly to conquest of our lives from within?

Step by step—inch by inch—the starry-eyed dreamers and planners in our midst go on and on—plotting and planning more control of our business machine—without which this Nation would swiftly lose its power and its greatness.

Step by step—the burden of taxes grows heavier—stifling business growth and progress—undermining our capacity to create jobs.

More and more, restriction follows restriction. More and more, political management of our lives—our total lives—makes a farce of democracy—the last genuine democracy on earth.

That—Mr. and Mrs. United States Citizen—by whatever name you choose to call it—is socialism in the making.

That is the same bag of political tricks that has finally made the courageous, fighting people of England victims of a busted economy. Victims, finally, of political management of business.

Under political management last year in England, civil aviation lost $100,000,000, coal lost $108,000,000, railroads lost an estimated $100,000,000.

And who pays the bill? The people, of course—in taxes that kill all initiative—all desire even to work for more than the bare necessities of life.

A $40-a-week worker in England works 12 weeks out of the year to pay his taxes.

Austerity—they call it. The other word for it is starvation.

And what is the prospect of relief? None—as long as business remains under control of politicians who know nothing of business operation and management.

This is socialism in England—in action. This is political management in action. Management that has driven prices up and the standard of living down, turned profits into losses, lowered production, reduced the quality of goods and services. Management that will finally run the total lives of people at a loss—a loss of pride, of dignity, of freedom, of all that we hold sacred.

In England—it may be too late. For once a nation gives up its freedom—submits to those who seek power for power's sake—there is small chance of escape.

In this country—where your freedom is at stake—it is later than you think, and the decision is yours. Before you decide that you will allow United States business—your business to be politically managed—your life—your total life—stripped of the freedoms you have known—it will profit you well to watch out for this thing called socialism—because brother—you don't know the half of it.

Socialistic Utopia on the Rocks in Great Britain—Uncle Sam Gets the Blame

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including another informative article by E. T. Leech, editor of the Pittsburgh Press, which appeared in the Washington Daily News on August 17:

UNITED STATES HELPS FILL BRITAIN'S TILL; PROVIDES EXCUSES FOR TROUBLES

LONDON, Aug. 17.—Socialist Britain doesn't like capitalist America. Nothing personal, but as a matter of principle. Socialism and communism, whatever their other differences, agree on one point. They hate and distrust free enterprise. They want to overthrow it.

British Government heads are careful not to stress this at a time when they are asking a half-billion-dollar boost in this year's Marshall aid. But in their domestic politics and their appeals for home consumption, they make no bones about it.

American high prices were blamed for swallowing up the United States loan to Britain 3 years ago, and when American prices fell, America again got blamed for causing England's dollar shortage. In either case, it was that old "debbil" Uncle Sam.

The Labor Party recently issued its official statement for the 1950 general election, as a booklet called Labor Believes in Britain.

Socialism, says the preamble, "will create a new age of peace and plenty, opportunity and justice."

"To this end," it continues, "we seek freedom from the enslaving material bonds of capitalism."

These same "bonds" have provided Britain's Socialist government with about $6,500,000,000 since the war. Canada has furnished around $1,000,000,000 more. It is gone, and more is needed.

The 30-page Labor Party platform makes only three brief, passing references to this help. The only one which is more than a phrase says:

"Soon after we took office lend-lease ended abruptly and world prices have risen steadily against us. Help has been honestly earned and thankfully received from our friends in the United States and the Commonwealth. But we have had to fight our way forward every inch."

When the booklet was issued high prices in America were the official excuse for most of Britain's problems. It was the reason given why the $3,750,000,000 United States loan lasted only about 18 months, instead of the expected 5 years.

CAN'T WIN

Just after the platform came out, American prices fell. That fall is now blamed for England's present financial crisis. Britain can't sell export goods, goes the excuse, because she can't earn, by around a billion and quarter dollars a year, what she needs to pay for the raw materials which she must buy with dollars.

The United States not only helps fill England's treasury, but provides handy excuses for most of her troubles.

PUBLIC KNOWS LITTLE ABOUT MARSHALL AID

So far as the British public is concerned—those who cast most of the votes—little is known about Marshall aid. This is understandable, for it is on a high financial level where few individuals move. The average citizen never sees or receives any object which he can directly connect with Marshall aid—as was the case with lend-lease supplies.

The Government issued a popular pamphlet explaining fairly how the Marshall plan works, but probably few British saw it. Inquiry among various children brought replies that the topic was never mentioned in school. You hear almost no mention of it outside business and political circles.

The extent of American help is unknown to large masses of the British people. Those who get it are far less aware of its existence than are the American taxpayers who provide it. Which is probably natural.

MEANS FOOD AND JOBS

Yet it means food and jobs to England. A Government memo estimates that without Marshall aid, British food rations would have to be cut more than a third. The butter ration, for example, would be reduced from 3 ounces a week to 2 ounces, and sugar from 10 ounces to 6. There would be fewer eggs—which now average about 2 per person per week. Raw materials would be lacking to keep industry at its present level, and this would cost 1,500,000 jobs. On a population ratio, that is the equal of 5,000,000 American jobs.

This gives an idea what capitalist America is doing to put Socialist Britain on its feet. There is a widespread belief among conservatives and other observers that without Marshall aid the Socialist government would have collapsed some time ago. Which does not mean, however, that Britain would have turned conservative. She might have gone further left.

MARSHALL PLAN GRAVELY THREATENED: THE REASON

Right now, the Marshall plan is gravely threatened. Recovery is in dire peril, after it seemingly was well started. The big reason is the British financial jam.

Britain is the most important of 19 nations getting Marshall plan help. She got $1,139,000,000 last year—or one-fourth of the total sum. Twice this year she has upped her requests for aid. Now she asks $1,500,000,000—or 40 percent of the total European relief.

British Government leaders deny this is due to heavy spending on their vast socialist program. Their opponents charge that it is, at least in part. The whole security program and nationalization of industry are financed internally, say Labor Party leaders. They deny that the use of about $360,000,000 in recovery funds (known as counterpart funds) for the payment of internal debts meant that recovery money was being used on the socialism program.

It seems to be largely a matter of how you keep your books. Or, to try for the simplest example, it's like giving a relative $20 provided he spends none of it for booze. So he spends $5 of his own for liquor, and uses $5

of your money to buy what he otherwise could have bought with his own.

It is hard to escape the conclusion that Britain's vast spending for socialist schemes—on the heels of a devastating war—is more than she can afford. This spending includes more than $2,000,000,000 yearly for food subsidies, around $1,500,000,000 on the health plan, and other vast sums for housing, the losses of state industries, and support of a government pay roll of more than 2,000,000.

LIVING BEYOND MEANS

England is living far beyond her means. This must be one reason she has to depend on outside help.

Marshall aid was supposed to drop as recovery got going. But in Britain's case the need is going sharply upward. And it is cruel to think of the plight of a decent, kindly people if this help suddenly stopped.

NEW SCHEMES WILL MEAN NEW BURDENS

There seems no chance that England can get on her feet by 1952—when Marshall aid supposedly will end. And to make matters more complicated, the Labor Party has a whole list of new or expanded schemes and a lot more industry slated to be nationalized if it can gain reelection. Which will mean new burdens added to present ones. And more cause for high prices.

As sure as tomorrow's sunrise, some new campaign for further United States help soon will get going. It may start when Sir Stafford Cripps, boss of England's economy and finances, and Foreign Minister Ernest Bevin go to Washington for conferences next month.

In 1946 it was the United States loan which would turn the trick. In 1947 it was Marshall aid. Now it is clear that something more—or at the very least an assurance of Marshall funds beyond 1952—will be sought.

Like the man who came to dinner, the British Government seems destined to linger long at the table from which comes the fruits of the enslaving material bonds of capitalism.

A Tribute to the Greek People

EXTENSION OF REMARKS

OF

HON. E. H. HEDRICK

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. HEDRICK. Mr. Speaker, as a Representative in the Congress of the United States, I have had many opportunities to know the Greek people and study their problems. Many citizens of my district, the Sixth Congressional District of West Virginia, are of Greek descent, and by contact with these citizens, as well as through my service in the Congress, I have deepened my appreciation of these fine people. Distinguished contributions have been made in the development of the United States by the sons and daughters of Greece. To our country they have brought their knowledge and talents which have helped build cities and develop our land. They are industrious, frugal, deeply religious, and patriotic. They have been active in the conduct of our public affairs. In the two world wars, they have served nobly in our armed forces. American citizens of Hellenic descent are distinguished for their loyalty to the United States, yet they retain a filial attachment to and a philanthropic interest in the country of their ancestors. Since the liberation of Greece in 1944, their contributions have helped to strengthen its economy.

History tells us that civilization began to establish itself in Greece and the islands as early as 2,000 years B. C. It is believed that the Greek people, as we know them today, are direct descendants of these early people. Down through the ages, the Greek people have always been heroic, progressive, scientific, and far advanced in poetry and literature. They have engaged in many wars, and produced many exceptional men such as Alexander the Great. One of the better known cities, Athens, reached its height in power, 458 to 445 B. C., and there followed 30 years of peace and prosperity. At the close of this period there developed a rivalry between Athens and Sparta, lasting more than 3 years. This was followed by the Peloponnesian War of more than 2 years' duration. Soon after the Peloponnesian War, the Roman rule came into existence and remained in power from 146 B. C. to 476 A. D. During this time, the country was more or less prosperous and the welfare of the citizens was protected by the Roman arms. Shortly after this time, the period of the Middle Ages and the Turkish yoke came into being and lasted from 476 to 1821. At this time, these heroic people had a terrific struggle for the independence which they had obtained. This struggle lasted from 1821 until 1829 when Greece, as we know it today, was established. This period continued from 1829 to 1914 when the country was disturbed by political crisis for 2 years. Soon thereafter, the Greek Republic was born, lasting from 1924 until 1935 when the Government became a monarchy again. On November 25, 1935, King George took over the rule of this great country.

Greece, with an area of 50,257 square miles and a population of approximately 7,488,000 is a country slightly smaller than the State of Illinois. Primarily an agricultural country, Greece has undeveloped deposits of iron, zinc, and lignite. In World War II, Greece withstood the onslaught of the Italian Army in October 1940. It drove the Italian forces out of the country when Germany launched its attack on Greece in April 1941. When overwhelmed by superior forces, Greece was forced to capitulate and suffered severely under the German occupation. While its cities were not subjected to heavy bombing, widespread damage of all kinds resulted in an almost complete economic paralysis. Retreating Germans effectively destroyed port facilities, roads, and communications. Almost 75 percent of the Greek merchant marine had been sunk. Villages had been burned, and livestock had almost disappeared. Disease was prevalent; about 85 percent of the children were tubercular. Inflation had steadily increased. During normal times, Greece was able to meet its food requirements only by heavy imports. It survived the war only through the Allied relief program which eventually reached the total of 30,000 tons per month. Only the essential commodities supplied by UNRRA reached Greece in the period immediately following liberation.

Totalitarianism forces have sought to deny Greece, exhausted from long years of war and of cruel occupation, independence and substitute its system for Greek institutions. Violence, terror, and sabotage have been the weapons used to create economic chaos in Greece. Without the determination of the Greek people to win this struggle, and the help of other democratic nations, including the United States, the effort made thus far might have been futile. A difficult period lies ahead for Greece, and its people must have the assurance of support from democratic governments.

Devoted to free institutions, it is not surprising that the fortunes and history of Greece and the United States should be closely linked. Our citizens have many common ties, including a belief in democracy, love for Greece, and admiration of its culture and talent. From these ties, Americans have had the desire to cultivate friendly relations with Greece and a sincere determination to aid Greece in maintaining her independence so that she may again develop into a prosperous country.

Early in the history of the United States, the effort was made to lend encouragement to the people of Greece. In 1822, President Monroe sent a message to the Congress, encouraging the Greek people to regain their liberties. Also, food, clothing, and medicines were sent to the soldiers of Greece, and American citizens journeyed to that country to aid its citizens.

Interest in the Greek people has not lessened in recent times. The United States has continued its efforts to aid Greece and to encourage the United Nations to assist in the restoration of that country. Appearing before a joint session of the Congress March 12, 1947, President Truman declared that the foreign policy and national security of the United States were involved, and that failure to aid Greece would have a far-reaching effect to the west as well as to the east. He requested the Congress to provide assistance for Greece and Turkey in the amount of $400,000,000. The Congress enacted legislation providing for such assistance to keep alive the hope of the Greek people for a better life and to maintain their freedom.

I am deeply sympathetic to the Greek people and want to encourage them in their gallant efforts to provide for themselves and their posterity a free and abundant life. Their love of democracy and their struggle for freedom have been inspiring examples to all liberty-loving people. As a Member of the House of Representatives of the United States, I take pleasure in sending my greetings and best wishes to the people of Greece, as well as those individuals of Greek ancestry who have become citizens of the United States.

"One of the Most Awesome Sights I Have Ever Seen Was a B–36 Loosing 168 High Explosive Bombs, Each Weighing One-Quarter of a Ton, 84,000 Pounds of Destruction!—The Succession of Shocks Split the Air in an Infernal Din—A Curtain of Smoke 5 Miles Long Rose in the Skies—Then and There I Acquired a Healthy Respect for the United States Air Force B–36"

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. ALLEN of Illinois. Mr. Speaker, Mr. Walter Trohan, Washington manager of the Chicago Tribune, one of America's greatest, most popular, and best known newsmen, substituted for Fulton Lewis, Jr., on the air the evening of August 15. His broadcast was one of the most interesting, timely, and convincing newscasts to which I ever listened. It was an enviable piece of factual reporting which needs no elaboration.

Mr. Speaker, no man can read Walter Trohan's vivid description of a B–36 in simulated war action—miles above the earth—without knowing that American air power is in fact American peace power.

In order that such of my colleagues as did not hear Walter Trohan's broadcast over the Mutual System last evening may have an opportunity to read his enlightening talk, I am inserting a transcript of the same in the RECORD. I am sure that all will find it one of the most current thought-provoking statements that has been made in many a day.

The broadcast was as follows:

Tonight I want to bring the brighter side of the world military situation. Forward-looking military leaders believe the United States can win world war III, if it comes. Better still, they believe world war III can be prevented. World war III can be won by the world's most powerful Air Force, with adequate Army and Navy support. World war III can be prevented by physiological warfare. They believe that Soviet Russia can be peacefully conquered by ideas—truth and freedom are our mightiest weapons in that war. Tomorrow and Wednesday I will bring you an outline of this campaign.

Meantime, tonight, I want to report on what our best planners see in the road to victory if war should come. World War II was won by teamwork—our ground forces, our air forces, and our naval forces—working as teams, won two decisive victories on opposite sides of the world. Now our strategy is in a period of transition. Teamwork will win world war III. But the same proportion and the same prescription will not win tomorrow, even though they won yesterday. We outnumbered Germany and we outnumbered Japan. We do not outnumber Russia. Military leaders do not believe we can destroy the Red Army with our ground forces. They do not believe a sea blockade would defeat the Soviets. Our best military leaders see the situation as a football game. If you cannot win by rushing or by blocking you turn to the air—you throw forward passes.

Forward-looking military planners are turning to the air. They believe the United States must have the most powerful Air Force in the world. They believe American planes must fly higher and faster and farther than any other planes. Military leaders are convinced this fact would impress the Soviets and discourage them from embarking on aggression. Our high command does not propose to place absolute reliance on air alone. They still believe in teamwork. Leaders say we must have an Army and we must have a Navy. In the final analysis ground is not won until you have a soldier on it. And soldiers are carried by ships in intercontinental warfare. But air is our Sunday punch.

Mastery of the air was essential to victory on the ground in World War II. And now our new plans have added a new look to mastery. This is the B–36 bomber. This controversial plane is now the subject of a congressional investigation, as you know. We can rejoice over this. Full and complete airing of the merits and demerits of this plane cannot help but bring us better planes and better teamwork in the armed services.

I have seen this plane, on the ground and in performance. One of the most awesome sights I have ever seen was this plane loosing 168 high-explosive bombs, each weighing one-quarter of a ton—84,000 pounds of destruction. The succession of shocks split the air in an infernal din. Then a curtain of smoke, 5 miles long, rose in the skies. Then and there I acquired a healthy respect for the B–36.

Its most ardent enthusiasts—and I have talked to all of them—do not say it is the final answer. They told me, and I can tell you, we have a bigger and better plane on our planning boards—the B–52. This will be an all-jet-powered plane. This will fly higher and faster than the B–36 and carry more bombs. Its estimated potentialities are a top military secret. However, being better than the B–36 is something. The B–36 can fly at 40,000 feet. The B–36 has a range of 10,000 miles. It can easily bomb virtually all of Russia from North American bases. It can fly at 350 miles an hour, steadily. Equipped with jets, the plane can make 500 miles an hour, for brief periods, to evade fighters. It can carry a peak load of 21,000-pound bombs. These super block busters are of postwar development. The peak load could not be carried to Russia, nor could the plane fly 8 miles high with that load. But it could carry an even more devastating load of atomic bombs to Russia. Just how many of these city smashers the B–36 can carry is a top secret. I can tell you that there are about 70 key bomb targets in Russia. An atom bomb on each of these targets would paralyze the Soviets, so our air commanders tell me. And we have about 200 atomic bombs.

Record of the First Session, Eighty-first Congress

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, August 18 (legislative day of Thursday, June 2), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the New York Journal and American dealing with the current Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. TRUMAN'S CONGRESS

Nearly 8 months have elapsed since the Eighty-first Congress began its first session.

It would be difficult to find in the record as many as eight important and commendable actions by this Congress—a low average of only one a month.

Even such normally routine measures as appropriation bills to keep the vast Federal establishment going are uncompleted: In fact, the Congress, because of its own delays, has recently had to pass an emergency bill to enable the Government to meet civil pay rolls.

A few days later, when Mr. Paul Hoffman, the European Recovery Administrator, departed for abroad to pursue his mission, he was still waiting for Congress to provide whatever funds it intended to provide.

During this same period, the Senate paused for three sultry days while a few Members debated the issue of base-point pricing before an almost empty Chamber.

In his election campaign, President Truman denounced the active and efficient Republican Eightieth Congress as the worst Congress in our history.

By every test, the lazy and Socialist-minded Eighty-first Congress has more than won the title for itself.

This congressional sloth was a subject of discussion at one of Mr. Truman's press conferences recently.

Typically, the President said the sad situation was all the fault of the Republicans.

This could not be true, for the Eighty-first Congress is a Democratic Congress—the President's very own.

The Republican minorities in the two Houses have no power to shape its proceedings.

Nor are individual Representatives and Senators, apart from Democratic committee chairmen, greatly responsible.

The actual blame rests squarely upon the official Democratic leadership—in particular, upon Vice President BARKLEY and Senator SCOTT LUCAS, and upon Speaker RAYBURN, House Majority Leader MCCORMACK, and Chairman SABATH of the House Rules Committee.

As a practical politician and former Senator, President Truman knows all this.

Ship-Operating Subsidies, Shipbuilding Subsidies, Postal Subsidies, Air-Line Subsidies, Tariff Protection, Minimum Wage Scales, and Numerous Other Governmental Subsidies Are Based on 100 Percent Parity. Why Should the Farmers Be Denied the Same Protection?

EXTENSION OF REMARKS

OF

HON. PAT SUTTON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. SUTTON. Mr. Speaker, the record discloses that the Republican-dominated Eightieth Congress rammed the Aiken farm bill down the throats of the Members of the House of Representatives on Sunday morning, June 20,

1948, after an all-night conference and in the closing hours of the Congress. Not one single Democratic Member of the House favored the passage of that monstrosity. Today it is apparent that only two Republicans openly declare that they favor the Aiken farm program which is to go into effect on January 1, 1950. The Aiken farm bill includes provisions that will permit the prices of farm commodities to be reduced as low as 60 percent of parity. I do not believe that there is a Member of Congress who will not agree that an over-all price-support program of 60 percent parity would be of absolutely no value to the farmer.

From the latest available figures, farmers are not doing as well as they were last year. Cash farm income for the first 7 months of this year was off about 10 percent from the corresponding 1948 level. It is estimated that for the full year, the decrease will be about 15 percent, or roughly, $5,000,000,000. Prices received by the farmers in mid-July were running 17 percent below the level of a year earlier. Retail sales show the effect of the price slump on farm commodities. Should the Aiken farm program be permitted to go into effect it is quite evident that the farmer will ultimately face financial failure. The House Committee on Agriculture, of which I am a member, recently reported for consideration a farm program known as H. R. 5345, and which bears the name of the gentleman from Georgia, Representative PACE. In this measure parity was redefined and raised. For the first time, consideration was given to the taxes, insurance, depreciation on farm machinery, and various other expenses naturally incurred in operating a farm. The Pace, of Georgia, bill was prepared by a subcommittee of the Committee on Agriculture. I am happy to have had a part in the drafting of this bill as I was a member of the said subcommittee. This bill was written after some 7 months of practically daily hearings by the committee. During these hearings representatives from farm organizations all over the United States were heard, together with numerous individual dirt farmers. It was evident to the committee that since the present farm program was some 15 years old, that now is the time to redefine parity, revamp the program, and enact farm legislation to conform to present-day progress. H. R. 5345, the Pace, of Georgia, bill, is the result of the committee's toil and labor. This bill proposes a 100 percent parity for basic farm commodities, and in my opinion is a vast improvement over our present program.

Agriculture is the nursery of all industry. It supplies materials for commerce, jobs for labor, and food for the human race. As the basic industry of America, its prosperity must be maintained. When the farmer is prosperous, all available labor is employed, the wheels of industry hum, the merchants' business booms, transportation is pressed to its capacity to move and distribute the fruits of labor and the finished products of industry. Universal prosperity prevails. Being a member of the Committee who drafted H. R. 5345, in my opinion such prosperity would have encompassed the Nation if the Pace, of Georgia, bill could be enacted into a law.

Personally, I have procured from the Department of Agriculture the latest crop production estimates for 1949 and where estimates are not yet available on certain commodities, the Department has furnished me with the crop production records for 1948. According to the statistics furnished me by the Department, the farmers of the State of Tennessee will suffer a loss of $71,331,824 per annum, should H. R. 5617, known as the Gore, of Tennessee, bill, be substituted and finally enacted into a law in lieu of H. R. 5345, the Pace, of Georgia, bill. The loss on each of the basic farm commodities is calculated as follows:

The United States Department of Agriculture discloses that the latest records on the annual production of corn for the State of Tennessee was 57,834,000 bushels. The support price on corn under the Pace bill was $1.46 per bushel, while under the Gore bill the support price is $1.41. Thus the farmers would have gained 5 cents per bushel on the price of corn should the Pace bill be enacted. Therefore, the annual loss to the corn growers of Tennessee is $2,891,700.

The Department of Agriculture further advises that the latest available production figures for burley tobacco in the State of Tennessee was 110,600,000. Under the provisions of the Pace bill, burley tobacco was supported at 49.6 cents a pound, while under the Gore bill it is supported at 41.1 a pound. In other words, the Pace bill provided for an increase in the price of burley tobacco of 8½ cents a pound. Therefore, the adoption of the Gore bill will cost the burley tobacco growers of Tennessee $9,401,000 per annum.

The Department further advises that the last annual record reveals that the State of Tennessee produced 32,960,000 pounds of flue-cured tobacco. The Pace bill would have supported flue-cured tobacco at 49.2 while the Gore bill supports flue-cured tobacco at 42.5. Thus, the increase in the price support of flue-cured tobacco should the Pace bill have been adopted would have been 6.7 cents per pound. Therefore the flue-cured-tobacco growers in the State of Tennessee will suffer a loss of $2,208,320 annually.

The Department further advises that according to the latest yearly figures on the production of cotton in the State of Tennessee, the State produced 670,000 500-pound bales. Under the Pace bill, cotton was supported at 27.99 cents per pound. Under the Gore bill, cotton was supported at 27.34 per pound. Thus, the cotton growers of Tennessee will suffer an annual loss in the amount of $2,177,500.

The Department of Agriculture advises further that the State of Tennessee produced 4,770,000 bushels of wheat. Under the Pace bill wheat is supported at $1.88, while under the Gore bill wheat is supported at $1.95. Thus the farmers will gain 7 cents per bushel on the price of wheat, or a total gain of $33,900 per annum for the wheat growers of Tennessee.

The Department further advises that the State of Tennessee, according to the latest available figures, produced 4,000,000 pounds of peanuts. Under the Pace bill, the price of peanuts would have been supported at 9.45 cents, while under the Gore bill, peanuts are supported at 10.6 cents. Thus, the peanut growers of Tennessee will gain $46,000 per annum on the price received for their peanuts.

The Department further advises that according to the latest available annual figures, the State of Tennessee produced 372,436,000 pounds of hogs. Under the Pace bill the price of hogs was supported at $19 per hundred pounds, while under the Gore bill the price of hogs is supported at $16 per hundred pounds. Thus the hog raisers of Tennessee will suffer an annual loss of $11,173,080.

The Department further advises that according to the latest figures, the dairymen of the State of Tennessee produced 2,210,000,000 pounds of whole milk. Under the Pace bill, the price of whole milk was supported at 4.22 per hundred pounds, while under the Gore bill whole milk is supported at 3.53 per hundred. Thus the dairymen of Tennessee will suffer a loss of $15,249,000 annually on whole milk.

The Department further advises that the dairymen of the State of Tennessee, according to the latest figures, produced 98,000,000 pounds of butterfat. Under the Pace bill, the price of butterfat was supported at 6.69, while under the Gore bill, butterfat is supported at 5.80 per pound. Thus the dairymen of Tennessee will suffer a loss of $8,722,000 on butterfat.

The Department of Agriculture further advises that, according to the latest figures, Tennessee produced 1,410,000 pounds of wool. Under the Pace bill wool was supported at 49.6, while under the Gore bill the price of wool is supported at 40.3. Thus, the wool producers of Tennessee will suffer an annual loss of $131,130.

The Department of Agriculture further advises that according to the latest figures, Tennessee produced 256,000 tons of cottonseed. Under the Pace bill the price of cottonseed was supported at 67.50 per ton, while under the Gore bill the maximum support for cottonseed is 49.70 per ton, and this is optional with the Secretary of Agriculture and is not mandatory. Thus, the cotton growers of Tennessee will suffer a loss of $4,556,800 on cottonseed.

The Department of Agriculture further advises that the cattle raisers of Tennessee, according to the latest figures, produced 291,680,000 pounds of beef cattle. Under the Pace bill the price of beef cattle was supported at $16.90 a hundred, while under the Gore bill, the price of beef cattle is supported at $12 per hundred. Thus, the raisers of beef cattle of the State of Tennessee will suffer an annual loss of $14,292,320.

They further advise that the State of Tennessee produced 16,831,000 pounds of sheep and lamb. Under the Pace bill lamb was supported at $18.40 per hundred, while under the Gore bill the price of lamb is limited to $13 per hundred. Thus the raisers of lamb in the State

of Tennessee will suffer an annual loss of $908,874.

The above are the major commodities produced by the farmers in Tennessee, and on these commodities alone, as will be noted from the above calculations, the farmers of our State will suffer an annual loss in the total amount of $71,331,824. In my opinion, this we can ill afford. Seventy-one-million-odd dollars in annual purchasing power for the farmer would prove of untold benefit to all of the people of our State. It would provide employment for thousands and could easily be the difference between success and failure.

Although only two Members of the House of Representatives would openly admit that they favored the Aiken farm program, the Gore, of Tennessee, bill provided for an extension of this farm-destructive measure for a period of 1 year. During the course of the debate, I offered an amendment to repeal the Aiken bill, which amendment was adopted by the House, thus repealing the Aiken program. The House of Representatives substituted H. R. 5617, the Gore, of Tennessee, bill, for the Pace, of Georgia, bill, H. R. 5345. The vote was as follows: For substituting the Gore bill: Republicans, 160; Democrats, 79. Against the substitution of the Gore bill: Republicans, 4; Democrats, 166. Therefore, the Gore bill was substituted for the Pace bill.

Thus, in the words of Omar Khayyam:

The moving finger writes; and, having writ,
Moves on: nor all your piety nor wit
Shall lure it back to cancel half a line,
Nor all your tears wash out a word of it.

Alleged Conversation Regarding Postmaster Appointment at Tacoma, Wash.

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, August 18 (legislative day of Thursday, June 2), 1949

Mr. CAIN. Mr. President, in a recent Washington Merry-Go-Round column, Mr. Allen, who is writing the column during the vacation of Mr. Pearson, related an interesting conversation which he said took place between the senior Senator from Washington and myself on a postmastership question which presently prevails in Tacoma. That no such conversation took place will, I have been advised, be testified to by the senior Senator and certainly by me. I ask unanimous consent in the name of accuracy that the portion of the column which discusses this conversation which never took place be printed in the Appendix of the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

FINDERS KEEPERS

Washington State's Senators WARREN G. MAGNUSON, Democrat, and HARRY CAIN, Republican, are at bitter loggerheads over the Tacoma postmastership. Tacoma is CAIN'S home town and he is demanding the appointment for one of his adherents, William E. Patrick, former Army colonel. MAGNUSON is just as insistently supporting John MacMonagle, disabled veteran who has been acting postmaster for 4 years.

CAIN took the controversy directly to MAGNUSON, saying, "I thought a Senator had the right to recommend the postmaster for his home town?"

"Perhaps so, in some cases," retorted MAGNUSON, "but in this case there are two strikes against you. One is that my man was originally recommended by the Congressman of his district and he has strong support in Tacoma. The other strike is that you Republicans are not in control this year as you were last. That makes a big difference, and that is why my man will get the appointment."

Private Enterprise Regained

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, August 18 (legislative day of Thursday, June 2), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from Newsweek of June 27, 1949, entitled "Private Enterprise Regained." This article is based on a column contributed to the New Hampshire Morning Union by Mrs. Betty Knowles Hunt, which will make interesting reading.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRIVATE ENTERPRISE REGAINED

I am indebted to Betty Knowles Hunt for sending me a column she contributed to the New Hampshire Morning Union quoting from Governor Bradford's own history of the Plymouth Bay Colony, over which he presided. It is a story that deserves to be far better known, particularly in an age that has acquired a mania for socialism and communism, regards them as peculiarly progressive and entirely new, and is sure that they represent "the wave of the future."

Most of us have forgotten that when the Pilgrim fathers landed on the shores of Massachusetts they established a Communist system. Out of their common product and storehouse they set up a system of rationing, though it came to "but a quarter of a pound of bread a day to each person." Even when harvest came "it arose to but a little." A vicious circle seemed to set in. The people complained that they were too weak from want of food to tend the crops as they should. Deeply religious though they were, they took to stealing from each other. "So as it well appeared," writes Governor Bradford, "that famine must still insue the next year allso if not some way prevented."

So the colonists, he continues, "begane to thinke how they might raise as much corne as they could, and obtaine a beter crope than they had done, that they might not still thus languish in miserie. At length [in 1623] after much debate of things, the Gov. (with the advise of the cheefest amongest them) gave way that they should set corne every man for his owne perticuler, and in that regard trust to them selves. And so assigned to every family a parcell of land.

"This had very good success; for it made all hands very industrious, so as much more corne was planted than other waise would have bene by any means the Gov. or any other could use, and saved him a great deall of trouble, and gave farr better contente.

"The women now wente willingly into the feild, and tooke their litle-ons with them to set corne, which before would aledg weakness, and inabilitie; whom to have compelled would have bene thought great tiranie and oppression.

"The experience that was had in this commone course and condition, tried sundrie years, and that amongst godly and sober men, may well evince the vanitie of that conceite of Platos and other ancients, applauded by some of later times;—that the taking away of propertie, and bringing in communitie into a comone wealth, would make them happy and florishing; as if they were wiser than God. For this comunitie (so farr as it was) was found to breed much confusion and discontent, and retard much imployment that would have been to their benefite and comforte.

"For the yong-men that were most able and fitte for labour and service did repine that they should spend their time and streingth to worke for other mens wives and children, with out any recompense. The strong, or man of parts, had no more in devission of victails and cloaths, than he that was weake and not able to doe a quarter the other could; this was thought injuestice. * * *

"And for men's wives to be commanded to doe servise for other men as dressing their meate, washing their cloaths, etc., they deemd it a kind of slaverie, neither could many husbands well brooke it. * * *

"By this time harvest was come, and instead of famine, now God gave them plentie, and the face of things was changed, to the rejoysing of the harts of many, for which they blessed God. And the effect of their particular [private] planting was well seene, for all had, one way and other, pretty well to bring the year aboute, and some of the abler sorte and more industrious had to spare, and sell to others, so as any generall wante or famine hath not been amongest them since to this day."

The moral is too obvious to need elaboration.

Mutual Defense Assistance Act of 1949

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 18, 1949

Mr. BLATNIK. Mr. Speaker, I am strongly opposed to this European rearmament bill, H. R. 5895, which would authorize $1,400,000,000 to provide arms for the North Atlantic nations, Greece and Turkey. I am going to vote against it because I am convinced that its passage is a step toward another world armament race and eventual war. Although this bill is proposed in the name of peace, it is predicated on the assumption of eventual war. No amount of slick doubletalk and hypocritical claims on the part of our State Department can change that basic fact.

It is claimed by certain naive and intellectually dishonest people that this rearmament program will stop communism. This argument, Mr. Speaker, is

the counsel of fools. For this measure is not designed to help feed hungry people and to aid economic recovery in Europe, and thus prevent desperate people from embracing the communist philosophy. This $1,400,000,000 is not earmarked for food, clothing and shelter—instead it is proposed for the purpose of military armament. It is nothing more than the continuation of our discredited and bankrupt policy in Greece and China where American arms are used to kill and destroy, and to eventually haunt us with the specter of defeat.

I am prepared to support any program to bolster the national defense and national security of the United States, and to defend democracy and promote world peace. I am convinced, however, that this program to rearm Europe will contribute to none of these objectives. Instead it will jeopardize the whole edifice of western civilization by creating the conditions for another and more horrible war which will destroy every value that Americans hold dear, and perhaps civilization itself.

PATTERN OF DESPAIR

This military-assistance program must be examined in the light of today's world political situation, and evaluated according to the lessons of history. For it is part of a pattern of events which parallel those following World War I, and which produced World War II. If we pass this bill, we are repeating the same mistakes of the 1919–39 period, and laying the ground work for world war III.

I am sure that the House is familiar with what happened after World War I. You will recall that we helped to rebuild Germany after World War I for the alleged purposes of halting communism and to protect American investments. After spending American money and lives to defeat Germany in 1918, we undid our work by helping rebuild Germany's war potential, and by allowing the German Junkers and cartelists to return to power. They in turn financed and supported the Hitler seizure of power. We listened to the siren songs of paid propagandists with bleeding hearts for poor misunderstood Germany, who told us that said nation's revival was necessary for peace and European recovery. So we halted reparations and returned the control of the Ruhr to the cartelists—to the very men who engineered the Nazi rise to power.

You will recall that after Woodrow Wilson proposed the League of Nations this country repudiated that organization, and that the unilateral actions of the great powers eventually destroyed the League as an instrument of peace. In the meantime, big-business leaders in America were praising Hitler and American monopolists were playing "footsie" with the I. G. Farbens, Krupps, and Thyssens. Germany secretly rearmed, and the Rome-Berlin-Tokyo axis was born to fight communism.

Did all this stop communism? Did it contribute to world peace? Did it bolster world democracy? It did not. It destroyed the League of Nations, and produced a world armament race which exploded into World War II.

The events of the last four years repeat the same pattern—the pattern of despair. America is again rebuilding Germany. German reparations have been stopped by the American Military Government, the denazification program has been scuttled, the German cartelists are again being reinstated as the economic, financial and political leaders of Germany. Germany's war potential is being revived, and an extreme right-wing government is being installed in that country.

Today the United Nations is fighting for its life. Just as Woodrow Wilson created the League, so did Franklin Roosevelt propose the United Nations, only to have the Great Powers wreck it as an instrument of peace. It has been by-passed by the Great Powers, and its ideals repudiated. World peace based on international cooperation and understanding has been rejected in favor of power politics, and by power alliances in the form of the North Atlantic Pact.

In the name of fighting communism, our Government is today building a reactionary power bloc around reformed Nazis, Japanese industrialists, Greek Royalists, and the Peronists of Latin America.

This proposal to rearm Europe is the next to the last step in the drive of American big business to bolster world reaction, and to create the conditions which can lead to war. There is only one more step after this one—and that is war, atomic war which will destroy democracy and perhaps civilization itself. It will be a long drawn-out and endless war which no one can win. It will be a war without decision that will open the floodgates of world revolution which will destroy all of us. Let us turn back before it is too late.

ARMS PROGRAM ECONOMICALLY UNSOUND

Mr. Speaker, I am convinced that the passage of this "Arms to Europe" program is impractical from every point of view. Even if we accept, for the purposes of argument, the premise that this program is not designed for war, it is still wholly undesirable and self-defeating. In short, it is economically unsound, politically unwise, and militarily impractical.

Let us consider the economic effects of this program. This plan calls for spending $1,400,000,000 for arms during the next fiscal year. But we should not forget that this is only the first installment, and only a token payment compared to what is going to be demanded in the years to come.

What the State Department really has in mind is to equip 40 to 70 European divisions at a total cost of at least $16,000,000,000, and perhaps $24,000,000,000. These heavy armament expenditures will have far-reaching and detrimental effects upon not only the American economy, but also upon the European economies of the countries whom we propose to help.

I will deal briefly with its effects upon our domestic economy. These billions added to the present $41,000,000,000 cold-war budget is creating the conditions for national insolvency and bankruptcy. It is no secret that during the last fiscal year (1948–49) the Federal Government spent more than it received in taxes, and that the budget deficit at the end of the year was about $2,000,000,000. And it is estimated that even without the "arms for Europe" program, the deficit at the end of the current fiscal year will amount to about $5,000,000,000.

As Dr. Edwin Nourse, economic adviser to the President, stated last spring, we cannot continue to increase our present heavy expenditures for armaments and foreign aid without jeopardizing our entire economy. At that time he pointed out if armaments for Europe were to be voted, then we must reduce appropriations for ECA and our own military budget. Congress has done neither, and now it is proposed that we add new billions to our already overheavy armament budget.

Moreover, it should be pointed out that every dollar we spend for arms abroad means we have one less dollar to spend for needed domestic programs at home. One cannot divorce foreign policy from domestic policy—the two complement each other. And it goes without saying that Americans cannot spend money for schools, hospitals, roads, old-age pensions, social-security programs, and the Brannan plan at home as long as we pour out our treasures in the form of arms for half the world. Cold-war expenditures have already canceled out the Fair Deal program at home, and this arms program means new budget cuts in funds for the existing domestic programs which operate for the benefit of the people.

I realize that there are some people who close their eyes to the fact that this arms program is a war measure, and look at it as a pump-priming operation to bolster our domestic economy. I want to remind these people that there are two ways to prime the pump. One is by embarking on a heavy, and still heavier rearmament program, which is the guns-instead-of-butter approach of Adolf Hitler; the other approach is to adopt a broad domestic program of social welfare, public works, and internal development, which is the path laid down by the late Franklin Roosevelt. As for myself, I choose the approach of Franklin Roosevelt.

I also want to say to the advocates of the Hitler guns-instead-of-butter policy that there is nothing healthy about an economy that depends upon an armament program to maintain itself—that production for death instead of life is an un-Christian approach and lacking in morality. It is a policy that cannot be accepted by people who believe in democracy and peace.

Just as this armament program will be harmful to America's domestic economy, so will it tend to defeat European recovery. Although the United States has already provided some $17,000,000,000 to help European nations rehabilitate their economies, our Marshall planners tell us that Europe will only be half recovered by 1952, and that we may have to make additional grants in economic aid.

In spite of the slowness of European economic recovery, our State Depart-

ment wants us to add to Europe's difficulties by placing upon their economies the additional burden of heavier armaments. Forty combat divisions involved 600,000 men, plus 1,400,000 workers to maintain them. This means an additional 2,000,000 European workers will be diverted from useful production to implement this war program.

I suggest that the burden of armaments in Europe is already too heavy and that it is a root-cause for Europe's slowness in economic recovery. In this connection I will mention a few significant facts. Last year Britain received $1,000,000,000 in ECA dollars, and spent about $3,000,000,000 for arms; France received $875,000,000 from ECA and spent $1,100,000,000 for arms; and Holland received $355,000,000 from the ECA and spent $284,000,000 for arms. Taken together, the North Atlantic Pact countries received $3,500,000,000 from the ECA during the last fiscal year, but the military budgets for these same countries added up to $5,700,000,000.

In short, Mr. Speaker, every dollar that we send to Europe for arms means one less dollar for economic rehabilitation. It is estimated that European countries will have to spend $5 for the building and maintaining of armies for every dollar that we send to finance the proposed armament program. In other words, one effect of the European rearmament program is to defeat the purpose of the Marshall plan for the economic recovery of Europe. Instead of American funds being used for food, clothing, machinery, and human welfare, it is being earmarked for arms and military machines.

This entire question was summed up very well not long ago by an anti-Communist leader of France when he said:

> Under present conditions it is impossible to increase both civilian and military production. To impose a program of military production on western Europe is to paralyze civilian production that is already far from sufficient. That would mean creating living conditions politically favorable to the Communists. And in the end we would have the danger that this costly war material would fall into the hands of the Russians.

EUROPEAN REARMAMENT MILITARILY IMPRACTICAL

The arms-for-Europe program is based on the false premise that Russian aggression is the big danger to the status quo in western Europe. The truth of the matter is that the real danger is political unrest and revolution which in turn is produced by low-living standards, exploitation, and poverty. The threat is political and ideological, and you cannot fight ideas with guns. Fire and sword cannot silence all popular demands for agrarian reform, mass education, and the end of exploitation.

American policy in Greece and China have been based on the assumption that the way to fight ideologies is with arms and more arms, and we are now in a position to see the fallacy of this approach. It is now obvious to all of us that the American military-aid program in China was a complete and utter failure—we dumped some $4,000,000,000 in American arms down the Chinese rathole only to find that the Chinese peasant's desire for land had caused him to turn to the Communists, and the end result was a terrific military and economic defeat for our policy in that country. The same thing is happening in Greece today.

The best answer to those who seek to destroy ideas by military means is found in the Vatican newspaper, Observatore Romano, where it was stated several months ago:

> It is impossible to paralyze an idea with violence, destroy it by force, drown it in blood. She, the church, is the greatest testimony of the folly of such prejudice. The idea that wins over another idea is that which excels in truth.

The conservative Wall Street Journal pointed out the same obvious truth when it said in its April 22 edition:

> The real trouble with all this is that you do not contain communism by military force. * * * You combat ideas with ideas. * * * The Truman Doctrine was an attempt to contain an idea. The Truman Doctrine is dead in one place and dying in another, but it is being reborn in the form of the projected rearming of western Europe at American expense. The people ought to scrutinize the new model more carefully than they did the last before they buy it.

In other words, Mr. Speaker, the only way to fight ideas and ideologies is with new and better ideas and with constructive programs for economic progress and social justice. The only way to protect western Europe from Communist revolution is by encouraging liberal programs to raise the living standards of the people, and to provide economic security for the common people.

This rearmament program rejects this approach—it is designed to meet the need for honest government and New Deal reforms by armaments instead of seeking to create the conditions for stable government. It is the wrong approach, and it is certain to fail in the long run.

I have said that there is little danger of direct Russian aggression on western Europe. This is not only my opinion, but it is one held by most people except those who are seeking to whip up the war hysteria for political advantage. The junior Senator from New York [Mr. DULLES] has stated that—

> I do not know of any responsible high official, military or civilian, in this Government or any other government, who believes that the Soviet state now plans conquest by open military aggression.

The former Ambassador to Moscow, Gen. Bedell Smith, has said the same thing, and warned us against the folly of all this talk of inevitable war with the Soviets.

But I am willing to assume for the sake of argument the possibility of Russian attack, and explore the advisability of this armament program in this light. Most military observers agree that in case of war, there is no defense line in western Europe that can be held against the Red Army for more than a few days. There is no force in Europe today, or will there be tomorrow, that is capable of holding the most favorable defense line against the now available striking force of the Russian Army. The Russians are restrained from marching today not because of any doubts that they could not reach the English Channel, but because Russia has not recovered from the last war and is in no position to start another conflagration that will be a prolonged, protracted disastrous war in which no one would emerge a clear-cut victor, and which would mean destruction of the Russian and non-Russian worlds alike.

Moreover, if Russia did march, then the arms that we supply to Europe will soon be in Communist hands, and would be used against us. America has just got through equipping the Chinese Communist armies through the medium of the corrupt and decadent regime of Chiang Kai-shek. Let us not do the same thing in Europe.

Getting back to reality, I think that world tension is diminishing, and would diminish further if the Congress does not stir up new hatreds and suspicions by adopting this European rearmament program. The possibility of Soviet invasion is less likely than it was a year ago, and the threat of Communist revolutions in western Europe are now receding. There is instead a belief that the U. S. S. R. is anxious to call off the cold war. Common sense indicates that America should now be making an all-out effort for a world settlement and a just and lasting peace. The cold war is giving way to a cold peace, and we should encourage this trend by thawing out the cold peace in the interests of a just and lasting peace among nations and peoples.

EUROPEAN REARMAMENT MENACE TO WORLD PEACE

I am also against the arms for Europe program because it represents one more milestone on the road to war. It is a war program for two reasons. In the first place, it is a blow to the United Nations because it encourages the further division of the world into two armed camps.

The Atlantic Pact represents a power alliance of one group of states within the United Nations aimed at another group of UN members—the Soviet bloc. By supplementing the pact with this arms program, we are cementing this two-world division and placing new obstacles to prevent the establishment of world peace based on the Roosevelt concept of one world. Do not forget that it was this kind of thing that wrecked the League of Nations, and have no doubts about the fact that this will damage the United Nations, and weaken it as an instrument of peace.

Secondly, it is going to initiate another armaments race and history shows that armaments races have a tendency to lead to war. Armaments programs are not the root causes of war, but armaments races create such tensions that peace settlements which might have been possible are made impossible.

It is said by some, and it has been argued on the floor of this Chamber, that we are committed to vote this armament program by reason of the signing of the Atlantic Pact, and that we must keep faith with such commitments. This argument is typical of the other false logic advanced by the advocates of this bill. Since when was the House of Representatives consulted with respect to the Atlantic Pact or anything else with

respect to our foreign policy? Instead, we are asked to rubber stamp policies of the State Department over which we have no control, and I think it is about time that the House begin to act as an independent body, which it is meant to be.

In conclusion, Mr. Speaker, I want to say that the hope of America and the hope of the world is for no more war. War as a means of settling international disputes is a dead-end street, and when we reach the end of this street the dead and crippled will rise up to haunt us. There is still time to turn back to the high road to peace based on the United Nations and Roosevelt policies of international understanding, that of the good neighbor. Let us reject this war program and go forward in an honest effort to reach international agreement through consultation and negotiations. We should try again for peace instead of preparing for war. Another war will be fatal to western civilization, and this is the time for statesmanship and understanding.

There can be no doubt but that the world is facing a crisis, but this crisis is man-made, and it is capable of solution by intelligent action. We live in a changing world, and only the blind are unaware of the rapidly maturing crisis. This crisis is the product of the last war, and mass protest against poverty and insecurity.

In the past the peoples of Europe and Asia have accepted poverty and exploitation without protest, but that is true no longer. Today the people of Europe are weary of war and exploitation, and they are capable of desperate action. Asia is in flux, and there is mass revolt against the colonial system and the feudal system of land ownership.

America must not close its eyes to these developments, but must seek to find policies to direct the growing political unrest and desire for revolutionary change into peaceful and constructive channels.

A PROGRAM FOR PEACE

Under existing circumstances, the following proposals would be both realistic and statesmanlike, and would represent a real contribution to the peace of the world and the happiness of its people.

First. America should discard forever the idea that ideas can be policed by force. We must give up this negative approach to ideologies and political movements that we dislike and take positive action to achieve peace and world stability.

Second. We should implement and expand President Truman's point 4 proposal to develop backward areas and to raise the living standards of the people everywhere. In this connection, I would like to refer the House to the conclusions reached by Maj. Gen. William J. Donovan, wartime OSS commander, following his recent trip to the Far and Near East—and I quote:

> We have many friends in China, India, Burma, Siam, Indochina, and Indonesia. They regard us far more highly than they do the colonial powers to which they are, or were, subject. In the light of what is happening in China, the soundest thing we could do would be to initiate the President's point 4 program in these countries.
>
> It would profit us immensely to build hospitals, clinics, schools, and industries in these areas to enable their people to develop their tremendous human and material resources. They are desperately anxious to do that if given a helping hand. And they will be eternally grateful to us for such help. That is the best way to build a bulwark against communism.
>
> In the interests of our own national security and economic welfare, it will pay us to abandon the costly and futile policy of financing foreign armies. This is a dead-end road. The thing for us to do now is to give the people the technical assistance they need and want to raise their health levels, increase their food production, and better their living standards generally.

This is the sound advice of a conservative, wise and honest man whose experience as a soldier and leader of men tells him what is the best policy. His recommendation that we give up the idea of financing foreign arms and concentrate on economic development of foreign nations in the interest of human welfare would accomplish a double purpose, namely, to destroy the poverty and bad economic conditions on which communism spreads, and at the same time create vast new markets for American businessmen.

Third, I am convinced that world peace depends upon the expansion and encouragement of foreign trade with all the nations of the world. The cold war and the present two-world grouping of powers has broken the normal pattern of trade relations. I maintain that the restoration of East-West trade would not only promote international good will, but it would create an integrated economic foundation upon which a one-world international organization can be built and strengthened. Such a condition would be mutually advantageous to all nations, and give all nations a stake in world peace.

Finally, we should make every effort to strengthen the United Nations by expanding its programs, and by using it to cope with the problems of our time. With respect to the Atlantic Pact, which violates the spirit as well as the letter of the UN Charter, I think we should do as the noted news columnist, Jay Franklin, recently suggested: "America should take a deep breath, count 10, and let the Atlantic Pact develop as a cultural grouping under the UN Charter."

Such a program, Mr. Speaker, based upon humanitarian ideals, as well as sound business principles and implemented in accordance with the good-neighbor philosophy of Roosevelt, would go far in achieving the goal of lasting peace.

The proposed European rearmament program is the exact opposite of this program. It is a war program instead of the peace program. Its effects will weaken the United Nations instead of strengthening that organization. It will further divide the world into two armed camps and encourage the cold war instead of creating the conditions for peace. It is impractical from every standpoint—militarily, economically, and politically—and for this reason I call upon the House to vote it down. Regardless of what the House may do, I cannot in good conscience support it, and I go on record as being absolutely against its passage.

A Balanced Military Policy for the United States

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. MARTIN of Iowa. Mr. Speaker, during the present session of the Congress I have included in extensions of my remarks several interesting and informative articles which were directly, or indirectly, related to the subject of national defense. Another contribution which particularly deals with the broad aspects of our national policy, is that embodied in an address recently delivered by Gen. Omar N. Bradley, Chief of Staff, United States Army, which was published in the Military Engineer issue of March–April 1949.

Under leave accorded the same is included in this extension.

Accompanying General Bradley's address, as it appeared in the indicated publication, is the following editorial note which reflects the high esteem in which this distinguished soldier is held by his professional associates:

> Present public thinking, aided and abetted by would-be military experts and by a well-meaning but deluded rank and file, has seriously affected our ability to insure national security. Push-button warfare, machines instead of men, and minimizing if not eliminating ground troops are still wishful thinking.
>
> For the first time since becoming Army Chief of Staff, this noted leader of World War II ground forces in Europe has made a public policy statement on the employment of air forces and ground armies in modern war.
>
> Here are the views on a balanced military establishment by one of the three military men, who in an emergency, must implement plans for our national security. With extreme clarity, without heat, and with the modesty and selflessness that characterize the man, General Bradley sets forth his conception of the steps necessary to insure the optimum provision of national defense within the means made available by the President and the Congress.

As indicated in the foregoing editorial comments, General Bradley's statement represents a very important addition to the military literature of these times.

The authors of the other articles included in my extensions in the Appendix of the RECORD are: Lt. Gen. Leslie R. Groves, page A169; Maj. Gen. C. F. Robinson, page A755; Lt. Col. A. W. Betts, page A1713; Lt. Comdr. H. B. Seim, page A2639; and Hanson W. Baldwin, page A4627. These articles, grouped together with General Bradley's address, form a most enlightening symposium of special interest to the Members of Congress concerned with military and defense programs, and especially with the subject of the atomic bomb.

In view of the confusion—and, at times, hysteria—which seems to have marked so much popular thinking in the effort to evaluate the effect of atomic

warfare on national policy, the too often oversimplification of the problems of national defense; the tendency toward an exaggerated emphasis of limited angles of the subject in the interest of special proposals; and the need for curbing exorbitant spending for vast undertakings in the name of defense and security; in view of all these matters, I would respectfully commend this very able statement of General Bradley, and the other contributions thus enumerated, to every Member of Congress—and, in general, to all American citizens—in behalf of the preservation of the resources that are vital to our national security and well-being.

The full text of General Bradley's address follows:

A BALANCED MILITARY ESTABLISHMENT

In the creation of a sound military force for the armed defense of the Nation, there is no place for free competitive enterprise among the separate services in the business of fighting a war. Security is a cooperative venture; it is not a competitive race. To forewarn aggressors and to construct effective military might, we are in need of partnership, not partisanship; concern for the safety of this Nation, not the survival of our arms.

I certainly do not question the right of any American to speak his honest opinion on the fitness of our plans. His is the Nation to be defended and his are the taxes that pay the bills. And I respect the constitutional right of Congress to make such provision as it may judge essential to the Nation's safety. But as a soldier, entrusted by you with a share of responsibility for the Nation's defense, I feel it my duty to speak the truth as I see it, to state my convictions as plainly as I can that you may know my position and that of the Army today.

Let me make it clear at the outset, that what I have to say here is not in criticism of the Air Force. I work in daily close association with General Vandenberg of the Air Force and Admiral Denfeld of the Navy. And I know they both believe as strongly as I do that the security of the Nation depends upon the teamwork of the services. It was General Vandenberg, himself, who said only 2 months ago, "The three services are in complete agreement that no one service can do the job alone."

Because too many Americans are searching for an easy and popular way to armed security through top-heavy trust in air power at the sacrifice of our remaining arms—we are in danger of reckoning our safety on fantasy rather than fact. I do not deprecate the vast capabilities of air power as a priority weapon for attack against any aggressor state. Nor do I deny that the threat of instant retaliation through an air offensive is our greatest deterrent to war today. But I must part company with those enthusiasts who ascribe to air power limitless capabilities in winning an instant decision. Air power, like every other weapon, has gaping limitations for war as we shall know it for many years to come. However crippling air attack can be, I am convinced beyond any reasonable doubt that should this Nation be forced into still another conflict, we shall once more be forced to gain the inevitable victory over our dead bodies—those of our soldiers on the ground.

If I did not believe that war in the future will still thrust its eventual burden on the soldier who fights on ground, then I would readily recommend abolition of the Army and happily bequeath our missions to anyone who would have them.

To provide long-term security for the Nation, our military requirements must be related both to American foreign policy and to the known offensive capabilities of likely enemy states. They must be predicated upon preparedness for a plan of war—a strategy that can defend our shores, aid our allies, and preserve a foothold from which to strike the aggressor in his homeland.

Even in the combined employment of air, naval, and ground arms, war presents a problem of priority and sequence in mounting an offensive against the aggressor's forces and the sources of his strength. To survive, the United States must be prepared instantly to gear its counterattack to a war of increasing violence, a war of growing intensity, and a war of widening global dimensions.

At the instant of aggression, the United States must fling the full force of its strategic air offensive against the enemy's heart land. But however savage this attack might be, it is dangerous for us to count on a decisive knockout in the first round. For the concentration of this initial air offensive must diminish as we dip deeper into the stock pile of our atomic bombs.

In the second stage of war, we must rapidly seize, hold, and push nearer the target those strategic bases from which we might bomb the enemy and from which he might bomb our cities. At the same time, while the enemy is flooding his neighboring states with troops and thundering against ground defenses, we must commit ourselves unreservedly to the preservation of a springboard for an eventual climactic ground attack.

If we were to accept the inevitability of enemy superiority on the ground, we should not only be forced to abandon our allies with frail hope of liberation, but we might also find ourselves trapped in a long and punishing war of attrition through air bombardment. While the odds in such a conflict would presumably lie with us, an air war of attrition could readily lead to disaster—to a duel, a duel in the best fabled tradition of the gingham dog and calico cat who ate each other up.

Unless the enemy suddenly were to collapse from the wounds of those first two blows, the United States must then be prepared in the third round of a war to strike at the enemy's forces, wrest from him his bases and destroy the enemy's armies in large-scale ground assaults. Whether they be air-borne or sea-borne, these piercing attacks of mobile mechanized troops provide the only weapon that can find its way to the roots of enemy resistance and there crush it or subdue it.

Because the Army cannot subscribe to the thesis that air power is a self-sufficient power capable of single-handed victory in a global war, I am dismayed that those who dare question it should be tagged as ox-cart soldiers in an atomic-age. And I am alarmed that the Army's insistance on a combined defensive force should be distorted in the minds of some Americans as stubborn opposition to the strengthening of air power.

The United States Army does not question the need for placing first emphasis on strategic air as the most formidable weapon of attack. We confirm the premise of most airmen that the fear of instant retaliation at the hands of our strategic air offensive is the most substantial deterrent to war today. We freely affirm—in concert with the Joint Chiefs of Staff—our critical need for creating an instant war readiness in American air power. And we readily agree that while the Nation in times of peace must curb exhorbitant spending for defense, first things must come first—and the first is readiness in air strength.

But this does not mean we can abandon the others of our armed resources. For if we are to construct air power at the fatal expense of ground and naval arms, then we may foolishly be forced to desert our allies and forsake our capacity to wage a sustained war.

By reckless reliance upon a knock-out blow in the opening months of a conflict, we might unwittingly risk defeat in war and the possible loss of our lives. If the Army and Navy were to be denied relative readiness in their striking forces to hold and seize advanced bases, we might easily waste our air strength in an overextended and therefore far less effective preliminary air war. This could do nothing but lengthen the conflict and multiply its eventual cost. Unless the Army can maintain a minimum mobile striking force as well as an effective base for mobilization of its civilian soldiers, the Army cannot be readied in time to accomplish its mission in war. In our mounting sequence of attack against an enemy aggressor, we cannot ring a bell for a third round and have the Army answer: "Wait a couple of years and then we'll come out swinging." "Then" will be too late because of too little now.

The roles of defense forces are publicly defined during congressional hearings on their budgets. But because limited peacetime budgets cannot and will not provide for the wartime mission of the Army, that mission is too often forgotten and frequently ignored.

Because air power is essentially a first priority weapon, its first priority needs are provided in peacetime readiness budgets. And because the Army is a lesser priority weapon in the sequence of attack, many of its peacetime needs are preparedness needs for wartime mobilization.

If we starve the Army in an effort to feed those first priority forces, then we shall have to anticipate that ground support will be perilously thin in the initial stages of war and the large scale ground offensive will, of necessity, be long delayed.

It is clearly apparent that in the absence of any precipitant danger, the Nation must curb within reason that share of the national income it would devote to its common defenses. A nation cannot hope to purchase within the limits of its purse an assurance of guaranteed security against aggression. But it can spread the risk among its several services so that with reasonable safety we may forewarn aggressors and intelligently provide for an effective force in the event of war. This, I believe we have done, critically, soundly, and with the general approval of the services themselves.

The Department of National Defense is not irrevocably split among partisans of the several arms. We have made a start in compromising our individual requirements to construct, one with another, a security force that can best fulfill both our instant and eventual needs in the event of war. And we have learned that just as important as step-by-step sequence of fighting in modern war is the fundamental demand for complete unity in word and heart among the armed forces.

The Army will live scrupulously within the means of a budget recommended to the Congress by its Commander in Chief. I pledge to you the willingness of the United States Army constantly to review its requirements that you need not be taxed for the maintenance of nonessentials. We do not exist to defend stubborn traditions, obsolete concepts, or yesterday's tactics. We exist to defend the Nation, tomorrow as well as today. And in subscribing to the need for prudence in military spending, I say to you that I would much prefer to take some military risk rather than have to weather the dangers of an economic bust.

Mutual Defense Assistance Act of 1949

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. POWELL. Mr. Speaker, I am against this bill for four distinct and separate reasons.

First, as a Negro, I am against this bill as a part of the Marshall plan because it puts our Government in the business of protecting and encouraging colonization and imperialism. The Nation's largest Negro paper, the Pittsburgh Courier, May 21, 1949, said editorially that Negroes should oppose the Marshall plan because of the aspect of colonization.

Second, as an internationalist, I am against this bill because it is another stab in the back to the UNO. Granted that the UNO is weak and imperfect—it will never become anything other than it is as long as we ignore it.

Third, as a Christian pacifist I am opposed to this legislation and all warmongering legislation that breeds war. I have always opposed all military bills including appropriations—and I always will.

The only answer to the foregoing is ever—"only this will stop communism." And so, I am finally against this bill as an American because the only answer to communism is a practicing democracy. Anything short of this will spell certain failure.

Socialist Britain's Failures Follow Failures of Business

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 18, 1949

Mr. MULTER. Mr. Speaker, I am sure the following editorial which appeared in the Brooklyn Eagle of August 17, 1949, will be of interest to the Members of the House:

SOCIALIST BRITAIN'S FAILURES FOLLOW FAILURES OF BUSINESS

The Economist of London, an internationally known magazine, has been quite critical at times of the so-called Labor government in Britain. Lately, however, the editors rose up and smote the critics of the present English administration. It spared neither its neighbors in Europe nor our own carping chroniclers of doom.

Answering the charge that the socialistic policies of the present government in the British Isles were ruining world trade, the editorial pointed out specific items on which they were doing as well if not better relatively than a number of the neighboring countries. The writer denied that British production was lower today than in 1938 and added that many practices used now in international trade by the United States were as socialistic as are those of the Labor government.

We do not favor the general nationalization of industries in any country. But we think it timely that someone took up the cudgels against the unfair propaganda that issues forth in regard to the Labor government's efforts to keep the English economy running.

Douglas Jay, economic secretary to the treasury, pointed out about the same time that the Economist was leveling its blasts that with the exception of civic aviation, the nationalized industries of Britain were beginning to show or had been showing a profit. The air industry has been subsidized almost from the start, just as it has been in this country and still is.

To make a fair evaluation of the English experiment it is necessary to know what was the condition of each of its industries before nationalization took place. If failure should overtake them, it is not in itself proof that the present regime is at fault. It may be that the cause is imbedded deep in the past and that nationalization was a last dying effort to save something that could not be saved.

The fact that the new experimenters may be unsuccessful does not prove that the old methods would not have been equally as unsuccessful. The people of England did not turn to a Labor government until after they had lost confidence in the ability of the Conservatives to do a good job for them.

Stigmatizing social legislation and government efforts to assist the people as the welfare state will neither correct the evils that bring on such effort nor will it dissuade the voters of a nation to spurn its offers. There are no cries of the welfare state when big business concerns buy up Government plants for a pittance, when taxes are used to repair roads damaged by giant trucks, when air lines and the press receive healthy doles or discounts from the Post Office Department.

England is having economic troubles under a Labor Government. So, too, are most of the nations debilitated by war. We are having some of our own. We do not think that the nationalization of industry is the panacea to prevent either present or future woes. But we do grant that it is the right and the duty of any government to step in and assist with salutary social legislation any segment of the economy that is faltering because of the failure of private enterprises to solve their own problems.

The term welfare state can be one of approval as well as one of opprobrium. In the last analysis, to protect the welfare of the people is the reason why a government exists. When it performs that function within proper limits we see no good reason why the action should not be called the work of a welfare state, but in a decent, not a derogatory, sense.

The Fraternal Order of Eagles Are Interested in the Physically Handicapped

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 18, 1949

Mr. MANSFIELD. Mr. Speaker, recently the Congress unanimously passed House Joint Resolution 228 and the President signed Public Law 162, authorizing an annual appropriation for the President's Committee on National Employ the Physically Handicapped Week. The President has since designated the Secretary of Labor as the responsible official to supervise the activities of the committee under the chairmanship of Vice Adm. Ross T. McIntire and of the Honorable Robert Ramspeck as vice chairman. This committee, composed of many public-spirited citizens representing some of our country's greatest and most important organizations and groups, has done much commendable work in bringing the employability of the handicapped to the attention of our Nation's employers and to all people. The chairman and vice chairman, who serve as a public service, have contributed much of their time and talent to this very commendable work. Admiral McIntire recently spoke at the national convention of the Fraternal Order of Eagles in Detroit. As a member of the Eagles I have been proud of their sponsorship of many programs in the public interest, and I am happy to report that they are also in the forefront of this work on promotion of the employment of the impaired worker. I should like to have Admiral McIntire's remarks available for all my friends in the Congress to read, for what he is asking for in his talk to the Eagles is greater community efforts to help solve this problem. One way of solving any problem is through greater information and education which results in understanding.

Admiral McIntire's remarks follow:

Mr. Chairman, friends, and coworkers in the field of social action, your invitation to speak at the 1949 convention of the Fraternal Order of Eagles was received with real pleasure and I hope by being with you here today to convey to you some of the very real appreciation members of the President's committee have for the work which your organization has done in behalf of our handicapped working men and women.

Eagles are no strangers to hard work. And people who work hard are at times injured in regrettable accidents. So, the men and women of Eagledom are no strangers to physical handicaps. It would be surprising if you were. For an injury, accident, or germ does not respect a group, a creed, a color, or an economic section of the population. But as members of our great American labor force you are familiar with the 2,000,000 yearly total of industrial accidents and with the many highway, home, farm, and miscellaneous accidents that result in partial or permanent injury to our country's men and women.

As a doctor for more than 40 years I have been no stranger to injury, accident, or illness with all their crippling aftermaths. As a naval officer responsible for the health and physical well-being of many men and women I am familiar with what has been done, what can be done, and what should be done in the rehabilitation and readjustment into employment of our casualties of war and peace. I stand here today and remind you that more must be done than is now being accomplished. I ask you here today to join with me in developing one phase of a national program aimed at creating more employment opportunities for the handicapped.

The Eagles have already worked out their own blueprint for cooperation in this program. The blueprint was tested in Milwaukee in 1948 and again earlier this year in 1949. Both times it was found to be successful. But behind this blueprint are some men, hard working men. And before such a blueprint could work in your own aeries you would have to produce similar men with equal vision, equal vitality and the knack of obtaining cooperation from all community elements. In Milwaukee that man was Frank Greenya who is known to all of you. Beside him was and is your former grand worthy president and my good friend, Bob Hansen, who provided the essential liaison with Washington and produced speakers of the caliber of Senator JOHN J. SPARKMAN and Assistant Secretary of Labor John W. Gibson.

The blueprint of which I speak is the Community Institute on Employment of the Physically Handicapped. This is essentially a management-labor program of mutual understanding and mutual interest. But it won't be successful unless management participates by sending its top personnel, medical and administrative officials to attend the

sessions of the Institute. Nor will it be successful unless other elements of your communities cooperate, attend and then become advocates of the program based upon the convincing evidence they see and hear at the Institute.

Those of you who carefully read your excellent Eagle magazine are already familiar with the idea of an Institute and are certainly no strangers to the general subject of employment of the handicapped because Bob Hansen has been most cooperative and most generous in making space available for information on the program.

This Institute not only provides an excellent community opportunity for the Fraternal Order of Eagles to carry on in the high tradition of public service for which it is so well known, but also to secure employment for brother Eagles or members of their families who may be seeking work for which they are qualified and for which they have been trained.

I brought with me a considerable quantity of mimeographed folders on institutes which are available to delegates willing to accept the challenge of going home and working with other community leaders, perhaps under the approval of the mayor, and actually holding such an institute in connection with National Employ the Physically Handicapped Week, October 2–8. However, if this does not give you enough time, or if your October program is already scheduled, the program is such that it is applicable any time during the year. Of course, there are some delegates here today who may be from areas essentially agricultural, where the institute plan as offered in the President's committee pamphlet may not be the right blueprint. However, no blueprint was ever developed which was not made better by the people who have to live with it. No plan from Washington was ever designed which was not improved upon in our communities by warm-hearted men and women. So, I ask you not to be worried that this is a project of such grand dimensions that it is not for you. Frank Greenya and Bob Hansen have proved that it can work, and although they are a long way from being completely satisfied at its past success in Milwaukee, they have both told me they believe it has great possibilities. If your leaders, including Charles McCann, who also represents the Eagles on the President's Committee, did not believe that this was a program which you could take home with you and put into operation I would not mention it here today.

In general, such institutes stimulate interest on the part of both employers and employees. You might call it a program of mutual education and information. And you will find many employers eager and willing to step onto your platforms and tell fellow employees of their own success in hiring the handicapped.

Briefly, I will outline the aims of such institutes:

1. To secure employer acceptance and effective utilization of qualified handicapped workers, both disabled veterans and civilians.

2. To emphasize use of Federal-State Employment Service facilities for recruitment and selection of workers.

3. To provide employers with facts regarding productivity, absenteeism, and low accident incidence of handicapped people.

4. To illustrate by a typical in-plant plan for employment of disabled.

5. To demonstrate the advantages of the selective-placement approach to hiring the handicapped—particularly the method of making physical demands analyses and physical capacity appraisals.

But, as I mentioned, the employee also learns that:

1. Special services are available to handicapped through USES-State employment offices.

2. Applicants, already handicapped but otherwise capable, should secure the various tests and vocational guidance procedures of State employment and rehabilitation services necessary for satisfactory placement.

3. An in-plant plan should demonstrate to employees the possibilities of increased employment by rearrangement of machines—grouping of certain related plant activities which may be carried on by handicapped, etc.

And, you may be certain of complete cooperation from your local office of the State Employment Service, your local Veterans' Administration officials and also the nearest office of the State Vocational Rehabilitation agency. These people are available in almost every community and probably already are busy with plans for the 1949 observance of NEPH Week.

I am happy to offer the local aeries of the Fraternal Order of Eagles a partnership with the many members of the President's Committee in the planning and carrying out of community institutes. I have no blood, sweat, and tears to offer you, but rather personal satisfaction in a major contribution to the welfare of our Nation's impaired workers, a satisfaction obtainable only through hard work, mutual cooperation with your home-town associates, and a willingnes to pioneer.

Your Eagle welfare program with its sheets of stamps is a very splendid one of which you should be rightfully proud. The fact that you have selected the dependents of a fighting marine who gave his life for his country is evidence of the merit of your program. I feel certain that not only your own brother Eagles, but the public as well, will rate your scholarship concept as eminently sensible and thoroughly in keeping with the ideals of Eagledom.

I am proud to have been honored last year by the Eagles for the work of the President's Committee in bettering the economic lot of the handicapped. But as I told Charlie McCann at the time he presented me your plaque, I accepted the award in behalf of many millions of people, including the Eagles' members, who are daily working in their lives to make this world a better place for the handicapped, a place where they can work with their abilities and where disabilities become relatively unimportant so far as work performance is concerned.

Recently Felix Morley wrote an article in Nation's Business in his column entitled "The State of the Nation." He was referring to the fact that all of us at one time or another get a break from someone else. He was asking consideration for the high-school and college graduate now entering the labor market. I think his words are certainly applicable to the employment problems of the handicapped and would like to quote a few sentences for your thoughtful consideration. He said:

"Unless generosity is the rule, and not the exception, the growth of the welfare state is as certain as the coming of night. Our creed—political as well as religious—is that men deserve consideration because they are men. So it is merely a question of who shall provide the consideration to others. Will it be provided by individual initiative, or by the State?"

You have already given the answer in your stamp program to finance yourselves the higher education of those children of Eagles who gave their lives for us. You can help give the answer also in your adoption of this Institute program as a major project for 1949–50. You won't be working alone, however. Vice President BARKLEY recently stated on a national radio hook-up that the response of businessmen, industrialist and labor officials to the President's plan to place more handicapped workers on the job has been highly gratifying. He also said, "We must intensify our efforts so that a war wound or an industrial accident is not a one-way ticket to the side lines."

No doubt many of you have received mail recently marked with the cancellation slogan "Hire the handicapped, it's good business." More than 140 cities are canceling mail this year with this slogan, probably hundreds of millions of letters going across the country and the world with this message In addition, the 150 organizations actively cooperating with the President's Committee are using many different methods of bringing this Nation-wide program to the attention of thinking men and women everywhere. Your home publications office will no doubt be sending out checklists to local aerie chairmen. I am sure that each will make whatever contribution to the over-all observance seems most desirable, possible, and reasonable.

I wish to again thank you for your hospitality in having me here as your guest and remind you that in taking a real interest in this program you are but following in the footsteps of the Man of Galilee who gave us the Golden Rule and who did much for the handicapped during his visit to our world.

British "Bundle"

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. MULTER. Mr. Speaker, I direct the attention of my colleagues to the following article which appeared in the New York Post of August 17, 1949:

BRITISH "BUNDLE"

(By Sylvia F. Porter)

Here it is—another neat little bundle from Britain proposed as an easy way out of the Empire's latest dollar crisis. It's simply this: We, in America, should raise our gold price, thereby automatically create a multi-billion-dollar profit for ourselves, and then use the billions created for further aid abroad.

Don't duck this one! It's your gold that's being discussed. It's the backing of your dollar that's at stake. It's your Government that's being asked to take this step.

And it's serious. This bundle is one of the most precious Sir Stafford Cripps and Ernest Bevin will have with them when they arrive in Washington early next month for the crucial United States-British-Canadian money talks.

Already, heavy propaganda for the move is being spread. High officials of Britain, France, South Africa are publicly supporting the idea in carefully phrased speeches.

Britain's technical experts here and in London are working out the figures for us down to the last decimal point.

I've heard the arguments for the move so often in recent months that they're running out of my ears.

And no matter how rigidly cold our Treasury Secretary Snyder may become when Cripps mentions gold prices during their hush-hush money talks, I'm convinced the British won't give up trying to sell us the bundle.

What's this gold tinkering idea all about? In brief, this is the tale:

America today has a gold hoard of way over 24 billion dollars, which is most of the monetary gold in the world.

The majority of our gold is stored at Fort Knox, and it's the valuable metal which backs our dollar, gives people the globe over confidence in our paper currency's stability and worth.

Back in 1933 and 1934, when we abandoned the gold standard, the Treasury so manipulated its buying of gold that the price rose from $20.67 to $35. At $35, Congress called a halt and fixed the official price. And that's where it has stayed ever since.

Now the neat little theory is this: If our Congress will agree, the Treasury again can so manipulate its buying that the gold price will rise—say, to $55.

It wouldn't be much of a job because in the black markets of the world, gold is selling at levels much higher than $55.

Or easier still, Congress could just pass a law ruling that our gold is henceforth worth $55 and we'll buy all offers at that new price. And overnight, the deal would be done.

What would that accomplish? Well, a $20 rise in our gold price would give us an "automatic profit" on our hoard of $24,000,000,000. Instead of having gold worth 24 billions, we'd have gold worth over 38 billions—a nice day's work, you will admit.

And then what? Well, then, according to the theory, we'd have that 14 billion "profit" to use to stabilize the tottering currency of Britain and the paper monies of other lands in Western Europe. When a currency got in trouble, we'd just send over some of our dollars to patch things up.

And we'd have billions left over to maintain and expand our European recovery program and we'd not have to tax ourselves either. And we'd have billions left over for our own purposes too.

And the producers of gold—which, by no coincidence, are in the British Empire—would also make a lulu of a profit and they'd increase their production. And the relatively small hoards of gold still in Britain and France also would be worth lots more in dollars.

And bingo, they conclude triumphantly, there's the end of the dollar shortage and the crisis.

So what's wrong with it? It sounds plausible enough, you say?

But what's most wrong with it, I think, is that it does sound so plausible; it is so neat, so cute, so painless—and so superficial.

It's monetary tinkering de luxe. It's the same old stuff tried through the centuries which may work as a temporary aid but which never touches the roots of the problem. After a pretty whirl, we'd be right back where we started with the identical problems of production, trade and money. Only in the meantime we would have devalued our dollar in terms of gold and weakened ourselves a bit more.

Maybe we'll buy the bundle. Some day. I've seen and heard enough so I wouldn't be surprised if we did. Some day.

But if this is the best we can think up to meet the great, grave economic challenges of the 20th century—well, we've sunk far, far down indeed.

Arms-Aid Bill, H. R. 5895—Analysis by William B. Ziff

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I was deeply impressed by the testimony of Gen. Bonner Fellers before our Committee on Foreign Affairs when it was considering the military-assistance bill. At my request Mr. William B. Ziff, noted author and air authority, has analyzed General Feller's statement. I include it as part of my remarks:

Hon. LAWRENCE H. SMITH,
House of Representatives,
Washington, D. C.

DEAR MR. SMITH: I have read carefully Gen. Bonner Fellers' statement on the military-assistance bill, H. R. 5895, made before the House Committee on Foreign Affairs. I am analyzing his remarks in the order in which they were made. I cannot resist observing in advance, however, that the General's comments on the whole are shrewd, conservative, and make sound military sense. He speaks as a military man whose views are simply given based on an examination of the problem itself, and not slanted to agree with the calculated policies of certain powerful political figures within the Government.

THE NORTH ATLANTIC TREATY

1. The North Atlantic Treaty has no such psychological value as General Fellers indicates. The extension of the Monroe Doctrine principle to Europe would have served ample notice on Russia that if the Soviets came in with armed force, we would meet them with armed force. This is all the guaranty that Europe needed.

Any weakness of European morale in no sense arises from a question as to our ability or willingness to fight against armed Russian aggression. It proceeds from a totally different set of considerations which we conveniently ignore. The first of these misconceptions is based on the fact that in urging the arming of Europe, we are operating against a nonexistent proposition. There is nothing to indicate that the Russians will invade any European country in an open war of hot lead. Nor is there anything which indicates that such a course would make military sense from the Communist view. The Kremlin has discovered a unique and relatively safe method of aggression, by which they attack these nations from the inside while at the same time maintaining perfectly correct relations with their governments. We have seen this, for example, in China where it is the United States which is calling the legal Chinese Government corrupt and worthless, whereas the Soviets maintain a rigid surface correctness in their relations with this same Government. Yet is it not amply clear that the real enemy of the Chinese Government in the civil war now going forward is the Soviet Union, under whose instigation all of this has taken place?

A monetary crisis such as threatens all Europe in the coming spring, or a general collapse in the conditions of trade brought about by the cynical and authoritarian style policies of these countries themselves, would set them up as logical prey to Communist aggression, despite any amount of arms which we might send them. We may be sure that under existing conditions, a shooting war will not be profitable to Russia; therefore, she will not undertake it. She will seek to gain her victories the easy way and with as little risk to herself as possible.

The Russians see a set of conditions in Europe to some degree paralleling those in Asia. In several of the countries such as France and Italy, the Communists have great strength; or in still others such as Great Britain, where under the name of socialism the domestic economies are rapidly going down the totalitarian road. There is no real belief in any of these countries in our own free-enterprise system. In addition to an observable apathy, there is a total realization that in the event of war the Communists and their Socialist allies could paralyze the resistance power of the nation almost immediately. It is this which constitutes the great morale question in each of these countries, and not whether the United States will come to their assistance. The real question, in fact, is a reverse one: if events finally bring about war between Russia and ourselves, will any of the European countries stand with us? The Labor Party in Great Britain has already indicated that Britain will not, but would prefer to remain neutral. So has the French Radical Socialist Party of France (this is the party of which the present Premier, Henri Queuille, is a member).

2. Europeans, who are historically minded, remember that the intervention of America in the two major European wars of the last quarter century, did not depend upon prior commitments. No such commitments existed, yet America intervened on the basis of what was considered here at the time to be our own best interests.

General Fellers states the absolute conviction of all military men in today's world, who are not dominated by their political leaders and, therefore, compelled to speak out of context with their own beliefs. There is no force which we can supply Europe which can prevent the swift occupation of Europe by the Red Army. Every European military leader believes this with absolute conviction, though they also believe that in an all-out test of strength with the United States, the Russians would eventually be beaten to a pulp as were the Germans, Italians, and Japanese. If fact, if we put up military plants in Europe, the big question in wartime will be whether these can be demolished before the Russians seize them and put them to their own use. The military equipment we give to Europe will more likely than not, fall into the hands of the Communists, whether local or invading Russians, exactly as American equipment supplied to Chiang Kai-shek's Government fell to the Chinese Communists.

General Fellers is also correct in his assumption that a bitter propaganda campaign operated in the countries of each of our so-called allies, will blame us for their fate if they are occupied by Russia. They will not be reconciled to the idea of America husbanding its resources for an all-out strategic air assault against the centers of Russian power in Eurasia, while at the same time abandoning for strategic reasons our militarily untenable positions in Europe. One look at the European map will indicate that apart from Britain, the situation of our European allies is such as to make any real effort to hold their territory against the Russians a precarious operation, which would play directly into Russian hands. In its present situation what remains of China could be held much easier in the event of such a war than the countries of Europe. Their areas are not only scattered but for the most part directly out-flanked. The Scandinavian countries could be overrun with little trouble. The same would be true of Greece and Turkey, which simply cannot be held. Italy and France with their huge Communist minorities and the vicious social war going forward between great sections of the population, together with the general apathy toward our own objectives, would not offer competent resistance for long.

The area of our European allies, in fact, is so scattered that it can be said to lie as a narrow and relatively defenseless fringe on the periphery of Soviet power. Its military problems could not even be met by a single military command and would have to be approached through something like the 12-nation board which operated in Washington during World War II, and which for practical purposes could not be regarded as a power force at all.

Thus the Atlantic defense set-up insures all the traditional military weaknesses of the coalition, in which divergent interests would at all times be observable and no cohesive plan operable at any time.

We will note that each of these countries will be looking out for itself despite the so-called alliance. Britain did this in World War II, when it withdrew its forces from the Continent in order to make a last stand in

the British Isles themselves, thus in effect abandoning France and the low countries to their fate. Even at this moment there is a strong rift between the French and the British based on this same old issue. The French have no confidence in a last-ditch British air, naval, and land support to prevent France itself from falling. The French want an all-out defense east of the Rhine, preferably at the Oder. The British are thinking in terms of a French and continental defense at the Rhine with the larger part of their own air and ground forces reserved for defense of Britain itself.

General Fellers is quite correct in his estimate of the quality of leadership in Europe. Not only is Europe utterly war-weary, but each of the countries is literally torn to shreds with internal dissension. The present armed forces of France are virtually worthless. There is total apathy on the part of young men of good family toward an army career. The army has lost caste. France may possess seven divisions in Europe. In addition, there are about 150,000 troops in French Indochina, which cannot be removed, and about 100,000 in North Africa, the latter hardly passing under the name of an army. Hanson Baldwin estimates that about five French divisions "are pretty well equipped, and one of these—with obsolescent tanks—is an armored division". France has almost no effective air power. The armed forces of Britain are not worth much more. In Britain and on the Continent there may be three organized divisions. There is the equivalent of one armored brigade, and an air force woefully weak in both morale and bombers, but well-equipped with modern interceptor jet fighters. On the whole, considering the nature of Britain's problem, this is no armed force at all. Due to economic difficulties, Britain's armed forces as a matter of fact, are to be cut down. Yet at the same time, the forces in such trouble spots as Hongkong and Malaya are to be increased. In view of their own peculiar situation, the British have, and can have no real intention of putting up a serious military struggle in Europe against the overwhelming military might of the Soviet Union. It is almost a foregone conclusion that Britain's blueprint of military strategy will involve a swift retirement for a fortress defense of her own island. Better still, in a shooting war Britain undoubtedly will attempt to remain neutral and thus avoid the terrible devastation which otherwise will be wreaked on her.

Hanson Baldwin, commenting in the New York Times of Sunday, August 7, remarks of Italy that she has the equivalent of seven or eight divisions and that these are "poorly equipped, chiefly with obsolescent British wartime equipment." There are a few jeeps and automatic light arms and little in the way of air power. The same mortal weakness is in the forces of Belgium, Norway, and Denmark. What little strength the Netherlands has is being wasted in the East Indies.

All of these countries have questionable elements within the ranks of the armed forces. None of them have any real belief in their own future or in the nature of the goals for which they would be fighting.

General Fellers is also quite correct in his belief that once donated, our military equipment will deteriorate rapidly; he is also right in his belief that we will continue to be blackmailed for increasing aid by each of these nations under the threat of otherwise yielding to the Communists.

It would take at least $25,000,000,000 to arm Europe, and perhaps as much as forty billions. In effect, this would mean that we would have to arm Europe in preference to arming ourselves. Even this all-out and incredibly expensive effort would not be effective unless we had assurance of a unified will to fight not only on the part of each of the countries, but on the part of all of the countries, so that each would participate in a unified strategic pattern, irrespective of its own individual interests.

It will take many years, in any case, to arm Europe. During this period, Russia will have access not only to the raw materials of Asia, but if she can succeed in organizing China, to unlimited manpower. The Russians now have the best in modern submarines and conceivably could succeed in making the oceans untenable to our transport, where Germany failed. There is also reason to believe that the Russian air arm would be sufficiently effective to give all required support to Russia's really superb ground forces.

General Fellers is also quite correct in his estimate that only air power can defeat air power, and that there is nothing in sight which indicates that we can neutralize the Red air force on its own chosen battleground.

I notice General Fellers reaches a figure of $24,000,000,000 to cover a European garrison of 60 divisions. I consider that this is a minimum figure. It is not, moreover, a static figure. That is, the investment once made, will not remain, but rapidly deteriorate, calling for supplementary investments.

General Fellers is also quite correct in his surmise that a war with Russia involves other factors than the purely military. Military forces alone cannot contain communism. Communism could very well spread within the western armies themselves, where the seeds are already planted deep, and where the use of Communist-contaminated troops in Italy and France is inevitable.

General Fellers' belief that Red soldiers, once permitted to see free Europe, would rebel against their totalitarian masters, is one of the great questions of our time. I do not think it is a question which can be answered with the full f rce of affirmation which General Fellers gives it. The Russian troops let loose in a ruined Europe would come in as masters, and at the same time will have been heavily indoctrinated with Communist fanaticism. There is no guarantee that they would rebel against Stalin. To believe otherwise would be a most dangerous assumption.

General Fellers' belief that a ground war in Europe cannot succeed against the Russians is borne out by every fact which can be reasonably adduced. The probabilities are that Stalin could use at least 1,000 Red Army divisions. His flanks are completely protected by the Carpathian Mountains. Our sole avenue of invasion is over the narrow northern European plain. Stalin's opportunities for invasion, instead of being equal to those of the west, are actually far superior, for his troops by a few sharp victories can collapse nation after nation on the road to the Pyrenees, whereas a reverse invasion toward the Urals would simply have the historical effect of sucking our limited troops into a morass, in which they might very well be drowned out by the immense extent of pure terrain alone. In this respect, it is useful to remember Japanese experience in China, where the great territorial expanse reduced the Japanese to garrisoning the big cities, without even being able to maintain absolute communication lines between these outposts. Soviet land would probably amount in area to some 11,000,000 square miles. By way of comparison, the area of the continental United States is around 3,000,000 square miles.

I agree completely with Fellers' contention that any acceptance of the idea that war with Russia is inevitable, is an admission that our leadership has failed. A war with Russia is apt to be one of the longest wars in history. It might last 25 to 50 years. It certainly would result almost immediately in a totalitarian structure for our Republic for the purposes of prosecuting the war. Even after winning such a war, the remnants of our free enterprise system would be in cinders. Not only Europe, but all Asia as well, would be in complete chaos. We have already discovered that a world in partial chaos has presented us with an almost insupportable burden. Imagine what would happen if the greater part of Eurasia were really destroyed by an all-out assault utilizing atom bombs, chemical and bacteriological warfare, etc. The situation is inconceivable. There would not be enough resources left in the world for our Nation to bring order back out of this terribly anarchy.

On the reverse side of this disk is the Russian knowledge that they, too, would risk everything in a shooting war. In any case, they would know that the present Russian hierarchy would be beaten to a pulp; and we must operate on the assumption that these people have certain selfish interests which they are attempting to protect, and that above all they do not wish themselves destroyed. Our experience in the Azerbaijan province of Iran, which had been overrun by Russian troops, and where we successfully intervened by threatening to come in shooting if they did not retire, offers suggestive proof that the Russian hierarchy is not anxious to become tangled in a determined shooting affray with us. In this single fact lies whatever sobering assurance which exists in this grievous situation.

3. General Fellers is quite correct in raising the question as to whether our weapons in the hands of western European powers may not ultimately be used against us. Our experience in China raises this as a legitimate question.

General Fellers is also correct in assuming that our weapons will be used primarily to maintain European colonial empires. To hard-headed Europeans, this is the only true usefulness they would possess. There would eventuate a further strengthening of the belief now actuating the colonial peoples that it is Russia which is the only true agency of reform in the world. Thus we would be indirectly responsible for making the Russians appear as legitimate upholders of freedom and equality against the machinations of colonial oppression.

I do not agree with Fellers that Stalin might be tempted to strike at the allied forces in Europe before they were strongly equipped, when his occupation of western Europe would be quick and certain. Stalin has no desire to bring on a hot war with the United States. He has been winning the cold war, occupying country after country. He can calculate on the possibility of shattering the cordon sanitaire erected against him, in detail. If he possesses any historic sense, he will know that no cordon sanitaire in the history of nations has ever remained effective against a powerful and determined state. It has always exposed a weak link somewhere and been broken. Oue experience with Hitler alone offers eloquent testimony to this fact.

Moreover, there is reason to believe that Stalin is playing a deep game of strategy in endeavoring to get us to dissipate our resources and our strength. A cardinal rule of warfare is the rule of the concentration of power. Decentralization of power by which strength is distributed over a wide periphery has always, from the military view, been the prelude to disaster. Stalin is not afraid of anything that can happen in Europe in an all-out test of strength. He is afraid, and has reason to be afraid, of a desperate last-ditch struggle with the United States, in which American forces, principally air forces, based on the American mainland, would by sheer technological superiority, destroy his entire empire piecemeal. The fall of Germany, and particularly of Japan, gives ample testimony to the soundness of such an estimate on the part of Stalin.

4. It is quite correct that what Stalin is afraid of is our air-borne power. In this respect, it is well to remark that the atomic bomb in itself, in all probability, is not the absolute weapon it is estimated to be by the majority of our people. The reason I mention this is that without the atomic bomb, we do not possess at this moment a superior

fighting force. In terms of equipment and readiness, our fighting force is mediocre. Much of our equipment is obsolete. It would seem requisite for us to bring our own forces to the highest possible point in efficiency, mechanization, and numbers before scattering our productive power over the world.

According to the survey of the British physicist, P. M. S. Blackett, to accomplish the same devastation wrought in Germany, would require 400 atomic bombs (that would mean that 400 atomic bombs would actually have to get through the wall of interception erected against them, and would have to hit their targets). Even this amount of devastation would not be decisive, for according to a United States strategic bombing survey, while air assault was extremely effective, German production actually reached its peak in September 1944, or after D-day. It is also well to remember that Soviet Russia is forty times the size of Germany, and with its satellite territories in Asia and Europe, more than double this, and that decentralization may be literally so great as to require quite a different technique than that posed by our possession of the atomic bomb.

The French expert, Stefan T. Possony, now a military lecturer at Georgetown University, estimates that to destroy ninety cities covering 4,500 square miles, with an allowance of one-third operational failures, and a 50-percent rate of interception, would require 10,000 atomic bombs. Despite the published material as to the mass production of these bombs, it is extremely doubtful that they exist in any quantity at all. In fact, a very sound guess could be made as to the number which do exist, and on this guess it would seem fair to assume that they are entirely insufficient to destroy all of the necessary targets under Soviet control, if a war is to be won by the bomb alone.

The Russians, however, have a very healthy respect for the destructive power of the bomb, and an even greater respect for our industrial efficiency by which other air-borne weapons could be brought to bear against Russian industrial centers in a continuity of mass assaults.

A scheme by which our own military establishment is cut back at the same time that military aid is being given to Europe, is a totally incomprehensible and indefensible one. It is an operation at complete variance with all accepted theories of military organization, and is sufficient to make the great military captains of history turn over in their graves in agony.

Fellers hits the nail right on the head when he remarks that we must tailor-make a force to meet the combat characteristics of our designated enemy. A combat force designed to fight against Mexico or Canada is one thing; a combat force designed to fight against the Soviet Union is quite another.

It would be suicidal for us to attempt to build the same type of armed forces which the Russians would find effective. We must be guided by absolute questions of opportunity, terrain, and transport. The Russians have contiguous land borders on three out of four sides. The so-called fighting team, or mechanized ground force with powerful air support, would meet the conditions of Russian military strategy admirably. They would not meet our conditions at all unless we were perfectly willing to sit still on our own continent while Russia rapidly absorbed all of Eurasia and Africa.

If we are to be guided by the axiom that attack is the best defense, we will have to put our attack into the air. Not only is the question of logistics an impossible one to answer against the overwhelming mass power of Russia, but there may even be a great question as to our ability to dominate the seas at all. The Navy so far has originated no viable defense against the guppy or snorkel submarine. The Russians are reputed to have some 350 of these, sufficient to totally destroy our water-borne commerce.

The chances are that we would have to elaborate mass systems of chemical, atom bomb, bacteriological, and other warfare, all of it air-borne. We would be faced with the very difficult job of destroying Russian communications and industrial installations, and of literally collapsing the entire Soviet Army; and on our ability to do this would depend our chances for victory.

There are alternative possibilities. Among these is the claim that large portions of the Soviet Union would revolt against their present masters. However, this is too uncertain an eventuality on which to gamble our chances of victory. Moreover, we are making no effort to build a competent psychological warfare branch which could effectively operate on these levels. Such an organization would involve real cost and effort, comparable to what we are now suggesting for the arming of Europe.

General Fellers' figures involving a cut in our present military budget will, in my judgment, not work out. I think the present $15,000,000,000 budget is minimum. The chances are that it will come to $18,000,000,000, if the proper supplemental work is done. Costly experimental operations, for example those involved in guided missiles, are a total necessity to any planned scheme of threat or intimidation which might hold the Russians in line.

Fellers is, of course, quite correct in stating that placing our principal reliance on the destructiveness of air power would in no sense mean an abandonment of western Europe, or of any other part of the world. These abandonments have been political, not military. It is our present system of fighting windmills which has abandoned these countries. We note this in our absolute incapacity to protect Hungary, Czechoslovakia, and other states of eastern Europe from being rapidly gobbled up, and our pathetic weakness in reference to the Communist advance in China.

General Fellers states the military strategy which any leader would be forced to adopt when he remarked that "It might actually be better to permit the Red Army to occupy Europe than to suffer the devastation which inevitably follows in the wake of tanks, bombs, and guns." He might have added that it would be better to make a strategic retreat than to risk smashing our resources in detail by attempting an ineffectual and costly resistance in areas whose possession will not determine the ultimate outcome. To be drawn into such a contest would use up our strength and gain little for us.

The British would think very much along these lines, too, as I pointed out to you before. They have already done so successfully in two wars, the principal object being to save themselves as against the prospect of ultimate victory.

When General Fellers speaks of "our allies," he begins to ride on a soft shoulder. The implication is of real and comparable power to our own, which has to be questioned. Actually we have no allies, but only petitioners, who have to be saved. These countries are not power areas but power vacuums. Our job is simply to prevent their being occupied, or successfully held, by the Russions. We should not misestimate these notions and accord them powers which they do not possess.

General Fellers is also correct when he remarks that the day we send guns, tanks, and planes to the Rhine and Elbe, the Kremlin clique will make the most of this "tangible evidence that the capitalist countries are creating the military might to destroy Russia." The Russian people will respond as patriots; they will be propagandized to death along this line. There is, however, an even graver circumstance which General Fellers does not touch on, and that is the war-weariness and utter horror of war which consumes all of the people of Europe. Especially with the big Communist and near-Communist groups which exist within each country, Russian propaganda can play it out to the effect that we are war-mongering, and that all Russia seeks is peace. Efficient propaganda will utterly immobilize the fighting will of each of these countries, even among non-Communist sectors. Such immobilization even in Britain will require little in the way of effort. I have pointed out that in Britain itself, Arthur Horner, Communist head of the all-important coal miners, has served notice on the government that in the event of a war with Russia, the miners will no longer mine coal.

General Fellers is totally in error when he speaks of the Moslems of southern Asia as being foolproof against Communist propaganda. Quite the contrary, the Russians have evolved a system by which they have adjusted their propaganda to both Moslem and Greek Catholic credo. Alexei, the Greek Catholic patriarch, is now an ornament of the Russian power system. Russia also is one of the two greatest Moslem powers of the world. A number of the Soviet Russian Republics in Asia are Moslem republics. Their propaganda system, aimed against the British exploitation of Moslem countries in Asia, is a most effective one. The British alliance with medieval Moslem potentates, effendis, and oligarchs plays directly into Russian hands. The Russians are quick to point out the deliberate deindustrialization of Moslem Asia and the one-sided trade and other arrangements by which the Moslem peoples are being kept in filth and misery. Colonial squeeze and feudalism provide the perfect breeding grounds for communism. As far as Japan, Okinawa, and the Philippines are concerned, there is a grave question as to whether these can be held at all if we allow China to be taken by the Communists and organized by them.

There is also a grave question as to whether England can be held against guided-missile attack from the Continent. The Russians are known to be specializing in this form of military equipment, and are spending great sums in intensive experimentation, notably at Chebliansk in Asia.

There is also a serious question as to our ability to hold North Africa, or for that matter, to service bases there with the vast amount of matériel which large-scale military operation would demand.

West Africa is another matter. From west Africa we conceivably might be able to strike at a Red-controlled Europe. Here, however, the question of military advantage becomes a moot one. It seems far more logical that we take the short and direct routes over the roof of the world, and attack not the peripheral areas in Europe, but the centers of Russian power themselves in Eurasia.

5. General Fuller's total conclusion is a sound one. If we devote our resources and effort to military assistance to Europe, the odds would be against us in a contest with the Red Army. If the entire principle of our operation is unsound, no amount of perfection in its execution would remedy this basic unsoundness.

It is also true that the Europeans themselves would like an immense ground combat apparatus fashioned by the United States, and preferably dominated by American troops, by which the Russians could be held at the Elbe or the Rhine. From the military view, however, this would be a desperate adventure, and one in which we would throw dice which we can suspect are loaded against us.

General Fellers' observation is very interesting also when he remarks that the proposed military-assistance program places the State Department in the role of determining military strategy. It might be further observed that the State Department and its cohorts in the Government are in the position of coercing the military into an expression of view which has little to do with sound military doctrine. The whole record of the State Department, in fact, is one of predilection in favor of European, and particularly, British objectives. It is, moreover, a record of continuous failure, and, at the best, of a total misestimate of the historical processes which are actually taking place. This may be seen at any moment by subjecting the entire list of State Department propositions to examination, and comparing the results with the claims made for these same propositions when they were submitted to the Congress for approval.

I may add here one remark which General Fellers has not made, though I believe he would not be in opposition: It is not our fundamental position that Europe or anyone else must be saved at all costs. Our fundamental position is that the peace and security of the United States must be safeguarded at all costs, and that next in order come the other territories and peoples of the world. I would conceive that our good will, kindness, and generosity should encompass all of mankind, where we can do so without ruin to our own situation and to our own future. Under any circumstances, charity must begin at home, and the center of our military and economic thought must be the full realization that it is primarily the United States of America which must survive as a healthy, operating unit, in the present critical situation into which the world finds itself plunged. This is not bad morality but good morality. It is also good common sense; for if we go down in the general ruin, there will be no single point of reference in the world where a free civilization can make its start again.

Sincerely,

WILLIAM B. ZIFF.

South's Negro Farm Owners

EXTENSION OF REMARKS

OF

HON. PRINCE H. PRESTON, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Savannah Morning News of July 10, 1949:

SOUTH'S NEGRO FARM OWNERS

The Pittsburgh Courier is the most widely circulated Negro newspaper in the United States, and its associate editor, George S. Schuyler, is a leading Negro publicist and columnist.

In a recent issue of the Courier, Editor Schuyler offers some figures to refute the notion, fostered by northern radicals, that the Negro is faring badly in the South by comparison with other sections.

He refers to statistics advanced recently by George S. Mitchell, executive director of the Southern Regional Council, covering the period from 1930 to 1945, showing that in 13 Southern States there are 1,396,000 white farm owners and 186,000 Negro farm owners—which is three times the number of Negro-owned retail businesses in the United States.

The increase in Negro farm owners Schuyler points out, was 4.2 percent during the 15-year period, and singularly enough the greatest increases in Negro farm ownership were, as the Courier writer puts it, "in the very States where horror is supposed to reign for the Negro."

These figures, Schuyler argues, "are worth noting by professional bleeding hearts who are always weeping over the plight of the 'terrorized' Negroes in the South and can see nothing below Mason and Dixon's line except grief."

Such words sound more like those of a writer on a standard southern daily, written by a white man—and yet, here they are, printed in the Pittsburgh Courier by one of its own staff who is a Negro.

Columnist Schuyler shows a sizable increase in all Southern States in the number of Negro farm owners during the past decade and a half, including Georgia, with an increase of 11.5 percent, and he observes that, "If the present trend continues there will soon be no tenants or sharecroppers over whom to weep and collect funds for defense."

It is the Courier writer's belief that the outside propaganda concerning alleged conditions among the Negroes in the South is injurious to his race, and that among other things it is discouraging to young, intelligent Negroes who could easily become farm proprietors in southern farm regions. He is to be commended for his forthright appraisal of the situation.

A Day of Anniversaries

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. JAVITS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York Times of August 15, 1949:

A DAY OF ANNIVERSARIES

August 15 has a special place on the calendar of the Pacific. It is a day of anniversaries, a day of beginnings and a day of endings.

It was on August 15, 1945, that President Truman announced that he had received the Japanese reply to the Allied note outlining surrender terms and that he deemed it a full acceptance of the Potsdam Declaration. It was this day, therefore, and not the subsequent day of the surrender signing that marked the official end of hostilities in the Pacific. We knew, then, that the war was over. Today, 4 years later, we are not so sure.

This is also the first anniversary of the proclamation of the Republic of Korea. That event, naturally, was the direct outgrowth of the Japanese defeat, one of the symbols of the victory of freedom. The liberation of Korea had been one of the proclaimed objectives of the war in the Pacific, but Soviet obstruction made it impossible to achieve an independent government until 3 years had elapsed.

Today our concern for Korea, facing grave danger, should not be allowed to overshadow our satisfaction in the splendid accomplishments of this first year of the young republic. The Koreans have set in motion genuinely democratic processes and have, in spite of enormous handicaps, demonstrated their capacity to work with the rest of the free world in a democratic family of nations. Korea has resisted the threat of overthrow from within and without, has carried out to the full the obligations imposed by the United Nations, and has shown herself worthy of our continued esteem and support. This anniversary should be the occasion for the renewal of our determination that this new state should not be allowed to fall through any dereliction on our part.

Today is also the anniversary—the second—of the proclamation of the independence of India and of Pakistan. Those two great commonwealths, likewise, have shown in these years the sturdiness of their people and their eagerness to take full advantage of the political changes that have been made in their world status. They, also, have been vexed with grievous problems. The transfer of populations incident to the partition of the subcontinent imposed upon each government a gigantic administrative burden, a task that would have strained the capacities of far older and better established states. It is a great satisfaction to know that this immense challenge has been met in both commonwealths and that the worst aspects of this enormous refugee problem are now happily past.

India and Pakistan come to this anniversary with a record of marked recent progress toward a settlement of their major outstanding dispute, the disposition of Kashmir. The cease-fire line has been fully agreed upon and there is good reason to believe that further gains in understanding are forthcoming. Once this difficulty is cleared away the path will be open for a long series of agreements and understandings that will bring Indians and Pakistanis closer together.

There is reason for gratification, also, in the fact that India and Britain have been able to solve a knotty joint problem in working out the formula whereby India could set up a republican government and still remain within the framework of the commonwealths. A sound mutual advantage has been retained with no sacrifice on the part of either party. Just as the establishment of an independent India and Pakistan was a stride in statesmanship, so also is this political adjustment the mark of clear thinking and of sound feeling.

There is a still further significance attached to this date in the Far East. It is today that the cease-fire in Indonesia becomes officially in force. It can be there, as elsewhere, the day of new beginnings, of changes for the better, of closer understandings.

At this time, when there is such grave distress in Asia, when there is so profound a challenge to freedom and well being, it is good to know that peace is being made, that governments can stand, that change and progress can be accomplished. On this day of anniversaries we join in the felicitation of our Korean, Indian, Pakistani, Indonesian and British and Dutch friends.

Fast Man With a Gun

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. KING. Mr. Speaker, at the recommendation of my colleague from the second Massachusetts district, Mr. FOSTER FURCOLO, which appeared in Monday's CONGRESSIONAL RECORD, I noted the article in the August 13 issue of the Saturday Evening Post entitled "Fast Man With a Gun."

It is a story which is of particular interest to me, because much of it I already know—indeed, it is a very remarkable story of a very remarkable man, Mr. Carl R. Hellstrom, now president of one of the oldest and finest arms concerns in this country—Smith & Wesson, Inc., of Springfield, Mass.

Not only is it an account of the achievement of a very extraordinary executive, but it also reveals a fascinating documentation of the really great war production record of this company.

I feel, Mr. Speaker, that I would like to supplement the recommendation of my honored colleague, the gentleman from Massachusetts [Mr. FURCOLO], with my own endorsement and recommendation that all Members of Congress read this story. I therefore include it as part of my remarks.

FAST MAN WITH A GUN

(By Donald Robinson)

Over the course of the past 97 years, the six-shooters produced by Smith & Wesson, Inc., of Springfield, Mass., have spat hot lead for such men as Wild Bill Hickok, Teddy Roosevelt, and Admiral Bull Halsey. Buffalo Bill Cody used them to hunt buffaloes. They have rendered yeoman service in four American wars and several dozen foreign imbroglios. Down South they have become a popular institution, and people there often refer to the Mason and Dixon's Line as the Smith & Wesson Line.

Despite this glowing record, Smith & Wesson was until recently teetering on the knife edge of bankrutcy. It is again coining millions today, but only because a tough Swedish engineer saved it from itself.

Back in 1941, the members of the Wesson family, a swanky old New England clan that has controlled this venerable company since its founding, had nothing but bygone glories with which to comfort themselves. To put it mildly, Smith & Wesson was up to its ears in financial woe. It had been losing money steadily for decades. It was in default on a $500,000 bond issue. It owed the British Government some $500,000 more. It had received this money as an advance payment on an order for rifles. It had to return it because the weapons wouldn't work.

In 1941, the Allied world was desperate for sidearms and willing to pay vast sums for them. It was the perfect moment for any armaments firm to cash in. But not for Smith & Wesson. Its production facilities were in such a mess that it was barely able to turn out seventy-two revolvers a day. Even the bondholders wouldn't have the concern. At a meeting early that year, it was proposed that they accept control in lieu of the money due them. "Hell, no," they objected. "The company's not worth taking over."

Then the Wessons hired the hard-boiled, hot-tempered Viking who, they freely acknowledge, has saved their bank accounts, their reputation and their renowned Smith & Wesson revolver from extinction. His name is Carl Hellstrom.

Two days after Hellstrom went to work for Smith & Wesson in the spring of 1941, he heard the Wessons giving an order to a workman inside the gun plant which they had hired him to run. Hellstrom, whose title then was merely that of plant superintendent, didn't like it, and he said so.

"Only one man's going to give orders in this plant, and that's me," he told Harold Wesson, the president of the company. "Either you and the rest of the Wessons get out of production, and stay out, or I do."

The Wessons got out of their moldy, redbrick factory, and they have stayed out of it for the 8 years since. Furthermore, the Wessons declare they're glad of it. With Hellstrom in charge, they say Smith & Wesson's output of revolvers jumped to 1,100 a day, the bondholders were paid off, the British were repaid, and by the beginning of this year the company had rung up profits, before taxes, in seven figures.

It was because of Hellstrom, the Wessons state, that their company was able to play a vital role in World War II, and it is because of Hellstrom that Smith & Wesson is already fully prepared for world war III. He has just built them a bomb-proof, sabotage-proof, and gas-attack-proof plant which is setting a pattern for new factory construction throughout the country.

Three years ago, upon the death of Harold Wesson, the family chose Hellstrom to succeed him as president. It was the first time in the firm's history that the post had ever been given to anyone not bearing the name of Wesson.

The biggest innovations Hellstrom made at Smith & Wesson were in its production methods. Before he came, there was not a machine or an operation of a recent vintage. Hellstrom reshuffled the company's plant and working force, renovated its machinery and streamlined its manufacturing techniques. He took what had been a snail-paced handwork factory and metamorphosed it into a high-speed, mass-production establishment.

How did he do it? Hellstrom explains it this way, "Having a free hand, with no family or financial connections, I was able to run roughshod over an old feudal system."

"Tough" is the word for Carl Reinhold Hellstrom. He acts tough, he talks tough and he is tough. A tense, hard-driving executive, he never eases the pressure on himself or anyone around him. He insists on getting what he wants, and when he wants it, or sooner. If he doesn't get it, his desk-pounding rage—and the epithets he roars in an English tinged with a slight Swedish accent—sizzle the paint off the wall. Add to this quality of toughness Hellstrom's inventive talents and his engineering ability, and you can understand why he has an international reputation as a production expert. At 22, he was assistant superintendent of all Allied shell production in America for World War I. By the time he was 30, he was nearing his first $1,000,000. At the end of World War II, he was awarded a War Department Certificate of Appreciation, and today he is a top consultant on industrial-mobilization matters to the United States Army. Tall and husky, Hellstrom looks tough too. He has a square, rugged face, with steely blue eyes and a genuinely jutting chin.

Educated as an engineer at Christiania College, young Hellstrom came to the United States in 1916 as a consultant to the French Engineering Commission. A year later he was second in command on the shell-production detail. He threw up this job to enlist in the United States World War I Army. 41 days later he was back. Secretary of War Newton Baker ruled that he was more valuable to America as an engineer.

The war over, Hellstrom was engaged as chief engineer for the Eastern Coal & Mining Corp. In 1920, he switched over to the American Rack Co., again as chief engineer. In 1921, he was named works manager, and in 1922, at 27 years of age, the president. On the side, meanwhile, he had set up an experimental laboratory called Hellstrom & Co. Here he tested various of his ideas, including a jet-propulsion engine. One of his inventions—a machine for making toilet-tissue dispensers—made him a handsome fortune.

In 1928, Hellstrom sold the laboratory, retired from business, and established himself as a consulting engineer. He did not take another steady job until 1941, when he was asked to resurrect the historic old firm of Smith & Wesson virtually from the dead.

Once, of course, Smith & Wesson was a great money maker. Twenty-six-year-old Daniel Baird Wesson founded the firm in 1852, and almost immediately made a go of it. Although his first gun was a failure, he and his partner, Horace Smith, who later dropped out of the concern, brought out a .32-caliber pistol in 1857 that caught on at once. Out West it became a favorite with both sheriffs and desperadoes. Wild Bill Hickok used one for years. He had it on his hip on the August day in 1876 when Jack McCall shot him in the back. Hickok was playing poker in a Deadwood, Dakota, saloon and never had a chance to draw the gun.

Shortly after the Civil War, D. B. Wesson developed a .44 six-shooter that was still more successful. Grand Duke Alexis, of Russia, purchased more than 200,000 of this model. By the turn of the century, Smith & Wesson guns were known around the world. In South America, the phrase "Smith & Wesson" actually entered the Spanish vocabulary as a generic term for all pistols. You hear it there today.

All this brought many millions to D. B. He built himself a sprawling mansion in Springfield, whose very doorknobs and faucets were made of gold.

Even World War I did not pull Smith & Wesson out of its slough.

After the war, Smith & Wesson continued to sag. Deficits piled sky high, and in 1941 the total physical assets of Smith & Wesson, including all its machinery, real estate, and 21 dank buildings, came to scarcely $250,000, owing to depreciation.

That was the situation when Hellstrom started as plant superintendent. The Wessons had used him before on a consultant basis, and now, in a moment of desperation, offered him a free hand to get their plant back on its feet.

It was Frank Wesson who first suggested to his relatives that they engage Hellstrom.

"What are this man Hellstrom's qualifications?" Harold Wesson asked him.

"Hellstrom's father built the Trans-Siberian Railroad," Frank Wesson says he replied.

"If Hellstrom's father was that good, he must be good, too," Harold Wesson decided.

At the time, Hellstrom had more money in the bank than most of the Wessons put together. Nonetheless, he agreed to work for them for the length of the war.

"I took the job," he declares now, "because I felt the United States was going to get into the war and I wanted to do something for my adopted country."

Hellstrom discovered that there was not a single blueprint in all the Smith & Wesson plant. For 89 years, the company had been manufacturing guns without bothering to put on paper any of its designs or specifications. There was no program for training young workers. Actually, there were no young workers. The average age of the workers in the machine shop, for example, was 69. There was no engineering or research department. Nowhere was there a list of the thousands of different tools stored in the plant tool room. Most of the smaller tools were hidden away in drawers, but not one drawer had a label on it.

Much of the machinery was so decrepit that it had to be held together by "baling wire." Even the building walls were crumbling. When the plant was in operation, the thunderlike vibrations of these walls could be heard three blocks away on Springfield's Main Street.

Working 14 hours a day, 7 days a week, Hellstrom revised operating schedules, made hundreds of engineering and design changes, standardized machine tools and revolver parts, organized an experimental department, and set to training both old and new workers. He rehabilitated machines, workers, and methods, and inside of a few weeks had doubled and then redoubled production. After Pearl Harbor he stepped up the tempo still more. He had his men and machines

working so hard that on at least one occasion some of the factory walls tumbled down.

Brig. Gen. Guy H. Drewry, who commanded the Army Ordnance office in Springfield, had his tangles with Hellstrom. He says, though, "Sure, he was tough, but he had to be tough in a spot like that."

Drewry says that Smith & Wesson, under Hellstrom, never missed a delivery date, and produced 1,110,392 revolvers for the armed forces at a cost lower than its competitors.

Probably the greatest contribution Hellstrom made to the war effort was his invention of a device to prevent revolvers from being accidentally discharged. He went to work on this problem on a July 1944 afternoon, minutes after the Wessons had received a report from the Army Ordnance Department that a serviceman had been shot dead by his own revolver.

"Either you improve the safety mechanism or we cancel all contracts," Ordnance ordered.

Hellstrom had been hired as a production man, not as an expert on the mechanism of guns. He knew practically nothing about the workings of guns. Nevertheless, he called a meeting of the Smith & Wesson staff. There he heard that the company had been working for years to develop a more effective safety device, but had got nowhere. Hellstrom asked whether anyone had ever thought of operating a safety device by the movement of the rebound slide, so that it could not explode a cartridge unless the trigger was pulled.

"No; that's never been done before," Harold Wesson said.

Hellstrom went into his laboratory, and by 10 o'clock the following evening he had built a gun with this new device installed in it.

Six days after the ultimatum was served a revolver with the new Hellstrom hammer block was in Washington. To this date there has not been a report of an accidental discharge of a revolver equipped with it.

With the end of the war Hellstrom stabilized Smith & Wesson production at 500 guns a day—the rate he considered the most economical for peacetime needs—and then took a vacation. He went off to Sweden.

Three weeks after he reached Stockholm the first cable arrived. A series of trans-Atlantic phone calls followed. They were all from Harold Wesson, and begged Hellstrom to return. Production had slumped to 70 guns a day. "Hellstrom, you've got to come back."

Hellstrom agreed to return "for a couple of months." In any event, daily pistol production soon mounted again to the 500 mark.

When Harold Wesson died, early in 1946, the family asked Hellstrom to become president. They offered him all the stock in the company treasury, about $150,000 worth, as a bonus.

He did not take the stock. He has never owned a single Smith & Wesson share. He claims he can be more loyal to the firm if he has no financial interest in it. He gets a salary of about $70,000 a year. Last year the board of directors voted him a bonus of some $32,000 more, which he promptly "divvied" up among the employees.

Today Smith & Wesson is in the best financial condition it has experienced since the turn of the century. In 1939 the company's sales amounted to $497,808.97. Wartime demands raised these sales to a point as high as $7,092,247.38 in 1943. With peace, the sales naturally dropped—to $2,025,534.16 in 1946. However, Hellstrom has since doubled that figure. Last year Smith & Wesson sold $4,383,619.75 worth of revolvers, some 60 percent of them to police and sportsmen in this country, the rest to foreign armies.

Most significant has been the effect on Smith & Wesson stock. It is not listed on the Wall Street big board, but there is brisk over-the-counter traffic in it. One share of this stock sold for approximately $3 in 1940. Although it has since been split twenty for one, it was selling for $6 a share this spring, roughly a 4,000-percent rise.

The one person who is not completely pleased by Hellstrom's record at Smith & Wesson is his slender, dark wife, the former Lois Allison. Mrs. Hellstrom, the granddaughter of the Pennsylvania coal magnate, Ario Pardee, says she'd rather that her husband spend a little less time on Smith & Wesson and a lot more at home. She maintains that she and their 14-year-old son, Douglas, have hardly seen him in the last 8 years.

Although the Hellstroms have a palatial estate at fashionable Wellesley Hills, Mass., and a summer home on Cape Cod that is replete even to what Hellstrom calls the Taj Mahal of boathouses, he passes most of his time in Springfield, 10 or 12 hours a day at the plant and the rest in a tiny three-room apartment he has rented. It has been 2 years since he has seen a movie. Once in a while he does go sailing in one of his own boats, and now and then he makes a flying trip to New York City, putting up at the exclusive Metropolitan Club and treating himself to some smorgasbord at a nearby Swedish restaurant.

Early this year Hellstrom hit the front pages of most American newspapers when he finally lifted the veil from the unusual new plant he has built for Smith & Wesson. The plant can withstand bombs, poison gas, sabotage and machine-gun strafing. Yet it is laid out for ultraefficient peacetime mass production. And it has been built at a cost below that of the ordinary, unprotected factory. Located on the outskirts of Springfield, the plant consists of five low-slung buildings set in the middle of a great lawn-covered park. Above ground, these buildings contain every facility for manufacturing effectiveness and worker comfort—natural light, fixed-radiation heating, portable electrical outlets so that machines can be moved anywhere, vast floor expanses for assembly-line setups, wide passageways and ample storage space—all the things a modern industrialist craves.

But it is underground where the radical developments are to be found. Deep under these buildings are huge catacombs, each fortified by thick concrete walls and ceilings, and connected by buttressed concrete tunnels. These catacombs are equipped with practically all the facilities installed aboveground. There is even a combination cafeteria-movie theater for off-shift workers.

In normal times, production will be carried on upstairs and the catacombs will be used only for storage. In case of war, all production can be switched below in a matter of hours. And there it can be carried on in safety. Built along the lines of Tokyo's earthquake-proof Imperial Hotel, these underground chambers can survive a near hit by a blockbuster. Airtight steel doors can seal off the chambers from poison gas.

Everything in the new Smith & Wesson plant is designed for war. No building is closer than 500 feet to the edge of the company property—this to guard against sabotage. Because bombers usually try to knock out factory power plants, Hellstrom has had his transformers built right into the concrete walls. He has done the same thing with dust collectors, which are generally set on top of factory buildings, making a splendid target for machine gunners. He has had extra septic tanks built, in case anything happens to the plant sewerage system. All his gas, water and power lines are underground. So are his oil tanks. Outside the plant there will be two airplane runways, one 2,500 feet and the other 1,400 feet long.

The plant cost only $6 a square foot to build—it has approximately 300,000 square-feet of floor space—an amazingly low price for a semiunderground plant with its expensive features, when you consider that the average cost for conventional plants ranges from $6 to $10 a square foot.

It cost so little because Hellstrom planned, designed, and personally supervised the construction of everything in it in his spare time. As a site, Hellstrom chose a deserted 126-acre swamp. He bought it for a mere $35,000 and had it filled in. Incidentally, he saved the water from the swamp, using it to make an artificial lake. It looks pretty, and besides, it can serve in fighting fires.

"To insure our employees' peace of mind," Hellstrom says, "the new plant is so designed that in time of war they will be able to eliminate the hazards of personal injury resulting from air raids or sabotage."

He urges that all industrialists give immediate thought to similar measures. "In the event of another war, God forbid, industry will not have the months to prepare that it had in the last one," he points out.

Hellstrom, naturally, is very proud of his new plant. He expects to have all Smith & Wesson operations transferred to it by the end of the summer. "It's my present to the Wessons and their employees," he declares. "If the Wessons can't produce at a profit here, something will be awfully wrong."

He is now busy developing a new product for Smith & Wesson, something far from firearms. He won't say what, yet. Once that is done, he claims he is going to retire from business altogether. That the Wessons are begging him to stay goes without saying.

"The smartest thing this family has done in the past 50 years was to hire a dynamo like Hellstrom," says Danny Wesson. "He's got to remain with us."

Frank Wesson concurs. "Hellstrom rescued us. It would be a tragedy if he were to leave."

Far Eastern Cooperation

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 17, 1949

Mr. JAVITS. Mr. Speaker, the appended article from the August 16 Christian Science Monitor points up the necessity for the creation by the non-European free countries and the free peoples of the Far East of a joint organization, consistent with the Charter of the United Nations, to establish a program of self-help and mutual cooperation along the lines of the Organization for European Economic Cooperation—OEEC. As the Monitor stated in an earlier editorial:

There is a massive political fact to be grappled with. Asia can no longer be used by the west for its own purposes. Instead, a common aim must be sought which will serve the purpose of both.

To this end, the resolution introduced by Representatives SMATHERS, of Florida; FULTON, of Pennsylvania; RIBICOFF, of Connecticut; CORBETT, of Pennsylvania; and myself—House Concurrent Resolution 120, et seq.—has been incorporated into the mutual defense assistance program, H. R. 5895.

A NONMILITARY PACIFIC UNION

(By Neal Stanford)

WASHINGTON.—The visit of Philippine President Elpidio Quirino to Washington was valuable if for no other reason than that it threw light on that important subject, a Pacific pact.

His address before the American Senate and his interview with the Washington press helped clear up many questions over what is and what is not involved in the creation of any such arrangement.

In the first place it has become quite clear that a Pacific pact and a Pacific union are not the same thing; that the original talk of a Pacific pact is now giving way to that of a Pacific union.

It was natural, in fact inevitable, that as the United States and western Europe began exploring publicly the possibility of a military defense arrangement, Asian powers should have started talking of a comparable Pacific pact.

The idea was that American participation in a Pacific pact would give the member nations that same sense of security from Communist imperialism that an Atlantic Pact was to provide the North Atlantic community. It envisaged a military alliance based on American military strength not too different from the Atlantic Pact which basically rests on American strength.

After the Atlantic Pact was signed, this talk of a comparable Pacific pact swelled to such proportions that Secretary Acheson had to publicly throw cold water on it by announcing that Washington had no plans for joining any other collective defense arrangement.

It was not that Washington was less aware of the Communist threat to Asia than its danger to Europe. The administration may have misread Communist designs in China some years earlier, but by 1949 it knew its lesson well.

The trouble was it couldn't find any solid base in the Pacific on which to build an alliance. In the Atlantic there had been the western union idea that emerged in the Brussels pact. But there was nothing—absolutely nothing—comparable in the Pacific.

There was the Nationalist regime in China which was on its last legs. There was the South Korean Republic whose security depended already on American guaranties. There was the Philippines, also already assured of American protection. There was Indonesia engaged in civil war. There was Siam, the most stable regime in southeast Asia but hardly big enough or strong enough to be a base for an Asiatic defense accord. And there was French Indochina, like Indonesia, caught in a desperate triangular struggle between Communists, Nationalists, and Imperialists.

"Spongy," was the way American officials described existing Asian foundations for a Pacific pact. Washington had no intention of getting trapped in the quicksands of Asian politics and feuds.

There was India which might have served as a core of some Asiatic defense arrangement, India with the best army in that area of the globe. But Pandit Nehru, Indian premier, had already politely declined leadership of such a move, declaring that the internal conflicts in Asia precluded creation of a Pacific defense pact.

So when President Quirino came to Washington as apostle of a Pacific pact he was diplomatically notified that the United States couldn't see it. Thus, when he appointed the passionate and personable General Romulo to be his alter ego through southeast Asia to press for a Pacific agreement, he emphasized there would be no military commitments. And, in speaking to the American Senate, he referred purposely to the project he was pleading for as a nonmilitary Pacific union.

He made it clear that as much as American participation would be welcomed he was aware that Washington would sit out any Pacific arrangement, even minus military commitments, until Asian powers had made some show of self-help and mutual aid.

President Quirino's brief visit then has emphasized the distinction between a Pacific pact and a Pacific union, and how Quirino has switched from the former, a military concept, to the latter, an economic and cultural arrangement, at least in its inception. It has made clear that Washington frowns on the first but gives its blessing to the latter, promising economic help at the first signs of self-help and mutual aid by shying away from any military commitments or entanglements.

President Quirino did not leave Washington empty-handed. He got from President Truman a promise of economic assistance—which at least publicly has to be spelled out. But what may be more important, he won the White House blessing to Pacific union—a still shadowy undefined project. The blessing will materialize as economic assistance along the line of point 4 of President Truman's program. The important thing, however, is that Asia take the first steps to organize itself and show signs of helping itself. A Pacific pact must have its roots in the Pacific.

Judicial Salaries

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial on judicial salaries which appeared in August 16, 1949, issue of the Washington Evening Star.

JUDICIAL SALARIES

Senator MCCARRAN and Representative CELLER have introduced legislation calling for an increase in the salaries of Federal judges. They propose that the salary of the Chief Justice of the United States be increased from the present $25,500 to $35,000 a year. All other Federal judges would receive increases of $5,000 a year, resulting in the following salaries: Associate Justices of the Supreme Court, $30,000; judges of the United States courts of appeals, $22,500; judges of the Court of Claims, $22,500; judges of the Court of Customs and Patent Appeals, $22,500; judges of the United States district courts, $20,000 (the chief judge of the local district court would receive $20,500), and $20,000 each for the judges of the United States Customs Court, the district courts of the Virgin Islands, Alaska, and the Canal Zone, and the Tax Court.

There are persuasive reasons why this legislation should be passed. In the first place, it would not add unreasonably to the cost of government. At the present time the cost of the judicial establishment is about one-nineteenth of 1 percent of the total appropriation for the Government. The salary increases, if approved, would involve an additional gross expenditure of $1,689,500, and about 40 percent of that would be returned to the Treasury in taxes.

Another reason lies in the historic relationship which has prevailed between judicial salaries and the salaries of officials in the executive department. For example, the salaries of Cabinet officers have been maintained, except for one temporary dislocation, at a level $2,500 above that of circuit judges and $5,000 above that of district judges. Congress is going to increase the salaries of Cabinet officers to $25,000, and the proposed increases for the judges would maintain the salary relationship which has prevailed for many years.

A more compelling reason, however, has to do with the equities of the case. The Federal judges have had but one salary increase since 1926, and the effect of that has been largely vitiated by the decision in 1939 that their salaries were subject to income tax. In the case of a circuit judge, for example, his salary in 1948 was $17,500 as against $12,500 in 1926. But his net gain, because of the tax change, was only $1,776. And this means, if the rise in the cost of living be taken into account, that the salary of a Federal judge, in terms of what it will buy for himself and his family, is substantially less today that it was 23 years ago.

The desirability of correcting this condition hardly requires argument. But it ought to be pointed out that with few exceptions lawyers of outstanding ability—and the exacting duties of the office call for competent men—are not apt to be attracted to the Federal bench as long as the distinction that goes with the post is more than offset by a salary scale that is punitive in its effect.

Marshall Plan and Colonies

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh (Pa.) Courier of May 21:

MARSHALL PLAN AND COLONIES

It is one of the curiosities of international politics that American Negroes, overwhelmingly opposed as they are to colonialism as represented by the imperialistic rule of subject colored people by France, Italy, Belgium, Britain, and Holland, are committed nevertheless through the Marshall plan to the support of these nefarious enterprises.

Of course it is said that the Marshall plan money is not to be used to bolster Western European imperialism but to stabilize the economies of that area in order to enable them to thwart the imperialist ambitions of the Soviet Union. But it is obvious that these "loans" will make these western nations not only stronger but for that reason more capable of continuing their rule and exploitation of subject peoples.

Oddly enough the Administration fostering this aid program is one which remained in power largely as a result of Negro votes in the last election cast in the hope that those elected would enact a civil rights program.

The widely hailed Eighty-first Congress seems destined not to approve the civil rights program any more than the Eightieth Congress did but it has approved the European aid program for which Negroes, like other Americans, will pay in continuing heavy taxation.

Considering the increased reliance of western Europe on the African colonies for raw materials and the stepped-up exploitation which that will impose, there is unlikely to be much civil rights for the dark masses of Africa either.

Nor would the picture have been different if the Republicans had won because the Marshall plan is a bipartisan one, supported equally by the politicians of both parties, by leading liberals and by the white press generally.

It is true that the Dutch have finally adopted a more reasonable and conciliatory attitude toward the Indonesian republic and

that the French are disposed to come to terms with the troublesome Indochinese, undoubtedly through pressure from the purse-holding Americans, but imperialists are untrustworthy (as the Russians have also shown in their dealings with the peoples behind the iron curtain) and the improvements indicated by these gestures may be more illusory than real.

There is nothing Negroes can do about the use of their taxes to bolster governments exploiting darker people over the globe, but it is interesting to reflect on some of these cruel facts in the international picture.

Accomplishments of Turkey

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, August 18 (legislative day of Thursday, June 2), 1949

Mr. CAIN. Mr. President, during the recent North Atlantic Treaty debate the junior Senator from Washington raised a serious question concerning the wisdom of excluding Turkey from the pact. I was speaking for a host of thoughtful Americans who shared, and will continue to share, my concern and disappointment over the absence of Turkey in what is recognized as being a military alliance. In a broadcast from Istanbul on July 25, 1949, Mr. Henry J. Taylor reflected on what Turkey has done as a nation and with the limited assistance which the United States has provided. For the reason that I know that Mr. Taylor has given all of us something to think about I ask unanimous consent that portions of his broadcast be printed in the Appendix to the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

"TURKEY: STALIN FINDS THE DOOR CLOSED"

Come tonight to Turkey, on the Russian border, and you'll hear some good news for us at home.

Go into the Sultan's palace. Pass from the Sultan's throne room, up the crystal stairways, to the great harems, the fountains, and the marble baths. Stand in the hall of mirrors.

Push aside the hangings of brocaded silk and gold, and you are pushing aside the old Turkey. For the Turkey of our age is new, progressive, hard working.

Today Turkey is one of the few countries in the world, outside the United States, that does not stop for long breathers—to drink tea, or to fall asleep for long periods in the daytime, while the work goes undone. Here, they are at least trying to work. In fact, an achievement of the new Turkey surrounds me at this moment, for I am making this broadcast to your land and mine from as modern a studio as you ever saw.

That's where we come in, and in a very important way. For we, in our American homes and workplaces, now have in Turkey a big stake, in dollars and brains and hope, directly related to the safety of the United States in any war with the Soviet Union.

KNOCKING AT THE DOOR

I left Egypt to fly here—a country where I was so ill for so long in 1942, while the Germans knocked at the door of Turkey, and the Turks burned their bridges at the border and dared the Germans to come through. Now, with the Russians knocking at the door of Turkey, I've come here again to get an eyewitness look at the Red fist, and to judge the strength of the door.

I flew from Cairo, across the Suez Canal and Palestine, and over the deserts to a town called Aleppo, in northern Syria. This is near the area of Stalin's birthplace, Tiflis, in Asiatic Russia between the Caspian and the Black Sea. From Aleppo I flew over the snows of the Toros Mountains to Istanbul—the Constantinople of our fathers and the Byzantium of the world's most ancient day.

Looking over the Bosporus and the Dardanelles, and closing out Russia from the Mediterranean Sea and the Atlantic Ocean, Istanbul has always been one of the most strategic spots in the world. It still is tonight.

CAT-AND-MOUSE ON THE BORDER

The Red Army has large forces of troops on the Turkish border right now. The Reds have been running a string of fortifications as jump-off spots striking at the heart of Turkey.

This border is something to see. The Russians have plowed up the earth in a wide belt for a hundred yards back from the border, and they are replowing it constantly. Their purpose is to enable Red soldiers to detect the footprints of anybody crossing the border. The whole stretch of the border here is inspected for footprints every day. Only one plane a day is permitted through, and every road is sealed.

Turkey on the border here is rimmed in by the Reds—as I found Canton rimmed in China. But while it is too late to do much about Canton, it is not too late to give great aid to Turkey—and thus great aid to ourselves.

THE ANCIENT ENEMY

Stalin would give his eye teeth to win this place—through his Communist propaganda and fifth columns, if possible, and by force if necessary. But the Communist Party is outlawed here.

We don't need to spend any money bolstering up the Turkish morale. The Communists in the Kremlin are not even called Communists. They are called by their original and true name—Bolsheviks. Moreover, the men and women of Turkey have hated them from their first cruelties, as long as they have been alive.

There is no wishy-washy feeling about Communists or communism around here. Nor is there any need to educate the Turkish people about the evils of bolshevism. We don't have to guess where Turkey would stand in the event of war. If attacked, Turkey would fight the Russians at the drop of a hat.

Since leaving home, I've been in one country after another that is on the fence. Perhaps the people would side with the Communists—perhaps not. But there is no doubt whatsoever about Turkey.

The Turks are tough. The Turk today, like his father, is always ready to fight the Reds. He was ready yesterday. He is ready today. He will be ready tomorrow. Here is one country in the world where there is no Communist problem.

AN INCONGRUOUS IDEA

But here's the situation which affects us at home. We're trying to give aid to so many countries who may not aid us, when the chips are down, that we may give too little aid to Turkey—a country we can really count on.

For example, we excluded Turkey from the Atlantic Pact. True, Turkey is not on the Atlantic. But Portugal, for example, is in the Atlantic Pact. So we are talking about arming Portugal.

Yet how on earth is Portugal going to help the defense against Russia by receiving arms from the United States? Portugal, a lovely country, is useful in some ways—but not for arming. Portugal stands in the wrong direction from the Russian border. Fighting is not Portugal's role. We might just as well send our arms to Timbuktu.

SPREADING OUR FAVORS THIN

As you travel around the world, here is a fundamental fact that strikes you. We cannot do everything for all people everywhere. Everybody wants something free from America, wherever you go. But we just haven't enough to go around.

We are already wasting vast quantities of our working people's money in places where the safety and security of the United States is not helped in any conceivable way. We can stretch ourselves so thin, in so many places, that we are not strong in the important places. That's exactly what Stalin figures we are doing today.

Furthermore, he hopes we will keep on spending our substance in places that don't do us any particular good. For—as I've attempted to say so many times before—Stalin's big bet is that we will over-extend our resources and knock ourselves out in our own gymnasium.

THE FREE-ARMS RACKET

Why should we arm the Philippines? At this moment, the Philippines are secretly negotiating to sell to Siam American arms that they already have. They seek to make a big profit on free arms we left in Manila. If we are willing to send them more free weapons, they too may fall into the hands of arms racketeers.

I found that out in Siam and reported it, as I hope you may recall, in my last broadcast from Cairo.

FINGER IN THE DIKE

Or look at Greece. We've spent over a billion dollars in Greece since the end of the war. We've spent over five times as much money in Greece as we have in Turkey.

Of course, some aid to Greece was no doubt needed. We don't want the Communist guerrillas to take Greece. But I've been all over Greece and I have never heard an important military man suggest that, in the event of war with Russia, and if the chips were down, we could hold on to Greece. The problem would be evacuation.

Yet we have linked Greece and Turkish aid together. Further, while we spent a billion dollars in Greece, we spent less than a fifth of that much in Turkey, where it would have done 10 times as much good.

Lowell Thomas told me one time that Lawrence of Arabia told him the Turks were the greatest natural fighters in Europe. I believe it. I've been to the maneuvers of the Turkish Army. With the spirit they have, and the ruggedness they have, and the love of country and the independence that they have demonstrated, they are a great army of fighters. If given sufficient American arms on the Russian border, they can really mean something to the stabilization of the peace of the world, and to victory against communism, if worst comes to worst.

THE SNEAK TECHNIQUE

You know Communists operate in the world like sneak thieves in an office building. They go down the corridors of the world, as a sneak thief goes down the corridor of an office building. He tries each door, turns the knob to see if it is unlocked. If it is locked, he goes on to the next door. If it is unlocked, he sneaks in. If he finds a stenographer's purse there, he takes it. If he finds a typewriter, he takes it. He'll even take a piece of carbon paper. But if the door is locked, he does not go in.

It is up to us to lock the door to Turkey. For here in Turkey, at long last, the American taxpayer is really getting something for his money. What a joy it is to be able to say that about any of the places I've been to and am going to, on this trip around the world.

FRESH OUT OF MONEY

But what is the situation? We are out of American military money here. Although it was carefully used, we've exhausted the small amount of military aid voted to be sent to Turkey. Any further aid must await new appropriations. This is because a first-class blunder seems to have been made by tying in the new appropriation proposition for arms to Turkey to a brand-new proposal for arms to any country just because it signed the Atlantic Pact.

Now it is highly doubtful if any arms should be sent to some of those Atlantic Pact countries. In fact, there is no reason at all why we should spend billions of dollars arming some of them.

There'll be much debate on that subject, as you know. But the wasteful idea of just automatically arming all the Pact countries should be defeated. Because it does not make sense. It will prove dangerous and foolhardy, unless it is done in a highly selective way.

Meanwhile the essential arming of Turkey is stalemated.

NO MORE FREE RIDES

Step No. 1 is to make a telling impression on the Kremlin by fully arming this place. To do ourselves some real good, this proposition should be divorced from the question of aid to Greece and from the matter of military aid to the Atlantic Pact countries, insofar as the timing is concerned.

We must stop wasting our money and materials in places where it will do us no good. We must stop trying to support any country at all that simply says it is short of dollars, and yet may never lift a hand to help us when the chips are down. We must stop being starry-eyed and start being realistic—really begin to concentrate our funds and weapons in truly strategic areas, like Turkey. The minute we do this, Stalin will know we mean business. He'll understand that we are not just set on a global boondoggle that could wreck us, in time, without Russia's firing a shot.

Sooner or later we will have to decide whether we intend to be a mother to the whole human race or whether we intend to have a secure and useful America. We cannot do both. It is up to us to cut out the chronic free-riders in the world and, instead, increase our military aid in places where it will do the most good—like Turkey.

So good night and good-by from Istanbul, Turkey. Good luck to Americans everywhere—and God bless our country.

The Cost of Rearming Europe Under the North Atlantic Pact

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, under leave granted I print herewith the broadcasts of Walter Trohan, chief, Chicago Tribune Washington bureau, on the Fulton Lewis, Jr., radio program, relative to the cost of rearming Europe under the North Atlantic Pact, delivered over the Mutual Broadcasting Co. network, August 8 to 17, 1949, as distributed by the Women Investors Research Institute, Inc. The first series of broadcasts have been inserted in the RECORD by Hon. LAWRENCE H. SMITH, of Wisconsin, under dates of August 15 and 17. The remainder of the broadcasts are as follows:

AUGUST 15, 1949

Tonight I begin the brighter side of the world military situation. Forward-looking military leaders believe the United States can win world war III if it comes. Better still, they believe world war III can be prevented. World war III can be won by the world's most powerful air force with adequate Army and Navy support.

World war III can be prevented by psychological warfare. They believe that Soviet Russia can be peacefully conquered by ideas. Truth and freedom are our mightiest weapons in thought warfare. Tomorrow and Wednesday I will bring you an outline of this campaign. Meantime, tonight I want to report on what our best war planners see as the road to victory if war should come. World War II, as you know, was won by teamwork. Our Ground Forces, our Air Forces, and Naval Forces, working as teams, won two decisive victories on opposite sides of the world. Now our strategy is in a period of transition.

Teamwork will win world war III but the same proportion and the same prescription will not win tomorrow, even though they won yesterday. We outnumbered Germany and we outnumbered Japan. We do not outnumber Russia. Military leaders do not believe we can destroy the Red Army with our ground forces. They do not believe a sea blockade would defeat the Soviets. Our best military leaders see the situation as a football game—if you cannot win by rushing or by blocking, you turn to the air. You throw forward passes.

Forward-looking military planners are turning to the air. They believe the United States must have the most powerful air force in the world. They believe American planes must fly higher and faster and farther than any other planes. Military leaders are convinced this fact would impress the Soviets and discourage them from embarking on aggression.

Our high command does not propose to place absolute reliance on air alone. They still believe in teamwork. Leaders say we must have an Army and we must have a Navy. In the final analysis, ground is not won until you have a soldier on it. And soldiers are carried by ship in intercontinental warfare. But air is our Sunday punch. Mastery of the air was essential to victory on the ground in World War II, according to military leaders. And now our new planners have added a new look to mastery.

This is the B-36 bomber. This controversial plane is now the subject of a congressional investigation, as you know. We can rejoice over this. Full and complete airing of the merits and demerits of this plane cannot help but bring us better planes and better teamwork in the armed services. I have seen this plane on the ground and in action. I was astounded by its size and impressed by its performance. In one of the most awesome sights I have ever seen, this plane loosed 168 high-explosive bombs, weighing a quarter of a ton each—84,000 pounds of destruction. The succession of shocks split the air in an infernal din, and then a curtain of smoke 5 miles long rose into the sky. Then and there I acquired a healthy respect for the B-36.

Its most ardent enthusiasts, and I have talked to all of them, do not say it is the final answer. They told me—and I can tell you—we have a bigger and better plane on our planning boards—the B-52. This will be an all-jet-powered bomber. It will fly higher and faster than the B-36 and carry more bombs. Its estimated potentialities are a top military secret. However, being better than the B-36 is something. The B-36 can fly at 40,000 feet. It has a range of 9,300 miles. It can easily bomb virtually all of Russia from North American bases. It can fly at 350 miles an hour steadily. Equipped with jet assists, it can make 500 miles an hour for brief periods to evade fighters. It can carry a peak load of four 21,000-pound bombs.

These super block busters are a postwar development. The peak load could not be carried to Russia. Nor could the plane fly 8 miles high with that load. But it could carry an even more devastating load of atomic bombs to Russia. Just how many of these city smashers the B-36 can carry is a top secret. I can tell you there are about 70 key bomb-targets in Russia. An atom bomb on each of these targets would paralyze the Soviets, so our air command tells me. And we have about 200 atomic bombs.

Japan offers the historical example of how air can conquer a nation. Fifty-two Jap cities were flattened by air strikes. I do not minimize the part played by the Navy and the Army in the Pacific. Emperor Hirohito looked out upon Tokyo and Yokohama and saw 25-mile stretches in which everything was destroyed. He surrendered the 2,400,000 troops guarding the homeland without firing a shot. Air shattered Germany. Nazi ground forces were paralyzed, industry was wrecked, morale was shattered. Former President Herbert Hoover reported, "We know now that, driven back into her own borders, she would have blown up in chaos within a short time without military action."

That is what our military leaders believe. Russia's great advantages—distance, manpower, and weather fade in importance when seen from the air. Our soundest military thinkers concede all Europe would fall to Russia in 90 days if war comes. Top planners believe the occupation of Europe would prove to be a blessing in disguise. They hold it would be better than the total destruction that would come from war on the ground. It would spread the Soviet Army thin. It would bring the Soviets into contact with western freedoms and liberty. And this would create unrest, which might lead to revolt against Communist masters.

With Soviet armies swarming over Europe, our military leaders would send bombers to bring atomic warfare to Russia. Devastating mushrooms would sprout over Moscow, Leningrad and other Soviet cities. The Soviet Army would be cut off from bread and bullets. Undergrounds in the Soviet occupied countries would spring up. Cut off from home and supplies, the Soviet armies would deteriorate. Our top air men believe that the Russians would surrender without a long and costly ground war. This is the belief of General Vandenberg, Air Chief of Staff. Lieutenant General Norstadt, chief air planner, and General Lemay, the man who bombed Japan with the B-29's. All three have expressed this view to me freely, frankly, and effectively.

Top Army and Navy men are not so sure. They ask what will happen if the Sunday punch fails? The air planners say they have the answer. If Russia should not surrender after strategic bombing, then the armed forces would go back to teamwork, again with emphasis on mastery of the air. Under an air umbrella the Army and Navy would work together in an invasion. This is why planners hold we must maintain an adequate Army and Navy. Planners say the invasion will be successful if Russia is shattered by strategic bombing and harassed by the tactical air arm, while troops dig into Russia.

Our top Army, Navy, and Air officers do not believe we can stop Russia by arming our western European allies. They do not believe that our allies can or want to fight. The military did not advance the scheme to send arms to our allies. This was done by our State Department. The plan was not the work of men who spend their lives in planning and guarding our security—men who have fought and won two wars in our time

The plan to defeat Russia by sending arms to our allies is the work of men who were identified with the pro-Soviet bloc less than 4 years ago. And I do not except Secretary of State Acheson. Former Assistant Secretary of State Adolf A. Berle, Jr., told a House committee last October, that Acheson was a member of that bloc. More recently he has been identified as the leader of the pro-British bloc.

The true purpose of the arms-assistance program is not to contain Russia, according to our military minds, but to give away American dollars. The State Department theorists and economists want to stay in power. They believe they can do this by spending, spending, and promoting crises. Military leaders say we may spend all our money and all our resources and still fail to build up our allies to a point where they could stop the Soviets.

You know, as well as our military high commanders do, that the military-assistance program is rooted in the policy which has had Europe at war for hundreds of years. It is based on the European theory of balance of power. Each balance brought on war. The best military minds are opposed to military assistance because it would commit the United States to ground war against Russia, which they regard as faulty and unsound strategy. Military leaders believe that the situation calls for a new and dynamic strategy.

Top military leaders have told me they believe the time has come when we should make known our strategy to the Russians. They believe we should openly show Russia overwhelming air superiority, backed by a sound Army and Navy. They believe we should make it clear that war would visit death, destruction, and defeat on the Soviet Union.

Our military leaders believe a strong America is a guaranty of peace. They tell me that they believe that the final decision on strategy should be made by you and not by fuzzy-minded theorists. Our military has confidence in your industrial genius and our military regards our young men as the most intelligent, self-reliant, and capable soldiers ever to go to war. Our top command does not have that confidence in those who sent our young men into two European wars and who are now once more rattling the war drums.

AUGUST 17, 1949

Tonight I conclude this series of eight reports on the world military situation as viewed by our top generals. The lessons given by our best military minds are that Soviet Russia cannot be defeated on the ground where she has tremendous allies in distance, manpower, and weather.

Generals do not believe Russia can be stopped by arming our western European allies. They do not think we have money enough, or resources enough, to arm peoples who have neither the will or the capacity for sustained war. Our military planners do believe Russia can be defeated through the air with teamwork of the Army and Navy.

More important, they believe that world war III can be prevented by psychological warfare. This would be directed at encouraging the Russian people to throw off the yoke of their Communist dictators. A free Russia would remove the threat of war, our military leaders say. A free Russia would mean a free world and a peaceful world. Military students of Russia say the great majority of its people are starved for news and sympathy of the outside world. Under the iron hand of the police state, the Russian people are distrustful and discontented.

American ideas can set them free. Military leaders have given me an outline of this thought war which I am privileged to pass on to you. The Russian mind is open for western thought. There are hundreds of thousands of fugitives from Red fascism—fugitives from Russia—and fugitives from satellite states. These are eager to serve as shock troops in this new and bloodless type of warfare.

In the first year after the end of the war, 25,000 Red soldiers deserted to the west. Those included high officers.

Desertions have continued even though we had a policy of turning over fugitive soldiers to the Soviets. And we know their fate was settled by Red firing squads. Our military leaders believe the flow of deserters should be encouraged. This flow was at times as high as 8,000 men a month. Military leaders believe the flow can be turned into a flood which will send shivers up and down Soviet spines.

At least a half million Russians are living wretched, hunted lives in western Europe, Greece, and Turkey. Military leaders tell me these people, who chose freedom, could be employed to help bring freedom to their fellow countrymen. Milions who fled satellite areas could be employed to bring truth and freedom to the latest victims of communism. Some of these are now working on their own to this end—without funds and without direction. They are smuggling anti-Soviet papers into Russia and the satellites.

Even now the truth is being smuggled into Russia and is working behind the iron curtain in the interests of peace and freedom. Even now there is an underground working in the Soviet Union. Isolated resistance units are working in the satellite states. These need supplies. But most of all they need moral assistance. These resistance movements will keep on fighting if they have moral support. Fugitives from the Communist chain gang include many able-bodied men. Many have military background. It is possible that these can be enlisted into a Russian foreign legion. Military leaders feel that these men have something to fight for. They do not think our western allies want to fight.

Our generals believe that these Russians have the will and capacity to fight. They want to set their people free. Already governments-in-exile and liberation for countries under Soviet rule, are operating. In these resistance movements are men who are widely known and trusted in their native lands. Military leaders believe these should be encouraged. More important, military leaders believe that the war of ideas should center about a Russian liberation movement. In this movement we would not send troops or planes to Russia, but would send ideas. We would give these ideas to the Russian people so that they could set themselves free.

Military leaders are aware that Stalin is a master psychologist. They are not afraid to tangle with him in thought warfare, however. With lies he has spread his influence around the world. Our military planners believe he can be stopped with the truth. The Russian people have been denied truths which would enable them to measure their way of life with ours. When these truths reach Russia, the Russian people may react violently.

Our military leaders have defined our objectives in thought warfare. The first aim is to discredit the Kremlin gang in the eyes of the Russian people. Our military leaders believe this can be done in a number of ways. Russian people must be made aware of the truth that the Communist system has failed to give them a decent standard of living. The Russian people must be told the truth—that they are enslaved by the cruelest dictatorship in history. The Russian people must be told the truth that the American people have no quarrel with them. The Russian people must be told the truth—that America wants peace in the world and freedom of the individual. The Russian people must be offered moral help toward establishing a liberal government.

The second objective of thought warfare would be to lower morale and encourage desertion among the Red occupation forces in Germany and satellite nations. Red soldiers should be warned they face liquidation on their return to Russia. They should be warned that they will not be sent to their homes, but to Siberia or distant outposts. Stalin does not want soldiers who have come into contact with the west to talk about what they have seen and observed.

A third objective of thought warfare should be to help anti-Communists to escape from Russia. Military leaders believe we should make it clear we will offer asylum to escapees. They believe we should enlist deserters. They feel we should create Russo-American reconstruction units in Europe and train escapees in liberal government. Our top commanders are aware that Red spies will infiltrate. But they are confident that these will be weeded out by Russians striving for freedom. In fact the spies themselves may be converted by the truth.

A fourth objective of psychological warfare should be to create and exploit dissention among the Kremlin gang. Many of our best military minds believe it might be possible to penetrate the Red Army. After all, soldiers are soldiers the world over and understand one another. It is possible, military observers believe, that we might convince the Red army that they should throw off Communist masters. This action might be advanced as a patriotic duty. Military leaders also believe it may be possible to play up and show dissention in the Kremlin itself. They feel purges might be dramatized—that jealousies might be encouraged—that conflicts might be created. Also they believe that we should offer inducements to top military and civilian officials to desert and avoid being purged.

A fifth objective in thought war would be to create suspicion and distrust among satellites for their Russian masters. This might be done by playing upon nationalism, reporting the truth of the outside world and encouraging all forms of resistance to the Red masters. Military leaders believe these objectives can be carried forward by radio and the printed word.

This war was opened through the Voice of America broadcasts.

But these fell into the hands of persons whose motives were questioned in Congress. There were times when the broadcasts were actually anti-American. Still even the trickling of truth worried Moscow. The Russians went to considerable trouble to jam the airways to keep truth beyond the iron curtain. And we helped the Soviet masters. Every night our broadcasts closed by giving the exact wave length of the next broadcast. This enables the Kremlin to set the wave-jammers 24 hours in advance of the broadcasts.

Military leaders believe that leaflets and news sheets in Russian can be circulated among Red occupation troops and civilian populations. They also believe newspapers, books, and periodicals should be circulated. One leaflet or one book may reach hundreds of hands. Our military leaders also believe that we should work to build the underground of Russia to spread truth.

Civilian Russian escapees and military deserters can be introduced in Russia to spread the gospel of freedom. Through the underground, word can be spread that America seeks the friendship of the Russian people—American concern for human rights does not stop at the iron curtain—Americans are eager to help the Russian people win freedom—America knows that the credit for Russia's glorious record belongs to the great mass of the Russian people and not to the Kremlin gang. Russia is a vast country. Not all the millions in the Red Army and all

the millions in the dreaded secret police can keep the truth out of all Soviet frontiers.

The best brains in our Military Establishment does not subscribe to our present policy of containing Russia. They do not subscribe to the policy of maintaining a military balance of power. Not a single responsible officer has told you that the arms program will stop Russia.

This policy is the work of the State Department. Our military master minds say it can only lead to an armament race and eventually to war. Our military minds believe that we should press the war of ideas. All the objectives of the thought war will take time to realize. Time is running out. But military planners say that is the reason why we should organize thought war at once. Military leaders assure me that if armed conflict—war—does not break out in 5 years, then psychological warfare will have better than an even chance of succeeding. And success means that war will be prevented.

Acheson's Autopsy on Nationalist China Didn't Help Patient

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report from Shanghai. Apparently American Government officials trying to explain their blunders which have contributed so materially to the downfall of an exhausted ally, consider it quite sportsmanly to hit below the belt or, more accurately, to kick even a friend when he is down.

Aren't we strong and China weak? And doesn't might make right? I venture the prediction that history will be easier on the publican than on the Pharisee:

[From the Washington Daily News of August 9, 1949]

ACHESON'S AUTOPSY ON NATIONALIST CHINA DIDN'T HELP PATIENT

(By Clyde Farnsworth)

CANTON, August 9.—Secretary of State Dean Acheson's autopsy on the Chinese Nationalist government while the body is still warm may not in itself be fatal. But it didn't do the patient any good.

Chinese Nationalists—and there's still a hard core of them, the only effective anti-Communist force in China—have been left to wonder just what Mr. Acheson's purpose was, or more broadly the purpose of the Washington administration in issuing the white paper on China.

Their speculative answers include:

It was a tacit eleventh-hour invitation to the Chinese Communists to welsh on their debts and commitments to the Soviet Union in return for American recognition.

It was intended to shush increased criticism and misgivings at home over the Washington administration's failure in China. It's generally regarded here as the best possible face that could be put upon American performance from Yalta down to the hamstringing of the United States military advisory group.

It was an implicit though somewhat premature acceptance of the Chinese Communist conquest of China with which the United States could couple a warning, however toothless, that the Chinese Reds must keep their revolution in China and not mess around with neighboring countries.

But, whatever its purpose, the white paper has in an unpredictable way given new impetus to the Nationalist disintegration.

I know an American businessman in Canton who cut short a Hong Kong holiday after the white paper was published to rush back to Canton to liquidate and get out before the Reds get here. He was sure the white paper had sharply limited Canton's weeks of grace.

There probably will be a Chinese Nationalist Government—in name, at least, somewhere on Chinese soil for a long time to come.

Actually, the white paper hasn't reached this side of the world yet and reaction is based on press reports. These are extensive, however, including texts of Secretary Acheson's covering letter and his five-point statement of basic principles of China policy.

ODDITY

Mr. Acheson's letter presented at least one glaring oddity—the statement that the Nationalists did pretty well for China from 1927 to 1937 and during the same time started to run down. That was the period between Chiang Kai-shek's break with the Communists and the war with Japan.

"During this period the Kuomintang (Nationalist government party) made considerable progress in its efforts to unify the country and to build up the Nation's financial and economic strength," Secretary Acheson wrote, and then added oddly:

"Somewhere during this decade, however, the Kuomintang began to lose the dynamism and revolutionary fervor which had created it, while in the Chinese Communists fervor became fanaticism."

The first sentence was a statement of fact readily documented. The second sentence was an exercise in cliches which not only fitted the general thesis of the Nationalists' incipient weakness but might have been matched almost word for word in any one of several pro-Communist books that have come out of China.

That's been a dominant theme of fellow travelers.

PRETTY AND PAT

It goes pretty and pat: The Chinese revolution was self-generating among the masses; the Kuomintang and Communists vied for leadership; Communists being more dynamic won.

Secretary Acheson's letter is sprinkled liberally with that idea in various forms. It's an argument for which there is no proof. If there is any pertinent evidence, it is that the Chinese as a whole are the least revolutionary people in the world.

Statehood for Hawaii

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by my constituent, Kenneth Haskell Mantel, of Brooklyn, N. Y., to the editor of the New York Times on the question of statehood for Hawaii:

HAWAIIAN STATEHOOD ASKED — ENTRY INTO UNION CONSIDERED THE BEST WAY TO COMBAT COMMUNISM

To the EDITOR OF THE NEW YORK TIMES:

Once again the question of statehood for the Territory of Hawaii has been brought to the fore in the Congress. To understand the true nature, the essence of the question of statehood, one is reminded of the historic days during which our Union was being formed in the face of grave difficulties perpetrated by the narrow-minded and domineering political groups.

It is an established fact that the majority of the citizens both on the mainland and on the islands are of the conviction that immediate statehood would represent a sound step in establishing the sovereignty of the people and the state of Hawaii. Again and again the islanders have expressed their desire for closer association with the Union; their leaders, Governor Stainback, and Delegate FARRINGTON, have fought incessantly for statehood; the President of the United States and the great majority of the Senators and Representatives in the Congress have voiced their approval—and yet Hawaii remains a Territory, her people taxed but not represented. The morale of the people of the Territory has remained steadfast and high—always in the hope of attaining that great dream: statehood.

Why, then, has Hawaii remained a Territory? Why has statehood been deferred time and again?

Surely, Hawaii has proved herself worthy of statehood; her industry, her people, so diverse and yet so united, the very beauty of the islands, have been a source of inspiration to the American people.

The small minority of selfish interests, who have consistently opposed statehood for Hawaii, regardless of the will of the majority of the people, have fought a cruel battle against the efforts of the people of the Territory in their struggle for statehood. Much of the argument against statehood revolves around a statement by the late Nicholas Murray Butler, president of Columbia University, who warned in ominous tones that statehood for Hawaii would spell the end of the United States of America as we now know it. He warned of grave disaster, of impending doom, should Hawaii become our great forty-ninth State. Others have taken up the cry, and yet in all the writings and oratory we can still sense the inconceivable attitude taken by Dr. Butler.

The insidious propaganda that Hawaii is under the domination of communism and under the rule of Moscow has been hurled at the people of Hawaii. Surely, the only sure way, the only honest and forceful method of combating communism in Hawaii would be to grant statehood to Hawaii, so that the very threat of communism would be destroyed, as it should be. The last thing in the world that the Communists would want would be statehood, because in its very nature statehood spells doom for the Communist movement in Hawaii. That communism must be destroyed is axiomatic; the method for its destruction lies in statehood. Let the Congress take heed, let the people be aware that statehood for Hawaii should be immediately granted.

The morale of the Hawaiians is high; let us not permit it to wane; to give Hawaii her chance as an equal—as our forty-ninth State of the great Union of the United States of America.

KENNETH HASKELL MANTEL.

BROOKLYN, *July 4, 1949.*

Winning Wisconsin Oration

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 19, 1949

Mr. WITHROW. Mr. Speaker, the following speech was the prize winning oration for the year 1949 in an all-State contest sponsored by the American Legion, Department of Wisconsin. In encouraging thousands of young high school students to interest themselves in the American Constitution, the Legion is keeping alive in the hearts of young Americans a deep knowledge and love of our way of life.

This year's winner of the Legion contest in Wisconsin was Edmund Campion Kersten, of Milwaukee, Wis., a junior at Campion High School, of Prairie du Chien, a Catholic high school conducted by the Jesuit fathers. This speech was also judged first over the winners in similar contests conducted by the Legion in the States of Illinois, Indiana, and Michigan. Campion High School, its speech coach, the Reverend Robert Grennan, S. J., as well as "Camp" Kersten are to be congratulated.

A few weeks ago, as I was reading Time magazine, I was amazed, more than amazed, I was disgusted. What disgusted me? I was reading about the trial of the 11 arch Communists in New York and saw how every legal maneuver was permitted in an effort to give these fifth columnists a fair trail. The integrity of the jury system was attacked from every angle by the defending lawyers on the pretense of prejudice; loophole after loophole was explored, every legal nook and cranny peered into, while the trial dragged on and on. Until, finally, it looked not as if the Communists were on trial but rather democracy, and that democracy would end up being the butt of the joke. And the thought struck me, just how inefficient can democracy get?

But, looking deeper, examining our way of life, I wonder if efficiency with human liberty is its primary purpose? Though we can call democracy slow, inept at times, did this country's founders aim at creating a business-like calculating machine, or was the Constitution based on a deeper truth than mere pragmatism?

To a thinking man, such was neither the answer nor the truth. For the founders of our Constitution set up as a guide or a norm a set of regulations that in operation was to seem to have many defects. But that norm was based on truth—it had reality behind it: that set of inviolable 10 commandments we call our Bill of Rights. Jefferson and Washington and the rest laid these down and called them unalienable—incapable of being taken away. And even if a government were never set up, these rights would still be called inherent, or born with us.

Did you ever stop to think that the Constitution does not give rights to the people, that it does not merely deign to recognize them? Freedom of religion, of speech, and of the press are not granted by the Bill of Rights. The Constitution sees these rights as already in man, and bases its very first amendment on that fact. It says:

"Congress shall make no law respecting the establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press."

The Bill of Rights forbids any legislation whatsoever with regard to these basic rights. In this sacred area of human dignity, we acknowledge that no earthly government may trespass because it touches upon man's highest faculties, the sources of which are literally not of this world.

In order to bring the American Constitution into sharp relief, and by way of contrast, let us consider the provisions of the Soviet Constitution on the question of freedom of religion. The original constitution of the U. S. S. R. states as follows:

"The right of religious and antireligious propaganda is accorded to every citizen." The constitution of 1936 reads:

"Freedom of religious worship and freedom of antireligious propaganda is recognized for all citizens." In other words, the supreme Soviet accords or grants the right, or deigns to recognize it. What it grants or agrees to recognize, it can at a later date refuse or deny.

Herein lies the fundamental difference between the philosophy of the state made into a god, and the state that recognizes the existence of God. In the former, it is held that the source of all human rights is the will of the dictator. In the latter, a man's rights are acknowledged to come from his Creator. That's exactly what is set forth in the Declaration of Independence—the spirit of the Constitution:

"All men are created equal and are endowed by their Creator"—not by the state—"with certain unalienable rights."

In the words of Justice Brewer of the United States Supreme Court the rights set forth in the first 10 amendments are rights "which by the Declaration of Independence were affirmed to be unalienable." They are untouchable because they come from without the state, from God.

Here is the excellence of the American system that sets an absolute bar against any government encroachment whatsoever upon rights of which it is not the author. Here lies the fatal defect of any form of government that fails to recognize the real author of human rights, and arrogates to itself the power to make and unmake human beings. For if God is ruled out of His universe by human fiat, men become slaves.

So the sharp issue in the world today is, What is the real basis for human rights? On that issue our forefathers did not compromise. They had the courage boldly to acknowledge the truth. Can we afford to do anything less when millions of human beings in our shrinking earth wither from fear of the hammer and sickle? The cold metallic voice of Lenin says to this latter-day world, "Where communism begins, atheism begins." And if we were to choose the course of compromise, we just as surely add to those words, "Where atheism begins, slavery has already arrived."

Just recently a tragic compromise did take place when the American delegate to the UN committee to draft a universal bill of human rights, agreed to omit any reference to the Creator as the true source of human rights. This is the very heart of the world conflict. Our forefathers saw that. And if we fail to see it, we shall have to accept a terrible consequence.

Just 57 miles across the Bering Sea, from the Seward Peninsula of Alaska, lies the mainland of northeast Siberia—the most inhospitable land in the world. In the winter the temperature has been known to drop to more than 90 degrees below zero. Until 1926, the population of this area was only about 1 or 2 persons per 100 square miles. But about that time, gold was discovered there and the coffers of the Kremlin had to be filled with the precious metal. So the state police set up the infamous organization known as Dalstroy to exploit the gold of northeast Siberia. Today where there were formerly only a few thousand natives, there are now several million human slaves under the lash of the MVD. Only 1 out of 50 to 100 is said ever to come back from Dalstroy. For every kilogram of gold delivered to Moscow, the life of at least one political prisoner is spent. The precious metal is extracted from the Arctic wastes, but the bones of millions of human beings lie frozen in the tundra.

This white hell of the Arctic is just 57 miles from the mainland of the American continent. What a contrast. A savage amoral dictatorship there, a Christian nation here. The contrast between a man-made-God and men God-made.

And, so, today we may be thankful that we live under a Constitution like ours. It may be inefficient but it is always truthful. It may be slow, but always considerate. For it acknowledges that each human being is precious because he is made in the image and likeness of God. Communists in Budapest and Sofia may substitute scientific torture for the judicial process in the trial of Christian clergymen; but Communists in New York are still presumed innocent until proven guilty in a fair trial. The very Constitution that they would destroy protects the basic human rights of even these.

Finland Keeps Her Word

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 19, 1949

Mr. MACK of Washington. Mr. Speaker, the Finns are a remarkable people. They are industrious, hard-working, reliable, and dependable. Their word is as good as their bond.

This is illustrated by the manner in which Finland has repaid the debt to the United States which she incurred shortly after World War I when she obtained relief supplies from this country.

Thirty years ago, in 1919, we loaned Finland $8,281,926 for the purchase of relief supplies. Finland agreed to repay this money to the United States with interest. Year after year, Finland has made payments in principal and interest on that debt.

To date, Finland's payments on that debt of $8,281,926 have amounted to $8,702,980. For every $1 we loaned her in 1919, we have been paid back $1.03.

What a different story this is to our loans to other nations. About the same time that we made our loan to Finland, we loaned other nations approximately $15,000,000,000 and to date have been repaid about $3,000,000,000, or less than $1 for every five loaned. These other nations have paid us back 18½ cents on each dollar we loaned them compared to Finland's having paid us back $1.03 for each dollar loaned to her.

I, therefore, was happy this week to join with other Members of the House in taking action providing that any future payments by Finland on her debt

to us should be used entirely and exclusively for the education in this country of Finnish students and for the purchase of books, scientific and laboratory equipment for the schools of Finland.

By this action we will, in great degree, be taking the action of canceling in effect Finland's debt to us through assurance that whatever she pays on that debt will be employed to build a young generation of Finnish youths who are better equipped by education to provide economic and political leadership for the great people of this great, freedom-loving nation, Finland.

It is our hope that out of this arrangement will develop a stronger Finland and that she will continue to stand as always a great citadel of freedom.

Fall Guy

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Peter Edson from the Washington Daily News:

FALL GUY

(By Peter Edson)

The case of W. Walton Butterworth personifies the present Washington muddle over what to do about China.

President Truman nominated Butterworth to be Assistant Secretary of State in Charge of Far Eastern Affairs last May. Half a dozen other high State Department nominations were sent to the Senate at the same time.

All these others were confirmed in June. But 2 months later the Butterworth nomination remains unconfirmed because a small group of Republican Senators don't like what has happened in China.

Senator OWEN BREWSTER, of Maine, says Butterworth "represents the Chinese policy of the administration." Senator STYLES BRIDGES, of New Hampshire, calls Butterworth the symbol of failure and of a tragic era in our relations with China.

Another name for it, perhaps, is that Mr. Butterworth is cast in the role of the fall guy. Because there is no one else who can be reached in fixing blame for the China debacle—President Truman, State Secretary Dean Acheson, Gen. George Marshall, Gen. Albert Wedemeyer, or even Generalissimo Chiang Kai-shek himself, for instance—Walton Butterworth heads the line to become the goat.

Senator ARTHUR VANDENBERG, of Michigan, the only one who did not vote for recommendation of Butterworth's confirmation in the Foreign Relations Committee, has nevertheless said that he "was not the responsible officer in the drama." VANDENBERG on the Senate floor said further that Butterworth was "one of the most distinguished and able career men in Government service."

With such things both good and bad said about Butterworth, the bare facts of his record are worth a closer look. There has been some attempt to pin a label of "State Department Red" on him. It comes as something of a surprise, therefore, to learn that during the war the now extinct left-wing tabloid newspaper PM branded Butterworth as a Fascist and a Nazi. This was while he was in Spain, making United States Government deals with Dictator Franco's government for the preclusive buying of mercury and other strategic materials to keep them from the Germans.

It would be a lot easier to believe that Butterworth was a reactionary than to believe that he heads up a mythical "Communist cell," sometimes believed to control United States policy in the Far East. Everything about his background bespeaks the aristocrat and the conservative.

He was born in New Orleans, where his father was a doctor. He was sent to "the right" schools—Lawrenceville prep, Princeton and Oxford, where he was a Rhodes scholar. He married a Boston Parker, which puts him right up there with the Cabots and Lowells. After 2 years at Oxford, Butterworth took the United States Foreign Service exams in 1928, when he was 25, entered the diplomatic corps and has been in it ever since. Most of his experience was in Europe, up to 1946, when he was sent to Chungking.

In China, Butterworth's job as minister-counselor was to run the United States Embassy and consulates. It was taking care of all the detailed and routine trade relations between the Chinese and American businessmen and missionaries.

General Marshall was in China in a special peacemaking role and seldom came near the Embassy. Ambassador Leighton Stuart, who knew Chiang better than any other American, helped Marshall.

But when Marshall returned to Washington as Secretary of State, he had Butterworth transferred back here as head of the Office of Far Eastern Affairs, to succeed John Carter Vincent. For the past 2 years, Butterworth has been in charge of the conduct of United States relations with China. Those relations have not resulted in a Nationalist victory against the Communists. That's what makes Mr. Butterworth vulnerable.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. VELDE. Mr. Speaker, several weeks ago, I publicly protested the inaction of the House Education and Labor Committee for not considering the Senate-passed labor bill. Today I should like to renew that protest and extend my remarks to clarify the situation.

It is no secret that Congress is getting ready for adjournment. The House, while waiting for the Senate to catch up on its work, would have plenty of time to reconsider and vote on a new labor bill, but this the administration refuses to do. President Truman and his congressional leaders have made it clear that they have no intention of fulfilling their campaign pledges to repeal the Taft-Hartley law during this session of Congress. But rather, they seem happy and contented to pigeonhole this legislation for now, so that it can be brought out and dusted off again as a political issue for the next election.

It must be said here that the votes of organized labor during the last election were bought for the paltry price of insincere promises to repeal the Taft-Hartley law made by the administration men who had no more thought of the workingman's welfare than the man in the moon.

The 1948 Democratic platform pledged far more than mere repeal of the Taft-Hartley law. It promised to substitute in place of the Taft-Hartley law a just body of rules to insure free and effective collective bargaining, to determine, in the public interest, the rights of employers and employees.

The original attempt of the administration to repeal the Taft-Hartley law was certainly a vain and feeble try. The Lesinski bill was so laden, encumbered, and fraught with inequities that it was doomed from the very outset. Instead of determining, in the public interest, the rights of both employers and employees, it utterly ignored those of the employer and the individual workingman. It actually went back to the discredited Wagner Act theory of sheltering the union, as an organization, at all costs. There was a time, of course, when the one-sided Wagner Act was necessary and considered good legislation. At that time labor unions were just coming into their own and the American worker was being suppressed by the unscrupulous tactics of many greedy employers.

Times have changed considerably since then and it would be unthinkable to return again to the out-moded Wagner Act. In the words of a very prominent Democratic Congressman on the floor of the House, "We most certainly did not promise—and we would not have dared promise—to go back to the one-sided Wagner Act."

Then which bill gives us the favorable balance we are all looking for in labor-management relations?

I say the fairest, most workable bill to come out of this session of Congress is the measure passed by the Senate.

This bill contains all the basic principles of equality between employers and employees and the prohibition of unfair labor practices on the part of both. It imposes respectability on unions equal to the power which they have—and will retain under this bill—including the obligation to bargain collectively, to be liable in court for damages resulting from breach of contract, secondary boycotts, and jurisdictional strikes. It embodies all of the important protection given to individual employees against arbitrary union power.

I do not regard the bill passed by the Senate as a perfect bill. Undoubtedly experience under this bill, if enacted into law, would require amendments just as experience has shown that we need to modify and change the existing Taft-Hartley law. Nevertheless, I am satisfied that in all fairness to organized labor the House should go along with the Senate bill, for it contains all the best features of the Wagner Act and the Taft-Hartley law, and is the most realis-

tic approach to the bettering of labor-management relations.

We must bear in mind that in any bill of this length, some mistakes are bound to be made. Senator TAFT, himself, has admitted these mistakes and has pointed out a number of necessary changes to the Taft-Hartley law which should be made. Altogether the bill passed by the Senate alters the existing Taft-Hartley law in 28 different instances.

I should like to point out a few of these changes, which in most cases are in favor of the labor unions and the individual worker:

First. Unions, while still deprived of the closed shop, may be notified by the employer of any vacancy and the union will be given a reasonable opportunity to refer qualified applicants for such employment. Further relaxation of the closed-shop provision is evidenced in the elimination of the vote to authorize the union shop, although a vote to deauthorize a union shop is retained.

Second. Unions may require the discharge of men expelled from the union because they are Communists, or engage in strikes in violation of the contract.

Third. One form of secondary boycott is authorized, namely, a case where a strike occurs in one plant and the work which would have been done in the plant is transferred to another plant. Union members are not required to do work thus transferred.

Fourth. The limited restriction on feather bedding is eliminated.

Fifth. The penalty against employees engaged in a strike before the 60-day cooling-off period is repealed. Although the clause providing for 60 days' notice and a waiting period is retained, it is corrected so that a strike is not illegal in case the contract is reopened in accordance with its terms.

Sixth. The provision requiring a separate union for plant guards is eliminated.

Seventh. The injunction section making it mandatory for the National Labor Relations Board to seek temporary injunctions in certain cases is repealed.

Eighth. Employees on strike will be eligible to vote, even if they are not entitled to reinstatement.

Ninth. While unions are required to file reports, the form of the report is greatly simplified.

Tenth. The Communist oath is continued, but applied also to employers and their officers and extended to include a form of fascism.

Eleventh. While the provision regulating welfare funds is retained, it is no longer required that there be joint control if the employer does not desire it. Criminal liability is removed if the Secretary of Labor approves the terms of the welfare fund.

Twelfth. Union check-off limitations are relaxed or modified to permit authorization to continue from year to year unless rejected.

I have only mentioned a dozen of the 28 amendments to the Taft-Hartley law embodied in the bill passed by the Senate. It is readily seen that with two or three exceptions all the amendments are in favor of organized labor.

How then can President Truman and his congressional leaders reconcile their campaign promises to labor last fall with their utterly indifferent attitude toward enactment of a new labor bill during this session of Congress?

I am sure from sentiment expressed in letters, telegrams, and by word of mouth by the many good members of labor unions in my district and all over the country that organized labor is fed up with the vain promises and seemingly complacent attitude of the administration.

The Taft-Hartley Act made a good political football in the last election. The clock is running out now and unless the administration picks itself up off the ground, retrieves the ball from the end zone and puts it back into play, the first half of the Eighty-first congressional game will be over.

As I see it, the American people want a fair, workable, and consistent labor bill that will eliminate unnecessary restrictions in the Taft-Hartley law and at the same time insure that unions as well as businesses will be responsible agencies. The Senate bill does just this, and I sincerely hope the House will find a way to pull itself out of the muck and mire which has bogged us down to this despicable state of inaction.

Testimony of Dr. Walter Adams, Assistant Professor of Economics, Michigan State College, Before the Celler Subcommittee of the Judiciary Committee of the House of Representatives

EXTENSION OF REMARKS
OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. MORRISON. Mr. Speaker, Dr. Walter Adams, a World War II veteran, has written several articles and books on economics. The following testimony was given before the Celler subcommittee of the Judiciary Committee on the subject of monopolies. Dr. Adams goes into the question of monopolies in considerable detail and his testimony is as follows:

My name is Walter Adams. I have a doctor of philosophy degree in economics from Yale University and am now assistant professor of economics in Michigan State College. I have written books and articles on general economics and have specialized in the study of industrial organization and price policy. My forthcoming book, the Structure of American Industry, of which I am editor and coauthor, is scheduled for publication in January 1950 by the Macmillan Co., of New York. Based on my experience in the field, I shall submit to this committee some general views on the monopoly problem in the United States and suggest some avenues along which a solution of this important problem might be approached.

WHAT ARE OUR GOALS?

Our first task is to reexamine our economic, social, and political goals. We must first decide what kind of industrial community, what kind of society we want or prefer before we can devise policies to implement attainment of our basic objectives. Shall we have an economic system which Justice Oliver Wendell Holmes envisioned when he said: "I don't disguise my belief that the Sherman Act is a humbug based on economic ignorance and incompetence"; in other words, shall we have a system which would rely primarily on the self-restraint of industrial leaders to protect consumers against exploitation and small producers against coercion? If that is our goal, let us modify our antitrust laws or fail to enforce them except in extreme cases. Perhaps our goal should be industry self-government as practiced in the days of NRA? In this case, let us repeal our antitrust laws lock, stock, and barrel. Perhaps we want Government supervision of industry by public regulatory commissions—somewhat along the ICC model? In this case, antitrust laws would be superfluous. Perhaps we believe in socialization of industry, either in part or in whole? In this case, let us encourage, not discourage the further concentration of power. Finally we might choose as our objective the maintenance and stimulation of competition. In this case, an effective public policy would require both the strengthening of our existing antitrust laws and their more vigorous and intelligent enforcement.

WHY PRESERVE COMPETITION?

Assuming that a regime of industrial competition is our goal—and woe to the legislator who publicly, at least, does not profess a belief in it—let us make clear the kind of competition that is to be fostered. It need not be the perfect or pure competition which nineteenth century economists still worship nostalgically. It need not be a type of competition which depends on instantaneous and automatic adjustments, where individual decisions are always arrived at rationally on the basis of perfect knowledge and foresight. We can safely content ourselves with a competitive system in which consumers are protected against excessive prices and artificial shortages simply because a few sellers are prevented from dominating price and output determination by virtue of their size; a system where technological innovations are not artificially restrained and where the economy is thus allowed to remain dynamic and progressive; a system where there is both legal and economic freedom of entry into markets and access to raw materials, i. e., where freedom of competition is valued as highly as freedom of contract. Finally, we should strive for a system where cyclical fluctuations are not accentuated by monopoly or restraint of trade.

The advantages of such a competitive system are as much social and political as economic in nature. The attractiveness of the system lies in the fact that power is essentially decentralized; that there tends to exist a broad base for the class structure of society; that there tends to be preserved a basic minimum of freedom and opportunity so that new ideas, new men, and new organizations have the bona fide chance to introduce themselves.

This competitive system is deeply rooted in the traditions of America—the tradition of federalism, the separation of church and state, the opposition to monopolies and trusts, and the separation of powers.[1] Here is a healthy suspicion of concentrated power, whether that power is in the hands of Government, individuals, or large corporations. Here is a generic distrust of size because concentrated economic power eventually results

[1] See E. V. Rostow, The New Sherman Act: A Positive Instrument of Progress, the University of Chicago Law Review, June 1947.

in centralized political control—fascism or communism, at worst, or democratic socialism, at best.

Mr. Justice Douglas has brilliantly expressed the curse of bigness against which the late Justice Brandeis warned. Said Mr. Douglas in a recent antitrust case: "Size should be jealously watched. In the final analysis, size is the measure of the power of a handful of men over our economy. That power can be utilized with lightning speed. It can be benign or it can be dangerous. The philosophy of the Sherman Act is that it should not exist. For all power tends to develop into a government in itself. Power that controls the economy should be in the hands of elected representatives of the people, not in the hands of an industrial oligarchy. Industrial power should be decentralized. It should be scattered into many hands so that the fortunes of the people will not be dependent on the whim or caprice, the political prejudices, the emotional stability of a few self-appointed men. The fact that they are not vicious men but respectable and social-minded is irrelevant. That is the philosophy and the command of the Sherman Act. It is founded on a theory of hostility to the concentration in private hands of power so great that only a government of the people should have it." [2]

Recognizing this inherent danger of size, our antitrust laws were designed neither to condone good trusts nor to condemn bad trusts but to forbid all trusts. They had as their basic philosophy and principal purpose "to perpetuate and preserve, for its own sake and in spite of possible cost, an organization of industry in small units which can effectively compete with each other." [3] This was so, because Americans—in contrast to Europeans—recognized that free enterprise meant not only curbs on government power but also checks on excessive private power; because Americans believed that enterprise which is not competitive cannot for long remain free.

THE GROWTH OF MONOPOLY

Yet today, almost 50 years after the first antitrust law was passed, we are confronted with a concentration of economic power unparalleled in our history. What is worse, the trend in that direction has been accelerated in recent years.[4] Independent businesses are succumbing to the encroachment of their larger rivals at an alarming rate. In industry after industry, a handful of concerns enjoy an exclusive position or are sufficiently dominant so as to enforce conformity among their smaller competitors. Whether we turn to steel or aluminum, to automobiles or petroleum, to motion pictures, or cigarettes, to chemicals or tin cans, there is the same sad tale of overwhelming size and entrenchment in strategic economic position. So serious is the situation that poor economics instructors are hard-put to find concrete examples of old-fashioned price competition with which to illustrate their lectures on price theory.

To be sure, we no longer have to contend with monopoly in its cruder forms. No longer is our economy infested with organizations such as the pre-1911 Standard Oil and American Tobacco companies. What we have today is not monopoly "of the sort which serves readily to illustrate the curvilinear niceties of simon-pure monopoly as adumbrated in collegiate textbooks by experts in the economic didactics of applied geometry and elementary calculus. It is a type of monopoly that is difficult to appraise, and, though more or less consistently evolved, that varies endlessly in methods of application and degrees of effectiveness. Practices under antitrust complaints may frequently, and without undue strain, be made to appear as the very essence of spirited competition." [5]

What we are confronted with today is technically referred to as oligopoly which denotes a type of market structure where a few sellers are dominant. Under this type of market organization, the entry of newcomers is effectively deterred—not so much by the threat of economic reprisals as by the size and entrenched power of existing firms. Under oligopoly, moreover, a seller no longer can afford to be independent in pursuing a given price policy. He must, of necessity, take the reaction of his rivals into account. Thus a firm knows that price cutting will inevitably cause its large competitors to follow suit with the result that the market is shared as it was before—only at a lower level of prices and profits. It is this certainty that price cuts will eventually be met, this fear of retaliation, that leads to conservative and nonaggressive price policies in our oligopolistic industries.

The result of oligopoly pricing is substantially similar to that which would obtain if but a single concern dominated a given field. Thus we get collusion—not in the common-sense meaning of the word, to be sure—but parallel action, nevertheless, as far as the effects of market behavior are concerned. As a very astute economist has observed recently: "A covenant signed with blood, an agreement signed with ink, an understanding without written words, concerted acts approved with a wink or a nod, a common course of action followed without physical communication—these may be different methods of collusion, but the differences are irrelevant if the effects are the same." [6]

FACTORS IN THE GROWTH OF MONOPOLY

How has our present industrial structure, in which oligopoly is so widespread, come about? It has come about not only because of the tremendous growth in size of business firms by means of mergers, holding companies, etc. It has come about not only because small-business men have increasingly sought protection through mass action—the Miller-Tydings Act (which, by the way, should be repealed) is a good case in point—instead of placing their faith in competition. It has also come about largely as a result of Government inaction and/or wrong action. It has come about partially because of the Government's failure adequately to enforce the antitrust laws now on the statute books,[7] as well as because the Government has muffed so many opportunities of stimulating small business and encouraging the deconcentration of big business.

Let me cite a case in point: the Government's policy in the disposition of war surplus. Under section 205 of the War Mobilization and Reconversion Act of 1944, the Attorney General was charged with the responsibility of insuring that WAA sales would be made in a manner to encourage competition and preventing further concentration of assets in the hands of giant corporations. The disposition of surplus Government plants in the steel industry at least—the case with which I am most familiar—makes a sorry record, indeed. It shows how legislative wisdom can, at times, be perverted by administrative incompetence or short-sightedness. Here is a summary of WAA sales in the steel industry together with an appraisal of their effects on competition.

At the end of the war—as of October 8, 1945—the WAA held the following steel and related facilities: (1) 29 plants, valued at more than $5,000,000 each, which were technically capable of disposal as independent operating units; (2) 20 plants, valued at more than $5,000,000 each, which were classified as "scrambled with privately owned facilities"; and (3) plants, costing less than $5,000,000 each, which were classified as partly scrambled. The lion's share of the Government's investment in steel facilities was in the first category. It amounted to $770,000,000 and represented 59 percent of the Government's total investment in this area.[8]

Of the 29 larger plants capable of independent operation, four were integrated steel plants. These plants were sold to their wartime operators, i. e. to the major steel companies. The effect of this action by the Government, regardless of any possible justification for it, was to strengthen the hand of concentration in the steel industry and to encourage perpetuation of the status quo in the industry's market structure. Especially significant is the fact that in some areas—especially the far West—the disposition of those plants allowed the major producers considerably to increase their percentage control of output in the local market. This is made clear when we consider that acquisition of the Geneva plant (which was built at a cost of $202,000,000 to the Government and which was sold to United States Steel for approximately $47,000,000) enabled United States Steel to increase its total capacity in the Pacific Coast and Mountain States from 17.3 to 39 percent, and to bring its total of steel ingot capacity in the area up to 51 percent.[9]

It will be interesting indeed to read the final report of the WAA which reveals all the dispositions made of surplus Government facilities. To the extent that the pattern in other industries resembles that followed in steel, the Government can be charged with booting one of the greatest opportunities it had in recent times of stimulating a greater degree of competition than we now have.

RECOMMENDATIONS FOR PUBLIC POLICY

Regardless of the criticism which can be leveled against our past antitrust policy, the fact remains that we are today confronted with a highly concentrated industrial structure and must, therefore, devise ways and means of dealing with it. Instead of citing the various indexes measuring the degree of concentration, I shall devote the remainder of my testimony to some general policy recommendations. These are not offered as panaceas. Nor are they to be regarded as final or conclusive. Instead they should be looked upon as a first step toward our goal which presumably is the maintenance of competition and free enterprise.

[7] Revealing is the fact that between 1934 and 1937 a total of 494 cases were started by the Antitrust Division, whereas between 1890 and 1933 only 391 such cases were initiated. Failure to enforce our antitrust laws adequately between 1890 and 1933 can probably be explained, in good part, by the politics behind antitrust prosecutions.

[8] See U. S. Tariff Commission, Iron and Steel, War Changes in Industry Series, Report No. 15, Washington, 1946, p. 71.

[9] See *United States* v. *Columbia Steel Co. et al.* (334 U. S. 495 (1948)).

1. Perhaps the most basic antimonopoly policy is the enactment of measures designed to maintain full employment in the economy. This policy is basic because, in a way, "the drive toward monopoly is not only the result of original sin and human selfishness, but is also a desperate and rather misguided attempt to solve (the) problem . . . deflation."[10] It is the fear of deflation, and the specter of destructive competition concomitant therewith, which is probably one of the primary motives activating producers to form monopolistic combinations and to engage in restrictive pricing practices. This fear is especially pronounced in highly concentrated industries like steel, for example, where a standardized product is manufactured by a handful of concerns under conditions of heavy overhead costs; for it is in such industries that price competition, in times of depression, stands in greatest danger of degenerating into cutthroat rivalry.

Yet, though the fear of deflation constitutes a plausible enough motive for the erection of bulwarks against the threat of cutthroat competition, this does not mean that public policy must accept monopoly or monopolistic practices as a cure for the disease. A more suitable solution to the problem which—at its roots—is one of depression lies in the Government's adoption of appropriate monetary and fiscal measures designed to stabilize the general level of demand, in order to mitigate the over-all fluctuations in business activity.

2. While the establishment of full employment might deprive producers of their main defensive argument in favor of monopolistic combinations and practices, the offensive motives of enterprisers would still remain for public policy to deal with. Though a more vigorous enforcement of our antitrust laws and the imposition of stiffer penalties would help in this regard, the basic policy of the Government must be one of coping with the fundamental problem of size—horizontal, vertical, conglomerate.

The horizontal size of firms must be reduced, if competition is to be maintained, because the existence of a few large-scale firms in an industry enforces a course of parallel action on each (since each fears retaliation by its large rivals in case of nonconformity). Hence, such phenomena as price leadership, live-and-let-live policies, nonprice competition, etc.—in short, the type of gentlemanly behavior which imposes higher and more inflexible prices on the consuming public. Vertically integrated size must, in many cases, be eliminated—if competition is to be saved—because the large integrated concern can apply the squeeze to its smaller rivals at any stage in the productive process. Conglomerate size is a problem in a competitive system, because it gives the large firm undue power as a buyer of materials, energy, transportation, credit, and labor. Such firms enjoy a special advantage in litigation, politics, public relations, and finance. The conglomerate firm, by virtue of its diversification, can discipline or destroy its more specialized competitors.[11]

How should we and how can we deal with excessive size? There is a body of economic thought which holds that little can or should be done about size; that we should not oppose size as such but content ourselves with controlling its abuses by enforcing the antitrust laws against monopolistic practices. This theory, it seems to me, misses the point at issue. It commits the same fallacy of which the majority was guilty in *U. S.* v. *U. S. Steel* (1920) and *U. S.* v. *International Harvester* (1927); namely, that mere size is no offense and unexerted power no violation of the law. It shadow boxes with manifestations of the problem and does not meet the issue head-on.

Excessive size, in the sense of market control, is the fact of life and the essence of the offense in many of our concentrated industries.[12] Restrictive practices are merely superficial symptoms of the disease. Given a market structure dominated by a few firms, it seems inevitable that prices be administered; that there be a deep-seated and characteristic fear of spoiling the market; that price competition be frowned upon as unethical chiseling and cutthroat rivalry, deserving of punishment. Given such a market structure, behavior which inhibits or regulates price competition and which gives the results of collusion and conspiracy must be expected. The only real solution for excessive size, the only punishment which fits the crime, is dissolution, divorcement, and divestiture.[13]

In connection with this policy, let me point out that there is pitifully little empirical data on the relation between size and efficiency. Nevertheless, on the basis of the information which is available, we may say that while large firms are technologically imperative in many industries they need not assume the Brobdingnagian proportions which they now have. Let me point out that, in reducing the monopolistic size of some firms, we need not return to the horse-and-buggy age. The reason for this is that the unit of technological efficiency is not the firm but the plant This means that, while the advantages of a large-scale integrated steel production unit at Gary or Pittsburgh or Birmingham are evident, there seems no technological justification for the unification of these three functionally separate plant units under the administration of one firm. In such cases, the size of present-day firms is explained by considerations of market strategy rather than by the economic dictates of the production process.[14] Furthermore, to the extent that profit figures are valid as measures of efficiency, it seems significant that several studies have shown the advantage to lie with medium-sized rather than with large firms—in spite of the semimonopolistic position which the latter often enjoy.[15] I would say that, on the basis of present information, public policy might strive to reduce the size of many of our giant firms without impairing technological efficiency. Thus the dissolution, divorcement, divestiture remedy seems safe on technological grounds.[16]

How, then, is a dissolution policy to be implemented? I do not believe that we should impose outright prohibitions on size. I think a case-by-case approach, on an experimental basis, is probably more advisable. Furthermore, since our dissolution policy is likely to cause tremendous conflicts with vested interests, we might enforce it more vigorously in new industries where the problem of concentration is not yet so pronounced. As a preventive measure it would fulfill a most useful function since ours is a dynamic economy in which new industries—if they remain competitive—can substantially curb the power of presently entrenched interests.

Some progress along the lines of dissolution, divorcement, and divestiture can be made under existing laws, especially if we invoke the long dormant section 2 of the Sherman Act. Preferably though, the latter might be amended by a law in which undue concentration of control over business activity would be declared contrary to the public interest and under which, above permissible limits set forth in the statute or to be declared by a suitable administrative authority, acquisitions of control would require explicit sanction on grounds of public advantage, and control already established would be subject to dissolution unless its necessity were proved.[17]

Similarly, we might amend section 7 of the Clayton Act—in accordance with an FTC proposal of long standing—so that not only the acquisition of stock but also the acquisition of a rival's assets be illegal where the effect thereof may be to lessen competition. Here, too, the burden of proof in consolidations and mergers should be thrown on the companies involved, causing them to show—say to the satisfaction of the FTC and subject to judicial review—that a given merger is in the public interest. This would be a long step in the direction of curbing the same concentration from taking place in the future which occurred in the past. With the exercise of proper care in the enforcement of this policy, we can approach the shore dimly seen—the goal of maintaining competition.

3. One way of dealing with size is by attacking it directly as outlined above. Another way, supplementary to the first and enjoying the advantage of greater pragmatic feasibility, is by protecting those who are engaged in an unequal struggle with it. Here the Government can take various positive measures to favor the small-business man, assuring him—as far as possible—of relatively free entry into markets and free access to raw materials.

(a) The Government might create special, self-liquidating credit institutions for the express purpose of correcting the inequalities which at present characterize the capital market. Given the same ability as big business to acquire needed funds, and at comparable cost, the small-business man might be encouraged to enter on many new ventures in competition with large-scale concerns.

[11] See C. D. Edwards, Maintaining Competition, New York: McGraw-Hill, 1949.

[12] Judge Learned Hand in *United States* v. *Aluminum Co. of America* (1945).

[13] See Rostow, op. cit., p. 589.

[14] It seems significant that many of the large-scale firms which are with us today were not formed to gain the technical advantages of scale, but were organized rather to achieve monopolistic control over the market and to read profits from the sale of inflated securities. As the Justice Department has pointed out: "practically every important industry shows the effect of the investment banker's inclination to merge and combine competing companies." (Staff report to the Monopoly Subcommittee of the Committee on Small Business, 1946, p. 239.) Here United States Steel is the outstanding historical example.

[15] See TNEC Monograph No. 13, Relative Efficiency of Large, Medium-Sized, and Small Business, Washington, 1941; L. Crum, Corporate Size and Earning Power, New York: The Twentieth Century Fund, 1939; R. C. Epstein, Industrial Profits in the United States, New York: National Bureau for Economic Research, 1937.

[16] Here we may note that the same arguments currently offered to justify monopolistic size of firms can be used in defense of socialized industry. After all, if size is synonymous with efficiency might not the centralization of managerial control over an entire industry, or even the whole economy, yield the most encouraging results? Conversely, if size in Government leads to bureaucracy, inflexibility, red tape, and internal conflict, why should it not produce equivalent results in large corporations?

[17] Edwards, op cit., p. 132.

(b) The Government might weight the tax structure in favor of the small-business man.

(c) The Government might subsidize research in certain selected fields and encourage the development of specialized engineering and consulting firms. These could be of inestimable service to small-business enterprises and thus deprive mammoth concerns of their present advantage in the field of research.

(d) The Government might prevent the future pre-emption of certain strategic materials. Where private ownership of basic materials reserves has already been achieved, techniques should be devised of assuring equal access thereto by potential competitors.

(e) The Government might overhaul its system of bidding on Government contracts with a view of assuring small-business men (without powerful lobbies or other connections in Washington) equal opportunities with the big boys.

Even if action is taken on all these proposals, there will still remain some substantial obstacles in the way of newcomers. Little can be done, for example, to counteract the advantage which an established large firm enjoys due to experience, trade connections, elite of personnel, and so forth. Especially vexing is the problem in such industries as breakfast foods, cigarettes, drugs, toilet articles, and so forth, where the dominant firms devote large advertising expenditures to their sales effort. Perhaps improved informational services, consumer education, stricter surveillance of advertising claims and similar measures can correct this handicap in time. A definite limitation on a firm's advertising budget could probably create greater competition in many industries overnight. Such a policy, however, is subject to so many pitfalls and dangers, that its implementation seems inadvisable.

4. Our patent laws, which are another important restriction on entry into some industries, deserve to be singled out for special attention. To the extent that they can be abused and turned into a device for exercising or attaining monopolistic control, they are an important element in any plan to strengthen the antitrust laws. The following revisions are suggested: Patents which are not worked should either be revoked or, better yet, be subjected to compulsory licensing, thus making them available to those who will use them. In cases where a patent is abused, i. e., where excessive prices or unduly limited supplies are the product of patented technology, the Government should have the right to revoke the patent or invoke compulsory licensing. Furthermore, where a competitor or potential competitor can show that his patent can only be improved by using a rival's patent, he should, upon proper presentation of proof, be permitted to get a license in return for payment of a reasonable fee and promise of a reciprocal license. Where patents are used as a device for perpetuating monopolistic control over an industry, such power should be reduced by the requirement of compulsory licensing on a reasonable fee basis. These measures would simultaneously preserve the incentive which the award of patents hold out to would-be inventors while also depriving the letter patent of its monopolistic features.[15]

5. Finally, I would suggest that the Government subsidize economic research in our universities—as it is now subsidizing agricultural research—so that scholars with an independent bent of mind can investigate the nature of the monopoly problem, its causes, effects, and possible solutions. Fundamental questions such as the relation between size and efficiency, the empirical measurement of demand elasticity for various products, the quantitative effects of advertising, the effect of oligopoly on the allocation of resources and the location of plants, etc., might be posed for study in relation to specific industries. Care must be exercised, however, that the initiation of these research projects not be used as a smoke screen for inaction. If public policy refrains from curbing the concentration of power in a positive manner at this time; if we wait for the results of further research to become available before action is taken, we shall in fact be encouraging, not the status quo in industry, but a further concentration of economic power. We shall, in fact, be acting on the assumption—also based on the inadequate data now available—that the existing structure of industry is desirable and that the direction in which it is developing does not merit interference. We must realize that curbing the concentration of power at this time does not preclude the possibility or desirability of amending or reversing our competitive policy if later information should warrant doing so.

[15] Cp. Edwards, op cit., pp. 216–248.

CONCLUSION

In conclusion, may I point out that this Congress has the rare opportunity of contributing to the workability of our economic system, thus protecting it against the foreign ideologies which are now challenging its existence. In this connection, we might recall the Marxian philosophy of history which predicted that capitalism was doomed partly because it would result in an ever greater concentration of power which would eventually push the vast majority of our people into the proletariat; and partly because the periodic recurrence of depressions would ultimately lead to the complete break-down of our system.

What Marx—an essentially erudite, though misguided, man—failed to anticipate was: (1) The development of active measures to cope with concentrated economic power, measures which were singularly unique in America where the antitrust idea found widespread acceptance; and (2) the possibility of adopting over-all monetary and fiscal measures to stave off, or at least mitigate, depressions. It would seem, therefore, that by pursuing a positive antimonopoly and antidepression policy—i. e. by doing exactly what the opposition least expects us to do—we can go a long way toward preserving our competitive economic system and the social and political values concomitant therewith.

Imports of Foreign Oil

EXTENSION OF REMARKS

OF

HON. OMAR BURLESON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. BURLESON. Mr. Speaker, the huge imports of foreign oil into this country should be of deepest concern to every Member of the House. The major oil companies, under earlier Government policy, are squeezing the lifeblood from the independent oil producers in this country by reason of their monopolistic practices.

Unless a remedy is found to curb the present imports, the result will be that only six or seven major companies will exist in the United States.

An example of what is happening is the case of the closing of the Panhandle Producing & Refining Co. at Lueders, Tex., in my congressional district, and I insert a news article in the RECORD from the Stamford Leader which shows that the business of this small independent plant will be taken over by the Humble Oil Co. As you know, the Humble Oil & Refining Co. is a subsidiary of the Standard Co., one of the great importers of foreign oil. This tells a story that may be repeated many times unless we can obtain a remedy to give protection to our independent oil operators.

The article follows:

PANHANDLE TO CLOSE LUEDERS REFINERY ABOUT AUGUST 15

The Panhandle Producing & Refining Co. will close its Leuders plant within a short time. It will cease to purchase crude oil on August 1 and will continue to run until the crude oil on hand is used up, which will be about August 15, R. C. Stanford, of Wichita Falls, vice president, said Thursday. The plant has a capacity of about 1,200 barrels per day.

The move, greatly regretted by the company, is necessary due to general conditions in the oil situation at this time, Stanford said. The decline in fuel oil price without a corresponding increase in gasoline prices and freight differential enter into the picture. Some two-thirds of the heavy fuels from the Lueders plan go to the northern markets.

Importing of foreign oil, which has depressed the entire oil industry in the United States, is deeply affecting Texas where the pro rata is now only producing days of crude per month, Stanford explained. At present 600,000 barrels of oil and products per day is being imported from Venezuela and the Near East and other oil-bearing areas.

The industry in Texas is appealing to its Congressmen to amend the Reciprocal Trade Act to limit the importing to 5 percent of the American requirement. At this time requirement is in excess of 5,000,000 barrels per day.

The Lueders plan has continued to operate "in the red" for 6 months to try to keep the plant open, Stanford said. Crude oil connections will be taken over by the Humble Oil & Refining Co., Stanford said.

The refinery at Lueders was established in 1933 by J. C. Hinds and J. W. Hampton, of Wichita Falls, and J. C. Hester, who moved to Lueders from Iowa Park to take over the active management. It was purchased by Panhandle in 1935 and improved and enlarged. Hester has remained as superintendent throughout the years.

The plant employs an average of 25 to 30 men with a monthly pay roll of $5,000 to $6,000. Most of the employees own their own homes in Lueders.

Negro Vets Pledge Support

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. PRIEST. Mr. Speaker, I have just received a very forthright and fine letter from M. R. Buchanan, who is chairman of the committee on un-American activities of Henry A. Cameron Post, No. 6, of the American Legion, in Nashville, Tenn. The membership of this post, which always has been in the forefront of civic programs in Nashville, is made up exclusively of Negroes.

The letter, which I include here under permission to extend my remarks, is a very patriotic answer to any charge made by irresponsible and uninformed persons, as to the position of these veterans and of the millions of loyal and patriotic American Negroes.

The letter follows:

AMERICAN LEGION,
HENRY A. CAMERON POST, NO. 6,
Nashville, Tenn., July 20, 1949.

Hon. J. PERCY PRIEST,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN PRIEST: Members of the H. A. Cameron Post, No. 6, American Legion, Department of Tennessee, heartily disapprove of organizations which participate in un-American activities, and of individuals who endorse such organizations and advocate such activities.

Inasmuch as Post 6 is an organization with a membership exclusively of Negro veterans of both World War I and World War II, it behooves us to make it clear as to where we stand on such an issue. We would like to have it understood that we oppose and condemn such organizations or persons who participate in or endorse the same.

The membership of Post 6 is aware of the fact that such organizations have been very active in certain sections of these great United States of America, and it is our desire that such organizations be requested, or forced, to disband. It has been said and published by an internationally famous member of our race that we would not commit ourselves or take up arms against an aggressor nation should our great country be attacked. American Legion, Post 6, heartily disapproves the attitude of such statements made by such so-called Americans.

We pledge our support to the United States, and we want you to know that we vigorously oppose such unpatriotic and un-American demonstrations as recently have come to the attention of the public.

We would appreciate it if you would have this statement included in the CONGRESSIONAL RECORD in order that Members of Congress and world leaders may know just where loyal American Negroes stand.

Respectfully yours,
COMMITTEE ON UN-AMERICAN ACTIVITIES,
M. R. BUCHANAN, *Chairman.*
THOMAS BALLENTINE.
J. P. CULP.

Military Aid Versus Unemployment

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement to the combined Senate committees on the military aid bill by Rev. Amos C. Barstow Murphy, on August 19, 1949:

Mr. Chairman, members of the Senate Foreign Relations Committee and the Armed Services Committee, I am Rev. Amos C. Barstow Murphy, member of the School Committee of Lawrence, Mass., candidate for the office of mayor in Lawrence, and chairman of the Lawrence Progressive Party.

I come here to testify against the military aid bill from the most distressed depression area in the country. Better than one out of every three workers in Greater Lawrence has no job.

I am here, gentlemen, to make you understand what is going on in Lawrence, Mass., not just in terms of dry statistics, but in terms of human lives and human thinking. I have been in the homes of Lawrence workers. I have seen the butter and the meat disappearing from their tables, the children being fed canned milk for lack of cash to buy fresh milk. I have listened to unemployed workers in Lawrence register disgust at enormous arms appropriations, while nothing is being done for their increasingly desperate needs.

The workers' growing desperation is forcing them to understand more and more clearly that you cannot have guns and even oleomargarine at the same time. I can assure you, gentlemen, that they will not tolerate much longer the war-directed policy of the bipartisan Democratic and Republican bloc.

In Lawrence almost 6,000 unemployed workers have already exhausted their unemployment checks. Even the conservative Lawrence Tribune reports that 10,000 will have used up their benefits by September. Allowing only one dependent per worker, this means that by September there will be 20,000 people in Lawrence with starvation city relief as their only means of survival. Our city council has just had to borrow $160,000, having exhausted its original relief allotment. In the face of the growing need of the people, this is peanuts.

The workers' economic plight—their worry about food for their kids, about where to get the cash to pay the rent and the doctor's bills—is uniting them in protest against further munitions spending for questionable B–36's. They are against this bill because they look to their Government to provide jobs to keep them from starving, not guns and tanks for a war which they neither desire nor think necessary.

Mr. Edwin G. Nourse, economic adviser to President Truman, admitted last April that to provide even $15,000,000,000 for military spending the President's budget had to cut down "the scale of social services for education, health, and social security." But unemployed workers of Lawrence do not need Mr. Nourse to teach them facts about the budget. They are learning from the stark necessity which faces them that we cannot have a peaceful program for their needs when we are spending $15,000,000,000 a year in an insane and unnecessary preparation for mass destruction.

"Sure," unemployed workers have said to me, "they have billions for guns and not a red cent for us."

They know that this military-aid bill of $1,160,000,000 is only a beginning. The reactionary governments we are supporting will clamor for more and more appropriations for arms, even as did Chiang Kai-shek. Where is it going to stop?

The workers are beginning to get a glimmer of the widespread war profiteering from the growing murmurs, such as those around Consolidated Vultee. They are asking cynical questions about the ripe war profits to be made out of these huge expenditures.

The textile bosses back home are also planning to get into this Military Aid Act. They rub their hands in anticipation of war orders. The American Wool and Cotton Reporter of June 10, 1948, gloated: "Millions of our fellow citizens in civilian work wear the regular work clothes, the denims, dungarees, and drills. When they get into the Army they ought to use all the denims, dungarees, and drills possible; for more rugged weather conditions the services ought to be clothed in sturdy carded woolens and if we are to have any of those expensive, fancy luxurious worsted cloth uniforms they ought to be only for officers."

Gentlemen, this week I traveled around Lawrence talking to workers, small-business men, unemployed workers, housewives, and mothers. I asked each of them, "What shall I tell the joint Senate committee about the proposed billion and one-half dollars for arms?" With but one exception the reply was unanimous: "Tell 'em to use that money for jobs for the unemployed." And when then I asked for financial help to bring this message to you, they dug for it. Those dollars and half dollars from the unemployed are testimony to the urgent need, and to the mounting righteous anger, of the people of Lawrence.

When unemployed workers demand works projects, they are told, "We must cut Government spending." But when the munitions makers and militarists demand guns and more guns, the people's representatives squabble over a few million dollars in an agreed-upon program of billions.

To the workers the North Atlantic Pact and its implementation, the military-aid program, means suffering and war. Unemployed workers are aware that the unemployment crisis of the 1930's was solved only by the commencement of World War II. They are becoming cynical. They ask "Is the only solution to this downward spiral another war?"

Back home our whole foreign policy is in sharper focus. Why should $5,000,000,000 be handed to a crook in China and not one cent be used to help the plight of the people? The workers are asking this.

The best that New England has received from the administration is a visit from Secretary of Commerce Sawyer, who met with the industrialists and the bigwigs, whitewashed the people's increasing problems, and promised to survey the situation further.

Gentlemen, the 22,000 unemployed workers in Lawrence and their families do not plan to starve. They demand works projects. They cannot nourish their children on jet planes and atom bombs.

They want peaceful projects such as the Merrimack Valley Authority, proposed about 5 years ago by Congressman THOMAS J. LANE. This hydroelectric project would provide both jobs and cheap power. It would bring diversified industries to our textile city. It would break the grip of the textile-mill owners, which is facing the workers with starvation and is strangling the small-business man.

As stopgap measures, the workers want Federal aid for increased unemployment compensation. They want the extension of 52–20 for unemployed veterans.

They want an adequate housing program. Evictions are mounting in Lawrence.

And more and more, they are asking about trade with the East. If it's good for England, why not for us?

Gentlemen, hungry workers cannot eat guns. They cannot eat phony war scares. They cannot eat promises.

In our land of plenty, they do not plan to starve.

They demand that you kill this costly bill for destruction and get on to your job of helping the people in their need.

Thank you.

Mutual Defense and Assistance Act

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. SHEPPARD. Mr. Speaker, last evening when the roll call votes were

taken pertaining to H. R. 5895, known as the Mutual Defense and Assistance Act of 1949, I was unavoidably absent. Had I been present when the vote was taken on the Richards amendment, indicated by roll call 188, I would have voted "No."

Further, Mr. Speaker, when the roll call vote was taken on the final passage, as indicated by roll call 189, had I been present, I would have voted "Yea."

Aims and Arms

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include an editorial from today's Washington Post, which pays a deserved tribute to the minority members of the House Committee on Foreign Affairs of both political parties for their penetrating and thoughtful analysis of the details of the military aid program which led to the common sense solution arrived at yesterday.

The editorial follows:

AIMS AND ARMS

The 50-percent cut in the MAP voted by the House last night is a tribute to the statesmanship of the House of Representatives. The dissenters in the House Foreign Affairs Committee who proposed this cut were on a wiser track than the majority who reported the bill to the legislature. None of the dissenters quarrels with prompt interim military aid to our North Atlantic Treaty partners. They accept, that is to say, the logic of the pact. But they wanted both to reduce the amount and to insure a fresh look when the Atlantic Allies have agreed upon unified planning and direction of Atlantic defense.

Administration spokesmen have been one fat boy after the other in making the committee's flesh creep about an emergency in Europe. The idea has been left in the legislative mind that the Russians are contemplating armed attack on Europe. With all due respect to our strategists, this is not the kind of emergency that this newspaper envisages. It is urgent to give interim aid to Europe as an earnest of a real program, not because the Russians are about to attack but because the defenders of Europe are losing both expertness and confidence for want of modern weapons. And it is no less urgent to defer large-scale arming till a plan providing for the integration of Atlantic defense has been worked out. The real emergency in Europe, in other words, is not lack of arms, but lack of unity. Let us push and prod to get this ahead of a sizable appropriation, rather than after, as in the case of the Marshall plan. As the Richards-Vorys-Judd-Burleson minority group says:

"By implementing half of the proposed plan at this time, we are showing our good faith, our willingness to go forward. By reserving action on the other half, we will in effect give notice to all of the governments concerned, including our own, to come up soon with an agreed over-all plan. We believe that this approach, providing an inducement to greater cooperation, will contribute to the ultimate success of the program, which is not attainable without such unity."

The Joint Chiefs come back from Europe with a good report about organizational progress in Europe. But the report was too glowing. To be sure, the Europeans have gone a long way in developing a defense organization. They have an agreed operational plan of what each government will do if one country is attacked. Joint training has started, something like standardization—that all-important requirement—is beginning. However, authority over defense policy and budgets, over armed forces, over armaments production—this authority is still national. And the whole direction and planning still remains to be dovetailed into the larger alliance with North America. Coordination—that poultice word which has come to be used nowadays to delude the people that unity exists where there is disunity—is simply not good enough in the present situation of the world.

It is a tragic fact that American arms are strewn all over the world doing some good but a lot of mischief. This is due to the fact that they were not tied to a world policy based upon a set of recognizable principles, as, for instance, anticolonialism. It is often said that political integration is impossible in Europe without prior security. Now the United States has embarked with a unanimity rare in its annals upon the task of doing all in its power to afford that security. It has said to Europe: The United States has declared officially you are part of our defense area, and the logic of that recognition is that your defense is our defense. But something else is necessary from Europe to create a sense of security. In a word: unity of command. None knows better than we do that this is difficult, but the Western World is now faced with a problem which admits of no other solution. There is no security, only an invitation to attack where the invitation doesn't exist at present, in providing arms to separate national establishments of which the Russians, with their massive armament and single organization, are contemptuous. "It is necessary," as the Richards-Vorys-Judd-Burleson minority says, "to go halfway now, in order to overcome their (the Europeans') concern, but it is also necessary for these countries to meet us halfway, to overcome our concern that they will not get together."

Federal Bureau of Investigation

EXTENSION OF REMARKS
OF

HON. GEORGE H. WILSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. WILSON of Oklahoma. Mr. Speaker, as a citizen, a lawyer, a Member of Congress, and a former member of the Federal Bureau of Investigation, I have been profoundly interested in the recent publicity given the FBI during the course of judicial hearings. Sensational publicity composed during the furore of a trial, and public statements made by individuals in the haste and heat of controversy touched off by such a trial, are all too often based on unsubstantiated reports and unfounded opinion. Sensational copy is one objective, while objectivity of viewpoint and fairness to our law-enforcement officials and trial participants is another. From experience I know that our law-enforcement officers must retain and use every lead and clue available to them and that secrecy of that information is most vital to the success of their efforts.

Communistic forces seeking to divide and conquer would like more than anything else to shake the confidence of the American public in the FBI. For Director Hoover to have publicly answered statements made during the course of recent judicial proceedings might have endangered the fair conduct of the trial and might have required the disclosure of further confidential information which might have been of value to seditious forces. To my mind Director Hoover has shown marvelous restraint and judicious silence during the course of this controversy and thereafter.

The security of our Nation depends on our unity. Our unity depends on public confidence in the integrity and ability of our law-enforcement officials. On such public confidence depends the ability of our law-enforcement officials to gather necessary information. I ask my colleagues in Congress and the public as well to inquire of the source of reports besmearing the efforts of our law-enforcement officers. I ask that you determine whether such statements or reports are based on unfounded rumors. If such reports are allegedly based on fact, I ask that you determine whether the informant is in a position to know the facts and all of them and whether or not the informant has a record of veracity to assure the accuracy of his reporting.

In the August issue of the Law Enforcement Bulletin appears a signed editorial of J. Edgar Hoover, Director of the Federal Bureau of Investigation. Portions of this editorial addressed to all law-enforcement officials have been quoted recently in a newspaper column here in Washington. Because the words of admonition and counsel contained in that editorial are worthy of repetition, I quote them in full:

UNITED STATES DEPARTMENT
OF JUSTICE,
FEDERAL BUREAU OF INVESTIGATION,
Washington, D. C., August 1, 1949.

To All Law Enforcement Officials:

Public servants must expect public criticism. Law enforcement, which brings Government close to the average citizen, is, as a consequence, more often subject to criticism than other public agencies. Such criticism, if it is based on fact, is usually constructive and should be welcome.

On the other hand, public criticism of a law-enforcement agency, when such criticism is not based on fact—whether made through ignorance, misinformation, or deliberate maliciousness—is inexcusable. In any case, the damage is definite and irreparable.

Law enforcement in a democracy is a two-way street. An efficient agency has the confidence of the public. Only an agency which has the confidence of the public can be efficient. Unless an agency retains the support of the public, it cannot get necessary information, reports of violations, evidence, and testimony so essential in the administration of justice. Those who attempt to shatter that confidence inevitably are attacking the administration of justice—the prime function of Government. Politics, selfishness, ignorance, and misinformation are not legitimate excuses for wanton disregard of the truth.

It is, therefore, in the public interest, whenever possible, to brand the person who makes unjustified and untrue criticism public, as the falsifier that he is.

Oftentimes law-enforcement agencies are placed in positions where, for the time being, they cannot defend themselves. When their record is clean, however, there is not too much cause for concern. Time conspires to reveal the truth, and the motives of those who in the final analysis actually are aligning themselves with the criminal forces, eventually will be disclosed.

Very truly yours,

JOHN EDGAR HOOVER, *Director*.

Why Democracy Works

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. PRIEST. Mr. Speaker, an essay written by Miss Juanita Sprott, a student in East Nashville High School, Nashville, Tenn., has been awarded first place in an international contest sponsored by Civitan International.

This is the second time within a few years that a winner of the Civitan Club contest in Nashville has gone on to win international honors.

This essay, Mr. Speaker, is entitled "Why American Democracy Works," and under leave granted to extend my remarks, I desire to include the text of the essay. It follows:

WHY AMERICAN DEMOCRACY WORKS

American democracy is not just government by the people. It is something deeper which dwells in the hearts of 145,000,000 individuals. Democracy is the right to think, to love, to believe, to hope, to achieve, and to share.

Three months ago I came from the land which used to be Czechoslovakia, to see this democracy at work. I hope to carry its principles home to a war-weary people. As early as the eighteenth century, democracies were established in Europe, but they failed.

Why does democracy work in America but not in other lands? It is because of an absence of class distinction in America. In Europe, belief is placed in dignity of wealth, rank, talent, and education; here it is placed in the dignity of the individual. America gives every man an opportunity; achievement depends upon abilities and ambition.

Compared with Europe, America is gigantic in size. Here are skyscrapers, rolling acres of unused land, wide-open spaces, great virgin forests, and ample room for everyone; there, people are crowded together in tiny huts, and every inch of soil must be cultivated in order to attain the barest existence.

I come from a land that has been plowed with tanks and field artillery and saturated with the blood of human hearts; a land where children cringe at the sound of airplanes and men dare not say what they think. In America I have found peace and prosperity.

You have received me as a friend. Friendliness, sympathy, and brotherhood: that is what makes American democracy work. In Europe we have an idea that America is a pushbutton nation. Your necessities are our wildest dreams of luxury: simple things, such as books, pencils, bathtubs, hairpins, laundries, telephones, and flower seed. Europeans are learning that, although America has many pushbuttons, behind them is a warm, kindhearted, peaceful, sincere, and generous people.

Europe has her past, America her future. Europe has become cynical in her old age. She is weary with centuries of struggle, devastation, and war; therefore, she cannot understand a nation that brings aid and expects nothing in return. America, like a child, is full of optimism, trust, faith in her abilities, and hope for the future.

I shall soon leave this land that I have grown to love. Perhaps I shall never again see those things which constitute her rich historical past: the Statue of Liberty, the Minuteman, the dignified beauty of Abraham Lincoln's Memorial, the ruins of the Alamo, Old Glory waving above the domed Capitol, the cherished copy of the Declaration of Independence. Perhaps I shall never again hear the loud swelling current of your national anthem, but I shall never forget.

Most vivid in my memory will be, not your symbols of liberty and democracy, but rather you, the people—your children, unmindful of the blessings of free education, playing on their way to school; farmers cultivating their fields as they see fit; smoke rising from factories that manufacture numerous luxuries; people gaily rushing onward to destinations of their own choice; and a land that provides its people with the unnecessary little things that make life more pleasant.

I will remember election day, when some were disappointed, other exhilarated. Deeper in my memory will be the fact that the next day opposing parties and candidates worked together in genuine friendship to do the will of the people. Americans believe in fair play; they will never be rent asunder by partisanship.

America is a land where Christianity is possible, where the Golden Rule is practical. Americans have plenty and give freely, sincerely, and self-sacrificially, with no desire for compensation. They give with one thought in mind: "Inasmuch as you have done it unto the least of these, you have done it unto Me."

The world is looking to you, America, for help in securing lasting peace. Do not rest upon the democracy built by your powerful ancestry. You stand upon an unshaken foundation of belief in God, freedom, courage, and enterprise. Do not fail to build your house worthy of its foundation. Each day add to it stones of devotion, patriotism, and brotherhood. Cement them with liberty, alertness, prayer, and the litle things in life. Instill into your youth the principles of a living democracy.

The love of democracy is latent in the hearts of the people the world over. Great men died that you might be free. Will you not live to share with all men your blessed gift of freedom?

Onward, America. Do not stop until you have given the world a lasting peace, based upon a universal democracy.

I have copied no part of this essay. It is entirely my own.

Slovakia Stands Firm in Faith

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article entitled "Slovakia Stands Firm in Faith" which appeared in the Evangelist, Albany, N. Y., on August 5, 1949:

SLOVAKIA STANDS FIRM IN FAITH

VIENNA.—The recent acts of open resistance to the persecution of the church in Slovakia have aroused more attention throughout the world than the Prague regime may have expected. This is presumably the reason why the Communist spokesmen have found no more to say on the subject. This does not mean, however, that the eastern region of the Czechoslovak Republic has settled down and accepted the regime imposed by the Communist rulers; on the contrary, far from being pacified, in the Communist meaning of the term, Slovakia continues to give the Prague Red bosses more headaches than they are willing to admit.

Between 1938 and the last months of World War II Slovakia had fared better, with the possible exception of Denmark, than any other country under the German heel. Owing partly to her geographical position and partly to the high moral authority of that excellent priest, Msgr. Josef Tiso, whom an overwhelming majority had elected president of the new state, Slovakia enjoyed then—and for the first time since 1918—full religious and cultural freedom and practically complete autonomy in all matters not directly affecting the German war effort.

Slovakia's trials began with the liberation. When, late in 1944, President Benes, fresh from his briefing in Moscow, entered Slovakia in the wake of the Red armies, one of his first acts was an order setting up a secret police on the pattern of the NKVD. The part of the restored Czechoslovak Republic where this dread organization was first put to work was Slovakia.

More than 80 percent of the 3,000,000 inhabitants of Slovakia are Catholics. Their religious zeal and loyalty to the church have always been exemplary. This explains why those who strove to force Czechoslovakia under the yoke of a godless tyranny turned their hatred from the outset particularly against the hapless Slovaks. In their designs they were assisted, it is useful to remember, by a number of misguided non-Communists, Liberals, Socialists, and others, whose anticlericalism had been the main motive for their turning fellow travelers.

Already in 1945, between April and June, when the regime established by Mr. Benes was ostensibly still democratic, about 20,000 members of the Slovak Catholic intelligentsia, not only popular leaders but also many young people of both sexes, had been put into concentration camps where two-thirds of them died. Of the remaining third only a few, so far, have been released, broken in body and mind. At the same time, two Catholic bishops and more than 170 priests were sent to prison.

But that was only the beginning of the Communist war on Catholic Slovakia. According to a statement made in 1947 by the then Slovak Secretary of the Interior, over 130,000 Slovaks had been jailed in the first 2 years after the liberation for "subversive activities or other political crimes"—in other words, for having remained faithful to their religion. It is not known how many more have since suffered a similar fate, but the number of Slovak Catholics imprisoned during the first year of the "People's Democracy," established in February 1948, is believed to have exceeded 100,000. Some have put the figure as high as 150,000.

Thus it would seem hardly doubtful that well over 10 percent of the Catholic population of Slovakia have been sent to prison during the last 4 years; and prison, under a Communist regime, means almost invariably inhuman treatment, if not methodical torture, and in many cases deportation to the U. S. S. R. No class, profession, age group, or sex is safe from the most cruel persecution; whether priest or nun, student or peasant,

intellectual or industrial worker, schoolchild or housewife—every Slovak who rates the divine law and the peace of his conscience higher than the commands of his atheist rulers must be ready to meet sufferings such as to make more often than not death seem a welcome relief.

Despite all that, the Communists have made little headway toward their ultimate goal. No doubt they will loot what is left of church property and close down the remaining convents and monasteries. They may continue to send nuns to the torture chambers of the secret police and to brand Catholic students, as has actually happened in Topolcsany and Bratislava, by burning the sign of the cross into the palms of their hands. They may dispatch further trainloads of prisoners toward an unknown destination in the east—but they will not succeed in tearing away Catholic Slovakia from her faith.

Socialism in Britain on the Rocks—Everybody on the Same Level

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 19, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks another article by E. T. Leech, who is in England making a first-hand report on socialism under the Labor Party. Members should find this article very interesting:

EGALITARIAN POLICY LEVELS OFF SOCIETY—EVERYBODY'S FLAT

LONDON, August 18.—Socialists, like Communists, have a jargon all their own. Their speeches and writing are sprinkled with such words as integration, coordination, balanced and stabilized—all of which refer to various types of economic planning.

They dug up a rare and obsolete word, "egality," to cover a different type of planning. It means "equality" and the "egalitarian policy" of Britain's Socialist government seeks to equalize income so that everybody will be on approximately the same financial level. It is aimed at the old British classes.

Taxation in England is used not only to raise revenue for her enormous social-service and security systems, and to pay the losses of her state industries, but also to level off her society. It aims at a narrow gap of income, so that nobody will be real poor or very well to do. And there will be no rich.

Francis Williams, former Labor Party editor and for 2 years public relations adviser to Prime Minister Clement Attlee, outlines these aims in his excellent book, Socialist Britain. They seek a minimum income of $1,000 to $1,200 a year, with a maximum of about $10,000 to $12,000—which is to include all income, both salaries and from investments.

The Socialists have done well at cutting down the upper incomes, through heavy personal and business taxes, inheritance taxation, and even a levy on capital.

They still have a long way to go on raising the lower incomes.

TWENTY-ONE MILLION TAXPAYERS

There are plenty of signs that this is caused at least parity by what economists call the law of diminishing returns. The rewards of management and investment have been so sharply cut by taxation that it isn't worth while to try to expand or develop business. Even the higher-paid skilled workers resist overtime work, because it throws them into higher tax brackets which cut their overtime pay below straight-time scales.

Thus far the "egalitarian policy" has been more successful in pulling everybody down to what Sir Stafford Cripps calls "austerity," that is, slim living—than in raising them to a common level of comfort.

The latest report on British income taxes, just issued, is for the year ended March 31, 1948. It showed 21,000,000 taxpayers—of whom only 70 had as much as $24,000 a year (or $460 a week) after taxes. The average taxpayer—17,210,000 of them—had from $12 to $40 a week after taxes.

More than 8,740,000 got to keep from $1,000 to $2,000 a year; 8,470,000 could keep $600 to $1,000 a year, and 2,030,000 had incomes after taxes of only $480 to $600 a year. Those figures are far below American standards.

These people, incidentally, had to pay in addition weekly taxes for social insurance and some of them paid local taxation. And of many of the things they would like to buy they would have to pay the world's heaviest sales taxes. In many cases these purchase taxes, plus scarcities, keep them from buying at all. But nearly everybody seems to manage to pay the most profitable sales tax of all—the one which forces a price of 70 cents for 20 British cigarettes. Even some social security payments have to be included as a part of taxable income.

GOVERNMENT SPENDS WAGES

In return, the English get a good many food articles (in small quantities) at prices well below those in America. This is done through subsidies costing the state more than $2,000,000,000 yearly.

The British also get medical care and a wide variety of social security benefits which are termed "free." They are actually paid for by taxation which now takes 40 percent of the entire national income.

What happens to the individual is that the Government spends a large part of his wages on what it thinks is best for him—and which the politicians refer to as "benefits" and "free" and lets him spend the balance.

BIGGEST PROBLEM

The one biggest problem in almost every British household, as shown in every poll and labor dispute is that of trying to make ends meet with the limited amount left after taxes.

This is why the Trades Union Congress—which controls the Labor Party—is having a hard time getting its members to stick to the resolution adopted last March favoring a policy of no pay increases. The Transport and General Workers Union, whose 1,250,000 members make it the world's largest, fought bitterly at its recent conference before standing by that policy. It did so only after its general secretary, Arthur Deakin, pleaded that in England's present financial plight "even moderate wage claims can hardly succeed." Foreign Minister Ernest Bevin, who built the union and gained political power as its head, kept away from the meeting.

EARN $4, KEEP 10 CENTS

London sports pages have been discusing the plight of one of England's few boxing champions—Freddie Mills, light heavyweight. He announced he would spend the remainder of his career somewhere else, because if he fights in England again he will only get to keep a dime out of each $4. That is top income-tax bracket—97½ percent.

A hotel official told me it was hard to get a "name band" to perform, because "they won't play for sixpence." This tax in the upper brackets hits the well-paid amusement field hard. Undoubtedly it does much the same thing as regards men who might manage or start big businesses—or who hesitate to take the risks of modernizing or expanding a plant when returns from success can be so slight.

LOOPHOLES IN TAX LAWS

There are certain loopholes in the tax laws—such as an easier treatment of capital gains than in America. Expense accounts and the use of a company car can furnish some substitute for income.

Socialist officials, incidentally, are not so "egalitariun" as to avoid these rewards. A London paper has just exposed the spending of $108,000,000 since the war for official autos—including 39 luxury limousines for top officials in the last 18 months. Lesser ministerial figures in London, it said, had 758 such official cars, while 6,600 others were kept in Government pools for staff members to use. This auto expense, it was charged, had exceeded the total spent since the war on colonial development throughout the British Empire.

As a footnote, this matter of autos for officials has another big point of interest—because gasoline for the average Briton is rationed so he can drive only 90 miles a month.

Millions of British undoubtedly have better pay and higher standards than ever before. The so-called lower class has been elevated—but not very high. The upper class is being wiped out, and the great middle class is badly pinched, including especially such people as teachers, civil servants, and professional and white-collar workers.

Scrap Iron for Communists

EXTENSION OF REMARKS
OF
HON. EARL T. WAGNER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 19, 1949

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Post of August 17, 1949:

SCRAP IRON FOR COMMUNISTS

The only argument we have heard for an attempt by the United States to do business with a Communist regime in China is that China's economy cannot be stabilized without American assistance.

China needs industrial know-how and equipment, transportation facilities, machinery, iron and steel, raw cotton, and petroleum products. Russia can supply only a fraction of these wants. The rest must be obtained in the United States if the Communists are to carry out their promised program of industrialization.

Admitting all this, how can any American contend that it would be to our interest to assist in such a program? Anything we contribute to the industrialization of a Red China would serve to build up communism's war potential and further Soviet expansion.

The Chinese Communists are an avowed Russian fifth column. They boast of it. They admit they seek the communization of all Asia.

Assistance to this movement, which is directed against us, would be as foolish as was the shipping of scrap iron to prewar Japan.

In general, American practice has been to recognize established governments, once they were firmly in the saddle. But the same realistic considerations which prompted such a policy argue against it application to conquests by the Soviet Union's fifth column in China.

In thinking of China, we must think, also, of Korea, Burma, Japan and the Philippines.

When we assist communism anywhere we assist it everywhere, for it is a world-wide network.

Industrialize Red China? It would be quicker and less painful to cut our own throats.

Wartime and Postwar Achievements of the Electric Utility Industry

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28 (legislative day of Thursday, June 2), 1949

Mr. FERGUSON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address entitled "Wartime and Postwar Achievements of the Electric Utility Industry," delivered by Mr. Walker L. Cisler, executive vice president of the Detroit Edison Co., before the seventeenth annual convention of the Edison Electric Institute, at Atlantic City, N. J., on June 1. It has been condensed by Mr. Cisler, himself, in order that it may be inserted in the RECORD within the regulation. Mr. Cisler, who has worked for the ECA as an adviser in Europe, is familiar with the questions involved in the electric utility industry, and I am sure that his address will give to the Members of the Senate the facts and figures they have been looking for as to what the industry is doing in America, and that it will be of great value to Members of the Senate. I ask that it may be inserted in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WARTIME AND POSTWAR ACHIEVEMENTS OF THE ELECTRIC UTILITY INDUSTRY

(By Walker L. Cisler, executive vice president, the Detroit Edison Co.)

Achievements of the electric utility industry in war and peace have and will continue to have a tremendously constructive effect on the economic strength, security, and well-being of our people individually and as a nation. It has been a record of high public service. I hope this paper may serve a useful purpose in presenting a clear picture of the electric-power situation.

I refer to the electric-power industry as including the operating and manufacturing components of it: one supplements the other. Within the operating industry, in terms of generating capacity, about 80 percent of the systems are privately owned, 10 percent federally owned, and 10 percent nonfederally owned. Thus, the industry is predominantly a part of the American system of free and individual enterprise and one of the greatest bulwarks against the advance of foreign "isms" that are contrary to our way of life.

WARTIME ACHIEVEMENTS

When the United States entered World War II there existed great sources of thermal- and hydro-generated electric power and the country was heavily interconnected. The margin of generating reserve was sufficient to meet wartime load increases and a large expansion program was under way. It was apparent, however, that all of this program could not be carried out because materials, manpower, and manufacturing facilities were urgently needed for production of ships, tanks, planes, trucks, and many other military items.

First things had to come first and an orderly procedure for resolving the military and essential civilian needs was established in the form of the War Production Board. The electric utilities and other industries made experienced personnel available to the Government. The Government in turn did its part in this mutually important undertaking; within the limits permissible in such an industry-government relationship, it made a partner of industry. The arrangement brought forth the best that each could contribute. The wartime electric-power requirements of the Nation were fully and adequately met, the maximum demand coming in 1944.

It was realized that because of wartime restrictions, there would be a postwar period during which no major capacity additions could be made because of the long time required to manufacture large generating units and other equipment. This must be borne in mind in connection with unfair criticism to which the industry has been subjected and to avoid misunderstanding in the minds of the public.

POSTWAR ACHIEVEMENTS

With the ending of hostilities the utilities were ready to proceed with projects interrupted by the war and with many new projects to build up depleted reserves and to provide for load growth. The expansion program undertaken was the greatest in history, but it was not until 1947 that any appreciable amount of new postwar capacity could be made available. Meanwhile electric demands increased at an unprecedented rate. Even in 1946 the peak load had risen to 10 percent above the wartime peak. Thus, it is understandable why reserve margins were so little in 1947 and 1948, and why consumption had to be restricted in certain areas because of lack of capacity or lack of energy largely affected by scarcity of rain or snowfall.

Faced with dwindling reserves, and in some instances the lack of them, the utilities prepared for action. Their resourcefulness seemed boundless. They have produced more and more where it seemed limits had already been reached. No decree, no order, could have brought about equal or better results. There is no substitute for the will of individuals to do their job when challenged to the test.

PRESENT SITUATION

The Edison Electric Institute has just completed its fifth semiannual power survey. It gives a complete factual picture of present and expected loads and capabilities throughout the country, and of new construction and the manufacture of heavy electric-power equipment. It is the product of people extremely close to the various situations who have extensive background in prewar, war, and postwar experience. The results should inspire confidence in what the electric-power industry is accomplishing.

The accompanying tabulation shows that peak capabilities throughout the power regions have progressively increased. These are the result of greater utilization of present generating resources and the addition of new units which reaches full momentum in 1949, when 7,000,000 more kilowatts are scheduled for service. In 4 years about 23,500,000 kilowatts will have been added to the electric-power systems. Of this highly efficient generating capacity more than three-fourths will be in thermal plants and the rest in hydraulic plants. Solid fuels will be used in about two-thirds of the new thermal plants.

The electric-power industry is now the largest consumer of solid fuels. In the modern thermal plant, a ton of coal produces nearly five times as many kilowatt-hours as the average plant produced in 1914. This is a significant contribution to conservation of a basic natural resource, and indisputable proof of the initiative of the industry in pioneering developments which have contributed to lower production costs.

Peak loads also show increases throughout all regions. For the country, it is greatest in 1949 when 9 percent is expected. In 1950, the estimate is 7 percent and in 1951 a little more than 6 percent.

The reserve margins for the country as a whole demonstrate that the point has been passed where loads were growing faster than new facilities could be manufactured and put into service. The low point in reserves is 5.6 percent in 1948. This will increase to 9.7 percent in 1949, 12.3 percent in 1950, and 15.9 percent in 1951, which is certainly a safe margin for both peacetime and national defense requirements. The improved reserves reflect in part the lower trend in load growth as well as a speeding up of construction schedules.

Region III does not take into account new steam units which the Federal Government expects to put into operation starting in 1952. The western division of region VII shows a small deficiency in capability, but the region as a whole shows capabilities and peak loads about equal for median hydro conditions. Adverse hydro conditions would bring a deficiency. To provide for reserves and estimated load increases beyond 1951 new capacity should be added.

Estimated production of energy to meet consumption shows an increase of 8.3 percent for 1949, 6.3 percent for 1950, and 5.9 percent for 1951. I believe that electric load requirements will in general be adequately met. Local restrictions may be necessary, but on the whole there will be no power shortages as the greater reserve margins clearly indicate.

The situation concerning manufacture of heavy electric-power equipment demonstrates our ability to produce at tremendous rates. By 1951, production capacity will reach 8,000,000 kilowatts annually for steam units and 2,000,000 kilowatts for hydraulic units, a total of 10,000,000 kilowatts. The accompanying tabulation shows the shipments and scheduled deliveries, 1948 through 1951, of steam and hydraulic units, 4,000 kilowatts and above, to Continental United States utilities. There is still some open manufacturing capacity for building steam and hydraulic units for delivery in 1950 and 1951.

FUTURE EXPANSION

It is expected that beyond 1951 substantial load growth will continue, requiring extensive capacity additions. The increase will depend chiefly upon the level of our national economy.

I would like to emphasize the need for maintaining a coordinated balance between thermal and hydraulic capacities to assure economic and adequate power supply in the face of adverse precipitation. The need is shown by the fact that where restrictions on use have occurred it has usually been in areas having a large amount of hydro capacity. This is true not only in the United States but elsewhere.

I believe firmly in the development of water-power resources to the extent that they are economically sound and bear their proper share of the costs. Flood control, irrigation, and navigation are influencing factors in deciding the justification of a project. These must be carefully examined to avoid wasteful expenditures which might otherwise be put to better use. In every case, there should be a full understanding of the facts so that the public may be enlightened. Only by so doing can there be a constructive approach to the problem of

Federal Government expansion in the electric-power field. There is urgent need for the determination of an electric-power policy on the part of our Federal Government. In certain cases, the Government has now assumed responsibility for development of our water-power resources. It is important also that areas of hydro generation be fully coordinated in operation with areas of thermal generation. Only by such measures can maximum benefits be achieved.

In future additions of thermal generating capacity it is reasonable to assume the use of conventional sources of thermal energy for some time to come. It is not expected that atomic energy will be available in quantities for extensive use in power plants for many years.

CONCLUSIONS

In closing I would like to thoughtfully leave with you the following conclusions:

1. The existing electric-power resources of the United States are the largest in the world, accounting for almost one-half of the total production and consumption for all nations and nearly six times that of the next nearest nation, the U. S. S. R. These resources are being expanded at a rate far beyond that of any period of the industry's 66 years of outstanding development. For our country, with a population of 7 percent of the world's total, it is one of the major components of our great American industrial system. It is one of our greatest sources of strength for both peace and security.

2. The wartime record of the electric-power industry was of the highest order. Every requirement for war production and essential civilian needs was met and in adequate quantity. It was a record of outstanding cooperation both within the industry and between the industry and Government. The power industry's resources were mobilized effectively and courageously. No one power region of the country contributed more to vital war production than another.

3. The postwar period, with its unprecedented load growth, has made necessary an even greater marshaling of existing equipment than ever before. It is an accomplishment which merits the approval and support of the many millions of fair-minded Americans. Generating equipment and other facilities have been coordinated, pooled, and operated to an extent almost beyond belief. No amount of biased ridicule, no attempted efforts to discredit the good work of our industry, can change the fact that a great task has been successfully carried out. It is to the everlasting credit of the people in the industry that this has been possible. It gives one faith in the continuation of a free America and a bulwark against the spread of "isms" foreign to our way of life.

4. Our wartime and postwar achievements and advancements in the field of electric power are an inspiration for other nations allied with us who are endeavoring to stimulate their recovery, strengthen their national economy, and raise their standard of living. Our operating practices, our engineering improvements, our construction methods, serve to demonstrate the technical assistance which other nations less fortunate than ourselves may use to their advantage.

5. The electric-power industry will go forward with undiminished vigor, initiative, and courage. Great as have been past accomplishments, they can be even greater than before. The establishment of a wise and constructive policy of our Government toward our industry can do much to enable the electric-power industry to assist, along with other industries, in promoting and insuring the social, economic, and political stability of our country. That is a purpose which is worthy of the thoughtful consideration of all who believe in the democratic principles of life, liberty, and the pursuit of happiness.

Total electric generating capacity, thermal and hydraulic, shipped and on order—Scheduled for shipment as of May 1, 1949

The President's Reorganization Plans

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Friday, August 19 (legislative day of Thursday, June 2), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Senate Sustains the Hoover Commission," written by Arthur Krock and published in the New York Times of August 18, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—THE SENATE SUSTAINS THE HOOVER COMMISSION

(By Arthur Krock)

WASHINGTON, August 17.—A wise provision in the law that gave to the President powers

to reorganize the Federal Government structure is responsible for the administration's failure to drive an entering wedge for socialized medicine into that structure. This provision permits a contitutional majority—one more than half of the total membership—of either branch of Congress to reject any reorganization plan submitted by the President. Thus, when the Senate yesterday declined to approve Reorganization Plan No. 1, the proposal failed, and the entering wedge for socialized medicine that was included remains undriven.

When the administration sought reorganizing powers, it made every effort to write into the enabling act a requirement that a majority of both branches must disapprove any plan drafted under these powers to reject it. This was also the recommendation of the Hoover Commission, one of those compromises with administration officials on the Commission which Chairman Herbert Hoover made to get their endorsement of his report. The Senate, however, has been apprehensive over the expansions of Executive power through law, custom, and practice; and it was well aware that the rules of the House of Representatives give the Executive unusual influence over a party majority therein.

Therefore, it insisted that a constitutional majority in either branch should be able to reject a reorganization plan. That is why it was possible to defeat the attempt in plan No. 1 to put the United Medical Administration in the same package with education and social security under the full control of Oscar Ewing, the Federal Security Administrator, who leads the drive for socialized medicine and was chosen to head the new department created in the plan.

A FUNDAMENTAL CHANGE

The Hoover Commission recommended the United Medical Administration and urged that it be kept completely independent. This was also the objective of the bill introduced in 1946 by Senators FULBRIGHT and TAFT and approved in committee. That bill (known as Senate bill 140) provided for a new Federal department of health, education, and security; but carefully protected the integrity of each, directed by an under secretary, in the same manner that the integrity of each of the armed services was protected in the law that created the National Military Establishment.

However, when plan No. 1 was drafted Mr. Ewing's influence was sufficient to include the United Medical Administration within the proposed new department in a way that removed its autonomy as provided in Senate bill 140 and in the report of the Hoover Commission. Mr. Hoover, apparently with the larger goal of the Commission report in sight, yielded to the Administration's argument that medicine could be separated or given autonomy by Congress at some later date and gave plan No. 1 restrained but actual endorsement. In yielding to this argument Mr. Hoover, said Mr. TAFT, was misled; and Mr. FULBRIGHT supported that opinion very impressively, as the following colloquy demonstrates:

"Senator THYE. Does he [Mr. FULBRIGHT] believe that we could ever bring about a reorganization and establish the medical division as an independent agency within the Federal Government if we ever were to carry through Reorganization Plan No. 1 as proposed by the President?

"Senator FULBRIGHT. No; I do not believe so, for very practical reasons. Theoretically it is possible. * * * but as a practical matter I do not believe we could do it, for this very obvious reason: Express disapproval of such a plan by the proposed head of the new agency, Mr. Ewing, and the President would make it, I think, virtually impossible, at least for the foreseeable future, to achieve that end, even if we attempted to do it.

"It is no secret, for example, that the program in the Senate is primarily determined by the executive branch of the Government, not by the Senate. Certainly the power of veto, when coupled with that, would be quite sufficient, certainly so long as the present administration is in power."

LESSON OF EXPERIENCE

The Senate knew from experience how true this is. The Senate also knew of Mr. Ewing's activities in behalf of a Federal health program, and conceived it to be more than possible that plan No. 1 could and would be used as a Trojan horse to bring this program within the Government walls. Hence it followed the counsels of Senators TAFT and FULBRIGHT, its pioneers in behalf of a new department concerned with health, education, and social security, and with a voice in the Cabinet, and declined to approve the reorganization as proposed by the President.

It should be remembered, when evaluating the Senate's action, that this administration has shown greater determination in pursuing its programs than any other in many years, and part of this program is a Federal health system which is heavily opposed as socialized medicine. Other administrations have fought hard for their proposals to Congress, and this one has sometimes compromised or retreated. But more often it keeps on fighting, or makes ready to resume the same battle another day with the same adversary. By one means or another, Mr. Truman stubbornly tries to have his way, and the large Senate majority which defeated plan No. 1 had reason to suspect it would open the back door to a project which had been turned away at the front.

Mine Safety

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Friday, August 19 (legislative day of Thursday, June 2), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD a timely editorial entitled "Still on the Calendar," published in the St. Louis Post-Dispatch of August 15, 1949. The editorial favors the early passage of Senate bill 1031, providing greater safety for the coal miners of the Nation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STILL ON THE CALENDAR

Lying dormant on the Senate Calendar now is a bill that should have been passed long ago—as long ago as 1947, when 111 miners were killed in the Centralia disaster. This is Senator NEELY'S mine safety enforcement measure.

An erroneous report recently stated that the Senate had passed the Neely bill, but what the Senate actually did was to pass over it, leaving it for possible action at some indefinite time. Congressman MELVIN PRICE, of East St. Louis, carried a similar bill through subcommittee in the House, but the lower branch has not acted either.

Such neglect defies repeated testimony about the weakness of State regulation of mine safety, and about the long record of mine fatalities which the Federal mine inspectors are powerless to cope with. The neglected bills would allow these officers to order workers withdrawn from dangerous areas of mines, and to invoke criminal penalties if their orders were ignored.

This is the only way to assure thousands of miners that they can be safe in their important work. Before Congress adjourns it should honor the promises of action that followed Centralia.

Civil Rights in the States

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, August 19 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial which appeared in the New York Times of August 14, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CIVIL RIGHTS IN THE STATES

While the Eighty-first Congress is not expected to approve or even to consider any civil-rights legislation during this session, more hopeful results are now in from many of the adjourned State legislatures. The accomplishments of the States indicate that they did not follow the example of inaction set by the Federal Government.

The list of States with effective FEPC laws was increased from four (New York, New Jersey, Massachusetts, and Connecticut) to eight by the addition of New Mexico, Oregon, Rhode Island, and Washington. Kansas established a temporary commission to investigate employment discrimination. New Jersey passed the Freeman bill, which applies enforcement technique to discrimination in places of public accommodation. Discrimination in education is now effectively prohibited in New Jersey as well as New York. Connecticut passed a bill regarding public accommodations, applying it to housing. Housing discrimination also has been forbidden in Pennsylvania. An Indiana law provides for gradual elimination of segregation in the public schools. Oklahoma ended exclusion of Negroes from its public graduate schools, though segregation continues. Four Southern States are considering referendums on elimination of the poll tax. Connecticut, Massachusetts, and Wisconsin prohibited segregation in the National Guard, and New York and Pennsylvania made moves in that direction. The Oregon alien land law was repealed, as was the California ban against issuance of commercial fishing licenses to aliens ineligible for citizenship. Texas passed an antilynching bill.

Thus many of the States were able to accomplish without rancor what the United States Congress failed to achieve. Of all the civil-rights proposals before Congress only one—the poll-tax bill—was able to get by either Chamber. Though the House passed the bill—for the fifth time—the Senate did not follow through. "No action" or "referred to subcommittee" were the dismal reports on a Federal FEPC, an antilynching bill, an anti-poll-tax bill, a group libel bill, an antidiscrimination in housing and education bill, and a comprehensive bill to establish a Civil Rights Commission.

Needless to repeat, Republican and Democratic platforms last November promised to stand behind most of these proposals.

Needless to say, such laws are still required to secure the rights on the interstate level. The problem before Congress remains to create adequate laws where none exist; it is not, as the distorters say, to change human nature or legislate morals. Sponsors of the congressional bills—despite this session's results—should redouble their efforts to gain early consideration for these proposals in order to guarantee basic rights.

German Visitors to the United States

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 19 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, recently a group of German trade union leaders came to the United States to study and see the practical application of our democratic processes. Mr. F. A. Groemping, one of the group, wrote an article which appeared in the June issue of the American Foreign Service Journal, published in Washington. I ask unanimous consent to have this article printed in the Appendix of the CONGRESSIONAL RECORD. I find his observations timely.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GERMAN VISITORS TO THE UNITED STATES

(By F. A. Groemping)

When a group of German trade-union leaders, who are in the United States to study and to observe the American way of life, visited the Tomb of the Unknown Soldier at Arlington National Cemetery recently, one of the visitors said, "I am beginning to understand what the war meant to Americans." Several other Germans pulled out their notebooks and copied the words of George Washington inscribed on the amphitheater, "When we assumed the soldier, we did not lay aside the citizen."

The Germans also noticed that among the decorations bestowed upon the Unknown Soldier by foreign governments there was none from Germany. One of the men who had served in the German Army in World War I said, "If I hadn't lost my iron cross when I had to flee from the Nazis, I would send it to fill this gap."

This group is one of the many who will visit the United States this year. About 300 persons will be sent in the cultural exchange program of the United States military government for Germany, and the visits of many others will be sponsored by non-Government organizations.

Unlike the arrogant representatives of the Nazis, whose boasts and demands alienated other peoples, these Germans are modest and appreciative. In hotel lobbies and Government offices, in factories and universities, they find hearty welcomes and respond eagerly and gratefully. Two factors account for this cordial relationship between victor and vanquished so soon after the war. The first is the effort of the United States to aid the democratic spirit in Germany; the other is the personal background of the visitors and the organizations they represent.

It may be stated that our aim in Germany is to restore an intellectual, moral, and cultural life based on principles of freedom and social justice, humanity, and the recognition of the dignity of the individual. Gen. Lucius D. Clay last year stated the issue as follows:

"We know definitely now that they can have, of their own efforts, a reasonable economic future and, when we give them that opportunity, we are knowingly restoring into their hands an industrial potential that is larger than any industrial potential in Europe. There is no alternative; they must be given the opportunity to live.

"What they do with that potential depends on what is in their hearts and in their minds. On you sitting here, and on your opposites in the British and French military government, lies the responsibility to see that their hearts and their minds are ready to receive the return of economic strength which is being given to them; and to weld it and use it in the common good and not, as it has been used in Germany so often in the past, for aggression and for purposes that are inconceivable to those of us who have lived in a free world and in a free way."

AIMS AND METHODS

Cultural exchange is merely one phase of the total reorientation program. Under this program, the Office of Military Government for Germany sends Germans sponsored by some organizati n, institution, or group to the United States for a period of study and observation of the American way of life, our institutions, the operation of constitutional government based on the democratic ideal. It also brings to Germany the best scholarship and expertness from the United States and from continental Europe.

In the carrying out of objectives three methods may be used:

1. Visits to Germany by specialists.
2. Visits by Germans to the United States.
3. Selection and dissemination of literature.

All six divisions of the exchange program, education and cultural relations, information services, civil administration, legal, manpower, and food, agricultural, and forestry groups, employ visits by Germans to the United States as one of their methods.

The broad aims of the six divisions may be summed up as follows:

Education and cultural relations division

1. To instill in the minds and implant in the hearts of the German people the will to recognize, the power to develop, the spirit to protect, a society based upon natural rights of men.

2. To aid the German people to aid themselves in the readjustment, reorganization, or redirection of their social organization.

Information services division

1. To rehabilitate and democratize the German information media.

2. To project democracy by exposing the German public to the democratic thought of the United States and other countries.

Civil administration division

To introduce to the German people democratic ideas and methods to further the reconstruction of the German public service into a truly democratic institution based on such fundamental concepts as service to the people, responsiveness to public policy, respect for the basic rights of the individual, and equality for the citizen to serve his Government regardless of race, sex, religion, or political belief.

Legal division

To assist the German people in their efforts to introduce democratic principles into their legal system; and to rebuild their bar and bench in a democratic spirit; to revive the roots of democratic justice among such Germans as are directly concerned with the judicial system.

Manpower division

To establish democratic German trade unions, democratic relationships between labor and management, effective public agencies in the labor field with high standards of public service, and to develop cooperative effort on the part of labor, management, and public officials in the study of problems of labor, the testing of new methods, etc.

Food, agricultural, and forestry groups division

To promote greater economic freedom for farmers and a greater sense among them of political responsibility.

STRAWS IN THE WIND

It is probably too soon to attempt an evaluation of this program. The objectives are far reaching and accomplishments are not immediately calculable. However, the reports of visitors returned to Germany and others still in this country and the observed reactions of German visitors to the American scene may serve as straws in the wind to indicate the eventual results.

Six German broadcasters visited the United States in 1948 under the auspices of the Rockefeller Foundation. In the opinion of the broadcasters themselves and of the American radio officers who have observed their performance since return, this initial project was an unqualified success.

Reports of a group of nine German and Austrian teacher educators after a year of observing methods in American universities and teachers colleges indicate "a good understanding of American education and suggested numerous possibilities for applying their experience here toward solution of their problems in their countries," states the Occupied Countries News Notes. Ruth Hubbard, of the Institute of International Education, after completing recently a 3-month tour of western Germany declared the student-exchange program is one of the most positive contributions to the cause of peace yet undertaken by the United States in the occupied countries.

Dr. Antonie Nopitsch, leader in religious activities, said after recent completion of a study tour of the United States that she was impressed by "the common consideration of personal life. A whole nation seems to join in fair play, following unwritten laws. This is perhaps the real secret of democracy." She added, "More impressive than anything else was the unexpected friendliness answering my very diffident approach to a former enemy country."

A group of 11 union labor representatives were happy to see a representative of the Department of Labor at the dock when they landed in New York recently. They stayed overnight at a well-known hotel. Here the number of lamps in the rooms impressed them, as well as the fact that the use of electricity was unrestricted. The bath with tub and shower, the faucet for icewater, the fact that there were six towels, two pieces of soap, free stationery, and even pen-points amazed them. They were also impressed by the hotel's recommendation that guests keep their room keys when they go out. Comfortable chairs, the telephone and radio, and the availability of a television set which could be rented for $2 added to their surprise.

In Washington their accommodations were less sumptuous. It seemed to give them pleasure to read on the Hahnemann monument the inscription, "Die milde Macht ist gross."

Strolling down Sixteenth Street, the group decided to get some refreshment, and went to a convenient hotel coffee shop. Here they noted and commented on the neat, well-fitting uniforms of the waitresses and the efficient, friendly service. When asked what they would like, they ordered strawberries with whipped cream, which appeared to be a great treat. One hour later the group was still chatting and the Germans decided to try something else. This time, they selected pie and coffee and seemed well pleased. The two Americans present had not ordered

anything and one of the Germans asked, "Will they charge you for sitting here without consuming anything?" When the Americans expressed surprise at this notion, the Germans explained that today in Germany it would be unthinkable to spend considerable time in a restaurant without ordering anything. They were delighted with the explanation that in America the customer is always right, and amazed at the illustrations of this principle, such as the privilege of exchanging at a store unsuitable wedding presents.

Perhaps equally surprising to both Americans and Germans was the discovery that when German is spoken in restaurants, a waiter, hostess, or the manager frequently addresses the guests in German. This happened in the presence of the writer at least three times within 5 days.

One group of visitors expressed great satisfaction about the friendliness of their reception after only a few days in Washington. Another group, who had completed a study tour of 7 weeks, carrying them as far west as Wisconsin, showed the same pleasure about the American eagerness to help them in their task. A representative of this group was invited to address the legislatures at Madison, Wis., and Lansing, Mich.

Both of these groups were entertained in Washington at a dinner by the American Federation of Labor, and addressed by William Green, president of the Federation; Michael J. Galvin, Under Secretary of Labor; and also Dr. Steelman, the President's labor adviser. The Germans were especially pleased by Mr. Green's speech, which reviewed American labor's aid in their struggle against communism, and promised continued support. Mr. Green's statement that 8,000,000 AFL members were behind them affected them visibly. The interpreter was inspired and instead of the usual, lifeless translation, the ring of his words in German carried the seriousness and sincerity of the AFL president. Those of the group who had completed their stay in the United States, and left immediately after the dinner for New York, were elated, and said on the way to the station, "Now we can tell those in eastern Germany who sneered and called us Befehlsemphanger of the American Government that the American people are behind us."

Two of the group of visitors who were driven past the Pentagon Building were impressed not only with its size but also with its functionally satisfying qualities.

At the National Airport, they marveled at the efficiency of the landing service when they watched a Constellation discharge, take on new passengers, and take off in about 5 minutes. While some of them knew the airlift operations, they were impressed to see the smooth handling of civilian aviation.

THE FUTURE OF CULTURAL EXCHANGE

Several changes in the exchange program are favored by the Advisory Committee on Cultural and Educational Relations with the Occupied Countries, which assists in the arrangements for German personnel coming to the United States, and prepares reports and recommendations to governmental and other agencies directly concerned. The committee considers visits of only 6 to 8 weeks unwise, and considers stays of at least 4 to 6 months necessary to reach a fair understanding of America. Visitors brought to the United States by private organizations now usually remain 3 to 4 months, while the average Government-sponsored visitor is here for 90 days. It is also contemplated to give visitors more orientation to enable them to understand American conditions and problems. Kits containing informative material will be prepared and sent to Germany for this purpose. An English test may also be given persons selected to visit the United States to measure their ability to profit from the trip and to aid them in the objective evaluation of their knowledge of English.

OMGUS has recommended that during 1949–50 at least 1,500 Germans should be sent to the United States. It is proposed that the program provide for: (a) 600 young leaders, age 25 to 35, from religious, women's, labor, youth, or other organizations; (b) 500 teachers in elementary, secondary, vocational, teacher-training schools; (c) 200 university students, preferably those who are in the early years of university education; (d) 200 secondary-school youth, age 16 to 18, to live and attend school in small American communities, to be adopted by a small community, and to live with a typical American family during this period.

Like the Advisory Committee, OMGUS also recommends an orientation period in Germany, on the area in which groups seek enlightenment, before going to the United States, and a reconvening upon the return of groups to Germany.

NONGOVERNMENT SPONSORSHIP

A recent OMGUS report states that one of the basic requirements for the success of the reorientation of Germany is the generous and early invitation to voluntary nongovernmental organizations in the United States to participate in the program. Many groups and individuals are now contributing to make the cultural relations with Germany peaceful and permanent.

Seven outstanding German women are sponsored by the Carrie Chapman Catt Fund, which was created by the League of Women Voters. The group sponsored includes members of parliamentary bodies, writers, a lawyer, and has for its purpose the promotion of interest in government and public affairs among the mass of German women. The Oberlaender Trust has made grants of about 30,000 dollars this year for the benefit of specific organizations, including the Free University of Berlin. Many universities are cooperating, and about 190 Germans are now in American educational institutions. Many large organizations, such as the American Federation of Labor, the CIO, and the NEA, and also religious groups are participating as sponsors.

The backgrounds of the visitors to the United States vary as much as do their professional interests. But they have one thing in common: the will to create a democratic Germany. Many of them suffered persecution and privation during the Nazi regime because of their convictions.

Some of the visitors, who travel in groups, and have a detailed itinerary prepared for them, have expressed the wish to see more small communities, instead of only a few large cities. They have also reported some pull for their sympathies by different American interest groups. The Germans are well aware that they are here to observe and learn.

A member of the executive committee of the Independent Union Organization (U. G. O.) of Berlin, which opposes the Communist-dominated unions, has summed up the impressions for his group, as follows: "We touched American ground with great expectations because all of us had heard and read much about conditions in this country at home. But we also felt some uncertainty. We did not know if we would find everywhere the necessary cooperation and help needed to accomplish our task. After all, only 4 years have passed since the horrors of the war ended. Today, after traveling in this country for 7 weeks, we have the answer to all our hopes and doubts. We visited many factories and have come to know their operations and functioning. We have talked with people from all layers of the American society and discussed with them the problems of our times. We are happy to express our gratitude for the great sympathy, friendliness, and eagerness to help which we encountered everywhere. All this has made the strongest impressions upon us and we shall treasure these impressions when we have returned to Germany. This trip was a great adventure for us, and we, who are devoting our powers to the economic recreation of Germany, its democratization, and to social justice, have received new impulses, which will benefit the movement we lead. The following I want to make very clear: We enjoyed complete freedom of movement in this country; we were free to ask any question pertaining to our trip; and no matter what we asked to see or learn, our wishes were always satisfied. The leaders of the Communist unions of Berlin called us the helpers of the American monopolistic capitalists, and declared we were called to Washington to receive orders. Apparently they considered our trip in the light of their dependence upon the Communist Party, and compared our trip to that of the trips of their delegations which were called to Moscow to receive instructions and orders for their work in Germany.

"Our tour included stays in New York, Detroit, Chicago, Milwaukee, and Washington. We visited briefly Lansing, Mich., and Madison, Wis., as well as many other small and medium-sized cities. In addition we saw a number of farms in the Great Plains, and were thus able to form a rounded impression of conditions in the Northwestern States of the United States. Unfortunately the time, 60 days, allowed for our task is a relatively short period, but I believe we used our time to best advantage. We received powerful impressions as we viewed a great number of factories of the different American industries. Here science, technique, and manpower have brought the economy to its highest expression. It was especially gratifying for us as union representatives to learn of the extent and organization of American trade unions. Thanks to their activity and the natural wealth of this country, American labor enjoys the highest standard of living, as we noted in visits to many homes. The inevitable comparison with conditions at home made us realize that we shall have to work hard and diligently to achieve a tolerable level at home. Toward this end, the visit to America has given us new courage and new strength. We leave American ground with feelings of deepest gratitude. Gratitude toward the Government which made this trip possible, and gratitude toward those organizations who gave us assistance, with whose leaders we have now established personal contacts. We are also grateful to the Government authorities and administrative officials who gave us insight into social work, which we need at home for the handling of social problems."

Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. BARTLETT. Mr. Speaker, I was thrilled today to learn in a telegram from my old friend, M. J. Haas, that the Loyal Order of Moose, composed of over one million members, passed without any opposition at all at its San Francisco convention, a resolution approving statehood for Alaska. This adds another powerful organization to the long list of groups which have already gone on record in behalf of Alaska statehood.

Longing of Foreigners To Live in America

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, August 19 (legislative day of Thursday, June 2), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an advertisement of Warner & Swasey, of Cleveland, Ohio, which appeared in the August 22 issue of Newsweek. To those of us who believe that we have more to be thankful for than any nation on the face of the earth the advertisement tells a story we understand and believe in.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

"IMMIGRATION IS THE SINCEREST FORM OF FLATTERY"

If capitalism is wrong, why don't people who hate it, leave America? If socialism is desirable, why don't they go to England? If communism is what the so-called "common men" wants, why doesn't he move in droves to Russia?

Nobody wants to leave America—but tens of millions of men and women all over the world, in every country, want, yearn, plead for the chance to come to America.

Parlor pinks here lisp about the beauties of statism, where the government guarantees security. People in those countries know all about this business of government taking care of you from cradle to grave. Particularly the grave. Do what you're told or you get hurried into it.

They vastly prefer America, with its chance for progress, its high living standard, its liberty, its dignity of the individual. They'd swap security for your liberty any time. Look out that you aren't talked into the trade.

(Headline written by Wheeler McMillen, editor in chief, Pathfinder.)

Yalta Exposed Again by White Paper on China

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 19, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Felix Morley, in Human Events of August 17, makes some pertinent references to the white paper on China and points out very clearly that Roosevelt undermined China at Yalta. Thus, the responsibility for the defeat of Chiang Kai-shek and his Nationalist Government is on Roosevelt's doorstep. This Nation can thank him for the Communist regime which is presently overrunning all China. Mr. Speaker, I include the article by Mr. Morley:

WHITE PAPER ON BLACK BACKGROUND

(By Felix Morley)

An April 17, 1934, a spokesman of the Japanese Foreign Office (Mr. Eiji Amau) made a public statement in Tokyo which our Department of State immediately challenged. Basing his argument on the Lansing-Ishii Agreement of 1917, Mr. Amau announced that Japan had "special responsibilities in east Asia" and therefore proposed to develop its political guardianship over contiguous areas in China.

The rejoinder of Secretary of State Cordell Hull was immediate and determined. In a carefully worded note, delivered in Tokyo on April 29, 1934, Mr. Hull restated certain "generally accepted principles of international law". He explained again why his Republican predecessor (Henry L. Stimson) had refused to recognize the puppet state established by the Japanese in Manchuria. He made clear that this policy of nonrecognition was a matter of principle and wholly nonpartisan in American eyes. Then, as is set forth on page 16 of the current white paper on United States relations with China, Mr. Hull concluded:

"In the opinion of the American people and the American Government, no nation can, without the assent of the other nations concerned, rightfully endeavor to make conclusive its will in situations where there are involved the rights, the obligations, and the legitimate interests of other sovereign states."

Time passed, but even at the obvious risk and eventual certainty of war both Secretary Hull and President Roosevelt stood firm on this clearly expressed principle. The Japanese argued, as Secretary Acheson now asserts, that the regime of Chiang Kai-shek was "reactionary" and corrupt. For Japan to guide and supervise Chinese politics, said Tokyo, would be in the interest of world peace. We reiterated that: "Our Government * * * has rested its policy upon an abiding faith in the people of China and upon the ultimate success, in dealing with them, of the principles of fair play, patience and mutual good will."

The Japanese continued to protest that cooperation with Chiang Kai-shek, whom we were then backing so strongly, was impossible. Our current white paper seems designed to prove that Tokyo was right and that Secretary Hull was wrong. On November 26, 1941, Mr. Hull informed Japan that its government must subscribe to "the principle of noninterference in the internal affairs of other countries." That virtual ultimatum, discreetly buried on pages 464-466 of the white paper, was equally categorical on the subject of Chiang Kai-shek and the Kuomintang. We laid it down, as an essential condition of peace in the Pacific area, that—

"The Government of the United States and the Government of Japan will not support—militarily, politically, economically—any government or regime in China other than the National Government of the Republic of China with capital temporarily at Chungking."

This essentially moral policy was too rigidly based, and too forcefully stated, for acceptance by the Japanese war lords. Overestimating President Roosevelt's attachment to principle, and underestimating American physical strength, they gave the fatal order. On December 7, 1941, the bombs at Pearl Harbor obliterated that line between peace and war which was already virtually erased.

II

The war dragged on—to its inevitable end. Italy surrendered; Germany crumbled; and by the beginning of 1945 the eventual defeat of Japan was also certain. But in the heat and fury of the struggle something was disintegrating in America too. It was the moral fiber of our leadership; it was the belief in principle.

This decadence in our foreign policy is discernible throughout the nearly eleven hundred pages of the current white paper. And the evidence of degeneracy is the stronger because it was certainly not the intention of Secretary Acheson to advertise our own corruption. It is charged that some damaging documentary material has been left out. More significant is the fact that so much condemnatory evidence has been included. For this proves that our surrender of principle is an essential part of the record. The compilation, no matter how carefully edited, was bound to be shot through with appalling disclosures.

For instance, there is documentation on President Roosevelt's effort to force Chiang Kai-shek to accept General Stilwell as commander of all the Chinese military forces. Naturally this pressure was resisted by Chiang. It probably would have been resisted even if a more temperate character than Stilwell had been suggested, and even if the danger of Communist infiltration had been less obvious. But President Roosevelt was thinking only of winning the war. And on August 23, 1944—as disclosed on page 67 of the white paper—he sent to Chiang Kai-shek the following self-revelatory message:

"I do not think the forces to come under General Stilwell's command should be limited except by their availability to defend China and fight the Japanese. When the enemy is pressing us toward possible disaster, it appears unsound to reject the aid of anyone who will kill Japanese."

It is important to note the date of this observation by one who was acclaimed as a great humanitarian. For there is now a tendency to excuse the perfidy at Yalta by saying that the President was then a dying man. Actually this shameful agreement, signed by Roosevelt, Churchill, and Stalin on February 11, 1945, was merely the logical application of Roosevelt's thought in the preceding August. Principle was even then subordinated to the sadistic desire to kill Japanese.

III

In 1934 Secretary Hull had firmly asserted that: "No nation can * * * rightfully endeavor to make conclusive its will in situations where there are involved the rights * * * of other sovereign states."

That was the principle in defense of which the United States went to war. Yet at Yalta, when Japanese leaders were already seeking to negotiate surrender, Mr. Roosevelt tossed away not only the principle but also the physical fruits of victory. The text of the Yalta agreement as to China, printed on pages 113-114 of the white paper, cannot be too carefully studied. The secret concessions then made to Soviet Russia at Chinese expense insured the eventual triumph of the Chinese Communists and the rise of a threat to our Pacific interests more serious than anything ever offered by Japan.

This was the accomplishment at Yalta of Franklin Roosevelt, Ed Stettinius, Averell Harriman, Harry Hopkins, Alger Hiss, and a couple more. Truly, Mr. Churchill might then have said that never before had so many owed so much disaster to so few.

The State Department's current effort to exculpate and explain Yalta is really pathetic—no other word will serve. For instance, the white paper asserts (p. 115) that: "There was historical precedent for the specific provisions of the Yalta agreement." It does not emphasize that this historical precedent was the Czarist Russian aggression against China which led to the formulation of our open-door policy just 50 years ago. What Mr. Roosevelt did was to tell Stalin that in his case the United States would underwrite a policy of aggression and infiltration which, in the case of the Czar, we had resolutely opposed. And this was done behind China's back.

Of course, it was not long before the well-informed discerned the dreadful significance of Yalta. The white paper tragically relates the effort of President Truman, soon after Roosevelt's death, to regain some of the values tossed away by his predecessor. On page 118 we read of instructions sent to Am-

bassador Harriman in Moscow, on August 22, 1945, telling him "as soon as possible" to get a written statement from Stalin "affirming respect for the open-door policy." Of course, no such statement was obtained.

IV

The white paper on China, we are informed, was published by the Department of State at the insistance of General Marshall. The former Chief of Staff is said to be worried over the failure of his mission to China, from 1945 to 1947, and to desire personal justification.

But all that part of the white paper is, of course, of secondary importance. At Yalta an American President, in effect, handed the control of China over to Soviet Russia. It was then that we actually administered the lethal dose to Chiang Kai-shek's regime. Even so, it took more than 4 years for the poison fully to undermine what Chiang had firmly built.

The white paper does demonstrate—at inordinate length—that after Yalta a number of honorable men endeavored to check the operation of the poison we had administered. But whether General Hurley or General Marshall, or the far more able General Wedemeyer, did all that was then possible to save China from communism is really of secondary importance. China was doomed at Yalta—by a President of the United States—on February 11, 1945. That day also will live in infamy.

Now the American people, like Hamlet, are beginning to find themselves forced to the realization of murder most foul. It is a reluctant realization. Indeed, it is not yet widespread. We shall, for some time, seek alibis, as Hamlet did. But the best excuse we can offer officially is that Chiang Kai-shek temporized with corruption, as the Japanese said 10 years ago. It is unfortunate that this excuse had to compete in the headlines with certain activities of General Vaughan.

The white paper—for any conscientious reader—does not exculpate. On the contrary, it only pins the stigma closer to every one of us. And while we may prefer to dodge the issue—to dally with Ophelia, so to speak—that will not serve. The Kremlin, for one, will not permit. It did not throw victory to the winds.

"To be, or not to be: that is the question." And suicide for a nation is not so complicated. It is merely a matter of officially approving and defending that which the individual moral sense can neither approve nor defend. Yalta cannot be defended on the dreadful basis of Mr. Roosevelt's lust to kill Japanese. And well we know it.

Co-ops Pay Their Taxes

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 19 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article written by Hon. Jerry Voorhis, former Member of the House of Representatives from California, and now executive secretary of the Cooperative League of the United States of America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A cooperative is simply a group of people who, faced with a need for credit, electricity, fertilizer, oil products, household supplies, medical care, housing, insurance, storage facilities, burial services, or any other type of goods or services, proceed to organize a business enterprise or agency to supply that need. These people invest their money, provide for business management, take their chances of success or failure in exactly the same way as do those who launch any other kind of privately owned business. But they do these things from a somewhat different motive. For the distinguishing characteristic of a cooperative is that it stems not from the profit motive but from the need motive in human life.

Since the whole reason for existence of a co-op is to supply its members' needs, and since the filling of the economic needs of a population is the supposed reason for all economic activity, the organization and operation of co-ops would seem the most reasonable sort of economic activity on the part of groups of citizens.

Yet, at the moment, co-ops are being subjected to all manner of attacks. They are tagged with every name in the book of prejudice. Attempts are made to associate them with their exact counterparts, namely communistic and fascistic types of economic organization. Prominent conservative daily newspapers print feature articles titled "The Menace of Cooperatives." Bills calculated to either put co-ops out of business or to so change their method of operation as to eliminate most of their truly cooperative characteristics are introduced in Congress. Speakers are hired, State by State, to spend full time addressing businessmen on the necessity of using political devices to remove the competition of their cooperative competitors.

On reflection it becomes clear that all this is hardly to be wondered at. The same treatment has been accorded every other institution which has arisen in human history and sought to open up to the people generally opportunities previously reserved for a comparative few. It happened to the church, the school, the labor union, the farmers' organizations. It happened to democratic government. Why shouldn't it happen to an attempt at economic democracy? After all—cooperatives decentralize the ownership of property—not personal property but productive plant and commercial property. Cooperatives have dared to do this at the very moment when the country was apparently on the point of resigning itself to the concentration of such ownership in the hands of a very few people and a handful of giant corporations. Cooperatives are just too confounded democratic; and, what is even more serious, they are democratic institutions in the one field which democracy wasn't supposed to invade—the economic field. This is why cooperatives are under attack.

It is quite probable that the more violent types of attack on cooperatives do not do them very much damage. Indeed there is considerable evidence that recent attacks have actually strengthened the loyalty of cooperative members and have interested many people who were formerly cool to the cooperative method of problem solving. After all, the basic motivation of co-ops is too fundamentally right, and their methods are too obviously a pat answer to some of our worst modern problems for irresponsible accusations to do them appreciable harm over the long run.

But the calling in question of their tax status, among a highly tax-conscious people—that is a different matter. Misunderstanding of the facts in such a case may be as harmful as the wrong set of facts—unless the misunderstanding be dispelled.

The important fact is that where a prior binding obligation has been assumed by a cooperative or any other business to make refunds to patrons in proportion to their patronage, then the money so refunded does not belong to the cooperative and cannot be taxed as income to it. It is simply impossible in either law or justice to tax one person on that which belongs to another. It is not a question of excluding or deducting a certain amount from the income of the cooperative. It is a question of ownership.

A cooperative is a partnership in which the patrons of the business are the partners. The cooperative itself therefore cannot have income where its savings clearly belongs to the patrons as partners. And to the extent that such savings would constitute taxable income to anyone they are taxable against the cooperative's patron-partners and they pay the tax upon it at individual tax rates. And it is to be remembered that no partnership and no individually owned business in America pays corporation income taxes.

We are discussing, of course, taxable income. We are not suggesting that a lady who spends $13.99 on a dress marked down from $19.99 should report on her income-tax returns that she thereby has received $6 of taxable income. No one can generate income for himself by spending money on goods he will consume and from which no income can possibly be derived. For exactly the same reason cooperative members who merely buy groceries or personal clothing or any other articles of personal use and who receive a reduction in price in the form of a patronage refund are not and cannot be regarded as having received any taxable income simply because the net amount of their expenditures has been reduced. But where a cooperative member obtains any services or goods from his cooperative which he uses in a business, then his patronage refund does have the effect of increasing his taxable income from that business—and upon this he, like anyone else, is taxed.

Cooperative members enjoy, therefore, no special privileges taxwise whatsoever. The same rules apply clear across the board.

The patronage refunds are the property of the co-op's patrons. They are a liability, not an asset, of the cooperative. And yet the central and only important issue between cooperatives and their opponents is that of whether or not patronage refunds shall be taxed against cooperatives.

With the exception of 101 (12) which even opponents of co-ops declare of no consequence, the Internal Revenue Code contains no special reference to cooperatives. The same tax law applies to all businesses, cooperatives, and others alike. There are official regulations, and court decisions in unbroken succession that declare patronage refunds not subject to tax in the hands of the paying business. But these laws, regulations, or court decisions do not apply to cooperatives alone. They apply to any business paying patronage refunds.

So the charge that co-ops don't pay taxes becomes to the informed cooperative member a most bewildering thing. He looks over the list of taxes paid by his cooperative. He finds it has paid all property taxes, sales taxes, franchise taxes, school taxes, county assessments, State and county license taxes, vehicle taxes, social-security taxes, State and Federal income taxes—and all the rest of the taxes levied generally upon business. He can only explain the oft-repeated accusation that co-ops don't pay taxes on one of two grounds: Either it is made in ignorance, as in most cases it of course is, or else it is another application of the admonition of a certain erstwhile dictator that if you tell a big enough lie often enough it will eventually be believed.

For the fact is that with this single exception of 101 (12) applying to a dwindling minority of even eligible farmer cooperatives all cooperatives pay all taxes under the same law as anyone else. Is this their fair share? Yes, and then some. For cooperatives are democratic businesses. A lot of people know all about them. They report fully on their inventories. Consequently, many a local cooperative pays more total taxes than its competitors per unit of business volume, despite the exclusion of patronage refunds.

The question that is being most frequently raised at present is this: Shall co-ops be taxed on patronage refunds paid in some other form than dollar bills?

To quote a large midwestern daily newspaper which has proven a relentless opponent of cooperatives through the years: "The big tax advantage that the co-ops enjoy, and use unfairly is the privilege of accumulating capital out of earnings without paying taxes as either an individual businessman or an ordinary corporation would have to do. This is done by the device of retaining so-called patronage dividends, giving the customers to whom they are due book credit instead of cash."

"A corporation can also retain earnings for business expansion if the stockholders so desire. But the corporation has to pay a 38-percent tax whether it keeps the money in the business or pays it as dividends."

So runs the argument. It has been reiterated over and over. But it is essentially and basically false. It simply is not true that a corporation or an individual business would be taxed if they did exactly what the cooperative and its customers do.

If any corporation, individually owned business, or partnership were to institute a program of refunds to customers based on patronage and if those customers liked such a business concern so well that they agreed to accept stock or certificates of ownership in lieu of immediate cash payment in order, for example, to make possible the opening of a new department—then that business would no more be taxed on the money so reinvested in it by its customers than a cooperative is. Again it is not true as implied in the above quotation that a cooperative could do what the corporation does without paying a tax on the same basis as the corporation. If a cooperative "retains earnings for business expansion" without allocating ownership of the money to its patrons it is taxed on funds so retained. And if a cooperative's stockholders as distinguished from its patrons, chose to leave the interest (or dividends) on their stock in the hands of the co-op to be used for expansion, the cooperative would be taxed on that money as income to it. The co-op, too, in the case of payments to stockholders, "has to pay a 38-percent tax whether it keeps the money in the business or pays it out as dividends."

The distinction in law and practice between stockholders and patrons is basic and of unquestionable validity. Businesses run as cooperatives are, for the benefit of patrons, nonprofit businesses so long as ownership of their savings (or margins) clearly belongs to the patrons rather than to the business itself.

Patronage refunds, therefore, however paid, cannot be the property of nor taxable against the cooperative for the simple reason that they are the legal property of the patrons. To contend that patronage refunds should be taxed against the cooperative if paid in some other form than cash is unreasonable. Let us suppose a man gave an agent $200 with which to purchase securities for him, and that the agent purchased the desired securities for $150 instead of $200. When the agent sought to return the $50 to the owner, the owner said, "No, just keep the $50 and when you have a good opportunity invest it for me in some good property." To say that in such a case the agent had $50 of income is simply ridiculous. And this is exactly the sort of thing that happens when a co-op member reinvests his patronage refund money in his cooperative.

The attack on patronage refunds not paid in cash is however altogether understandable. Co-ops do not have access to Wall Street or La Salle Street for their capital. They get it from the people—from their members who are almost always folk in very modest circumstances.

The principal times when these members can invest is when they receive their patronage refunds. If a penalty tax could be passed against patronage refunds reinvested in a cooperative their growth might be slowed down. The objective of co-op's competitors would have been accomplished by a political maneuver.

Kiplinger magazine, certainly no pro-co-op organ, made some pointed remarks about such methods in its November 1947 issue. It said: "Co-ops are doughty competitors chiefly because they operate by nature on a 'buyer's market' basis, regardless of economic conditions. Other businesses tend to work on a 'seller's market' psychology. * * * So it is clear that the co-op question will be settled in the market place on the basis of competitive efficiency. Fowler, in the Cooperative Challenge, is willing to leave things on such a basis. It would be strange, indeed, if supporters of free enterprise declined that challenge and became obsessed, instead, with legal maneuvers to restrict co-ops. The legal maneuvers probably will not turn out as desired. The co-ops will still be in there competing, and other businessmen will have wasted time they could have spent studying ways to meet the cooperative challenge."

Some people simply cannot seem to understand that the thing that makes cooperatives grow is a very dynamic and fundamental idea and principle which no tax law nor any other law can kill. For 1,948 years, ever since the first Christmas Day, self-seeking forces in the world have been trying to kill that same idea. It is the idea of mutual aid. Co-ops simply apply that idea to business.

The competitive advantage of cooperatives lies, and will continue to lie, whatever the result of political drives against them, in the fact that they pass on to their customers what would be profit to other businesses. The only way they can be stopped is to make it a crime punishable by death to conduct a nonprofit business in the United States.

So what is the answer? It's the same answer that good lawyers and good lawmakers have always found. It is to establish principles of law and then apply them clear across the board without fear or favor. The basic principle is the simple one now applied in American law. It is this: if any business, cooperative or otherwise, receives earnings and keeps them in its own name then it should be taxed on such earnings; but, if any business fails to make earnings or if it deliberately obligates itself to divest itself of what would otherwise be earnings by paying them to others, then that business cannot, in justice, be taxed on income it does not possess. Nothing could be closer to true tax equality than this principle.

It is nothing more nor less than a recognition of the difference between profit and nonprofit business. To violate it by levying discriminatory taxes against nonprofit business would be tantamount to denying American citizens the right to conduct nonprofit business unless they paid a penalty for the exercise of that basic right. Once understood, the American people would never tolerate such action.

Louis Johnson—Capable, Bold, Fearless, Frank, Stubborn, Forthright, and Honest

EXTENSION OF REMARKS

OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I am herewith inserting an editorial from the August 18, 1949, issue of the Stars and Stripes which gives a comprehensive unbiased appraisal of our Secretary of Defense:

THE EDITOR'S CORNER—FROM BEHIND CLOSED DOORS

Sometimes we wonder how the new Secretary of Defense can ever get a toehold on his complicated job and do the things he is expected to accomplish. The former national commander of the American Legion is no wallflower, and, Washington being what it is, he must don his boiled shirt several times a week to attend tea parties and banquets, usually having to render a speech or two on such occasions. He is called upon for radio addresses both at home and elsewhere, and perform hundreds of chores, in addition to his regular duties. All take thought, time, and effort.

But, being a politician who with few others had faith in the public service last November of one Harry S. Truman, he has come under the direct fire of antagonists and has had to appear personally to testify before numerous congressional committees. Many opponents have been prompted in their opposition by purely partisan motives, while others entertain actual fear that Louis Johnson might not have the administrative capabilities to be safely trusted with the tremendous powers he has sought and which, after prolonged debate, have been given to him.

We would go to jail before we would divulge the source of our information, but we have been privileged to have the reaction of some who have questioned his capacity and who have felt him out boldly behind closed doors in executive sessions at the Capitol. With one accord these inquisitors have reached a refreshing and heartening conclusion. Johnson, they say, is bold and fearless. He has at his fingertips an unusually thorough knowledge of foreign affairs and defense matters. He answers questions fully and completely, and, if he is in disagreement with an interrogator, he says so frankly and states why. Open to reason, he is nonetheless stubborn when he believes he is right, and he usually announces that he is. Above all else, say those who have matched wits with him, he is forthright and strictly honest.

That is saying a whole lot for the man in whose hands rests all decisions relating to the security of his country and its people. Add to it the fact that he has surrounded himself with intimate and trusted associates of long years standing and we feel that the veterans of America, and all other citizens, have little to fear in the man Johnson and much to hope for in his handling of national affairs. Perhaps after a while those who have been taking pot-shots at him will leave him alone and permit him to do the work he is called upon to do.

Gems From Speech of Herbert Hoover on His Seventy-fifth Birthday

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 19, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, so that we might preserve in succinct form literary gems in the speech by Herbert Hoover on his seventy-fifth birthday in California, I am including them as they appeared in his formal address:

PALO ALTO, CALIF., August 10.—Highlights of Herbert Hoover's seventy-fifth birthday address tonight included:

"No nation grows stronger by subtraction.

"Along this road of spending, the Government either takes over, which is socialism, or dictates institutional and economic life, which is fascism.

"Most Americans do not believe in compromises with collectivism. But they do not realize that through government spending and taxes our Nation is blissfully driving down the back road to it at top speed.

"The steady lowering of the standard of living by this compromised collectivist system under the title 'austerity' in England should be a sufficient spectacle. It aims at a fuller life, but it ends in a ration.

"We have not had a great socialization of property. But we are on the last mile to collectivism through government collection and spending of the savings of the people.

"Thinking and debate on these questions must not be limited to legislative halls. We should debate them in every school. We should resort to the old cracker barrel debate in every corner grocery.

"As spendthrifts we are on our way to rob posterity of its inheritance."

China Fights On

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 19, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of August 18, 1949. It is fortunate for the world and for ourselves that China has some strong men who are not as easily daunted as American defeatists in our Government. These Chinese had the strength to fight our enemy, Japan, alone, even when we were helping that enemy. They still have the strength and the will to fight our enemy, communism, alone, even when we abuse and denounce them, thereby giving vital aid and comfort to the enemy. I hope God and history will be more merciful in judging us than we are in judging a faithful ally which succeeds in killing 243,000 Communists while we accuse it of not fighting:

RED SWEEP IN CHINA

While the world watches in paralyzed inactivity, the Communist armies continue to overrun one part of China after another, and the Chinese National Government, which all countries, including Soviet Russia, still recognize as the legitimate government of the country, continues its fighting retreat to bastions from which, as during the war with Japan, it can organize a last-ditch stand. According to the best estimates, the Communists have already conquered more than 30 percent of China's total area and nearly 50 percent of its population. Now they appear to have broken into Foochow, opposite Formosa, the final citadel of Chiang Kai-shek, and are driving on Canton, the temporary national capital. The chances of their reaching it can be judged from the haste with which most foreigners are leaving, and even more from the fact that the National Government is beginning to transfer its offices to the wartime capital of Chungking.

It is obvious that the position of the National Government is growing desperate—more desperate than it ever was during the Japanese war. But the State Department's white paper notwithstanding, and despite continuing defections, it still refuses to disintegrate and is continuing a fight in which, according to the Communists' own figures, it inflicted nearly 1,500,000 casualties on the Communist armies during the past 3 years, or about half a million more than all American forces suffered in the war against both Germany and Japan.

Its armies are scattered and suffer from lack of everything, but they still amount to nearly 1,500,000 men. Moreover, as the Communist armies spread out they weaken their local controls, with the result that they are beginning to suffer from peasant uprisings, against which they have been forced to declare a special campaign. And the National Government has one advantage which it did not have during the Japanese war—namely, control of the sea, which enables it to blockade the Communist-held ports.

Nevertheless, barring a miracle, destiny is striding along in China with inexorable steps, and each step brings nearer the time when the United States must make up its mind what to do about it—if anything. Canton is next door to Hong Kong, and Hong Kong is a western citadel in China whose fall would have incalculable effects on the whole Far East.

Cotton Acreage Allotment and Marketing Quotas

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 3, 1949

Mr. BROOKS. Mr. Speaker, during recent months I have become intensely interested and concerned with our agricultural problem. For 10 years we have had a surcease from some of the problems of surpluses and poverty prices which have crushed our farming population during the last few generations. Beginning in the thirties, under a new agricultural program, the farming areas of the country have shown substantial progress toward prosperity, and in some instances, luxury. The country has gone forward under the best farming conditions of a generation.

Now, Mr. Speaker, I see trouble ahead. I am not alone in my concern. As I listened to some of the speeches here in the last few weeks, I found other Members of this body deeply disturbed and generally concerned regarding our farm program.

It is not so much the operation of the farm program as it covers basic, nonperishable commodities that causes disturbance. This program, generally, has operated well in the past. While controls will be necessary in the future to curb production and maintain reasonable prices to our farmers, it seems to me that this program will yet give reasonable satisfaction throughout the Nation.

The phase of the program which causes deep misgivings is the application of it to perishable commodities. It seems unfair that the farmers engaged in producing basic commodities should enjoy price support but those engaged in producing perishable nonbasic commodities should have no help in our farm program. If price support of basic commodities is to be continued as a permanent agricultural policy of the Nation, some satisfactory adaptation of this program must be applied to those who produce perishable commodities, such as milk, eggs, meats, potatoes, and strawberries. In the past we have been attempting to handle these perishable commodities on the same general basis and under the same general program as has been handled the basic nonperishable commodities, such as cotton, corn, and wheat.

Our program has not worked well when applied to them. There are, for instance, our operations in reference to price support on Irish potatoes. During the last 2 years we have sustained a loss in these operations of $494,000,000. We have, likewise, sustained a loss of some $67,000,000 in the support program for eggs; and have sustained losses in other support programs for perishable farm commodities.

Heretofore, in order to sustain the price of a perishable commodity, the Government has moved into the market and bought until the price was stabilized in the open market. It then often found itself with huge quantities of perishable commodities, purchased to support the price and yet, through the fear of breaking the price, is unable to sell or dispose of these commodities. In the past, especially in the case of Irish potatoes, we have held in storage huge quantities of these commodities. We have kept them in storage until they ultimately rotted and spoiled. Millions of pounds of powdered eggs, I am told, are in storage today and are spoiling because of our inability to sell this product on the open market. In the past millions of bushels of Irish potatoes have, likewise, spoiled and have then been destroyed by burning, with the use of kerosene. In these operations we have sustained huge losses.

A call now I think is proper to those who have the interest of farm economy at heart. It is a call to develop some change in our farm program which will more

successfully handle perishable farm commodities. Secretary Brannan has made certain suggestions and then after making them, has suggested changes in his original ideas and program. The Agriculture Committee recently presented to the House of Representatives a bill, authorizing an experimental run on three commodities—namely potatoes, eggs, and wool—under a new program fashioned, to a large extent, on the original recommendations of Secretary Brannan. The House, itself, decided against an experimental run at the present time, even though limited to three commodities, and preferred to carry on with our present program for another 12 months. This action is only postponing the day of ultimate decision. It is an effort to close our eyes to the true situation and 12 months hence we may open our eyes to the realization that the black clouds which we saw ahead of us in the meantime have opened up into a real storm.

I am candid to say I do not have the solution to this problem at the present time. I believe, however, that it is going to take the thought of the best minds of this Nation to present to us a modification of our agricultural program as it applies to basic commodities to care for the requirements of perishable commodities. I have been willing to do some little experimenting to help us in our ultimate decision, which cannot be postponed indefinitely. It is by adapting successful operations to new conditions and by modifying them that we progress in the solution of our problems. The Congress may have now another 12 months to face this problem, and as I bear in mind the fundamental needs of the rural sections from which I come and throughout our great Nation, I fervently hope that some new ideas with possibilities may be advanced.

Report From Britain

EXTENSION OF REMARKS
OF
HON. HARRY L. TOWE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. TOWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two articles on socialized medicine by Mr. William Alan Richardson, editor of Medical Economics, Rutherford, N. J.:

[From Medical Economics for July 1949]

REPORT FROM BRITAIN—THE COST OF THE NATIONAL HEALTH SERVICE

(EDITORS' NOTE: Faced with the possibility of a medical new deal in the United States, American physicians are seeking any cues they can get from the experience of their British colleagues. To gather such cues first hand, the editor of Medical Economics recently undertook a month-long 2,000-mile tour through England, Wales, and Scotland, visting every principal city there and as many small towns. Mr. Richardson's aim was an objective study that would show particularly how the British doctor is being affected by state medicine and what kind of medical care he is able to give his patients. The results of the study are being presented in a series of articles, of which this is the first. The author was aided by the opinion research firm, Mass-Observation, and by Medical Economics' British correspondents, Harry Cooper and staff. More than 300 depth interviews were conducted among cross-sections of doctors and patients.)

Not long ago, a member of the House of Commons was defending the cost of the state medical scheme in Great Britain.

"What does it matter how much the scheme costs," he said, "if the needs of our people for medical care require such an outlay?"

"What does it matter, indeed?" another member replied. "The Americans are paying for it."

No Marshall-plan funds are earmarked specifically for Britain's national health service. Yet it stands to reason that without these American billions in the British till our cousins across the Atlantic might well have trouble financing their all-out medical program.

A good many Americans who don't like socialism object strenuously to our helping support socialist experiments in Britain. Nor are all Britishers in favor of it. Just a month ago an Englishwoman wrote the New York Herald-Tribune, as follows:

"If only we hadn't taken your Marshall aid. We should have had to work harder. We should have had to go without even more things. But knowing that we had something to fight for—independence, reconstruction, self-respect—and not being tied to anyone's apron strings, we should have come out of it all right, just as we came out of the Battle of Britain. We would have known, too, that we had achieved a real success, not a false one as at present."

YANKEE DOLLARS

"Marshall aid is allowing the people in power here to push all their schemes into effect. You are financing socialism, and, as we see it, socialism is hardly distinguishable from communism.

"We are utterly shocked when we consider how far we have gone along the path toward complete obedience to the state. I pray for our own sakes that more Marshall aid will not be forthcoming."

The National Health Service is estimated officially to cost more than $1,500,000,000 in the fiscal year 1949–50. And $1,500,000,000 is more than 10 percent of Great Britain's total national income. In other words, for every pound the Government takes in it will have to spend one-tenth on its state medical scheme (more than one-sixth on its entire social-security program).

And these are only the operating costs. There are also some items of proposed capital expenditure, such as $1,500,000,000 for health centers (excluding site values and cost of equipment) and almost $1,500,000,000 for extra hospital beds (excluding cost of rebuilding, renovating, and reequipping existing hospitals).

Careful estimates indicate that when socialization of British medicine is complete the project will cost not $1,500,000,000 a year but at least $2,500,000,000. This means an expenditure of more than $55 a head, or $220 for a family of four. In the United States it would total above $8,000,000,000 a year.

No one denies the wisdom of spending money intelligently to treat sickness and to preserve health—just as no one argues against buying proper food. But the public can't afford lamb chops with lace pants at every meal.

The cost of the National Health Service was so grossly underestimated by the Labor Government that a wave of parliamentary protests followed. The ophthalmic service alone was found to cost 650 percent more than anticipated: the first estimate had been $8,000,000; the revised estimate was $52,000,000. For the state medical scheme as a whole, costs are now running 40 percent above the level expected.

Complained a member of Commons: "If a business firm or a contractor made such a fantastic error in estimating, it would go bankrupt. The estimating here was hopelessly incompetent—unless a lower figure than the true one was deliberately put forward."

To some extent, at least, the Socialists underestimated costs because they underestimated human nature. The natural tendency among people when given something for nothing is to take too much of it. If when the British railways were nationalized it had been announced that everyone who contributed a pound a year could have a free pass to travel around the country, thousands of people would have been journeying to Land's End for no good reason at all. The same sort of thing has been taking place under the national health service.

CRACK DOWN DUE

Sir Stafford Cripps hinted in his last budget speech that it might be necessary next year to impose some special charge or tax in connection with the health services. "Perhaps this," said the Chancelor of the Exchequer, "would help to make people more economical in their use of the services." Such a device had to be resorted to in Germany after the state medical project got under way there. If it is adopted in Britain, the patient may have to pay for his first visit or two to the doctor in each illness and for part of the cost of his prescription, whether the script be for medicine, for supplies (bandages, adhesive, etc.), or for an appliance (e. g., eyeglasses, a corset, or a denture).

Meanwhile, as costs continue to mount, new curbs will have to be placed on the doctor. During the first year of the National Health Service, he has been allowed to prescribe as he pleased. But the expense incurred has been staggering. It will not be long, therefore, until the Government is compelled to establish some limits on what and how much the medical practitioner may order when he writes a prescription for a patient. Opticians have already been warned against supplying an extra pair of spectacles unless it is necessary to the patient's normal mode of life and there is a presumption that he will wear them.

Caught between an austerity budget on the one hand and the cost of a luxury medical service on the other, the Minister of Health, Aneurin Bevan, has been using the general practitioners of the country as a buffer. He promised them adequate pay when he urged them originally to take part in the health service. It was partly because of that promise that many agreed to cooperate. But the Minister has not kept to the bargain. He has had to cut expenses somewhere, and he has apparently assumed that he can get away with such a cut most readily among the G. P.'s. The British Medical Journal, which is never unduly critical of the National Health Service, calls this short-changing of doctors a gross breach of faith.

The recent reduction by the Minister of dentists' incomes is easier to understand, since dentists in some cases were making far more money than is considered respectable in a social-welfare state. Even so, there have been loud complaints because the earnings cut—varying from an eighth to as much as a half—were imposed without discussion with the dentists beforehand and without any warning.

The Labor Government is trying to make further savings on its state medical scheme by squeezing the hospitals. Mr. Bevan has called upon these institutions to pare their expenses so drastically that a number of hospital boards have said the only way they can do it is by closing beds—and this in the face of one of the worst bed shortages ever witnessed.

The Sheffield Regional Hospital Board, ordered to cut expenses by $885,000 in 1949, issued a public statement on the impossible

financial situation created, declaring that "If you want us to save money, we will have to close 2,000 hospital beds, reduce our staff, and cut out all comforts for patients."

The Chancelor of the Exchequer remarks that Britain's social services have resulted in a very great and highly desirable redistribution of wealth, because they benefit the less well-to-do at the expense of the more well-to-do. Unfortunately, Sir Stafford adds, just about all the wealth has now been spread around; so we have to recognize the unpleasant fact that these services must be paid for; and they must be paid for by taxation, direct or indirect.

To put it another way: There are now no more rich people left in Britain, so the cost of the social services must be met out of the workingman's pocket.

Only a small fraction of the expense of the state medical scheme is defrayed by the social-security contributions of the employee. The bulk of the bill is paid out of general taxation—which already eats up 40 percent of the total national income. The result is that the workingman pays practically the whole expense of the health service, but he does not realize it. His direct contribution is so small that he thinks he is getting virtually something for nothing.

To the Chancelor of the Exchequer the hard facts are more apparent (though he cannot for political reasons stress them too loudly). There was a veiled warning in his recent declaration that "We must moderate the speed of our advance in the extended application of the existing social services to our progressive ability to pay for them."

SLOW BOAT TO RUIN

Sir Stafford has admitted that "Social service expenditures will inevitably increase over the next 5 or 10 years. Nothing can stop this except the cutting down of the social services themselves, and that I do not believe anyone is prepared to recommend."

To this conclusion, the Economist nods its head in sad agreement: "It is a lamentable truth, but an inescapable one, that the British democracy would rather ruin itself than give up any of its major spending projects."

The crux of the cost argument was expressed in Parliament by David Eccles of Chippenham. "It has been stated," he said, "that the need of the people is the only criterion of the amount of money to be spent. We should all like that to be true. But, in point of fact, the choice is: Shall we spend our revenue on new houses, where people will be prevented from getting ill? Shall we spend it on education, which will teach them their way about the world? Shall we spend it on health services, to cure them when they fall by the wayside? Or on pensions, to support them in their old age? We have now reached a point where it is absolutely necessary to balance one social service against another."

HIDDEN COST

The people of Britain pay nothing directly to the National Health Service. Employed persons over 18 are subject to a weekly payroll deduction (men 98 cents; women, 70 cents) that helps in a small way toward the support of the national insurance (social security) system. National insurance funds pay for state medicine, unemployment coverage, old-age pensions, funeral benefits, etc.

People who are not employed—such as housewives, children, and other dependents—make no social-security contribution and are therefore not "insured." But they can join the health scheme anyway, and they pay nothing for it.

Scarcely any of the public interviewed in Britain would venture even a guess as to the cost of the national health service. And most of those who did guess were wrong. When told the cost, five of every seven said they thought the service was worth it.

Asked what she liked best about the state medical plan, the 34-year-old wife of a Liverpool crane operator said simply: "You haven't got to pay."

A lorry driver in Worcester said: "The cost isn't a great lot. We used to pay more privately. When you have to pay a guinea ($4.20) for a visit, and you need two or three visits a year, it soon mounts up. Now you can have as many visits as you want and it doesn't cost you a penny."

According to a warehouseman in Nottingham, "It's better for the Government to have people well than falling off sick. They're able to work better and it's better for the country."

INDUSTRY PAYS

A retail jeweler in Leicester did not agree: "If the money used for the National Health Service had been used instead to lower the income tax and the purchase tax, the higher spending power and the lower price of goods would have been a greater incentive to effort. Only an increase in production will give this country the money to support luxuries like the health scheme."

The scheme is, indeed, a charge on industry; for it raise inevitably the cost of goods exported from Britain. As world competition develops a keener edge, the British may find the expense of their medical system pricing them out of markets on which they depend for their economic survival.

Why, then, do they clutch so hard at Government aid? If they can't afford it, why don't they go without it? The answer lies in their acute need. For years, Britain's poor got only the barest medical attention. Some got almost none. Among all British families today, about 84 percent have incomes below $1,000 a year. Yet 60 percent of American families have incomes above $2,000 a year. Only when the vast economic dissimilarity between Americans and Britons is realized can British insistence upon free medical care under a national health service be fully understood.

The Health Ministry's comment on the high cost of the health service in its first year is that it reflects an abnormal period.

"Pent-up demands for treatment were met which should gradually taper off," says an official spokesman of the department. "Costs will then decline."

Others feel that as the state service makes the people more health conscious, treatment and costs will not decline but will go up. "A bankrupt nation cannot afford to throw its money about like this, no matter how worthy the principle," says a physician in East Lothian, Scotland.

Dr. Ffrangcon Roberts, of Cambridge, who has made an intensive study of the national health service, concludes one of his reports with these words:

"We know the cost of food and clothing. We can find out exactly the cost of repairing a house. But sickness is different. The cost cannot be ascertained with anything approaching accuracy. The only certainty is that it will increase with accelerating speed. The British state has underwritten an unlimited liability."—*William Alan Richardson.*

[From Medical Economics for August 1949]

REPORT FROM BRITAIN—THE PEOPLE VIEW THE NATIONAL HEALTH SERVICE

(EDITOR'S NOTE.—Faced with the possibility of a medical new deal in the United States, American physicians are seeking any cues they can get from the British. To gather such cues first-hand, the editor of Medical Economics recently undertook a month-long 2,000-mile tour through England, Wales, and Scotland, visiting every principal city there and as many small towns.

(Mr. Richardson's aim was an objective study that would show how British doctors and patients are being affected by state medicine and what they think of it. The results of the study are being presented in a series of articles, of which this is the second.

(The author was aided in his inquiry by the opinion research firm, Mass-Observation, and by Medical Economics' British correspondents, Harry Cooper and staff. More than 300 depth interviews were conducted among doctors and patients and among the various professional associations and the Ministry of Health.

(Medical men to be interviewed were chosen at random by taking every *n*th name in the British medical directory. A sample was sought in this way that would reflect no over-all bias either for or against the government health service. Equal care was taken to get an unprejudiced sample among the public. Here a stratified selection was made according to age, sex, location, financial status, and occupation.

(Mr. Richardson's initial material is being kept fully up to date as follow-up reports are received each month from London.)

Many Britons have strong convictions about their year-old state medical scheme. A deaf-and-dumb group leader was cited recently as an example. In expressing himself about the scheme before an assembly of fellow deaf mutes he dislocated three of his fingers.

Whether Mr. Haxton of Brixton—or any other Britisher—likes the National Health Service depends on whether he likes socialism. If he's a typical citizen, he's for the Socialist Government. Ergo, he's for socialized medicine.

A fairly large minority of middle- and upper-class people oppose the scheme. But they're outnumbered by the laboring and lower classes who favor it.

According to the wife of a civil-service employee in Surrey, the National Health Service is "one of the finest things any government has ever done." A clerk in Devon describes it as "the greatest innovation of the present century."

Among the British public interviewed, only about one person in eight said the National Health Service was anything but good, or good in part. However, about one-third of the advocates qualified their approval, saying the service was good "mostly for the poor" or "if we can afford the high cost," or "if the public would only stop abusing it," or "if only we had more doctors."

A librarian in Dorset said, "I'm sure the nation will be far healthier from now on. People no longer have to put off seeing the doctor because they can't meet the cost. No one will ever know the number of lives endangered or lost in the past because people who needed a doctor couldn't afford to call one."

THE LID'S OFF

A foundry worker in Middlesex said, "For the first time, it isn't a matter of a person's bank balance that decides whether he's going to live or die. There are old people here who went about for years half blinded because they couldn't afford spectacles. I've seen them using bits of magnifying glass to read newspapers with, and buying 2-shilling eyeglasses at Woolworth's. This scheme is a godsend to them."

A warehouseman in Leicester said, "The free health service is a jolly good thing: It has shown us something, too: You can't judge the public's need for medical care until it is free."

The comments of the people interviewed reflect clearly the many defects of the new service. But they reflect also an awareness of those defects. The optimists insist that present troubles are only temporary, that after the health scheme passes its "teething" stage people will get better medical service without having to wait so long for it.

Meanwhile, there is evidence all over Britain of the tremendous appeal of a plan that promises the public comprehensive medical care almost without limitation and at no direct cost. The Government has yet to

deliver on this promise, but as long as there's any chance of it doing so, most of the people want to let things take their course.

The American observer soon realizes something that the British politician realized at the start of the century: Most Britons don't care too much what kind of medical care they get as long as they get something. Many of them have for years been too poor to afford a doctor. Now they rejoice because the doctor is free. If they have to queue up to see him, if his service is not of top quality, what of it? What good was quality under the old system if you couldn't afford to buy it?

Obviously, medical care in Britain isn't free. But the patient tends to think it is because his direct contribution is so modest (less than a dollar a week).

A farmer in Cornwall indicated very simply why so many Britons have clasped state medicine to their bosoms: "People," he said, "can now afford to be sick."

A crane operator's wife in Liverpool said, "Sometimes when my little girl Aggie was sick, I use'n't to have the money when the doctor come. It's everything to a mother to know you can call the doctor even when you haven't the four shillings ready."

A houseworker in South Wales pointed out that "We used to have to pay seven shillings and sixpence a visit. So, many of us just kept away. Now when we need treatment we just go and get it. The poor people get the same kind of care as the people better off."

Said a metal worker in Oxford: "It gives us new peace of mind to know we can call a doctor if we need one. Before, lots of people let their illnesses go too far because they were afraid of doctors' fees."

Many who liked the national health service are former panel patients. Britain had the panel system from 1911 to 1948. All workers earning less than $1,680 a year (about 40 percent of the population) were covered by the scheme. Their dependents were not covered, but the panel physician generally gave them medical service at reduced rates.

In evaluating British acceptance of the national health service, therefore, Americans must recognize that a large proportion of the people of Britain have been conditioned to socialized medicine for almost four decades. Many have never known anything else. They have never known what first-class medical care is.

WHY THEY APPROVE

What they do know is that the panel system had some big gaps—e. g., that it did not cover dependents, that it did not provide specialist services, that it did not include medicines, appliances, and teeth. The national health services aims to fill those gaps. It promises the people more than they had before. So, many of them figure: What have we got to lose?

Britain may, in time, lose its shirt trying to maintain the new service. But the critical period has yet to come when depression, war, or the threat of national insolvency forces a show-down. Meanwhile, Marshall-plan money flows undiminished across the Atlantic, and the world continues to witness the paradox of private enterprise helping pay for Socialist experimentation.

CHIEF COMPLAINTS

The commonest objection patients have to the new health scheme is the time they have to wait to see the doctor. A draftsman in Newcastle said that since the scheme started, the queues have grown tremendous. A London housewife said, "My husband went to the doctor's the other week and had to wait outside the door for 2½ hours."

The London Sunday Times put it in rhyme:

> "I wonder if Bevan
> Would queue up at eleven
> To consult his M. D.
> At a quarter to three."

The fact is that most Britons queue up fairly readily. They don't seem to mind it the way Americans would. Either their spirit has been dulled or their patience is infinite.

A white-collar worker in Cardiff proved himself an exception. He figured he could not afford to wait 2 hours in the surgery of his NHS doctor, for he would then lose a half day's pay. So he consulted a private doctor by appointment.

A jeweler in Leicester said, "I dread the idea of being seriously ill. One might have to wait months to get into a hospital, to have an X-ray, or even to see a specialist."

According to a garage manager's wife in Croydon, "People aren't getting the same attention they were getting before. Medical attention has become such an impersonal matter now. Doctors try to get through as many patients as they can.

"If I wanted any real medical advice, I'd go to a doctor and pay him. If I only wanted a certificate, I'd go to the doctor I'm registered with."

A tobacconist in the same town, speaking of NHS doctors generally, said, "They treat you like you was in a post office. Still, you can't expect them to take an interest in their patients when they know they'll get paid for you if you come or if you don't."

A housewife in Durham summed it up by saying, "We just don't feel that we have a family doctor any more."

The jeweler quoted made the point that "In a Socialist state everything, including medical care, is graded down to the same mediocre level. A patient who wants a few aspirins can now demand attention as urgently as someone suffering from a grave illness."

A good many Britishers have adopted a policy of "Let's get ours while the getting is good." They seem to feel that if they don't take advantage of the health insurance promptly they may later have to pay for some part of the benefits they now get "free."

"The Government should have known that crowds of greedy people would overwhelm the doctors," said a housewife in Durham. "My husband and I are Socialists, and we've never been anything else. But we're against the new health scheme as a waste of public money. The poor could have been helped without our all being saddled with the present system."

An ironmonger's assistant in a small village in Scotland said, with some feeling, that "What I don't like is the way the Labour Government keeps saying the health service is free. It's not free. It's got to be paid for. And we're the ones—all of us—who'll have to foot the bill."

HOW GOOD IS CARE?

Asked about the quality of medical care given under the national health service, most patients say it is not much different from what they used to get under the panel system. But since patients are not the best judges of quality in medicine and since the panel service was anything but a criterion of quality, the answer to the question is not conclusive.

Even some patients who praise the new system admit that it does a better job quantitatively than qualitatively. An aircraft fitter's wife in Birmingham, for example, said that "The scheme is absolutely marvelous. It has a big future. But the treatment we now get isn't quite up to standard because the doctors have too much to do."

A bakery manager near Leeds: "The old scheme," he said, "was bloody awful; and the new one's no better."

APPLIANCES "ON HOUSE"

"Free" eyeglasses have been among the biggest hits of the British health show. A lorry driver's wife in London explained why: "There's people couldn't afford spectacles before and now they can 'ave 'em."

Yet this phase of the service has been one of the most abused. And many Britons know it. An RAF officer's widow was incensed because "They told me I could get glasses under the health scheme; but after I filled in all the forms, they then said I'd have to wait several weeks—unless, of course, I wanted to pay for them. I needed them in a hurry, so I paid."

A draper in Yorkshire said, "A friend of mine broke the sidepiece of his glasses. He sent his son down to the optician's with them. All he wanted was the sidepiece replaced, but in the end he got two new pairs of glasses.

"One optician I know makes a regular practice of frightening people into having two pairs. He'll say, 'You don't want to ruin your eyes, do you? Then you should have two pairs—one for near and one for distance.'"

"Free" teeth have won even more enthusiastic applause from NHS patients. And not without reason. For, as Colonel Stoddard-Scott, of Pudsey, said in a gem of understatement before the House of Commons, "Britain's teeth have not been the brightest pearls in our country's diadem." The gentleman from Pudsey declared himself "well pleased that the dentists have been so overworked since the health service began."

Yet dentistry, too, has been another fertile field of abuse. The chief complaint here is that the patient often can't get service within a reasonable time unless he pays cash.

The draper quoted said, "It's a racket. My next-door neighbor, a woman known to have a little money in the bank, was told she could have a new set of teeth in a week for £40 ($160) cash or have a set on the scheme for nothing and wait several months. She paid the £40."

An accountant in south London cited the case of a dentist who had charged the Government £21 ($84) for 1 hour's work on a patient. He had claimed payment for 21 fillings.

"Free" medication is likewise popular among Britishers today. Yet here the opportunity for abuse is less. The main charge heard—but not very often—is that some doctors are reckless in the quantities they prescribe. One patient even asserted that her doctor was "trying to sabotage the scheme by extravagance."

Some specialists are accused of the racket of arranging prompt hospitalization for patients who pay them privately. To the extent that this goes on at a time when hospital beds are in acutely short supply, it is a vicious practice; for it means that some trivial cases are getting priority over serious cases.

According to a businessman in Yorkshire, "If your doctor says he would like a second opinion, and you agree, along comes the specialist. After pocketing his fee he can usually get you an infirmary or hospital bed in about 5 minutes. Otherwise, getting a bed might take you months."

A speaker in Parliament said recently that some children who require tonsillectomy have to wait up to 2 years for the operation, while others whose parents will pay the surgeon from $120 to $200 for the work are admitted to a hospital at once.

Some Britons feel that the National Health Service has been an example of too much too soon. It should have been adopted only in part, they say, and gradually—over a period of perhaps 25 years. But this was not politically expedient.

The doctor is quite naturally the one most aware of the threat to his incentive in a state medical scheme But patients sometimes recognize this too. A cellulose sprayer in Lancashire said that "When doctors treated you privately, they usually tried to give you their best. Now that they're paid servants of the state they brush you off in a hurry."

Certain patients complain that the doctor's don't-care attitude leads inevitably to a deterioration in his relations with patients. A Scotch shopkeeper said, "The doctor isn't so friendly as he was. Now that medicine is nationalized, he's just like the rest of the

civil servants. When I took him my registration card, he wasn't very pleased about it. I'd always paid him for what he did for me. Now he's got to take everybody at so much a year. You can't expect to get the same service."

PREVENTIVE MEDICINE?

The national health service was described originally by its sponsors as a great potential force in the field of preventive medicine. As yet it has a long way to go. It's true that because house and office calls are "free," more of them are being made. But there is often not time for adequate examination or treatment. So the theory doesn't always get into practice.

An architectural student in London remarked that "We were promised health centers where everyone could get preventive medical service. But where are they? The NHS, as far as I can see, is concerned only with patching you up."

Minor complaints about the health service are of a wide variety. For instance:

"A lot of untrained people are becoming opticians now, just to get their hands on that ready Government money." * * * "I dislike the fact that doctors are still allowed to take private patients since these are obviously paying just to gain preferential treatment." * * * "Our family is naturally healthy. We seldom ever see a doctor. Now we're taxed to take care of the sick." * * * "Why should foreigners get our medical service for nothing? I'm one taxpayer who resents it."

Some patients in cities charge that they can't get their doctors to answer night calls. The doctor is always allegedly out on another call when the patient tries to reach him. By the time he's available, it's morning. This disinclination to go out at night is commonest in the heavily populated industrial areas where there are not enough G.P.'s and where the doctors thus have the best chance of dictating their terms of practice.

PATIENT RELATIONS

The people interviewed were asked their opinion of the value of a close doctor-patient relationship and what they thought the NHS had done to such relationships. Many who answered were former panel patients whose knowledge of such relationships was scant.

The student quoted above replied to the query about the doctor-patient relationship by saying, "That's my eye! Oh, it's all right for those old ladies who want a nice bedside manner with each bottle of cough medicine. But the main thing is for the doctor to know his business. I don't care if he's a complete boor as long as he knows what he's doing."

A commercial traveler in Leicester said, "An intimate doctor-patient relation may have been a good thing among the old-fashioned middle classes; but I can't see that it is possible—or essential—today.

But most Britons consider the doctor-patient relationship important and they don't think it has been affected much by the national health service. This is either an endorsement of the NHS practitioner or—more likely—a reflection on the panel doctor who preceded him.

CHOICE OF PHYSICIAN

Four out of five people questioned in Britain felt that they enjoyed a reasonably wide choice of doctor. Again, many of them were making comparisons with the panel system and not with private practice.

A dissident voice was that of a motorcar painter in the Midlands, who said, "I think our choice of doctor has narrowed a lot. For instance: If the patient is a chronic, few doctors will want to take him because he's a dead loss. If the patient lives outside the G. P.'s district, the G. P. won't take him because it means too much time lost in traveling."

There are those who predict a steady growth in private practice over the years, as dissatisfaction with the health service mounts. But as long as the public is taxed to support the service and as long as British incomes remain low, not many people will feel able to make double payment for their medical care.

A housekeeper in Essex said, "I'd rather pay than wait around." But she is in the minority. So also is the instrument maker in Manchester, who said, "Under the new scheme I have a different doctor. But I'm still a private patient of my old doctor who's not in the scheme. The surgery of my NHS doctor is nearby, so I thought it advisable to have such a doctor for my family in case of an emergency or some trivial mishap or illness. But for anything serious, I prefer the idea of continuing with my old doctor.

"This doctor lives at the other side of the city. He couldn't afford to come way over here for the small NHS fee he'd get. So I see him as a private patient."

There is every reason to believe that the Socialists in Britain will fight to the last ditch to keep their state medical scheme going. Nor will the Conservatives try to upset it and risk political suicide in the process.

The key to the issue is held by the people. Only when they realize the impossible cost and the basic unsoundness of their socialized health scheme will the end of state medicine in Great Britain be a reasonable expectation.—*William Alan Richardson.*

General MacArthur's White Paper

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of August 18, 1949:

GENERAL MAC ARTHUR'S WHITE PAPER

In declining an invitation to come home and give Congress his views on the China situation, Gen. Douglas MacArthur remarked pointedly that his ideas concerning Pacific policy were "fully on file with the Department of the Army."

The general's views are known to conflict with those of the State Department, so his unwillingness to become involved in a public controversy with the administration is understandable. But his previous recommendations can speak for themselves and he is willing to stand on that record.

The Joint Chiefs of Staff should be called upon to produce and comment on the MacArthur file, for vital questions of national security are involved.

In a cable to the House Foreign Affairs Committee almost a year and a half ago, General MacArthur disposed of most of the confusion revealed by the State Department's 1,054-page white paper in two paragraphs. He said:

"The international aspect of the Chinese problem, unfortunately, has become somewhat beclouded by demands for internal reform. Desirable as such reform may be, its importance is but secondary to the issue of civil strife now engulfing the land, and these two issues are as impossible of synchronization as it would be to alter the structural design of a house while the same was being consumed by flame. The maintenance of China's integrity against destructive forces which threaten her engulfment is of infinitely more concern. For with the firm maintenance of such integrity, reform will gradually take place in the evolutionary processes of China's future.

"The Chinese problem is part of a global situation which should be considered in its entirety. Fragmentary decisions in disconnected sectors of the world will not bring an integrated solution. It would be utterly fallacious to underrate either China's needs or her importance. For if we embark upon a general policy to bulwark the frontiers of freedom against the assaults of political despotism, one major frontier is no less important than another, and a decisive breach of any will inevitably engulf all."

Contrast the calm, penetrating logic of this reasoning with the State Department's fumbling 1,054-page alibi on the same subject.

The Case of the Spanish War Veterans and Their Widows

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. O'HARA of Illinois. Mr. Speaker, I regret exceedingly that after these many months in which we have been in session there has reached the floor of this House no measure for the relief of the aged veterans of the Spanish-American War and their widows. Many of these good men and women are subsisting on the pensions they receive from the Federal Government, and I had hoped that in the wisdom and the graciousness of the Congress some adjustment might have been made to meet the increased cost of living.

I myself am a veteran of that war of 1898 and the welfare of my surviving comrades and of their widows is very close to my heart. I am deeply moved when I receive letters such as the one which came to me today from Mrs. Birdie Wheeler Gorham, 219 North Second Avenue, El Paso, Tex. She is 72 years old, and in her youth she was wooed and won by one who was a member of that great volunteer military force that won in record time our war with Spain. Her husband died in April of 1947 and she is living on the $48-a-month pension she receives as the widow of a Spanish war veteran.

Mr. Speaker, there are so few of these Spanish War veterans and so few of these widows—I refer to the widows who were married to veterans for a considerable period of years—that it would mean such a trifling sum of money for the Congress to increase these small pensions so as to provide for a more comfortable old age.

Mr. Con S. Kelly, past commander in chief of the USWV and beloved by all his comrades in his home city of Chicago as well as throughout the Nation, has wired me urging that I give such support as I am able to the amendment to H. R. 5598 for Spanish-American War veterans and dependents which is before the Senate committee. Unfortunately, of course, all that I can do is to bring the

just claims of my comrades to the attention of my colleagues and hope that the amendment will be accepted by the Senate and later meet the approval of the House conferees.

It was the Spanish-American War which started the United States of America on the road of her destiny to placement as the first power of the world. It was the beginning of a new era of richer lives and greater human contentment for men and women everywhere—the era, to last for centuries, which will be known as the golden period of American "peace and good will" influence. Future historians, I am sure, will speak of the three wars of my lifetime as the "50-year war" which ushered in the golden epoch of the American influence. A 50-year war, yes, beginning with the war in 1898, when British siding up to us prevented the open alliance of Germany with Spain, an interlude of armistice, then World War I with the same alliances, another interlude of armistice, and the third and final clash of arms.

Let us not forget the "boys of 1898" who in 101 days fought and won a war on foreign soil, completely destroyed both the Atlantic and the Pacific fleets of the enemy and prepared the way in the Philippines and in the islands of the Caribbean for the triumph of our arms in the world wars of these later years.

Because the war was won so quickly, by reason of the irresistible force of an Army and a Navy composed entirely of volunteers, there has been from time to time a tendency on the part of some, misinformed as to the facts, and engrossed in the intensity of later events, to belittle the Spanish-American War. I myself, served—a boy just turned 16—with the Fifth Army Corps under General Shafter at Santiago. We were sent to Cuba—my regiment, the Thirty-third Michigan Volunteer Infantry arriving a few days after Col. "Teddy" Roosevelt and the Rough Riders—with issue of winter clothing and outdated smoking Springfield rifles. The beef that was sent us was putrid, and from the rigors of the campaign, intensified by the lack of proper tropical clothing and of wholesome food, by August we were reduced by yellow and malarial fever to the mere skeleton of an army. The week before we disembarker I, the low-ranking corporal, was the commanding officer of my company with only one other, a private, able to report for duty. All the others, in the pink of good physical condition when we left Camp Alger near Washington in early June—had been stricken by the fever. I cite this bit of personal experience merely to show the condition of our Army in Cuba which came largely from the neglect of our Government to make the proper provisions for a tropical campaign. It is not too late for our Government to make up in some part for this neglect by providing a little greater ease and comfort in their last years to my few surviving comrades and the widows who for a considerable span of years were married to veterans.

I think my colleagues may be interested in the figures furnished me by Mr. J. A. Hilliard, the brilliant and respected historian of the United Spanish War Veterans who has done a great work in exploding the 50-year-old slander that there were only 345 battle dead in the war with Spain.

Mr. Hilliard writes:

So when we read of 345 battle dead in war with Spain, please note that 243 were killed in battle at Santiago and 1,345 wounded; 514 died of disease around Santiago, 87 died en route home, 257 died at Camp Wikoff, making 1,107 of 345 battle dead in the Fifth Army Corps alone.

The first 38 months of war with Spain—May 1, 1898 to June 30, 1901—the total dead was 9,713. It is well to note here that of the 10,668 officers and 220,213 men in State and United States Volunteers of 1898 that 4,544 were discharged for disability and, mostly after the hospitals were full, that 18,554 were discharged by order to be cared for or to die elsewhere.

The fighting in Santiago came to a close with the Armistice of July 17, 1898. But the deaths continued. On July 27, 1898, there were 4,122 on sick report, 3,193 of these being fever cases, 822 new cases developed that day and there were 2 deaths. On August 1, 1898, the Fifth Army Corps at Santiago had 4,239 on sick report, there were 689 new cases that day and 15 deaths.

In 1898 and 1899 there were 4,919 cases of gunshot injuries among our soldiers and sailors. Here are the figures: In head, neck and face, 726 cases and 298 deaths; in trunk, 1,065 cases and 409 deaths; in upper extremities, 1,410 cases and 9 deaths; in lower extremities, 1,555 cases and 41 deaths; not stated, 163 cases and 88 deaths. The total number of deaths was 845 out of 4,919 cases. If the battle dead was 345 what would you call the other 500 who died from gunshot wounds in the first 20 months and 9 days of the War with Spain and resultant Philippine insurrection?

Deaths from disease in 1898 totaled 3,690 and in 1899 the total was 1,241. See pages 857 and 860, volume 1, part 2, Surgeon General's Report, 1900.

Mr. Speaker, I do hope that when H. R. 5598 comes from the Senate and from conference it will contain the amendments urged by Past Commander in Chief Kelly—amendments which will carry to the "boys of 1898" and the aged widows the message that the Eighty-first Congress, with many of its distinguished membership veterans of World War I and World War II, had remembered before adjourning the volunteers of the smaller war who in the prime of their youth so well remembered the Maine. I have the faith the country would approve and applaud.

Stupid and Pusillanimous Republicans

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, under leave to extend my remarks, I am printing a copy of my letter to the editor of the Detroit Free Press:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 19, 1949.

EDITOR, DETROIT FREE PRESS,
Detroit, Mich.

DEAR SIR: A recent editorial in the Detroit Free Press, calling attention to the lack of opposition to the appointment of Tom Clark to the United States Supreme Court, carries this concluding paragraph:

"The blind stupidity and selfishness and all-around pusillanimity of the Republican leadership as the 'party of the loyal opposition' is the complete answer to the refusal of the people to have any faith in the GOP."

Assuming for the moment that your charge is true, how, may I ask you, did Republicans get that way? What encouragement over the years has the Detroit Free Press, or its publisher, John S. Knight, given Republicans in Congress when they fought the New Deal and its fallacies?

When the writer was fighting the Communists in the CIO, doing everything within his power to induce legal authorities to suppress the lawlessness of the CIO's goon squads, what was the Detroit Free Press printing—anything in favor of the enforcement of the law?

I recall very distinctly an editorial printed just before, as a representative of the House Labor Committee, I was sent to Michigan to investigate the violence, the civil strife, created by goon squads of labor organizations. You charged in substance that any hearing that I might hold would be unfair, and report made biased and prejudiced against the labor unions. That statement of yours, as a record of the hearings which I had previously held will demonstrate, was viciously untrue.

When some of us here in the House were after the Communists who were then being sheltered under the wing of the Roosevelt administration, the Detroit Free Press smeared us time and again.

In the CONGRESSIONAL RECORD, page 4729, part 4, volume 88, of the second session of the Seventy-seventh Congress, you will find an editorial signed by John S. Knight, owner and publisher of the Detroit Free Press, in which he said:

"A Congressman is a man who played ball with the drys during prohibition, but never missed an opportunity to sample his friends' private stock.

"A Congressman is a man who will drink your liquor all night.

"A Congressman is a man who collects mileage from the Government for trips he never takes.

"A Congressman is a bumptious, slow-witted politician who depends upon smarter men to elect and reelect him; a small chip in the big international poker game now being played at Washington. He is susceptible to flattery, devoid of backbone, lacking in principle, short on ability, and usually labors under the delusion our Government exists chiefly to perpetuate him and his kind on the public pay roll.

"In brief, most Congressmen are a total waste of time, money, and effort."

On the front page of the Detroit Free Press of Sunday, May 17, 1942, under the heading "You can do something about this," among other things, Mr. Knight wrote:

"By the action of some 200 of its Members who participated in an undignified scramble for unlimited gasoline ration cards, the Seventy-seventh Congress has again confirmed its reputation as one of the worst in history. * * *

" 'Bundles for Congress' and the X gasoline rationing farce are but symbols of its restricted collective mentality and utter inability to sense the national temper before hearing from the people back home.

* * * * *

"A stupid, spineless post-war Congress which yielded to the insistent demands of

each selfish pressure group could very well throw this Nation into an economic tailspin from which there could be no recovery under our present system of Government."

He concludes that editorial with this statement:

"The inept, spineless Seventy-seventh Congress now assembled in Washington should be a direct challenge to every good citizen to see to it personally that the Seventy-eighth Congress will be a better one."

Is it any wonder that some Congressmen want to remain inconspicuous when they get that kind of publicity from the editor of a daily paper? Why did he make those statements? Evidently because we were opposing the ruinous policies of the New Dealers.

It is just possible that Republican Congressmen are stupid. It is probable that we have our share of selfishness. If some of the Congressmen are pusillanimous, it is possible that you have contributed to their failure to publicly fight the New Deal, the Truman administration, the racketeers in the labor unions.

Some may have concluded that, as long as the newspapers of the country, with a few notable exceptions like the Chicago Tribune, the South Bend Tribune, and the papers in the Fourth Congressional District of Michigan, have given Congressmen heck and repeat every time they vigorously expressed an opinion or took action which tended to first protect our own country, insisted that we should have respect for the courts and for the law, they would remain silent until the press and the people got an overdose of the New Deal, of communism, of lawlessness.

In the words of the scripture, "It is hard for thee (me) to kick against the pricks." Why should I or others in Congress continue to carry on the battle while you and editors of other great papers continually smear us?

In your editorials you have been blowing hot and cold; you have been as variable as the weathervane on grandfather's barn. If you and other editors had, over the years, given us a little support, a little encouragement, the situation here in Washington might have been different.

Congressmen are quite like other folks and even the most courageous of us sometimes realize the futility of attacking every wicked thing an administration does.

When the Eightieth Congress had control, I, as chairman of one House committee, held hearings in an effort to uncover any connection Tom Clark may have had with the granting of paroles to the Chicago Capone gangsters. I held hearings, with one of Clark's representatives represent, which forced the prosecution and conviction of Philadelphia gangsters and racketeers.

I personally insisted that Clark send the chief of his criminal division to attend hearings before the Labor Committee. In the presence of that representative, I asked the questions which later resulted in the perjury conviction of the Communist, Christoffel, head of a CIO union which held up production during the war. An opinion by Justice Murphy freed Christoffel on a technicality.

Did you ever have a word of commendation for me in connection with any of my activities here? Not that I recall. On the other hand, you libeled me, and, had you been a resident of my district, I would have sued you as I did one other Detroit paper, forcing it to admit that its derogatory charges against me were wholly false.

You and the people are getting just exactly what you asked for. Some of us will continue our fight for the things we know to be right, but we can't always be on the firing line and I venture to guess—and it is only a guess—that Congressmen as a group possess no more of stupidity, selfishness, and all-around pusillanimity than do those who publish and edit the Detroit Free Press.

It might be a fine thing for the country if John S. Knight, reputed to be the owner and publisher, and who sometimes writes good signed editorials for the Free Press, would follow in his father's footsteps, become a Congressman and give the rest of us a leader. I, for one, would be very happy, as long as I am here, to give him my support in any effort he might make to put a little intelligence, a little less selfishness, a little more courage, into congressional actions.

Sincerely yours.

The editorial to which I refer reads as follows:

WHY PEOPLE LACK FAITH IN THE REPUBLICAN PARTY

President Truman named Tom Clark to the United States Supreme Court on July 28. That's 15 days ago.

The Senate Judiciary Committee started hearings on the nomination 5 days ago.

In all this time not one of the 40 Republicans in the Senate or of the 165 Republicans in the House has had the courage to stand up and denounce this immoral appointment.

Protest has been left to a section of the press. Now comes Harold Ickes, former Secretary of the Interior in the Roosevelt and Truman Cabinets, with a scathing indictment of Clark's unfitness in a signed article in the New Republic. We quote:

"President Truman has not 'elevated' Tom C. Clark to the Supreme Court; he has degraded the Court to Tom C. Clark."

What chance have the people, asks Ickes, "when the Supreme Court is treated with indignity and contempt?" The other Justices "will have to pretend to welcome as an equal, a second-rate political hack."

Again quoting Ickes:

"Instead of determining the rights of others, as a member of the Supreme Court, Clark should be defending himself before the Senate of the United States against impeachment charges voted by the House."

The allusion is to Clark's misfeasance or malfeasance or worse, while Attorney General from June 1945 to July 1949.

The vital need to keep the Supreme Court in the hands of good men learned in the law does not need stressing.

Yet, President Truman names to it a political hack who did dirty work for him, as Attorney General, who is not learned in the law or in common ethics.

These facts are of record.

As Attorney General, Clark not only did not carry out the Supreme Court mandate in the California tidelands case, in which vast oil reserves belonging to the people were involved, but collaborated, as Ickes charges, with Secretary Krug to make it impossible to carry out that mandate.

Again, as Attorney General, Clark could find no cause for prosecution in the Kansas City vote frauds, although the Pendergast machine confessed its guilt by bringing in safecrackers to remove the evidence from the county vaults.

Again, when one of Mr. Truman's Missouri campaign managers engineered Federal paroles for a gang of Capone extortionists, Attorney General Clark, sworn to uphold law and justice, looked the other way.

Again, during the campaign last year, Clark gave a talk to a gathering of United States attorneys, his subordinates, which amounted to instructions, not to enforce the Corrupt Practices Act, but to condone evasions of it to promote Truman's reelection.

And not a single Republican in Congress has the vision or the integrity or the courage to stand up and not only denounce this betrayal of the public interest but to demand Clark's impeachment.

The blind stupidity and selfishness and all-around pusillanimity of the Republican leadership as the party of the loyal opposition is the complete answer to the refusal of the people to have any faith in the GOP.

United Nations Promotes Russian Interests in Dutch East Indies

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks I include a radio broadcast by H. R. Knickerbocker regarding affairs in the Dutch East Indies, made just prior to his ill-fated flight on the KLM plane after he and other newspaper correspondents had visited Indonesia.

H. R. Knickerbocker was twice winner of the Pulitzer prize for outstanding journalistic endeavors. He was a reporter of more than ordinary ability, and in 25 years of active career became noted as a foreign correspondent, particularly because of the swiftness and accuracy with which he analyzed foreign political news.

Mr. Knickerbocker died with other distinguished journalists in an air crash near Bombay, India, while returning to America after an exhaustive survey of the Indonesian situation. The following text of a broadcast made by Mr. Knickerbocker should interest every Member of Congress. It is a great work of a sterling reporter.

UNITED NATIONS PROMOTES RUSSIAN INTERESTS IN DUTCH EAST INDIES

(Radio broadcast by H. R. Knickerbocker from Batavia, Java, July 9, 1949)

Good evening, from Batavia, in Java.

United Nations interference in the Dutch East Indies has gravely increased the danger of communism here and has promoted the interests of the Soviet Union. This is a judgment achieved after 2 weeks of intensive study and travel in the Indies, which is all too short a time, but is 2 weeks longer in the Indies than our Mr. Jessup had when he blasted the Dutch last January.

On this visit we have talked to most of the leaders here, Soekarno and Hatta and Salim and Sjahrir, the Sultans and the Rajahs, the Federalist statesmen and the Dutch, in Batavia, Bangka, Jogjakarta, Bali, and Macassar. We have talked to the Americans in the consulate, the United Nations political and military observers, and the British.

We have flown thousands of miles over these gemlike islands, and inhaled the fragrance of their spice. We have driven hundreds of miles through their rice fields and rubber plantations. The beauties of Bali have enticed us with their dances and the Bali orchestras of bells have opened our ears to new and enchanting music. We have sailed a Malay prau in the Straits of Macassar on the storied waters of Joseph Conrad.

The gentle Indonesians have won us with their smiling friendliness. They have inspired an intense sympathy with their aspirations. We want them to have what they want. They want to be free. Their cry—"Merdeka"—Freedom, finds an echo in American hearts.

But the criminals and the Communists in the jungles of Java are still there with the arms the Dutch wanted to take from them. And these jungle bandits are the enemies of the Indonesian people. The United Nations prevented the Dutch from accomplishing the disarmament of these bandits.

No one knows exactly how many of them there are. There may be four thousand; there may be fifty thousand. Thirty thousand Communist insurrectoes were liberated last December and are now at large, with or without arms.

This is the crux of the problem. Will the projected Indonesian government be able to disarm and master the bandits and Communists, when the Dutch leave?

The most disturbing single discovery made here was that the United Nations observers seem to be proceeding as the most unscientific of scientists. They came here with a thesis to uphold. That thesis was that the Dutch were always wrong; the Indonesian Republic was always right. Their reports coincide with this preconceived thesis.

My own finding is that if the Dutch made a mistake when they took their police action against the Indonesian Republic, the United Nations made a still greater mistake in taking police action against the Dutch.

The Dutch acted to suppress murder and pillage by the bandits Sukarno's government could not control. The United Nations acted to suppress the forces of law and order. That might have been all right if the United Nations had itself possessed superior police forces to replace the Dutch. But it had no forces whatever to restrain or control the native outlaws. The United Nations only had a weapon to punish the Dutch, the weapon of the withdrawal of Marshall-plan aid.

We used that weapon to bludgeon the Dutch into accepting a speed-up of their withdrawal which may wreck the careful, determined intentions of the Dutch to create a strong, independent Indonesia.

Here are the rough figures which tell the story. Holland has an investment of around $4,000,000,000 in the Indies. From it she used to derive around $500,000,000 a year which constituted a part of the total national income of the home country, variously estimated at 10 to 25 percent. That is, Holland is dependent for her very life on the Indies. Her income from the Indies today is zero minus.

It would be idiotic to think of this wealth as a banana the Dutch have plucked without effort. The wealth of the Indies is a Dutch creation, as much as it is the result of the labor of the natives, who increased under Dutch supervision from a few tribesmen 300 years ago to 70,000,000 today.

A great part of this wealth was destroyed by the Japanese and by the Indonesian rebels, with their scorched-earth policy. It would take years of peace and ample capital to restore production. Th' Dutch were counting on Marshall-plan aid to help them do this.

All the world needs the rubber and sugar and quinine and pepper, the kapok and copra, the palm oil, the tea, coffee, cocoa, and tobacco the Indies produce. We are getting almost none of this now. Sumatran oil could be of vital importance to us if the Soviets overran the Middle East. American oil men here are bleakly pessimistic about the prospects of orderly operation after the Dutch leave.

When the Dutch acted last September, they did it to stop continuing destruction of the sources of these products. The jungle bandits were devastating the Indies almost as thoroughly as the Bolsheviks in Russia wiped out the world of Tolstoy. The Indonesian Communists and brigands were still scorching the earth, burning the estates, and their vital industrial plants with their priceless European and American machinery.

There is hardly anything left of the fine plantation homes the Dutch had built during the last 10 generations. Dutchmen who have gone back to their estates have gone back to view the ashes of these ancestral homes. These Dutchmen are not colonials. They are Indonesians as truly as any native. They were born here, and their parents were born here, and many of them can trace a line of ancestry in the Indies as far back as any native prince. They are no more colonials than Texans are in Texas. They share every sentiment and right of the Indonesians.

I have met these Dutchmen, lean fellows, leather-faced, tight lipped, in Surabaya, in Jogjakarta, in the railroad stations, and at the airfields. They always carry rifles. Hard work has lined their faces. They make the popular conception of the fat colonial fattening on the toil of the natives look shamefully silly. They are brothers to Daniel Boone.

With all sympathy for the Indonesians, they really ought not to compare their revolt against the Dutch with the American war of independence against Britain. If the American Indians were to have risen in 1776 and driven out the white settlers, that would have been a correct comparison. But we exterminated our Indians, and we still make heroes of our Indian fighters of long ago.

Here in Indonesia, the Indian fighters have gone back to their ruined estates to live in native kampongs while they struggle to rebuild. They have no money. Holland was destitute after the German occupation. They could only rebuild with Marshall-plan aid.

They had got a trifling $57,600,000 of Marshall money when they took their police action. The police action was the signal for the Kremlin to scream "imperialism" at the Dutch. The Emperor of all the Soviets who has conquered and reduced many of the ancient homes of civilization in Europe, and whose Asiatic satellites are overrunning China, screamed likewise at the United States, "imperialists." We cringed at the cry, and muttered: "We are not imperialists, either. How dare you call us imperialists. Why, to show you we are not imperialists, we will beat you to it and we will scream 'imperialists' at the Dutch louder than you can scream, and we will do something more." So we took away our aid from the Dutch, and that made the Soviets very happy indeed. The Soviets could only scream at the Dutch; but we could really hurt the Dutch. We did.

Now what will happen in Indonesia? Last night we talked with Sutan Sjahrir, onetime Premier of the republic, now sitting out the troubles. He is the man who so ably presented the Indonesian case to the United Nations. He is the Indonesian who negotiated with the former lieutenant governor, van Mook, Holland's ablest statesman for the Indies. Van Mook and Sjahrir trust each other. If things had been left to them, there might have been a solution by now. Sjahrir seemed the ablest Indonesian leader of them all. He is the brain of the republic, though he looks like a young kewpie in brown. He said the United States of Indonesia would need 5 years with foreign and Dutch help to be able to stand alone.

If Sjahrir were to be made President of the United States of Indonesia, and van Mook were to be made adviser to the new state, the future would be promising. For the Indonesians cannot succeed without the Dutch managerial ability. If the Dutch are permitted to stay on with their skills, to work for the United States of Indonesia as advisers in the army, the police, in public finance and administration; if the Dutch estates are restored, and trade resumed, this country has a chance.

If the United States speedily restores Marshall aid to the Indies, this country has a chance.

If we keep on starving and bullying the Dutch, the only people who have a chance in this country will be the Communists.

If we continue our present policy, when the United States of Indonesia is set up, there will be an exodus of the Dutch. Tens of thousands will leave the country. It is unlikely that there will be massacres of Europeans in the cities, but all the Dutch will be expelled from all the offices of government. For 2 years there will be a rapidly diminishing efficiency of government until the point is reached where the Indonesians may feel it necessary to call upon the Dutch or other Europeans to help them run the country.

Meanwhile, the Communists here, if they behave coolly, will bide their time and do nothing until the new state is set up and all the Dutch troops and police leave. They should not do anything to alarm the American State Department, before the Dutch get out. After the Dutch leave, the Communists will be able much more easily to get arms from the continent of Asia, and to receive new cadres of leaders from the staff colleges of communism in Moscow.

There are five elements working against communism here. They are, the fact that the population is Mohammedan, not proletarian, largely peasant, that it is divided into many tribes and languages, and that the Indonesians already practice family communalism. A sixth factor which may or may not become decisive is that the United States might help the Indonesian state resist communism.

Now, the factors working for communism are these: First, the impact on this country of the triumphal sweep of communism down from China through the other states of southeast Asia. This sweep is assuming the character and proportions of the spread of Islam or the crusades of medieval, Christian Europe. It is the paramount factor. It is the most important thing happening in the world today.

The second factor working for communism is the probability of an economic break-down here when the United Nations rushes the Dutch out of the Indies, leaving the inexperienced Indonesians to manage on their own.

Third is the possession by upwards of 30,000 Communists in the jungle, of an unknown but considerable number of arms, which the Dutch wanted to take away from the Communists. They were prevented from doing so by the United Nations.

Fourth is the fact that when the Dutch leave, the Communists will be able to increase their arms indefinitely by smuggling from Communist centers in continental Asia. Fifth, there is the fact that Dutch departure will signal the arrival of new Communist leaders from Moscow.

The new Indonesian state will be recognized instantly by the Soviet Union, and to its sovereign capital the Kremlin will send a mission complete with several hundred cultural attachés. They will spread their culture, and before Mr. Jessup can finish composing his memoir on Indonesian independence, the Kremlin will show him why the Russians want to hurry the Dutch out of the Indies.

We named the sixth factor that may be counted upon in the future to work against communism, as the United States; and the sixth factor working for communism here as the Soviet Union. But we had to leave out the most effective factor which has worked in the past against communism in the Indies. That factor was the Dutch.

What we have done now is to force out the Dutch so fast that the place of power they leave empty will be filled either by the Soviet Union or by the United States. If we had been less hasty, the Dutch might have, and I think they would have, arranged it so that the Indonesians themselves could have filled the power vacuum. Now the United States will have to take over from the Dutch the task of keeping communism out of Indonesia. Considering our record in China, the only people that can be happy about this are the Communists.

The Conquest of America

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following article by Archibald MacLeish which appeared in the Atlantic Monthly magazine for August 1949, entitled "The Conquest of America."

Poet and lawyer, publicist and public servant, Archibald MacLeish has answered many callings in his distinctive career. He was a successful practicing lawyer; in 1932 he was awarded the Pulitzer prize for poetry. From 1939 to 1945 he served as Librarian of Congress, Assistant Director of OWI, and finally as Assistant Secretary of State. At the war's end, he was appointed chairman of the American delegation to the United Nations Conference which founded UNESCO. This autumn he comes to Harvard as the Boylston professor, a chair giving full scope to his love of teaching and writing.

Mr. Speaker, I recommend this article of Mr. MacLeish's—it is worth reading. What he has to say deserves thoughtful consideration.

THE CONQUEST OF AMERICA

(By Archibald MacLeish)

Sometime along in the 1980's, when the world has left us as far behind as we have left the years that followed the First World War, somebody is going to publish a piece called the Late Forties. I hope to be dead at the time.

The subject of this piece will be the conquest of the United States by the Russians. It will begin more or less as follows:

Never in the history of the world was one people as completely dominated, intellectually and morally, by another as the people of the United States by the people of Russia in the 4 years from 1946 through 1949. American foreign policy was a mirror image of Russian foreign policy: whatever the Russians did, we did in reverse. American domestic politics were conducted under a kind of upside-down Russian veto; no man could be elected to public office unless he was on record as detesting the Russians, and no proposal could be enacted, from a peace plan at one end to a military budget at the other, unless it could be demonstrated that the Russians wouldn't like it. American political controversy was controversy sung to the Russian tune; left-wing movements attacked right-wing movements not on American issues but on Russian issues, and right-wing movements replied with the same arguments turned round about.

American education was Russian education backward; ignorance of communism was the principal educational objective recognized by politicians and the general press, and the first qualification demanded of a teacher was that he should not be a Communist himself, should not have met persons who might have been Communists, and should never have read books which could tell him what communism was. American intellectual life revolved around Russian intellectual life; writers stopped writing and convoked enormous meetings in expensive hotels to talk about Russia for days at a time, with the result that the problems of American culture (if that self-conscious and overfingered word is still in use in 1980) became reflections of the problems of Russian culture. Even religious dogma was Russian dogma turned about; the first duty of a good Christian in the United States in those years was not to love his enemies but to hate the Communists—after which he was told to pray for them if he could.

All this, moreover—so the story will go on—all this took place not in a time of national weakness or decay but precisely at the moment when the United States, having engineered a tremendous triumph and fought its way to a brilliant victory in the greatest of all wars, had reached the highest point of world power ever achieved by a single state. The American national income had doubled and doubled again in a generation. The American standard of living was far in advance of any other, including—including particularly—the Russian. The American industrial potential balanced, and overbalanced, that of the rest of the industrial world. American technological supremacy was so obvious that it was taken for granted, and American products were so far superior that they were used or copied everywhere on earth.

It was not, in other words, a weak and declining people, caught in the expanding shadow of history's new master, which gave up its independent mind, contracted its national will to the dry negation of the will of others, and threw away the historic initiative which, in the lives of nations as in the lives of men, is the key to greatness. It was the most powerful people in the world—a people still young in a continent still new—a people which, only a generation before, had been regarded as brash to the point of arrogance, cocksure to the verge of folly, and so wholly certain of its future and itself that travelers wrote books about the national assurance. It was the nation, in brief, which had been chiefly famous among other nations because it conceived of its present not in terms of its past but of its future—the nation which spoke with a straight face and with entire sincerity of the American dream.

It ought to be possible for a good historian with a lively sense of the ridiculous to amuse himself and his readers for some pages with variations on that theme. But what will be hardest for us to take—those of us who are left around—will not be the ridicule of our successors but their sympathetic understanding. For it is unlikely that any future account of the prodigious paradox of our conduct will fail to reach the conclusion that we lost our way as a people, and wandered into the Russian looking glass primarily because we were unable to think.

We were unable, that is, to understand the nature of the crisis in which we were caught or the character of the role we were called upon to play. Instead, we confused one of several consequences of the crisis with the crisis itself, enlarged upon a necessary police operation until it became not only a national policy but the national policy, and chained ourselves, as a sort of vast sea anchor, to the purposes and policies of a rival state. Even the Marshall plan, which, in its beginnings, was a courageous and positive proposal, responsive to the realities of the world situation, became in press and Congress, under the influence of our fears, a negative and defensive operation.

As to the nature of the crisis, it will be noted that the general opinion held among us, however individuals might dissent, was the opinion that the troubles of our age were international in character; that they had been precipitated by the rise of communism; that communism was a great new revolutionary force; that the way to resolve the crisis, therefore, was to resist and contain and presumably strangle the Communist revolution.

As to the role we were called upon to play, we had persuaded ourselves that this labor of resistance and containment must take precedence over everything else, and that purely American objectives and purposes, including the great traditional objectives of American life, must not only be subordinated to the accomplishment of the task of containment but even, in certain cases, sacrificed to it.

All this, our historians will observe, was uninformed and unintelligent. The crisis in which we were caught was not new but had been produced by the cumulative changes of many centuries. It was not a crisis in international relations but a crisis in civilization, a crisis in culture, a crisis in the condition of man. That crisis had not been precipitated by the rise of communism, which was, indeed, one of its consequences, or by a conspiracy in the Kremlin, which was one of its incidents, but by a tragic lag between the disintegration of one order of society—the petering out of one historical era—and the flowering of another.

Communism, finally, was not a new revolutionary force but one of several forms of authoritarian reaction, political, philosophical, and clerical, headed back toward the disintegrating order of society and competing with one another for the domination of that disappearing world. The true revolutionary force in our epoch—the force moving not backward, toward the disintegrating age, but forward, toward the age which had not yet begun—was the force which had been released at the end of the eighteenth century and the beginning of the nineteenth by the words and actions of a few men, most of them Americans.

The belief that the world crisis could be resolved merely by resisting and containing communism was, therefore, a delusive belief; and the conclusion that the realization of the historic American purpose must be deferred and subordinated to the defeat of the Russian purpose was not only a false conclusion but a betrayal of the life of the Republic.

II

We shall hardly be in a position—those of us who live that long—to refute this damaging indictment. No one but the ignorant man or the fanatic really believes even now that communism is the origin of our ills or that the world suffers solely from the attentions of personal devils—Stalin from our point of view: Truman from the Russian. We know perfectly well, whatever we may read in the general run of our newspapers or hear from the noisier commentators on the air, that the real difficulty of our time goes deeper than Russian imperialism or Communist fraud. The real difficulty touches life itself, not merely the manipulation of life. It involves a conflict not between nations but between worlds: a dying world not altogether dead; a new world conceived but not yet born.

The dying world is the world which reached its highest European integration in the Middle Ages: the world in which men were able to realize themselves and fulfill their lives as members of the closely knit body of a city, or a church, or a state, or a feudal or institutional structure of some kind. This world began to decay with the Renaissance and has disintegrated with a rapidly accelerated momentum over the years which included the two great world wars. The new world is the world in which men, exiled from an institutional security and an institutional fulfillment, will learn to realize themselves as whole and individual human beings answerable to their consciences and God. The new world, though it was foreseen and its possibility declared 170 years ago, has yet to be established. The limbo in which we live is the interval between the two.

But if this is true the theory propounded by the Communists and their authoritarian rivals, that communism is a revolutionary force, collapses. A revolutionary force, as distinguished from a reactionary force, is one which moves not backward against the flow of change but forward with it. It is a force which dares to take the revolutionary risk of trusting the flowering of the tree, the meandering of the current. The whole movement of human life, violently accelerated over the last few centures, has been a movement toward the separation of the individual consciousness from the common consciousness, the common sleep, the animal sleep—a movement toward the differentiation of the individual from the community of the tribe, and, before that, from the community of the natural life of universal instinct.

Communism is not a force which moves with that current. On the contrary, communism, like its authoritarian rivals, seeks to cure the sickness of the condition of man by turning back against the current of human evolution to that decaying city of hierarchical and disciplined order in which mankind, at certain sacrifices of manhood, may find seclusion and retreat.

The one force which can claim the revolutionary title in the world we live in, the one force which can claim to move in the direction of life, is the force that Jefferson put into words. Later Americans have, it is true, betrayed that force, both in terms and actions. Its vocabulary has been appropriated again and again for private advantage. Its victories have been corrupted by hypocrisy and cynicism and selfishness. Its articles of faith have been made the catechism of a faithless materialism. Its central concept of the dignity of the individual, grown cancerous on occasion, has swollen to the morbid and malignant figure of irresponsible and grasping power—the rugged individual whom some still think of as American. But though the hope has been betrayed and forgotten in one generation and another, the living seed remains; the seed remains and grows. It is this seed, this influence, this force, this force of revolution, which is the living thing in the Republic. Without it, the United States is so much land, so many people, such an accumulation of wealth. With it the United States is a stage upon the journey of mankind.

III

It is not, however, only because we have been wrong and faint-hearted in our thinking that we shall be blamed by those who come after us. It is not only because we had no reason to subordinate our own purposes to the defeat of Russian purposes and thus to surrender to Russia the initiative we had always held before. We shall be blamed also because the negative and defensive attitude of mind to which we have committed the Republic is mistaken and mischievous and evil in itself. It is mistaken because it is incapable of achieving even its own negative purpose. It is mischievous because it has choked up the deep springs of the moral life of the Nation. It is evil because it has deprived the world of the thing the world most needed—a positive and believable alternative to the grim choice the authoritarians hold before mankind.

The inadequacy of the position we have taken, even within its own narrow and negative purpose, is only too obvious. Neither communism nor any other body of positive belief can be overcome in a period of world-wide dissatisfaction and unrest merely by denying it, or by offering, as a substitute, the world of things as they are. It can be fought only by facing it with a true alternative. And the true alternative to communism is not the world of things as they are; nor, even more certainly, is it some other kind of authoritarianism.

The real choice is the choice between all forms of authoritarianism on the one side and, on the other, the dream of a whole and responsible human freedom. The real conflict, in other words, the underlying conflict, is not the struggle between the Kremlin and the West which the press associations report from day to day. The real conflict is the conflict between world reaction, which preaches submission to authority, whether of a state or a man or a party or a church, and world revolution which is still, however the various reactionaries may attempt to confuse the issue, the revolution of the individual, the revolution of the whole man.

Stated in terms of structure, the real alternatives are, at the one pole, a cellular, authoritarian society in which individual human beings may live their lives through the life of the society as a whole, and at the other a world of individual men, whose relation to each other, in the freedom of their individuality, will create a society in which each can live as himself.

For the United States in such a situation to adopt a wholly negative policy aimed at the containment of communism is not only to fail in the effort to defeat communism but to miss the real American objective as well; and, worse still, to obstruct one form of authoritarian reaction to the advantage of others. Having unwisely elected to forego our own purposes as a people, and to resist the purposes of the Russians, we have found ourselves, not once but many times in the past 4 years, befriending those who hate the revolution of the individual as violently as the Communists hate it. And not only abroad but here at home. For, by putting the hatred and fear of Russia first we have opened the sacred center of our lives, our most essential freedoms—the freedoms of mind and thought—to those among us who have always hated those freedoms and who know well how to use our fear of Russia as a mask to cover their disguised attacks. The spread of legalized thought control from points of infection in the Congress to State legislature after State legislature across the country is not the work of chance. It is the work of freedom-hating men. And we have laid the Nation open to them by our fears.

IV

The second vice of the morbid and negative national opinion we have accepted in these years—its mischievous influence on our spiritual life—may be judged by other evidence, no less obvious to those who wish to see it. The soul of a people is the image it cherishes of itself; the aspect in which it sees itself against the past; the attributes to which its future conduct must respond. To destroy that image is to destroy, in a very real sense, the identity of the nation, for to destroy the image is to destroy the means by which the nation recognizes what it is and what it has to do. But the image a people holds of itself is created not by words alone or myths but by its actions. Unless the actions are appropriate to the image, the image is blurred. If the actions deny the image, the image is destroyed.

What is happening in the United States under the impact of the negative and defensive and often frightened opinion of these years is the falsification of the image the American people have long cherished of themselves as beginners and begetters, changers and challengers, creators and accomplishers. A people who have thought of themselves for 150 years as having purposes of their own for the changing of the world cannot learn overnight to think of themselves as the resisters of another's purposes without beginning to wonder who they are. A people who have been real to themselves because they were for something cannot continue to be real to themselves when they find they are merely against something.

They begin to ask questions. Who are they then? Are they still the journeying restless nation to which the future was a direction on a map and the duty of the son was to turn his back on his father's gateposts, or have they turned around and headed the other way? Are they still the new nation of discoverers and inventors who were never satisfied to leave things as they were but remade the world in every generation, or are they an old nation now of protectors and preservers whose passion is to keep things as they used to be? Are they still the young champions of freedom in the west who warned the Holy Alliance to leave the fires of revolutionary freedom alone to burn as they might on this continent, or have they joined with those who put the fires out?

The old words of freedom and revolution are still around, louder than ever, but somehow they are not the same. Revolution, which was once a word spoken with pride by every American who had the right to claim it, has become a word spoken with timidity and doubt and even loathing. And freedom which, in the old days, was something you used has now become something you save—something you put away and protect like your other possessions—like a deed or a bond in a bank. The true test of freedom is in its use. It has no other test. But freedom in this sick and melancholy time of ours has become, not a thing to use, but a thing to defend.

Even the word American has changed. The American once was a man bound to his country and his fellows by a common belief in something, not yet realized, that he loved. Now he is a man—or there are those who tell him he is a man—bound to his country and the rest by a common hatred of something looming that he fears.

What has been happening to the people of the United States in the last few years is something that can destroy the inward vitality of the Nation if we let it go on. It is possible for writers of a certain journalistic mentality to look at the change and rejoice in it as proof that we have grown up as a country, that we have faced the harsh realities of life at last and that we have now become a great power. But a people which recognizes its unity only in its opposition to another people, which understands its purpose only in its resistance to another purpose, is not a people which has a unity or a purpose of its own. And it is not a great people whatever its power or its wealth. The great nations in the history of the world have been the nations which proposed, the nations which asserted, the nations which conceived. The United States was such a nation when it knew its mind and declared its belief and acted to create the world it wanted.

From the American point of view, then, the severest indictment of this generation of men and women will be the charge that we falsified the American image and thus undermined the spiritual integrity of the Nation. But there will be other accusations from other quarters, and some of them will be even harsher than our own. There will be the judgment of the men of conscience and concern and honest mind in every country who, when all the arguments are in, write down the verdicts. And what they will say of us will certainly be this: that we had it in our power at a critical moment in history, when the whole future of humanity hung in balance, to present a true and hopeful alternative to the iron choice with which the world was faced, and that we did not do it; that we did not do it even though the true alternative was the course to which our whole past and our entire tradition had committed us; that instead of doing it we built a wall against one-half the evil but not against the other, and made the wall still higher by tearing down for its construction some of the dearest of our own beliefs.

V

It will be difficult for us to answer that charge in whatever tribunal of the future

such verdicts are debated. We can argue with great conviction that we had no choice, in the face of Russian threats of force and Russian conspiracies of fraud, but to arm ourselves and to resist. And it is true that we had no choice. But it is true also—and no one who remembers what has been said in the American press and the American Senate, in these days, can deny that it is true—that our policy in this situation was not merely to put ourselves in a position to resist and then go on about our American purpose; on the contrary, our purpose and our policy became resistance.

Resistance to the Russians became an end and object in itself. And the result was a declaration of political bankruptcy such as few great nations in the course of history have ever confessed to. When Senators, urging recognition and aid for Franco, argued that that enemy of everything this Republic is or has ever stood for deserved our friendship because he had fought the Communists and Russia, they said in effect that what we believe in is nothing, but what we hate is the gateway to our minds.

No one in his senses denies that Russian fraud, Russian lies. Russian militarism, Russian imperialism, Russian stupidity and fanaticism and greed left us no choice but to rearm. But no one in his senses can deny either that we made of this necessity the excuse for a failure to achieve a policy of our own. That failure may well turn out to have been the costliest blunder in our history.

What needed to be done in the years immediately following the second war is obvious even now. What needed to be done both for the purposes of peace and for the hope of human life was to break the impotent and issueless deadlock, the total spiritual impasse, between the two authoritarianisms of right and left by declaring, as alternative to them both, a freeman's solution of the problems of this time. To the shrill bat voices of those who cry out on this foreshore of history from the direction of Franco's Spain on the one side and Stalin's Moscow on the other that the world has no choice but to choose between them, and that peace between them is impossible—to these shrill and cynical and brutal voices there should have been a man's voice answering, like Ulysses' above hell's offering of blood, to tell them both they lied.

The answer to the inevitable choice between the authoritarianisms with their heartless promise of a bigoted and bloody war is the answer implicit in the American proposition. The answer is that there is also another choice: a man's choice: one man's choice. What was needed was to make this answer. What was needed was to declare, with the full and reasoned conviction of a great people behind the declaration, that there was still a man's way out of the wreck of our disasters; that the revolution of the individual, far from being finished, had not yet begun; that the words of that revolution were not merely words but meanings also; that the meanings could be given and could be understood. What was needed was a redeclaration of the revolution of the individual in terms which would have realistic meaning in this time. Only one nation in the world was capable of that act and the nation was our own. And we did nothing. We built walls.

It will not be possible for us to argue, when the finger of time is leveled against us, that we did not see what needed to be done. The wisest and soberest and most realistic statesman of our generation warned us 3 years ago that the job we had to do—the job we had to do whether there were Communists around or not—was to make freedom a reality in the postwar world; and Henry L. Stimson did not speak alone.

Neither will it be possible for us to plead that there was nothing we could do—nothing we could do as a people: that a people cannot think itself through problems such as these: that the labor of redefining, of implementing, the revolution of the individual in a modern industrial society is a labor of such difficulty that only the technicians of industry and politicis can accomplish it: that to ask an entire nation, by an act of choice, an act of will, to make freedom a reality under the conditions of contemporary life is to talk in rhetoric, not reason. It is true, of course, that the labor is difficult; nothing more so. It is true that it will require much technical skill, political, industrial, mechanical, and economic. But it is not true that it is the technical difficulty that stands in the way. What really stands in the way is the moral difficulty, the difficulty of choice, the difficulty which only the people, acting as a people, can remove.

No intelligent man believes that technical difficulties are insurmountable, and least of all in a country of great natural wealth, a high level of administrative and technological intelligence, and large reserves of skilled labor. If the people of such a country were determined to hammer out a political and industrial and economic order in which individual men—all men as individuals—should be capable of living and working in dignity and freedom and self-respect with an adequate opportunity for the realization of their full potentialities as human beings the thing could be done. It makes a great deal of difference, as Bishop Berkeley observed, whether you put truth in the first place or in the second. It makes a great deal of difference whether you say that your objective is a free society but that you wish first to be prosperous, or first to be comfortable or first to be something else, or whether you say that your objective is a free society.

Certainly the political problems, difficult and delicate though they may be, are not insoluble. Some, like the control or the liquidation of monopolies which stand in the way of individual initiative, have a long history in this country. Others, like the struggle to liberate individuals from the degrading fear of unemployment or old age or sickness, are less familiar—at least in the United States. Still others, like the overriding question of the relation between individual freedom and the intervention of the state, have a meaning for our generation which they did not have for generations before. But only a man who did not wish to find an answer to questions such as these would argue that no answer can be found.

And what is true of the political difficulties is true also of the industrial. Even the greatest of the industrial obstacles to individual freedom—the mechanization of the machine-worker—could be removed if the freedom of the individual became the first business of society. There is no lack of mechanical inventiveness, as the proliferation of new machines and new machine methods demonstrates. Unwanted gadgets are produced with the most astonishing originality and brilliance. Machines and methods which would restore to the men who work them a measure of their former manhood, their former mastery, could be developed with equal skill if industry were determined to discover and produce them.

No, it is not the technical problem requiring special knowledge and unusual skill which stands in the way of the great alternative of freedom. It is not the failure of the engineers or the economists or the political philosophers to devise the new form of a free society which has robbed us of our initiative as a people. We cannot excuse or justify ourselves by complaining that no one has told us what to do. The real obstacle is the obstacle of ends, not means. The real obstacle is the obstacle of will, not method. Those who follow us and observe our failures will say we did not wish sufficiently for freedom. And they will say the truth.

Freedom—individual freedom—is always a hard choice. With us, in a world in which the old established order, weakened by the earthquakes of four centuries, has all but collapsed, it has become a choice which many men find it impossible to make. For to choose individual freedom now is to choose, not a common struggle against the masters of an ordered world, but a lonely journey, each man for himself, across the ruin and the rubble which that world has left. To choose the revolution of the individual now is to choose not revolutionary armies and open battles but singleness and duty in a broken world.

It is not remarkable, therefore, that many of those of our generation who should have been champions of the revolution of the individual—poets, writers, men whose first necessity is freedom—have been unable to accept the burden: have turned back instead to one or the other of the authoritarianisms where they can stretch the painted canvas tent of dogma between them and the empty sky where once the roofs were. But though it is possible to understand why many of the best have left us, and why great numbers of the American people have given up the lonely pursuit of liberty for the safer assurance of discipline and peace, it is not possible for that reason to forgive their desertion, or to justify it, or to forget that it is through them and their default that the world has lost the great and positive affirmation it so desperately needed.

We are at that point in our moral history as a people at which we have failed, for the first time in a moment of decision, to assert our moral purpose. We have not yet denied that purpose—the cock has not crowed for the second time—but we have failed to assert it. We have not yet changed the direction of our national life but we have lost our momentum, we have lost our initiative. We have not yet rejected our role as a revolutionary people moving with the great revolutionary current of history but we have ceased to move, we have begun to resist, to oppose. It does not require a prophet to see that we have come to a moment of critical decision—a decision which is nonetheless critical because it may be taken unaware.

If we do nothing, if we continue to stand where the forties have left us, we will have taken one decision, we will have ceased to be what we were and we will inevitably become something else, something very different, something the founders of the Republic would not recognize and surely would not love. Only by action, only by moral action, only by moral action at the highest level—only by affirmative recommitment to the revolution of the individual which was the vital and creative impulse of our national life at the beginning of our history—only by these means can we regain ourselves.

India, Like America, Must Choose Sides in Asia

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article portraying the difficulties for India which inevitably flow from Communist activities in China. One can sympathize with the Indian leaders when recalling how carefully we too were led by the propagandists to believe we should be neutral in the struggle in China, because it was

supposedly just another civil war between two Chinese factions—the Kuomintang feudal Fascists and the heroic Communist agrarian reformers. Or if not neutral, it was incessantly urged until a few weeks ago that we should choose the Communists as the right horse for believers in democracy to back. It would still be possible for Communist expansion in China to be stopped by a change in American policy. It appears the State Department prefers not to make a change. If so, then the communization of Asia and world war III are inevitable:

SLEEPING INDIA UNCONSCIOUS OF STEALTHY TREAD OF RUSSIAN BEAR

(By Edgar Ansel Mowrer)

"Under Communist Party leadership, the 300,000,000 people of India are ready for liberation," said the Soviet radio of June 27. "The country is now ready for land reforms and the elimination of rich landowners."

Here was Moscow's answer to the voiced hopes that free India can remain aloof from both the democratic and the Communist blocs.

It is hard for independent peoples to accept this hard fact. The peoples of western Europe were so long dominant in world affairs that their main desire is to recover as a third force totally independent of both the United States of America and the Union of Soviet Socialist Republics.

REDS EVIL BEDFELLOWS

To be sure, the governments of western Europe have seen the light. Norway, for example, has not only recently adhered to the North Atlantic security pact, but intends to seek admission to the European western union for common defense. Bevin of Britain and Schuman of France publicly recognize Soviet imperialism as the only real menace to their freedom, and have thrown in their lot with that of the United States.

Since the Communist rape of Czechoslovakia no other line is rational. That country became a Soviet victim partly because its hypnotized rulers fondly imagined that it was possible to be friendly with the Russian bear and avoid being hugged to death.

The lesson of Czechoslovakia has still to be learned by the Government of India.

For this dullness on the part of highly intelligent leaders, there are several good reasons. Indians educated under British occupation still tend to think of Russia rather than of Soviet communism. Whatever Russian danger exists is located, for them, to the northwest. So long as India's northwest frontier is protected by sturdy Moslem states, why worry?

INDIA'S PERIL LIES EAST

They have failed to realize that communism, no longer an independent ideology, has become the chloroform sponge held by Russia to the nose of intended victims in order to prepare their "liberation" by local Communists and the Soviet Union. Today's threat to India lies not in the northwest but in the east—in Communist China and half-Communist Burma, India's near neighbor.

Another reason for India's flirtation with the idea of "neutrality" is its ambition to captain the Asiatic peoples against "imperialism." But the imperialism that hit Asia has, in the past, come chiefly from western Europe. Therefore even Pandit Nehru seems to be paying more attention to the diminishing trickle of Dutch and French imperialism than to the rising flood of Soviet conquest.

Finally, the new Indian state has terrific internal problems. Rich as it is potentially, free India is terribly backward in industry, agriculture, and education. These conditions cry out for improvement. The government would like to concentrate on them. It is irritated at being asked at just this time to develop a defense against the Soviet Union. Yet that is precisely what it must do if India is to survive.

PAL JOEY OR UNCLE SAM?

Why, the Indians want to know, must every free people line up with the United States or perish? Surely the United States does not intend to transform all friends into satellites—like the Soviet Union.

It certainly does not. Here lies one great American advantage in the present tug-of-war.

Yet free countries have little choice. Soviet Communist doctrine is monopolistic and totalitarian. Events in Czechoslovakia and Yugoslavia have proven that the Kremlinmen insist on complete subordination to Russia. The Soviet Union is not a state like any others. It is a devouring monster that has to expand, in deference to its own monstrous doctrine.

In the long run, therefore, no country can survive as a "third force" unless it can defend itself without outside help. Nations that wish to remain free, therefore, face the following alternatives: Make themselves impregnable at whatever sacrifice by their own means, or combine for defense with the United States, the one country today whose power overshadows that of the Soviet Union.

To certain peoples that choice is unattractive. There is no other.

The Mayor's Housing Economies

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mr. POULSON. Mr. Speaker, I am asking permission to insert an editorial from the Los Angles Times of August 10, 1949, calling attention to some of the first apparent results of the recent housing bill which we passed. I am also calling attention to a letter I received from the Public Housing Administration, inviting me to be present when the city of Los Angeles receives her first grant. As the letter stated, the press will be there and it is naturally to be assumed that this would be fine political propaganda to have our pictures taken with our mayor upon receiving the first grant from this public housing fund. However, I did not vote for the bill for many reasons, including the one stressed in this editorial, and therefore I cannot be a hypocrite and attend this meeting.

[From the Los Angeles Times of August 10, 1949]

THE MAYOR'S HOUSING ECONOMICS

The city council went through the necessary motions on Monday to get a $100,000,000 piece of Federal money for low-rental housing. Mayor Bowron signed the articles and said he will fly to Washington soon to close the deal. The mayor remarked, in effect, that if Los Angeles doesn't get the money some other city will, and he is probably right in believing that his logic is acceptable to most citizens of this vast and marvelous metropolis.

THE MAYOR'S REASONING

Some of the mayor's remarks to the council deserve repeating:

"Whatever merit there may have been to the objections presented against the Federal Housing Act, the fact remains that we now have a Federal statute appropriating funds—which are contributed to in no small part by the taxpayers of this community—and unless Los Angeles receives a fair proration * * * it will mean that local taxpayers will be paying for public housing in other States or in other sections of California."

Every mayor in the United States reasons that way. No mayor, not excepting Mr. Bowron, who has a fair share of courage, dares to tell the people that the housing fund grab bag is a typical Federal grant-in-aid, one of the many that have helped to increase the Federal share of the total national tax collection to almost 75 percent. Neither does he tell his constituents that they never get back from the Federal Government what they put in. The handling charges as the money goes from the Federal taxpayer to Washington and comes back sometimes run as high as 30 percent.

WE LOSE AND LOSE

Mayor Bowron told the council that Los Angeles would be getting back money it paid into the Federal Treasury. But to get $100,000,000, Los Angeles would probably pay in several millions more than that.

We lose on the first transaction and we continue to lose thereafter. Getting back the $100,000,000, minus handling charge, is just the beginning. But first let's quote Mayor Bowron again:

"We would * * * be cutting off our nose to spite our face if we fail to avail ourselves of the opportunity to provide good housing to persons who are not able to have proper housing and to pour many millions into the economy of this city at a time when it will mean much to local business and also be of great aid in relieving the unemployment situation. * * * We will not in any manner be defeating anything that could be accomplished by private enterprise. We would not be taking away a possible purchaser for a new home or a renter for an apartment."

This, we submit, is short-sighted, if not downright error.

There is not much unemployment in the building industry. Therefore building $100,000,000 worth of public housing would draw workers from private building. The building materials would be sold anyway for private purposes; the Government coming into the market on so large a scale will tend to jack up prices. Is that good for the private builder?

CALLING IT WHAT IT IS

Moreover, this low-rental housing is going to be fairly expensive stuff, judging from what the Washington planners have said. A price of $15,000 per dwelling unit has been mentioned. That is not low-rent housing. If the rents are as low as the planners aim to keep them, the public housing investment will never be liquidated. In other words, the taxpayers build the housing units and afterward they pay the difference between the low rent the tenants pay and the rent that ought to be paid to maintain the properties and pay off the investment.

This sort of thing can't be defended economically. The candid way to talk about it is to call it what it is: A taxpayer's charity. Perhaps a case can be made for charity on this scale, but let's call it what it is from the beginning.

It's a charity so vast that it will hurt the middle-income citizen in more than his tax bill. Because it will raise building costs, he will have to pay more for his new house, or more rent for his new apartment.

Even the Nation, that irascible weekly magazine which usually favors taking from those who have and giving to those who have not, put its finger on the flaw in the low-rent housing law. "What the bill does not provide for," said the Nation on July 9, "is the middle-income home seeker. If and

when we get a Congress that really wants a Fair Deal, this will be a priority target."

The middle-income home seeker would be happy if Congress could restrain the Federal Government taking his money on the pretext that it is merely a collection agency for the benefit of his home community.

HOUSING AND HOME FINANCE AGENCY,
PUBLIC HOUSING ADMINISTRATION,
Washington, August 12, 1949.

Hon. NORRIS POULSON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN POULSON: The Housing Authority of the city of Los Angeles is one of the first housing authorities in the Nation to submit an application to the Public Housing Administration for participation in the new low-rent public-housing program recently enacted by the Congress.

We are planning to take final action on this application on Wednesday, August 17. Officials of the housing authority are planning to come to Washington for the occasion and I understand that Mayor Bowron will accompany them.

If your time permits, it will be a pleasure to have you with us at 2 p. m., in room 1115 of the Longfellow Building, 1201 Connecticut Avenue. It is expected that the press will be present.

Sincerely yours,

JOHN TAYLOR EGAN,
Commissioner.

Principal Ingredients of a Successful Democratic Government

EXTENSION OF REMARKS
OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, August 22 (legislative day of Thursday, June 2), 1949

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and timely radio interview had last night with the senior Senator from Arkansas [Mr. MCCLELLAN], over Station WWDC, of Washington.

The subjects covered in this interview and the comments thereon by the Arkansas Senator, I believe, merit the attention and consideration of Members of Congress and of the people of this Nation.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

This is Ed Hart speaking from Washington. Someone has said that the principal ingredients of a successful democratic government are wise spenders and wise economizers. The more you think about that statement, the more you appreciate its merit. And if you think long and hard about it, you come up with the realization that perhaps the ills which so frequently beset democratic government are due to the fact that wise spenders and wise economizers are hard to find.

Senator JOHN L. MCCLELLAN, of Arkansas, is not averse to the Government's spending money. But at the same time, he has become a significant force for economy in government. He not only thinks about economy, he works to achieve it.

As chairman of the Senate Committee on Expenditures in the Executive Departments, Senator MCCLELLAN has a real opportunity to check up on Government expenditures. Then, too, he is a member of the Senate Appropriations Committee, where he and his colleagues deal in fabulous figures, adding up to billions in Government spending. Early in June Senator MCCLELLAN tossed into the Senate hopper an economy resolution that has received wide publicity.

Mr. HART. Senator, you were the leader in a group of 23 economy-minded Senators who have petitioned the Senate leadership to bring up Senate Joint Resolution 108, of which you are the author. Just what is the essence of that resolution?

Senator MCCLELLAN. The prime objective of this resolution is to bring about a balanced budget by authorizing and directing the President of the United States to make further reductions of from 5 to 10 percent in the over-all total of appropriations passed by the Congress this year.

Mr. HART. How much money would be saved if the resolution were to become law?

Senator MCCLELLAN. It would save an additional one and one-half to three billion dollars.

Mr. HART. How much has the Congress already cut?

Senator MCCLELLAN. All of the appropriation bills, as you know, are not yet through Congress, but there is every indication that the Congress itself will reduce appropriations under the President's budget recommendations by about one and one-half billion dollars.

Mr. HART. So that would make a total of some $3,000,000,000 of cuts?

Senator MCCLELLAN. Three billion would be the minimum if this resolution passes, and it is possible to make it four and one-half billion under the resolution.

Mr. HART. That is a lot of money to try to save, Senator. Now, what chance has Senate Joint Resolution 108 of passage before adjournment?

Senator MCCLELLAN. It has little chance if the administration has its way about it. The leadership of the Senate will not agree to bring up the measure for a vote.

Mr. HART. What are you considering doing about this?

Senator MCCLELLAN. Well, I have at least one alternative. I can offer this resolution as an amendment—what is frequently termed a rider on another bill.

Mr. HART. Do you plan to do that?

Senator MCCLELLAN. I shall give to the Senate tomorrow the notice required by the rules of the Senate that when the armed services appropriation bill comes up for consideration I shall offer this resolution as an amendment to that bill.

Mr. HART. That would require a suspension of the rules of the Senate, wouldn't it, Senator?

Senator MCCLELLAN. It does require a suspension of the rules. It will be necessary to get a two-thirds vote of the Senate to suspend the rule. However, on the rule-suspension vote every Senator will have the opportunity to make a record and to show by his vote whether he is willing to support economy in government.

Mr. HART. Senator, the administration forces claim that Senate Joint Resolution 108 should be defeated because if it were to become the law then the Congress itself would be shifting responsibility for cutting expenditures to the President. Why doesn't the Congress do its own cutting?

Senator MCCLELLAN. Mr. Hart, I acknowledge that the final responsibility rests with the Congress, but, under our system, the President has the first or the initial responsibility. He prepares the budget and submits it to Congress and requests and insists that the Congress give him the amount of money he asks for. I take it the President is just as much a servant of the people or should be, as are Members of Congress. Therefore, I maintain that it is the joint responsibility of the President and the Congress to economize in government. Appropriations of around $42,000,000,000 have been requested by the President, therefore, he should take his share of the responsibility in reducing them so that we will not spend more money than we collect in taxes. I call your attention to another fact, Mr. Hart.

Mr. HART. What is that, Senator?

Senator MCCLELLAN. The President has his own agency, the Bureau of the Budget. It employs between five and six hundred people working the year around at a cost to the taxpayers of more than three million annually. This huge staff of personnel is charged with the duty of examining all of the requests for appropriations by the different agencies in the executive branch of the Government. The Budget Bureau should best know where cuts can be made.

Mr. HART. Well, then, the President is equipped to examine the requests for Federal expenditures made by the agencies in the executive branch of the Government.

Senator MCCLELLAN. He is. He has the five to six hundred employees working at the job the year around as compared to the Senate Appropriations Committee's total of only 18 employees, on both its professional and clerical staff. Therefore, it is impossible for the Congress to make an adequate check on the more than 6,000 items in the President's budget. In the past, the Congress has generally relied upon the President's budget as its guide in making appropriations. But obviously if the administration's position that the President has no responsibility in this field is sound and the Congress must take the whole responsibility, then it is imperative that the Congress set up a budget bureau of its own to work for it or take over the present Budget Bureau and make it an agency of the Congress.

Mr. HART. Then actually, Senator, you are proposing that the Congress itself take over the Bureau of the Budget?

Senator MCCLELLAN. Well, if the President, having the present Bureau of the Budget as his agency, will not share in the responsibility for reducing the cost of government, then we have no alternative except to either take over the present existing Bureau of the Budget or create a similar agency to serve the Congress, at an additional expense to the taxpayers. But I maintain there is joint responsibility on the President and the Congress to do this job. I also maintain that if the President and the Congress will cooperate in the best interests of the American taxpayers, expenditures can be reduced without the necessity of creating another agency.

Mr. HART. You have projected a novel and important thought there, Senator. Now, while we are considering economy, let's consider it as applied to the European arms-aid bill. As you know, Senator, the House of Representatives did a fairly sizable job the other day on the European arms program. They reduced the administration's request by $580,495,000 from the total request of $1,450,000,000. Now, in your opinion, what is the Senate going to do to the measure when the bill comes up?

Senator MCCLELLAN. Mr. Hart, I have no definite opinion as to what the Senate will do. Personally, I have not reached a final decision. The far-reaching implications and consequences involved in this foreign aid-arms program demand the closest scrutiny on the part of Congress and it may be advisable to defer any dollar aid for this program at the present session of Congress. I have no objection to our supplying these countries with any surplus military equipment we may have on hand.

Mr. HART. But, Senator, the amount the administration is asking for is what our Government practically considers a commitment already made to the various western European nations that signed the Atlantic Pact. We are committed to support that pact with guns, tanks, ammunition, and so forth.

Now, won't the European nations think that Uncle Sam is hedging if we cut the amount for arms aid to Europe?

Senator MCCLELLAN. I do not know what secret commitments, if any, administration leaders may have made to other countries. I do know that when the Senate ratified the Atlantic Pact, we were assured there were no agreements other than what the pact itself contained. Now you say we are committed to support that pact with guns, tanks, and ammunition. That is not written into the pact, Ed, and I am not so committed. We are committed to go to the defense of any member country when it has been attacked, but until such an attack is made, we are not committed to arm all of the Atlantic Pact nations. I am not so concerned about what the European nations will think as to our hedging. After all, it is our prerogative and our duty to make decisions and to act in accordance with what we believe to be for the best interests of all in carrying out the pact.

Mr. HART. Would we be playing into the hands of the Russians if we cut expenditures for European arms aid?

Senator MCCLELLAN. I do not think so. We will never play into the hands of the Russians by keeping America economically strong, and it must be remembered that any dollars appropriated for arming Europe will be deficit spending and the amount will be added to our national debt. There is one thing we must never overlook. If, in our attempts to strengthen Europe by giving her financial aid, either for arms or other purposes, we seriously impair our own economy, then most certainly we will be playing into the hands of the Communists and Russia. These are my firm views and convictions on these important issues, Ed.

Mr. HART. Do you feel, Senator, that the cause of world peace—the cause that we are all interested in—can be advanced by the Atlantic Pact, plus our European arms-aid program, plus the European economic aid, which is our officially designed over-all program for peace?

Senator MCCLELLAN. Mr. Hart, there are thousands of answers readily given to any inquiry about how we can achieve world peace. It is my opinion that no one knows the full answer. We strive to achieve peace, and, aside from some basic fundamentals, we have to act largely upon the basis of day-to-day events. What appears to be the right course today may prove tomorrow a dangerous step to take.

Mr. HART. You believe in caution, Senator.

Senator MCCLELLAN. Yes; caution and good, common sense.

Mr. HART. Thank you, Senator JOHN MCCLELLAN, of Arkansas, for your remarks concerning economy in Government, not only as it pertains to our foreign and domestic arms programs, but as it might be applied all along the line—of course, subject to the approval of the greatest deliberative body on earth, the Congress of the United States. This is Ed Hart saying good-by from Washington.

The President's Recommendations

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. MILLER of Nebraska. I recommend that during the recess of the House, you go home and report to the folks you represent and find out how they feel about the following recommendations of the President:

First. Four billion dollar tax increase.
Second. Brannan farm program.
Third. Repeal of the labor law.
Fourth. Socialized medicine.
Fifth. Federal aid to education.
Sixth. Arms to Europe.
Seventh. Expenditures for foreign aid.
Eighth. Deficit spending.
Ninth. Reciprocal trade agreements.
Tenth. Government-built steel mills.
Eleventh. Establishment of another OPA to allocate and ration scarce materials.
Twelfth. Extension of social security.

My friends, you ought to get away from the pressure and propaganda in the Nation's Capital if you are to get a fresh understanding of those you represent.

Mr. Speaker, I have scheduled the following visits in my district:

August 30: Spencer and O'Neill.
August 31: Kearney—county fair.
September 1: Dunning—county fair.
September 2: Lexington—county fair.
September 3: Arthur—county fair.
September 4: Bayard.
September 5: Lodgepole—picnic.
September 6, 7: Bridgeport and Alliance.
September 8: Gordon—county fair.
September 9: Lewellen—county fair.
September 10, 11, 12: Scottsbluff.
September 13: Big Springs—chamber of commerce.
September 14, 15, 16: Kimball and Sidney.
September 17, 18: Grand Island.

Wonderful Example of a Good Local School System

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. PATMAN. Mr. Speaker, permission having been granted, I am inserting in the RECORD at this time an interesting story, which appeared in the August 18, 1949, issue of the Lamar County Echo, published at Paris, Tex., entitled "Cunningham School Receives State-Wide Publicity in the Progressive Farmer."

Cunningham is a progressive community in the southeastern part of Lamar County in the First Congressional District, which I have the honor to represent. The educational program at the school there under the splendid leadership of the superintendent, Mr. Floyd E. McGahan, which is outlined in this article, is so very interesting and is such a fine one that I feel there are many others who would be interested in reading about it. It is as follows:

CUNNINGHAM SCHOOL RECEIVES STATE-WIDE PUBLICITY IN THE PROGRESSIVE FARMER

The Cunningham school was featured in a special article in a recent edition of the Progressive Farmer. Together with several pictures of schoolroom scenes, the story was as follows:

In the little community of Cunningham, Tex., a rural consolidated school is pioneering in an educational program which may well be the only accepted one in a few years.

Under the leadership of Superintendent Floyd E. McGahan and his wife, Carolyn Street McGahan, along with a highly selected faculty, the school has a program which places the complete adjustment and development of each individual student as the primary goal. To carry out the school motto, "Every Child on the Same Level," they strive to remove every handicap or obstacle which will keep one child from having equal opportunity with others.

"We take it for granted a child strives to excel if he is normal," explains Mr. McGahan. "If he doesn't, something is wrong. We try to discover the handicapping condition.

"Every child who comes through this school has the most complete case history which can be made," he continued. "However, we believe it relatively unimportant to learn about the child unless we plan to help him. We have regular round table discussions with all teachers who touch the lives of these children. The case history of each child is presented to the faculty and a plan is devised whereby the handicap is relieved.

"If it is a physical handicap we take the child to a doctor. Then we take him into the special education room and give him whatever is prescribed by the doctor. We also go into the home and work out a plan so the home can be geared with the school.

"We have the most complete testing program possible," Mr. McGahan added. "We have eight tests altogether, such as aptitude, personality, academic achievement, social acceptance, I. Q. test, and leadership tests.

"A complete physical examination is given every child. The county health unit comes out and gives every school-age child a complete check up. This is kept up whenever necessary. Sometimes we take as many as 8 or 10 children a week to county health service or a city health center," said Mr. McGahan.

The handicap program has been practiced at Cunningham since 1939. One room has been set aside with a teacher in charge where children with defects in speech, hearing, or with nervous disorders or lowered vitality may go and receive special help in addition to regular classroom instruction. The room contains a bed for rest periods. Some children are given milk and food between meals.

In 1938, a thesis was worked out to locate leadership in elementary school children. Dr. T. W. Buford of Pattonville and Dr. Merl E. Bonney of North Texas State Teachers College served as advisers to Mr. McGahan. Also, the Hogg Foundation at Austin furnished consultants.

A program of sociometric testing was begun whereby a secret vote was made by each child as to someone he admired in his group and would choose as a friend. Through this ballot they found the children always fell into three levels of leadership. The information was kept secret. But the teachers then began work on the children in the two lowers levels to eliminate physical and personality handicaps.

Individual help and advice are being given through a well-organized counseling program. Designated counseling periods are set up and each child may pick the teacher he wishes to consult about personal problems. Six out of the twelve teachers in Cunningham qualify as special education teachers for handicapped children.

One group-counseling project was carried on with 24 girls during their 4 years of high school. Discussions were given on all problems of boy-girl relationships, reasons for family break-downs, and stress and strain in the home. Also, they gave an educational program for parenthood. Consultant authorities in the field were brought to talk to the girls. The girls' mothers joined in

the panel discussions. Out of this group of 24, only one marriage has resulted in divorce. It lifted the level of the entire community and did away with so many early marriages. Now 70 percent of the children go on to college.

Finding there were some students who needed an opportunity to do more than regular class assignments, a system of awards has been established. A certain number of goals are set up for each class. The student then works to complete as many as possible. There are two academic awards. A master award is given for completion of 90 percent of the set goals and a high-level award is given to those completing 75 or 80 percent of the goals.

"This spreads recognition to about 40 percent of the children instead of one or two," Mr. McGahan explained. "We try to get away from the idea of failure and stress achievement. About 95 percent of our students pass."

About 95 percent of students eat in the school lunchroom. The students buy 20 tickets for $3. They are given well-balanced meals of milk, meat, vegetables, dessert, and plenty of bread. The low price is made possible through careful planning and as a result of a canning program carried on by mothers in the community.

A different class is in charge of the luncheon each day. Some child always volunteers to offer a blessing for the food before the meal.

The interior of the building is kept in such a way as to instill pride in the children. They help keep it clean. The color of the walls in each room is suitable for the age of the children. Pale pink walls are in the primary department, while one especially dark room was painted yellow. A complete lighting system is being worked out.

In the industrial arts department, Instructor W. T. Lawrence trains both boys and girls in beginning trades such as woodworking, electrical work, ceramics, and craft. Over 175 table lamps were completed the past year. Some of the students sell their products and use the money to buy new materials. Leather work with belts, billfolds, and key holders is very popular.

The entire school program is interpreted to the parents and community through the school paper, The Warrior. The paper is put out every 2 weeks and is paid for through local ads. Students in business administration and English do the writing and printing.

Oil Development

EXTENSION OF REMARKS
OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks, I desire to include in the CONGRESSIONAL RECORD the following information which relates to oil:

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF STAFF,
Washington, D. C., June 29, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This letter makes reference to your communication of recent date, addressed to the Honorable Gordon Gray, Secretary of the Army, in which you requested information relative to the building of oil refineries in Germany.

I have discussed this matter with the appropriate officials in the Department of the Army and I find that no new refineries have been constructed in Germany and that it is presently planned that none will be built. Some reconstruction of damaged plants has been effected in bizonal Germany in order to provide sufficient capacity for refining imported crude oil needed to maintain the German economy. Present German oil production cannot meet the needs of the country. It is understood, however, that some additional equipment is being installed to exploit present known fields. If local fields can be made to produce greater quantities of crude oil, it will result in a considerable savings to United States taxpayers as to the amount of oil and oil products which must be imported will be materially reduced, together with resultant savings in our own natural resources.

I am pleased to be able to develop this information for you, and if I can be of further service, please feel free to call upon me.

Sincerely yours,

C. G. BLAKENEY,
Colonel, GSC, Legislative and Liaison Division.

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF STAFF,
Washington, D. C., July 14, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This letter makes further reference to your request for additional information relative to equipment for oil well drilling purposes to be installed in western Germany to exploit present known fields.

I have been able to determine that the Office of Assistant Secretary of the Army has requested ECA to finance the purchase of approximately $400,000 worth of oil well drilling equipment for operation in the area. This equipment will be used primarily for exploratory purposes. It is expected that the utilization of this machinery should result in a greater production of crude oil which should prove of material assistance in the reduction of costs for this type of product.

I am glad to have had the opportunity to secure this information for you and if I can be of further service, please do not hesitate to call upon me.

Sincerely yours,

C. G. BLAKENEY,
Colonel, GSC, Legislative and Liaison Division.

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF STAFF,
Washington, D. C., August 11, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This letter makes further reference to your communication of recent date in which you requested information as to what companies owned the oil fields in the bizone of Germany and whether any new oil refineries were being built by the Department of the Army in Europe.

I have received a reply to my radiogram to the commander in chief of the American forces in Germany, and I am enclosing a break-down of the oil fields now in operation and I have listed opposite them the names of the operating companies, together with the names of the firms who own the fields.

I have further been able to determine that the Army is not building any new oil refineries in Europe.

I am glad to have had the opportunity to develop this information for you and if I can be of further service to you, please do not hesitate to call upon me.

Sincerely yours,

C. G. BLAKENEY,
Colonel, GSC, Legislative and Liaison Division.

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF STAFF,
Washington, D. C., August 19, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This letter makes reference to your communication of recent date in which you requested information as to whether any American companies own interests in the operating companies of the firms who own oil fields in the bizone of Germany.

I have had this matter looked into and I find that the Standard Oil Co. of New Jersey own equal interests with the Shell Oil Co. in Brigitta, which in turn partially owns and operates the Steinbke-Roden, Steinbke-Lichtm oil fields. The Shell Oil Co. is primarily a British concern and Standard Oil of New Jersey is of course an American company.

I am glad to have had the opportunity to develop this information for you and if I can be of further service, please feel free to call upon me at any time.

Sincerely yours,

C. G. BLAKENEY,
Colonel, GSC, Legislative and Liaison Division.

Report on 1949 Program for Alabama Veterans

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. ELLIOTT. Mr. Speaker, as of June 30, 1949, Alabama had a veteran population of 316,000, of which 269,000 were veterans of World War II, and 47,000 were veterans of World War I, the Spanish-American War and prior wars.

During the year which ended on June 30, 1949, the Federal Government through the Veterans' Administration, spent $132,128,970.62 in Alabama under the laws pertaining to Alabama veterans. These payments consisted of pension and compensation, subsistence allowances under Public Law 16 and Public Law 346, readjustment allowances under the GI bill, payments to educational institutions for tuition, books and supplies, payments for automobiles and tractors for disabled veterans, medical and dental expenses, first-year interest payments on guaranteed loans, and for administrative costs.

Pension or compensation payments were made to 11,441 veterans of World War I, and to 31,101 veterans of World War II, or to a total of 42,542 Alabama veterans.

Fifty-nine thousand three hundred and twenty-two Alabama veterans were in training on June 30, 1949, either under Public Law 16 or Public Law 346. The kinds of training received were on-the-job, farm training, college training, trade-school training and other miscellaneous training. Since the training program was started some 150,101 veterans have received such training.

Since March 28, 1946, the Veterans' Administration has guaranteed some 20,178 loans, of which 17,969 were home loans. Only 1,340 farm loans were guaranteed. Eight hundred and sixty-nine business loans were guaranteed. These figures reveal that the veteran in the small community or on the farm has not been able to avail himself to the benefits of the loan provisions of the GI bill of rights. I hope this Congress will enact laws that will bring the benefits of these loan provisions to the veteran who lives in the small town and on the farm. His problem can only be solved by allowing the Federal Government to make direct loans to veterans in those cases where local private financing is not available. Earlier in this session I introduced a bill to provide for a greatly expanded GI loan mortgage market on the one hand, and direct loans to veterans who were qualified but could not obtain private financing. I hope this Congress will not adjourn until those provisions are written into law.

The veteran who lives in the rural sections of this country is just as much entitled to home, farm, and business loans as are those veterans who live in the larger cities where the large private financing institutions can and do make such loans. Too long has the rural veteran been discriminated against in this regard. We must guarantee him an equality of opportunity with his city cousin.

Mr. Speaker, I include as a part of my remarks a report from Hon. Harley A. Smith, manager, Veterans' Administration, regional office, Montgomery, Ala., covering some of the activities of the Veterans' Administration in Alabama during the fiscal year which ended on June 30, 1949:

REGIONAL OFFICE,
VETERANS' ADMINISTRATION,
Montgomery, Ala., August 8, 1949.

Hon. CARL ELLIOTT,
House of Representatives,
Washington, D. C.

DEAR MR. ELLIOTT: There is enclosed for your information a copy of a statistical summary of operations of the Alabama regional office of the Veterans' Administration for the fiscal year 1949. This summary, which was given to all employees of the regional office, is sent to you because of your interest in veterans' affairs.

Please do not hesitate to call on me when I can be of service to you.

Very truly yours,

HARLEY A. SMITH,
Manager.

REGIONAL OFFICE,
VETERANS' ADMINISTRATION,
Montgomery, Ala., August 2, 1949.

To: All employees.

Subject: Statistical information regarding operations of Alabama regional office of Veterans' Administration—fiscal year 1949.

1. I am sending you the information contained in the attached memorandum as I felt it would be very interesting to you as a member of this regional office.

2. The figures contained in this statistical report do not show a picture of all activities within the regional office during the past fiscal year, but they do give a pretty good idea of what has been done in the way of direct benefits to veterans. Since service to veterans is the only reason for our existence as an organization these figures help to show that we have done a big job during the past year.

3. As a member of the team that makes up this VA regional office, each of you has played an important part in the over-all work that has been accomplished. I appreciate the effort on the part of every employee and feel that you have a right to be proud of the part you play in rendering service to veterans of Alabama.

HARLEY A. SMITH,
Manager.

STATISTICAL INFORMATION REGARDING OPERATIONS OF ALABAMA REGIONAL OFFICE OF VETERANS' ADMINISTRATION, FISCAL YEAR 1949, JULY 1, 1948, THROUGH JUNE 30, 1949

The following information presents figures regarding some of the activities of the Alabama regional office of the Veterans' Administration for the period from July 1, 1948, through June 30, 1949. Unless otherwise indicated, all figures cover the specific period mentioned above.

The purpose of this tabulation is to present facts regarding benefits that have been made available to veterans of Alabama during the past year, and to give some idea of the volume of work required by all elements of the VA regional office. These figures should be of interest to the public.

Estimated veteran population, June 30, 1949

World War I and others	47,000
World War II	269,000
Total	316,000

Finance activities—Funds expended in Alabama

Checks certified for payment	Number of checks	Value
Pension and compensation	477,444	$27,071,188.07
Subsistence allowance:		
Public Law 16	67,364	6,286,581.91
Public Law 346	732,169	61,754,937.51
Educational institutions (tuition, books, supplies, etc.)	12,301	17,556,892.10
Payments for automobiles, tractors, etc., for disabled veterans	53	84,548.13
Administrative costs (salaries, travel, counseling fees, rentals, office supplies, etc.)	50,952	5,671,686.12
Medical and dental expenses	8,904	777,117.92
Readjustment allowance (reimbursement to State of Alabama)	305	12,208,938.74
First-year interest payments on guaranteed loans	1,493	717,080.12
Total	1,350,990	132,128,970.62
Average number of checks per month	112,582	

Claims activities

Total claims filed to June 30, 1949	111,567
New claims received in past year	3,593
Number of veterans receiving compensation or pensions:	
World War I	11,441
World War II	31,101
Total	42,542

Vocational rehabilitation and education activities

	Public Law 16	Public Law 346	Total
Total number veterans in training status since inception of program	11,881	138,220	150,101
Veterans in training June 30, 1949:			
(1) On-the-job	1,420	10,460	11,880
(2) Farm training	1,774	18,373	20,147
(3) Institutions of higher learning	726	7,976	8,702
(4) Trade schools, others	473	18,120	18,593
Total in training	4,393	54,929	59,322

Veterans rehabilitated under Public Law 16	3,591
Veterans completed under Public Law [redacted]	12,511
Veterans with entitlement exhausted	6,186

Medical activities

Number of medical examinations	74,910
Number of medical treatments	28,627
Total examinations and treatments	103,537
Number of dental examinations	8,277
Number of dental treatments	6,350
Total examinations and treatments	14,627

Loan guaranty activities—Total in program, Mar. 28, 1946–June 30, 1949

Guaranteed and insured loans	Number	Total loan value	Guaranty
Farm loans	$1,340	$3,707,924	$1,839,222
Home loans	17,969	82,986,353	43,300,448
Business loans	869	3,022,510	1,329,945
Total	20,178	89,716,787	46,469,615

Legal activities

Number wards under guardians, June 30, 1949	1,157
World War II	526
World War I and other	631
Number wards under custodians, June 30, 1949	3,262
World War II	2,211
World War I and other	1,051
Number field examinations made past year	4,390

Contact activities

Personal contacts at offices	216,334
Personal contacts away from offices	26,778
Total	243,112
Number telephone contacts	68,931
Number benefit applications prepared	69,264
Number forms prepared	105,811
Correspondence items prepared	73,610
Total	317,616

Administrative division activities

Total number pieces of mail handled	3,456,613
Average daily number pieces of mail handled	13,294
Total handling of veterans' files	2,182,678
Number of veterans' records transferred:	
In from other States	18,273
Out to other States	20,910

Memorandum on the White Paper on United States Relations With China

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, August 22 (legislative day of Thursday, June 2), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD a memorandum prepared by me, the Senator from Nevada [Mr. McCARRAN], the Senator from Nebraska [Mr. WHERRY], and the Senator from California [Mr. KNOWLAND] on the so-called white paper on United States relations with China.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM ON THE WHITE PAPER ON UNITED STATES RELATIONS WITH CHINA

THE BIG ALIBI

The State Department's white paper on United States relations with China is to a large extent a 1,054-page whitewash of a wishful, do-nothing policy which has succeeded only in placing Asia in danger of Soviet conquest with its ultimate threat to the peace of the world and our own national security.

It is an attempt to whitewash a policy which, in sum effect, has meant the desertion of China and has conveniently served Communist purposes. William Z. Foster, head of the Communist Party in the country, appealed to American Communists in 1945 to prevent United States intervention in China. "The war in China is the key to all problems of the international front," he said, "and it is here, above all else, where we have to deal the hardest blow * * * on the international scale, the key task is to stop American intervention in China."

Fortunately, there may yet be time for the United States to prevent what the State Department fallaciously declares already to have happened.

Secretary of State Dean Acheson says the cause in China is lost. "A decision," he says, "was arrived at in China, if only a decision by default." Mr. Acheson has added his voice to that chorus of doom which, repeatedly now for several years, has sung a dirge for China's Government. The only wrong note is that the Chinese Republic refuses to die.

CHINA REFUSES TO QUIT

Even before the fall of Nanking in the Sino-Japanese war, Japan made peace overtures to China through Dr. Oscar P. Trautmann, German Ambassador to China, and these were repeated after the Chinese Government had evacuated Hankow. Japan was willing to restore the status quo prior to the Luchoo Bridge incident provided only that China recognizes Manchukuo.

Considering the defeats China had suffered, these were not unattractive terms. But Generalissimo Chiang Kai-shek was determined to fight on. If he had not repeatedly turned down Japanese offers of peace, and had become a partner of the Greater Asia scheme, the Pacific war might have taken a quite different turn. While battered China was holding on, the Japanese were taking Hong Kong, Singapore, Rangoon, Bataan, and Corregidor, moving into New Guinea and the Solomons and closing the Burma Road, China's only overland supply line.

China still has not succumbed. The Chinese Government still holds a greater area of the country than it did after the first year of war with Japan. What the Chinese Army lacks more than anything else are the weapons which the State Department dangerously advises be withheld from its armies. Against the Government troops, deprived of arms and equipment by this short-sighted State Department policy, the Communists fight with a wealth of weapons. Most of these—as the white paper points out—were surrendered by the Japanese to the Russians. What the white paper has neglected to state, however, is that reports indicate that some of the Communists' United States-manufactured weapons have been diverted to them out of the United States wartime $11,000,000,000 lend-lease to Soviet Russia. For propaganda purposes, Communists have claimed to have captured it all from the Nationalist Government.

WAITING-FOR-THE-DUST-TO-SETTLE POLICY

The white paper says China lost huge quantities of munitions sent from the United States. What it does not say is that China has suffered from an embargo on United States military aid.

The Chinese Government has received from the United States more criticism than help, more advice than material support. When General Marshall acted as a mediator in China, he could bring pressure on the Nationalist Government and not on the Communists because the Nationalist Government depended on the United States for arms and munitions while the Communists were amply supplied by Russia with captured Japanese arms.

When General Marshall failed to bring about a coalition government with the Communists in China, he blamed both sides but he imposed penalties only on the government, which was denied further military supplies. General Marshall testified before the House Committee on Foreign Affairs that he personally put an embargo on military supplies to China. This helped the Communists eliminate crack Government divisions. They were the veterans of Burma who had been given American equipment and training. Without ammunition, they were impotent and the Communists wiped them out in Manchuria.

General Marshall's personal embargo lasted almost a year, until the summer of 1947 when the sale of .792 rifle ammunition was permitted. The Chinese Government received 130,000,000 rounds which it had ordered 2 years before. The ammunition was specially made for the so-called "Generalissimo rifle" and could not be obtained elsewhere.

No real postwar-aid-to-China program started until the passage of the China Aid Act on April 3, 1948, and it is noteworthy that, even then, the first shipment—a meager 600 tons of ammunition and supplies—did not reach China until last December 15. Under the act, the United States made available to China a total sum of $400,000,000. Of this, $275,000,000 was earmarked for ECA civilian aid and the remaining $125,000,000 ultimately was made available for military purposes. The arms and ammunition transferred under this appropriation was not at the United States Army's cost but much of it was at the much higher replacement value. Three-fourths of it was turned over to the United States Army at the Chinese Government's request so that it could supervise procurement for China. Less than 20 percent of these procurements have been handled by the Chinese.

The impression is widespread in this country that China has received billions of dollars in postwar military aid from the United States. State Department figures add up to more than $962,000,000. But they include $30,000,000 charged as services for disarming and repatriating Japanese troops. The Chinese Government contends it has received vital arms and ammunition of a value of only $110,000,000, and has documentary proof to that effect.

UNRRA

The white paper runs the total grants up to a misleading and astronomical $1,596,000,000. But it does this by including purely nonmilitary ECA aid and $474,000,000 in UNRRA grants. Not only were the UNRRA payments nonmilitary but also they were shared impartially between the Government and Communist-controlled areas. Since the areas under the Communists were primarily food-producing the Communists' needs were largely for clothing and medical supplies, of which 52,000 tons were delivered to those areas.

PACIFIC SURPLUS

The impression is created that large amounts of military supplies were included in this sale. President Truman himself stated on December 18, 1946, that "aircraft, all nondemilitarized combat matériel, and fixed installations outside of China were excluded. Thus no weapons which could be used in fighting a civil war were made available through this agreement." On page 180 the white paper notes General Marshall's assurances to the Communists that the surplus property contained no combat matériel.

Due to the tropical weather in the areas where the matériel was abandoned, it is understood that a great portion of it was in various stages of deterioration. As an example, in the sales agreement a truck was defined as a vehicle "with less than 20 percent of its parts missing." Approximately one-third of the total of Pacific surplus is represented by vehicles of all kinds.

After one global war fought to protect our shores against invasion, the State Department should have learned that no line of our defense can be left unguarded. The United States wisely adopts a military-assistance program for Europe and joins a North Atlantic pact. But that does not justify neglecting China and the Far East, nor brushing off the crisis there with a long apologia for State Department errors.

THE CHINA CRISIS IS A WORLD CRISIS

The Communist crisis in China is not a domestic problem of China alone, as, apparently, the white paper assumes. If China should fall completely into the hands of the Communists, it would mean the eventual end of progress toward democracy in all Asia. Mao Tse-tung, the Chinese Communist commander, already has proclaimed his intention of joining the world revolution under the Soviet Union's banner.

Victorious in China, the Communists inevitably would push into the southeast Asia countries. Communist vanguards already are implanted in the Indies, in India, in Indochina, in Malaya. Our own welfare, no less than China's, demands that this master plan of Soviet conquest be stopped. We cannot ignore the threat of a Sovietized Asia, which would tip the delicate balance between the Communist and the free worlds. It would close the door of Asia to the West, deny markets and material for western industry, and give the Soviet Union manpower and resources for the ultimate blow for world domination. China is in peril, but, contrary to the State Department, it is not lost yet.

The United States spent its blood and wealth in part to protect the integrity of China in World War II. If China then was important to the peace and security of the United States there seems to be no reason why China is of any less importance now. Certainly there is nothing less sinister about the Soviet plan of aggression, which knows no national boundaries, than there was in Japan's greater east Asia coprosperity program.

If our policy still is to contain communism the world over, then there can be no justification for the policy of our State Department in ignoring the plight of China and discounting the relative importance of the entire Far East. We are spending millions to fight a cold war against communism throughout the rest of the world and approximately 1 percent in the important Pacific area. In China there is a hot war. The Chinese Government must have immediate and adequate military aid.

THE YALTA AGREEMENT

Worse than the white paper's attempt to justify the past mistakes of United States policy, it clearly indicates that the State Department has found new excuses for prolonging them.

Until very recently, American Far East policy was based on the wishful theory that China's Communists were not Communists at all, just an inadvertently labelled group of agrarian reformers, despite the fact that they always have openly proclaimed themselves to be Communists. The State Department persisted in its do-nothing appeasement on the excuse that China's Communists would reject domination from the Kremlin and that a unified China would provide a basis for stability.

But that all blew up a few months ago. Mao and other Communist leaders settled any possibility of doubt with the declaration that "the people of China must side either with imperialism or socialism. There must be no exception, no third line of action. Straddling the fence is a futile thing * * *. We belong to the anti-imperialist front headed by the U. S. S. R. and we can only look for genuine friendly aid from that front." Last April the Chinese Communist Party officially proclaimed that in another world war they would "march forward hand in hand with the ally of China, Soviet Russia."

There is the reality. In the light of it, American Far East policy has blundered grievously. The Yalta agreement becomes a sell-out of China. The State Department policy of trying to create a Chinese coalition with Communists becomes a colossal blunder.

The present State Department position persists in a breach of what had been the United States' consistent China policy for a century, from 1843 to 1943. This was a policy of friendship and cooperation which had its strongest expression in John Hay's "Open Door." In many ways it was an Asiatic Monroe Doctrine for it attacked the theory that China could be colonized by European nations, partitioned or split up. Then as now, Russia coveted Manchuria and Korea as stepping stones to empire. Our historic policy was reaffirmed as recently as 1922 in the nine-power Treaty which still binds the United States and China.

Again on December 1, 1943, President Roosevelt and Prime Minister Churchill signed with Generalissimo Chiang at Cairo a declaration that "all the territories that Japan has stolen from the Chinese, such as Manchuria, Formosa, and the Pescadores, shall be restored to the Republic of China." A few days later this statement was repudiated at Tehran at the demand of Stalin.

Then, on February 11, 1945, at a secret meeting attended by Roosevelt, Stalin, and Churchill, at Yalta, an agreement was reached which dealt the severest blow to China's chances for postwar peace and unity. In return for Russia's agreement to enter the war against Japan 90 days after the defeat of Germany, Stalin was rewarded with great concessions. Outer Mongolia was permanently detached from China. Russia was restored rights she had seized in Manchuria and which Japan had taken from her in 1904. The pact gave Russia a primary interest in the port of Dairen and the two main Manchurian railroads and control of the naval base of Port Arthur.

This, in effect, was a trade of territory which did not belong to either the United States or Great Britain. It was a repudiation of the Cairo Declaration signed just 14 months earlier. It vitiated the Chinese Government's 20 years of struggle against the Communists and made meaningless the Chinese people's 8 years of war and misery. It is generally agreed now that this tragic and dishonoring agreement at Yalta is at the root of the present turmoil in China.

The white paper said the agreement was made for military expediency and that at no point did President Roosevelt consider that he was compromising vital Chinese interests. True, at that time the atom bomb had not been dropped. But it was obvious that Russia would enter the Pacific war because Moscow could not have participated in the peace for Asia without having participated in the fighting for Asia. Cordell Hull had been assured in Moscow before Yalta that Russia would enter the war in the Pacific.

The Yalta agreement was made in secret. It was not until June 15, 4 months later, that General Hurley, United States Ambassador in China, informed Generalissimo Chiang. The white paper wryly notes, however, that from the Generalissimo's reaction he appeared to have learned about it from Stalin.

The open door that was shut by Yalta has remained closed although the State Department has had ample time to discern whether that immoral secret diplomacy compromised vital Chinese interests. The white paper itself mentions assurances which Marshal Stalin gave Harry Hopkins in Moscow in May 1945, that he proposed no alteration over the sovereignty of Manchuria or any other part of China, that Generalissimo Chiang Kai-shek was the only Chinese leader qualified to undertake the unification of China, that the Communist leaders were not as good or as well qualified, and that he would welcome Chinese civilian participation in the administration of Manchuria.

These were the assurances but they only underscore the fallacious belief that Stalin could be appeased into democratic cooperation. Yalta and State Department policy in Asia since then reflect the belief that postwar peace depended on cooperation of the two opposing ideologies, therefore no sacrifice was too big. Instead, it encouraged and strengthened the Soviet expansionists, not only in China but also in Poland, Yugoslavia, and elsewhere. Subsequent events proved the Soviet appetite increased with eating. Not until the Soviet influence in Poland, Hungary, Austria, Rumania, Bulgaria, Iran, Manchuria, and Korea became entrenched did the Western Powers get nervous about the situation. It took the misery and suffering of the population of half of Europe and most of Asia to convince the Americans of their mistake.

But instead of facing facts in China and admitting its error, the State Department still buries its head in the sand and issues a white paper. If one set of circumstances does not justify its policy, another set must be found. Now it says Nationalist China is dead and undermines the Kuomintang and the Government. Worse than attempting now to whitewash its past mistakes, the State Department tries to prolong them.

MARSHALL URGED A COALITION WITH THE COMMUNISTS

Some 9 months after Yalta, General Marshall was sent to China by President Truman to try to unite the country by peaceful means. The Soviet Union then was still viewed as a peace-loving democracy and the Chinese Communists as mere agrarian reformers unrelated to Moscow. The Marshall mission was a sequence of Yalta, based on the assumption that the Communists could be appeased and that Russian-American friction in China could be held down. The Marshall mission declared its aim as effectuating a coalition, actually participated in negotiations, and compelled the Chinese Government to sign several agreements. What it did not declare was the threat to withdraw United States support—as it later did—

if the Government should refuse to settle on terms laid down by General Marshall.

China did not settle, and, therefore, paid its penalty when it approached the Export-Import Bank late in 1945 with applications for credits for rehabilitation needs. The white paper says no action was taken on these requests "and in January 1946, the National Advisory Council, acting in accordance with General Marshall's recommendations, decided that a major program of financial assistance to China must await satisfactory political and economic developments in that country." General Marshall, therefore, was able to use funds for rehabilitation as a lever to attempt to achieve his political objective of forcing the Chinese Government to accept the Communists.

The white paper now contends that the Marshall mission did not envisage a coalition between the Nationalists and Communists. On page 273, the white paper quotes the President on March 11, 1948, as having "expressed his hope that the Chinese liberals would be taken into the Government but stated that 'we did not want any Communists in the Government of China or anywhere else if we could help it.'"

But the strife in China exists between the Chinese Government and the Communists. Marshall's mission was to unite the country by peaceful means. If that does not mean by agreement between the two sides, then it must mean by the capitulation of one or the other and that was not possible. The State Department would know this if it attempted to reconcile what is quoted above with page 211 in which it quotes General Marshall as summing up China's situation on December 1945, "with the statement that the Communists were too large a military and civil force to be ignored. * * * He believed, therefore, that it was imperative that efforts should be taken to bring them into the Government * * *."

It is obvious now that State Department failure was a fortunate one for had it succeeded the stories of Estonia, Latvia, Lithuania, Poland, Rumania, Bulgaria, Yugoslavia, Albania, Hungary, and Czechoslovakia would have been repeated in China. We know that whenever a government is forced into a coalition with Communists, the result is domination of the government by the Communists. Wherever they are a minority, their technique is to rule by coalition. The people's democracy of which China hears is not a Chinese invention. It is a special term in the Marxist lexicon which denotes a form of transition government that is socialist in theory but tolerates capitalist elements. Like the eastern European Communist rulers, the Chinese Communist leaders are Soviet-trained and look to Moscow both for ideology and orders.

CHINA PROVES ITS MORALE

Not the least of the white paper's canards is the statement that China has lost fighting morale. The fact that it still has armies in the field attests not only to its fighting heart but also to the use to which it has put such material as it has been able to acquire. The State Department mentions the Government armies' losses. The Communists themselves admitted on July 19 to 1,432,000 casualties and they hardly would be accused of exaggerating such statistics. The white paper does not mention the Communist losses.

Long before many of us here in the United States awoke to the threat of communism, Chiang Kai-shek was fighting it. His beliefs and tactics have been criticized but still he has not wavered. He did not capitulate in the face of tremendous difficulties and he chose to go into retirement when pressure was brought upon him to surrender to the Communists. The report of the Senate Foreign Relations Committee last year on the China aid bill contained this passage:

"In the judgment of the committee, the Nationalist Government of China, led for 20 years through tremendous difficulties by the selfless patriotism of Generalissimo Chiang Kai-shek, represents our common contest against threats to international peace and security and against Communist aggression and deserves support within our resources as proposed in this act. Further, the aid authorized by this act is a tangible proof of American interest in the independence and integrity of China, in the welfare of the Chinese people, and in stabilized peace in the Far East."

CHINA REFUSED TO LISTEN

China, which has received more advice than tangible help from the United States, now is accused by the State Department of having refused to be guided by this counsel. The main advice, backed up with penalties, was to form a coalition with the Communists. There no longer can be any question but that such advice was wrong on the inevitable terms of any coalition with Communists. China should not be blamed, but congratulated, for having had foresight to be first in the field against Communist aggression and to have preserved in the struggle through two decades of grievous hardship. The white paper fails to whitewash the errors of the State Department. It does underline the immediate necessity of the utmost support of the United States for a stanch ally.

CONCLUSION

The white paper utterly fails in whatever it may have been intended to accomplish. It could probably be compared to a legal plea of confession and avoidance. Yet it fails in this for such a plea must have color and, certainly, the confession in this instance entirely lacks color. It does avoid the issue—the one from which there is no escape. It attempts to leave the impression that the decision has already been written. To accept this means the decision has been made in Moscow. It may be that is where many people prefer that it be made, but the policies of the United States Government enunciated so clearly in the Foreign Assistance Act of 1948, as well as the China Aid Act of 1948, cannot so lightly be dismissed.

Certainly, the ideals of the Nationalist Government, as contained in its constitution, in its legislative and judicial systems, are those to which this country, as well as every independent democracy, can well subscribe.

Although men may have been derelict in their duty and in the exercise of the office they have held, it does not settle the matter to attempt to write off the entire Nationalist regime, for that leaves the issue still to be met. That issue is the same today as it was in 1945 and 1946. Certainly the future is not as cloudy now as then with respect to the opposition. If nothing else has come out of this catastrophy, it is a clarification of those who are sincerely against communism and those who are not so sincere. It is inevitable that bureaucratic agencies, having taken a position, are reluctant to acknowledge that that position was wrong. Better evidence of such a situation cannot be found than the white paper. It meticulously avoided the inclusion of matters which reflect upon it the same degree of misadministration, lack of integrity, and willful neglect of the will of the people as expressed through its Congress. It does not indicate that the majority of the economic assistance given by the United States was administered in such a way as to detract from the Nationalist Government rather than to encourage faith of the Chinese people in its Government. Certainly, the expenditure of such sums of money, even though they did add to the material betterment of some of the Chinese people, did not contribute in the least part to the objective of encouraging the people to support their Government in the stand it was making against the Communists. In fact, the administration of much of this aid was on a basis entirely divorced from the political considerations so that the recipients were always under the impression that aid received from the United States was not or had no connection with their Government and that whether under the Communists or the Nationalists, the aid was for the people. This certainly is not the same course that has been followed in Europe. The policy there is clear that the aid given is in support of the democratic governments as opposed to the Communists.

Such examples merely emphasized the degree to which the State Department has been inept in its handling of United States foreign policy in the field of ideology. The issue is not solved nor is it clarified by the white paper. The issue is as it has always been, the containment of communism. The solution of the issue is not easier today because of the events contained in the white paper. They are, however, susceptible of solution, and if they are to be solved certainly they must be solved by people with more imagination than the white paper indicates is contained in the State Department.

Mr. Dean Acheson, Secretary of State, in his letter transmitting to the Congress the Department of State's white paper, concludes:

"One point, however, is clear. Should the Communist regime lend itself to the aims of Soviet Russian imperialism and attempt to engage in aggression against China's neighbors, we and the other members of the United Nations would be confronted by a situation violative of the principles of the United Nations Charter and threatening international peace and security.

"Meanwhile our policy will continue to be based upon our own respect for the Charter, our friendship for China, and our traditional support for the open door and for China's independence and administrative and territorial integrity."

Thus, in effect, Secretary Acheson writes off loss of all of China to the Russian-directed Communists and retreats to the borders of China. He serves notice that if the Communist regime of China lends itself to the aims of Soviet Russian imperialism against China's neighbors, the United States would consider such action a violation of the United Nations Charter.

The United Nations could perform helpful assistance in focusing opinion of the free world on Russian aggression, but effective measures for action could be blocked by Russia's veto in the Security Council.

We submit that despite all the evidence that the United States policy regarding expansion of Russian aims in China has been a failure in protecting the interests of the United States, he is still vacillating when the situaion cries aloud for decisive forthright action to retrieve losses already sustained.

Secretary Acheson belatedly recognizes in the above-quoted statement that, perhaps, Soviet Russia may be shown to have had imperialistic aims in trying to overrun China. With the evidence so plain that the Communists' armies in China are Russia-directed, Secretary Acheson's policy of retreat to the borders of China is illogical and certainly not good strategy. There is no publicly revealed evidence that Secretary Acheson is making any forthright efforts for unifying China's neighbors against the oncoming Red armies. His effort to make Chiang Kai-shek a scapegoat for the blunders of present and past administrations in Washington is shallow. It has been rejected by every competent observer of the tragic record of betrayal of China running back years.

We believe Communist control of China would endanger gravely America's strategic

position in the Pacific. There is amply substantiated evidence in the files of the State Department and the Department of National Defense that the Communists through their fifth columns of infiltrators already have begun to terrorize countries bordering China.

Much of China is still free of Red armies. In view of all of the disquieting developments, we submit that it is high time—the hour is getting late—for President Truman to institute a forthright policy of tangible assistance to those free areas in China, and to get on with cooperation of bordering countries for their mutual defense.

The Veterans' Bonus

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, August 22 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated August 18, 1949, which I wrote to Col. Philip Mathews, Democratic State chairman, at Harrisburg, Pa.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 18, 1949.

Col. PHILIP MATHEWS,
Chairman, State Democratic Committee, Harrisburg, Pa.

DEAR COLONEL MATHEWS: Since you have seen fit to reach out for political advantage by making a public statement falsely representing my position with regard to the veterans' bonus, I am addressing this open letter to you in order that you may become acquainted with the truth.

Only by distorted reasoning or ignorance could you possibly reach the conclusion that I am now or have ever been opposed to the bonus.

The fact is that every veteran in Pennsylvania and every veterans' organization knows that the bonus has had my continuous support since it was endorsed by the American Legion.

Every veteran in Pennsylvania knows that the 1946 platform of the Republican Party, adopted in Pittsburgh, September 7, 1946, upon which I ran for election to the United States Senate, declared in favor of the bonus as follows:

"We pledge the payment of a fair and liberal bonus to the veterans of World War II."

Every veteran knows that the bonus legislation was passed by two sessions of the General Assembly, under Republican leadership and control.

Were you unaware of those facts or did you deliberately ignore them when you resorted to misrepresentation in your attempt to deceive the veterans and the people of Pennsylvania?

Certainly you must realize that when you falsely represent, for the purpose of getting votes for the Democratic Party, that the Republican leadership is opposed to the bonus, you are in fact working against the interest of every veteran.

In trying to bolster your false and misleading statement, you mentioned that in my recent address to the Legion State Convention in Pittsburgh, I did not discuss the bonus. For your information I am enclosing a copy of my remarks on that occasion in the hope that you will recognize the importance of the national problems in which the Legion is interested and to which I devoted my address.

It should be unnecessary for me to point out that in a news conference just prior to my address I emphasized my support of the bonus. That interview was accurately reported in the press, as you no doubt are aware.

Let me remind you that at no time in my public career have I used veterans' benefits to gain votes. I have been honored many times by veterans' organizations, church groups, and fraternal bodies, but I have never used such recognition as a means of getting votes for myself or others.

In the event that your statement was made on the basis of inaccurate information, I respectfully suggest, in the interest of the veterans, that you make prompt and appropriate correction.

With kindest personal regards, believe me,
Very sincerely,

EDWARD MARTIN.

England's Financial Condition

REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. BURDICK. Mr. Speaker, American newswriters in England have been sending home many articles to the effect that the present socialistic government in Great Britain is on the rocks. I accept that as being true, but that is not all there is to it. It would not make any difference what political party is in power. The Conservatives, under Churchill could not stem the tide, unless he was able, as he was before, to milk our Treasury out of several more billions. That might put off failure for a while, but in the end it would count for nothing.

England was the center of a great Empire. Her ships brought from every corner of the earth raw material which was manufactured in England. England grew into a great manufacturing center. Manufactured goods were shipped in British ships to foreign countries and commerce thrived. Shipping thrived and a great navy was built up to protect that commerce and defend the raw material plants in foreign lands. People of England found employment in manufacturing business in this far-flung Empire.

Conditions have changed—England's Empire with inexhaustible resources is breaking up. India kept England alive since the days of the East India Company. That resource is gone. Canada, Australia, and South Africa find it necessary now to use their own resources for themselves. Canada is fast filling with manufacturing plants and the raw materials of those countries yet affiliated with Great Britain are finding it necessary to use those resources.

Unless England can have access to raw materials, she is doomed. Forty-seven million people cannot live on an island one-third the size of the State of Montana. The great resources of Montana are greater than all of the British Isles and the Netherlands added.

If the policy of England is to keep on attempting to be the manufacturing center of the world, she is headed for ruin no matter what party is in control of the Government. Right now the British pound is in danger of falling to zero, and Brother Cripps will be here soon, if he is not already here, to persuade us to bail out the British boat of finance. The papers report he wants to get our gold at Fort Knox and I presume he wants to trade us British pounds for gold. The British pound is a myth—it is, in plain words, nothing. It is their measure of money. Instead of a dollar they measure the pound. With nothing behind that pound it is worthless, and if there is still anything behind it, there soon will not be unless Mr. Cripps can horse-trade us out of our gold.

The British people cannot live on that small island and carry on as a great democracy.

With the royal family draining more out of the Kingdom than the people can supply, with no resources, no extensive agricultural tracts, and no raw materials coming in in every ship, 47,000,000 people cannot possibly find employment. Full employment in production is the foundation of any sound money system, and when there is no work the money system must crash.

It is absolutely asinine for us to go any further with loans to England. She never will pay a cent of it back, because she cannot. It is up to her now to scatter her population out of this manufacturing center, which was once great but never will be again. England has had great statesmen in the past—she has a glorious history. Every acre teems with tradition, but people cannot live on a glorious past. The present concerns England and no statesman has yet been discovered in England who can provide employment for 47,000,000 people in a country with scarcely enough resources for 20,000,000.

It makes no difference whether they have an Attlee or a Churchill.

Mr. Churchill said in a speech to this House during the war, "I was not elected Prime Minister to preside over the liquidation of the British Empire." If he does not want to preside over just this, he had better let Attlee stay where he is and do the presiding. The liquidation has started.

We have loaned her billions upon billions; the last report showed she had obtained from us, since World War I, $26,000,000,000. We have settled some of these loans at a discount of 98 percent and Great Britain could not pay the 2 percent. We loaned her the money to pay the 2 percent, and, of course, she will not pay this loan, either.

My advice is to place an extra guard at Fort Knox while the British financiers are here.

On the face of this borrowing record of Great Britain, if we loan her some more billions, then I will say that her statesmen are the equal of anything that Britain has produced.

Additional Benefits For Disabled Veterans

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. DAVIS of Georgia. Mr. Speaker, I have received from service officer, W. B. Jones of the East Atlanta Post No. 159, American Legion, Atlanta, Ga., a copy of a resolution adopted by the membership of that post on August 4, 1949.

The officers and members of this live post of the American Legion are always alert to render needed service to ill and injured veterans.

Mr. Jones at the same time sent me an article which appeared in the Atlanta Constitution of Thursday, August 4, 1949, describing the plight of one of our veterans who is the holder of the Purple Heart Medal and Ribbon, and who, because of the wounds received by him in World War II, must spend the remainder of his life in a wheel chair. This veteran is Roy Strickland, of 1062 Barton Way, Decatur, Ga.

For the information of members, I am inserting herewith the resolution adopted by East Atlanta Post 159, and the clipping from the Atlanta Constitution.

RESOLUTION

Whereas Public Law 702 provides additional benefits for veterans suffering of spinal cord disease or injury causing paralysis of the legs and lower part of the body: Therefore be it

Resolved, That East Atlanta Post 159, American Legion, Department of Georgia, address the Georgia department executive committee to memoralize the national executive committee to petition the United States Congress to amend Public Law 702 to include all veterans who are paralyzed in the lower limbs and body or loss of both legs from whatever cause if service-connected; and be it further

Resolved, That a copy of this resolution be furnished our Representatives in Washington, D. C.

Unanimously adopted this August 4, 1949.

[From the Atlanta Constitution of August 4, 1949]

HOUSING ACT DENIES AID TO GEORGIA VET

(By Marjory Smith)

A legless Decatur World War II veteran, doomed to spend the rest of his life in a wheel chair, yesterday spoke out for a unique minority group of Georgia heroes who feel the Government is discriminating against them.

Roy Strickland, 37, of 1062 Barton Way, Decatur, took it gamely when his right leg was amputated between the knee and the hip—and when, a year later, his left leg was disarticulated at the hip.

This holder of the Purple Heart Medal and ribbons signifying service at the front in World War campaigns in northern France, the Rhineland, Ardennes, and central Europe was used to dirty jobs.

He received the shrapnel wounds that eventually cost both legs while he was helping pick up bodies of dead comrades in a Graves Registration Division assignment.

But today Strickland resents the indignity of having to crawl about the floor of his Decatur home and of depending upon his wife and mother to lift him from his bed to his wheel chair—especially when only the wording of a disabled veterans' housing bill prevents him from having a home especially equipped for wheel-chair-living

"Strickland and other Georgia veterans are certainly discriminated against in Public Law 702, passed by the Eightieth Congress, a Veterans' Administration rehabilitation worker admitted yesterday.

The VA employee—who declined use of his name and stressed he was speaking on his own, not for the VA—explained the Housing Act is designed to authorize assistance to certain veterans in acquiring especially adapted housing which they require by reason of their service-connected disabilities.

The bill provides that the Government will pay up to 50 percent of the cost of a housing unit designed with ramps and other features planned especially for a wheel-chair-bound patient—for veterans with permanent and total service-connected disability "due to spinal-cord disease or injury with paralysis of the legs and lower part of the body."

Strickland and the VA worker feel the discrimination occurs in the wording set off in quotation marks above.

"Strickland and more Georgia ex-servicemen than the average person dreams are committed to wheel-chair-living for the rest of their days," the VA worker pointed out.

Strickland, a native Atlantan who was a husky truck driver and baseball-playing addict before his double amputation, is too heavy for the two women to lift. He has to wriggle on his stomach from his bed to a small table, then to the floor before he crawls painfully into his wheel chair.

Arms Aid for Europe and a Pacific Defense Pact Important To Stop March of Communism on All Fronts

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 18, 1949

Mr. YOUNG. Mr. Speaker, I support this legislation to provide arms aid for our associate nations in the Atlantic Defense Fact. A cold war is being waged against this Nation by the Soviet Union. It may be that by strengthening the nations of western Europe we can prevent a desperate shooting war.

War with the Soviet Union, Russia, is not inevitable.

If we do not believe that in the countries of western Europe there is a will to resist aggression we are wasting whatever money we vote them for arms aid. My belief is there is a determination to prevent dictatorship, aggression, and Communist infiltration. This Congress will reconvene next January and by late winter or early spring we shall know what progress these European nations are making in coordinating their activities for their own maintenance and for defense. We are told that no unified defense plan has been agreed upon as yet. We should not hitch the cart before the horse. I am convinced we will provide substantial arms aid to these European nations next year, provided they demonstrate a willingness to help themselves. With adoption of the Richards amendment more money than was proposed in this unamended bill is provided for the coming 12 months. We go all the way in arms aid for our allies in this cold war, and I favor that.

I do feel that we in the Congress should have a second look and reexamine this important defense program next session. There must be a coordinated defense program; otherwise we pour vast armaments into France, Luxemburg, and so forth, which the Russians on the march would take over if the French armies were again to throw down their arms and flee as they did when Hitler invaded the low countries.

I voted in favor of the Judd-Lodge amendment to provide $75,000,000 for China and $25,000,000 to southeast Asia. We should battle communism on a global basis.

There is war raging in China. I propose military aid to halt the Red terror in the Far East the same as in western Europe. Of what avail is it to stop the Soviet Union in western Europe if at the same time we do nothing to contain the march of Communist Russia in the Far East. By direct aid to Greece, Turkey, and Italy, we defeated Russia and threw back the Red terror from those areas. I advocate the same measures in China and hope before this legislation passes both bodies of this Congress, authorization for appropriation of at least $100,000,000 will be provided for arms aid to China. Let Chennault's Flying Tigers fly again. Let us save a vast area the same as under the Truman doctrine and Marshall plan we saved Greece and Turkey. If you look at the map of the world, you will see five vast areas—The Soviet Union, the United States plus Canada and Mexico, China, Australia, and Brazil. Please bear in mind at all times that a Pacific defense pact against Soviet aggression is just as important as an Atlantic Defense Pact—probably more important. To stop the march of communism, we must provide for the armed defense in China and the southeast Pacific as well as for western Europe.

Arms aid for Europe and a Pacific defense pact is important—the march of communism must be stopped on all fronts in this cold war waged against us by Soviet dictatorship.

Basing Point Bill S. 1008 Threat to Small Business, Drug Topics Says—Robinson-Patman Act Periled—Any Threat to Robinson-Patman Act Looked Upon With Great Disfavor by Retail Druggists

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. PATMAN. Mr. Speaker, Drug Topics, the national newspaper for retail druggists, on its editorial page under date of July 18, 1949, describes the peril to small business through the destruction

of the Robinson-Patman Act if the passage of S. 1008 is finally accomplished.

The editorial records the fact that the Robinson-Patman Act was passed so as to assure a high degree of equality in the distribution field. Further, that the act was designed to outlaw inside discounts, rebates, kick-backs, under-the-table hand-outs, and discriminatory allowances of all kinds.

The Drug Topics' editorial is short but truly summarizes the power for good embodied in this law. Aided by decisions of the courts, the Robinson-Patman Act, as the editorial points out, has solved many of the problems facing retail distribution, has provided equality of opportunity in many retail fields, and, as emphasized by the editorial, has brought price more out in the open than ever before.

The editorial follows:

ROBINSON-PATMAN ACT PERILED

There seems good reason to fear that the passage of S. 1008, now pending in the House of Representatives, would endanger, if not destroy, the Robinson-Patman Act. The National Association of Retail Druggists has made a study of the terms of the measure and is convinced that it would pull the props from under the act.

The NARD has, therefore, called upon its members to write their Senators and Congressmen, urging them to kill the bill. Retail pharmacists should comply promptly, as S. 1008 has passed the Senate and will soon come to a vote in the House. Members of Congress are alert to views from home in matters such as this.

The Robinson-Patman Act, let it be remembered, was passed some years ago, so as to assure a high degree of equality in the distributional field. The act, sponsored by the NARD, was designed to outlaw inside discounts, rebates, kickbacks, under the table handouts, and discriminatory allowances of all kinds.

As these special favors were always granted on an unfair and hidden basis, Congress demanded that they be discontinued or else granted to all on equal terms. The Robinson-Patman Act was dedicated to the principle that there should be equality of treatment to all similarly situated.

The act has solved many of the problems facing retail distribution. It has killed off the nefarious practice of favoring one segment of distribution at the expense of competing segments. It has provided equality of opportunity in many retail fields. Price, as determined by the terms of the act, is more equitable, more fair, more out in the open than ever before.

Any threat to the Robinson-Patman Act must be looked upon as a threat to distribution as a whole, a truth the NARD is seeking to drive home to all retail pharmacists at this time.

Hal S. Dumas

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. DAVIS of Georgia. Mr. Speaker, in the latest issue of the magazine Dixie Business, Col. Hubert F. Lee, the editor, has given a profile of Hal S. Dumas of Atlanta, Ga., one of the South's outstanding business leaders.

Mr. Dumas' career is a splendid example of the success which may be attained under our free enterprise system by an American who has energy, ambition, and ability.

Under leave previously granted, I insert this article herewith:

A PROFILE OF HAL S. DUMAS—A TOP LEADER OF THE SOUTH

(By Hubert F. Lee)

An editor of the 1911 Auburn Yearbook once wrote of Hal Dumas: "If he doesn't raise peaches, he will be president of the American Telephone Co."

Thirty-two years later, Hal S. Dumas, a one-time electrical engineering student who partially financed his college education by managing a peach orchard, was elected to the presidency of the Southern Bell Telephone Co., proving that the schoolboy editor was on the right track.

Undoubtedly a partial factor in Mr. Dumas' success was and still is a very healthy philosophy about the section of the country in which he has lived. "I thought then," he has said, "as I do now, that the greatest opportunity a man could have is in the South."

Mr. Dumas' background helped to formulate that philosophy. His father, W. J. Dumas, was a Georgian plantation owner and a captain in the Confederate Army. His mother, Ida Anderson Dumas, was a native of Springfield, Tenn. Hal was born in Macon, Ga., and he lived there only a few months before his parents moved to Monroe County.

His ability as an administrator became apparent at an early age. While still a student at college, Hal utilized his spare time by working in a peach orchard in order to help with his expenses. Proving himself quite proficient at handling peaches, he soon became manager of the orchard.

"We had a good season, and things went well until my service as manager of the orchard was almost at an end," he recalls today, "and then, the owner found out how young I was and almost fired me. He was horrified that he had placed his orchard in the hands of such a young man."

Upon completion of his college education, and with that same faith in the future of the South, Mr. Dumas, then only 18 years of age, accepted a position with Southern Bell in preference to several other engineering jobs offered to him outside of this general region. After completion of a special training course and several months of practical work in Atlanta and Birmingham, he was appointed suburban district traffic manager at Birmingham in 1913.

Returning to Atlanta, he advanced steadily through the ranks to positions of increasing responsibility. In 1938, he was appointed vice president in charge of operations. And on January 1, 1943, he became president of the Southern Bell Telephone Co.

Although actively engaged in directing the affairs of Southern Bell, Mr. Dumas still finds time to take part in public-spirited enterprises and is an outstanding civic leader. He is active in the Atlanta Rotary Club, chamber of commerce, community fund, Red Cross, and other similar public-spirited organizations. He is a trustee of the community fund, the YMCA, and the YWCA. He is a member of the board of directors of the First National Bank, a member of St. Luke's Episcopal Church and of the American Legion.

As president of a company which is the largest single industrial enterprise in the South, Mr. Dumas has been a part of the rapid expansion of Dixie's industry. His own company he may point to as a barometer for the South's economic future. The rate of growth of telephones in the nine Southern States which Southern Bell serves is about twice that of the rest of the Nation.

And within the region served by Southern Bell, Mr. Dumas and fellow officials may note with pride their company's immediate progress. Since 1940, telephones in service have more than doubled, and in less than 8 years, Southern Bell has grown more than in the previous 61 years of its history.

At the end of 1940, telephones in service numbered approximately 1,350,000. Today there are 3,000,000 in service. Also, at the end of 1940, there were 23,856 Southern Bell employees. Since then the number has increased to more than 51,000.

So great have been the demands for telephone service throughout Dixie that Southern Bell in every State has built new facilities requiring vast amounts of new capital which it has brought into this region. Shortly after VJ-day, the company, under the administration of Mr. Dumas, announced that it would spend at least $300,000,000 in providing new facilities to meet the requirements of the South within a 3-year period. It is symbolic both of Southern Bell's faith in the region, and of its energetic determination and action to back up that faith with works, that up to the spring of 1949, the company already has spent more than $400,000,000 on the largest improvement and expansion program in Southern Bell history. To raise the funds to finance the construction necessary to meet the South's continuing demands for telephone service, Mr. Dumas has pointed out that Southern Bell must be financially strong. It is important to the public that the company remain so, in order that Southern Bell may continue to answer the demand of a vital southern market, which Mr. Dumas feels to be one of the most important in the Nation.

In a recent meeting of the Atlanta Lions Club, Mr. Dumas said: "The South has been looking forward for years to that day in the golden future when its hour would strike; that day is no longer in the future, it is here right now."

And since 1911, when Hal Dumas declared his faith in the South, cold facts have proved that he, like the Auburn Yearbook editor, was on the right track.

Are Eggs To Cause Marketing Troubles and Financial Losses to the United States Government?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the poultry industry is one of the largest farm enterprises in our country. In dollar value its importance is exceeded only by pork, beef and milk production. The farm value of eggs in 1948 was over $2,000,000,000, and with the poultry meat value would indicate a $3,000,000,000 industry.

The United States egg-production dollar value for the calendar years 1940 to 1949, as compiled by the Bureau of Agricultural Economics of the United

States Department of Agriculture, is as follows:

	Amount	Dozens	Price
			Cents
1940	$588,440,000	3,629,000,000	18.0
1941	815,369,000	3,828,000,000	23.5
1942	1,206,904,000	4,430,000,000	30.0
1943	1,681,951,000	4,972,000,000	37.1
1944	1,580,547,000	5,305,000,000	32.5
1945	1,752,137,000	5,060,000,000	37.7
1946	1,737,640,000	5,030,000,000	37.5
1947	2,079,846,000	4,604,000,000	45.3
1948	2,162,940,000	4,597,000,000	47.2

The United States egg exports as compiled by the Foreign Agricultural Relations of the United States Department of Agriculture, is as follows:

1940	$1,133,000
1941	46,751,000
1942	163,278,000
1943	270,070,000
1944	302,592,000
1945	188,944,000
1946	154,043,000
1947	99,184,000
1948	46 336,000

You will note that the exports of eggs in 1948 were only one-sixth of the exports in 1944. The imports are small being a little over $1,000,000 in value in both 1947 and 1948.

The following is a copy of an official letter, which I have permission to include in the RECORD:

AUGUST 6, 1949.

Hon. ELMER THOMAS,
Chairman, Agriculture and Forestry Committee,
United States Senate.

DEAR SENATOR: I have your letter of July 28 and greatly appreciate your expression of desire to work closely with the Department of Agriculture in developing sound price-support legislation. You know, I am sure, that we want to cooperate fully with congressional committees at all times.

In your letter you also comment on price support programs for eggs and suggest certain changes in methods of operation. Because we are deeply concerned about the whole egg situation and the possibilities of serious trouble in carrying out mandatory price supports in the months and years ahead, I should like to outline some of the outstanding facts of this situation before taking up your specific suggestions. You and other Members of Congress are, of course, equally concerned about the practicability of price-support operations, and I feel that the essential facts should be summarized for your review.

Every year since 1946, the Department has been required to carry out substantial egg price-support operations. Early in this period, procurement for foreign supply helped the general situation. In recent years, however, direct price-support operations on a material scale have been needed. And these price-support operations have necessarily been based on removing enough eggs from the domestic market to maintain prices at the mandatory 90 percent of parity.

In 1946 slightly more than 10,000,000 cases of eggs were purchased. Fortunately, outlets were found which reflected full cost for this total supply, and there was no loss to the Department.

More than 9,000,000 cases of eggs were purchased again in 1947. Market outlets were found for about one-third at full cost. The remaining two-thirds were distributed through section 32 fund outlets, commercial companies for export, relief organizations, or other Government agencies for relief feeding in Europe. Losses to the Commodity Credit Corporation on 1947 support operations totaled about $26,000,000. About $26,000,000 of section 32 funds were also spent in moving eggs acquired that year, or a total of around $52,000,000 for the year's operations.

Support operations were again necessary in 1948. A total of 2,800,000 cases were bought. The Commodity Credit Corporation continues to hold the equivalent of about 1,600,000 cases of these 1948 stocks. Those that have been moved have gone into special domestic outlets under section 32 programs, or have been exported under heavy subsidy, running as high as 50 percent of the cost.

Thus far in 1949, it has been necessary to remove 5,500,000 cases from the domestic market in carrying out mandatory price supports. Purchases are continuing at the rate of about 100,000 cases a week, and thus far in 1949 egg prices have reflected 90 percent of parity. It has so far been possible to dispose of only 600,000 cases of this year's purchases, even with a 50-percent subsidy.

This lack of outlets for egg price support stocks, in spite of every effort we can put forth to find and develop them, is one of the most serious aspects of the problem. At the present time, the Commodity Credit Corporation has on hand 16,000,000 pounds of dried whole eggs carried over from 1948 operations. Added to these are about 49,000,000 pounds from 1949 purchases, as of August 1. It is estimated that an additional 10,000,000 pounds will have to be bought during the rest of this year, in order to maintain prices at the mandatory levels. This total of dried egg stocks will reflect a cost to the Commodity Credit Corporation of about $100,000,000.

Serious as this situation is, the prospects for the year ahead are still more discouraging. Our poultry specialists anticipate from 8 to 10 percent greater egg production in 1950 than in the current year. If this happens, even if consumption stays at present high levels, we could be faced with having to spend from $150,000,000 to $200,000,000 in egg price support procurement in 1950—if we are operating a mandatory 90-percent support program.

This is what we will be up against if H. R. 5617, approved by the House of Representatives, should be the controlling legislation for next year.

In view of these circumstances, I urgently request that you and your committee give serious consideration to agricultural legislation which will provide program authorizations to permit the development of practical operating procedures—offering needed protection for our millions of poultry producers and at the same time giving consumers an abundant supply of eggs at fair prices. It would be tragic if we were left saddled with the restrictive provisions of H. R. 5617, with a mandatory 90-percent support level and inadequate program operating authority.

Before the war our people ate a per capita average of about 298 eggs annually. In the postwar years the per capita average had been around 380 eggs, and it is continuing at that high level this year. Therefore, unless a drastic improvement in average egg quality occurs or unless egg prices to consumers can be lowered, we cannot expect any material increase in domestic consumption.

In your July 28 letter you suggest the desirability of switching egg price-support purchases from dried eggs to whole shell eggs, and then marketing these shell eggs in "deficit" areas. There are several points that need to be considered with great care in this connection.

In the first place, the eggs that the Commodity Credit Corporation is buying in dried form for price support are not the same product which is sold as shell eggs in the retail store. In the Midwest, where our purchases of dried eggs are being made, farmers usually sell their eggs as "nest run" or as they are gathered. At this season of the year the average quality is low although the eggs are wholesome and suitable for use in manufactured food products. Probably not more than four eggs out of each dozen sold by farmers can be sold to housewives in large eastern cities as high quality shell eggs. Another one or two eggs per dozen are unfit for any use for a variety of reasons. The remaining six or seven eggs are best used in dried or frozen form.

Thus, it can readily be seen that the cost of the few good eggs would be relatively high when shipped to deficit areas in the East, even when the producer is paid the support price of 35 cents a dozen. This is the reason that we continue to be offered surplus eggs in the Midwest at 35 cents a dozen while shell eggs of good quality from the same area are wholesaling for as much as 60 cents a dozen in New York City. After adding the cost of wholesaling, candling, cartoning, and retailing, it is not surprising that retail prices appear relatively high.

Quality shell eggs are enjoying an excellent demand at good prices. As a matter of fact, there is no surplus of good quality shell eggs. The type of egg we are purchasing requires direct price support and their purchase is serving to stabilize the average price of all eggs at the required levels. We have geared in our support operations where they were needed, and where they would do the most good in meeting our mandatory requirement to support the general egg market.

As an illustration of the need for support purchases where we have been making them, I have noted that prices to producers in Oklahoma averaged only 36.5 cents a dozen in July, in spite of the fact that the Commodity Credit Corp. bought the equivalent of 48,738 cases of eggs from driers in Oklahoma alone during that month. Had these eggs been of high quality, price support purchases would have been unnecessary inasmuch as substantial premiums are being paid for high quality eggs in many parts of the country.

It would not be practicable to shift purchases to shell eggs for another reason. If these eggs should be resold in "deficit" areas as you have suggested, the effect would be to lower producer prices in the deficit areas by as much as they were raised in the surplus area where originally purchased. It would obviously, then, be extremely difficult, if not impossible, to meet our mandatory support obligations because the price-enhancing effects of purchases in one part of the country would be offset by price-depressing effects of heavy marketings in other parts of the country. As I have pointed out, per capita domestic consumption is already so high that there does not seem to be much room to increase the over-all market for shell eggs under present conditions.

Dried eggs can be stored efficiently and inexpensively for a considerable time. Shell eggs cannot, especially the quality of eggs we have been buying under the support program.

If it were possible and practicable to meet the egg situation through purchase of shell eggs and the remarketing of these in other areas where there was greater demand or through expansion of our export market, we would of course be eager to follow these courses. But neither of them appears feasible at this time. We shall, however, continue to explore all possibilities along these lines, and shall be very glad indeed to work with you in every effort to develop more effective program procedures.

In my opinion, the establishment of a special marketing division or agency, as you have proposed, would not be of material assistance in disposing of products acquired

under the price-support program. We are already organized to do everything practicable along this line. The Production and Marketing Administration, which handles our action programs of this kind, is set up along commodity lines. Each commodity branch of this agency has specialists who work constantly on the job of finding disposal outlets for our price-support inventories. These men know the trade, they know the various outlets, and they are continuously developing plans to move our inventory supplies on any practicable basis. Working right in the administrative units which handle procurement and other price-support operations, they are in close touch with the situation at all times and are in the best position to direct disposal.

In addition to the basic activities of these commodity specialists, PMA has effectively organized functional branches which concentrate on over-all phases of this disposal problem. Such branches as the Price Support and Foreign Supply Branch are constantly seeking foreign outlets for our surpluses, through commercial exports or foreign relief programs. Also, the Food Distribution Programs Branch directs the flow of surplus food to outlets such as school-lunch programs, public institutions, and individuals certified by welfare agencies as eligible for relief. It also carries out an aggressive program to encourage the increased sale and distribution of surplus foods through normal trade channels. In addition, a special interagency food committee, which has been very helpful in aiding the disposal of surpluses in recent years, is still in effect.

In view of this situation, and the organizational units now available to attack the surplus disposal problem, I do not think the creation of an additional special division or agency would serve a useful purpose. I agree entirely that increasingly effective efforts must be put behind the job of finding outlets for these surpluses, but the answer does not seem to lie in further administrative organization.

Knowing and appreciating your great concern with sound price support provisions, I have outlined the general egg situation broadly. Our administrative people and commodity specialists stand ready at all times to furnish more detailed information, and to cooperate with your committee fully as you work out the difficult and tremendously important details of legislation affecting this question.

Sincerely yours,

CHARLES F. BRANNAN, *Secretary.*

The following is page 2 of the Poultry and Egg Situation, a United States Department of Agriculture publication:

The poultry and egg situation at a glance, July to August 1949

Item	Unit	Month	Average 1938–47	1948	1949	Comments on current situation
EGGS						
Farm production	Million dozen	June	391.4	416.8	408.8	Will exceed last year when 1949 pullets are added to laying flock.

Chicks placed in 7 broiler areas.[1]	Million	June		24.0	31.2	

[1] 5 weekly periods centered on June.

I do not care to go into a detailed discussion of this egg situation at this time. There are, however, several factors to think through.

First. Are the consumers allowed any price advantages when Midwest eggs are selling at support prices, or 35 cents per dozen?

Second. Will an egg-stamp plan be advisable to provide fresh eggs for institutions and low-income groups?

Third. The loss to the Government up to this time has not been over 1 cent per dozen, but will these losses increase?

Fourth. While a loss of 1 cent per dozen compares rather favorably with the 50-cents-per-bushel loss on potatoes, is it not advisable to correct this situation when it can be efficiently corrected?

Fifth. Why are the losses incurred when the storage stocks of frozen eggs and shell eggs are the lowest of any year since 1916?

Sixth. If losses and waste are not prevented is not the whole support program in jeopardy?

Seventh. Will not the consumer and taxpayer act to end supports unless the programs are administered for the benefit of all of the people?

Eighth. Is an egg-stamp plan a desirable approach?

I have hoped that we could have hearings on the egg situation but time has evidently not permitted.

Loss of Independence Is Price for Security

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Chief Justice Marvin B. Rossenberry, of the Supreme Court of the State of Wisconsin, has written a challenging article which appeared in the Dairyland News of August 15, 1949. Under leave to extend my remarks I am including the article:

IS SECURITY WORTH PRICE OF LOST INDEPENDENCE?

On March 23, 1775, in Richmond, in the Colony of Virginia, Patrick Henry made an eloquent, impassioned, and moving speech in support of a resolution and closed it with the words which have since become famous: "Give me liberty or give me death."

What did Patrick Henry mean by the word "liberty?" He was free to come and go and speak as he pleased. He did not mean the kind of liberty that Robinson Crusoe enjoyed on his island where he had to provide his own food, clothing, and shelter, or die.

CATALOG OF WRONGS

Eleven years later in the Declaration of Independence we find a catalog of the wrongs done to the Colonies by the mother country. What Patrick Henry was talking about was the right of the Colony of Virginia to govern itself and to be free from the regulations which the mother country had imposed upon it. Most of us think that the cause of the

Revolution was taxation without representation. That was merely one of the causes and not in my opinion the principal one.

The Revolutionary War was fought and won, and in 1789 the Constitution of the United States was adopted. Patrick Henry bitterly opposed its adoption because he felt that it deprived the Colony States of their liberties and made them subject to a central government. Down to the close of the Civil War the rights of the States under the Constitution were respected and carefully guarded. Commencing with the enactment of the interstate commerce law in 1887 the fears of Patrick Henry have been fully realized.

CONGRESS LIMITED

In the exercise of the powers granted to it, the Congress has not hesitated to invade the powers reserved to the States by the tenth amendment to the Constitution which provided: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

States no longer have the power to regulate their own affairs. Congress is not entirely to blame because the States in consideration of grants in aid have been willing to conform to regulations by Congress—a new kind of cajolery invented to evade the limitations which the Constitution imposed upon Federal power.

By section 8 of the Constitution Congress is given power to regulate commerce with foreign nations and among the States and with the Indian tribes. For more than 100 years it was believed that this clause related to the transportation of goods from one State to another. However, the increasing complexities of our economy created a demand for the exercise of the powers of Congress beyond regulating transportation of goods. State lines became a hindrance to trade.

I call your attention to two cases which have been decided within the last decade, in which the Supreme Court has approved a vast extension of the regulatory powers of Congress.

1. The first of these is *United States* v. *Darby*, decided in 1940. This was a labor case and involved the Fair Labor Standards Act of 1938, which provided for fixing minimum wages and maximum hours for employees engaged in the production of goods for interstate commerce with increased compensation for overtime.

On behalf of the defendant it was argued that the production and manufacture of goods being wholly within a State, Congress had no jurisdiction to regulate the process of production and manufacture, that the jurisdiction for such regulation was within the power of the State. This was in accord with the original concept of the people of the country in regard to the power of Congress under the interstate commerce clause. The act forbade the shipment of goods produced under some substandard labor conditions which were prescribed by the act. Darby argued that this was a State power and not within the jurisdiction of Congress.

Justice Stone, later Chief Justice of the Supreme Court, wrote the opinion. Speaking for the Court he said:

"The power of Congress over interstate commerce is not confined to the regulation of commerce among the States. It extends to those activities intrastate which so affect interstate commerce or the exercise of the power of Congress over it as to make regulation of them appropriate means to attainment of a legitimate end, the exercise of the granted power of Congress to regulate interstate commerce."

Here was a straight-out declaration that in regulating interstate commerce Congress was not confined to transactions between States but had jurisdiction over those intrastate activities which affected interstate commerce. In practice this extended the power of Congress.

2. I now call your attention to the case of *Wickard* vs. *Filburn*, decided in the Supreme Court of the United States in 1942. Filburn was an Ohio farmer.

Under the Agricultural Adjustment Act of 1938 the Federal authorities had established a marketing quota for his farm. Under this quota he could raise 11.1 acres of wheat. He sowed 23 acres, and harvested from the excess acreage of 11.9 acres 239 bushels, which under the act subjected him to a penalty of 49 cents a bushel, or $117.11. Filburn did not pay the penalty, did not store the excess under regulations prescribed by the Secretary of Agriculture, and sought an injunction prohibiting the authorities from enforcing the penalty imposed by the act.

Filburn for many years had operated a small farm, maintaining a herd of dairy cattle, selling milk, raising poultry, and selling poultry and eggs. It had been his practice to raise a small acreage of winter wheat, sown in the fall and harvested the following July, to sell a portion of the crop, to feed part to poultry and livestock on the farm, some of which was sold, to use some in making flour for home consumption, and to keep the remainder for the next seeding. What he intended to do with this particular crop did not appear.

On behalf of Filburn it was argued that the act was a regulation of the production and consumption of wheat; that such activities are beyond the reach of congressional power under the commerce clause, since they are local in character and their effects upon interstate commerce are, at most, indirect. The Government contended that the statute regulates neither production nor consumption, but only marketing, and in the alternative that if the act does not go beyond the regulation of marketing it is sustainable as a necessary and proper implementation of the power of Congress over interstate commerce.

You may wonder how the Court arrived at this startling conclusion. After citing many cases the Court said:

"One of the primary purposes of the act in question was to increase the market price of wheat and to that end to limit the volume thereof that could affect the market. It can hardly be denied that a factor of such volume and variability as home-consumed wheat would have a substantial influence upon price and market conditions. This may arise because being in marketable condition such wheat overhangs the market and, if induced by rising prices, tends to flow into the market and check price increases, but if we assume that it is never marketed it supplies a need of the man who grew it which would otherwise be reflected by purchase in the open market. Home-grown wheat in this sense competes with wheat in commerce."

If the doctrine of these cases is followed out logically, practically all the activities connected with production, manufacture, and transportation are subject to regulation under the interstate commerce clause. While of course the constitutional guaranties must be observed, the power of the Interstate Commerce Commission over the life of the people of this country is practically unlimited. Yet these decisions have passed unnoticed. So far as I am aware there has been no protest, but this is only the beginning.

The National Labor Relations Act is based upon the power of Congress to regulate interstate commerce, and if every activity which affects interstate commerce is subject to regulation by Congress, then the shoemaker who pounds pegs made in Maine into leather tanned in Pennsylvania with a hammer manufactured in Illinois, is engaged in interstate commerce.

TRADE LIBERTY FOR GRANTS

In this connection we should consider the recent proposal of the Secretary of Agriculture to tax the whole country to make up a decline in the price of foods which is simply a proposition to take from one group of citizens and give to another. According to Wisconsin Taxpayers Alliance for the year 1948 Wisconsin paid $779,500,000 in the shape of taxes into the Treasury of the United States. It received back by way of grants-in-aid the sum of $99,936,367.

If Wisconsin had been required to pay only so much tax to the Federal Government as was reasonably necessary to carry on the governmental processes we in Wisconsin would have no difficulty today in finding funds for State activities, such as providing for the State university, housing the mentally disturbed, and providing adequate care for the wards of the State.

Transfer of Land by Connecticut to Ohio

EXTENSION OF REMARKS

OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, August 22 (legislative day of Thursday, June 2), 1949

Mr. BALDWIN. Mr. President, when Charles II, King of England, granted the charter to the Colony of Connecticut, in 1662, he bounded the Colony of Connecticut, as set forth in the charter, on the west by the "ocean," not knowing how far off the Pacific Ocean was at that time. As a result of that charter Connecticut claimed a part of the State of Ohio, and settled a part of that State with people who went from Connecticut to make their new homes in what afterwards became Ohio. Sometime after that Connecticut was reimbursed for giving up her claim to lands in Ohio, and the western boundary of the State was fixed at the line of the State of New York, as it is today.

There has come to my attention a little aftermath of those interesting historic facts. It seemed that before this claim was settled, and while Ohio was still a part of the State of Connecticut, a small piece of land was deeded to a township and set aside for school purposes. When the land ceased to be used further as a school, under the deed it reverted to the original grantor, and it became necessary, in order to get title transferred to the State of Ohio, for the General Assembly of the State of Connecticut to direct the treasurer of the State to deed this little acre of land to the State of Ohio.

The past State commander of the Disabled American Veterans, Mr. Vincent Uricchio, of Hartford, was given the commission of delivering the deed to the Governor of Ohio, and there was a very touching little ceremony held in connection with the delivery of the deed.

I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me by the present department commander of the Disabled

American Veterans, Mr. Russell E. Sullivan, transmitting a news item which was carried by the Associated Press under a Columbus, Ohio, date line, setting forth the details of this interesting historic ceremony.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

DISABLED AMERICAN VETERANS,
DEPARTMENT OF CONNECTICUT, INC.,
West Haven, August 19, 1949.

Hon. RAYMOND E. BALDWIN,
United States Senator,
Washington, D. C.

DEAR SENATOR BALDWIN: Following you in the CONGRESSIONAL RECORD, I have noted your occasional reference to Ohio having been a part of Connecticut.

As you know, State Treasurer Joseph A. Adorno steered through the general assembly a bill which granted title to an acre of land that Connecticut had in Ohio.

Through Mr. Adorno's cooperation it was possible for the Connecticut delegation to the national convention of the Disabled American Veterans to act as the bearer of the deed.

I am enclosing a clipping from the New Haven Register which makes mention of the matter.

The Voice of America has beamed this matter overseas as an outstanding example of the cooperation that exists between the individual States here in the United States.

I think, in view of your outstanding cooperation with Ohio's distinguished Senator, that a matter such as this is most suitable for use as an extension of your remarks in the RECORD.

If you do see fit to use it, the DAV would appreciate mention of the fact that their representatives were in Ohio at their national convention, which fact has been omitted in the enclosed article.

Very sincerely yours,
RUSSELL E. SULLIVAN,
Department Commander.

[From the New Haven Register of August 19, 1949]

CONNECTICUT MAKES FORMAL TRANSFER OF ITS OHIO ACRE

COLUMBUS, OHIO, August 19.—The State of Connecticut completed yesterday the transfer of its Ohio acre to the Jackson Township Board of Education in Paulding County.

The transfer, by quitclaim deed, took place in the office of Gov. Frank J. Lausche.

The presentation was made by a delegation headed by Mr. and Mrs. Vincent Uricchio, of Hartford, Conn. Uricchio is outgoing State commander of the Disabled American Veterans. Also in the delegation were Mrs. Kathleen O. O'Connell, of Bridgeport, Conn., State commander of the DAV Auxiliary, and Mrs. Stella Barro, of Bridgeport, also a DAV Auxiliary member.

Uricchio remarked as he made the presentation:

It's a sorry day for the State of Ohio to lose its birthright in the State of Connecticut. It presents, however, a classic example of the friendship between States as contrasted with the bickering between the states of Europe.

To which Governor Lausche replied:

"This is a separation of land only; it indicates no separation of friendship between the two States."

The acre deeded to the township today was land set aside for school purposes when the area was owned by Connecticut. Connecticut had stipulated, however, that should the land ever fall into disuse for school purposes it should revert to the State of Connecticut.

What Price Potatoes

EXTENSION OF REMARKS
OF

HON. CHARLES B. DEANE

OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. DEANE. Mr. Speaker, the old "spud," that never-to-be-forgotten item on every Army menu, is in the news. Within recent days John W. Ball, Washington Post reporter, wrote a series of five articles on the Government's potato price-support program as it relates to Aroostook County, in the State of Maine. These stories reveal that the Government paid out $65,000,000 last year to hold up potato prices in this one county. The stories by Mr. Ball indicated that one grower, and there may have been others, received checks of approximately half a million dollars for potatoes sold to the Commodity Credit Corporation, and that 31 farmers obtained more than $100,000.

It is recognized, however, Mr. Speaker, that the production cost reduced the returns to the owners and growers, since the pickers' earnings averaged from $20 to $25 per day.

Moreover, it is expected that the 1949 potato crop will be less than the 1948 crop since the support price has been cut from 90 to 60 percent of parity and acreage allotments have also been reduced. However, the potato support program is expected to cost over $50,000,000 during 1949.

During the time that this series of articles was appearing in the Washington Post, Mr. Ralph S. Trigg, administrator of the Production and Marketing Administration and President of the Commodity Credit Corporation, made the principal address at the Potato Blossom Festival at Fort Fairfield in Aroostook County, Maine, on August 15, 1949, and I ask leave, Mr. Speaker, to include as a part of my remarks the address delivered by Mr. Trigg and point out to my colleagues this significant statement made by the able administrator of the Production and Marketing Administration: He stated: "It is perfectly obvious that the sound answer does not lie in unlimited purchases to support the market. We need a better approach and the authorization to develop such an approach, if we are to avoid a program collapse which could threaten the whole farm price support structure."

It is Mr. Trigg's opinion that the whole price support program is threatened by the extravagance of potato purchases. It is to be hoped that before this Congress adjourns, the authorization to develop a better approach as indicated by Mr. Trigg will be enacted into law by the Senate and approved by the House. If the Congress fails, it certainly will not be the fault of the leadership of the House of Representatives in the Eighty-first Congress since the House attempted and failed some days ago to initiate legislation that would correct some of the problems of the support program. Neither can we place the responsibility on the Secretary of Agriculture or the officials of the Commodity Credit Corporation who are charged with the duties of administering the farm-support program.

Mr. Trigg's address follows:

I am very happy to be in Aroostook County today, visiting this beautiful northern country and spending a little time with representative Maine farmers at the Potato Blossom Festival. This section is world famous as a potato-producing area, and after visiting here today it is easy to see why this is so. You have the community spirit and the leadership which have meant constantly increasing production efficiency.

In spite of this progress, however, there are problems in connection with potato production and marketing which need very careful attention. This is not the time or occasion to go into detail of possible solution, but I do want to mention some of the obvious facts of the general situation.

I need not remind you that Government potato price-support programs have been costing far too much in recent years. Through a combination of factors—including lower price-support levels and lower yields in some areas—the total cost this year should be far below the record cost on the 1948 crop. But it is perfectly clear that we do not yet have the answer for our basic problems. It is harder and harder to find disposal outlets for surpluses. Program costs are still too high. We simply cannot go on indefinitely with any program which results in excessive waste, and which costs the taxpayers of the country too much.

You Maine producers know the underlying problems well. You know that per acre yields have increased greatly throughout the country, so that even with some adjustment in acreage, production can still outrun effective demand. Your total production in Maine has tripled in the last 25 years, and competition from other areas has increased.

You also know that per capita potato consumption in the United States has been dropping steadily, shrinking potential market outlets. Our people ate about 153 pounds of potatoes each in 1920. In 1948, consumption per person was down to 108 pounds.

This is a tough situation. There is no easy answer. Maine's total commercial shipment of 1948 crop potatoes were only about 33,000 carlots—the lowest figure since 1922. At present Maine yields, it would be possible to produce this many potatoes on about 90,000 acres. This would be the lowest acreage since the 1890's, when rail transportation became generally available for northern Maine. Any reduction to this level would mean a major revolution in the economy of Aroostook County. For comparison, the 1949 Maine commercial acreage goal is around 141,000 acres.

Some of the factors involved in the commercial marketing of the 1948 Maine crop may have been of a more or less temporary nature. Some may be here to stay, unless it is possible for the industry to do something to correct the 1948 situation so that Maine will be in position to continue producing in the volume it has for the past 25 years.

In short, no matter what sort of Government program may be developed, it seems obvious that in the long run Maine potato producers will have to market more or produce less.

I am not suggesting a return to the laissez faire, do-nothing policies of the 1920's and before. We all remember what happened too often in those days. Big potato crops one year and prices so low that they would not pay the costs of digging and shipping, followed by short crops, and unreasonably high prices for consumers.

We have come a long way in our national thinking about farm programs since those days. We know now that we cannot have a prosperous national economy without a prosperous agriculture. We know that sound farm programs, including price-support programs, are essential for a prosperous agriculture.

Farmers have been relatively well off in recent years. Good prices and good crops have added up to good incomes. Altogether the American farmer has lately been a $30,000,000,000 customer for American business. Looked at another way, Secretary of Agriculture Brannan recently estimated that farm spending this year pays the salaries for nearly nine and one-half million jobs in other industries.

We can take a large measure of satisfaction in this, but we must never take it for granted. American agriculture has seen some hard times in the not too far distant past, and it can see hard times again if we are not alert to the need for measures to prevent collapse. And these preventive measures are as important for the rest of the economy as they are for agriculture itself.

A study made back in the middle thirties offered a striking illustration of this interdependence of farming and industry. From the low point of the depression years, farm income had come back a good ways by 1935. The forerunners of our present Government programs had been put into operation, and farm prices had rallied. The study I speak of was made to determine the effect of this increased buying power on sales by business and industry. This was the story, in brief: From 1933 until 1935, shipments of all manufactured products from the 16 leading industrial States, including New England, had increased by 60 percent. But during this same period the shipments of manufactured products used primarily by farmers had increased by 165 percent.

There has been evidence of a different kind recently. When farm prices started down from their high point last year, buying of equipment by farmers slacked off immediately. The Department of Agriculture has records of numerous instances where farmers canceled orders for tractors and other farm machinery when farm prices started to drop.

There is no doubt about the fact that farm buying power is of direct concern to the whole economy. Further, the effects of lowered buying by farmers are felt quickly. At the same time, it is equally true that the best assurance of good markets and good prices for farmers is high employment at good wages for workers in industry. It's a two-way street. Industry needs farm markets; the farmer needs customers among those who work in industry.

This same two-way-street principle holds for farm programs, also. We need constant development and strengthening to meet changing conditions and changing needs. And in developing and carrying out such programs, the agricultural producer must play his full part. It is not enough for Congress to authorize farm programs, and for an agency in Washington to outline the details and make them available. The farmer himself must help make the programs work.

I can illustrate this point by a current situation. Price support programs, at the levels authorized by Congress, are in effect for a number of farm commodities. Among these are several for which the open market price is now below this support level. Wheat and corn are good examples. This means that enough farmers are marketing outside the price-support structure to force the market price down. They either have not bothered to get the storage facilities necessary to take advantage of price-support loans on storable commodities, or they have been willing to sell below the support level for reasons of their own.

There is nothing that we can do about such a situation, except to make the support programs easily available and to urge farmers to take advantage of them. This we have done, and are continuing to do. Beyond that farmers must make their own contribution.

The same thing holds for the price-support programs for perishable commodities. Producers cannot expect the Government to do it all. Any sound price-support action must be based upon the condition that farmers themselves will go along with necessary adjustments to make the programs workable, even if this means cutting down on the acreage they would like to plant.

Getting back to potatoes for a moment, Maine producers operated under a marketing order and agreement program to help meet the problem of extreme surpluses in 1948. So did some of the other leading areas, but in spite of this fact the Commodity Credit Corporation had to buy far too many potatoes. You know, of course, that we bought $70,000,000 worth of surplus 1948-crop potatoes here in Maine alone. In fact, less than half of your potatoes went to normal markets; the Government provided the market outlet for the rest. When you consider the increasing difficulty and cost of finding diversion uses for these potatoes, it is perfectly obvious that the sound answer does not lie in unlimited purchases to support the market. We need a much better approach, and the authorization to develop such an approach, if we are to avoid a program collapse which could threaten the whole farm price-support structure.

When faced with farm surpluses, it is natural to think of widening the markets—trying to sell more of the crop. This is as it should be. We should never turn to production adjustments until we have exhausted all means of distribution, both at home and abroad.

The foreign market obviously does not offer much hope for potatoes. It is going to offer a decreasing outlet for some of the commodities we have been shipping abroad in large volume during recent years. Food exports from the United States have set a new record every year since the war. Last year we shipped out well over 19,000,000 tons, and one of my assistants tells me that much food would fill a freight train stretching all the way from San Francisco up here to Aroostook County. By way of contrast, our food exports during the 5 years just before the war averaged only a little more than 4,000,000 tons.

We have reached the point now where we can no longer count on continuing exports in such volume. European production is getting back toward normal. Dollar balances are very low in many importing countries. Just how much foreign trade we can hold will depend largely, of course, on how many foreign products we are willing to accept as imports. The flow cannot be all one way for long. That is simply a matter of elementary economics. Under any circumstances, however, it is reasonable to expect much lower food export totals in the future and to plan accordingly.

The domestic market also presents a complex picture. As long as national income is high, and consumers have money, they will buy farm products in large volume. Even here, however, there are changes in what they buy—in what they eat. We think we eat about the same from year to year, but this is not so. Before the war, we ate 126 pounds of meat per person. This year we are eating about 146 pounds. Our consumption of eggs has jumped from 298 per capita before the war to more than 380 this year. We are also eating much more fresh vegetables. On the other hand, these increases have been offset by decreases in the consumption of other standard foods. Fats and oils are down; milk is down; flour is down by about 17 pounds per capita; and, as I said before, potatoes are down—21 pounds since before the war, and about 45 pounds per capita since 1920.

Under changing conditions like this, producers must show initiative in holding their fair share of the total food market. And when all possible has been done on this front, and marketing efficiency has been improved, they must be ready and willing to make necessary adjustments to prevent wasteful overproduction.

Some of these things I have been saying may sound pessimistic. I have not intended that they should, and I certainly do not feel pessimistic about the future myself. Recognizing realities is simply a necessary start in getting ready to meet our problems.

What we need now is the strongest possible over-all farm program. I think you will agree that we do not have such a program now. Farmers, farm spokesmen, and Government—working together—must see that one is developed and made available without delay. We have a splendid foundation in the program history of the last 15 years. We have had a lot of experience in different types of operation. Now we must go on, building the cooperative measures which will protect farmers and the whole country.

Speaking of the whole country, there is one thing which we in agriculture must not forget. Our programs must always give consumers and taxpayers their money's worth. This means that we must aim at an economy of abundance—an abundance of food and other farm products to meet consumers' needs at fair prices, at the same time protecting the farmer against ruinously low prices.

This abundance must be a "balanced abundance." It does no one any good to have overproduction of commodities for which there is no effective market, and possibly an underproduction of some others which are needed.

These are simple facts which are generally understood. Our job—yours and mine—is to help see that they are reflected in our farm program planning and operation.

There is one more thing I want to mention briefly. That is the constant need to rebuild and protect our soil resources as we go along. Nothing is more fundamental or more important in the whole farm picture. If we lose our soil fertility, there is no use in worrying much about any other phases of a farm program.

Fortunately, we have proved and effective ways of doing this part of the job. I refer to the agricultural conservation program—the ACP program as most of you know it. Through this program, farmers built up soil fertility reserves before the war. These reserves made possible the record-breaking production of war and postwar years. The conservation program also helped farmers hold the fertility line during the emergency period of intensive cropping. It is now ready for our farmers' use, under the direction of their own elected committee system, in carrying out the conservation practices which will protect the land for the future.

No; there is certainly no room for pessimism. Farmers are in many ways in a stronger position today than they have ever known before. They are in good shape financially, as a result of several high-income years. Congress and the public generally recognize the need to continue the sort of cooperative assistance which will keep agriculture strong. Farmers themselves know the basic problems.

The future looks good—just how good will depend directly on just how wisely and cooperatively we all work together in developing the soundest and fairest possible programs in the national interest.

We Can't Thrive On Security

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Monday, August 22 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to insert and have printed in the Appendix of the CONGRESSIONAL RECORD an article entitled "We Can't Thrive on Security," written by me and published in the June issue of the American magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE CAN'T THRIVE ON SECURITY

(By KENNETH S. WHERRY, United States Senator from Nebraska)

We are about to become a nation of spoon-fed people. It is all on the drawing board, in blueprint, and all the statistics have been compiled. We can stop worrying or even thinking about the future. A kindly, beneficent, all-wise Uncle Sam will take care of all our needs and keep us propped up on billowy pillows. Under the great design of the master planners, all we have to do is share the good things in life—and pay taxes.

Our needs will be provided for from prenatal to postmortem. There will be allotments of food for anyone who doesn't feel like working to earn it. If a man or woman gets tired of working, he or she can relax while the Government provides unemployment compensation.

Uncle Sam will also be on hand with houses for those with the lowest incomes so that slums may be abolished. Ten million of the 37,000,000 families in the United States earn less than $2,000 a year; 4,000,000 of them under $1,000. That's a potential of 14,000,000 houses.

And the Great Provider in Washington will hand out college scholarships to young people who can't stand the thought of settling down to work after high-school graduation. People who love to have doctors fuss over them can do so to their hearts' content free of charge.

Businessmen, farmers, workers—everybody engaged in the healthy struggle for a living in a system of free enterprise—need have no thought for the morrow, no concern over prices, supply and demand, for all these, too, are to be managed by the omniscient planners at Washington.

Their great design takes care of all this. Papa knows best. Ceilings on prices and wages; floors under prices and wages—all will be neatly arranged according to the slide rule and statistics.

Is some segment of industry lagging? Presto, Uncle Sam steps in, cash in hand, and builds a plant, or many plants, to make steel or something else in order to reach that happy utopian condition in which the law of supply and demand is repealed.

These are samples of the plans made for us. They have gone beyond the "think" stage. They are in legislative form, prepared for Congress by the administration. Some of them have been enacted into law; others are on their way through the congressional mill.

The great design of the self-styled Fair Dealers is revolting to anyone who believes in free markets, free, competitive enterprise, and in republican government. The old school of hard knocks, under which Americans have been reared and toughened for 300 years, is being liquidated as old-fashioned, outmoded.

These programs to make us a spoon-fed people have been hatched by pressure groups. They were devised as vote-getting bait for large segments of our population, all in the name of "security." They elected President Truman last November.

One of the ringleaders dishing out promises is Oscar R. Ewing, Director of the Federal Security Agency. He frankly declares his goal: "Your Federal Government expects within the next 10 years * * * to bring a new feeling of security to every man, woman, and child in the Nation."

The American people are now seeing the greatest "give-away" show; bigger, gaudier, more spectacular and more costly than any show on earth. We are told those give-away shows on the radio are driving our best cultural and entertainment programs off the air. Some one, come all, something for nothing.

Mr. Truman and his political lieutenants with reckless disregard of the public welfare have discharged their political debts by tossing the whole bundle of economic planning and social welfare promises into the lap of Congress.

What is the pay-off for all the people and generations of the future? A leading metropolitan newspaper recently estimated that the "social welfare" proposals of the President alone would cost, over a period of 50 years, more than $1,250,000,000,000.

Fantastic? Yes. But it's true.

The President, Mr. Ewing, Secretary of Agriculture Charles F. Brannan, and their associates have been long on promises of the good things they advocate, but extremely shy on costs.

The administration's compulsory health insurance carries so many authorizations for expenditures that exact estimates on the total are impossible. Competent experts, however, estimate socialized medicine would cost about $6,000,000,000 in the beginning, and when spending gets under way in earnest the cost will rise steadily.

The President and other proponents of the health plan tell us their purpose is to see that every ill person in the land shall receive the best medical care. It is quite obvious that there are not enough of the best clinics for all the people, and yet our national health bill is now estimated at $5,000,000,000 a year. Plainly, if everyone who wants medical attention is to be given the best care, the cost must rise considerably. My guess is it will run to more than $6,000,000,000 a year by 1960 for the prepaid medical insurance program alone.

The number of additional Government employees necessary to manage and operate a compulsory health program for our large population would be staggering. Intrusion of the Government into the relationship between our families and their family doctors would be abhorrent to those of us who believe in the doctrine that a man's home is his castle.

Special police forces would be necessary to apprehend and prosecute those who make dishonest returns on their ailments and their doctors' bills. The amount of paper work in keeping the millions of accounts in order would be stupendous. I have seen estimates that 1,500,000 bureaucrats would be necessary, in addition to the doctors, to administer the socialistic venture.

A British doctor in Ipswich moaned, "I have become a pill dispenser and a pen pusher." It seems he has to make all his reports to the bureaucrats in triplicate.

The British have had a bad taste of socialized medicine. There, the demand for pills and glasses suddenly swamped the producing industries. With free medical care available, millions of Americans will suddenly find they are sick and hasten to a subsidized physician for treatment, and it may take the doctors a long time to prove to them that they are imagining their ailments.

Our country has the best health record of any nation. Advances that have been made in the science of medicine are due to the freedom that has been given, under our republican government, for free enterprise, initiative, and genius of our people.

Let's keep open to the youth of our land the opportunity to embark upon a career in medicine. Let us protect them against a system that would make of our medical practitioners mere robots in a government machine, such as they have in Russia. Socialized medicine—and that eventually would mean socialized manufacture of pharmaceuticals and medical equipment—would halt the progress of medical science.

All history reveals that mankind has made the greatest progress as it has gained freedom for expression and individual talent.

Our Federal Government for many years has maintained a Public Health Service. It has done a good job. We should expand and strengthen our Public Health Service so that it may dig deeper into research. We have special governmental agencies exploring causes and possible cures for cancer and for diseases of the heart and teeth.

There is much—very much—that the Federal Government can do in serving as a clearinghouse for information on diseases and their cures; much can and should be done by the Federal Government to assemble the most advanced thinkers in the realm of medicine and to disseminate their knowledge among all the people—out to the States and municipalities for trial and report.

Our Federal Government is now contributing $75,000,000 toward hospital construction, providing facilities for training more doctors and nurses. But this is being done in cooperation with privately endowed institutions, in countless experimental laboratories where new ideas and new remedies may be developed for the good of all our people.

Public health is primarily a personal, private service, but all levels of government, municipal, State and National, have their proper spheres of activity. However, should the Truman plan to socialize medicine be adopted, the Federal Government will control the sanitation and medical programs in every State, city, and village.

Doctor Truman has not only handed the American people a sugar-coated pill in his compulsory health program, but Secretary Brannan has handed another sugar-coated pill to the farmers in the so-called Brannan plan. The Brannan plan is another facet in the "cradle-to-grave" social security program of the Truman administration.

The artful plan of Secretary Brannan will hog-tie the farmers and make them wards of the Government. He proposes to let prices for farm commodities sink to their lowest level in times of surpluses so as to give the people who are not farmers, those in the urban centers, the benefit of low prices. And for the farmers he proposes that the Federal Government, through taxation which consumers and farmers would pay, donate to the farmers enough money to make up their losses and to obtain a parity of income with other segments of the population.

Under this plan, farmers would be regimented like privates in an army. A legion of auditors would be running everywhere,

examining their books to see what the farmers' incomes are. This is not a give-away plan. The people would have to pay for this security, and pay dearly.

Mr. Brannan is reluctant to discuss costs to the taxpayers. But agricultural experts estimate those costs at upward of $5,000,000,000 annually.

The administration's program to carry America down the road of socialism is revealed in the field of housing. The Eightieth Congress—that "do-nothing" Congress—did much to relieve the housing shortage by freeing the building industry of Government controls and by pledging the credit of the United States for the resulting building boom, the biggest building boom in our history. Roughly, twice as many dwelling units were built in 1947 as in 1946, when President Truman had power to control every inch of board and every nail; and in 1948, nearly three times as many dwelling units were built, compared with 1946.

But this progress toward meeting the housing problem in the American way did not satisfy the social planners. The administration's bill in the Democratic Eighty-first Congress made the socialistic departure of providing that the Federal Government must pay part of the cost of new dwellings for persons of low incomes who live in slum areas or on farms whose productivity is not adequate to afford credit for private loans.

Responsibility for eradicating slums through proper building codes, and their rigid enforcement, is the responsibility of the cities and States. It is not a Federal function under our form of government. However, this has not deterred the social planners at Washington. Their legislation pledges part of the population to maintain another part. And the problem of slums cannot be cured by money alone. Education and civic pride are essential ingredients.

Even assuming that it is a field in which the Federal Government can properly assume financial responsibility, the cost upon the taxpayers will be tremendous. The cost of the administration bill is estimated at $12,000,000,000. With 4,000,000 families earning less than $1,000 a year and 10,000,000 less than $2,000, obviously the Fair Dealers have opened another long road for socialistic planning. Under the terms of the administration's housing measure, should there be a 20-percent decline in the building of dwelling units, the Government would have authority to do about one-fourth of all the home-building in the Nation. Thus, the Government competes with private builders in seeking building materials.

There is much that the Federal Government can and should do in improving housing conditions. But it ought not to go into the business of building, renting, and selling houses. The fact is that many State and municipal authorities have failed to do their duty toward cleaning up slums. Building codes in many places are archaic and do not permit eliminating slums. Dwellings unfit for human habitation should be condemned by the local authorities just as unsanitary restaurants are padlocked.

The Federal Government can help by studying housing conditions all over the country and abroad; by intensive research into better ways to build homes, better materials, and more efficient practices; by helping to standardize certain building materials, and by serving as a medium for fostering private enterprise and dissemination of knowledge. That kind of social security is in line with republican government.

Another big part of the Truman security program is Federal financial aid to States for education—another foot-in-the-door proposition that will soon cost billions. The Fair Deal wreckers of our free enterprise system seem to be especially eager to get their hands on the education of our youth. It is not suggested here that all who want the Federal Government to finance education are Socialists or tinged with radicalism. But it is contended a federalized education will assume the philosophy of government of those who administer the funds.

There is no such thing as Federal aid without Federal control. I do not want the Federal bureaucrats controlling our schools. Next to home and church, schools are our most treasured institutions. They are the well-springs of our Republic.

Federal aid to education is not free. It is simply taking money away from the local communities and spending it through a bureau in Washington. A dollar which makes the round trip to Washington never comes home with 100 cents in it. Bureaucracy always exacts its tribute.

Mr. Ewing has stated, "We will make it possible for all children to enjoy the benefits of education, including college, through scholarships or Government-insured loans." Likewise, the President's Commission on Higher Education has urged that the Federal Government start a college scholarship program, which by 1960 would cost United States taxpayers $1,000,000,000 a year. The pattern is clear.

The president of Fordham University some months ago observed: "By multiplying college facilities until we can care for every high-school graduate who doesn't want to go to work, the President's Commission is not doing the colleges, or the country, any favor."

Surely we want to see our school facilities steadily improved and our techniques of educating developed. Great strides have been made by the teaching profession, and our Office of Education at Washington, through the years, has contributed to these improvements. It is my contention that the closer we keep supervision of our schools to the parents of children going to those schools, the greater will be our genuine social security.

The Legislature of Nebraska has passed unanimously a resolution opposing the administration's Federal-aid-to-education proposal. Our State legislature also unanimously adopted a resolution opposing compulsory health insurance. The Nebraska Legislature insisted the people of Nebraska be allowed to keep their own money to be spent as they deem wisest.

In the great design of the administration we see the spectacle of promises of security for everybody: High wages, low prices, free medicine, free health insurance, part free homes, free education—free everything—but we know that none of it is free. And the people are given only shadowy estimates on what it will cost in taxes when wrapped into one package.

And just how well fixed is the Federal Government to go into all the free social security demanded by the administration in response to pressure groups and special interests?

The cold fact is that unless the present Congress drastically cuts appropriations asked by the President, the United States Treasury will have a deficit of $3,000,000,000 or $4,000,000,000 in the next fiscal year, and double that in the following fiscal year. A Treasury deficit can be met either by increasing taxes or by deficit financing, or by both. We are now spending five times as much as in 1939, and the proportion of taxation to our national income is rising rapidly.

Higher taxes would be a drag upon business already leveling off. A return to deficit-spending would be more disastrous. Some people seem to think that our resources are inexhaustible. The per capita debt of the United States in 1947 was $1,794 per capita. The average per capita State debt was $27, and the per capita debt of municipalities, on the average, was $112. Some municipalities and some States had no outstanding debt.

And in the midst of a cold war with Russia that is costing the United States $10,000,000,000 a year, through economic aid to freedom-living countries and in extra national defense, we are being swept along the road to national socialism under the guise that it is security.

Those who fight this ruinous trend are liberals, standing for liberty and freedom for the individual. It is a crusade well worth waging, for our Republic hangs in the balance.

My birthplace is Liberty, Nebr. My father, David Emery Wherry, often admonished me never to forget that fact. He started as a merchant and farmer in southeastern Nebraska, among pioneers of the West. As his three sons grew, he branched into business they were later to operate. We sold furniture, plows, caskets, groceries, and buggies. When we had developed our wagon-and-buggy business, the automobile and truck came along. It looked like a calamity for us, but we soon had an automobile agency and were doing more business than ever before.

It was as a youth watching my father buy horses and mules that I learned some important lessons. I learned to be wary of people—forerunners of the modern socialists—who wanted to give you a big bargain.

Dad told me: "When a man tells you he has the best mule in the county, watch out. It is probably 'windy,' 'spavined,' 'string-halted,' or 'moon-eyed.'"

My father and mother admonished us to earn our own living. They told us there is no substitute for self-reliance. Whenever the administration trots out a proposal to give people more security, I recall my father's words: "Stand on the two legs God gave you."

That is the way the American people think. Our people think it is a disgrace for an able-bodied son to live off his father. Fortunately, our sons feel the same way.

That is the spirit which built the United States. When the people are given the facts on where this socialistic trend is leading us, they will make the right decisions. Let's blow our trumpets in favor of a system of government that has brought so many benefits to so many people.

We are confronted by fundamental issues. Is it healthy for us as a people to be guaranteed complete security from all needs—to be assured that the Government owes us all a comfortable living? Such security seems to be the goal of the Truman administration, but I contend it is a short-sighted, wicked goal that denies the underlying principle of our Government: Government is the servant and not the master of the people.

America would not exist today as a republic if our early colonists had been supported by subsidies and hand-outs and protections against every conceivable threat, including Indians. Who would have had the courage and strength to pioneer the West? Who would have written the Declaration of Independence?

Despite the pooh-poohing of left-wingers, we cannot ignore the fact that totalitarianism is becoming a real threat in America. It is becoming a threat because so many people accept the notion that the answer to each and every problem is more government.

Actually, one of our most pressing problems today is to get big government off the backs of our people—and it is not essentially a problem for Democrats or Republicans, but for the whole American people. Canada very wisely is trying to do this by sharply reducing taxes.

We must also learn to cope with big business and big labor. Our huge corporations are growing bigger and fewer. Many small, independent businessmen are waging a desperate struggle for survival against unfair opposition. I know, because I spent the past 2 years, during the Eightieth Congress, trying to help them as chairman of the Senate Small Business Committee. Big business, as such, is not

necessarily bad. Most big businesses in America started as small businesses and are big because they provide goods and service the public wants at prices they can pay. It is only when big business abuses its size and power that it is reprehensible. And we have had examples of this.

Much the same thing applies to big labor. We must not overlook the power big labor has achieved, which, if abused, could strangle our economy.

America has grown great because of one great principle: Freedom. Freedom, more than anything else, is what we have lived by and fought for from Colonial days right down to today. It has been only in the past few years that Americans have bothered to talk much about security. And that fact is ominous. Our final fall into totalitarianism will come if and when we yield our freedoms to regimentation under the guise that therein lies security. I pray that it will never occur.

To make certain that never happens, we must, above all, see to it that our system is constantly applied to give every American a fair chance to make a good living and a chance to achieve fame and fortune by working for it.

It is here that encouragement to small businesses is vital. Pioneering in new enterprises is the great field of opportunity, especially for our youth. Would we have had a Ford if it had not been for the opportunities and incentives open to independent, venturesome businessmen? How about Firestone and Edison? We could not get a Ford, a Firestone, or an Edison, under any system of cradle-to-grave spoon-feeding that robs the people of their incentive and enterprise.

One of our present pressing problems is that there is less and less incentive for our modern young Fords and Firestones to gamble on their ideas. They know that if a man invests money in his invention or idea, and it succeeds, the Government will take a large part of his gain away in taxation. If he loses, he loses everything. If Mr. Ewings' security ideas were carried to their logical conclusion, the Government would guarantee our young Fords and Firestones that if they didn't make good on their idea the Government would make good out of tax funds. That, of course, would be nonsense.

For Americans, real progress lies, not in the direction of more government paternalism, but rather in more freedom—more freedom to pursue the great opportunities this country and the world still offer.

When the founders of our Nation composed the Declaration of Independence it is significant that they did not guarantee people security, or even happiness. Instead, they said the main function of government is to guarantee people the right to "Life, liberty and the pursuit of happiness."

The liberty to pursue happiness is the only guarantee Americans have asked for 174 years, while building the Nation that has become the envy of the world.

Address by Lawrence Hunt at Convocation, Bishop's University, Lennoxville, Quebec

---

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, August 22 (legislative day of Thursday, June 2), 1949

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by Lawrence Hunt, a distinguished member of the New York City bar, at the convocation of Bishop's University, Lennoxville, Quebec, on June 17, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chancelor, Dr. Jewitt, ladies and gentlemen of the class of 1949, friends and neighbors of Canada, you have honored four Canadians for their eminent contributions to Canadian life and for their devoted service to their fellow men. You have also honored me as an American friend, and I shall cherish the high honor as an unusually gracious expression of the friendship which exists between Canada and the United States—the rarest friendship which has ever existed between two nations. We are deeply grateful, and we are delighted to be enrolled among the alumni of Bishop's University.

As an American, I naturally feel at home in Canada. And as a graduate of Williams—a small New England college—I feel especially at home with you here today. Bishop's, like Williams', is not a vast intellectual incubator in which there is a tendency to identify men, and even women, as digits. She is an Alma Mater who knows and cares about every one of her sons and daughters.

Ladies and gentlemen of the class of 1949, this is your day. It's a good day—a good time—to enter into a hard but worth-while world. I think it is a better time than existed for those of us who were graduated after the First World War.

The pessimists among us—the men of little faith—would tell us, with sombre satisfaction, that you are entering into a world filled with envy, hatred, and malice, and all uncharitableness. They would point to this and that threat, crisis, menace, and danger. If you paid too much attention to these prophets of doom, you would soon find yourselves useless and unhappy men and women, trapped in the dungeon of giant despair.

To be sure, there are some obviously unpleasant similarities between the convocation days of the 1920's and 1930's and of today. Then, as now, there were convocation orators who received honorary degrees and made long speeches. I remember that we were told we were the "hope of the world" and all sorts of embarrassing things. We were solemnly exhorted not to make the mistakes the older generation had made. Well, we haven't made exactly the same mistakes, but, of their kind, our mistakes have been beauties.

In the nineteen twenties and thirties there was a Communist Russia and there was an unrepentant Germany which soon found its hero in a fanatic who knew how to arouse the blood lust of the German people. There was an ineffective League of Nations. And there were some perfectly beautiful treaties which outlawed war.

Worse than that. The pseudo-intellectuals and the peace-at-any-price pacifists of the older generation confused the minds and chilled the hearts of many of us with an obscene objectivity toward right and wrong. They tried to teach us to scorn the supreme moral values for which we fought in the First World War, to doubt the motives of other free nations, and to indulge in sickly sentimentality toward the enemies of man's freedom.

In America, as the German menace grew, we were asked to shut our eyes to the most blazing truths, to avert our gaze from the plain facts of our contemporary life, to stuff our ears, and to harden our hearts, so that somehow, in some way, we could escape from the tough realities of this world and, as a Nation, evade the tasks which nature, our moral traditions, and the uncompromising forces of destiny had set for us to do.

The results of these teachings were almost fatal.

To some extent, these stupid and immoral teachings were also heard and heeded in Britain and Canada and the other nations of the British Commonwealth. But, when the supreme test came in 1939, Britain and the other nations of the British Commonwealth, for 2 years, alone saved the freedom of the world. Finally, after America's entry into the war, the British and American peoples again beat down Satan under their feet.

Again I say, this is a better time. Today, there are also the menace of Communist Russia and the menace of an unrepentant Germany, and an ineffective United Nations. But an immense difference, a tremendously hopeful difference, between the nineteen twenties and nineteen thirties and today, is that we know our dangers, and we are facing them. The Marshall plan and the Atlantic Pact are practical expressions of our determination that we shall not again endure the horror of a world war if courage and good sense can avoid it. There is a sure spiritual rebirth in the hearts of free men which is finding expression, not in words alone, but in a willingness to sacrifice, unprecedented in days of peace, for the supreme values of human life.

Moreover, there is a clear recognition, if not always an open acknowledgment, that the most fundamental political fact of our time, in world affairs, is the growing cooperation between the British Commonwealth and the United States. The wisest American and British statesmen have known for a long time the vital need for this cooperation. Two world wars have proved it. Our matter-of-fact cooperation today in political, economic, and military affairs would have seemed incredible to most people 10 years ago. The Anglo-American partnership is a going concern.

The partnership is not as complete as it must be if we are adequately to protect ourselves and the other free peoples of the world. The statesmen of the British Commonwealth and of the American Republic should know that it does not make sense for us at the same time to slap each other on the back and to kick each other in the shins. Our partnership should not be limited to certain spots here and there, such as the Atlantic Ocean and Greece. Anglo-American cooperation must be measured by our world-wide responsibilities and our need for each other.

Regional pacts are good and useful things. United Europe and one-world movements are very interesting, very pleasant subjects for convocation-day orators. Our present disillusionment about the United Nations should not blind us to its possible future value.

And yet, come what may, remember this: Whatever their imperfections may be, the American Republic and the British Commonwealth together are the greatest force for the protection of human liberty and of man's gradual progress toward a better world.

There will be world conferences, and many of them will fail.

There will be all kinds of international formulas, and they will fade away.

There will be glittering slogans, and they will be forgotten.

But if the American and the British peoples have faith in each other's purpose, hope in each other's future, and charity toward each other's shortcomings, then, as friends, as partners, and as allies, they can go forward together into the future, as far as the human eye can see, in dignity, in freedom, and in peace.

Housing

EXTENSION OF REMARKS
OF
HON. THOMAS H. BURKE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. BURKE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the UAW-CIO Ammunition and also two resolutions adopted by the UAW convention on housing:

MORTGAGE BANKERS FEATHERBED—$10,000 HOMES CAN BE SOLD FOR $24.33 A MONTH WITH NO DOWN PAYMENT

The biggest featherbed in the country is the one the real-estate speculators and mortgage bankers sleep on.

Every family that buys a $10,000 house pays in the neighborhood of $5,750 for the featherbed.

The curious thing about this featherbed is that most families don't realize they are buying it.

The reason is that the real-estate brokers and bankers carefully hide this cost from consumers.

The cost of the featherbed is so carefully hidden that most families think they pay $10,000 for a house with a $10,000 price tag on it. Actually, most $10,000 houses cost you $14,500 (at least) when you finish paying for them.

The extra $4,500 is the interest charge on a 5-percent $9,000 mortgage over a period of 20 years after you have made a $1,000 down payment on your $10,000 house.

HOUSING COSTS

Based on the distribution of costs from 1940 to 1944 here is where the money goes in the average $10,000 house today that costs you $14,500:

Materials	$4,570
Labor cost on the site	2,950
Land costs	1,250
Profits	1,250
Interest charges	4,500

With the connivance of most newspapers (the real-estate racket is a profitable customer of the newspapers) the real-estate propaganda mill has been successful in passing the buck for high housing costs to everyone except the actual culprit.

Reams of paper have been wasted to prove that bricklayers ought to lay more briecks, or that the building-trades workers are committing a crime by insisting on decent wage scales.

Actually, however, even if the building-trades workers contributed their labor, a $10,000 house today would still cost you $11,630.

If the total costs of the land and labor in a house were free, a $10,000 house would still cost about $10,380.

Once you realize where the real hidden costs in a house are, the opportunities for reducing the costs of a home become obvious.

Today to buy a $10,000 house you need around $1,000 in cash (not including settlement costs) and $56.25 a month (not including the costs of taxes and insurance).

If the interest rate were cut from 5 percent to 4 percent, the final cost of the house to you would be reduced by $900.

A Government program of low-cost mortgages to home owners, which lent money on first mortgage to families at 2½ percent, could reduce the final cost of a $10,000 house to you by $2,250.

This would reduce your monthly payment from $56.25 to approximately $46.87.

PAY IN 60 YEARS

Eliminating the high interest subsidy to mortgage bankers plus one other simple expedient (both are features of the Reuther plan to use the factories that built war planes for building homes) could reduce the monthly cost of owning a home by half and eliminate the $1,000 down payment altogether.

The other expedient is to extend the amortization period from 20 to 60 years.

The effect would be to make it possible for the millions of American families that cannot afford any more than $6,000 for a home to purchase homes (provided they were built) immediately.

Today half of America's families cannot afford to buy decent homes because they cannot afford more than $6,000 for a house.

By nonprofit low-cost 2½-percent Government mortgage loans and a 60-year amortization period, these families could immediately afford the equivalent of a $10,000 house.

Then instead of a housing industry that is steadily drying up for lack of purchasing power, overnight there would be a building bottleneck instead of a purchasing power bottleneck.

That bottleneck could be broken by using the Nation's war plants to build homes by industrial methods. Further savings then would become possible as the result of mass-production economies.

Low interest rates, the extended amortization period, and the industrial production of houses, could make the housing problem for American families as out of date as the bow and arrow.

A $9,000 FHA first mortgage today includes a $4,500 charge for interest, which the real estate mortgage bankers collect.

Under the rules—which the real estate brokers have written for the FHA—these mortgages are set up to be paid off in 20 years.

Actually the useful life of a well-built home is more than 60 years. Homes built by the Federal Government are financed so that their costs are paid for over a period of 60 years. Tax laws and accounting procedures used in industry follow the same principle.

$10,000 HOME—$24.33 A MONTH

If this period of amortization were applied to the purchase of homes by American families and if low-cost 2½-percent mortgage loans were made available, you could buy a $10,000 home with no down payment and a monthly payment of $24.33.

Except for the cost of operating the 2½-percent family mortgage program, no Government subsidy would be necessary. The only casualties would be mortgage bankers. They would have to get up off their featherbeds and go back to work.

A 40-year amortization period would make the $10,000 home cost $31.25 a month with no down payment.

It should be noted that the farm and home program the Government now sponsors to enable farm tenant families to buy a family farm is based upon 40-year amortization periods.

Briefly, here is the story.

THE WHOLE STORY

Half of all American families need decent homes and can't afford a down payment of $1,000 and a monthly payment of $56.25.

They can afford homes that don't require down payments or that rent or carry for $50 a month or less.

Today nothing that isn't a rat trap, a chicken coop, or a slum, is being built to rent for less than $50 a month.

But low-cost decent homes are possible.

They are possible by eliminating the featherbed the mortgage bankers sleep on and by extending the period for paying for a house.

A 60-year amortization period is used for Federal housing projects and is standard practice under tax laws.

Federal home loans at 2½ percent that include no featherbedding charges to mortgage bankers, plus the 60-year amortization period, would make it possible for American families to buy a $10,000 house (and an even better house once industrial methods were used to make them) for no down payment and a monthly payment of $24.33.

HOUSING

Whereas the prewar shortage of housing, intensified by the war, has created a housing tragedy in this country. Millions of families live doubled up or in slums, or cannot afford a home of their own because of the failure of the housing industry to meet the needs of the American people.

The real-estate lobby has been defeated on one section of the housing front. However, the slum clearance, public housing and farm housing provisions of the new law will make only a dent on the problems of rehousing the millions of families who are inadequately housed.

Homes for people will be provided at prices people can pay only through the full sized mass production adequately financed program which President Reuther has proposed: Be it therefore

Resolved, That the President be urged to use his authority to get quick action on actual construction of housing under the law which Congress has enacted.

That Congress be urged to increase the income limits for families eligible for public housing.

That Congress be urged to enact a law providing direct Federal loans at low interest to groups of middle-income families who are not eligible for public housing.

That Congress be urged to authorize a more adequate program for farm housing and to provide adequate facilities for migratory farm workers and their families.

That the UAW-CIO mass production housing program be given our support as is provided by special resolution of this convention.

MASS PRODUCTION OF HOUSING

Whereas early this year the president of the UAW-CIO prepared a detailed plan for conversion of unused war plants to prefab housing production.

To the Nation's homeless and overcrowded millions, the plan offers the hope of speedy relief at a price which low-income families can bear. To construction labor it opens the way to employment stability, with an end to seasonal lay-offs. To the unemployed it promises a large number of new jobs: Be it therefore

Resolved, That this convention urge upon the President the appointment, as quickly as possible, of a National Housing Committee. The committee should be instructed to develop the following:

(1) A national inventory of housing needs.

(2) An inventory of surplus Government-owned airplane plants.

(3) Establishment of a research and technical development agency to explore the use of new materials, utilize the most advanced architectural know-how, encourage rational city planning, improve productive methods, and bring outmoded building codes up to date.

(4) Coordination of housing production with potential requirements of military production.

(5) Provisions for—

(a) Full participation of private enterprise and individual initiative in the plan; and

(b) Direct Government operation of production facilities where private enterprise is unwilling to assume responsibility.

(6) Extend the President's proposals on steel to other industries such as aluminum, copper, and power, wherever refusal to expand capacity impedes fulfillment of the housing plan.

Middle-Income Housing

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 18, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks, I wish to include in the RECORD the following Letter to the Editor by Jack Carter, national housing officer, Veterans of Foreign Wars, which appeared in the Washington Post on May 30, 1949:

MIDDLE-INCOME HOUSING

Herblock hit the bull's-eye with his May 23 cartoon indicating the plight of the neglected middle-income family.

In support of his views and, I hope, those of the Washington Post, I should like to identify the middle-income family as seen by the Veterans of Foreign Wars, describe its problem, and outline a possible solution.

The Bureau of the Census tells us that the median income of the 25–34 age group is $2,449 while that of the 35–44 age group is $2,845. Applying the common rule of thumb, 2½ times annual income, these groups can afford, respectively, homes costing $6,122.50 and $7,112.50. But where can a man with a wife and 2 children find a suitable home today for $7,112.50?

Actually, it is difficult if not impossible to find a suitable 2-bedroom home for $10,000, especially in the North where sturdier construction is required. However, for the purpose of argument, let us assume that suitable $10,000 homes are available. If we apply the same common rule, 2½ times annual income, we find that the home buyer must have an income of $4,000 to purchase a $10,000 home. Again, figures published by census indicate that only 12.4 percent of the 25–34 age group has an income of $4,000 or above. In the 35–44 age group 22.2 percent have an income of $4,000 or above.

This means that in the younger age group 87.6 percent of our male citizens, veterans and nonveterans, cannot afford a $10,000 house. In the older age group 77.8 percent of our male citizens, veterans and nonveterans, cannot afford a $10,000 house. This, in actual numbers, means that 17,038,000 male individuals between the ages of 25 and 44 have incomes of less than $4,000 and therefore cannot purchase a house costing $10,000 without overreaching themselves financially.

Of course, some of these people will be eligible for public housing. The Public Housing Administration quotes its average maximum income limit for a typical family (two adults and two children) as $1,947. If we eliminate from these particular age groups those persons eligible for public housing by reason of earning $1,947 or less per year, we eliminate 33.3 percent of the 25–34 age group and 26.4 percent of the 35–44 age group, or a total in numbers of 6,167,000.

When the number representing people eligible for public housing is deducted from the number representing persons making $4,000 or less we have then outlined our real middle-income group numbering 10,863,000. This figure represents the number of male persons between the ages of 25 and 44 who cannot quality for public housing because their income is too high and cannot afford a $10,000 home because their income is too low.

After exhaustive study I have been drawn to the conclusion that any program designed to aid this important middle-income group must do several things.

First, it must cut costs by mass purchase of land (undeveloped if necessary); mass purchase of materials; reducing labor cost through mass production; eliminating profits of developer, builder, promoter, etc.; reducing financing charges; extending period of loan amortization.

The only vehicle by which all of the above requirements may be accomplished is the nonprofit cooperative or corporation authorized to borrow money directly from the Federal Gvernment at low interest with an extended period of amortization. We visualize an interest rate at the average cost of money to the Federal Government plus one-half of 1 percent (to cover administrative cost of program) amortized over a period equal to the expected life of the building (not to exceed 60 years).

It must be emphasized that this is not a subsidized program. It can and will pay its own way just as existing FHA programs do. These and other features are contained in H. R. 4458, drafted and supported by the VFW, the AFL, the CIO, and many other public interest groups. It has been introduced by Representative HUGH B. MITCHELL and 14 other Members of the House of Representatives and it is to be hoped that H. R. 4458 will receive the attention it deserves.

JACK CARTER,
National Housing Officer,
Veterans of Foreign Wars.
WASHINGTON.

Loyalty of Samuel L. Wahrhaftig Sustained

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. DONDERO. Mr. Speaker, under date of April 28, 1949, I wrote the Secretary of Defense in reference to the case of Samuel L. Wahrhaftig, which letter he referred to the Secretary of the Army. I am in receipt of a reply, and am glad to note the action taken by the Security Review Board, Office of the Secretary of the Army, as set forth in the following letter from the Office of the Chief of Staff, Department of the Army:

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF STAFF,
Washington, D. C., August 16, 1949.

Hon. GEORGE A. DONDERO,
House of Representatives.

DEAR MR. DONDERO: This letter is written in further regard to your communication of recent date originally sent to the Secretary of Defense, in which you expressed interest in the case of Mr. Samuel L. Wahrhaftig. You will probably recall that Mr. Wahrhaftig was suspended from the civil administration of our military government within Germany. I last wrote you about this matter on June 8, 1949.

The Security Review Board, Office of the Secretary of the Army, as a result of an administrative hearing on charges instituted against Mr. Wahrhaftig which resulted in his ultimate removal under Public Law 808, Seventy-seventh Congress, has unanimously recommended to the Secretary that he be reinstated. The Secretary of the Army has concurred in the Board's recommendation.

The effect of this decision in the removal action against Mr. Wahrhaftig will therefore result in his reinstatement to the same position or a similar one within Germany, provided a suitable vacancy exists. If the situation with respect to position vacancies in our military government renders no suitable vacancy, Mr. Wahrhaftig will be reinstated in accordance with the provisions of Public Law 808. During the period of Mr. Wahrhaftig's suspension he has suffered a loss of salary, hence reinstatement action will serve to reimburse him for the time lost on his former assignment. Notification of the Secretary's decision in this regard has been transmitted to the Headquarters, Office of Military Government, United States Zone, Germany, and that headquarters will deal directly with Mr. Wahrhaftig insofar as it concerns the necessary steps to be taken in the disposition of his case.

I am very glad to be able to supply you with this information.

Sincerely yours,
C. G. BLAKENEY,
Colonel, GSC,
Legislative and Liaison Division.

Will It Be Security or Opportunity?

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely and thought-provoking editorial which appeared in the August 21, 1949, issue of the Worcester (Mass.) Sunday Telegram. The article follows:

WILL IT BE SECURITY OR OPPORTUNITY?

The average person who "works for a living," perhaps operating a machine, driving a truck, or running a farm, may find it hard to realize that without Wall Street there would be no capitalistic system, and without a capitalistic system there would be no United States as we know it. It takes a deep appreciation of the basic economics governing this Nation to recognize the vital worth of what has come to be known as "an investment."

Investments—in shares of businesses large and small, local and national—are made from the savings of individual persons, called "equity capital." By investing this equity capital in ventures large and small, people risk their earnings in the hope of receiving dividends from stock or other returns. Risk-taking has always been considered one of the basic ingredients of the American success formula.

But something is happening to the public's willingness to participate in "risk" or "venture" investments; and because of this diminishing willingness on the part of the investment public, something dire may be happening, right before our eyes, to the spirit, the soul of America.

The behavior of Americans in respect to investments during the past decade may indicate a startling change in American attitude. It may illustrate that our citizens, by and large, are not so much interested in opportunity or risk as they are in security. Certainly the legislation receiving the widest endorsements is that which increases or seems to increase security. Now a study of the investment patterns reveals that during the years that we have been increasing our emphasis on security, we have also been lessening our interest in investments and other monetary risks.

It is indeed indicative of some such trend when it is considered that at the very time that personal incomes are at their peak, brokers are finding it hard to sell stocks of reliable corporations, businesses are scratching around looking for new capital for expansion and generally the investment of free equity capital is ebbing.

In the years 1927 to 1929, more than 53 percent of all new corporate capital raised publicly was in the form of stock. Last year, new corporate capital raised in stock amounted to only 17 percent. It has been declining steadily year to year, since the market crash of 1929.

Just this summer, when every indication in the stock exchanges called for investment, the New York Stock Exchange lolled through spiritless doldrums and brokers had to trot out every selling device known to the trade.

Yet, at the same time, the United States Department of Commerce reported that personal incomes, the mainspring of consumer buying power, increased in June. They were pushed, for the first 6 months of 1949, to a level of 2.9 percent higher than the first half of boom-time 1948.

While it is true that the capitalistic system can operate only on the investment and reinvestment of wealth, it is just as true that something has happened to that "spirit of America" which gave rise to its active stock trading and made "investing" almost second nature to the average comfortably-situated American.

A recent study of the Federal Reserve Board sharpens the focus on the problem. It shows that fewer than one out of every ten American families owns any corporate stock. But it also shows that half the families with annual incomes of $7,500 or more do own corporate stocks, as do almost 25 percent of those families in the income brackets of $5,000 to $7,500.

In America there is no way of telling—officially, at least—when a person jumps from one income bracket to another. But there is a growing suspicion, fairly-well founded, that as the incomes of middle-class Americans rise and the incomes of the established rich are whittled down, those benefiting from the trend are not bothering with making traditional investments in corporate stocks and new businesses. Instead they're putting their money into savings. Savings banks deposits continue their steady rise, indicating that this is so.

Tax laws provide certain barriers to those in high-income brackets, which discourage heavy investment in the securities markets. To save the investment markets, these barriers might be removed. Or, some persons have suggested that steps be taken to expand the market so it will include more investors from the lower-income groups.

As to this second suggestion, it is an alternative measure and does not get at the core of the problem. Furthermore, since the formerly low-income earners who have now become high-income earners do not show any interest in making investments, why should it be supposed that lower-income groups could be interested?

It is a well-known fact that dividends paid on stock investments are taxed doubly. It is also known that business is suffering because of stringent provisions for the carrying forward and backward of losses growing out of business operations. The Federal Government could—and should—do something about this.

One stock broker, decrying the situation, complained that America had produced a generation of race track gamblers who weren't afraid of almost impossible odds at a track, but who were afraid to invest in a going business with a history of successes.

If so, America has arrived at a dangerous point in her economic growth.

Cooperative Housing

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 18, 1949

Mrs. DOUGLAS. Mr. Speaker, buildings in the Amalgamated housing projects in New York are near completion. These great housing projects, built in the memory of Sidney Hillman, show what cooperative housing can mean in meeting the acute housing shortage for the middle income groups. Any housing bill drafted to meet the needs of the middle income families must include a section on cooperatives.

Under permission to extend my remarks in the RECORD, I wish to include the following article which appeared in the Advance on July 15, 1949:

AMALGAMATED HOUSING MAKES FINE PROGRESS

Individual buildings of the two Amalgamated housing projects under construction—one in the Bronx and one on the lower East Side—are nearing completion.

These Amalgamated housing developments, based on cooperative endeavor by the tenants, represent a positive step toward solving the acute housing shortage in this country. It is making only a small dent in the Nation-wide situation but it is an excellent sample of what can be done by determined, enlightened people.

Of the three new buildings planned for the Sidney Hillman houses on the lower East Side, building 1, housing 263 families, was recently completed and is now fully occupied. The steelwork for building 2 is finished and the brickwork is under way. According to officials of the Sidney Hillman Housing Corp., this second building will be completed by the end of the year.

Building 3 is still in the blueprint stage but plans for the clearance of the slums now on the proposed site are being carried out.

Besides the three new buildings, 12 stories high, each replacing a block of slums, a fourth block has been taken over which will house a garage, a park, and a proposed community center.

APARTMENTS AVAILABLE

A limited number of apartments in the Hillman houses are available for members of the Amalgamated. Union members who are interested in information concerning these beautiful cooperative apartments should get in touch with the development's office at 504 Grand Street in the Amalgamated dwellings project.

Uptown, adjacent to the huge Amalgamated development facing Van Cortlandt Park in the Bronx, the Amalgamated Housing Corp. is completing construction of the first of four huge cooperative apartment buildings. This first building, which will house 150 families, will be completed and ready for occupancy on September 1. When completed it will contain 282 apartments, a 200-car garage, and a steam central heating plant for 1,500 apartments in the project.

Many of the apartments in this unit will have large open-air balconies and the garage roof will be used as an open-air terrace by all of the cooperative tenants in the building. Completion of this building is expected early in 1950.

The third and fourth buildings of the four-building project are planned for early construction.

All of the buildings border on Van Cortlandt Park, which not only affords a magnificent view, but provides huge recreational areas for the project's population.

Amalgamated members who wish to secure apartments in the new Bronx development should contact the main office of the Amalgamated Housing Corp. at 80 Van Cortlandt Park South.

Abraham E. Kazan is director of both the Bronx and downtown Amalgamated cooperative housing projects. He is assisted by an excellent staff.

Government's Potato Price-Support Plan

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include therein the editorial that appeared in the Washington Post on Saturday, August 20, 1949. I submit this excellent item to the attention of the Congress since I feel that it merits action in this session of the Congress:

POTATOES

In a series of five articles Post Reporter John W. Ball, has given our readers an on-the-spot report of what the Government's potato price-support plan has done for Maine growers. In Aroostook County alone the Government paid out $65,000,000 last year to hold up potato prices. At least one, and maybe several, local growers received checks in the neighborhood of half a million dollars for potatoes sold to the Commodity Credit Corporation, which 31 farmers obtained more than $100,000 each. And these stupendous figures take no account of the returns from non-Government sales at the artificially high prices resulting from Government price-support operations.

To be sure, some of these returns are skimmed off by high production costs. In the days of the California gold rush miners had to share their riches with purveyors of tools, clothing, and services. Similarly the growers of high-priced potatoes have to share their returns with labor. Last year, for instance, pickers' earnings averaged from $20 to $25 a day. This spring potato planters made $15 to $25 a day. Nor does a grower have to be a big landowner or capitalist to get a sizable portion of the golden harvest. Mr. Ball cites the case of a man with a 30-acre farm that cost him $3,000 in 1930. All but 2 acres of this holding were in potatoes, for which the Government paid $20,000. Outlays for fertilizer, insecticides, and labor cost $7,000, leaving the farmer with a net profit of $13,000. Not a bad return on an investment of less than a fourth that sum.

For the country as a whole payments to growers on the 1949 potato crop will be considerably less than those on the 1948 crop, owing to the fact that the support price has been cut from 90 percent to 60 percent of parity, and acreage allotments have also been reduced. Nevertheless, the program is expected to cost from $50,000,000 to $100,000,000. Even at these lower levels, the support program is an incentive to overproduction, which forces the Government to take supplies off the market and sell them for a song to starch mills, alcohol plants, etc. Acreage restrictions, too, have failed to solve the problem of overproduction. For growers have been encouraged by high prices to use more fertilizers and insecticides and to plant closer. As a result, despite a reduction this year of nearly 25 percent in planted

acreage, Maine's potato crop will probably be only 10 to 12 percent below last year's.

If potatoes were to be sold for what they would bring in the open market without price supports, there is no knowing where they might end up. For per capita potato consumption has been steadily declining, and the demand for them as food is relatively inelastic. Hence, it is doubtful whether lower prices would stimulate increased buying to any considerable extent. If growers were to be paid the difference between a so-called fair price for potatoes and prices ruling in the open market (so-called production payments advocated by the Secretary of Agriculture), the cost of the program might far exceed outlays under the present system, unless severe restrictions were imposed on production and sales. Yet to cut all supports would entail dreadful hardship in one-crop areas, like Aroostook County.

We don't know the answer to the potato problem. But as Ralph Trigg, head of the Commodity Credit Corporation, recently told Maine potato growers, "It is perfectly obvious that the sound answer does not lie in unlimited purchases to support the market. We need a better approach" he said, "and the authorization to develop such an approach, if we are to avoid a program collapse which could threaten the whole farm price support structure."

Alcoholic Beverage Advertising

EXTENSION OF REMARKS

OF

HON. JOHN R. WALSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. WALSH. Mr. Speaker, under unanimous consent, I include in the RECORD a letter and a petition I have received from the Grant County, Ind., Woman's Christian Temperance Union:

MARION, IND., *July 23, 1949.*

Hon. JOHN R. WALSH,

United States Representative in Congress, Washington, D. C.

DEAR CONGRESSMAN WALSH: Enclosed please find 2,521 signatures of Grant County community citizens to petition to Your Honor for relief from an intrusion into the sacred precincts of our homes, where we are trying to bring up a generation of citizens that will be an honor and a bulwark to the State.

We cannot accomplish this as long as the liquor interests are allowed to steal into our homes through radio and press, distorting the minds of our unsuspecting citizens of tomorrow in favor of the use of beverage alcohol.

Very truly yours,

DEPARTMENT OF LEGISLATION, GRANT COUNTY, IND., WOMAN'S CHRISTIAN TEMPERANCE UNION,

ANNA NANCY THOMAS, *Director.*

PETITION

To Our Senators and Representatives in Congress:

We respectfully request that you use your influence and vote for the passage of a bill to prohibit the transportation of alcoholic-beverage advertising in interstate commerce and the broadcasting of alcoholic-beverage advertising over the radio. The most pernicious effect of this advertising is the constant invitation and enticement to drink. The American people spent $9,640,000,000 for alcoholic beverages in 1947, as compared with $7,770,000,000 in 1945. During the same period there was a corresponding increase each year in crime, juvenile delinquency, broken homes, deaths, and injuries due to intoxicated drivers, in the number of alcoholics, and also of habitual or heavy drinkers. There is every reason why this waste of money and of human values should not be increased but rather greatly decreased.

UN Children's Emergency Fund

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent article by Frank Gervasi on the work of the United Nations International Children's Emergency Fund, which appeared in the Washington Post on August 21, 1949:

UN IS AN ABSTRACT TO ORPHANS, BUT ICEF MEANS A CUP OF MILK

(By Frank Gervasi)

ROME.—The Mother Superior at St. Joseph's Orphanage, out on the Via Nomentana, knew less about the United Nations than most people. She did not know that it had stopped two or three little wars, and was even ignorant of the fact that right here in her own country the food and agricultural organization, a UN subsidiary, had saved the valuable chestnut crop from blight.

But the Mother Superior did know about ICEF. Her face lighted with appreciation at the name. So will yours, perhaps, when you learn that ICEF—the United Nations International Children's Emergency Fund—may have saved a million lives in Italy, and possibly as many as 4,000,000 in Europe, since the war ended.

The Mother Superior motioned me to follow her down a long, high-ceilinged corridor. It was 11:30 in the morning and all the kids were indoors for merenda, a prelunch snack. The nun stopped at a double door and threw it open.

"ICEF milk," she said, and waved her hands at the scene.

It was a huge room, cool with the hot Roman sun shuttered out. Three or four hundred moppets ranging in age from 20 months to 8 or 9 years sat on either side of long board tables.

You could not tell them apart very well. Their heads had been shaved and looked like so many coconuts. All wore pink cotton pinafores or aprons over rudimentary underwear. Tie-on sandals served for shoes.

Heads turned toward the door for 30 seconds, then all returned to the job in hand, which was downing the contents of pint-sized enamel cups. Some of the smaller ones had to be helped by novitiates.

"Every day," the Mother Superior said, "they get milk at this hour. Later, about half past one, they get their lunch. There will be stew today with meat and rice from ICEF.

"We get medicine from ICEF, too, and cod liver oil and other things. I do not know how we could feed all these children on our limited resources. We have 700 altogether. The older ones are in another refectory. There are too many here. There are too many everywhere like these."

The children in St. Joseph's were, for the most part, the survivors of parents killed by the war or who died of the diseases of war's aftermath. Some of the younger ones were foundings abandoned by parents too poor to care for them.

They were not the healthiest kids in the world. Many had tonsilitis, ear infections, and adenoids. Some had ugly skin scabs. But they were alive. And without ICEF help they might be dead or, like hundreds of thousands of others, scavenging the garbage dumps of cities and villages for food.

Yes, Italy, like the rest of Europe, is "recovering." Four years have gone and the rubble has been cleared away, the smoke pours again from factories' chimneys and the fields are reviving. Houses have been repaired and new ones built.

But here, as in other European countries and in China, Indonesia, and the Middle East, the war is not over for millions of children and mothers and expectant mothers.

In Italy, you do not see them on the tourist beats of Rome, Florence, and Venice. You are aware of them only when the children, skinny and dirty, come to beg at the safe tables or to pick up the butts of discarded cigarettes whose tobacco is salvaged, sold, and remade into more cigarettes.

Or you become aware of them when you visit the Quartiere Flaminio. There the war is not over for 367 families who live in caves, airless, lightless bomb shelters and huts built of trash—a few sticks, some flattened-out gallon tims.

The Quartiere Flaminio makes the Hoovervilles of our great depression look like health resorts. Its 1,836 inhabitants draw their water from a single public tap and are ravaged by typhoid, paratyphoid, dysentery, and tuberculosis.

AGGRAVATED SINCE WAR

The problem of rescuing Europe's children for useful citizenry was staggering enough when the war ended. Some 14,000,000 children, enough to populate a good-sized nation, were left parentless and homeless. Millions more have been born since.

Many were saved by wartime outfits like the much-maligned UNRRA. Many others became wards of their own countries as these gradually recovered from political and economic chaos.

But for millions more, according to welfare experts who have studied the problems at first hand, there is little hope unless existing agencies are given greater support than they are now getting or are likely to receive in the next 2 or 3 crucial years.

The notion is spreading that food has become plentiful in Europe. But everywhere I have been except Britain and Sweden and Finland, food is abundant only for those who have money with which to buy it. Misery, while mitigated and in some areas even eradicated by Marshall aid billions, is still widespread.

In the Europe west of the iron curtain, at least, people have achieved two of the four freedoms. They can speak and worship freely. But they are far from achieving freedom from fear and freedom from want.

In the last 5 months, I have talked to enough hungry, sick, and desperate people to be convinced that a good many would swap the first two or more of the third and fourth, particularly in France and Italy.

The Marshall plan, although it has worked miracles in industrial and agricultural recovery, has not yet reached those at the lower levels—those still unemployed, still homeless, still scrabbling among the ruins.

"Marshall aid," said an unemployed worker in Latina recently, "has meant white bread instead of black. But I'm still hungry and my bambini are hungry and my wife is sick."

TB AND VD ATTACKED

The only instruments for reaching the children of poverty-plagued homes seem to be those of the United Nations, particularly ICEF. And the cost of saving lives seems to be small compared to that of destroying them.

This year ICEF is spending in Italy about $11,200,000. That sum will not only provide supplementary feeding for about 1,000,000 children and 30,000 mothers; it will also finance a perhaps even more far-reaching medical program.

Hunger is only one of the byproducts of war. Syphilis and tuberculosis are others. A year ago last May, the ICEF mission here launched a program for treating pregnant mothers afflicted with VD in Rome, Naples, and Sicily. It also began mass immunization against TB.

But what may turn out to be the most important project undertaken by ICEF is milk pasteurization. For an outlay of only $250,000, a plant is being installed in Sicily, where infant mortality largely traceable to contaminated milk was among the worst in Italy.

For generations Sicilian children got their milk from cows brought to the doorsteps of their homes by itinerant vendors. Junior held out his cup and the man squirted milk into it. Flies covered, milkman, Junior, and his cup. Junior usually died before he was a year old and his chances of surviving until age 5 were only about 1 in 5.

Extermination of flies and mosquitoes, with resultant decrease in deaths from intestinal disease and malaria, have also been undertaken by ICEF in Sicily and Sardina. In Sardina, the antifly campaign was so successful that infant mortality has dropped from 106 per thousand to 68 and continues downward. There are so few cases of malaria on the island now that recently they had a difficult time digging up a case for laboratory study.

CLOTH AND LEATHER

ICEF's operations in the 12 neediest countries of Europe, including several Soviet satellites, cost only $55,500,000 this year. The bill covered powdered milk, canned meat and fish, cod liver oil, medicines—and raw materials. The fund brings in cotton for cloth for diapers, woolens for warm clothing, and leather for shoes. The stuff is made up locally; the individual countries paying all manufacturing costs and supplying transportation and storage facilities.

Only 4,000,000 of the several times that many known to need help will be reached by ICEF aid in Europe. Russia neither contributes nor receives ICEF aid, but 28 nations are chipping in to support the fund and 33 are getting help. The United States puts up 72 cents for every 28 cents contributed by another country.

But no money handed out by Uncle Sam since the war ended has accomplished more. For half the cost of an aircraft carrier millions of children will live tomorrow who might have died yesterday.

Ask the Mother Superior what ICEF has meant at St. Joseph's Orphanage, out on the Via Nomentana, about half a mile up the road from where one of the men who made ICEF necessary, Benito Mussolini, used to live in the Villa Torlonia. (It is an overseas school now for the children of American residents.)

"Well," the nun will tell you, "the children can do their lessons now. They seem to have more energy for their work and they learn more quickly. It is the food, of course."

Last July 28 and 29, I made a 2-day study of the UNICEF (United Nations International Children's Emergency Fund), headquarters in New York City, for the Relations with International Organizations Subcommittee of the House Committee on Expenditures in Executive Departments. I was tremendously impressed by the efficient, effective, and quiet manner in which this humanitarian program was being carried out. Directed by experienced and competent persons, such as Mr. Maurice Pate, executive director, Mrs. Betty Muther Jacob, special assistant to the director, and Gen. Lowell Rooks, fund-raising coordinator, UNICEF has within the space of little more than two short years established a far-flung operational program throughout the world which has saved the lives of millions of undernourished and diseased children and mothers, mostly victims of war-ravaged countries. A very complex and involved program of procurement, transportation, and final disposition of food, clothing and medicinal supplies and equipment had to be worked out, to bring materials and supplies from countries where they are in surplus or easily obtainable quantities, to the areas where they were in dire demand. In spite of these obstacles, the administrative costs have been held to an unusually low percentage, and UNICEF's procedure of maintaining title to its goods until the time of final consumption guaranteed that the supplies, food and materials got to their destination in the shortest possible time and with negligible loss en route.

The United States Government contributes 72 percent of the cost of the program, matching on a 72–28 percent basis all contributions from other governments. The Eightieth Congress authorized a $100,000,000 appropriation for this program, but appropriated only $75,000,000. By action completed on June 30, 1949, the Eighty-first Congress extended both the authorization and the appropriation through fiscal year 1950, so that the undrawn balance of the $75,000,000 remains available to match the contributions of other governments through June 30, 1940.

The undrawn balance today is approximately $10,000,000 and it is very likely that before the end of this year this balance will be matched by other countries and exhausted. This would mean sufficient funds to carry on operations in Europe, where the major part of the program is concentrated, for the first 2½ months of 1950.

I believe, as do many of my colleagues on both sides of the aisle, that the United States has a moral obligation to make the additional appropriation of $25,000,000, and it is my considered opinion that this should be done during this session in order to avoid placing this splendid program in a precarious position in midwinter when its services are needed most.

Those of us who are familiar with UNICEF's program feel that failure to appropriate this $25,000,000 balance would seriously handicap the efforts of General Rooks, Fund Raising Coordinator, to solicit contributions from other countries the moment the remaining United States balance became exhausted. Furthermore, it is extremely doubtful that the Congress would act rapidly enough to make this appropriation by March or even April of next year, in order to make sufficient funds available when they are most needed to wind up a successful program. I invite the serious attention of my colleagues to this matter, and it is my earnest hope that this appropriation will be forthcoming before adjournment.

Why Pick on Spuds?

EXTENSION OF REMARKS

OF

HON. FRANK FELLOWS

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. FELLOWS. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Bangor (Maine) Daily News of Wednesday, August 17, 1949:

WHY PICK ON SPUDS?

Let's admit that all the facts published in a Washington paper and purchased by a Boston paper with Democratic leanings for exclusive New England distribution are true.

Having admitted them, we ask, "So what?"

The record shows that under the 90-percent-of-parity Government guaranty, Aroostook farmers did well for themselves on the 1948 crop, much of which was marketed in 1949. The Washington record shows that Uncle Sam poured more than $65,000,000 into the farmers' laps. This averages $650 for every man, woman, and child in Maine's largest county. Nationally, potato price support cost Uncle Sam a quarter of a billion.

Isolated instances show single checks for $495,000, $426,000, $276,000, $202,000, and so on down the scale to the lowly three- and two-digit figures. With one exception the figures are admitted by the farmers themselves, or at least not denied, so they may be accepted as accurate.

But why pick on potatoes, which form only a part of the Nation's farm products, and on Maine spuds in particular, which aggregate from 15 to 20 percent of the Nation's total tuber production? Why not take the stab at the biggest boy in the parity game, Old Man Cotton?

In the Washington article, admittedly accurate so far as it goes, only half the picture is there—the half that depicts the Aroostook farmer as an avaricious money grabber. He is condemned as though responsible for the whole price-support system.

Actually he had nothing to do with it, though he can hardly be blamed for taking advantage once Congress has given the green light.

The Steagall amendment, passed down some years ago by a Democratic Congress, established price support for potatoes and various other commodities at 90 percent of parity until 2 years after the end of the war, which was determined by President Truman as December 31, 1948.

Parity is an elusive word, one of doubtful meaning. Here it means the ratio between agriculture and industry for 1912. Just why 1912 was selected we have no idea, since that was one of the banner years of economic chaos in the Nation's history. Nevertheless, that is the standard of comparison.

The 1948 crop of potatoes was accordingly under support at 90 percent until December 31, 1948, without regard to the Republican Congress unless it were prepared to repudiate the pledges of the Government to the potato growers.

Potatoes, therefore, came out from under existing farm price support system in 1949, except for the small percentage of the 1948 crop that was marketed in 1949. No one can fail to recognize the inequity as well as the utter impracticability of ending support in the middle of the marketing season, as this could mean only the dumping of the entire 1948 crop on the Government. Otherwise, the grower would have to assume the hazard of a price decline.

For the 1949 crop, however, and thereafter, support is assured only at 60 percent of parity instead of 90 percent—a fact not mentioned in the Washington article. This radical reduction of 30 percent was made by a Republican Congress under the leadership of New England Senator AIKEN and with the full cooperation—believe it or not—of the potato growers; another fact carefully omitted.

In addition, 150 other crops are left hanging in the balance for 1949, with no assurance of support until the two branches of Congress have a meeting of minds.

Meanwhile, the six or seven basic crops—which curiously enough include peanuts but not potatoes—are assured of the 90-percent parity through 1949—but thereafter, under the Aiken bill, parity is redefined in terms that would mean a reduction of approximately 30 percent under present conditions and support is to be reduced under a sliding-scale formula depending on available supplies from 90 percent to 60 percent of parity, which means that support may be as low as 40 percent of the 1948 level.

This is neither a condemnation nor eulogy for price support. Merely an attempt to set the record straight. Price support happens to be written on the books, and while it's there Aroostook farmers would be more than stupid if they failed to avail themselves of its generosity.

Psychological Warfare

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lowell Sun regarding a bill introduced by me:

RADIO WASHINGTON

Congresswoman EDITH NOURSE ROGERS, of Lowell, has presented a resolution in which she advocates the creation of Radio Washington, for beaming information across the seas. Logically, she points out that Russia and many other nations have their official stations which are freely used for promotion and propaganda purposes in a psychological war.

Giving them a taste of their own methods would be the principal advantage to be derived from such a station. Naturally, while the station could be heard in this country, it would not be used for domestic matters except in case of emergency. It would be dedicated solely to overseas work; in fact, it might be likened to the program sponsored by the State Department a few years ago when, with the cooperation of the Library of Congress, when a collection of books, based on the American way of life and the democratic theme in general, was shipped to strategic points in Europe.

The creation of a campaign of psychological warfare in peacetime may be a difficult task for the most learned strategists. But the success of these stations in capital cities overseas would indicate that the resolution introduced by Congresswoman Rogers would at least represent a fine start toward matching every move that the Reds and other nations might make.

Their objectives are quite clear—and so are ours. And we may as well tell the world about them just as other people are so anxious to do.

News Behind the News

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. MULTER. Mr. Speaker, I direct the attention of my colleagues to the following article by Ernest Lindley which appeared in the Brooklyn Eagle of August 18, 1949:

NEWS BEHIND THE NEWS
(By Ernest Lindley)
DENIES BRITISH FINANCE CRISIS IS DUE TO SOCIALISM ALONE

The Economist, of London, is an anti-Socialist publication which has contained many penetrating criticisms of the economic policies of the Labor government. Those criticisms frequently have been quoted in this country.

The Economist has taken alarm, however, at the tendency in the United States to attribute the British financial crisis primarily to the socialistic policies of the Labor government. In its leading article of August 13 entitled "British in the Pillory" it presents some analyses and figures which deserve thoughtful attention in the United States.

The most clearly socialistic measures of the Labor government are, the Economist points out, the nationalization of a few sectors of the national economy, chiefly coal, the railroads, and certain other utilities. It is simply not true, it says, that the nationalization measures taken so far made it more difficult for Britain to balance its international payments. On the contrary, it thinks that coal might have been scarcer and possibly dearer, and that railroad rates might have been higher if those industries had not been nationalized.

The Economist then turns to the licensing of commodities, bilateralism, and related restrictions on trade. It believes that Britain should move away from them as rapidly as possible. But, it emphasizes, these policies are not primarily attributable to doctrinaire socialism—most of them have been imposed by unavoidable facts. It points out that when faced with similar facts, as in western Germany, American officials have adopted similar policies. That is, they have sharply restricted nonessential imports and have put trade largely on a bilateral basis "as near barter deals as any made since Dr. Schacht." The American objective in Germany, like the British objective at home, was to keep trade in balance and to conserve dollars.

What about expansion of the social insurance system and other welfare policies? The Economist thinks this probably has been too rapid in Britain. It is anxious especially about reducing the incentives to individual initiative. But, it points out, the same trend is to be found not only in most of the other Marshall plan countries but in the United States. In any event, it believes that this factor has been very much overemphasized.

Britain's crisis is not a crisis in production, the Economist points out. During the first quarter of this year, Britain's industrial production stood at 131 percent of prewar—a greater gain over 1938 than any other Marshall plan nations had made excepting Sweden and Denmark, neither of which suffered war damage.

Britain's ratio of exports to imports during the first quarter of this year was far higher than that of any other Marshall plan nation. Also Britain was the only Marshall plan nation which had increased, since prewar, its ratio of exports to imports in relation to the dollar area.

These are all pertinent facts which should be kept in mind in this country. There is a British financial crisis. But its causes are considerably more complex than the easy-tongued critics of British socialism in this country appear to realize. And certainly they are not attributable to a lack of willingness to work on the part of the British people.

Capitalism and Big Business

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. GARMATZ. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an article brought to my attention by one of my constituents, a reprint from the Portland (Maine) Evening Express, together with an editorial from the du Pont magazine August 1949:

[From the Portland (Maine) Evening Express of March 10, 1949]

CAPITALISM AND ALL OF US

Greetings, fellow capitalists.

Capitalists?

Why, sure. In this country, even those who yell loudest about their hatred of capitalism are pretty apt to be capitalists themselves.

That is to say, almost every American owns a piece, however small, of this country's vast, capitalistic, economic structure. Do you have a life-insurance policy? Greetings, brother capitalist! Or is your labor union dickering to win group insurance for you and your fellow dues-payers? Then you'll be, when you get it, capitalists like almost everyone else.

How do you figure that?

Well, here's the annual report of E. I. du Pont de Nemours & Co., a huge, capitalistic (naturally) corporation. The report carries a tabulation giving interesting information on the ownership of the company as of the end of 1948.

And who owns du Pont? Why, it seems, you do—or a great many thousands of people, just like you. For example:

Common stock in this company was owned, at the end of last year, by 77,347 persons. A total of 23,608 investors held preferred stock in the company. Call these investors "Wall Street," if you like. But there were an awful lot of them—of such capitalists.

These owners of the du Pont Co. are scattered throughout the 48 States, the District of Columbia, several territorial possessions, and 40 foreign countries, the statement shows. So they do not all go to mahogany-paneled offices in Wall Street, there to clip coupons the live-long day and to "grind down the faces of the poor," after all.

Let's continue this story:

Of the total number of du Pont stockholders, individuals comprised 81 percent, and held 31 percent of the shares outstanding at the end of 1948. Groups, comprising 19 percent of the total numbers of owners, held 69 percent of the shares outstanding.

These stockholding groups consisted of estates and trusts; banks, bank nominees, and brokers; charitable, educational and fraternal organizations, insurance companies, and other companies and organizations. (Could be that the company insuring your life is one of those coowners, stockholders,

of this corporation; and that could make you something of a capitalist, couldn't it?)

The du Pont statement presents a breakdown of these groups holding 69 percent of its outstanding shares. It shows that the group stockholders of record include 14,000 estates and trusts; 1,100 banks, bank nominees, and brokers; 1,300 charitable, educational and fraternal organizations; 400 insurance companies; and 1,500 other companies and organizations.

The du Pont corporation finds tha more than 200,000 persons have a beneficial interest in dividends paid by the corporation to the 16,000 stockholders in the estates, banks, and other companies classifications listed above.

It points out that the number of persons benefiting from du Pont Co. dividends received by the 1,300 stockholders in the charitable, educational and fraternal organization classification, while very large indeed, cannot readily be determined. (But perhaps your lodge, or the college which is your alma mater, or some charitable organization which your donations help to support is one of those 1,300 stockholders. Could be.)

Finally, there are the 400 insurance companies with some of their funds invested in the stock of this great corporation. Undoubtedly the company which issued your policy is one of these 400. In that case, you are one of millions of little people, as the Russia-firsters designate us—one of the millions of persons all over this country (and all over the world) with a beneficial interest in the earnings, made possible by sound and profitable operation, of this one great corporation.

As we were saying: Greetings, fellow capitalists. What multitudes of us there are.

[From the du Pont magazine for August 1949]

HOW BIG IS BIG?

Americans like bigness. Most towns hope to grow larger. When a man starts out in business, it goes without saying that he hopes his business will grow. We agree pretty generally in the United States that this is a healthy viewpoint. And some little towns do grow, do become big towns. In the United States many a small business does grow. Now and then it makes so many friends, it climbs to such a position of leadership that it crosses an imaginary line and becomes big business.

But then a strange thing happens. Some of the very people who agree that growing bigger is a good thing, turn around, once a business crosses this imaginary line, and say it is too big. A century and a half ago the du Pont Co. began as a very small company. We have grown with America. Today du Pont is a big company.

So we ask this * * * Just when does big become too big? Just who is to decide when the imaginary line is crossed? Just when ought a company stop growing?

Would anyone really be better off if the people who owned the du Pont Co. in the year 1900—or 1910, or 1920—had said: "We are too big. We refuse to grow bigger." In that case you would have no cellophane, no Duco finishes, no nylon, no neoprene rubber. Shall we stop growing today? Shall we tell our research teams to stop improving old things, stop looking for new ones? Shall we refuse to hire any new people and lock our laboratory doors? Then there will be no du Pont developments tomorrow.

The answer is really pretty simple. Any company should be just as big as it needs to be to manufacture goods economically and efficiently. After all a big business is just a business in which a number of people have joined together to do a job too big for a lesser number of persons. By the same token small businesses perform many services more efficiently than big business. Each does the thing it does best. And you actually decide how big any company shall be, because you cast a vote every time you buy a product.

For our part we feel proud that the du Pont Co. is big enough to bring you an ever-increasing number of better things for better living.

Other Factors Ahead of Cheap Labor in Development of South

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. WILLIAMS. Mr. Speaker, those in other sections who are alarmed because of the current boom in industry throughout the South have been prone to list cheap labor as the chief reason for this movement of industry. We in the South have known for many years that these arguments were spurious and had no basis in fact.

I was pleased to note in yesterday's Sunday Star an article, written by Francis P. Douglas, in which the true facts regarding this movement are related.

Under leave to extend my remarks, I include herewith the afore-mentioned article:

(By Francis P. Douglas)

The idea that the postwar industrial expansion in the South is due primarily to cheap labor is exploded by a study of why 88 plants were established in that region since the war.

The South attracted the plants because it offers an expanding market and because it is a source of raw materials and power. The factor of cheap labor ran a poor third, despite the fact most people believe that is the chief attraction the South has to offer.

This is the most striking conclusion in the study made by the National Planning Association's committee on the South, which has just recently been published in book form under the title, "Why Industry Moves South."

MOVE NEAR CONSUMERS

According to the report of the survey, 45 percent of the plants were influenced by the rising importance of the South as a market for industrial and consumer goods. There was a desire or need to get production near the consumers.

Another 30 percent were established in the South to be near the raw materials or the sources of energy—natural gas and electricity.

Labor conditions attracted 25 percent, and they were interested chiefly in an adequate supply of labor rather than cheap labor.

Furthermore, those plants located in the South because of the market and raw materials factors were larger than those established there because of labor conditions. No manufacturing unit of those attracted by labor-supply considerations is estimated to employ more than 1,000 workers. On the other hand, 25 percent of the plants located in the South to be close to their markets and 15 percent seeking proximity to their raw materials are to employ more than 1,000 persons.

The book is the third report of the NPA's committee of the South, which is composed of more than 50 leading southerners in various fields. The authors are Dr. Glenn McLaughlin, now chief economist of the National Security Resources Board, and Dr. Stefan Robock, now with the Justice Department's Antitrust Division in Boston.

SOME FALLACIOUS IDEAS

Their report may throw into the discard a number of preconceived ideas. One is that the South is being industrialized at the expense of New England and other of the older industrial areas. According to the authors, only 3 of the 88 plants were relocations of existing industries and 2 of these were not clear examples of relocations, because they involved an expansion in total capacity and a shift in markets.

Examples of industries established in the South to be near their markets both for consumer and industrial goods are a big candy plant in Dallas, an International Harvester Co. plant in Memphis, automobile assembly plants in Atlanta, producers of textile fibers, makers of cardboard containers and bags, paints, batteries, and a variety of other products.

Those seeking to be near their raw materials produce newsprint, cheese, and other dairy products, phosphorus, and other items.

Plants which were located in the South chiefly because of labor considerations are chiefly those producing shoes and textiles. And it is these plants where the South and New England actually compete. Only two or three of the new southern units for which location was determined by raw materials could have been placed in New England. Those are plants handling forest products.

While the South may congratulate itself on the steps toward industrialization these plants represent, they carry with them the factor of absentee ownership.

"The home offices of the companies responsible for most of the large-scale expansion in the South are in New York, Chicago, Boston, Detroit, St. Louis, the Philadelphia-Wilmington area, and the Cleveland-Akron area," the authors report. "The expansion into the South is thus largely a matter of the establishment of branch plants of northern companies. Capital and management functions are centered in the older industrial areas."

The survey did not analyze the North-South wage differential. The authors state, however, that it frequently is confused with the differentials between large and small towns. Wage differences for communities of similar size in both North and South have been narrowing steadily since the war, they state.

LABOR SURPLUS

The general conclusion is that it is no longer necessary for those trying to attract industries to the South to base their appeal on low wages as many have done.

There is a labor surplus in the South and it has been maintained by the highest birth rate in the Nation despite the steady and substantial outward migration. Contributing to it is the mechanization of agriculture.

Many employers, according to the survey, place great stress on the difficulty of obtaining workers in northern areas, particularly for work in textile mills, as compared with the ease of attracting employees of the same type in the South, where job opportunities are limited.

Labor legislation in the South generally is less restrictive than in the North. This was a consideration for a textile concern locating in the South which felt that its operations in the North were burdened by the fact that women were not permitted to work after 6 p. m. But none of the plants seeking proximity to markets or raw materials were concerned by this fact.

Southern labor, according to the authors, came to be recognized during the war as able to staff plants requiring skills long thought to be a peculiar resource of the older industrial regions. Moreover, the great advances in training techniques during the

war makes it possible to train green workers quickly.

"In the judgment of nearly all of the companies covered in this study, labor productivity in the South is equal or superior to that in the North," the authors state. This is not only a matter of skill, but also is due to less absenteeism, less turn-over, better selections from the large labor supply, a cooperative attitude on the part of workers and fewer labor disturbances, both sympathetic and direct.

Agricultural Workers

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 18, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks, I wish to include in the RECORD a clipping from the Kern County Labor Journal dated August 5, 1949.

Mr. Speaker, why are we importing agricultural workers from Mexico? We certainly do not need them in California. Among the agricultural workers in our State there is wide distress. Unemployment among agricultural workers in San Joaquin, Merced, Madera, and Fresno Counties has mounted to serious proportions. In the week ending July 9, such unemployment was estimated to be 5,000 greater than in the previous week, with the result that wages are down because of the competition for jobs.

Mr. Speaker, I repeat, we do not need additional farm labor in California. The following clipping from the Kern County Labor Journal shows how agricultural workers feel about the recently concluded agricultural workers' agreement with Mexico:

"Organized labor has always recognized the need for an adequate farm program," Harold Hodson, butchers' union representative and former labor council secretary, told delegates to the Kern County labor council Tuesday evening, "both from a Government marketing program and a program of adequate labor force."

"The American farmer," he said, "and that includes the California farmer, has received $11 of every $15 paid in subsidy by the Government and the taxpayer. This has aided the small farmer and in many instances has made the large farmer wealthy.

"To show their gratitude and patriotism for this financial help from the taxpayer, certain large farm interests have banded together and with the aid of the State Department, have effected an 'illegal' agreement to admit 35,000 Mexican nationals to aggregate the already serious unemployment problem that faces the State.

"Not only does the taxpayer foot the bill in subsidizing the farmer, but he will also foot the bill for the care of more than 35,000 American workers who will be displaced by the Mexican national."

"Mr. Aleman, we don't want Wetbacks or Mexican nationals. There is too much labor here now."

This was the inscription on signs, some in English and some in Spanish, that pickets wore when they picketed the Mexican Consul in Los Angeles this week, Aleman is the President of the Republic of Mexico.

Three pickets included a Mexican-American, a colored, and an "Oakie" farm worker.

Meanwhile, telegrams protesting the agreement between the United States State Department and the Mexican Government to let in 35,000 Mexican nationals to displace American workers were sent to Washington, to William Green, president of the American Federation of Labor, and to H. L. Mitchell, National Farm Labor Union chief.

Last week, telegrams of protest were sent to Secretary of State Dean Acheson, Mexican Consul Salvador Duhart, Governor Earl Warren, Representative JOHN LESINSKI, and Senator TOM CONNALLY by the NFLU.

It was reported that 80,000 Mexicans are at the border waiting to be chosen among the 35,000 to be brought in under the agreement. Union officials pointed out that in the turmoil of admitting those who will be chosen under the agreement, thousands will enter illegally as "wetbacks."

The Kern County Labor Council also went on record protesting that the entry of these nationals would not only lower the already low living standards of American agricultural workers but that it would lower standards in semiskilled and laboring jobs

It was also pointed out that when the contract ends and the nationals are returned to Mexico, they know the ropes and return to the United States illegally as "wetbacks."

Union officials cited growing unemployment all over the United States and particularly among agricultural workers and those of unskilled trades, agreeing that in the face of these figures and the talk of a possible recession, now was not the time to replace American workers with alien ones.

Unlike the last agreement when nationals were admitted, the present agreement is void of many of the protective clauses which were contained in former agreements.

Hank Hasiwar stated that the Mexican and American Governments had signed resolutions and agreements regarding nationals and the State Department and the Mexican Department of Foreign Affairs had violated them in signing the present agreement.

Hasiwar also mentioned the secrecy in which this agreement was worked out, saying that it was strictly a "back room deal."

"While those 35,000 are not all destined to be shipped to California, many of them will be shipped here. California is one of the States most severely hit with unemployment.

"Thousands of farm workers are now working part time and many local workers who look for work are told to move on because there are already illegal workers here who will work for practically nothing. The importation of nationals will aggravate this situation adding a heavier burden on relief agencies."

The situation will be further aggravated because in our experience a flood of "wetbacks" invariably follow Mexican nationals.

Postal Pay Increase

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. CURTIS. Mr. Speaker, the postal workers of the country are entitled to a pay increase and I want to state that I favor having that done. These workers perform a very important function for the economy of America. It is a public service and they are entitled to consideration.

When the first discharge petition was placed on the Speaker's desk some weeks ago, it was my feeling that the legislative committee handling this matter should be permitted to complete the hearings and make their recommendations before they were discharged. That committee has recommended legislation now. I believe that legislation should be acted upon and I have signed the pending discharge petition.

The Thrasher Farm and the Nation's Soil Program

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. BEALL. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial appearing in the Baltimore Sun on August 10, 1949. This editorial gives us a good picture of what the Soil Conservation Service is doing and the Thrasher farm in my district is just one of the instances of the good work being done.

The editorial follows:

THE THRASHER FARM AND THE NATION'S SOIL PROGRAM

Just a year ago the farm of Mrs. Nellie V. Thrasher in the Middletown Valley, west of Frederick, had "its face lifted" to the accompaniment of deliberate ballyhoo and world-wide publicity. In a single day it was transformed from the conventional, old-fashioned square-field farm into one exhibiting the best features of soil conservation practice.

Visitors, both official and unofficial, now come in impressive numbers to see how the farm looks at the end of its first year under the new program. The layman is perhaps disappointed, for the changes are not spectacular. Many of them would escape entirely an unpracticed eye. However, an expert and disinterested committee, having surveyed the farm, reports gratifying improvement in its physical condition and production.

Where, before, hay had to be bought in considerable quantity, the farm is now more than self-sufficient. Where wheat last year was a failure, this year an average of 26.4 bushels was produced on each of 18 acres. The corn crop is expected to reach 70 bushels to the acre as compared with 40 bushels last year. For the first year the farm has succeeded with alfalfa which will yield three cuttings. Wastelands of a year ago now have been converted to permanent pasture and the growing of mixed grasses. The farm, valued a year ago at approximately $13,500, has been reappraised at $26,500.

The increase in the value of the farm is, of course, important to the owner. But farm values rise and fall with the market. So, too, production figures may be affected in one way or another by weather conditions and other elements of chance.

The important permanent factor in the Thrasher farm project is neither the increased valuation nor the total of this year's crops. It is that, through the introduction of conservation measures, the topsoil which used to be washed away in heavy rains now is being held in place. That is important not only to Mrs. Thrasher but to everybody. It means the preservation and improvement of arable land that is essential to producing

food for the Nation's growing population. It means also less good soil being washed downstream to clog our rivers and bays with silt, impede navigation and kill marine life.

The Thrasher farm was treated in dramatic fashion for the very definite purpose of bringing the public's attention to the Nation-wide program of the Soil Conservation Service. This program is a colossal undertaking that has hardly more than begun.

In 1937, there were only 13 organized soil conservation districts in the whole country. Today there are some 2,000 districts embracing 773,000,000 acres of the Nation's estimated 1,144,000,000 acres of farm lands. Last year it was estimated that 15 percent of the country's soil and water conservation job had been completed. That leaves 85 percent to be done. There is, however, encouragement in the fact that, with 2,000 districts organized, conservation work is being completed twice as fast as it was a few years ago.

Resolutions by Alabama Department, the American Legion

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following letter from Maj. Joseph M. Dickerson, adjutant, Department of Alabama, the American Legion, together with copies of three resolutions passed by the department convention, July 3–5, 1949:

THE AMERICAN LEGION,
DEPARTMENT OF ALABAMA,
Montgomery, Ala., July 21, 1949.

Hon. CARL ELLIOTT,
House Office Building,
Washington, D. C.

DEAR CARL: Enclosed are copies of three resolutions adopted by our department convention in Mobile on July 3–5, 1949, relating to the following subjects:

Pensions for older veterans.

Extension of time for development of chronic and tropical diseases.

Retroactive insurance for disabled veterans.

Trusting you will be in position to give these resolutions your support, I am,

Sincerely yours,

JOSEPH M. DICKERSON,
Department Adjutant.

Whereas the American Legion at its last national convention, held in Miami, Fla., adopted a resolution asking for pensions to our older veterans of World Wars I and II; and

Whereas Congress as the result of this resolution has passed a pension bill through the House of Representatives, and the bill is now pending in the Senate; and

Whereas our older veterans are dying in great numbers and many are in need; and

Whereas it has been the policy of our Government to pay pensions to its older veterans for 173 years of its existence as a free nation: Now, therefore, be it

Resolved by the Department of Alabama, the American Legion, in annual convention assembled in Mobile on July 3–5, 1949:

1. Hereby endorses the pension bill now pending in the Senate of the United States Congress which provides pensions for our needy veterans.

2. That we commend the members of the Alabama delegation of the House of Representatives who did support the pension bill;

3. That the Senators from Alabama be and are hereby requested to support this bill; be it further

Resolved, That the legislative committee of the Department of Alabama be directed to cooperate with the national legislative committee and assist them in every way to secure the final passage of this bill, and a copy of this resolution be mailed to national headquarters of the American Legion and copies be mailed to all the members of the Alabama delegation in Congress and a copy be furnished the press.

Whereas the American Legion is vitally interested in all legislation which promotes the interest of veterans and all veterans' affairs; and

Whereas there is a serious need for the extension of time within which certain chronic and tropical diseases becoming manifest shall be presumed to be service connected; and

Whereas a bill was introduced in the United States House of Representatives on February 28, 1949 (H. R. 3057), to amend Veterans Regulation No. 1 (a) and extend the above time from 1 year to 2 years: Now, therefore, be it

Resolved, That the American Legion, Department of Alabama, in annual convention assembled in Mobile, Ala., on July 3–5, 1949, go on record as favoring and urging the passage by the Congress of the United States of the House of Representatives bill No. 3057 to amend Veterans Regulation No. 1 (a) to provide that certain chronic and tropical diseases becoming manifest within 2 years after separation from active service shall be presumed to be service connected; be it further

Resolved, That a copy of this resolution be sent to each member of the Alabama delegation in the Congress of the United States.

Whereas section 305 of the World War Veterans Act of 1924, Public Law 242, Sixty-eighth Congress, as amended, provides that certain unpaid compensation due veterans at time of death or permanent total disability shall be applied in payment of premium on United States Government life insurance which has lapsed or has been canceled or reduced while veteran was suffering from a compensable disability; and

Whereas there is no such provision of law affecting National Service Life Insurance; and

Whereas it is felt that the same privileges should be extended to holders and beneficiaries of national service life insurance: Now, therefore, be it

Resolved by the American Legion, Department of Alabama, at its annual convention at Mobile, Ala., on July 3, 4, 5, 1949, That the National Congress be urged to enact legislation providing that where any person has heretofore allowed his national service life insurance to lapse, or has canceled or reduced all or any part of such insurance, while suffering from a compensable disability for which compensation was not collected and dies or has died, or becomes or has become totally disabled and at the time of such death or total disability was or is entitled to compensation from the Veterans' Administration remaining uncollected, then and in that event so much of his insurance as said uncollected compensation computed in all cases as is provided by existing compensation laws, would purchase if applied as premiums when due, shall not be considered as lapsed, canceled or reduced; and the United States Veterans' Administration is authorized and directed to pay said veteran, or his beneficiaries, as the case may be, the amount of said insurance less the unpaid premiums and interest thereon at a rate of interest to be determined by Congress, compounded annually, the insurance benefits to be paid in accordance with existing plans of payment of national service life insurance; and be it further

Resolved, That a copy of this resolution be sent to all members of the Alabama delegation in Congress.

Cooperative Housing for Medium Incomes

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 18, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include an article by Harry C. Bates, chairman, housing committee, American Federation of Labor, which appeared in the Washington Post on August 20, 1949.

Mr. Speaker, I am very proud of the fact that I was one of the first to introduce a housing bill to assist middle-income families.

The article follows:

COOPERATIVE HOUSING FOR MEDIUM INCOMES

(By Harry C. Bates, chairman, housing committee, American Federation of Labor)

The intelligent treatment which the Washington Post has given to the question of housing legislation contributed greatly to the enactment of the housing law passed earlier this year. Remembering many fine editorials in support of public housing and slum clearance I was very much surprised by your editorial on August 14 criticizing the cooperative housing provisions of the new bill (S. 2246), introduced by Senator SPARKMAN, and approved by the Senate Banking and Currency Committee.

The value of a housing measure, like any other type of legislation, must be judged in terms of the answers to the following three questions:

1. Is there a real need which this legislation is designed to meet?

2. How well does the proposed program meet this need?

3. Are there any alternative, more effective methods for meeting this need?

The American Federation of Labor is convinced that the cooperative housing program in Senator SPARKMAN'S bill meets all these tests.

There is common agreement that at the present time the housing needs of moderate-income families are not being met. By moderate-income families we mean the 40 percent of American families whose incomes in 1948 ranged between $2,000 and $4,000, according to the Federal Reserve Board.

The great majority of union members and veterans fall in this group. The average factory worker today earns about $53 a week, equivalent to $2,756 a year for full-time work. The average veteran earns approximately the same amount, or a little less. Assuming that no family should be forced to spend more than 20 to 25 percent of its income for shelter, these families can afford to pay no more than about $50 to $60 a month for housing.

The housing problem facing these families is both simple and tragic. Largely untouched by any existing housing legislation, they are too poor to afford the housing constructed by private builders, yet their income is too high to make them eligible for public housing.

According to the Federal Reserve Board, the average price of new houses for sale in 1948 was between $7,500 and $8,500, requiring

monthly payments of approximately $75 to $85. The estimated rental for an average apartment in an FHA rental project is in the neighborhood of $100 a month, including services and utilities. Clearly the overwhelming majority of moderate-income families cannot buy or rent the homes private builders are constructing today.

On the other hand, these families are not eligible for public housing. The average income of families admitted to public-housing projects during the latest period for which figures are available was only $28 a week. Existing programs are clearly not meeting the needs of these moderate-income families.

A number of different proposals have been advanced to deal with this problem. After careful study of these proposals, public interest groups which have been most concerned with this problem, including all the major labor and veterans' organizations, have concluded that the most effective and practical solution is embodied in Senator SPARKMAN'S bill for a cooperative housing program.

This bill makes it possible for cooperative housing projects to be financed by direct loans from the Federal Government at the going Federal rate of interest (now 2½ percent) plus one-half of 1 percent for administration for an amortization period of up to 50 years. Experts in the housing field have estimated that this program would make possible the following types of savings compared with the rent for the average FHA-insured 4½-room apartment.

1. Utilizing the nonprofit cooperative type of organization, $5 a month.

2. Allowing very low vacancy rate comparable to that in public housing, an additional saving of $5 a month.

3. Reduction in operating and maintenance expenses made possible by a maximum of tenant maintenance, $11 a month.

These savings amount to $21 a month, and if private ordinary mortgage terms were to be applied, the resulting rents would average $65–$80 a month—still substantially more than the moderate-income families can afford to pay.

The crucial savings made possible by the provisions of the Sparkman bill are in the financing terms. The reduction in the effective interest rate from the present 4½ percent to 3 percent and the lengthening of the amortization period to 50 years allows a further reduction of about $12 a month. The total savings, therefore, would amount to about $33 a month and would bring the cost down from $85–$100 to $52–$67 a month.

The direct loan feature of the bill has been criticized, but as the Senate Banking and Currency Committee has pointed out, these provisions represent no untried experiment. Direct lending programs by the Federal Government have been in existence for many years and have been of inestimable benefit, particularly to the farm families of our Nation. Direct Federal loans to rural electrification cooperatives at interest rates of 2 percent and with long amortization periods have been made for many years. Direct Federal loans have also been made to farm cooperatives at low interest rates, and to cooperatives of water users for irrigation projects.

The Government also has undertaken direct real estate loans in the past, and, indeed, provision is made for such loans for other types of housing developments in the Sparkman bill. For the Government to recognize that its lending powers are necessary to meet the housing needs of a large group of families represents simply a continuation of policies which have long been effective in other fields.

The editorial asserts that the proposed cooperative housing program involves some element of subsidy from the taxpayers. This is a contention which we vigorously deny. The fact is that all groups working on this program have insisted from the start that any housing program for "moderate income" families must be one which can be carried on completely without subsidy.

For the Government to lend money at the same interest rate at which it borrows it clearly involves no element of subsidy, if it receives an additional amount to cover the cost of administration. In the bill an additional one-half-percent interest is included for the purpose, and our calculations indicate that it will be entirely adequate.

Nor do we think that the adoption of this program might result in substantial losses. The cooperative principle has proved its worth many times over. Unlike a cooperative retail store, for example, families who join this type of cooperative will be continually investing their savings in the housing project. In our opinion, this will assure that losses will be kept at a very low rate.

The American Federation of Labor supports the cooperative housing program contained in S. 2246. To us this seems the only practical solution to a very acute problem, the problem of finding a way whereby the moderate income families can be helped to provide decent housing for themselves.

We feel that there are certain dangers in applying subsidized housing to moderate income families. In the cooperative principle, plus the provision for direct loans by the Federal Government at low interest rates, we have a practical solution to meet this pressing problem. It is true that this country has not had extensive experience with cooperative housing, but in the light of foreign experiences, particularly Sweden, we feel confident that a vigorous cooperative housing movement can be successfully organized. We are prepared ourselves to do everything within our power to make certain that this program will be a success.

Sweetpotatoes

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. BECKWORTH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter with reference to sweetpotatoes:

DEPARTMENT OF AGRICULTURE,
Washington, August 18, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This is in regard to your telephone conversation with Mr. K. W. Schaible, of our Fruit and Vegetable Branch, PMA, and your letter of August 9, 1949, in connection with an inquiry of the Barnett & Ead Potato House of Edgewood, Tex., concerning loans for price-support purposes for sweetpotatoes.

Prices for the 1949 crop of sweetpotatoes will be supported through the medium of purchases. A loan program for sweet potatoes is not contemplated. Enclosed are copies of press releases in which the 1949 price-support program was announced.

Prices for sweetpotatoes were supported through the medium of loans prior to 1947. These loans were not popular with producers and only three such loans were executed. Successful storage of sweetpotatoes requires considerable experience and careful attention to prevent excessive losses and, therefore, loan-type programs for stored sweetpotatoes are not suitable for general use.

Sincerely yours,

K. T. HUTCHINSON,
Assistant Secretary.

Power Plans Ignore New England

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Boston Sunday Advertiser of August 21, 1949, regarding the rivers and harbors bill:

BAY STATE SOLONS ROUSED AS CONGRESS' WATER POWER PROJECTS LEAVE NEW ENGLAND OUT IN COLD

(By George Brady)

The almost certain approval by Congress of a lopsided, viciously sectional rivers and harbors bill giving $1,300,000 to the South and West and neglecting to appropriate a single penny for the development of water-power in electricity-famished New England aroused and angered Massachusetts political leaders yesterday.

In a telegram to the Boston Sunday Advertiser, Congressman JOHN W. MCCORMACK, the majority leader in the House of Representatives, said:

"I have called on Congressman WILLIAM WHITTINGTON, of Mississippi, chairman of the Public Works Committee, to hold early hearings on H. R. 3040, introduced by Congressman FOSTER FURCOLO, of Springfield.

"This measure provides for a survey of the Merrimack and Connecticut and other rivers in New England, looking to hydroelectric power development, flood control, navigation, and other improvements."

By telephone, Congressman JOSEPH W. MARTIN, of Massachusetts, the minority leader in the House of Representatives, declared:

"Nearly a dozen bills dealing with the production of low-cost electrical power from our New England rivers are gathering dust in the pigeonholes of Congress.

"Many are sponsored by outstanding Republicans, notably Senator HENRY CABOT LODGE, Jr., Congresswoman EDITH NOURSE ROGERS, and Senator MARGARET CHASE SMITH, of Maine.

"I intend to find out why all this legislation has been shelved, and I shall do my utmost to have it acted upon before Congress adjourns."

Congressman THOMAS J. LANE, of Lawrence, sponsor of a bill for a Merrimack Valley Power Authority, was even more direct and bitter. He said:

"In view of the fact that the people of New England, even those who have lost their jobs due to southern and western competition, will be forced to help pay for the multi-million-dollar dams which Congress intends to build in other parts of the country, I consider it shocking and disgraceful that we have been denied Federal assistance for the hydroelectrification of our scandalously neglected rivers.

"This may be a great victory for the Power Trust and the mighty lobbyists in Washington.

"But it is a tragic blow to the people of my district, who are sick and tired of seeing their mills and jobs move away to the South, which has received vast sums of free money for the development of their rivers and which is now demanding and getting more money.

"Congress has appropriated billion after billion for England and the various nations of Europe in spite of the fact that it is common knowledge that a substantial part of the largess was squandered by the British.

"How much wiser and better it would be for Uncle Sam to come to the rescue of his own people in New England, people who are

paying the highest electric light rates in the entire country and who are losing their livelihood because of the scarcity of water power and the inability of their industries to compete with the highly subsidized South.

"The Merrimack Valley Power Authority bill, which I have introduced, would provide immediate employment for at least 25,000 men, and it would so improve Lawrence, Lowell, Haverhill, Amesbury, and Nashua and Manchester, N. H., that 300,000 persons could look forward with confidence to steady employment and decent wages as long as they live.

"MILLIONS FOR EUROPE

"But this does not interest some of the gentlemen in Washington.

"They prefer to play Santa Claus with our money to the countries of Europe, including the ones which shot down so many American boys in the last war."

President Chester A. Dolan, Jr., of the Massachusetts Senate, spoke out with equal vigor and force.

"As head of the senate," he said, "I have done my utmost during the past year to equip our shamefully ignored rivers for prosperity.

"I find great satisfaction in knowing that I have accomplished more in this respect than all my illustrious predecessors.

"But no matter what the Commonwealth of Massachusetts does, it is absolutely necessary that we demand and get a fair deal from the Federal Government.

"I could hardly believe my ears a few days ago when I was informed that lobbyists had been so successful in Washington that New England would be virtually cut off from Federal river development funds.

"But now it is happening, and there is no doubt about it.

"REBUFF, BAY STATE

"The worst part of it all is that it constitutes a slap-in-the-face at the Massachusetts General Court, which only 2 months ago memorialized Congress to drop less important matters and to rush the development of New England hydroelectric projects.

"Surely the members of the New England congressional delegation are aware of this action on our part, and I can only hope that it will induce all its members to get behind Congressman McCORMACK and force action on the Furcolo and other bills before Congress adjourns.

"We have so much unnecessary unemployment in Massachusetts that we cannot afford to contribute millions of dollars in taxes for new TVA and Columbia River developments without getting anything in return for the rehabilitation of our own industrial centers.

"A happy England and a contented Germany may be all right.

"But when it comes to investing American tax money, I much prefer a prosperous New England."

Minimum Wage Bill

EXTENSION OF REMARKS

OF

HON. WINGATE H. LUCAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. LUCAS. Mr. Speaker, many Members of the House have requested information about the provisions of the minimum wage bill which was passed by the House recently. In an effort to be helpful to them and with a desire to be of all the assistance possible to the conferees on the part of the House if and when they are appointed, I have prepared the following summary.

In writing this analysis I have made no reference to the Lesinski bill, which was before the House when my bill, the so-called Lucas bill, was accepted as a substitute. The Members of the House are familiar with the extraordinary and unprecedented powers which were sought to be conveyed to the Secretary of Labor in the Lesinski bill. It carried more authority to the Secretary of Labor than any bill which has ever been considered by the Congress in peacetime. It was indefinite in language and written in such a fashion as to promote endless litigation and confusion.

The House very wisely chose to adopt a bill which was clear in its meaning and unmistakable as to the intent of Congress. The summary follows:

SUMMARY OF PRINCIPAL PROVISIONS OF H. R. 5856, THE FAIR LABOR STANDARDS AMENDMENTS OF 1949, AS PASSED BY THE HOUSE ON AUGUST 11, 1949

INTRODUCTION

The underlying purposes of this bill were to make more realistic the minimum wage and to make unmistakably clear the meaning of the provisions of the 1938 act so as to assist the Administrator in carrying out the intent of the Congress. Experience under the act has shown a great need for its redefinition and clarification. The course of the courts and the Administrator in extending the act and restricting the exemptions demanded congressional action. The bill answers this demand.

SCOPE OF ACT

The wage-and-hour provisions (secs. 6 and 7) are made applicable to every employee engaged in interstate commerce or in the production of goods for interstate commerce. The term "produced" in section 3 (j) is redefined so that no employee may be held engaged in the production of goods for interstate commerce unless he is producing the goods or is engaged in a closely related process or occupation indispensable to the production of the goods for interstate commerce.

EXEMPTIONS

(a) Employees in agriculture: Present complete exemption from wages and overtime is continued. (Secs. 3 (f) and 13 (a) (77)).

(b) Exemptions from overtime for processing of agricultural commodities: Year-round exemption from overtime continued for the following: First processing of milk, cream, skimmed milk or whey into dairy products; ginning and compressing of cotton; processing of cottonseed; and processing of sugar beets and sugar cane into sugar or sirup. Also, the first processing of buttermilk into dairy products is granted a year-round exemption from overtime. (Sec. 7 (c)).

Fourteen workweeks per year exemption from overtime is continued for the following: First processing, canning, or packing of fresh fruits or vegetables; first processing within the area of production of any agricultural or horticultural commodity; and handling, slaughtering or dressing of poultry or livestock. Authority to define area of production is transferred to the Secretary of Agriculture (sec. 7 (c)). The first processing, canning, or packing of fresh fruits or vegetables will continue to enjoy a further 14-workweeks-per-year exemption from overtime under the seasonal exemption provided in section 7 (b) (3), thus giving to these industries the same 28 weeks per year exemption from overtime they presently have.

(c) Exemption from wages and overtime for employees within the area of production engaged in handling, packing, storing, ginning, compressing, pasteurizing, drying, preparing in their raw or natural state, or canning of agricultural or horticultural commodities for market or in making cheese or butter or other dairy products: Present complete wage and overtime exemption continued, but authority to define area of production is transferred to the Secretary of Agriculture (sec. 13 (a) (11)).

(d) Canning of fish: In an attempt to increase the coverage of the law in the case of canning fish, the House erred in passing an unintelligible amendment. This must be cured in the Senate or in conference.

(e) Local retailing: Present complete wage and overtime exemption continued for any employee engaged in making retail sales or in performing work immediately incidental thereto, such as wrapping and delivering retail purchases (sec. 13 (a) (1)).

(f) Retail and service establishments: Complete wage and overtime exemption granted to any establishment satisfying three conditions: (1) Over 50 percent of the establishment's sales must be made within the State in which it is located; (2) 75 percent of the sales must not be for resale but rather to the ultimate consumer; and (3) 75 percent of the sales must be recognized as retail sales or services in the particular industry (sec. 13 (a) (2)).

(g) Bakeries, ice plants, candy kitchens, ice cream parlors: Complete exemption from wages and overtime granted to an establishment selling products which it makes if it satisfies the following conditions: (1) over 50 percent of its sales are made within the State where is is located; (2) 75 percent of its sales are not for resale; (3) 75 percent of its sales are recognized as retail sales in its industry; and (4) the establishment is recognized as a retail establishment in its industry (sec. 13 (a) (4)).

(h) Laundries and establishments engaged in cleaning clothing and fabrics: Completely exempt from both wages and overtime if 75 percent of the laundry's services are for customers who are not engaged in a mining, manufacturing, transportation, or communications business, and if over 50 percent of the services are for customers within the State in which the laundry is located (sec. 13 (a) (3)).

(i) Interstate motor carriers: Complete exemption from overtime continued for drivers, drivers' helpers, loaders, and mechanics (sec. 13 (b) (1)).

(j) Railroads, pipe-line companies, etc.: Complete exemption from overtime continued for employees of railroads, express companies, pipe-line companies, etc. (sec. 13 (b) (2)).

(k) Air-line employees: Complete exemption from overtime granted to all air-carrier employees (sec. 13 (b) (3)).

(l) Seamen: Complete exemption from wages and overtime continued for all seamen (sec. 13 (a) (5)).

(m) Small weekly, semiweekly, or daily newspapers: Complete exemption from wages and overtime granted if newspaper has circulation of less than 5,000, the major part of which is in the county where printed and published or in contiguous counties (sec. 13 (a) (9)).

(n) Switchboard operators in public telephone exchanges: As in present law, complete exemption from wages and overtime granted if exchange has less than 500 stations (sec. 13 (a) (12)).

(o) Small forestry, lumbering, and sawmill operations: Forestry, lumbering, and sawmill operations completely exempt from wages and overtime where conducted by an employer with not more than 12 employees (sec. 13 (a) (15)).

(p) Nonprofit irrigation companies supplying and storing water for farmers: Completely exempt from both wages and overtime (sec. 13 (a) (16)).

(q) Home workers in rural areas: completely exempt from both wages and overtime if self-employed (sec. 13 (a) (17)).

(r) Lumber yards and building material establishments: The term "resale" has been defined so that a lumber yard or building

material establishment selling goods to a contractor for residential or farm building will not be regarded as making a sale for resale (sec. 3 (l)). Such yard or establishment will be exempt as a retail establishment if it meets the tests stated above in (f) for retail and service establishments.

MINIMUM WAGE

Flat rate of 75 cents per hour (sec. 6).

OVERTIME

(a) Belo plan: Gives specific legislative approval to Belo type contracts (upheld by the United States Supreme Court), under which an employer may pay his employees who work different hours each week a fixed guaranteed weekly salary, thus assuring employees stability of income and employment. The contracts may be used only if the duties of the employees necessitate irregular hours of work. The contracts may be made either individually with the employees or with unions, but must specify a regular rate of not less than 75 cents and compensation at not less than time and one-half such 75-cent rate for all hours worked over 40 in 1 week. The contracts must also provide a weekly guaranty of pay for not more than 60 hours based on the rates so specified (sec. 7 (e)).

(b) Overtime on overtime: Continues present law outlawing overtime-on-overtime claims, both retroactively and for the future (sec. 7 (d) (6) and (7) and sec. 7 (g), also sec. 3 (e) on p. 38 of bill).

(c) Bonuses, payments for vacations, illness, etc., profit-sharing plans, employer contributions, to old-age, retirement, etc., funds: Excludes most of such payments from regular rate of pay for purposes of computing overtime (secs. 7 (d) (1), (2), (3), and (4)).

ADMINISTRATIVE POWER UNDER THE ACT

Continued in an independent administrator (sec. 4).

RULE-MAKING POWER

As in present law, no rule-making authority granted to the Administrator except in limited areas such as authority to define who shall constitute an executive employee (sec. 13 (a) (1)), authority to issue regulations concerning learners (sec. 14), etc.

RIGHT TO SUPERVISE PAYMENT OF BACK WAGES DUE EMPLOYEES

Such right conferred upon the Administrator. If employee agrees to accept payment under such supervision, then upon payment he thereby waives any right to liquidated damages (sec. 16 (c)). No right conferred upon the Administrator to sue for back wages. Employees only may sue (sec. 16 (b)). Such right of suit is subject to the 2-year statute of limitations prescribed in section 6 (a) of the Portal Act.

PORTAL ACT

Such act is left in full effect. (Sec. 3 (d) on pp. 37–38 of bill.)

CHILD LABOR PROVISIONS

Extended so as to forbid the employment of child labor in commerce or in the production of goods for commerce (sec. 12 (b)).

Distinguished Jewish Poets

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. JAVITS. Mr. Speaker, I am today introducing two private bills for the relief of the distinguished Jewish poets, Nahum Bomze and Joseph Rubinstein (Rubinsztjn). Both escaped the Nazi advance into Poland, spent five tragic years in the Soviet Union, and as soon as the border was opened into Poland both, when given the alternative of accepting Soviet citizenship or returning to Poland, chose the lesser evil and returned to Poland. Both are anti-Communist and both would pay a dreadful penalty if they had to return to Poland due to the condemnation the Polish press has heaped upon them for attending a non-Communist world congress for Jewish culture held in New York in September 1947.

There is appended hereto an editorial which appeared in the issue of July 21, 1949, of The Day, the national Jewish daily published in New York, describing the situation of these two Jewish poets.

There is also appended a letter from the Jewish Labor Committee of July 18, 1949, among whose officers is one of the great leaders in the struggle against communism, David Dubinsky, president of the International Ladies' Garment Workers' Union, and which numbers among its officers outstanding trade-union leaders Adolph Held, Isadore Nagler, Louis Stolberg, Jacob Pat, Max Zaritsky, and Charles Zimmerman.

Also appended are biographical sketches of Mr. Bomze and Mr. Rubinstein:

[Translation of leading editorial in the Day, issue of Thursday, July 21, 1949]

PETITION TO CONGRESS ON BEHALF OF TWO JEWISH POETS

We are informed that important Jewish cultural organizations, such as the PEN Club, the Peretz Writers' Union, and others, are seeking ways and means to keep the two noted Jewish poets, Joseph Rubinstein and Nahum Bomze, from deportation from the United States.

Joseph Rubenstein and Nahum Bomze reached the shores of America after years of wandering, and agonizing experiences. They came here with the hope of the eventual possibility of remaining here and seeking a new life. Both poets reached this country after the long and bloody road which faced Polish Jewry under Nazi occupation: Soviet Russia, then back to Poland, then the lot of the refugee in France.

Both poets knew the terrors of totalitarianism. And when they came here they breathed the free air of America, and opened their eyes wide to the New World, soon realizing that there is still a corner on God's earth where man is free to say what he likes, write what he feels, have opinions and convictions of his own. And that this corner is the United States of America.

However, the period these men were permitted to stay in this country is coming to a close soon. If there will be no effort made in Congress to permit them to remain in this country and in time become naturalized citizens, they will be forced to go back.

It is easy to say "Go back." The question is, go back where? To Soviet Russia or to Poland, from which they miraculously saved their lives, or to France, where they were suspended in midair and never felt secure from one day to another?

No. Joseph Rubinstein and Nahum Bomze have no place to go back to. For them there is no going back. They are men without a country. The only place where they are able and where they wish to stay and should stay is America.

It has already been pointed out that important Jewish cultural organizations are intensely interested that Rubinstein and Bomze should remain with us. The interest of these organizations in these two noted Jewish poets is based not merely on humanitarian motives, though such motives alone would be sufficient. However, there is another motive and that is the important work these two poets can do in our midst, if they are permitted to stay here.

Jewish culture in the United States is sorely in need of new and fresh cultural springs. Before God vented his wrath on the Jews of Europe they, especially east European Jewery, served as the reservoir from which we drew a great deal of spiritual strength. Europe provided the United States with Jewish journalists, writers, poets; she gave her rabbis and religious teachers, as well as actors.

All these sources have been cut off. Today Jewish life must be culturally and spiritually self-sustaining. Therefore, we treasure so highly each individual new force that comes to us.

Joseph Rubinstein and Nahum Bomze are young poets who have already established themselves prominently in Jewish poetry. It is without doubt that their presence in our midst will spell a great asset for Jewish culture in the United States. We hope that the efforts of the Jewish PEN club, the Peretz Writers' Union, and the other organizations will prove successful. We hope that our Congress will enable these two Jewish poets to remain in America, the only place of refuge open to them.

JEWISH LABOR COMMITTEE,
New York, N. Y., July 18, 1949.

Congressman JACOB K. JAVITS,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN JAVITS: We understand that you have undertaken to introduce private bills for two outstanding Jewish poets, Mr. Nuchim Bomze and Mr. Joseph Rubinstein, who, during the last 10 months, have been visiting this country and who cannot, because of political reasons, return to their native Poland.

In 1940, both men escaped the Nazi advance to the east, and spent five horrible years in Asiatic Russia. In 1945, when the Russian Government gave Polish citizens a choice of either adopting Soviet citizenship or returning to Poland, both men chose the lesser evil and returned to their land of birth.

In September 1947, on the initiative of the Jewish Labor Committee, a World Congress for Jewish Culture was held in New York, and these two outstanding poets came to participate in and address it. As this convention excluded all Communist and fellow-traveling groups, both Mr. Rubinstein and Mr. Bomze have been subjected to abuse and vituperation from the newspapers in Poland and the Communist-controlled press in France. They have both been denounced as "agents of the Marshall plan."

While in this country both have tried, through lectures describing life under communism in Russia and in their native Poland, to rally support for democracy and freedom. We have known these men as opponents of totalitarianism and are keenly interested in their final adjustment in this county. We are glad that you have introduced bills for these men in the House of Representatives, and wish to assure you of our fullest cooperation in this matter.

With best wishes, we are

Sincerely yours,

JEWISH LABOR COMMITTEE,
JACOB PAT
Executive Secretary.
JOSEPH GODSON,
Director, Public Relations.

Nahum Bomze, noted Yiddish poet and writer, was born August 7, 1906, in Sassow, Austria, later Poland and now Soviet Russia. Was evacuated in 1941 to Russia. After the war, he claimed Polish citizenship and returned to Poland, refusing to live under a Soviet regime. Went to Sweden December

1946 and came to Paris May 1947. Came to United States on September 13, 1948, as a delegate to World Jewish Cultural Congress, representing the Jewish Literary Society of Paris, France.

Was known in Paris as opposed to communism and its social theories. Also known as a Zionist. Was attacked by Communists in Poland, France, and America as an enemy of the Soviet and as an American agent. Opposed the convention of a World Congress of Jewish Culture which the Communists planned to call in Paris.

Has lectured in many American Jewish communities on Jewish life in Soviet Russia and satellite countries, disseminating information about the true state of affairs in contradiction to the run-of-the-mill Communist propaganda.

Temporary French visa expired. The refusal to grant him a permanent visa in this country, forcing his return to Poland, would endanger his life, as he would certainly be arrested on his return there and subjected to slave labor and exile to Siberia or perhaps liquidation.

Joseph Rubinstein, noted Yiddish poet and writer, was born October 11, 1903, in the city of Skidel, Russia, later Poland, and since World War II Russia again. Came to United States September 13, 1948, as a delegate to World Jewish Cultural Congress, representing the Jewish Literary Society of Paris, France.

Is a Polish citizen, was evacuated in 1941 from Poland to Russia. After the war claimed Polish citizenship and returned to Poland, refusing to live under a Soviet regime. Left Poland for Sweden, January 17, 1947, and after 6 months in Stockholm went to Paris.

Was known in Paris as opposed to communism and its social theories. Also known as a Zionist. Was attacked by Communists in Poland, France, and America as an enemy of the Soviet and as an American agent. Opposed the convention of a World Congress of Jewish Culture which the Communists planned to call in Paris.

Has lectured in many American Jewish communities on Jewish life in Soviet Russia and satellite countries, disseminating information about the true state of affairs in contradiction to the run-of-the-mill Communist propaganda.

Temporary French visa expired. The refusal to grant him a permanent visa in this country, forcing his return to Poland would endanger his life, as he would certainly be arrested in his return there and subjected to slave labor and exile to Siberia or perhaps liquidation.

His wife, now in Paris, shares his views and refuses to return to Poland, where the fate of an enemy of communism would await her.

Good Report on Housing

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. MULTER. Mr. Speaker, the following editorial on what New York City is doing to meet the housing problem should prove of considerable interest. It appeared in today's New York Times.

GOOD REPORT ON HOUSING

In early July Mayor O'Dwyer issued the first of a series of departmental and agency reports to the people on progress since he took office on January 1, 1946. It dealt, rather inadequately we thought, with the health department. Yesterday the second of these reports was published, and told of achievements in housing construction in the last 3½ years. A third, on the department of hospitals, is made public today.

The report, prepared by the New York City housing authority, naturally emphasizes public housing, but it has chapters also on private construction and quasi public housing, such as the huge Stuyvesant Town project of the Metropolitan Life Insurance Co. and Fresh Meadows, of New York Life. It discusses at length the alternative courses on tenant relocation, a difficult problem. The report is well and painstakingly prepared; it gives specific detail on projects, with facts on costs. It is also a record of solid accomplishment by an agency with a tremendous job on its hands.

In brief, 42 public housing projects valued at $540,000,000 have been started in 42 months, or one a month. At the end of the war 17,000 public housing living units had been built and 20,700 had been planned. Now there are 63,000 built or under construction and more than 5,000 are scheduled for an early start. A list of 49 proposed sites for new public housing is given. New State and Federal funds now in sight will assure steady building for several years.

Of the 42 projects started in 42 months not all by any means are cash-subsidized, low-rent housing. Twenty-one projects, in fact, represent pioneering in policy, for they are housing without cash subsidy, which the rents will make self-supporting. They are addressed especially to the veteran's problem. They have somewhat larger rooms, the bathrooms are a bit more luxurious, they have other small advantages over the subsidized housing. The rents are also considerably higher, of course.

For the postwar period the average overall cost of a subsidized apartment has been $11,401. This includes cost of acquiring land, of clearing site, of installing heating and equipment, and stoves and refrigerators for the apartments. The buildings are fireproof, they are built with the expectancy of at least 50 years' usefulness, and may have a lifetime of 75 or 100.

Thomas F. Farrell, chairman of the housing authority, has moderately good news as to construction costs. The authority finds these now appreciably lower than they were at the 1948 peak. The drop was sharp for a time, but has now leveled off. In April 1946 the construction bid cost for an apartment (not including full development cost) was $4,942. A year later it had risen to $7,124. In 1948 it was $9,283. Last month the bid on one project showed $6,789 per apartment. Labor in some trades is showing greater productivity. The authority's costs of obtaining money have declined somewhat. These are favorable signs.

This is a comprehensive report, and a useful one. It tells of hard work done in a driving effort to solve one of the city's major postwar problems.

Social Security

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Globe, Boston, Mass., Sunday, August 21, 1949:

OLDSTERS MAY NEED TO SOLVE OWN PROBLEM—IF WE SET THE LATER YEARS INTO A GROUP APART SOCIETY WILL BE THE LOSER—WE SHOULD BE EXTENDING, RATHER THAN SHRINKING, THE EMPLOYABLE AGE

(By Frances Burns)

From all the stir that is being made about retirement and pensions and programs for the old we might conclude that age is something new and peculiar to the atomic era.

An enterprising manufacturer even is pushing a line of "foods for the aged." From advance reports it sounds like the kind of pap that has been sold by the millions of little jars for babies and has saved so many mothers of this generation the nuisance of squeezing beef juice and straining spinach.

The hitch is that baby food can be shoveled into junior with the resistance and overflow more or less dependent on the deftness of the feeding hand. But, it is complained, "the old have stubborn ideas about what they want to eat," and are putting up sales resistance.

A testimonial on this food for the aging might be sought from Mr. Churchill. After all, when he was leading Britain in her finest hour he already was beyond the age at which we now lay business and professional men and industrial and government workers on the shelf.

The rash of schemes for pushing forward the arbitrary age of senility to make ever more men and women dependent on the uncertain generosity of politics while taking away their livelihood smacks a bit of escapism. We are tired of trying to solve the problems we have created for ourselves. Let's do something for the old. There are ever more of them and presumably they have relatives. Moreover, because immigration long has been checked, they increasingly are all good Americans, red blood a little thinned, perhaps, but still voting.

It is a fact that Americans are living longer today than even their fathers did. In 1900 only 4.1 percent of the 76,000,000 people in the United States were 65 years and older. Currently this age bracket constitutes 7 percent of the population. But the prediction that in 1975 or 1980 the aged will be 12 percent appears to overlook the tremendous war-baby boom and the offspring which these 10,000,000 and more presumably will be having in a quarter of a century.

GRANDPARENTS GETTING YOUNGER

In the meantime there is danger that in whatever guise of social concern we do it, we make a long life less worth striving for.

There are few of us who, on being presented with a first grandchild at 50 or so, do not think complacently that "grandparents certainly are getting younger all the time." But unfortunately for the peace of mind of the fifties the Government and industry and even our colleges increasingly are making old age an arbitrary 65—in some cases 60.

Is this wise? Perhaps with an ever longer life span in prospect we should be extending rather than shrinking the employable age. There is no age vigorous enough to carry on its back the support of such an increasing percentage of the population.

They say that it is the "organized aged" in California who have been able to get a law passed which would give most of them $75 a month for life. The pensions, it is true, go only to California "needy" or the State would not be able to obtain Federal funds. But a California husband and wife "in need" still can own a house assessed at $10,000, insurance policies up to $2,000, two automobiles, and as much as $3,000 in securities. The cost may be $125,000,000 this year.

Massachusetts paid out $5,079,133 to 92,984 men and women over 65 years old in the May just past. The average monthly payment was $61.40. But Massachusetts' definition of

need is parsimonious by California standards. The successful applicant may not have more than $300 in savings or securities that can be liquidated. His equity in a house—in which he must be living—may not be more than $3,000 or he has to give a mortgage for the difference, against which assistance payments to him are a lien held by the community and State and collectible on death.

Yet those receiving this aid in May were only about 22 percent of the persons over 65 in the Commonwealth, reported by the last general census in 1940 to number 450,000. If the floor is lowered to 60 by the General Court it is estimated that another 25,000 persons would be added. But in spite of the fact that there are worthy and in many cases needy older men and women who do not seek assistance because they think it smacks of charity the Commonwealth, the Federal Government which pays almost half the cost, and the 351 communities in the State are spending together nearly $70,000,000 a year on old-age assistance.

SOCIAL SECURITY PAYMENTS

However, some 107,000 retired employees in Massachusets are receiving $2,500,000 monthly from Federal Social Security. Employees of many classes began paying in 1940 1 percent up to $3,000 wages with a like amount from the employer. This money now is beginning to come back on application in maximum payments of $45 a month to the single individual and $67.50 to a married couple, if the worker is retired, regardless of the other income he may have. The amount of payment is based on the contribution he has made. Congress now is considering increasing the collections and the monthly payments.

Then more and more concerns have instituted their own retirement plans and it is claimed that altogether nearly half the people over 65 in the country now are receiving a pension of some sort.

This is, on the whole, a good idea. We don't want to go back to the poor farm—indeed, in one town west of Boston the poor farm has become the country club. But the danger lies in thinking that men, and women, too, have outlived their usefulness as contributors to the work of the world or their ability to earn because universities wish a painless way of getting rid of professors who might hang on too long, unions want way made for younger members and business needs to have executive jobs opened for their younger, more ambitious men.

The truth is that you cannot establish an arbitrary old age by fiat. Here in Massachusetts we have too many examples of the indispensibility of men and women who are not 65, but well into their eighties, to believe such nonsense. What of the world-renowned physician who flew the Atlantic to share his knowledge with European doctors on his eightieth birthday this summer? An octogenarian former Secretary of the Navy making his first Atlantic crossing by air for a business conference? A family physician who stops, over the protest of his patients, at 89? The lawyer coming in daily at 90? The Cape Cod man who feeds his family and neighbors with his garden and hens at 86? The 75-year-old woman who taught navigation to scores of successful flyers during the war? A Charles Eliot and William Lawrence?

OLD PEOPLE ARE PEOPLE

"Old people," says Dr. Robert T. Monroe, Boston specialist in the comparatively new geriatrics, or science of diseases of the aging, "are people. Perfectly normal people. Even their diseases are common to any age. But by age they have lost their natural advisers. They have only God and those younger than they. God is rather far away and the young do not understand them—are only too glad to step in and soothe them with 'At your age, what can you expect?'"

Just as for any age, work, he points out, is paramount for the well-being of older people—"and not silly, made work. You can't fool an older person. But employment liability laws, labor-union restrictions and veterans' preferences are against their employment. Society as a result is losing the services of experienced people and is suffering intellectually and economically. And we are breeding a discontented group of old people who have idleness forced on them."

There might well be some tax relief for older people in the Commonwelth. A man and wife with $1,600 a year income from investments, made with money saved, perhaps, must pay 6 percent on the whole amount. The physician thinks, too, that a great need is low-cost housing and provision of services to enable the older person on a small pension to stretch it over food, shelter, clothing, and medical care.

The fact is, we should begin to get ready to live the last of life for which the first was made when we are young. Every able-bodied man or woman should be ready to take on another job if he faces retirement. It may be an avocation for which there has not been time before. There are many unpaid, vital jobs that older people can do.

Industry and the universities and government need to use the wisdom and experience of their older men and women, even if at lower salary, while leaving the nervous strain of executive positions to the younger men with drive and ambition who are not bored by them.

If old age is a problem it is another one we are making for ourselves. The solution is not soft food in little jars or a place on the shelf, however well padded. It is to be found in the same area as for any other age, that of freedom to live and work to the fullest capacity of the individual. Why should not older people tackle it themselves?

Address of Hon. Sydney McMath, Governor of Arkansas

EXTENSION OF REMARKS
OF
HON. JAMES E. NOLAND
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. NOLAND. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following speech of Gov. Sydney McMath, of Arkansas, delivered before the Indiana State Young Democrats Convention, July 22, 1949:

Mr. Chairman and fellow Democrats, I am delighted to be here in Indianapolis tonight and to meet with the Young Democrats of Indiana. The very fact that a group of Hoosiers has invited the Governor of a Southern State to speak at this convention evidences the character of our Democratic Party as a truly national party—representing the people from one end of this land to the other.

It is precisely because the Democratic Party is the only truly national party that we sometimes have differences within our ranks—differences that occasionally cause great preelection glee among the Republicans. That, however, usually gives way to post-election gloom, as it did last November.

The Democratic Party has, from the days of its founding, had adherents in every section, and among every group of our citizens. Quite naturally, then, a party composed of southern cotton farmers, New England industrial workers, and western cattle-growers will find within itself disagreements as to ways and means of advancing the cause of every citizen—whose cause the party everywhere has stoutly espoused. So we may disagree as to proper tariff laws; as to what is an adequate minimum wage; as to how best to secure for all our people their full rights of citizenship. What is good for the citizen in Indiana, may not seem quite so desirable for another in Alabama. High freight rates may protect established industrial pay rolls in New York, but they add to the cost of living in the South and West.

All of you as good Democrats are familiar with our party's history, and its magnificent accomplishments for the welfare of the country. I will not tell you again what you already know.

What I would like to discuss with you is the role of the South in the Democratic Party. Too often you above the Mason-Dixon line never hear of us except when the Ku Klux Klan make their cowardly assaults against some defenseless victim; or when the Dixiecrats shout "States' rights" as in objection to anything which for any reason they oppose, and they oppose almost anything. But these things do not give an accurate picture of the South today. We are not all spending our time on white-columned verandas sipping mint juleps, and plotting to keep our people in economic slavery. We realize our shortcomings, perhaps better than some of our most vociferous critics. But today there is abroad in all the Southland a healthy, vigorous progressive movement, a growing and insistent demand for the development of the human and economic resources of our region. Every day the light of tolerance and understanding is pushing back the fog of prejudice and hatred which for too long was the stock-in-trade of too many southern politicians.

If you think I'm overemphasizing the "new Rebel yell" in the South, as Hodding Carter has aptly put it, I would like to recall for you the vote of the South in the last Presidential election. President Truman carried every State where he appeared on the ballot as a Democrat. The only States the Dixiecrats carried were those in which they controlled the party machinery, and arranged the ballot so the people could not fairly express themselves as Democrats.

The voting record last November—and for 50 years before—provides sufficient evidence of the South's devotion to the Democratic Party and its concept of individual freedom. But there are genuine differences in the outlook of the so-called southern wing of the party, and the interests of the northern—or more properly eastern—wing. They are the differences, largely, between the outlook of the farmer who lives in a dispersed rural society, and the industrial worker whose life follows the patterns of concentrated urban society. The concept of States' rights has been often perverted by the demagog in the North and South alike and used as a weapon against social progress. But, despite all that, the principle of States' rights remains a living doctrine with deep and honorable roots in the history of our party.

It is an almost universal complaint that our Government generally is slipping away from the people. Each political subdivision, because of legal or economic compulsion, is relying more and more on the next higher political unit for a solution to its problems. There has been a marked tendency, particularly on the part of our State governments, to refuse to assume responsibility and to become increasingly dependent upon the Federal Government. This has resulted in a concentration, a centralization, of governmental power in Washington and has contributed greatly to a do-nothing policy on the part of State governments. A convenient excuse for failure to act in any field is "we are waiting for help from the Federal

Government." It is true that there are many areas of endeavor in which the Federal Government has a legitimate interest and an obligation to assume its proportionate share of the burden. Yet more often, a State problem is the State's primary responsibility, and it is the duty of the State government to meet that responsibility with energy and resourcefulness. To the degree that the State fails, or refuses to meet its obligations, to that extent, there is agitation for Federal interference.

The cornerstone of our Government—and of our party's philosophy—is the guaranty of certain basic, fundamental rights which in turn guarantee the dignity of human life to every citizen. I am not taking a leaf from the demagogs when I say the greater the concentration, the centralization of power in the Federal Government, the greater the danger of encroachment upon these individual rights.

One of the most effective means of decentralizing our Government and thereby avoiding the danger of excessive Federal control is by an assumption by the States of those responsibilities and that they should rightfully assume.

There are States' rights, and we should protect them. There are also States' responsibilities, and we should assume them. We, in the South, are perhaps more zealous of our States' rights than the people of any other region, but only too often we have failed to fulfill our States' responsibilities. We say, and properly so, "Stay out of our affairs," but many who wail the loudest about outside interference are the least willing for the States to shoulder their responsibilities. We must not in our fight to protect our States' rights fall into the error of using States' rights as a subterfuge to distract attention from other pressing problems that demand solution.

We recognize our responsibility to afford all our children, regardless of color, equal educational opportunities. In the past our record on this score has not been a happy one, but we have set our goal at achieving this and are today—not 20 years hence—making rapid strides toward our objective. Arkansas, for example, was the first Southern State to admit Negro students to our university schools of law and medicine.

The right upon which all other rights ultimately rest in a democracy is the right of the individual to have an effective voice in government. This, of course, means that every citizen, regardless of race, creed, or color shall have the right to vote his or her own convictions without interference from any source. The South has for years been under bitter attack on this score, charged with denying a large percentage of its citizens the right of free ballot. Part of the charge has been that Negroes are prohibited from voting and partly that the poll tax in effect keeps them from having the right of franchise. There is no denying that in many parts of the South the Negroes were denied the ballot in the Democratic primaries. In fact, in many States, the Democratic Party, which professed nationally its belief in the brotherhood of man and its championship of the rights of the underdog, has had as part of its party bylaws a rule forbidding membership in the Democratic Party to members of the Negro race. That is no longer true today. A part of the change is the result of Federal court orders. On the other hand, even before those decisions were enforced, there were many southerners earnestly seeking for the Negro the right to have a voice in the governmental affairs through the ballot. In Arkansas today Negroes are qualifying as electors in increasing numbers and are going to the polls throughout the State to cast their ballots on election day. And this is true not only in the urban centers where you might expect it, but is also true in the Delta plantations.

While we are discussing the franchise I would like to say a few words about the attitude in the South today toward the poll tax. Abolition of the poll tax has, for many years, been the demand of liberals throughout the country. In many instances this has been a good rallying cry at election time, but has been forgotten when the campaigners actually took office. There has been considerable confusion, too, about why the States in the South which still keep the poll tax have insisted upon doing so. It is my sincere conviction that in most of these Southern States, including Arkansas, the retention of the poll tax has not been based primarily upon a desire to prevent Negroes from voting. This was achieved by party rule. A great many of the advocates of the poll tax fight to keep it not primarily because of its effect upon Negroes voting but because of its general effect in keeping all people of lower economic means, whether black or white, from exercising their right of franchise. In addition to those with this sinister motive, there are also perfectly honest and sincere believers in democracy whose attitude is affected by many other complicating factors. In Arkansas, for example, all the money derived from the dollar a year poll tax goes into the common school fund. Our school teachers, as in other States, have been notoriously underpaid and our schools for our children of all races have been woefully inadequate. Abolition of the poll tax last year, as an example, would have taken some $450,000 from the school fund. In the past then we have had the educational forces of the State, which have been among those striving for a better existence for all our citizens, fighting repeal of the poll tax. The point that I am making is simply this: I would like for you to understand that it is an oversimplification and a gross distortion to view the poll tax solely as a whip in the hand of a political Simon Legree lashing out at an unfortunate segment of our citizenry. I believe within a very few years all the States now having a poll tax will of their own volition abolish it. In my own State there will be submitted at the next general election by initiative petition an amendment to abolish the poll tax.

Another phase of the change that is taking place in the South is the vast industrial development that we have had in the past few years. The expansion goes on, and with increased industrialization there has been a steady growth of membership in labor unions. As they have grown in membership and experience they have become increasingly active in political affairs.

Our drive for industry in the South has in recent years been based upon a sounder and more honorable footing than was true in years gone by. There was a time when the South was attractive for industrial development because we had available a cheap and ample supply of labor, which was not organized and which would work under sweatshop conditions for long hours and meager pay. We realize now that such an appeal is not good for other parts of the country and is not good for the South—for we pay in many ways for industries thus acquired. Our present industrial development and our constant effort to seek the location of new industries in the South is based on the natural advantages of climate, availability of power and natural resources, and the potential skill and productivity of our workers. We fully recognize that industries also mean the increased unionization of the workers. It is our conviction that a well paid workingman benefits the whole community economically.

Some of you may feel that what has been referred to as the "new Rebel yell" in the South is actually no more than a faint whisper as compared with the oratorical shouts of the perennial demagog. When a man like ESTES KEFAUVER can be elected to the United States Senate from Tennessee, I say that there can be no doubt of the strength of this new voice in the Democratic Party in the South. The election of Governor Kerr Scott in North Carolina and his subsequent appointment of Dr. Frank P. Graham, president of the University of North Carolina to the United States Senate is further evidence of the progressive movement in the South. I could cite other examples to show that the old style southern demagog who thrived on hate and fear is definitely on his way out. These men I have mentioned and others like them are the demagog's natural enemies, yet they have withstood his wrath and won out in test after test before the people of the South.

All of this, it is true, does not minimize the fact that there are still substantial difference between segments of the Democratic Party in the South and in other parts of the country.

We have problems in the South peculiar to our section. You, here in Indiana, have problems that are peculiarly your own. This is true of all sections of the United States. However, the members of the Democratic Party can and should reconcile sectional differences in the interest of the common good. We, in the Democratic Party, have common aims and objectives. We may differ as to the means of realizing these goals, but the preservation of this party, the welfare of our citizens and the continued progress of the United States, demand that we reconcile our differences and maintain the solidarity of our ranks.

It is in building and cementing the national ties of the party and building a greater unity within the Democratic ranks throughout the Nation that the Young Democrats of America can play a vital role. In my associations with the national leadership during the time I was president of the Young Democratic Clubs of Arkansas, I found that, though we might disagree on certain matters of policy, we were able to find a common ground where we could move together as one organization. We found that we could work together without resorting to irresponsible name calling, or to the old trick of accusing those with whom we disagreed of being dominated by some alien or evil influence, and without picking up our marbles and going home. In most of the States of the Union the Young Democrats are a powerful political force. In my own State of Arkansas, a large percentage of the elective officials of the State and county government are active members of the Young Democrats. The chairman, vice chairman, and secretary of the State Democratic Party are also active in our State Young Democratic organizations.

I have discussed some of the differences that in one sense separate the South from the remainder of the Nation—those social and economic influences which we may deplore but which we cannot ignore. Let me stress the fact that these are differences within a larger area of agreement—differences over method, not over principle. The democratic faith is alive in the South, perhaps more alive than in any other part of the Nation. For all our past sins of omission and commission, we, in the South have clung to our basic belief in the worth of the individual. Many observers have pointed out that the South, with its racial problems and its comparative poverty, should have been the great happy hunting ground of the Communists in the United States. There is evidence that the Communists themselves believe this to be true. It is highly significant that the Communists have made less headway in the South than in any other region of the United States. There are so few party members in my State that the party doesn't even bother to maintain an official in Arkansas. Southerners, white or black, have not been deluded by the promise of security to be paid for in the coin of personal liberty. The southerner looks upon Government, as Thomas Jefferson did, as the guarantor of personal freedoms, not as the purveyor of

favors or the source of livelihood. We recognize that poverty is the eternal foe of human dignity, and we recognize the Government's attendant responsibility in the economic sphere. But we insist that this activity shall be negative in character—the guaranty of economic opportunity, not of economic equality. We are individualists—perhaps to the point of eccentricity on occasion—as a consequence, we count ourselves dedicated foes of the concept of the faceless mass dependent upon a paternal government. We believe that all rational social and economic goals can be obtained without doing violence to the basic democratic principle of individual initiative; we believe that no goal which depends upon sacrifice on that principle is worth obtaining.

This is the faith upon which this country was founded. The faith which every American has accepted through most of our history. In this postwar period, however, there are signs that some Americans are becoming faint of heart. There are those, as Archibald MacLeish has said, who look upon freedom as a thing to save, not as a thing to use. There are those who say we are no longer a young Nation, that our task now is to store up the gains of the past, to preserve the status quo at all cost. I say that our Nation is still young—that its future will be shaped by young men who have not lost faith in our ability to save ourselves—yes, and if need be to save the world.

There is a definite need within the National Democratic Party for active organizations such as yours. If I may draw an analogy, in combat the military unit that is engaged continuously in battle, day after day, week after week, suffers casualties. Many of the bravest soldiers and the most capable leaders are lost. There comes a period when that unit must undergo a period of reorganization. Replacements must be found, a new estimate of the situation in serious conflict continuously for 17 years. Many of our most capable leaders have become casualties. We have made mistakes, but we have won great victories. From time to time, our lines have become overextended and there has been confusion in our ranks. During these times, we have had to reorganize, to find replacements, and to rechart our course.

During periods of reorganization, the Democratic Party looks to its younger members to supply leadership, replacements, the energy and the enthusiasm which are needed to continue the fight of the political battlefield. The Democratic Party, founded by Thomas Jefferson, championed by Andrew Jackson stands tonight as the protagonist of a government dedicated to the needs of the people. We are a party deeply aware of the historical rhythm of challenge and response which has marked the making or breaking of nations. A new and critical phase challenges our country. We have in our party the active chemistry of thought and practice to focus the diverse energies of our Nation into an ever improving and a dynamic instrument for human welfare. This is the battle to which we are called. It is a challenge worthy of our noblest efforts.

The Oldest Book

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. MULTER. Mr. Speaker, I direct the attention of my colleagues to a most interesting editorial which appeared in the New York Herald Tribune of August 22, 1949:

THE OLDEST BOOK

The ancient Hebrews who hid their sacred scrolls in a cave near Jericho some 2,000 years ago doubtless would be gratified to observe the avidity with which they are being read by scholars today. The scrolls, which are said to include some of the most ancient copies of Old Testament books yet discovered, were found in sealed jars by two Arab goatherds in 1947, and some of them now are in the hands of the American School for Oriental Research at Yale University, where they will be published. They range from a commentary on Habakkuk, one of the least of the minor prophets, to a complete manuscript of Isaiah, the greatest of the major ones.

The probability is that the new manuscripts will have no appreciable effect on the accepted Biblical texts of today. The traditional Hebrew text, as transmitted by one generation of copyists to the next, seems to have adhered with remarkable accuracy to the lost originals. Each discovery attests this fidelity, and Prof. Carl H. Kraeling of Yale says that the new manuscripts serve to indicate the reliability of the traditional text. Nevertheless, this complete book of Isaiah, inscribed on a 22-foot-long scroll, is a find of the first importance if only because it is the oldest extant copy of a complete Old Testament book in Hebrew.

It is fortunate that the old scribes and copyists were necessarily forced to employ tools and materials that stand up against time almost as well as their writings. The leather scrolls are still intact; the inscriptions legible enough to be read in photographs. An ancient custom decreed that disused or mutilated copies of the scriptures must be buried rather than destroyed; that is why such finds as that just made are still possible. If we, in our way, continue to show as much esteem for the holy writings as the ancients did, undoubtedly there will be other enlightening discoveries made beneath the earth of Palestine.

Aid Bill—Some Questions That Remain Unanswered

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting the following statement by Frederick J. Libby, executive secretary of the National Council for Prevention of War, which he presented before the Senate Committees on Foreign Relations and Armed Services on August 19:

Mr. Chairman and members of the two Senate committees, I appreciate Senator CONNALLY'S invitation to offer a statement for inclusion in the record of these hearings, in lieu of testifying as I did before the House Foreign Affairs Committee on August 5. I wish only to raise a few questions:

1. WHAT IS THIS AID FOR?

This fundamental question, after all the discussion, has had no convincing answer. Chairman KEE says, as Secretary Acheson said in substance, that its purpose it to prevent Russian aggression in western Europe. But, as Brig. Gen. Bonner Fellers, retired, reminded the House committee, even if we equip 60 western European divisions at a cost of $24,000,000,000, they cannot be expected to withstand the assault of 500 divisions, which Russia and her satellites can readily mobilize.

One administration witness said that its purpose is psychological. We must relieve French investors of the fear of Russian aggression, which is preventing them from cooperating with us in expanding European industry under the Marshall plan. But against the undeniable fact that Russia can overrun western Europe clear to the Pyrenees in 60 days, whether we supply this military aid or not, shall we not be merely creating another false sense of security such as the French felt behind their Maginot line?

Another explanation that has been offered us is that this military aid bill is tangible evidence, a token, of our ultimate purpose to cooperate fully in the rearmament of western Europe against Russia. But again we must ask, how could the United States make the rearmament of western Europe's land armies adequate and effective against the Russian Army? Since $24,000,000,000 will equip only 60 divisions, of how vast a sum is the billion dollars of this bill intended to be a token?

A prominent Senator has declared that our choice is between our guns and our sons. This is nothing but a rewording of the slogan "aid short of war," which eased us into full participation in World War II. "Our guns and our sons" is undoubtedly implicit in the bill if it is carried through to its logical end.

So absurd does our Government's explanation of the purpose of this bill seem to Walter Lippmann that on August 4 he came forward with a brand new answer to our question. He declared categorically that the public is being misled in thinking that its purpose is to guard western Europe against Russia; that it is aimed to contain a rearmed Germany. The passage reads in part:

"The true case for European rearmament is one that has not yet been stated publicly. It is that considerably larger forces are needed in France in order to prepare for a German settlement. When the occupying armies withdraw (from Germany) * * * it is essential to the peace of Europe that there should exist a French Army sufficiently large to enforce the German treaty and to contain the German military revival. * * * The program makes no sense if it is supposed to create ground armies in a race with the Red Army."

Mr. Chairman, in the light of these conflicting interpretations of the far-reaching policy represented in this bill, would it not be a good idea for your committee to postpone action on it until you have explained to the American people what it is for, after first agreeing on an answer among yourselves?

2. WHAT WILL THE REARMAMENT OF WESTERN EUROPE CONTRIBUTE TO PEACE?

This bill is being offered to the American people as a peace measure, as were the North Atlantic Pact and the Truman doctrine. The theory underlying this whole policy is that peace flows from a preponderance of military power.

Let us examine this strange theory of peace. It is strange, and yet not new. Hitler had it, and Napoleon before him, and many others before Napoleon. We and our allies are to be so strong that no nation or combination of nations will dare attack us.

As a writer in the Wall Street Journal of July 27 put it:

"We are to preserve the peace by turning the world into an armed camp. We preserve it by announcing to our enemy that we hate him, despise him and fear him, and that we intend to build up sufficient force to crush him if need be. That 'if need be' is supposed

to allay him; we are peace-loving, and neither we nor any of our allies whom we arm would hurt anybody."

History, of course, shows that this pleasant theory has never worked. It didn't bring peace to Hitler's Europe. It exiled Napoleon to St. Helena. For it always has led to an arms race. Nations resent their subordinate and actually helpless position. Enemies and friends alike chafe under the domination of a great power. If the truth were known, we are acquiring no friends by our recently consummated military alliance under the North Atlantic Pact, while we strengthen our enemies.

Mr. Chairman, the rearmament of western Europe will contribute nothing to peace. On the contrary, it will bring the world closer to war. Not until you and the Executive create an atmosphere of confidence and understanding between Russia and ourselves, and we are leading nations toward general disarmament instead of rearmament, shall we be able to believe that we are on the road to peace.

3. WHAT FUTURE DOES THE MILITARY AID PROGRAM OFFER GERMANY?

"Security for western Europe" has been spoken of constantly as the aim of this bill. Analyze the question more closely, however, country by country, from Norway in the north to Italy in the south, and you will realize that the word "security" is dangerously inapplicable. There is no security in this rearmament program, but increased insecurity for each European nation.

We might select any of our European allies as an example, but I believe Germany, which is not yet our ally but is our ward, has the blackest outlook. If Russia should conclude that we are threatening her safety with advance airbases and ever-tightening encirclement, and should decide to march, don't our military planners intend to make Germany the battleground? Will it not be in Germany that we shall bomb Russia's concentrations of troops and supplies? Will it not be in Germany that we shall bomb the Russian lines of communication in the hope of halting her advance? To destroy one's allies is horrible, but 'military necessity led General Eisenhower to obliterate parts of Normandy, and "military necessity," so far as one can see, will make Germany the "no man's land" if this bill precipitates a third world war.

So the third unanswered question is, What does this military aid program offer to individual countries in Europe, and specifically to Germany?

4. SHOULD NOT AN HONEST-TO-GOODNESS PEACE PROGRAM BE DEVELOPED?

The action of the House yesterday in cutting in half this MAP and insisting on a "fresh look" next year is an encouraging sign. It reflects the prevailing uneasiness and downright dissatisfaction with a foreign policy that offers us not peace but only heightened tension and an ever more costly arms race with Russia.

Dr. Archibald MacLeish describes in the August issue of the Atlantic Monthly, under the title "The Conquest of America," how our rivalry with Russia has dominated our foreign policy for the past 4 years. "No proposal could be enacted," he says, "unless it could be demonstrated that the Russians wouldn't like it. * * * Never in the history of the world was one people as completely dominated, intellectually and morally, by another as the people of the United States by the people of Russia in the 4 years from 1946 through 1949."

Is it necessary, Mr. Chairman, for our great country to be "led by the nose" any longer by the Soviet Union? India's Prime Minister, Pandit Nehru, told a press conference on August 5 that India's refusal to abandon its independence of action by joining one of the power blocs is the result of its "positive" policy of working for world peace, abolition of racial discrimination and of economic exploitation. Are these not America's ideals? Why are we wasting our young strength in picking up the pieces of the British Empire and exhausting our resources in a negative program of trying to block Russia, when the world looks to us for positive peace leadership?

In my testimony before the House Committee on Foreign Affairs, I called attention briefly to the peace program recently published by the American Friends Service Committee (Quakers). The Quakers study the ways of peace just as the Pentagon studies the ways of war. Both are apt to flounder when they venture into the other's field.

The Quaker report is entitled "American-Russian Relations: Some Constructive Considerations." Excerpts from it were given front-page space on July 18 in most newspapers. The editorial comments that followed treated the report on the whole favorably, criticizing only two items of the recommended program.

At the risk of stretching unduly your kindness, I urge you earnestly to include with my statement a copy of the Quaker report.

Many Members of the Senate and House have gone along with our anti-Soviet foreign policy simply because they saw no alternative. This report offers a positive, intelligent, and practical alternative. As such, it merits your study. It does not answer all the questions, but no more does the military-aid program.

The world wants peace and the fruits of peace. You must help in developing an honest-to-goodness peace program.

Statement of Hon. Frank Carlson, Governor of Kansas

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following statement of Frank Carlson, Governor of Kansas, before the subcommittee of the House Small Business Committee, at Wichita, Kans., August 17, 1949:

Mr. Chairman and gentlemen of the committee, I welcome this opportunity to discuss the oil import problem because the welfare of the people of Kansas is being threatened. Excessive imports of foreign oil already have caused much injury to our State's economy. Far greater injury is threatened.

Not only has the Kansas oil industry suffered severely during the past few months but of even greater importance, the impact is being felt throughout our entire State economy. Injury to the Kansas oil industry is reflected in reduced purchasing power, loss to the State of important oil tax moneys and increased unemployment.

The problem facing the Kansas oil industry is rapidly growing more serious. Our oil industry is very definitely a small business operation. We have some 1,250 individual oil and gas producers. They continue in business and expand their operations principally from earnings. If their production and income is curtailed, they cease to explore for new oil. Our industry would then become static and Kansas would no longer contribute to the national security or to the problem of meeting increasing peacetime consumer requirements. During recent months, our State production has been cut back substantially, about 19.7 percent. As a result, the oil producer is already applying the brakes to his individual operations. He is not drilling the wildcat wells which he planned. While Kansas oil industry operations have been seriously retarded, during this period imports of oil have risen to a record high.

As imports displace domestic oil, we become dependent on a foreign source. World War II experience is too fresh a memory for us to be led into such a dangerous position. Yet since the war, the trend has been in this direction. This trend must be stopped. It prevents a problem that reaches beyond Kansas—it is national in scope and therefore is appropriate for study by this committee and the Congress.

Assertions have previously been made to your committee, particularly in the New York hearing, indicating that conservation programs in oil-producing States are used in collusion to artificially control production. These assertions are untrue.

As Governor of Kansas, with direct responsibility for its conservation policies, I can deny these charges without reservation. My experience as a member of the Interstate Oil Compact Commission, of which I am now chairman, enables me to know that such statements are not true with regard to the action of such officials in the other oil-producing States.

The oil and gas conservation officials of the producing States are duly elected or appointed and there is no reason to presume them unfaithful to their trust. Their acts are subject to the review and interpretation of proper courts of the land. If their acts were contrary to the laws under which they must operate, they would be immediately subject to court action. This procedure is at all times available. Many of the orders and regulations have been reviewed by State and Federal courts and have often been carried to the highest tribunal of our land.

There is no basis for statements tending to suggest improper administration of State conservation laws.

Through the necessity created by lessening of the market for the oil which could be produced in Kansas without waste, successive reductions in the allowable production have been ordered by the Corporation Commission of Kansas. The daily average production in Kansas for July 1949 as a consequence of the orders was about 60,000 barrels less per day than it was during December 1948 which production was 305,000 barrels daily. The commission is charged by law with the duty of preventing waste of oil and gas in our producing fields. Excessive storage of oil contributes to waste. The oil industry learned that many years ago and the aim has been to keep crude oil in the natural reservoirs until needed, withdrawing it at a rate consistent with use, and maintaining above-ground stocks in such quantity as necessary for transportation and refining operations. Market demand is an integral factor of the whole conservation program, just as are reservoir pressures and gas/oil ratios.

I vouch for the soundness of the administrative policy on oil and gas conservation in my State. The policy has been consistent. Even during the war, when the demand was for even greater production of crude oil, there were times when the State of Kansas set allowable production rates somewhat lower than those recommended by the Petroleum Administration for War. It did this because our conservation body and the industry knew that to produce at the rate recommended would speedily cause a decline in producing ability of many fields and that within a short time the result would be less, not more, oil for the conduct of the war.

As to the administration of conservation laws in other States, it might be amiss for me to comment except for the fact that I am

privileged to have some acquaintance with their programs and policies. Kansas is 1 of the 20 oil-producing States that are members of the Interstate Oil Compact. The commission which was established under that compact is a forum of discussion and a clearing house of ideas on conservation. It has nothing to do with setting production rates, although loose assertions have been made by a few uninformed persons to that effect. Each State acts under the authority of its legislative body. Each State, I believe, has gained much in the knowledge of broad principles of conservation because of its membership in the compact.

Through my participation in the compact commission's work and studies, I believe that the assertion which I have repudiated as to Kansas is equally false as to the other oil-producing States. The State of Texas has been referred to as having made unjustifiable reductions in their production allowables. The officials of Texas are perfectly capable of refuting such statements themselves. However, sufficient facts are available to enable anyone to judge for himself.

Before the last reduction of allowables was made in Texas, petroleum purchasers in three neighboring States in which oil was produced had of their accord reduced the amount of oil they would buy in those States by 15 percent. The record of your committee reflects the fact that testimony was given before the Texas regulatory agency by the largest purchaser of petroleum in that State to the effect that if that agency did not make such reduction, this company would be forced to reduce its purchases because of lack of market.

Looking at the national situation, production of crude oil in the United States has been reduced substantially from about 5,665,000 barrels daily during the closing months of 1948 to about 4,750,000 barrels daily by July 1949. This has not been a reduction below the market demand. Every demand has been met under these reduced rates. Over and above this meeting of current demand, the stocks of crude oil and refined products were at the following levels at the end of July:

	Stocks on July 30, 1949	Increase over year ago
	Barrels	*Barrels*
Gasoline	109,964,000	+10,763,000
Kerosene	24,547,000	+3,621,000
Distillate fuel oils	70,767,000	+18,338,000
Residual fuel oils	67,166,000	+18,548,000
Crude petroleum	271,999,000	+41,044,000
Total crude and principal products	544,443,000	+92,314,000

Source: Products stocks from American Petroleum Institute; Crude Oil Stocks from U. S. Bureau of Mines.

These figures show that inventories at the end of July 1949 were 92,000,000 barrels greater than at the same time in 1948. These stocks are in excess of adequate working levels as estimated by the Economics Advisory Committee of the Interstate Oil Compact Commission.

It should be noted that the excess stocks of residual fuel oil are located in California. For the area east of California, stocks of residual fuel have not increased as increased imports have demoralized prices thereby discouraging domestic production of this fuel and at the same time encouraging uneconomic conversions from coal to oil. However, ample supplies of domestic crude oil are available to meet the demand for this, and any other, petroleum product.

These facts, that every demand has been met, plus an accumulation of over 90,000,000 barrels in storage, show clearly that there has been no excessive or artificial curtailment of production. Greater production would have meant even further wasteful additions to inventories to the point where existing storage facilities might have been physically unable to handle the supply.

As Chairman of the Interstate Oil Compact Commission, I wish to introduce in the record a copy of a resolution on this question of imports adopted by the Interstate Oil Compact Commission at the 1949 Spring Meeting of the Interstate Oil Compact Commission at Jacksonville, Fla., on May 9 to 11, 1949. I would like to point out that this resolution recognizes that imports must not be permitted to exceed those quantities needed to supplement domestic production if the Nation is to avoid the loss of some 4,000,000,000 barrels of oil reserved underlying stripper wells. This resolution further recognizes that displacement of domestic crude petroleum has resulted from sharp increases and imports and that the present rate of imports should be reduced to such quantities as will not supplant domestic oil.

In view of the situation faced by the Kansas oil industry, it is encouraging to us to know that your committee is giving this problem of oil imports its careful study. Certainly an equitable solution is needed. A policy guide which has received wide acceptance has been developed by the industry through the National Petroleum Council. In my opinion, it is imperative that some means now be devised to implement this policy. Your committee is doing a great service in working to this end.

Keep the Ball Rolling

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of August 19, 1949.

KEEPING THE BALL ROLLING

Failure of the would-be vetoers to stop the President's plans 2 and 3 and absence of any move to block the four plans remaining of the seven submitted indicate that this Congress does not oppose government reorganization as such.

On the other hand, the defeat of plan 1 (to set up a Department of Welfare), the narrow victory for plan 3 (to group the employment and the unemployment insurance services under the Department of Labor), and the previous bitter fight over reorganizing the Department of Defense now reveal pretty clearly the nature of the more serious difficulties in the way of effective Government streamlining.

From the beginning, opposition to each specific proposal by specific vested interests, within and without the Government, has been foreseen and, to some extent, discounted. The obstacles now taking form are less obviously the product of self-interest. They are more easily intertwined with, and hence concealed by, arguments on broad policy—on what is helpful or harmful to the country.

Here is a situation in which thoughtful citizens will feel a need for some set of standards against which to judge what has already been done and what is likely to come up when the President sends the next budget of reorganization plans to Congress.

Our contribution toward that end would run something like this:

We would say first: Follow the Hoover Commission's recommendations as fully and closely as possible. This is not an absolute rule. We have differed with the report in some respects, and expect to differ again. But the work of the Commission was as near nonpolitical as such things can be. And we would say to ourselves as well as to the President and Congress: If you differ, take more than one long, hard look at your motives and your reasons.

To the White House we would say: Don't sell out the opportunity of a century to get real administrative reform for a chance to put over partisan schemes, or campaign promises, or to further any controversial ideology of government. Suspicion of such jobbery killed the welfare department plan for the present, along with the several good things in it. That could happen again.

To Congress we would say: Consider the plans apart from the personalities immediately involved. The offices will remain; the incumbents will change, regardless of elections. No reorganization is possible—in fact, no Government program at all is possible—without an assumption that, on the average, the officials who will carry on will be persons of ability and integrity.

And to Congress again: Unless omissions defeat the very purpose of reorganization, don't veto a plan because it doesn't go far enough. It has taken well over 100 years to overcome entrenched interests and inertia and get the Hoover Commission report and its enabling legislation. The ball must be kept rolling, even though every push it gets may not be a circuit smash.

Essay of Robert H. Smith of McAlester, Okla.

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. ALBERT. Mr. Speaker, there appeared in a recent issue of the Delta Kappa Gamma Bulletin a very stimulating essay written by Robert H. Smith, a student of the high school at McAlester, Okla. This essay, entitled "My Teacher," received first prize in a State-wide contest. It is written purportedly as a letter from a grandfather to his young granddaughter on the eve of her graduation from college.

The essay follows:

MY TEACHER

(By Robert H. Smith, McAlester, Okla.)

MY DEAR LOUISE: I am writing this letter from my study and shall mail it tonight, so that it will be sure to reach you the day of your graduation from college. No doubt you are all excited, and, with the packing and last minute details to be taken care of, you are probably too busy to do more than glance quickly through my letter. I am sorry that I cannot be with you on the big day, but that is impossible, so I shall let this letter convey to you my congratulations. I want you to know how proud I am of you for the many fine things you have done in college. Certainly you deserve all the happiness the world can give you. In return you must give the world of your knowledge and youthful energy, but I am sure that you are well equipped now to do that.

I have been doing a great deal of thinking about you and the thousands of other young men and women like you who are in a few more days to enter upon your life work of

teaching. During the last 4 years you have learned much about the subjects you will teach, and about the children whom you will be teaching. These, and many other necessary things you have learned in college. Yet I wonder—are you sure that you are prepared for this sort of a career? I do not mean prepared with a formal education, as important as that is; but, rather, prepared with a clear knowledge of what your responsibilities as a teacher will be. I can recall, in particular, one teacher I had when I was a boy. She was more than just a teacher of books; she taught us life itself. I want to tell you about her, in the hope that it will help you to see your objectives in teaching.

In the country, life is different from your city life. When I was young, the men in our family were up before dawn and quit only when it was too dark to see to work. The ground had to be plowed and crops planted and harvested. We had little time for schooling. At the best, we could get in only a few weeks, possibly a month or two of school at a time. The ground was our life, and it received our greatest attention. We expected to be farmers too, and it was our job to help with the work, so that when we grew up we could have a farm of our own. Some of the parents, who had not had the opportunity for any education at all, were suspicious of "book learning." Then, as now, there were many obstacles to confront a young teacher.

It was into this life that Mary Davis came, fresh from college and armed with blue-backed spellers and boundless courage. She had grown up in the country, and she knew more than just the contents of the books she carried. She knew how to sew and cook and spin, and when necessary she could plow as straight a furrow as any man. She stayed with the preacher's family and walked 2 miles to and from school each day. The little school had just one room and that was not made for comfort. Rude benches, backless and rough, served as desks for the pupils; she had to plug the drafty cracks between the logs herself.

But still greater difficulties that Mary Davis encountered were from the children and their parents. Then as now, some boys and girls would rather go swimming in the mill pond than sit in a schoolroom. She spent long weeks gaining the confidence of the children and developing in them a desire to attend school. They learned, however, that there was far more to education than they had ever supposed. She took them out into the fields, there to discover the beauty and life that before they had never taken time to notice. She told the girls little secrets of cooking that would make their mothers and appreciative menfolks smile in delight. Boys who would have once put a grass snake in the teacher's chair because they resented her lack of love and understanding would now bring snakes into class as a part of their nature study. They learned how to make the most of their land, and methods of crop rotation and conservation. Parents found that their boys and girls could tell them more than they themselves knew about planting or harvesting or taking care of the home.

For many years Mary Davis labored with prejudice, suspicion, and indifference. Parents who were once distrustful of education slowly came to see the results of it, and they were proud of their sons' and daughters' ability to spell and figure. From their indifference grew interest, and she began to hold classes in the evenings for farmers and their wives who wanted to learn to read and write. The people began to discover the world about them, and how to make better use of their land and livestock. Mary Davis brought with her more than just her books, she brought the key to abundant life.

We children learned to know Miss Mary better than most of the people, and the more we knew her the more we loved her. She had a quality of inspiring trust and friendliness in everyone whom she met. The roughest people were nonplused by her quiet, yet firm attitude. Her patience was endless, and I never saw her angry at a pupil for a mistake or accident. Deliberate mischievousness or thoughtless acts brought a gentle rebuke and a look that spoke louder than any words. She never had any discipline problems with her students, and impudence or impoliteness were unheard of. She had her faults, as all of us do, but of these, kindness might be said to be her greatest weakness.

Mary Davis was always ready to help anyone in trouble. There were many nights that she spent at the bedside of a neighbor who was ill. The absence of a doctor in the area made her, with her admittedly scanty knowledge of medicine, the country nurse, an undertaking which she did to the best of her ability. She had the opportunity to make full use of her ingenuity, for each new circumstance brought different problems. Resourcefulness might well have been her motto, so logically and practically did she respond to every difficulty she faced. Miss Mary could always be relied upon in any emergency, however adverse the conditions or difficult the task.

For her, teaching was not restricted to certain hours, but all of the time. She often went out of her way to talk to a friend who needed encouragement or advice. She could frequently be seen with the children who were always near her. Often she would accompany the parson on his calls and entertain the young folk while the family visited with the minister in the parlor. Her ready wit and natural friendliness made her stimulating to hear, and she had a way of making even the dullest subject one of interest. Her manner inspired confidence and truthfulness in those whom she met. In all she combined most of the virtues necessary to the teaching profession.

It has been a long time since I sat on those rough, backless benches in the little schoolhouse, yet it was there that I first discovered myself and the world. Her purpose in teaching was to stimulate our desire to learn, to teach us how to live with each other, and to help mold in us characters of strength, courage, and faith in God. How well she succeeded it is impossible to measure; yet, in looking over the history of our Nation, we can see how it came to pass that men and women from humble log cabins became the leaders of our Nation. Scientists, teachers, philosophers, statesmen, and a host of others rose from simple lives wrought of ironclad character. My teacher and thousands of others like her who gave their lives to the teaching profession have literally shaped the destiny of our great country today, and they will continue to do so as long as young men and women like you will answer the call to teach.

It does not matter that you are living in a modern world. There are still vast educational frontiers to be pushed back, and you will find that your problems will parallel my own teacher's problems a great deal. You will have to deal with prejudice, indifference, and suspicion just as she did. Your problems, however, will be those of a complex, rapidly moving nation. They will require of you what they required of her: patience, kindness, love, unselfish giving of time and talents, personal inspiration, and all the other virtues so necessary to the success of your work. There will be many difficulties, yet the results will repay you a thousand times. The little red schoolhouse is fast disappearing from the scene and being replaced by modern schools, but the pioneering spirit of Mary Davis will never die as long as there is an America, and as long as there are educational boundaries to be surmounted. As a teacher, you have a responsibility to the world; follow Mary Davis' example, and make the most of your life. The world is waiting!

Affectionately yours,

GRANDFATHER.

Repeal the Excise Transportation Tax

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from a recent issue of the Melrose (Mass.) Leader:

Since the pre-Revolutionary days of the Stamp Act and the Boston Tea Party, Americans have resented discriminatory taxes.

One of the most irritating of this type presently on our law books is the 15-percent Federal transportation tax. Not enacted originally as a revenue measure, but as a deterrent to wartime travel, it has not yet been repealed although Japan surrendered almost 4 years ago.

Surveys prove that the great majority of Americans travel, and from the pockets of these people a quarter of a billion dollars is drained annually.

Since our neighbors on the north very sensibly repealed their tax on transportation, thousands of inhabitants of border areas have begun a sort of legal bootlegging. For example, in Detroit during a 1-month period, the sale of bus transportation dropped over $8,000, while there was a like increase in business at the Windsor, Ontario, terminal during the same period.

One Canadian transportation company official reports that they are receiving inquiries as to the possibility of purchasing tickets through the mail for use in the United States. These requests naturally have been rejected on ethical grounds, but there is no doubt that many new ways are being improvised to beat the tax.

Aside from such considerations, however, let us remember that you, the American people, willingly supported this measure for its obvious purpose during the war years, and that you have every right to agitate for its repeal now. Tell your Senators and Congressman how you feel. Insist that this tax on your freedom to travel be promptly eliminated.—*Highway Traveler.*

Pennsylvania's Oil Values

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 23 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article prepared by a Yale professor in 1855, relating to the production and use of oil. I am putting this in the RECORD because 28 States are now interested.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHEMIST FORETOLD PENNSYLVANIA OIL'S VALUE AS EARLY AS 1855

TITUSVILLE, August 10.—Pennsylvania oil's value as a lubricant was foretold as early as 1855 when Benjamin Silliman, Jr., professor of chemistry at Yale College, issued the first scientific analysis of petroleum. Four years later the world's first commercial oil well was drilled here by Col. E. L. Drake.

Silliman's Report on the Rock Oil, or Petroleum, from Venango County, Pa. has just been reprinted by Dr. P. H. Giddens, professor of history at Allegheny College, Meadville, in connection with the ninetieth anniversary of the oil industry to be celebrated here on August 27.

Giddens, who also is curator of the Drake Well Museum here, has written a foreword to the fascimile of Silliman's report. The oil industry historian says Silliman's report dispelled many doubts about the value of petroleum and encouraged investment in a venture that led to the drilling of Drake's famous well in 1859 and the founding of the petroleum industry.

The Yale professor's report today is regarded as a rare item of Americana, according to Giddens. The first petroleum scientist did not release his findings until George H. Bissell and Jonathan G. Eveleth, two young New York lawyers who were interested in developing the oil springs near Titusville and had engaged Silliman to analyze an oil sample, scraped up $526.08 to pay his fee.

The chemist's report explained that his "extended researches upon the rock oil, or petroleum, from Venango County, Pa." showed that "as this oil does not gum or become acid or rancid by exposure, it possesses in that, as well as in its wonderful resistance to extreme cold, important qualities for a lubricator."

Silliman hazarded that the Venango County oil was a pyrogenic (fire-produced) product, judging by the very high boiling point of most of the products of the distillation. He described the crude oil as having a dark brown color which, by reflected light, was greenish or bluish. It differed, he said, from oil obtained elsewhere by not becoming hard and resinous like mineral pitch or bitumen after long exposure to the air.

After listing the several boiling points of the portions of the crude oil, Professor Silliman stated the basis of what eventually became to be accepted operating procedure in oil refineries." We infer that the rock oil is a mixture of numerous compounds, all having essentially the same chemical constitution, but differing in density and boiling points, and capable of separation from each other by a well-regulated heat."

Petroleum's principal value at the time Silliman made his study promised to be in lighting homes and workshops. In this connection the professor wrote: "It is safe to add that, by the original distillation, about 50 percent of the crude oil is obtained in a state fit for use as an illuminator without further preparation than simple clarification by boiling a short time with fair water."

Later generations of petroleum scientists have marveled at the vision of Professor Silliman, hinted in the closing words of his report:

"In conclusion, gentlemen, it appears to me that there is much ground for encouragement in the belief that your company have in their possession a raw material from which, by simple and not expensive process, they may manufacture very valuable products.

"It is worthy of note that my experiments prove that nearly the whole of the raw product may be manufactured without waste, and this solely by a well-directed process which is in practice one of the most simple of all chemical processes."

Address by Hon. Alexander Wiley, of Wisconsin, to the St. Bartolomeo Society at Waukesha, Wis.

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 23 (legislative day of Thursday, June 2), 1949

Mr. WILEY. Mr. President, on Saturday, August 20, it was my pleasure to address the St. Bartolomeo Society at Waukesha, Wis., reviewing the life of this great spiritual leader, in whose name the society is dedicated, and commenting on present-day problems of Italo-American relations.

The people of America have always felt a very warm and sincere friendship with the Italian people across the seas. To our own land from Italy have come some of our finest citizens, enriching the culture of this continent. Of late, we have been particularly interested in the welfare of Italy because she has become a bastion of the Western World, experiencing the onslaught of communism at her gates.

I ask unanimous consent that the text of my address before the St. Bartolomeo Society be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LIVING MESSAGE OF ST. BARTHOLOMEW, 1949

Friends of Waukesha, I am very happy to be your guest this evening. It is indeed a privilege to speak to this fine group of American citizens, most of whom stem from that great people of Italy.

THE LIFE OF ST. BARTHOLOMEW

It was my privilege to read the very fine address given last year by your able and genial Congressman, Glenn Davis, in which he sketched the life of St. Bartholomew, who is known also by the name of Nathaniel, one of the Master's disciples. St. Bartholomew, apostle and martyr, had sat at the feet of the Master and had learned from Him those great Christian principles which shaped his life to become a great teacher and preacher of the Gospel in Italy, in Arabia, in Asia Minor, and—some believe—in India. He grasped the significance of the statement: "Ye shall know the truth and the truth shall make you free." This sent him on his great adventure which culminated in his laying down his life for the cause.

From the life of this saint, you and I can draw many lessons, lessons which if we apply them in our own lives, will make us better servants of our creed and better citizens of this great Republic.

While the mortal remains of St. Bartholomew rest in Italy in a church dedicated to him on an island in the Tiber at Rome, his spirit marches on. This is evidenced by the fact that he has been accepted by many of the Italians here in Waukesha as their patron saint, and by mariners throughout the world as their patron saint. The spirit of St. Bartholomew is the spirit of consecration to the living God against the anti-Christ against atheistic communism.

THE CHALLENGE TO YOU AND TO ME

So, today, we gather to refresh ourselves in contemplating some of the virtues of this great citizen of the world, and dedicate ourselves to preserving those freedoms of the spirit which he loved and for which he sacrificed. Included in this dedication and undertaking is the preservation of this great Republic—your land and mine—which has been catapulted to the top in world affairs and is the world's greatest depository of those freedoms of the spirit.

THE ANTIDOTE TO COMMUNISM

St. Bartholomew was loyal to the teachings of the Master—those teachings that we should not only love the Lord our God with all our heart and mind and soul and strength, but also "love our brother as ourselves." Surely, this great ferment of love provides the true antidote to the ferment of communism, of class hatred. If St. Bartholomew were with us in the flesh today, I am sure that he would counsel us to carry on in the spirit of the Master and he would also tell us to preserve those great fundamentals that constitute the American way.

PATRIOTISM OF ITALIAN-AMERICAN IMMIGRANTS

Among my audience are descendants from immigrants from Italy. I must express to you my appreciation for that sense of loyalty that you Americans demonstrated to the Republic even in those days when Italy was regarded as one of our "enemies." You know that is the wonderful thing about this America of ours. While we love the land from which we or our parents came (and we have a right to do that), we know that this is our country.

May I tell you the story of a little incident that occurred just a little over a year ago when I was in San Francisco. Coming down from the famous Coit Tower, I noticed that the elevator operator spoke with an accent, so I asked him where he was born. Pointing down toward the direction of the harbor, he said: "40 years ago, I landed at that pier. I was born in Italy, but this is my country." When he said my country, he literally shook with proud emotion. Yes, we all feel just like this American of Italian descent felt when he said, "This is my country."

And what did he have in his mind when he said that? Well, you undoubtedly know. He truly felt what it meant to be an American citizen. He had come to this country poor. He probably had children who were grown, successful in business or the professions or in public life. He owned his own home. He read a free press. He went to the church of his choice. He breathed the free air of America. On the other hand, he saw the struggle in his unfortunate mother country—the war was over. Much of the economy was ravaged. Communism rampant, poverty, misery all about. No wonder he said of America: "This is my country."

After all, it was an Italian, Columbus, who discovered the New World. It was another Italian, Cabot, who discovered the North American Continent, and ever since these two began their march westward, countless Italians have enriched the blood, the music, the art, the life of our continent.

THE THREAT OF COMMUNISM

But let us not just look at the past. Let us look at the present and the future. Obviously, one of the paramount facts of the world today is the almost unchecked sweep of bolshevism throughout the globe. This is not scare talk, my friends. This is hard fact.

You and I know that communism, based upon the theory of Karl Marx, means community of all property—abolition of private property; it means complete control of labor by the state; the state having unrestricted power to draft individuals for labor without reference to their personal desire. The state is all. The individual has no rights whatsoever. Communism asserts there is no God. It attributes all the natural rights of man to the community, it strips him of liberty and makes him a mere cog in the machine for the production of material

things by collective labor in a classless, Godless community.

THE COUNTER-CRUSADE AGAINST COMMUNISM

You and I recognize, too, the terrific battle which is being waged in Italy and elsewhere against communism, particularly through the leadership of His Holiness, Pope Pius XII. The forces of right, of justice, shall, of course, prevail, but the battle will rage with undiminished fury.

There are no iron curtains to shut out the inflow of ideas. Unless an individual so buttresses his own thinking with the right ideas—either good ideas or bad ideas—he is liable to find himself subject to the wrong ideas. Unless there is lodged in the individual those fundamental truths taught in the Christian religion, he may be subject to the inflow of those communistic concepts that are running riot on earth.

May I briefly recall another anecdote:

In 1947, my wife and I were in Europe. We came back on the *Queen Elizabeth* and while on board, I was introduced to Mr. Andrei Vishinsky by Mr. McNeal, head of the British delegation to the United Nations. Vishinsky said he didn't speak English, so there was an interpreter present. When I grasped his hand, I looked him straight in the eye and said: "Mr. Vishinsky, I pray every night that Russia and Britain and America and the other nations of earth will have a sincere desire for peace, and will be adequate to consummate that desire in some form of effective international organization." Through the interpreter came the reply from the Red delegate to the United Nations: "I do not pray."

Consider this incident, my friends.

Last year I was out in Mount Palomar, Calif., looking at that amazing 200-inch telescope which examines the light from stars that are over 500,000,000 light-years away. This instrument has measured almost infinitely distant worlds where the sun is as small in comparison as our earth is to the sun. (Our earth, as you know, has a diameter of 10,000 miles—the sun 1,000,000 miles.) Yet—Vishinsky doesn't pray. Washington and Lincoln were praying men, as are all great souls. St. Bartholomew was ever reaching for the light. But the Reds seek only to replace the light with darkness.

Now, let us talk specifically of the Communist and other problems in Italy.

ITALY'S GREAT COME-BACK UNDER THE MARSHALL PLAN

I should like first to say just a word about the great role of the Marshall plan in bringing Italy back to partial economic health. During the last fiscal year, Italy has received some $500,000,000 in aid through the European recovery program. This aid has pumped life blood into the economic body of a previously prostrate republic. For the first time, Italy's food supply has permitted the ending of all rationing. Inflation has been curbed.

Italy's exports have risen during 1948 to approximately the 1938 level. This has served to reduce Italy's unfavorable balance of trade. Her textile mills are the marvel of Europe and she has made other splendid advances.

The Italian Government, under Premier de Gasperi, has played a fine role in cooperating with other European nations toward reducing barriers to trade, toward attaining European self-sufficiency, and toward a greater political collaboration of the Western World.

Let me indicate just for one moment how American aid to Italy works out. The supplies which our Government makes available to the Italian Government are sold by that Government to the ultimate users. The proceeds from this sale by the Italian Government are deposited in a special lira fund. This fund in turn is used for reconstruction and recovery purposes. Thus, my friends, we have a twofold effect. Every pound of food, every ton of machinery which we forward to Italy, aids by that much in her comeback. Moreover, the sale of these items increases the lira fund, which, in turn, helps rebuild bridges and roads, reestablishes railways, reclaims land, etc.

THE SET-BACK TO THE REDS IN ITALY

The American people want, of course, to help Italy to help herself. At the same time we have a right to ask, Has our help contributed toward reducing the totalitarian trend in Italy?

The answer is yes. In fact, nowhere in Europe, save perhaps in France, have the effects of the Marshall plan been so favorable in terms of lessening the danger of communism.

To anyone who knows the Italian people it seems inconceivable that there should be any danger at all of communism, except when one considers the appalling poverty, the malnutrition, the unemployment, the cynicism which resulted from Italy's years of lack of freedom and her defeat in the Second World War. Hungry peoples, desperate peoples, disease-ridden peoples turn to communism.

Fortunately, however, there is a deep love of freedom in the Italian people, and, in addition, a great fund of common sense. Moreover the Italian people are a devout, churchgoing people, whose leadership in the field of religion is an age-old fact which the world has almost taken for granted. The Italian people, who gave to the world the flower of art, of music, of literature, is inherently anticommunistic, and we have given this great people the sinews with which to fight communism.

Earlier this week I checked with the State Department and they confirmed the fact. You know, of course, that the Italian Communist Party has numbered over 2,000,000 members, the largest outside the Soviet Union. It attracted some 8,000,000 voters. Moreover the Communist-controlled General Confederation of Labor claims over 5,000,000 members.

Well, my friends, although the Communist Party has denied that its membership has dropped to 1,500,000, it is a significant fact that the Communist secretary of Labor Federation recently admitted that this organization has lost 1,000,000 members, 200,000 of them in Milan alone.

THE CONTINUING RED MENACE

But the danger of communism is not eliminated, my friends. The Reds are ingenious, highly adaptable, flexible in their tactics, masters of the monkey wrench. You and I have read of their tactics of promoting chaos in the Italian Parliament. We have seen pictures and read stories of the bloody street riots which they are so easily capable of promoting. The Italian Communist Party, let us note, is the largest single Communist Party outside the borders of the Soviet Union.

Situated as it is very close to the Communist satellites behind the iron curtain, Italy is always in double danger. Her borders are virtually unprotected, because of the postwar treaties. It is easy enough, my friends, for you and me 3,000 miles away to stand up stanchly against the Communists, but the Italian people are in the front lines. The Red flag waves right outside their border, whether it be the Red flag of Marshal Tito or of Albania or of any of the Soviet-controlled Balkan states.

In the Senate Foreign Relations Committee, Italy has been and will remain one of our chief topics of interest and attention.

RECOMMENDATIONS ON TRIESTE, COLONIES, ARMS

And now, if I may be permitted a final material word, so to speak, on this great spiritual occasion, let me present three concrete recommendations.

1. It is obvious that Italian Trieste must be promptly returned to Italy. That is the policy of our United States Government. That is elementary justice based upon the ties of blood and loyalty between the people of the territory and Italy. We must therefore persist in demanding the return of Trieste.

2. Another matter requiring our urgent consideration is the question of Italian colonies. I need not tell you of the investment of sweat and blood and tears of countless Italian men and women which has gone into building up these colonies. I need not tell you of the appalling conditions under which Italians are now living under occupation there. Obviously, no permanent solution to the problem of Italy is possible unless and until the question of overpopulation of Italy itself is handled adequately. This, in turn, brings to the fore the necessity of a just solution to the colonial problem—a solution which I trust will be forthcoming in the meeting of the United Nations Assembly, and a solution which recognizes Italy's legitimate interests.

3. A third basic issue is the question of adequate modern Italian arms to defend Italy against the threat of aggression. You cannot fight a tank with your bare hands, and the Italian people cannot be expected to resist aggression unless they are given the wherewithal to defend themselves.

Italy has demonstrated wonderful courage in her entry into the North Atlantic Pact. She is in effect putting her head in the mouth of the Russian bear. It is up to us to help make sure that the bear does not snap its jaws, by helping Italy to rearm to the extent that our military officials jointly determine with Italian leaders.

CONCLUSION

Well, my friends, it has been an inspiring occasion to be with you today.

Wisconsinites of Italian descent have contributed mightily to the growth of our beloved State. I am sure that you will make still further contributions in the pattern of true Americanism—the pattern of the sons and daughters of immigrants building the greatest Nation on earth.

Yes, it has been a real pleasure to meet with you, to drink from the life of St. Bartholomew inspiration, and to rededicate ourselves to the preservation of the Republic. Perhaps I have demonstrated to you the need of all of us to be awake and alert so that we will not have any more Pearl Harbors, military Pearl Harbors or mental ones. "Eternal vigilance is still the price of liberty." This means that we cannot rest on our oars. We must pull in unison to avoid the rocks and the dangerous rapids. It means that we must not permit those who would split us up into factions to succeed in their dangerous purpose.

Let us ever remember that this is our country and that the pseudo thoughts and bogus ideas of communism, fascism, statism, and socialism must not become imbedded in our way of life. We have much here to preserve, and it is going to take effort and time—yours and mine—to preserve these values. But who wants to live a life of ease when the world is dynamically evolving as never before? We are privileged to be alive in this period, and we have to demonstrate that we appreciate that fact. We will show that we are awake and alert by meeting head on the impact of wrong thinking and by guarding and guiding this beloved Republic.

Asia—Summing Up

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. HALE. Mr. Speaker, no matter how deeply we bury our heads in the

sand, nothing can alter the facts about what is going on in China. Our State Department now realizes that our Chinese policy must be revised, but it has not yet the sense of urgency which is so necessary if we are to do anything effective. Under leave given me, I ask attention for the text of an article by Stewart Alsop in the Washington Post of August 22, 1949:

MATTER OF FACT

(By Stewart Alsop)

ASIA—SUMMING UP: I

The odd sense of unreality which most travelers experience on their return from abroad is curiously heightened in one who has returned to Washington from the Far East. For it is perfectly clear that, if southeast Asia is allowed to go the way of China, an unthinkable war is virtually inevitable. And it is perfectly clear that southeast Asia will go the way of China—and very soon—unless a major effort is made to reverse the process which is now under way.

Yet—and this causes the sense of unreality—there is no atmosphere of urgency at all in Washington. There is a good deal of talk. There is a good deal of worrying. A good many policy papers are being written. But nothing very much is being done, and nobody seems to contemplate doing anything very much for a long time to come.

If nothing is done, the sequence of events, as forecast by the most experienced observers in the Far East (and as undoubtedly forecast by V. M. Molotov, now directing the Soviet power drive in Asia) is broadly as follows: The Chinese Communist armies will reach the borders of Indochina and Burma while the non-Communist government in Burma and the non-Communist Bao Dai regime in Indochina are both still pathetically feeble. The promised material support will be delivered to the Communist forces in these countries, and Burma and Indochina will rapidly be transformed into new democracies.

When Burma and Indochina go, Siam will follow—on this point everyone (including the Siamese) is unanimous. The long, irregular Siamese-Malayan border will then become an avenue of infiltration and supply for the Communist guerrillas in Malaya, and the British position in Malaya will be rendered untenable. The rest of southeast Asia gone, the pressure on the harried, new-born Nationalist government in Indonesia will be too great to withstand.

All this is not some sort of unpleasant nightmare about small, faraway countries with peculiar names. It is what is now extremely likely to happen. It is likely to begin to happen, not in the distant future, but in a matter of months, before this year is out.

This is not merely the opinion of this reporter. It is the opinion of every single informed observer on the spot. It is necessary to consider what it will mean to the United States if southeast Asia, together with China, is organized under the authority of the Kremlin. In the first place, it will mean either that Japan's vital industrial potential will be added to the Kremlin's vast Asiatic empire, or that, to prevent this happening, the United States will be forced to transform Japan into a tightly held military colony.

With the inexorable need to feed her people, with her export market in the United States destroyed, it is nonsense to imagine that a non-Communist Japan could hold out against Communist pressure when her whole natural trading area had been organized under Communist control. The United States could, and probably would, attempt to hold Japan permanently by military means. But ultimately this could only be done, if it could be done at all, by brutally repressive measures.

In the second place, southeast Asia is incomparably the richest remaining reservoir of untapped resources in the world. Leave aside for the moment the strategic meaning of a Communist southeast Asia. Consider only the economic meaning: If these riches are added to the Soviet power center, and subtracted from the West, the kind of overturn in the world power balance will have occurred which in the past has always resulted in war.

It is difficult to write about what is happening in the Far East without sounding shrill and hysterical. And it must be said at once that the sequence of events outlined above, although it is now quite clearly likely to happen, need not necessarily happen.

To balance the picture, it is necessary to add the assets which the West still commands in Asia. Some of these are, non-Communist governments in Japan, Korea, the Philippines, Siam, Burma, Indonesia, and above all India; the economic weakness of Communist China; the great potentialities for a sharply improved standing of living throughout southeast Asia; the weakness and division of most of the native Communist movements; the unpopularity in southeast Asia of the Chinese minorities who have clearly been designated Molotov's political shock troops; and perhaps, above all, Asiatic nationalism. The Soviets have exploited this nationalism against the West, but it is a two-edged sword which can also be turned against Soviet imperialism.

Forthcoming reports in this space will outline the views of the best-informed observers and officials on the spot as to what can be done to exploit these assets, and to prevent the disaster which has already occurred in China from becoming the final catastrophe of the loss of all Asia. But the essential ingredient of every plan of action in Asia can be stated in one sentence. It is the sense of urgency in the United States which is required if the effort to save Asia is to be made. For the effort must be great, and it must be made very soon.

Mr. Truman's Bold New Program

EXTENSION OF REMARKS

OF

HON. FRED. L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. CRAWFORD. Mr. Speaker, charity begins at home. Yet we have long lived a doctrine of favorable balance in trade that made it begin abroad. In the hope that the dumping of American goods in other peoples' laps may be stemmed before the overdraft on our natural resources, relative to demands thereon by pyramiding populations, becomes an inescapable dilemma, I offer for the RECORD under leave to extend my remarks, an abridgment of a recent address by Hon. Spruille Braden at the Colgate University Conference on American Foreign Policy, as follows:

POINT IV BY PRIVATE ENTERPRISE

(By Spruille Braden)

"It is related that a person of limited intelligence, on being assured that he would certainly one day enjoy an adequate competence if he closely followed the industrious habits of the thrifty bee, spent the greater part of his life in annointing his thighs with the yellow powder which he laboriously collected from the flowers of the field."

In plain language, diligence and thrift, admirable as they are in themselves, will be useless or even harmful if misdirected or employed in a futile attempt to reach an unobtainable goal. Just as it is impossible for men economically to perform the essential functions of the busy bee, so the application of the highly industrialized system of the United States to other peoples, in other climes, under widely divergent conditions and influences may be inopportune, abortive and injurious to all concerned.

Certainly, with the world in its desperate economic and political straits, this is no time for our Government to dash forth in pursuit of utopias, otherwise to indulge in misguided endeavors or to heap further taxes on an already overspent Nation in order to finance global panaceas. Yet, in effect, that is precisely what the American people from a relatively small beginning may gradually, perhaps unwittingly, slip into doing, led astray by their emotions and by the glittering enticements attributed to the so-called bold new program.

We, Americans, are innately optimistic and, therefore, always ready to try something new, especially if it promises reform or a speedier approach to the millenium. Also we are given to emotional outbursts of all varieties; harmless or explosive, of short or long duration, for good or bad, they sweep the whole country from coast to coast. There were the manias for mah-jong, obstacle golf and blowing bubbles. Now our charming ladies, almost without exception and with scant regard to the masculine eye for a well turned ankle and a trim figure, unaesthetically bedeck themselves in the new look, sloppy flat-heeled slippers and slacks. Whole communities, seduced by the hope of getting something for nothing go all out for pyramid clubs and radio give-aways. As opposed to these rather silly mass psychoses, on other occasions, with splendid generosity we contribute vast sums to help those all over the earth, who, less fortunate than we, suffer from catastrophes and war, illness, and starvation.

Great promises dissipated in subsequently small performance will impair confidence in us and in the world leadership which is ours. Let us remember with John Kible that:

"Nemesis hangs over men who are overbold in aspiration, whether, like Prometheus, they devise methods and expedients for the alleviation of common ills, or, as Io, indulge in building castles in the air."

Before waxing overbold in aspiration by devising methods and expedients for the alleviation of ills common to all humanity, would it not be wise first to cure our own ailments? In this way we might set a good example for others to follow, we could better learn how later on effectively to assist our neighbors, and, after all, charity does begin at home.

Everything the point IV program proposes to do for the undeveloped areas of the earth should also be done in and for this country. Millions of our fellow citizens need and wish to realize their yearnings for a better life; to have more and better food, clothing, housing and more mechanical power to lighten their burdens; in short, to raise substantially their standards of living.

In contrast with the manifold divergencies, obstacles and risks which will be encountered in trying to spread our industrial and scientific techniques abroad, it would be easier first to attack this huge job to be done at home. Here we have a more or less homogeneous population, already possessing technical know-how or, at least, a ready adaptability thereto. We enjoy general uniformity of laws, customs and principles and, above all, a firm belief in our way of life—in the private competitive enterprise system.

That we should give priority to the huge job to be done at home in no way pre-

cludes our proceeding simultaneously to increase friendship and cooperation with our neighbors to the south. Our maximum efforts in these particulars should be concentrated in this hemisphere. There is no other region where the point IV program can be essayed under more propitious circumstances. Its success or failure in the new world should indicate what might be done elsewhere.

Let us pause to contemplate just what the expression "bold new program" means. Presumably it may be bold to the extent it breaks precedents, overreaches our abilities or becomes foolhardy. None of these alternatives are necessarily commendable, hence, the word, although actually meaningless, might have been injected because it was sonorously inspiring. Such literary flights make a poor defense against hard economic facts.

The dictionary defines a program as "a prearranged plan or course of proceedings." Yet, 5 months after the President's pronouncement, we are told officially that "all the agencies of Government having experience in the fields of international technical cooperation and economic development have been hard at work examining ways and means for United States participation in the point IV program." In other words, there was no program to begin with and, judging by what has thus far emerged from Washington, it still remains pretty sketchy for what Mr. Truman says "has become one of the major elements of our foreign policy."

The plan, so far developed, appears in the President's special message and two bills recently presented to Congress. Separated from the usual pious platitudes and alluring abstractions it is admitted to be experimental and only the first steps. It divides into two categories: (1) Technical aid by the United States Government and the UN; (2) encouragement to private enterprise to go abroad through the negotiation of protecting investment and trade treaties and by the Export-Import Bank guaranteeing capital against losses. It is recognized that the major effort may be local, i. e., via self-help.

The cost of these experimental first steps during the initial year will be $45,000,000 for technical aid and an unknown amount on the guarantee account. Such starting estimates may cause those to shudder who have observed the manner in which truly insignificant acorns of expenditure in Washington quickly grow into gigantic spreading oaks.

During the last decade the United States Government has actively been giving technical cooperation through Latin America, expending large sums in the process. Its success has been relatively unimportant, excepting for the Institute of Inter-American Affairs work in education, health, and agriculture. These projects were carried on jointly with the respective national authorities and United States contributions steadily decreased as the local share rose.

For some time it would be advisable to restrict United States Government activities under point IV to this type of endeavor.

Even so, there will be complicating factors. What is to be done when techniques so improve health and other conditions as to increase greatly the population in a country, which even under optimum foodstuff production can now barely sustain a smaller number of people? Wisecracks about birth control and making it retroactive don't give the answer. Or, to take a simpler case, if by the use of modern tools a worker produces twice as much, it may require quite an educational campaign plus the generation of many incentives to dissuade him from working half as long.

It is pertinent to observe that American enterprises cannot afford to give away their scientific and industrial knowledge, experience, and techniques for nothing; payment must be made for patents and know-how. Nor can they permit these things to be misused by reason of ignorance or for improper ends.

On the other hand, the United States Government mostly does not possess these things and, therefore, cannot supply them. To the extent that foreigners, unaware of this fact, are disappointed in their expectations, they will accuse Washington of bad faith. However, this probably won't stop the bureaucrats, since no government organ, I ever heard of, has yet abstained from any function because it acknowledged itself to be ignorant or incompetent.

Therefore, unless Congress rigidly circumscribes governmental operations under point IV, there is grave danger that the appropriations required for the program, within a surprisingly short time, will become enormous. Frequently they will be of a speculative nature. To employ United States taxpayers' money in such ventures would be unprincipled and unsound; it would be counter to our democratic-capitalistic tenets; it would involve us in the worst form of dollar diplomacy; it would turn over the investment of our savings to bureaucrats, ill-equipped for the task and whose responsibilities for the errors they may commit would be blurred; and it would deprive our citizens of their fundamental right to choose their own investments.

No officialdom, irrespective of how carefully selected or wise it may be, is competent to master and direct all the intricate and powerful economic forces of this Nation—and still less of the whole world.

To prosecute more than a small part of this program through governmental vehicles, disbursing the taxpayers' money in government-to-government loans or grants would render it bold to the point of foolhardiness. The recipients of governmental loans or largesse acquire a distaste for private capital. Moreover, governmental credits receive exchange priorities and other preferences, thus further injuring private interests.

Even worse than developing this program through United States governmental instrumentalities would be to put it under the less experienced United Nations and the latter's specialized agencies. This Nation would continue to make the major financial and technical contributions, yet the direction and control thereof in most cases would be vested in those organizations where our single vote would be overwhelmed by those of the plan's beneficiaries. The United Nations, like all bureaucracies, seems ambitious to expand its activities and, at best to be only grudgingly tolerant of private enterprise. To coordinate its operations with those of private organizations would be a Sisyphean task. The evils of the statism and bureaucracy from which we already suffer within our own country would be expanded into an infinitely more dangerous international superstate and hegemonic bureaucracy.

During recent years we have witnessed the menacing and ever-increasing tumefaction of a variety of grants-in-aid to the several States and of Federal subsidies to sundry groups who may possess convincing electoral influence. All of this undermines self-confidence and individual initiative and makes men supine under a welfare state.

Still it comes as a shock to learn we have advanced so far down the easy path of lethargic submission or indifference that it is now proposed to use the taxpayers' money as a guaranty to induce private capital to invest abroad in undertakings in which, based on sound business judgment, it would not dare hazard its own funds.

According to the President's message to Congress, private investors are to be insured against the dangers of inconvertibility of their capital and profits into dollars, expropriations, unfair and discriminatory treatment by foreign governments, and the destruction of their enterprise through war or rebellion.

While this proposal as yet is too nebulous and complicated to permit of detailed analysis, certain generalizations are applicable, irrespective of the nature of the loss which the guaranties are supposed to cover. The suggested procedure would be unsound because—

(a) Any guaranties such as are contemplated should be given by the country where the investment may be made, and under no circumstances by the country supplying the capital.

(b) It would appear unfair to discriminate against older investments, i. e., precisely against those who have demonstrated the initiative, enterprise, and courage to go abroad on their own, without governmental assistance. On the other hand, were the guaranties to be extended to existing investments, the risk might be an undue burden on the United States Treasury; while simultaneously the premiums might too greatly augment operating costs of the beneficiaries. Either alternative would be bad.

(c) In many cases, it simply would not work. It would be impossible to insure against the speculative risks of exploration for minerals, timber cruising, etc., or to guarantee the value of mineral reserves.

(d) To use the taxpayers' money in such an undertaking would be wrong in principle and unwise in practice. A governmental official, in my opinion, must act as a trustee on behalf of the taxpayers. He has absolutely no right by taxation to seize their savings and invest them in a motley lot of businesses scattered far and wide over the earth. Similarly, I question the propriety of that official employing the taxpayers' money to underwrite or guarantee risks, which the private investor would otherwise reject as unsafe. Under this system the private investors would get the profits, if any; whereas, the taxpayers for certain as yet indeterminate premiums which will never reach their pockets, would wind up absorbing the losses.

(e) Not only would it weaken the disposition of underdeveloped areas to create an atmosphere attractive for private investment, but to the extent losses result from the actions of foreign governments, it might even increase the number of expropriations and other abuses, on the theory that after all, "Uncle Sam will pay the bill anyway."

(f) It would increase the already dangerous measure of governmental supervision and interference in business. It would involve registration of capital, profits, and other data, thus giving the unfriendly or unscrupulous a potent weapon wherewith to harass and injure our investors.

(g) Since the guaranties would have to be available to every citizen, it could be employed by the chiselers, fly-by-night and crooked promoters to the disadvantage of every one concerned, excepting only themselves, thus giving United States business—and government—a bad name. A sort of Gresham's law might result; bad investments driving out the good.

(h) The Export Import Bank in due course might be forced to make good some of its guaranties and therefore to take over the private investor's position, often including large blocks of nearly worthless foreign currencies. The United States Government would then find itself in one or more bad pieces of business which would be the subject of acrimonious debate with the local authorities. Such a situation would be embarrassing or humiliating and might lead to disagreeable charges that we were exercising a new species of dollar diplomacy.

(i) For the aforegiven reasons, it would discourage rather than encourage private investment.

(j) Lastly and worst of all, it would establish a precedent in subsidized business that could be seized upon, both at home and

abroad for their own gain by pressure groups—labor, agriculture, and business of every variety—to raid the public purse. It would be represented by Communists and others as proof positive that private enterprise cannot operate on its own, but must be supported by the taxpayers' money. It would undermine the fundamental concepts of our democratic, self-reliant system.

It is my belief that the majority of American business leaders still have too much virility to be led astray by the debilitating paternalism of government guaranties. ECA experience with its somewhat similar insurance scheme would seem to confirm this opinion.

Since, as President Truman cogently observed, the major effort must be local, it behooves the governments, who seek developmental capital and know-how for their areas, to learn and adjust themselves to the basic economic facts of life; to enact and honestly administer proper laws and regulations which will encourage private enterprise; to abandon legislation and practices which discriminate against foreigners; in short to create that intangible but all-essential atmosphere which will attract investment. If they will do these things, they will find United States capital anxious to venture abroad, as it has in the past, on a scale and in a manner which will bring large profits to everyone involved.

It is pertinent to observe that under the vast array of overlapping laws, regulations, and taxes existing both in the United States and Latin America, it would be utterly impossible presently to initiate the vitally important enterprises, which have so hugely benefited those peoples and their governments, raised their living standards, and given us the strategic materials without which we could not have won the recent war. In other words, unless the impediments and disincentives I have described, can be removed not even a start can be made constructively on the bold new program.

It has been reiterated that point IV is a long program, yet there are those who would now present it as a quick cure for recession, disinflation, or whatever one wants to call our present economic difficulties. To corelate it with any short-range problem will only cause confusion. Since it will require decades and generations, patience and persistence will have to be exercised by all.

In the development of the Truman program, it is imperative at all times to bear certain verities in mind:

(a) It is dangerous to generalize. Each country and area must be studied separately and plans adjusted to the specific conditions prevailing therein, before an attempt is made to formulate a coordinated general plan.

(b) It is a common error to attribute unlimited resources to so-called undeveloped areas, as for instance Latin America, when actually extensive investigations in each country have already proven that the alleged riches are not readily at hand.

(c) Our scientific advances and industrial or technical procedures are not universally applicable. A small mine in the Andes may be worked profitably by local methods; whereas it would be a losing proposition for American operators.

(d) The exploration, development, and working of such large natural resources as do exist can be performed successfully only by private enterprise. Government, and still more international government, is incapable of doing the job.

(e) As previously noted, no attempts should be made to industrialize areas which are unsuitable by reason of scarcity of raw materials, inadequate or incompetent labor, meager markets, or other adverse conditions.

(f) Such international accords as those approved at the Bogota Conference in 1948, in respect of the Grau doctrine, expropriation, and in other particulars must be rescinded or they will block the entire program.

(g) Any positive program to succeed must be premised on the proposition that private property rights are human rights and if they are lost all freedoms will perish.

If I have sounded several notes of caution, it is precisely because President Truman's idea—his ultimate objective—is so splendid that we must not, like the person who laboriously gathered yellow pollen from the flowers in the field, fail by being overbold in aspiration or building castles in the air. Nothing can be so foolish as empty boldness—the chill of ignorance, and nothing so futile as daydreaming.

The most inspiring incentive which can be given toward forwarding this program would be for the United States itself to stop the insidious drift toward a collectivist economy which now threatens to smother the American way of life; to put our own house in order; to restrict Government to its proper functions; and to return to the free private competitive enterprise system which respects economic rights and rewards honesty, hard work, and intelligence with profits, higher standards of living, and general well-being.

Excise Taxes

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1949

Mr. DAVENPORT. Mr. Speaker, the time has come when we must give serious attention to bolstering our economy in order that we maintain full employment, high purchasing power, and profitable business.

Our economic system is complex—in fact, so complicated—that we would be fools to have a patent answer for whatever problems that may arise. But it is not difficult to point out that certain things are not sound and do damage to our stability and progress by their continuation. All about us, I am sure, each of us can point with little effort to several barriers to the normal flow of business.

I should like to call your attention to one of the worst and insidious barriers to the efforts of businessmen to maintain sales. I refer to the so-called luxury taxes on many common items of purchases. These taxes were devised for the most part in 1941. Their rates were increased from 10 to 20 percent in 1944, and put on a more or less permanent basis in 1946.

Without question, these so-called luxury taxes are doing an immense harm to the future well-being of our great Nation. All over this Nation, they are nullifying sales each day, each hour. Businessmen find that they are unable to explain these taxes to their customers. They find customer resentment developing, as if the taxes were their own idea and as if part of the taxes fell into their pockets.

Originally these taxes were levied in 1941 to discourage the sale of these articles, in order to conserve materials then in short supplies. The general idea was that if consumers wanted them, they would have to pay a penalty, or a so-called luxury tax. Today the taxes persist as a means of raising revenue—and they do produce about a billion dollars a year. However, what is wrong with these taxes overweighs any revenue considerations that can be argued in their favor. They are seriously curtailing sales. Need more be said? But just as important, they constitute, in general, a tax against the women of this country. Most of the products so taxed are used by women. Others are used by babies and infants. A few are used by men.

If you examine the items in the category of luxury taxes, you must conclude as I have that they are not luxuries, but essentials. Since when has it been Congress' intent to tax women and babies? And since when has it been Congress' intent to tax essentials during peacetime? The answers are obvious.

I have here my wife's purse. She was gracious enough to allow me to show you the economic discrimination we have practiced upon the women of this country and upon manufacturers, workers, jobbers, and retailers.

To begin with, this purse could not be purchased until an additional 20 percent of the retail price was paid as the retail excise tax. Purses are essential to women. They are certainly no luxury. I have 10 pockets in my suit. Women are not that fortunate. Most female outergarments do not contain any usable pockets.

Now let us open this purse. Here is a billfold. It could not be purchased from the retailer without paying a 20-percent tax. Can a billfold be called a luxury? And here is a key case. It holds car keys, house keys, basement keys, desk keys. Would you call this a luxury item?

And how about this tube of lipstick. What woman would call this a luxury?

Here is a bottle of nail polish. Few women would be without nail polish. Yet it pays a 20-percent so-called luxury tax.

Here is a box of face powder, and here is a compact. Luxuries? Hardly. And hand lotion. A luxury for chapped or overworked hands?

And what about this fountain pen and this mechanical pencil? Who would ever call these luxuries? Is writing home to your family a taxable commodity?

Here are a couple of movie-theater stubs. To get past the ticket collector required an additional payment of 20 percent of the price. Movies are not a luxury any more. They provide a form of relaxation which permits people to do better work in the plant or in the office the next day.

Here is a wrist watch. Is it a luxury to know the time? Is it a luxury to have available an instrument which will enable you to get to work on time? Our tax laws think so.

Now here is a wedding ring. What sentiment and love is attached to it? What great joy? And yet this token of new status, family relationships, kinship, cannot be purchased unless a tax of 20 percent of the selling price is also paid. There are other articles in this purse that are subject to so-called luxury

taxes. I believe I have shown you enough examples to judge the injustice of these taxes.

Let us get some sense into our tax laws. Let us free our women from these discriminatory taxes. Let us help our businessmen help us to maintain our high standard of living. Let us not confuse necessities with luxuries. Let us get rid of these nonsense taxes.

Cooperative Housing

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. RAINS. Mr. Speaker, under leave to extend my remarks, I include the following letter to the editor of the Washington Post from my distinguished colleague, the Honorable John SPARKMAN, Senator from Alabama, entitled "Cooperative Housing":

COOPERATIVE HOUSING

In your editorial of August 14 on cooperative housing, the statement is made that the housing bill reported by the Senate Banking and Currency Committee includes a program involving subsidies for cooperative housing.

This bill does not provide for subsidies. It provides for loans at an interest rate representing the cost of money to the Government on its longer term borrowings plus one-half of 1 percent to cover the cost of administration.

The making of direct Federal loans for cooperative housing at low interest rates follow a precedent already established by the Government in other fields involving direct loans at low interest rates to cooperatives, such as long-term loans to cooperatives in the rural electrification program where the interest rate is 2 percent rather than 3 percent as provided in the housing bill. Other examples are direct Federal loans to farm cooperatives and similar assistance to the cooperatives of water users in irrigation projects.

Numerous other laws testify to the sound policy our Government has followed in making direct Federal loans when private capital was not available on the terms required to achieve a purpose in the national interest.

The fact that Congress has passed a public housing bill to take care of families of low income does not in any way meet the housing problem of families in the low middle income group whose incomes are above the level where they would be eligible for public housing. Moreover, the Senate Banking and Currency Committee recognized that the aids through mortgage insurance and other assistance to privately financed housing in the bill (S. 2246) would not meet the needs of a substantial group of American citizens of modest incomes.

For example, Federal Reserve Board figures show that the income of 40 percent of American families range between $2,000 and $3,750 per year. These families are caught in the middle. They cannot afford the privately financed housing which is being built, nor are they eligible for public housing. Rather than continuing to neglect their needs, the Senate Banking and Currency Committee determined that we should have a balanced and comprehensive program to assist these low middle income families to have decent homes also.

It is true that the assistance in the form of more liberal financing is conditioned upon the housing cooperative achieving other economies in construction and operation. These would include self-help through a large degree of tenant maintenance, and they would require the elimination of speculative profits. This was done as a means of assuring that there would be sufficient total savings—which we estimate will reduce the monthly costs of housing to about one-third less than rental housing being currently insured by FHA—so that th program would serve the moderate income families for whom it is intended. Admission to occupy would be subject to an income limit, and similar limits would apply on occupancy turn-over, since cooperative owners would be required to resell their interests to the cooperative when they vacated.

Your editorial states that regulations of this kind might discourage the organization of housing cooperatives. This is questioned by the fact that the legislation as presently drawn has the support of the cooperative, veteran, labor, and public interest organizations who are actively interested in sponsoring housing cooperatives. They feel, as the Senate Banking and Currency Committee does, that this program is a way of filling a gap in our present legislation by providing homes for moderate income families whose needs are now neglected.

JOHN SPARKMAN,
Senator from Alabama.

WASHINGTON.

Repeal of Indian Liquor Law

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1949

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the tribal council of the Crow Tribe, Crow Agency, Mont. I place this material in the RECORD at the specific request of Mr. Robert Yellowtail, chairman of the Crow Tribal Council, who wishes the Members to be informed of the tribe's views on certain legislation.

The resolution follows:

Resolution on repeal of Indian liquor law

Whereas there has been introduced in the Eighty-first Congress of the United States a bill, H. R. 4941, the intent of which, is to repeal chapter 241, United States Code, title 25, Indians, being the act of June 30, 1834, which is the Indian liquor law; and

Whereas the Crow Tribe meeting this 19th day of August 1949 in a general council, duly called, hereby endorses the said H. R. 4941 bill and do hereby urge the Senate and House to speedily pass said bill for the following reasons, to wit:

1. The act has never been possible of enforcement and never will.

2. The early considerations which prompted the enactment are now nonexistent.

3. The yearly appropriation of the people's money to pay a large corp of Federal employees cannot be justified from the nil results which has been the record chalked up since 1834.

4. The Indians have always been able to get and use bootleg liquor, law or no law, and in the future will continue to do so.

5. The existence of the act of June 30, 1834, has made possible a large bunch of bootleg racketeers surrounding every Indian reservation in the country and which yearly costs the Government great money expense in the prosecutions of both Indians and whites, many of whom now are serving terms in Federal penal institutions.

6. At the moment and due to warnings by the Federal enforcement officers, all food stores and drug stores in the United States now refuse to sell to the Indians all articles of toiletry, such as cologne or perfumes containing any alcohol, also kitchen necessities such as vanilla and lemon extracts, as also being banned by the act of June 30, 1834, and as a consequence the Indians all over the United States and Canada are resorting to the use and drinking of all kinds of shaving and rubbing lotions, canned heat, hair tonics, and such mixtures which has now and is daily endangering the health of Indian youths, both men and women to the danger point. Many deaths all over the Indian country are occurring as a result of the use of these dangerous concoctions.

7. This law—

(1) Is class and discriminatory legislation, discriminating against the Indians, a minority segment of our national population, and is therefore in violation of the Constitution of the United States and hence is illegal and unconstitutional.

(2) Has been a miserable failure in point of results attained over a period of 100 years of attempted enforcement.

(3) Is pure mockery and a foolish attempt at the impossible, and should be repealed forthwith.

(4) Puts the United States in the position of willful ungratefulness toward the American Indians and 50,000 of their soldiers who defended our country in times of national peril, by providing by law for their prosecution and incarceration in penal institutions for the exercisement of the sacred American and constitutional privilege of drinking or eating what we desire. You cannot regulate by law the choice of liquid quench of thirst in America. Hoover tried the noble experiment on white Americans and it proved a miserable failure and the repeal and correction of which, placed Roosevelt and the Democratic Party in the White House for the past 16 years.

(5) This law is vicious and cannot be justified longer from any point of fair, reasonable, and sane reasoning, and should be abolished and repealed in the interests of humanity before it kills off the flower of the Indian tribes of the United States which it is doing in a fast and large way right now.

(6) Has been rat-hole operation No. 1 in that the people's money in the Federal Treasury has been yearly appropriated for over 115 years in large amounts in an effort that defies and challenges the showing and proving of results by its supporters.

So, now, therefore, for the reasons herein given, we urge upon the Congress to pass H. R. 4941 and thus save the young people of the Indian tribes of the United States.

Resolved further, That copies of this resolution be sent to the House and Senate of the United States and to the Montana Delegation in Congress with the request that it be spread upon the journals of both Houses for the information of the Indians of the United States.

Considered and passed in an open Tribal Council of the Crow Tribe this 19th day of August 1949.

Members present, 106; votes for, unanimous; votes against, none.

ROBERT YELLOWTAIL,
Chairman of Crow Tribal Council.

Attest:

GEORGE HOGAN,
Secretary.
KENNETH E. HOLKAN,
Acting Superintendent.

Harry J. Davenport on Old Age

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from a radio talk made by me over station WLOA, Braddock, Pa.:

All Americans want the opportunity to protect themselves and their families against the economic hazards of old age. Only a very small portion of the population is fortunately able to do so today. Today we have a system which covers only 40,000,000 of an estimated total of 70,000,000 workers.

Among the excluded are 5,000,000 farmers, 3,500,000 farm workers, 2,500,000 domestic workers, a million in nonprofit organizations.

Restrictive eligibility requirements for older workers have kept all but 20 percent of those over 65 from benefiting from the program. Millions of workers were excluded from the old-age insurance program originally because of an erroneous belief that there would be administrative difficulties in collecting contributions from them. Fewer persons in proportion to total population receive old-age pensions in farm States than in industrial States. This is the result of excluding farmers and farm workers.

The benefit payments under the present old-age insurance program are completely inadequate. The average benefit for a retired male worker at the end of 1946 was $24.90 a month. The average benefit for a retired man and wife was under $40 a month. The average family benefit for a widow with two dependent children was $48.20.

With a 75-percent increase in the cost of living since 1939 when these scales of payment were established, they are inadequate to pay more than a portion of the rent or the food bill.

The first essential of an adequate old-age insurance program is to guarantee our older people security from want. It must never be less than an amount sufficient to maintain a healthy and satisfactory life.

Our present law is a farce as far as security to our older people is concerned. It must be revised upward to meet American standards. Another essential of an adequate pension program is not to interfere with the enterprise of those past the retirement age.

Is there any reason why a man of 70 must, as he is forced to do under the present program, turn back his monthly benefit if he earns more than a certain amount? Still another essential of an adequate old-age insurance program is that all can qualify for a future pension regardless of age. Under the present program, a man who is 65 today must work for 6 years in a covered job before he can qualify for an old-age pension. The seriousness of the old-age problem is attested to by the aging character of our population.

Of a total population of 145,000,000 today, more than 17,000,000 persons are over 60 and 11,000,000 are over 65. In 50 years there will be 27,000,000 persons in the United States who will be over 60 years of age.

With our present inadequate system of old-age pensions the responsibility for the care of our old people falls on the individual families concerned. This is an unfair burden on our young, who should be devoting their energies to self-improvement or to their own growing families. Our old people are our responsibility. They have added to the wealth of the Nation and have strengthened our democratic traditions. They have no desire to fall burden on their children or on the pity of their local communities.

Those who have paid money into the old-age program have a right to adequate return. And those who have not paid money into the pension program have a right to the minimums necessary to maintain a healthy existence. Our older people should feel no humiliation in getting aid as they are made to feel today.

An adequate minimum old-age monthly pension today would be $100. This is $15 above the maximum allowed under the present law. There should be no cut below this figure for dependent widows. The age of eligibility should be dropped to 60 instead of 65, as found in the present law. The life expectancy for American men is below the minimum age qualification of the present law.

This program should be financed through a pay-roll deduction with Government contribution as found necessary. The present contribution rate is 1 percent on the employer and 1 percent on the employee. With full employment a 2 percent payment from employers should minimize the Government's share in the cost of operation. It should not place too large a burden on the economy. In returned security and purchasing power it will more than pay its own way.

These are my proposals to strengthen our social-security laws and keep America strong. These are my proposals to meet the challenge forced upon us to prove that democracy is the better way.

If We Can Persuade

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1949

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am including in the RECORD an article on the atomic bomb by the senior Senator from Connecticut, the Honorable BRIEN MCMAHON. I do this because of the profound statements made by Senator MCMAHON and because I believe, with him, that the full implications of atomic energy should be known and the possibilities for control thoroughly explored.

No one in the United States—perhaps in the world—is in a better position to understand and to discuss this subject. Senator MCMAHON, as chairman of the Joint Senate-House Committee on Atomic Energy, knows the problem of atomic energy from the viewpoint of both science and politics, and because of his mastery of this subject his words should be heeded.

A statesman of the first order, an American in the best sense of the word, a man who is vitally interested in peace for his own country and all mankind—for all time—that typifies the senior Senator from Connecticut.

The people of the United States owe him a deep debt of gratitude for the tremendous efforts he has been making in seeking means to bring about the control of atomic energy, to the end that it may be an instrument not for destruction but for the betterment of all people and the peace of the world.

IF WE CAN PERSUADE

(By United States Senator BRIEN MCMAHON)

"The delegation of the Union of Soviet Socialist Republics objects."

Mr. Andrei Gromyko of the Soviet delegation to the United Nations Atomic Energy Commission was speaking. The date was May 17, 1948. The Commission was preparing to wind up nearly 2 years of search for a solution of international control of atomic energy. Three delegations, those of the United States, France, and the United Kingdom, had agreed on a plan.

"The delegation of the Union of Soviet Socialist Republics objects," Mr. Gromyko said, "to proposals submitted by the three delegations. Furthermore, if these proposals are put to a vote, then we shall have to vote against it."

The proposals he referred to were those first made by the United States. They were approved on November 4, 1948 by the General Assembly of the United Nations. The Assembly voted 40 to 4 with 4 abstentions to accept the majority plan of the Atomic Energy Commission as the United Nations plan.

Since then, the picture has not changed materially. The Soviet Union has steadfastly refused to cooperate with the rest of the nations in seeking an effective system of international control of atomic energy and particularly of the atomic bomb.

It is the prime tragedy of postwar history that such a system is not now in force. More than 3 years have elapsed since it was officially announced at the first meeting of the United Nations Atomic Energy Commission on June 14, 1946, that the United States stood ready to prescribe and destroy this instrument—to lift its use from death to life—if the world will join in a pact to that end.

OUR LOGICAL MAGNANIMITY

Never in the history of the world had such a proposal been made. Never had a nation in complete possession of so deadly a weapon voluntarily offered to relinquish control of it.

Why did the United States make this offer?

It did so because the realism of history forced the United States to recognize the fact that it could not maintain such a monopoly forever. Guard the secret as it would, other nations sooner or later would learn how to make atomic bombs. When and if that should happen, no nation would be free of fear. The mere threat of atomic warfare could enslave the peoples of smaller nations and atomic warfare itself would be the ultimate catastrophe of civilization.

To save the world from such fear, to remove every likelihood of this ultimate catastrophe, the United States proposed to internationalize atomic energy in return for the adoption of an effective system of international control.

In view of the most altruistic, the least self-serving international offer in the cause of peace and human advancement ever made, why did the rulers of the Soviet Union reject the plan? Why have they refused to participate in lifting this burden of fear from the peoples of the world, their own as well as those of other nations? Why have they not hastened to grasp this unique opportunity to utilize atomic energy for the purposes of peace and plenty?

ENLIGHTENING THE MASSES

In seeking for a rational answer, I think we must clearly distinguish between the rulers and the people of the Soviet Union. Were the people of Russia and the other countries of the Soviet orbit permitted to understand what atomic energy could do for them in peace and what it could do to them in war, I have no doubt which they would choose. But the Soviet Union is under a dictatorship, and the people are permitted to know only what the Politburo wants them to know. And the men of the Politburo do not want effective international control because it would present a threat to their dictatorship at home and to their hope of expansion abroad. That is why they prefer to keep the negotiations in the amorphous state of stalemate while they work feverishly to

produce their first atomic bomb. Some day they will produce it. What then? Where does that leave the United States and the rest of the world? What can we do about it?

In my opinion, there are three things the United States must do. First of all, the national security of the United States and the peace of the world compels us in America to make the production of more and better atomic bombs the first order of business in our own atomic program. Against the day when aggressors are no longer restrained by monopoly, they must be restrained by superiority. On the day that Russia gets her first bomb, the United States must have as large a number as it is possible to produce.

ATOMIC SURVEILLANCE

Secondly, in cooperation with other nations, the United States must look for other avenues and corridors of approach to a workable system of international control, not only of atomic bombs, but of all weapons of mass destruction and even of war itself. The stakes are high. The peace of the world is not to be lightly abandoned to chance.

The third thing that must be done is corollary to the second. Every means must be utilized to bring the true facts about atomic energy and the world situation to the men and women behind the Soviet-imposed iron curtain. Perhaps if they can understand how their leaders have isolated them from the good will of the peoples of the rest of the world; perhaps if they can be told now how the attitude of their rulers has held back the good things that atomic energy will bring to themselves and the world; perhaps if we can persuade them that they stand alone against the world—perhaps then they will be able to make their desires and their will for peace and plenty heard even behind the thick walls of the Kremlin.

To permit large masses of people anywhere to remain in intellectual darkness as to both the great evil and the great good inherent in the use of atomic energy is to gamble with human destiny. The plain people of America have only sympathy and good will for the plain people of Soviet lands. We must do what we can to bring them our message of peace and hope—not only for them but for ourselves as well.

Poetry in Prose—A Little Relief From the Affairs of State

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1949

Mr. McDONOUGH. Mr. Speaker, a constituent of mine, Mr. Averell Denys Garrison, of Los Angeles, Calif., has written some excellent poetry in prose form which I am sure many Members of the Congress will find interesting as a relief from the cares and problems of state which occupy so much of our time.

Here are a few of Mr. Garrison's compositions:

THE VANISHED YEARS

I like to sit and ponder as I smoke my battered pipe, and muse about some joys I think I missed; as a pupil so reluctant that it made the teachers gripe, and the laughing girl some other fellow kissed. I had a pal so friendly that we stuck like chewing gum, till one sad day we fought behind the school; the days of anguish we both spent, till other friends had come, and the mounting years had tagged me as a fool. For this same lad had loved me with affection as of yore, when we both marched forth to battle at the call; he fell at Lookout Mountain where men sleep by the score, for the flag he was the first to give his all. The past seems ever mellow after many years have fled, in the present there are unimportant chores, now I'm just a sere old fellow with white hairs on my head, still we like reviving history though it bores. The day you fought at Shiloh to repulse the mighty horde, or when you followed Sherman to the sea; the thrill of Lee's surrender when he sheathed his potent sword, and Lincoln's death which followed victory. One by one your comrades vanish from a seat at Pershing Square, to obey the final call with no reprieve; a salute to all good soldiers who still can dream and dare, for those who fell in combat we shall grieve.

FRIENDSHIP

Dear old pal of a former day, good friend of the ready smile, you're gone and I go my lonesome way, no task now seems worth while. When the fog was thick and fate would frown, you cheered me with banter and jest, together a drink or two we would down, plus a hefty meal under our vest. But you're gone, 'pon my soul, and now I must say that at present I'm feeling quite glum, but I hope you'll return, some day to repay, the 10 bucks you borrowed, you bum.

HOLLYWOOD HAZARD

Kindly give me, friend, a big stuffed club and a fist like an Armour ham; or hand me a poniard keen and bright and an arm like your Uncle Sam; provide me, please, with a scowl and a frown and a jaw that is stiff and square, a mouth that is stern in a menacing style, let me assume that cocky air. Let me pack a gun on either hip, to shoot fast like old Bill Hart, or perhaps I should have a teargas bomb, to be what the wise call smart. Thus equipped I shall attempt to cross the street, Godnoze I'll need your prayers, for a fellow afoot needs a whole lot of luck, or he'll be climbing the Golden Stairs.

WHAT DO I WANT?

I don't want a home where the buffalo roam, nor a cabin way up in the hills; I don't want a house where termites carouse, nor a mansion so gaudy it thrills. I don't want a car that is better by far than the one my neighbor acquired, nor a flock of degrees which may exalt, if you please, of such learning I'm getting quite tired. I don't want a harem, a yacht, or a plane, a ball club, a hotel or rich food; a flock of fleet ponies would drive me insane, such a life would do me no good. I am not fond of women, they keep me aloof, I've decided to retain the same wife; I don't want what I want when I want it, forsooth, so perhaps I have been dead all my life.

END OF A BAD MAN

It happened out in Sundance when the hills were plenty rough that a bird rode down from Deadwood, proclaiming he was tough. A little weazened hombre, with a mustache like a saw, who toted potent weapons, was lightnin' on the draw. His face was weatherbeaten and his cayuse much the same, to see him spur his hossflesh would put a man to shame. The cuss would belly to the bar and as he drank would say, he was bad down to his boot heels, and no one said him nay. He dwelt among us quite a spell, too long if you ask me; each day we yearned for slaughter, but just seethed inwardly. At last we solved the problem, in a way no one foresaw; we made him city marshal, to enforce the civil law. Then he could strut at random, scowl other bad men down; I'm declaring here, kind stranger, he's now mayor of this man's town.

Walter Trohan Broadcasts on Military Assistance Program

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including the final broadcast of Walter Trohan, chief of the Chicago Tribune Washington Bureau, delivered August 19, 1949, from Station WOL in Washington over the Mutual Broadcasting Co. network. Mr. Trohan has been substituting on the Fulton Lewis, Jr., radio program for the past 2 weeks. During that period, he devoted eight broadcasts to a detailed explanation relative to what the cost of rearming Europe under the North Atlantic Pact really will be to our people. This broadcast, which I am inserting today, is a summation of Mr. Trohan's broadcasts from August 8 to 17 inclusive. This series of broadcasts has been reprinted and distributed in pamphlet form for the convenience of Members of the Congress by Women Investors Research Institute, Inc., 224 Second Street SE., Washington, D. C., of which Miss Cathrine Curtis is president and Michael Ahearne is research director. Members may obtain copies of these Walter Trohan broadcasts by contacting the Institute.

SUMMATION

(August 19, 1949)

I had thought to entertain you on this last broadcast with some of the more humorous incidents that have come my way in 15 years in Washington. But I am not going to be humorous tonight. There is nothing funny in the world situation. There is nothing funny in a policy which may result in plowing under a generation of American boys. I refer to our foreign policy, which many serious military minds fear is leading to war.

As you know, I devoted almost all of my 2 weeks on the air to a report from our best admirals and generals on world strategy. I reported they believe that we cannot stop Russia by arming our European allies. I reported that our best military minds viewed the military-assistance program with grave misgivings. As you know, President Truman had asked Congress to vote $1,450,000,000. The bulk of this was to go to Europe, and the rest to Greece, Turkey, Iran, Korea, and the Philippine Republic. Last night the House cut the European share of the program in half. The House voted a total of $870,000,000.

Today Congressman JOHN TABER told me that you and I can claim some credit for this saving of more than a half-billion dollars. He told me that he personally knew six Members of the House who had been moved to change their votes by the chats you and I have had. TABER, as you know, is the ranking Republican member of the House Appropriations Committee. Also, Representative JOHN H. VORYS took the floor to say he had been for the arming of western European nations but had been moved to change his mind to favor the cut. And he quoted from one of our broadcasts.

These broadcasts were put in the CONGRESSIONAL RECORD by Congressman LAWRENCE H. SMITH of Wisconsin. They were also gathered into a booklet by Women Investors Research Institute and placed on the desk of every

Member of Congress. Your support and encouragement induced me to continue the series to eight broadcasts, so you can claim a part in the savings.

The battle is not yet won, however. The arms program now comes up in the Senate, where the administration plans to bring tremendous pressure to have the House cut restored. It was no accident that the bill was brought up first in the House—this is the same strategy that was used to obtain passage of the lend-lease program early in 1941. The administration steam rollered that measure through the House. Then the administration approached doubtful Senators with the argument that their State delegations had voted for lend-lease.

The Senators were told that the Congressmen voted for the measure because they were close to the people. This argument was effective. And remember that the supporters of lend-lease told us that the chief aim of the program was to keep us out of war. The arms-assistance program is lend-lease all over again, but without lend or lease—it is now undisguised give-away. And it is being sold to us as a way to keep America out of war.

This time the administration strategy of initiating the give-away in the House has backfired. The House has cut the program. And Members of the House are closer to the people because they come up for election every 2 years. The people have spoken in the House. The fight has only begun in the Senate. But already there is evidence that the administration is facing a tough battle. The Senate Foreign Relations Committee reopened hearings to give opponents of the program a chance to put in their case. Several Senators have been kind enough to say that our chats have had some influence on this decision.

Tonight I want to emphasize why our best military minds are opposed to the military-assistance program. This program, as you know, was not drafted in our Defense Establishment; it was drafted in the State Department by individuals trained only in giving away money. Our top military say the arms-assistance program is based on unsound strategy; on the balance-of-power theory, which has brought on one war after another for hundreds of years. Military men say that the arms-assistance program is unsound because it commits us to ground combat against the Soviet Union, if war comes. And every responsible military man I know is aware that we cannot defeat Russia on the ground. There are too many Russians for our bullets. Russia has 20,000,000 men. She is favored by distance and weather.

Not one responsible ranking officer in our Army, Navy, and Air Corps is convinced that France would fight, even if given arms. Not one responsible officer believes that England could or should do more than defend herself. Italy failed miserably in the last war. The other seven of our European allies are too small to be an important factor. These are, as you know, Norway, Denmark, Holland, Belgium, Luxemburg, Portugal, and Iceland. The best military minds do not believe all our allies together have the will to fight or the capacity to defeat Russia on the ground. They know Stalin wants to fight on the ground. Stalin knows he can win on the ground.

It is possible that Stalin would oppose the military assistance program in the hope that the United States will go broke in doing it. Military leaders say the billion and a half the administration is asking is only the beginning. They say that the plan could cost $66,000,000,000 in 5 years if we would place a garrison of 60 divisions in the Rhine or the Elbe Rivers. And even then our best military minds say we would have no guaranty that Russia would be stopped. Stalin is a master psychologist. Many believe he is opposing the Marshall plan, under which we are pouring billions into Europe, because he thinks his opposition will induce us to continue it.

Many believe Stalin wants us to get stubborn and say, "Well, if Stalin is against it, we want it. We'll show him." Remember, Nikolai Lenin wrote in 1924, "Some day we shall force the United States to spend itself into destruction." And you know that Lenin is one of the two gods permitted the godless Communists. The other, of course, is Joe Stalin. Trained military commanders say the arms assistance program won't work and that it costs too much.

They do have an answer, however. They say world war III can be won, if it comes. Forward military thinkers believe it can be won through the air, with Army and Navy support. They believe a strong Air Force would check Stalin and forestall war.

They also believe world war III can be prevented if we conduct a psychological and bloodless war to encourage the Russian people to overthrow their Communist masters. Truth can enable the Russian people to lead themselves out of bondage. A strong Air Force and the atomic bomb could bring Soviet Russia to her knees without invasion. Or at the very least, these powerful weapons could ease the way of invasion.

As you know, the Nazi air blitz over London had the gallant British thinking of surrender. In the peak month of the bombing 10,000 bombs were dropped on London. The total weight of these bombs was 1,000 tons. Gen. Toohey Spaatz told me today the equivalent of this load of bombs could be carried today in one trip in 24 B-36 planes. Our top air leaders say if Britain was shaken by 1,000 tons of bombs, what would happen to the Soviets if a hundred and more times that load is dropped on them?

Many Members of Congress are opposed to the arms-assistance program for the same reason they opposed the North Atlantic Pact. They see it as another step toward union with Britain and union with western Europe—political and economic union. Already two schemes for world federation are before Congress. One, supported by world federalists, envisions a union open to all nations. The second plan, drafted by the Atlantic Union Committee, would transform the North Atlantic Pact into a union along the lines of the Thirteen Original Colonies.

I should like to call your attention to the first man to advocate union. He is the spiritual father of those who want to bring us into union with Britain. On October 7, 1780, this man called for union. He made his plea only 18 months after George Washington took the oath of office as the first President of the United States. He said: "I am now led to devote my life to the reunion of the British Empire as the best and the only means to dry up the streams of human misery that have deluged this country."

That was written in London. The man who wrote it was Benedict Arnold.

You know him as the man who tried to deliver West Point to the British during the Revolutionary War. You know his name as a synonym for traitor.

Let me read this first argument for union now again: "I am now led to devote my life to the reunion of the British Empire as the best and the only means to dry up the streams of misery that have deluged this country."

That was the Arnold plan in 1780, and that is the Arnold plan today.

The CIO Against the United States

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald:

THE CIO AGAINST THE UNITED STATES

At least 500 CIO goons invaded the Bell Aircraft plant near Niagara Falls, N. Y., on Friday, beat and intimidated employees who were working despite a strike, and dragged others out of the plant.

The Bell plant has been working on jet planes for the Air Force and experimenting on other secret models. The mob invaded experimental quarters, barred to ordinary employees. In the mob, company officials say, were two or more men who had been dismissed on Government orders as bad security risks. "Bad security risks" means Communists.

Governor Dewey, at Albany, is playing his customary role of pusillanimous me-tooism. He had ignored previous requests from the sheriff of Niagara County for help. After the riot, he again denied a request for State troopers and told the sheriff it was up to local authorities to enforce the law, or else.

Niagara County has a relatively small population and the sheriff had previously explained that he needs trained police officers, not an untrained citizen posse, to control the CIO mob that has been guilty of previous disorders at the plant.

The CIO pattern of violence in the United States is clear. At Kalamazoo, Mich., leaders of another CIO union recently were saved by a hung jury after trial for staging another plant invasion similar to that against Bell Aircraft. The prosecution was directed by the Democratic attorney general of Michigan, a former CIO lawyer. The outcome was what might have been expected. Like the Democratic administrations, national and State, Governor Dewey is willing to countenance violence to win votes.

Thanks to the good sense of Congress, the Taft-Hartley Act is still on the books. That law, however, deals only indirectly with riotous unionism. It contemplates a society in which unions are guaranteed peaceful collective bargaining. The CIO engages in collective bargaining when it wants to. It is following the path of revolution.

The first responsibility for stopping violence in strikes, like violence in any of its other manifestations, rests with local authorities. But the police forces of small cities or semirural counties are insufficient in numbers, however courageous their members may be, to cope with the sudden attacks of mobs of hundreds or thousands of violent men.

Government is not powerless to deal with these tactics, though it gives that appearance when the power to act rests with politicians who are either cowardly or partisans of the rioters. CIO unions, with their Socialist and Communist leadership, are being encouraged in the belief that they are bigger than the people of the United States. The longer their revolutionary acts are tolerated, the harder, and perhaps bloodier, will be the task of restoring respect for law.

Gen. Mikulas Ferjencik

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Honorable John T. Kmetz, former United States Assistant Secretary of Labor, in regard to Gen. Mikulas Ferjencik, former Minister of Interior of Slovakia, now held by the United States Immigration Authorities on Ellis Island as a collaborator of Reds; also an answer to Jan Papanek who defended General Ferjencik:

Jan Papanek in his defense of Gen Mikulas Ferjencik now detained by the Immigration authorities on Ellis Island after his arrival in New York City on Sunday, August 14, 1949, as a displaced person, asserted that the Slovak League of America and the American Friends of Slovak Freedom were not representative of democratic exiles of Czechoslovakia.

Papanek said that General Ferjencik fought Communists in Czechoslovakia since 1945 as well as the Slovak separatists during the war, etc. Papanek further asserted since many of the Slovak separatists Fascist leaders who now are in many countries and their American friends of Slovak descent supported them during the war and who are trying to rehabilitate themselves and feel that it is an opportune moment when the democratic forces are concentrated to establish their damaged reputation.

To this assertion Hon. John T. Kmetz, former United States Assistant Secretary of Labor and leading member of the American Friends of Slovak Freedom, rebuked Papanek, stating "I strongly resent the statement made by this 'Czech carpetbagger' who enjoyed our American hospitality for the past 20 years as a servant of the Prague Government, and who since the birth of the United Nations as a representative of the pro-Soviet Czechoslovak Government was taking his orders from Molotov and casting his vote with Comrade Gromyko against every decent humanitarian proposal made by our American democratic Government and its allies."

It is no surprise to us that Papanek jumped to the defense of General Ferjencik, better known as the "Bluebird of Slovakia," who has surpassed all records of bluebirds on the European Continent for the number of people he has sent to their graves. Jan Papanek like many of his other associates, approved the dictates of the Soviets during and after World War II and did not raise any objections when President Benes, Jan Masaryk, and others made a hasty trip to Moscow and Uncle Joe and signed a 20-year agreement.

This they did before they thanked the American Government and its allies, especially the United States of America, for establishing them a Czechoslovak Republic for the second time. We all know that the United States Government created the first Czechoslovak Republic. Yes, Papanek resigned after the Communist coup in Czechoslovakia in February 1948, and so did many of his associates including the Ambassador in Washington, but he failed to tell the American public why he resigned. It was simply because it was safer for him to stay here in the good old United States of America, under the Stars and Stripes and eat three square meals a day, than to be recalled by his Communist government with which he was playing since the establishment of the Czechoslovak Republic. Papanek saw the handwriting on the wall and he knew that he would be recalled to Czechoslovakia; therefore, a month after the coup he resigned. Of course, what prompted him to take this step was the thought that America was much safer for him and it would be more profitable to stay here, shed crocodile tears and beat the drums from coast to coast by "hijacking" the American public for contributions and donations to put himself and his cohorts into power again, if at all possible, at the expense of our American Government.

So far as Papanek's statement, in regard to the Slovak League of America and the American Friends of Slovak Freedom, asserting that "they are not the representatives of democratic exiles of Czechoslovakia," please, remember that these two organizations are American in act and spirit and they do not pretend to serve foreign countries but they have a right to be on guard against any subversive organizations or persons trying to enter this country with the sole purpose of spreading their undemocratic ideologies. Let us pause here for a moment to ask in all fairness: "What nerve and impudence from an alien to insult so brazenly these organizations of American citizens."

Mr. Kmetz continued: "Papanek admits that General Ferjencik participated in the coalition government which means that he yielded to the Reds and served their purpose until July 1948, when he mysteriously escaped. Papanek mentions that many leaders are in prisons in Czechoslovakia, using this as a defense for Ferjencik, but he fails to admit that it was Ferjencik who either put them there or helped to imprison many thousands of them.

"Just to show what kind of a democratic Government Papanek represented here in the United States of America, I want to state, that after being recommended by John L. Lewis, president of United Mine Workers of America, I was chosen to represent the United Mine Workers at the International Labor Organization known as the ILO which is part of the United Nations. The conference was held in Geneva, Switzerland, in June 1947. My mission was approved by the President of the United States. A few weeks before leaving for Europe, the United States Department of Labor secured for me, without any difficulties, visas of seven countries, namely, Ireland, England, France, Holland, Denmark, Switzerland, and Italy, and also a special recommendation to Gen. Lucius Clay for a visit to Germany. At the same time a request was made upon the Czechoslovak Government for a visa. To my great surprise the United States Department of Labor was turned down and my passport returned. I was also informed by one of the officials a few days later that another request was made on my behalf. After several days I was asked by the Czechoslovak Embassy to appear in person, which I had done, and spent more than 2½ hours in the Czechoslovak Embassy. I was quizzed by the doorman, stenographer, telephone operator, and finally got in to see the Ambassador. Each and every one wanted to know the purpose of my visit to Slovakia, the country of my birth, which I had left at the age of six. They wanted to know my history from my birth to the hour of my visit to the Embassy. And most surprising to me was that the Secretary who also mentioned that she was born and raised in Bratislava, and she and her husband were both employees at the Embassy, wanted to know to what church I belonged.

"I informed the secretary, and others present, that I was an American citizen and so were all my relatives in this country and that I was confirmed as a delegate to the ILO conference by the President of the United States, having obtained a diplomat's passport and I asked them whether they were going to recognize the passport of the United States Government or not? That is all I wanted to know, and finally, I was given the visa. This I mention because I want the American public to know what kind of a government Papanek represented in the United States in 1947. Of course, he was too occupied at that time making speeches praising Soviet Russia. After termination of the conference in Geneva, I decided to visit Czechoslovakia with my wife, who was born and raised in the United States of America. I left Geneva by plane on July 2, 1947, for Prague, where I spent 4 days and celebrated the American Independence Day with many American soldiers and officers, who were at the Hotel Paris where I stayed. On the morning of July 5, a demonstration took place in Prague, with a parade displaying a large banner with a huge picture of Stalin and Benes. To my surprise, the only people in the streets who seemed to be aroused and happy were the members in the building of the Communist Party headquarters in Prague, which also served as the headquarters of Comintern. Later as a float came with the Stars and Stripes, carried by 12 youngsters, all being not more than 15 years of age, I was pleasantly surprised that this was the only section of the parade that received applause from the large audience. Also to my surprise, this American flag, was carried by a group which came to Prague from Slovakia, which in May 1946, voted 67 percent against the Reds. I personally took moving pictures, in technicolor, of the parade, which consisted of more than 400 feet of film.

"The same parade took place in 1948, and received a great deal of publicity in our American press, but this same group showed how they despised Gottwald.

"On the afternoon of July 5, 1947, I left by plane to spend a week in Slovakia, between Bratislava, Kosic, Presov, and the place of my birth. While in Czechoslovakia for 2 weeks, I met quite a few people in all walks of life—government, business, peasants, workers, and people of the church, of Protestant, Jewish, and Catholic faiths, including officers of the Czechoslovakian aviation, with whom I flew from Prague to Presov. These same three officers, on April 8, 1948, escaped into the American zone of Germany and they had told me of their plans in July 1947. These intelligent officers also told me at that time that they were ashamed to tell anyone the place of their birth on their trips to London, Stockholm, and other foreign cities, because of the collaboration of the Czech Government with Moscow. The Government feared its own pilots and went so far as continually changing, replacing, and separating each crew after each and every flight. For instance, the crew I flew with into Slovakia was not there at the completion of the trip because they were replaced by another for the fear that they would get too intimate with the passengers or the personnel of various airports.

"I spoke to people in Bratislava where I spent some time, also in Kosice and Presov. In Presov I hired a car to take me to my native village. During the drive of 30 miles, our automobile was stopped and followed at least a dozen times by police and soldiers, and my credentials were checked and rechecked, and the driver on these occasions was threatened by police and the Gestapo of Benes and Stalin. These members of the Czech Gestapo were taking orders from General Ferjencik who at that time was the

most despised person in my native Slovakia. His name was mentioned in whispers as the people lived in fear because they did not know who was going to suddenly disappear and be sent to Siberia or the slave camps or some other hellhole under the Red dictatorship.

"As an American citizen, born in Slovakia, I would have never believed that people could have feared any one man as they feared General Ferjencik. During my visit in Czechoslovakia, I had taken some pictures in the eastern part of Slovakia and I have them with me to show them to anyone who may doubt my statement that leaders in Czechoslovakia would ever permit such things to exist. I, also, have pictures of the monument, built of marble, which is a bust of Joe Stalin, with the hammer and sickle on the top right corner. This monument is located in a little park in front of a Catholic Church in the city of Presov. In my course of conversation with various businessmen and clergymen, I had been informed that the erection of the monument had begun in the fall of 1945 and completed during 1946. Here I would like to ask General Ferjencik, Jan Papanek or any one of their associates: Did they raise any objections against the erection of this monument in the city of Presov. During my stay in the southeastern part of Slovakia, I had never visited a dining room, restaurant or a hotel, without having to face a huge picture of the dictator of Moscow and a small picture (6 by 10 inches) of the puppet Czechoslovak President Benes hanging on the wall.

"The only successful businessmen in Presov were those who believed in the principles of the Moscow Government. And to prove they were loyal and true to these principles a red star was painted on the door entering their shops. The order was enforced by General Ferjencik. So for your information, Jan Papanek, this is how General Ferjencik was fighting communism since 1945.

"General Mikulas Ferjencik ate with them, slept with them, and carried out their orders, even going as far as to persecute innocent people just because they opposed Marxist ideologies. As a general, or at least called general by Papanek, he should be in Czechoslovakia leading his people against the Communists, and not 4,000 miles away, leaving his people to fight in the underground alone, as have many other leaders of that defunct Government of Czechoslovakia who have fled to the United States and expect the Americans to believe that they are in exile and want us to sympathize with them.

"A general never leaves his people nor does he ever desert his ranks. Take, for instance, what had happened in the Philippines. Did our General Wainwright desert his ranks? Did he leave his people? No; he did what every loyal officer would do.

"Jan Papanek and his cohorts should pack up their bundles and go over there and try to lead their people out of the red blind alley into which they led them.

"The American Government has given you the Czechoslovakia Republic after World War I and the sons of many American mothers and fathers of all nationalities sacrificed their lives to reestablish Czechoslovakia, which you, Jan Papanek, General Ferjencik, and the rest of you sold to the dictator of Moscow for less than 30 pieces of silver.

As an American citizen and the father of two sons, who served their country in World War II, I resent emphatically the statement of Jan Papanek, in which he calls the Slovaks, Fascists and also insults their American friends. As an American of Slovak birth, who has lived in this country 49 years, I will not permit the likes of Jan Papanek, who was making speeches before subversive organizations such as the American Slav Congress, an organization which was placed on the subversive list by our United States Attorney General, to insult my fellow Americans. The United States Congressional Investigating Committee on Un-American Activities listed such organizations like the American Slav Congress. An organization which I refused to join, back in 1943, because of its Moscow orientation and its red adherence, and at which time Papanek had only praise for the fellow travelers whom he has nourished, protected, and served.

Today he, again, has shown his pro-Red colors, by defending General Ferjencik, better known as the bluebird of Slovakia.

Having confidence in our American democratic Government, I do not hesitate for one moment to demand that General Ferjencik be deported from this great country of ours, the United States of America, and I feel that I express the mutual feelings of over one million loyal Americans of Slovak birth or extraction.

NOW THE $64 QUESTION

In concluding my prepared statement in answer to Jan Papanek's attack on the Slovak people in his defense of Gen. Mikulas Ferjencik I personally know that General Ferjencik had a rank of a colonel in the Slovakian Army before he became a general.

Now, under whose government was the rank of colonel bestowed upon him, is the $64 question that only Pan Papanek and General Ferjencik can answer. I suggest that you newspapermen seek the answer for this $64 question.

Yes; who bestowed the rank of colonel on General Ferjencik?

Death of Dr. Douglas Hyde

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from a newspaper article written by Francis J. Dixon, one of Pittsburgh's most astute scholars on Irish history. Mr. Dixon's article bears out the fact that wherever it was a question of public office Ireland never questioned a man's religion.

DEATH OF DR. DOUGLAS HYDE

At a time when totalitarianism seems to command so much attention, it is a disappointment that the passing of such a brilliant scholar and eloquent orator and philanthropist, as the late Dr. Douglas Hyde has not merited more attention.

Dr. Douglas Hyde was an internationally known figure, the son of a Protestant minister born in County Roscommon, Ireland, and educated in Trinity College, Dublin. He first came to the United States in 1891 to serve as interim professor of modern languages at Rutgers University.

In November 1905 when he again visited the United States he accepted President Theodore Roosevelt's invitation to dine at the White House. President Roosevelt found the future President of Ireland a profound and able scholar. He gave $5,000 towards the relief of the victims of the San Francisco earthquake of April 18, 1906.

The Gaelic language, Ireland's native tongue, which was the voice of European civilization for 3,000 years, when it was on the verge of extinction, its decline was stayed by the enthusiastic patriotism of Dr. Douglas Hyde, and in 1938, 12,000 qualified to teach it in Ireland.

He became President of the Free State in Ireland on May 4, 1938. He was elected by acclamation in a country that is 93 percent Catholic. For his high and noble sentiments, Ireland's beloved genius will always have a warm spot in the hearts of those familiar with his writings.

The distinguished Gaelic scholar was laid to rest after memorial service in St. Patrick's Protestant Cathedral, Dublin. Flaiteas de ar a anam (the Kingdom of God to his soul).

Kaiser Aluminum Has Banner Year

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Tuesday, August 23 (legislative day of Thursday, June 2), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a news article printed August 23 in the trade publication American Metal Market, a recognized market authority of the steel and metals industry. This news story relates to the Permanente Metals Corp., which produces all of its aluminum in the State of Washington. This young corporation, which did a $73,693,182 business during the 1948–49 fiscal year, today produces about 20 percent of the Nation's primary aluminum, a large amount of it in my State. This is more than the entire United States production in any year prior to 1937. The Kaiser Co., which owns Permanente, recently purchased Government-owned plants in Spokane, Wash.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PERMANENTE SALES IN 12 MONTHS REACH $73,669,182—HENRY J. KAISER REPORTS COMPLETION OF PLANT OWNERSHIP

OAKLAND, CALIF.—New high records for production, sales, and earnings for the 1948–49 fiscal year were announced in the annual report of the Permanente Metals Corp., producer of 20 percent of the Nation's primary aluminum.

President Henry J. Kaiser reported that Permanente Metals net sales for aluminum, chemicals, and refractories totaled $73,669,182 for the 12 months ending May 31, 1949—an increase of 19.6 percent over the previous year's $61,593,967.

Net earnings increased 30.1 percent for the last fiscal year to a total of $12,023,374. This was at a rate of $4.62 a share, compared to $3.55 for the preceding year, based on 2,600,000 shares now outstanding.

Working capital of Permanente Metals Corp. was more than doubled from $12,230,000 on May 31, 1948, to $25,089,000 on May 31, 1949. This $12,859,000 increase included $7,973,145 proceeds from sale of common stock and approximately $5,000,000 from the year's earnings. The balance of the fiscal year's earnings were paid in dividends—$1.46 a share, totaling $3,796,000—and applied to the purchase of plants and properties.

OWNERSHIP OF ALL PLANTS COMPLETED

Important developments that have taken place since the close of the fiscal year were

recounted in a separate letter to the stockholders by Mr. Kaiser.

Permanente Metals has purchased from the Government for $36,000,000 three major aluminum plants, formerly leased, the total original cost of which is placed by War Assets at approximately $91,000,000. These are the Trentwood aluminum rolling mill and Mead reduction plant, both at Spokane, Wash., and the alumina plant at Baton Rouge, La.

These acquisitions complete ownership of all plants being operated by Permanente Metals. The corporation owns and is operating plants with an approximate cost of $138,110,000, with a book value of $50,813,000. Included in these totals are the plants purchased from the Government, plants built by Permanente Metals during the war and now being operated, and all additions that have been made. They do not include the inactive magnesium plant at Permanente, Calif., with an original cost of approximately $15,000,000.

ALUMINUM PIG SOLD FOR STOCK PILING

The Munitions Board has classified aluminum pig as a strategic and critical material and, in accordance with congressional authorization, has advised War Assets to accept aluminum pig for national defense stock piling. War Assets accordingly has agreed to acept from Permanente Metals—in lieu of cash to meet the down payment of $1,800,000 on the three plants, plus interest and rentals payable prior to June 30, 1950—24,000,000 pounds of aluminum pig or ingot at prevailing market price, or a total of $3,840,000.

The purchase agreement further provides that in subsequent years in the event the Munitions Board indicates additional amounts of aluminum may be acquired at market price by War Assets of the General Services Administration, approximately 40 percent of such additional amounts will be accepted from Permanente Metals, at the company's option, in payment of principal and interest.

ELECTRICAL CONDUCTOR AND FOIL PLANTS OPENED

Advances made by the corporation during the fiscal year were recounted by Mr. Kaiser as including:

1. Opening of an aluminum rod, bar, wire, and cable mill at Newark, Ohio, in a plant purchased from War Assets Administration at a total price of $4,500,000, with an initial cash payment of $450,000. Installation of the most modern commercial rod and bar and wire and cable manufacturing facilities will result, when completed, in an additional investment in the plant of approximately $4,500,000. Orders of electrical conductor have been booked for all the production scheduled by the Ohio plant up to January 1, 1950, and the backlog extends beyond that date.

2. The corporation went into production of aluminum foil at its mill at Permanente, Calif., in March 1949. This first foil plant west of St. Louis is supplying products widely used by industries for the packaging and labeling of food, tobacco, candy, and pharmaceuticals, and in electronic equipment, refrigeration and air-conditioning equipment, and building materials.

OTHER DIVERSIFICATIONS

3. New equipment was installed at the Trentwood mill for the roll forming of aluminum shapes. This provides for fast production of high-quality aluminum sections for decorative purposes, store and building fronts, automobile trim, and interior fixtures. The development and marketing of a new general purpose aluminum sheet alloy, 150S, is another example of broadening the range of products. Sales of 150S already have achieved sizable volume.

4. Other diversifications of products include the introduction of Kaiser aluminum shade screening, a new type of screen that gives protection from the sun's heat; embossed roofing sheet; prime-coated sheet; alodized sheet and brazing sheet.

5. Permanente Metals is energetically following up its program of exploration and research into new sources of bauxite. Options have been obtained on bauxite deposits in Jamaica.

Permanente Metals employs 4,000 persons and has approximately 4,100 stockholders throughout the country. Its two aluminum-reduction plants have a capacity of 257,500,000 pounds of aluminum annually or more than the entire United States production in any year prior to 1937. Products are marketed throughout the United States through Permanente Products Co., a wholly owned subsidiary with 26 offices in principal cities.

Ban on Give-Aways

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Tuesday, August 23 (legislative day of Thursday, June 2), 1949

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial published in the Washington Post of August 23, 1949, entitled "Ban on Give-aways." Certainly, I want to pat on the back the three members of the Federal Communications Commission for their courageous action in calling a halt on the insane "Give-away" fad which has swept radio. The chance to win on these programs is said to be less than one in 8,000,000, so only an infinitesimal number can take much of a financial loss in their elimination. Only the advertiser gets something for nothing out of these medicine-men radio shows. With the Post, I regret that all seven Commissioners did not find it possible to join as a unit in abolishing this cheap clap-trap which lowers the standing of radio. Radio licenses were not granted to cultivate and appeal to the base emotions. Radio broadcasting has a finer service to offer than that. Pyramid clubs, give-away programs, and lotteries, may have strong audience appeal, but it is not an appeal worthy of our greatest entertainer and instructor—the radio.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BAN ON GIVE-AWAYS

Instead of challenging the authority of the FCC to ban radio and television give-away programs, responsible broadcasting companies ought to welcome this ruling as a salutary policing measure that will protect them from the competitive pressure of a debasing form of entertainment appealing to the cupidity and gambling instincts of mass humanity. If the broadcasting industry is to continue as a form of private enterprise, it must provide the kind of instruction and entertainment that justifies belief in the superiority of the American system of private ownership and control of broadcasting facilities. Otherwise an aroused public will eventually demand increasingly drastic regulatory action and possibly Government supersession of private companies.

The steady deterioration of broadcasting programs in recent years resulting from the vogue for the give-aways has disgusted millions of Americans. But the hope of getting something for nothing, or next to nothing, has an irresistible lure for other millions who tune in on these programs in the hope of a telephone call that will tell them they have won hundreds or thousands of dollars in cash or assorted merchandise. As a result, the programs that rely on their strictly entertainment or informative value are losing listeners and in some cases have been pushed off the air.

The FCC order is directed primarily against the type of program that gives away prizes in stay-at-homes or makes receipt of prizes dependent on possession of the sponsors' products or evidence that the winner has listened to current or previous broadcasts. Apparently programs that limit gifts to studio audiences will not be affected, although some of them pay big money to successful contestants selected by chance. The only difference—an important one, to be sure, from the viewpoint of its effect on competing programs—is that the invisible audience is not bribed to listen to the studio gift programs in the hope of an award. The FCC, even with its limitations, will, therefore, if sustained, force the broadcasting companies to drop most of the meretricious programs that offer fortunes to the chosen few who can identify a tune or answer a random question.

We regret the fact that the FCC order was approved by only three members of the Commission, three others being absent and one dissenting. The question that the courts will have to consider, however, is whether the FCC had the authority to prohibit the give-away programs under the antilottery law. The section of the criminal code on which the FCC relied prohibits the broadcasting of information, not only about lotteries but also about any gift enterprise or similar scheme, offering prizes dependent in whole or in part upon lot or chance, or any list of the prizes drawn or awarded by means of any such lottery, gift enterprise, or scheme. Violators are punishable by fine or imprisonment or both, and each day's broadcasting constitutes a separate offense.

It seems to us that the FCC has ample authority under this sweeping prohibition for its recent action. We hope that the courts will sustain its ruling, for it is aimed at abuses that must be checked in the public interest. Broadcasting companies that fight this ruling because it will deprive them of revenue would be well advised to consider whether they do not stand to lose a great deal more in the future if they attempt to perpetuate programs whose chief attraction is the broadcasting of money instead of real entertainment. By banning this kind of programed games of chance the FCC is not interfering with freedom of speech but simply trying to prevent the broadcasting companies from abusing the privileges accorded them as licensed users of the airways.

The Postal Pay Increase Bill

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. O'SULLIVAN. Mr. Speaker, it has been my sincere belief that at this time the postal workers of our Nation are entitled now to a further pay increase.

These trustworthy and most capable Government employees, if paid in proportion to their work and ability, would be given a much larger amount than that which is provided for in the present pay increase bill.

I signed the first discharge petition and intended to sign the latest discharge petition today, but upon inquiring at the Speaker's desk for the purpose of affixing my signature to the document I learned that it had been entirely filled up during the first 3 days and had been withdrawn as far as any other signatures being placed on same were concerned. The rules of the House provides that after the required number of signatures have been secured no further signatures of House Members may be added. Hence my signature will not appear on same, but I am for the measure and shall support same to the best of my ability when it is brought up for consideration before the House of Representatives.

Lucas Day

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 23 (legislative day of Thursday, June 2), 1949

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an editorial from the Friday, August 19, 1949, issue of the Peoria Journal, entitled "LUCAS Day," paying a well-deserved tribute to the distinguished public service that my able colleague, the senior Senator from Illinois and majority leader, has rendered.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LUCAS DAY

Thursday was Democratic Day at the State Fair, but it might well have been called Lucas Day, for United States Senator SCOTT W. LUCAS received the biggest ovation of any of the politicos there assembled.

The people applauded Gov. Adlai Stevenson and Vice President ALBEN BARKLEY, as well as other Democratic notables. But their enthusiasm was reserved for SCOTT LUCAS, the down-State Senator from Habana.

This was a deserved tribute to Senator LUCAS, who has won a post of genuine eminence in the Government through hard work, devotion to duty, and loyalty to the democratic precepts of government. As majority leader of the Senate, Mr. LUCAS bears a heavy burden of responsibility, but he is discharging his duties capably and efficiently.

Above all, Senator LUCAS does not forget for one moment, in the press of official duties and party business, that he is first of all the senior Senator from Illinois. His first duty and loyalty belong to the people of Illinois, and his awareness of this has been apparent throughout his entire career.

The home folks gave evidence of what they thought of LUCAS when they joined in spontaneous, enthusiastic applause at the fair. It was a deserved tribute, and one that must have warmed the heart of Senator LUCAS, for it gave clear evidence of the high regard in which he is held by people from all parts of the State of Illinois.

A Challenge to Our Readers

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald:

A CHALLENGE TO OUR READERS

We have a communication from Curtis P. Nettels, professor of American history at Cornell University, which may interest our readers as a test of their general knowledge. Any reader who can't provide the facts to support each of the points Dr. Nettels raises is not aware of the forces now at work to transform and eventually destroy this country.

Dr. Nettels entitles his paper, "Eleven Rules for Reducing a Large Republic to a Small One." His rules, in order, are:

1. Assume a large part of the burden of supporting two defeated states with a combined population nearly equal to your own. Act so that you will have to carry this burden indefinitely. Remember that the first straw, as well as the last, is needed to break the camel's back.

2. Nourish the enmity of a country with a population of nearly 200 millions, and engage in a new "cold war" while the old war is still legally in force. Nothing will so effectively paralyze a republic as a permanent state of war.

3. Provide immense funds to the allies of your presumed enemy in the "cold war." Grant lavish favors to states that are pledged not to assist you in a war that may be precipitated by your favoritism to them. This will illustrate the principle of challenge and response, whereby a challenge for cash is met by a response of folly.

4. Select a few countries and tell the rest of the world that your favorites alone are essential to your welfare, thereby notifying all others that you regard them as of no account. By this means you will make certain that you will have few friends among the nations and prove anew the truth of the saying: "There is no little enemy."

5. Subsidize a favored state on the ground that you are thereby resisting communism and do this while your favorite is encouraging the spread of communism in an immense country like China. This will so bewilder and stupefy your people that they won't know whether they are coming or going.

6. Subsidize a few foreign empires that discriminate against you in vast areas they control. Reward foreigners who insult and double-cross you, so that your people will feel that they are worms. This will devitalize the country and soften it for further foreign levies.

7. Prepare to resist a presumed enemy by repudiating your historic policies and traditions, in order that you may serve the allies of that presumed enemy. Attack and vitiate your national sovereignty and independence, since, if asserted, they would deter you from the suicidal course of subsidizing and arming foreign states that are pledged not to aid you in a major war. Deaden all sense of national interest, lest it prevent your embroiling yourself in a war for the benefit of those who are pledged to assist you.

8. Give to foreign states vast sums of wealth, thereby depleting your natural resources. Deny to many citizens the benefits which they must provide, through taxes, for the enrichment of others who serve the allies of a presumed enemy. The dazed and demoralized victims of such legal duplicity will be of little use thereafter to the Republic.

9. Drain communities of their resources so that local institutions, such as public schools, libraries, hospitals, colleges, and churches will be impoverished, thereby causing a deterioration that will hasten the end of the Republic.

10. While forcing ordinary citizens to pay heavy taxes or to give forced military service to the National Government, honor and reward others who openly propose to mutilate the Nation's sovereignty and independence. Provide Government hand-outs to be used as a propaganda fund for undermining the Nation's independence. Such irrational conduct will convince the people that reason and intelligence should be exterminated, whereupon a people who have lost their wits will tamely submit to any bizarre scheme for foreign advantage.

11. By vast expenditures chiefly for the benefit of the allies of your presumed enemy, corrupt a part of the public by inducing citizens to accept bribes as the price of betraying the Republic, thereby setting an official example for everybody to profit by such betrayal.

The Fifth Column in America

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1949

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Alexander M. Campbell, member of National Commission on World Order Disciples of Christ; member of board of trustees, Indiana University; Assistant Attorney General of the United States; at the State convention of the Department of Texas of the American Legion, at Fort Worth, Tex., August 6, 1949:

It is a real joy to return again to the State of Texas—a great empire, which has given to the Nation many of the outstanding leaders in our time—yes, of any generation.

Texas, at the present time, is giving great leadership to this Nation in a time when the people of the world look to the United States for leadership, courage, and stability. You have given to our people such leaders as former Vice President Garner; the inimitable Speaker of the House of Representatives, SAM RAYBURN; the distinguished chairman of the Foreign Relations Committee in the Senate, the Honorable TOM CONNALLY; the dynamic Senator LYNDON JOHNSON, and last week the President of the United States nominated another distinguished Texan, your friend and mine—Tom Clark—to be an Associate Justice of the Supreme Court of the United States.

I say to you that Tom Clark would love to be here with his fellow Legionnaires in order that he might tell you first-hand of some of the activities of the Department of Justice in his fight against the fifth column in America.

It is a great privilege, however, for me to speak for him and in his stead—this is probably the only time in my life when I will have the opportunity to speak for both a Justice of the Supreme Court of the United States and the Attorney General of the United States at one and the same time.

It is, therefore, with humility and with honor that I address you—the members of the American Legion, which has for its goal

the greatest of all American organization undertakings—the defense of our liberties, the preservation of our freedoms, and the maintaining of the peace of this Nation.

We of the Departmenta of Justice feel that we are partners with you in these undertakings and I am proud to point to the fact that it was Tom Clark, one of the greatest Attorneys General in the history of the United States, who has the courage, wisdom, and foresight to strike out against subversives within and without the Government after he became Attorney General of the United States. Under his leadership in enforcing the laws which Congress has enacted, and in carrying out the purposes of President Truman's loyalty order, we have ferreted out of the Government subversive agents and vigorously prosecuted spies and fifth columnists.

If the far-sighted recommendations of the American Legion regarding a strong military defense—civilian training—an adequate Army—a matchless Navy—a mighty air armada—had been carried out in time, perhaps there might never have been a Second World War.

Almost 4 years have passed since the last shot was fired in World War II. Yet the echo of that shot continues to reverberate around the world—a world that remains tense and troubled. The ideals of free men are still threatened, and in some parts of the globe liberty's cause is being weighed in the balance.

I don't have to tell Legionnaires that a tremendous price has been paid for our freedom and that we are determined not to lose this priceless heritage. We are also resolved to make good use of it.

The inborn desire for liberty found expression in the American way of life. While we have by no means achieved perfection, we are nearer to it than any other peoples. Yet our kind of life is only a distant hope for countless humans over the earth. Their dreams and their hopes are like those which caused millions to cross treacherous oceans to come here in quest of life's most precious possession—liberty.

They, too, would like to think as they please, worship in their faiths, travel freely, carry on their businesses, and own their homes, undisturbed under the law. All these wonderful blessings, and more, we enjoy here. Yet there are some who would undermine the very institutions from which these blessings flow. What a difference in our way and that in totalitarian countries such as those behind the iron curtain.

Over there freedom of political opinion has been extinguished; freedom of expression has been muzzled; freedom of assembly, except for Communists, is denied, and freedom of religious worship is in chains.

As President Truman said, "Totalitarianism is incapable of satisfying the needs and desires of men for a better life."

Democracy in full bloom does satisfy the needs and desires of human beings for peace and happiness.

We must have dynamic missions that will familiarize our own people, and peoples everywhere, with the soundness, the right, the advantages and the blessings of our form of government.

We need to constantly proclaim the blessings of individual liberty over a police state—of a godly life over a godless existence. We must carry the story of the rise to influence and power of our wonderful United States of America to all parts of the world—and that includes Russia and its forlorn satellites.

The people of the world are learning, and believing, through the Truman doctrine, the European recovery program, the Marshall plan, the Atlantic Pact, that your country and my country has no selfish objective. They are learning that our only goal is the brotherhood of man.

We must have stirring and effective missions that will bring more health, more prosperity, more peace, more understanding—mental and spiritual—to the great mass of our people. It is compelling in these uncertain times that we be strong militarily, physically, mentally, and spiritually. The urgency for a strong defense recalls the infant days of our Republic when the vigilant pioneer went to church with a Bible in one hand and a rifle in the other. Freedom and peace we want above everything else. Would that we never again have to resort to bullets and bombs to get that freedom and peace. Our choice is the use of books and bonds—bonds of friendship and books of brotherhood—to reach that goal.

It must never happen again that out of 17,000,000 young men called to serve in World War II, 5,000,000 were rejected as unfit. Another 1,500,000 were later dismissed from the service because of defects that showed up after induction.

Think of it. Six and one-half million young Americans could not answer the call to duty in the severest crisis of our country's history. The American soldier of the last war did double duty. He also had to carry the burden of the man that was unfit.

That is a challenge that we must face today on the domestic front—that mission must be completed.

It must not be said in the future, as can be said now, that 10,000,000 adults over 25 years of age never went beyond the fourth grade; that 3,000,000 have never gone to school at all, and that 6,000,000 youngsters were not in school last year. And upon such boys and girls rests some of the responsibility of preserving our heritage. That is another challenge that must be met, another mission to be achieved.

In 1,200 out of the 3,100 counties in the United States, there are no hospitals.

In 346 counties, there is no practicing physician, or fewer than 1 for every 3,000 people. That is another mission for the health and welfare of the American people that must be successful.

Let it not be said in the future, as is now reported, that 50 percent of the adults of the United States have no church affiliation.

No country can long endure that is not based on the principles of religion. This is another opportunity—an immediate must—for God-loving Americans. Like crime, communism grows on ignorance and poverty. It breeds on the godless.

Our Republic was founded on the solid foundation of religion—the eternal rock of ages. Our people have always recognized, and always must recognize that the true source of strength is faith—faith in God. Without such faith we cannot have faith in each other—and without such there can be no brotherhood.

The pages of history tell the sorrowful story of nation after nation—rising to dazzling splendor and power, falling by the wayside, crumbling into the dust of the past, never to rise again. They failed to follow God.

As the light of understanding breaks through, domestic Communists have become bewildered—and are scampering hither and thither.

Creators of confusion, they become confused. Digging a ditch for others to fall into, they themselves stumble into the ditch.

They don't speak the truth. Gradually they come to believe there is no truth. Finally they end by having no faith in their fellow man or even in themselves.

The Department of Justice has prosecuted Communist subversives on all domestic fronts. Action against them has been taken in the Federal courts and through deportation proceedings. As you know, 11 top-flight Communists have been on trial in New York City for the past 7 months.

Thirty-four alleged Communists have been convicted in the courts of Washington for contempt of Congress. Sixteen alleged Communists have been convicted in California on a charge of civil contempt for refusing to testify before a grand jury. Five more were convicted there for refusing to obey a court order to reveal the books of the organization and its officers. Four of them received jail sentences. Seven alleged Communists were convicted in Denver, Colo., on charges of contempt for refusing to testify before a grand jury in connection with the investigation of the alleged disloyalty of a Government employee. Seven Federal employees, in the East, South, and West, have been prosecuted as a result of the President's loyalty program.

You are familiar with the Hiss and Coplon cases. Many subversives, including Communists and Nazis, have been deported. They are being shipped out without return tickets. In all of our activities, we in the Department of Justice have been vigilant in the protection of civil liberties. We shall continue to protect the innocent with the same vigor that the guilty are prosecuted.

May I express my deep pride in the variety of activities of the Legion and the Legion Auxiliary that are doing so much to mold and build a greater and better America. I have no fear for our country's internal security with patriotic organizations such as yours, alert and active. The Legion and the Department of Justice have considerable in common. I am familiar with the Legion's character-building programs for youth that are making an invaluable contribution to the future of America. The boys and girls states, for example, are valuable projects to help prepare youth for citizenship responsibilities.

Periodically, and twice in our generation, notwithstanding the benefit of all of our churches and creeds, education and work, science and industry, men of barbaric vigor and ruthlessness have raised the sword and in the process of aggressive warfare or fifth column activity have conquered and enslaved millions of men, women, and children. The new Caesars, like those of ancient days, may conquer the earth and enslave humanity; and they may either be crushed by the armies of the Christian world, or be convinced by argument and inspiration that the true way of life is the way of free men whose individual liberties are preserved by the laws of God and the laws of man.

This eternal conflict, which must either be brought to an end or destroy our civilization, has been in process since the time when tribes fought tribes, neighboring cities fought neighboring cities and local rulers with landed warriors sought additional wealth and power by subjugating neighbors and plundering and enslaving nearby peoples unable to defend themselves. It has been with historic man, with medieval man, with the victorian man and with modern man, that war has been customary and peace has been exceptional. As between the forces of civilization and savagery conflict is incessant.

We have won both recent wars and after each victory the people had hoped to achieve a lasting peace. The victory having been attained, the peace which we promised ourselves has not been achieved. Instead of the people of the world being able to agree on harmonious and unanimous terms and conditions of a just and durable peace, we now find ourselves discussing the possibilities of a third and ravishing world war.

There is no difference in principle between the onslaughts of savagery and brutality by one aggressive tribe against a nonaggressive tribe in the historic days than there is between nazism, fascism, and communism in their godless drive against our modern, scientific, so-called intellectual Christian civilization. It is the old story of the forces

of totalitarianism against free men throughout the world. The forces of brutality and unmorality against morality and the better way of life. The forces which drive the dictator on the road of conquest to enslave the world are the same whether he be a Nazi dictator, an Italian duce, a Japanese war lord or the head of a Communist state.

Reduced to its simplest terms the modern struggle of civilization is between totalitarianism and democracy, servitude and freedom.

Dreamy-eyed candidates and Fascist dictators are either knowingly and wantingly or unwittingly leading a great segment of the people of the world down the road of communism, the inevitable end of which is slavery for the masses and an orgy for the hierarchy. We, the plain people, the newspapers, the churches, and lodges; the civic organizations, have failed to awaken our fellow men to the tragedy that lies ahead. It is inconceivable to understand how people follow blindly a pagan leadership which leads them down a road to the abyss of their own destruction. Need I recount at this time the awful butchery in the concentration camps of Nazi Germany. Need I recall to your memory the awful devastation of the town of Lidice—every visible form of life was burned to the ground, including men, women, and children. The trees, that only God can make, the birds and the animals in the street. Have we forgotten the thousands that were cremated, burned, both dead and alive, in the Nazi extermination camp at Auschwitz near the eastern front?

Remember Pearl Harbor—ah, yes, my friends—remember also Dachau—the Nazi concentration camp outside of Munich and the 150 other slave and liquidation camps in Nazi Germany and occupied areas where there was no indictment, no trial by jury, no judge administering equal justice under law.

Can a free nation of the world ever forget the slave labor in Nazi Germany and in the occupied countries, chained to their machines until they died from forced work, from hunger, exhaustion, and shock. There were no strikes, there were no lock-outs.

In the Communist state, as in the Nazi state, the same path is followed, the leadership talks about the great good they are doing for the masses and yet in the very sight of the person engulfed in the ideology of the Kremlin there stalks hunger, disease, and unemployment.

Gentlemen—it is later than you think. Personal freedom and individual liberty are on the guillotine block. In the totalitarian countries there is no freedom of speech, freedom of press, freedom of religion, trial by jury, or the protection of constitutional rights by a great judicial system. In a Fascist country the churches are closed, the lodges are abolished, every avenue of expression of a freeman is blocked. Divorce is a simple one-sided act. You register the liquidation of your marriage and your spouse is notified of the fact by post card. There is no money and the field belongs not to the people but to the police state. Human rights and property rights are extinct. It is the solemn obligation of every free person everywhere to work and fight for, if necessary, the preservation of a free world. Humanity cannot endure on a planet half-free and half-slave. To those of us who adhere to the Christian faith, ours is a task of great import.

The atomic bomb, the jet plane, and rocket ships, traveling faster than sound and light, have made us one world. Bacteriological warfare could destroy the world. In these great inventions we have the instruments to hasten the collective suicide of a world that has lost its balance.

The Communist coup of Czechoslovakia follows the same pattern as the Nazi infiltration of Austria, Czechoslovakia, and Poland along with all the other occupied countries. The Communist fifth column is here.

J. Edgar Hoover, brilliant Director of the Federal Bureau of Investigation, warns us in his testimony before the House of Representatives in Washington and when he appeared before the Un-American Activities Committee, he testified that: "The mad march of Red-Fascism is a cause of concern in America. The Communists have been mobilizing, promoting mass meetings, sending telegrams and letters to exert pressure on Congress—all in opposition of American aid in Europe." America must not fail. The principles of Christianity will spearhead our activity. To preserve freedom and liberty for people everywhere, our citizens will rally to the cause of freedom as they did from the churches, schools, and shops to the support of the world-famous Friendship Train of Drew Pearson. We will do it in the democratic way through our representative Government. We will do it under the Constitution and the Bill of Rights which were carried throughout the country by the Freedom Train, conceived by our dynamic Attorney General, Tom C. Clark.

America must never have a Munich. We are at the crossroads again and the course of our destiny will be dependent upon the decision to capitulate as we did with Hitler and the Rhineland, Italy and Ethiopia, Japan and Manchuria, or our decision to stand firm and resist aggression from wherever it may come.

Free enterprise as we know it here in America must accept, as it always has, the verdict of our times.

What is our immediate plan—the Marshall plan—Have you read it? The Marshall plan is a Christian plan. It has been approved generally by the Christian groups of the country. But that is not enough. The laymen of the world must work for and fight for, if necessary, world statesmanship to direct finance, industry, commerce, agriculture, and education based on free enterprise and undergirded with the principles of freedom and equality of opportunity.

In such a society world organizations must supersede local jealousies and feuds. The United Nations must live. The Atlantic Pact must not fail. The art of effective politics under these conditions is the art of planning and utilizing productive resources on a world scale since planning on a lesser scale will fail; and we must enforce law and order on a world scale—since any lesser law and order is too little and too late for the needs and preservation of modern world civilization.

We, the people, are faced with these inescapable prerequisites for the survival of our children and ourselves—there may be no others.

A voice from the tomb of the Unknown Soldier cries out—The crusade for a Christian world marches on. Do not forsake my brethren.

If we fail now, America will be an island of democracy in a sea of communism, destined for eventual servitude and liquidation.

America will not fail.

Color Television

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Tuesday, August 23 (legislative day of Thursday, June 2), 1949

Mr. JOHNSON of Colorado. Mr. President, Fred Othman saw color television and came away enthused. It is a major accomplishment when anyone sells this high-powered critic on any venture. I ask unanimous consent therefore to insert his masterful blow-by-blow description of what he saw in the Appendix of the RECORD.

Especially do I want to reecho his punch lines "All I know is that I want a color television set. You hear that FCC? And the sooner the better." Amen, Mr. Othman, Amen.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KILLJOY FCC

(By Fred Othman)

If color television is good enough for doctors to watch blood gush red, then I claim it is suitable for me to gaze into the big brown eyes of Milton Berle.

And if the Federal Communications Commission kindly will get up off its sofa and allow the color-picture boys to go into business, I'll appreciate it. Their widgit is wonderful. I want one.

There I was at the local armory, looking into a bleached oak television set carrying the first technicolored picture ever to be sent over the air.

These came by commercial channel from Baltimore; in the past tinted television always has traveled by wire. So this was a historic moment and Dr. Peter Goldmark, who invented the system, was nervous.

He fiddled the dials and rainbows flashed across the screen. Then came skyrockets. And pretty soon there was a female who looked like a sunburned Indian with green teeth. Dr. G. twisted the knobs some more, the colors fell into their proper places and there on the screen was Miss Patty Painter, a beauteous redhead with white teeth and skin which would have been a pleasure to touch.

She stood in front of a sky-blue wall 40 miles away. Her fingernails were dark red. Highlights glistened in her auburn hair. Her eyes were blue, while her blouse was of Roman stripes, red, blue, green, and gold. All this was as clear and sharp and bright as any technicolor movie I ever saw.

So Miss Painter held up a series of multicolor scarfs, Scotch plaids, pink ostrich feathers, cigarette packages, and paintings of headless females by a modernist named Matisse. In the midst of this Dr. G., like any proud proprietor of a plain old black-and-white set, cculdn't resist tinkering with the dials. He got the usual result. Chaos. But he soon put the machinery back in adjustment and there was Miss P. in full color saying good-by. The temptation was strong to reach out and shake hands with her.

A number of important personages were present. Mostly, they were amazed. As Representative HARRIS ELLSWORTH (Republican of Oregon) put it, "That is too good to be true." The weird thing was that this particular test wasn't being made in the interests of television fans generally, but so that doctors could watch other sawbones performing operations. The physicians soon will do their slicing in color under auspices of Smith, Kline & French laboratories of Philadelphia, which bought the equipment from CBS.

The Communication Commissioners issued a special license for the docs, but it turned down Dr. Goldmark's color system for public use 2½ years ago. It still hasn't changed its mind, but has scheduled further public hearings next month.

Dr. Goldmark, a youngish citizen in heavy eyeglasses and speaking with an almost imperceptible accent, said if the Commissioners decided in his favor, color television sets would go on the market almost immediately.

Several radio factories even now, he said, are tooling up, just in case. He figured that a set producing colored pictures would cost about 25 percent more than present models.

He also talked about green phosphors, electronic color, color discs, and something that sounded like sink. I have no idea what he meant.

All I know is that I want a color television set. You hear that, FCC? And the sooner the better.

Utopia on the Rocks—Private Medicine Will Never Come Back in Britain

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I include another of a series of articles appearing in the Washington Daily News by E. T. Leech, senior editor of the Scripps-Howard newspapers, who was sent to the British Isles to study conditions there:

LONDON, August 20.—Britain's famous medical plan is here to stay, regardless of who wins the 1950 election. Private practice won't come back.

It is the one Socialist creation which is popular in Conservative as well as Labor Party ranks. In fact, with the election campaign starting, Conservatives are claiming it as their own baby. They say they first took steps to set up the system.

There is much criticism of the state health system. This mainly has to do with abuses which have made it far more costly than expected; and with delays in getting hospital care, dental service, and eyeglasses. England did not have enough hospitals, doctors, nurses, or facilities suddenly to take the whole population under its medical wing.

Short-cut and mass-production methods, by overworked doctors trying to see enough patients to make a living, also bring many complaints. Doctors—who get a state fee of $3.40 a year for each patient on their list, up to a maximum total of 4,000—are unhappy. Many work at least twice as hard as ever before for about half the income. They are demanding higher fees.

DENTISTS UNDER FIRE

Dentists are under heavy fire. A nation never much given to dental care rushed in for treatments and false teeth. Fees recently were cut about a fourth, but dentists still do far better than physicians. The papers print stories about excessive dental incomes (up to $100,000 a year in one case) through mass services often performed largely by office helpers. Numerous investigations into quality of work have been made.

Opticians are swamped. It takes 3 months to a year to get spectacles—and a long time for eye operations. London's county council has been investigating charges that school children must wait more than 3 months for glasses, even in critical cases.

Breaking or losing your spectacles in England is a major tragedy. An angry member of Parliament recently told Commons about an elderly couple who had been using the same pair of spectacles for more than a year, after the husband lost his.

HOSPITALS JAMMED

Hospitals are flooded with patients. Many serious cases must wait for long periods to gain admittance. Once in the hospital, they are rushed home as soon as is physically possible. This situation is due not only to a shortage of doctors, but also of nurses, technicians, and staffs. It is hard to recruit nurses, but medical schools are filled.

Doctors are hounded by some patients whose main object is to get their money's worth. They may not be ill. Or they may want prescriptions for such minor medical supplies as aspirin or a roll of adhesive tape.

ABUSES DECLINING

If the doctor signs an order, a patient can get almost anything without charge—such as a hot-water bottle. The matters of free wigs, medicinal spirits, and special corsets for women have received a lot of attention. But even critics of the medical plan told me they had been exaggerated, and that such instances are now declining.

However, doctors do have to submit to endless appeals to fill out forms. If a doctor orders it, a family may get a larger housing unit, on grounds of medical necessity. Or an extra coal ration. Or an increase in some rationed food.

But early abuses of the health plan—now over a year old—apparently are declining. Doctors aren't so liberal about granting every request for state aid. Also Government superiors are doing a better job of backing them up. Social workers, local medical boards, and state officials have grown less apt to cater to a patient's every whim.

FIFTY CENTS A WEEK

The health plan is costing Britain more than 50 cents a week per person—which is twice what was estimated before it started. So says a 36-page booklet just issued by the Minister of Health—who is Aneurin Bevan, a former coal miner and the most violent left-winger and revolutionist in the Socialist government. He also has charge of housing.

His bitter hatred of the old system, and his passionate desire to give benefits to the poor, probably have contributed greatly to the heavy cost of the health plan. He is a free spender who doesn't consult much with others. His personality and attitude have added much to the unhappiness of the medical profession.

COST ABOUT ONE AND ONE-HALF BILLION

Total cost of the medical system this year was estimated in Mr. Bevan's report at $1,464,000,000. It probably will exceed $1,500,000,000. More than half will be for hospitals, of which about 2,600 were taken over by the state. Less than 300, mostly religious in character, are still private.

(On the same per capita cost a similar United States health plan would cost about $6,000,000,000 a year. But far higher living standards would probably make the bill twice that amount.)

Of this $1,500,000,000 for health service, only $164,000,000 comes from the public's insurance contributions. These run at a rate of $1 a week for an employed man, of which about 14 cents is for the health scheme. Women pay slightly less, and the self-employed quite a bit more.

These contributions must be paid by everybody—regardless of whether they register under the state plan. About 5 percent of the British public did not, and still pay fees to the small minority of doctors engaged in private practice.

SOME PAY TWICE

An unregistered man or woman thus pays twice for medical care—through state insurance and private doctor bills. Moreover, such a patient must pay the druggist for drugs and medical supplies. The Conservative Party platform, recently issued, promised to let these patients of private doctors have state drugs. Thus, while pledging economy, it promised to add a considerable cost to the health plan. (It also promised to raise old-age pensions—another vote-getter.)

Well over $1,000,000,000 of the cost of the health system is paid out of general taxation. It is one reason why British pay the world's highest income and sales taxes. Indirectly, it is a factor in the high costs which have cut sales of British goods in world markets.

ALL PLEDGED TO IT

But, by and large, the Labor Party, the Conservatives and the weak Liberal Party generally praise and are pledged to uphold state medicine.

Even severe critics admit it has done much good for the poor—especially women and children. Under the old system, in which employed men got medical service from panel, or company, doctors, their families were not included. The mother and child in poor homes often did not get attention until critically ill. There was a great deal of free care in voluntary hospitals, as in America. But a great many lacked it.

Faults or no faults, the British people plan to hang on to what they now have.

Aid to England

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1949

Mr. AUCHINCLOSS. Mr. Speaker, I have the honor of representing one of the most outstanding industrial companies in the country which does business all over the world. This company, Johnson & Johnson, of New Brunswick, N. J., has been in operation a long time and their policy has been to build up their business and good will by rendering honest and efficient service to the public, at the same time adopting an attitude toward their employees which recognizes the part that they play in making this success possible. As a result, Johnson & Johnson has been prosperous and its many employees have always enjoyed fair wages acceptable to them and working conditions which recognize the needs and simple courtesies due working people.

Recently the chairman of the board of directors, Gen. Robert W. Johnson, retired, returned from a visit to England where he inspected the company's installations and he addressed a letter to me which I append to these remarks. I hope the Members of the House will read this letter because it represents the views of a forward-looking American industrialist who is not an isolationist. He is a realist who is anxious to do what he can to promote the peace and stabilization of the world. His letter follows:

JOHNSON & JOHNSON,
New Brunswick, N. J., August 18, 1949.
Hon. JAMES C. AUCHINCLOSS,
House Office Building, Washington, D. C.

MY DEAR JIM: Recently I visited our several industrial installations in England. It was my purpose to examine carefully actual operations, and to meet almost exclusively workmen, group leaders, foremen, superintendents, executives, and directors. My studies led me to conclude that the present Government in England is spending more than its income and that its income cannot be increased.

It is clear that the present level of taxes has partially destroyed—and if continued will largely destroy—enterprise. The cost of most English products is prohibitive primarily because the cost of government has been added to the cost of production. Many

English operations are efficient and many are inefficient, but even those that are efficient have difficulty in meeting international competition.

The purpose of this note is to recommend that we carefully scrutinize further aid to England. I doubt that we are benefiting either England or ourselves through these subsidies.

Sincerely,

ROBERT W. JOHNSON, *Chairman.*

World Federation

EXTENSION OF REMARKS

OF

HON. E. H. HEDRICK

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. HEDRICK. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an article by Mr. Soterios Nicholson, entitled "World Federation," which appeared in the Atlantis, August 7, 1949:

WORLD FEDERATION

(By Soterios Nicholson)

WASHINGTON, D. C.—In 1916, while the First World War was going on in Europe (the United States had not decided then to join), the writer wrote a book—War or United World—in which he expounded the idea of an international government to stop war forever. He plainly stated the reasons and conditions, but he wrote that it will take years and years before such an ideal will be accomplished, mainly because it is necessary that the people of the world have to be educated to think internationally, instead of only nationally.

Briefly, the idea in the book was that an international government was imperative on the same theory as Switzerland and the United States are running their united government over their several States. The international government should first codify international law—write down what the international law is—secondly, establish an international tribunal to decide what the law is, and thirdly, organize an executive department to set up an international army and navy to enforce the judgments of the court. Very simple, is it not?

But the people are thinking yet nationally, and not internationally, hence neither the League of Nations nor the United Nations will accomplish the desired results. In both instances, however, the people have started to walk in that direction. The first step was the League of Nations, the second is the United Nations. We hope the third step will be the establishment of world federation.

From the arguments of the officials of every nation, including our own—the United States of America—one will watch the trend of thought leading to the international government. In the process of establishing the League of Nations, after World War I, very few were then advocating and supporting the idea. If it was understood then, as it was understood after the end of stopping fire of World War II, when the San Francisco Conference was held, and still better as it is known and advocated now, if better provisions were inserted in the United Nations Covenant, then perhaps the world would be still higher for an international government or a world federation of government, as it is now expounded by several officials, than we have anticipated. The progress is slow, but it is sure.

The main obstacle for such complete understanding is the Soviet Union. The western nations understand it, and they are trying to develop it. But the ideal of communism desires either full control of the world, or to go on their own way in achieving their end. Thus we have arrived at two definite forms of government: the democratic and the communistic. We will discuss that question another time.

Let us make a few remarks in general—namely, how will the international government work? No nation should maintain an army or navy. All military establishments would be vested in the international government and will be on the orders of the general staff of that government. No nation would possess any arms or ammunition. Each nation would have a guard for domestic tranquillity. All questions for enforcing the international law will be vested in the executive department of the international government. All violations of the international code will be decided by the international tribunal in accordance with the international codified law, and enforce it by the executive department through the established machinery or Army and Navy. The details should be agreed upon by the proper representatives accredited for the international assembly to be appointed for such a purpose by all nations.

Just as New Jersey is not afraid of New York or Pennsylvania, so it should be for the neighboring nations to exchange, sell, or trade their goods with any nation they wish, freely. Hundreds of arguments could be made against such a form of international government, or as many be advanced in favor. The details could be worked out by the representatives and ratified by each nation adhering to those principles. One cannot cover all the ideas in an article for consumption by the readers of a daily newspaper, but the broad principles are stated as food for thought.

After the San Francisco Conference and Washington conferences, there sprang a wide public opinion for a world federation. Former Justice of the Supreme Court Roberts formed a society for that purpose, having its headquarters in Philadelphia. The American Academy of Political and Social Science held a world government conference in Philadelphia, Pa., April 8 and 9, 1949. The results and arguments advanced for that thought have been published in the July issue of the Annals, official publication of the society, in which the writer is also a member. More recently 92 Congressmen in the House of Representatives have declared themselves with the federation or international government idea. This is an encouragement, as the remedy of stopping war is in the hands of all nations. Hence, it is their responsibility to end war once and for all through a good organization. Amendments could be made through the United Nations Covenant. Nothing is impossible, if the people understand the problem and in what way it can be properly solved. The day will come, but why not now? The sooner the better.

Socialism Under Labor in Britain on the Rocks

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by E. T. Leech, which appeared in the Washington Daily News on Monday, August 22, 1949:

LONDON, August 22.—The foundation or bedrock of socialism is that government knows best. As the British Labor Party platform puts it: "Government must accept responsibility for economic planning for the nation as a whole."

The basic difference between the British plan and the ones developed under Stalin, Hitler, and Mussolini has been in the use of force.

During 4 years in power, the British Socialists have used compulsion sparingly. The individual has remained free. They have put or kept strong laws on the books to control him in picking or changing jobs, and in other personal acts.

There are labor controls far stiffer than anything ever included in or proposed for the Taft-Hartley or other American laws. The Socialist Government formally invoked them twice in dock strikes, but it then shied away from using them. Beyond employing the power to freeze coal miners in their jobs, the Government has scarcely touched its authority to control employment.

It has used plenty of compulsion against business. But that has been economic force—denial of licenses, refusal of raw materials and similar business restraints.

It has taken property from unwilling owners to nationalize business. It paid them with a form of bonds (something like preferred stock) which pay 3 percent and have no maturity or calling dates. Prices were based on those in the security markets. Though there have been disputes over prices, there has been no outright property seizure without payment.

By and large, the British Government in putting over its program has followed democratic methods. It tolerates free speech and political opposition—sometimes with a show of reluctance. But it has been chary about force against individuals. Personal liberty lives in England.

HOW LONG?

How long will this continue? Will a government already deeply in trouble with its plans continually going awry, resist the temptation to put over by compulsion what it cannot do by persuasion? Will it yield to the old snare that the end justifies the means, and that those who resist what is planned to help them must be forced along for their own good?

APPROACHING CROSSROADS

Britain is approaching that crossroads. The answer may be provided in the general election to be held probably next spring or summer.

When Winston Churchill opened the campaign against the Socialists, he called it a choice between two ways of life: between individual liberty and state domination.

"Nationalism," he said, "spells the doom of trade-unionism." He said wage earners would fall under "an all-powerful state machine which, once it is thoroughly established, can beat the worker down to the level of a Soviet Communist serf."

FREEDOM AN ISSUE

The Conservative platform, following that lead, holds that the Labor Party is seeking a completely Socialist society "in which all forms of power are to be centralized in the government, and the interference of government will pervade and dominate the private life of the citizen."

Labor Party leaders, of course, stoutly deny all that.

But the coming campaign obviously will be fought to a large degree on the issue that personal freedom is threatened—that "the

creation of a socialist state prepared the way for communism," as the Conservative platform phrases it.

SAFETY CATCH STILL ON

I saw what happened during the recent dock strike which lasted 24 days. For the second time in a year, the Government invoked the sweeping rules of the Emergency Powers Act, which virtually establishes martial law. It had previously not been used since the famous general strike of 1926.

After an emergency proclamation by the King—a mere form to carry out the Cabinet's decision—the Government could arrest without warrant, prosecute anybody for causing a worker to withhold services, billet troops, and carry out sweeping controls against loitering, trespass, interference, etc.

It is labor law beyond anything known in the United States.

The proclamation clearly was intended to scare the strikers back to work, as it did a year ago. In that it failed. Then the Government timidly declined to use the powers it had invoked. Instead, it sent 15,000 drafted troops to the docks—many of them from trades-union families—and used them to load and unload ships until the strikers caved in.

SHOW-DOWN WITH UNIONS?

Other unions are almost as rebellious as the dockers. After months of sporadic slowdowns, a general railroad strike is in the offing. It may force a grave show-down. Unions are determined to end the wage-freeze policy.

The Government, under the so-called Supplies and Services Act, has revived in peacetime drastic war controls. It has scarcely touched them yet. But it holds vast power over persons and property—controls which expired after the war and which the Socialists revived in 1947. At a recent labor congress the determination to make them permanent was announced.

This is a gun not yet fired. The powers include such things as compulsory direction of labor into jobs and places of work, detailed business controls, authority to requisition property, and other broad rights.

The 1947 Agriculture Act gives the state power to compel good farming "if necessary by dispossessing inefficient farmers and landlords."

PRESSING IN ON LIBERTY

The Government today virtually stops emigration by restraints on a citizen's right to leave with his property. It tightly restricts the amount of money an Englishman can carry over the border for travel. It is pressing in from other directions on personal freedom.

Thus the Government has secured, but uses only to a limited degree, vast powers over people and property. Will this policy change? It is cited that Prime Minister Clement Attlee told Parliament in 1946: "In matters of economic planning we agree with Soviet Russia."

CRACK DOWN IN PARTY

The Labor Party already is cracking down hard on dissenters in its own ranks. Just the other day it expelled a Socialist member of Parliament from the party—the fifth so bounced since 1945. Four were extreme left-wingers who disagreed on foreign affairs; one opposed the bill to nationalize iron and steel.

This discipline is now necessarily confined to party matters. But it gives warning of possibilities—particularly should the Labor Party's extreme left wing, led by the revolutionary Aneurin Bevan, get control. Many Britons are fearful of that happening.

The big obstacle now is that the Socialists have to win an election not far off. But if they were back for 5 years, and if things continued to go as badly with their plans as they have lately, a lot might happen to British democracy.

Secret Report on Chinese Communist Movement

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a secret report on the Chinese Communist movement which was made by our Army Military Intelligence Service in 1944–45 after a careful and comprehensive study. It cannot be that this report was not available to our State Department, especially when General Marshall was its Secretary. But how could anyone have read its conclusions and then followed policies in China based on suppositions wholly contradictory to those conclusions? And on what possible excuse can the document have been omitted from the white paper which is supposed to give our people a full and balanced picture of the situation in China and why we did as we did.

Mr. Speaker, the situation in China is now fast approaching an ultimate crisis, which has long been foreseen by many officials of our Government, both military and civilian, but which we could not get Secretary Acheson and our State Department to recognize.

This crisis was preventable. It is inexcusable that it was allowed to develop. Had the State Department given the attached report of the military the study to which it was entitled, and the consideration which it merited, today's catastrophe might not be upon us.

I have had this report for almost 4 years, but previously have not felt free to release it. Now, however, the State Department has itself come out with many other secret documents to bolster its own feeble case. Consequently, I feel under obligation to a decent respect for the truth to release the report, because the document so clearly shows the failure of those who have formulated American foreign policy, to look realistically at the facts.

In view of this report, and in view of State Department policy notwithstanding this report, I can only say that Secretary Acheson seems determined to make impossible a continuance of the fine bipartisan foreign policy which has been responsible for such foreign-policy victories as we have won.

We had hoped, many of us, that we could get a consistent, defensible foreign policy related to the entire world—a policy which could win wholehearted support from those men of clear vision in all parties, who see the dangers of communism globally, and not through a telescope trained on Europe alone. We have cooperated wholeheartedly in European policies, and hoped that we could get the State Department to pursue similar policies in Asia. During consideration of the military-aid bill, an amendment was introduced and supported by prominent Democrats as well as Republicans, to give authority and funds to the administration to support free peoples in China and southeast Asia, in their fight against Communist subjugation. Here was the opportunity for development of a global foreign policy for containing communism.

Notwithstanding the sincerity of men who supported the bipartisan policy toward Europe, Secretary Acheson, in a letter to a Member of Congress, specifically opposed development of a consistent policy in the vast continent of Asia, where Communist aggression is not just a threat, as in western Europe, but a cruel actuality.

The decision of Secretary Acheson was to oppose communism in Europe, but still appease it in Asia. He wants us to pursue the Truman doctrine in Europe, yet follow the Henry Wallace policy in China. This Acheson-Wallace policy in China has been followed in the face of frequent warnings against the consequences now so clearly developing, and despite our military department's solemn warning contained in the attached report entitled, "The Chinese Communist Movement."

No fair-minded person could have read the five major conclusions of this exhaustive military study which events have proved so remarkably accurate, and then approved the policies which our State Department has followed in China during the last fateful 4 years. Certainly, no fair-minded person could have read them and then tried to justify these policies, as Secretary Acheson has sought to do in his letter transmitting the white paper.

The text of the report's summary follows:

THE CHINESE COMMUNIST MOVEMENT

1. THE PROBLEM

The problem of the Chinese Communists is not merely one of how the Communists should be dealt with; even more difficult has been the problem of determining the facts. Authorities on both sides have disputed the most elementary statements of fact.

It was considered by the Military Intelligence Service that this state of affairs constituted an impediment to the effective prosecution of military operations in China and in the Pacific. A major project was therefore initiated at the end of 1944, under which the most competent analysts, both civilian and military, were assigned to the examination of all material available, and to the compilation of a report on the Chinese Communist movement. The preparation of the report involved the examination of over 2,500 reports, pamphlets, and books.

2. FUNDAMENTAL CONCLUSIONS

Careful study of these materials has led to a number of basic conclusions. Appropriate qualifications and detailed authentication for these conclusions is contained in the full report. The most important conclusions may be summarized as follows: (1) The democracy of the Chinese Communists is Soviet democracy. (2) The Chinese Communist movement is part of the international Communist movement, sponsored and guided by Moscow. (3) There is reason to believe that Soviet Russia plans to create Russian-dominated areas in Manchuria, Korea, and probably north China. (4) A strong and stable China cannot exist without the natural resources of Manchuria and north China. (5) In order to prevent the separation of Manchuria and north China from China, it is essential that, if Soviet Russia participates in the war, China not be divided (like Europe) into American-British and Russian zones of military operations.

3. PRÉCIS OF CONCLUSIONS

(a) High morale: The Chinese Communists are the best led and most vigorous of present-day organizations in China. Their morale is high. Their policies are sharply defined and carried out with a devotion which is fanatical.

(b) Policy of establishing communism through "democracy": The Chinese Communists emphasize two stages in their revolutionary program: First, the change of the Chinese semifeudal society into a bourgeois (or capitalist) democracy; second, the establishment of communism. The first is their present goal according to their own claims. They insist, however, that the bourgeois democracy must have the support and leadership of the proletariat under Communist guidance. This objective they have achieved in their areas of control; theirs is a one-party controlled democracy.

(c) Soviet democracy: While the Chinese Communists, call their present political system democracy, the democracy which they sponsor is in fact Soviet democracy on the pattern of the U. S. S. R. rather than democracy in the Anglo-American sense. It is a democracy more rigidly controlled by the Chinese Communist Party than is the so-called one-party dictatorship of the Chungking government controlled by the Kuomintang (People's National Party). This is indicated by the fact that Chiang Kai-shek rules by maintaining a measure of balance between the various factions within the Kuomintang and by making concessions to the non-Communist opposition groups outside the Kuomintang in Chungking-controlled China. Whenever he fails, as he has in the past 4 years, to maintain such a balance, he weakens his rule. On the other hand, while minority parties which wholeheartedly accept Communist leadership are tolerated in Communist-controlled China, real opposition parties and groups are summarily suppressed as traitors. If the Communists' charge of Kuomintang intolerance is true, it is also true that the Communists will be still more intolerant if they ever obtain supreme power in China.

Nevertheless, since the Chinese Communists provide individuals, especially the laborers and peasants, with greater economic opportunities than the Kuomintang Nationalists provide, the Communists enjoy wider popular support in the area held by their own armies than do the Nationalists in their areas of control. This is the Communists' greatest source of strength in China.

(d) Part of international Communist movement: The Chinese Communist movement is part of the international Communist movement. Its military strategy, diplomatic orientation, and propaganda policies follow those of the Soviet Union. They are adapted to fit the Chinese environment, but all high policy is derived from international Communist policy which in turn depends on Soviet Russia. Throughout their history the Chinese Communists have loyally supported and followed the policies of Soviet Russia and have accepted the whole content of Marxism-Leninism-Stalinism.

(e) Desire for United States support against Japan and the Kuomintang: This does not prevent the Chinese Communists from maintaining a friendly attitude toward the United States. Their attitude toward us and all capitalist democracies is conditioned, however, by the extent to which they can obtain benefits from us in the furtherance of their own revolutionary aims: the subjugation of China under Communist rule and the development of a Communist-controlled "capitalist democracy" in China as a preliminary to the introduction of communism. They would use American support to further their struggle against both Japan and the Chungking Government.

(f) De facto independence: The Chinese Communist movement today is not represented merely by a political party; it is represented by what is a state in all but name, possessing territory (the combined area of which is about the size of France or one-fifth of China proper) a population of probably more than 70,000,000 people, armies, law, and money of its own. The Chinese Communist state is economically primitive, but (at a primitive level) fairly self-sufficient.

(g) Rivalry with the Kuomintang—(1) Failure of the "Entente Cordiale." During the period of the Soviet Russian-Kuomintang Entente Cordiale, 1923–27, the Kuomintang and the Chinese Communists cooperated. The Chinese Communists promised to support the revolutionary, nationalist, democratic program of the Kuomintang. They broke this promise. It soon became evident to the Kuomintang leaders that the Chinese Communists, urged on by Soviet Russia, were aspiring to turn the revolution into a class war in order to gain supreme control over China. In 1927 the Kuomintang therefore turned against the Chinese Communists and Soviet Russia.

(2) Development of the "united front" movement: The ensuing civil war, 1927–37, between the armies of the two Chinese parties was accompanied by the bloody excesses characteristic of all class wars. By 1936 the Kuomintang had almost defeated the Chinese Red Army. The latter was saved by the Kuomintang's acceptance of the idea of a united front with the Communists in defense of China against Japan. The united front idea had been developed in Moscow. It applied to Communists in all countries and involved cooperation between Communists and non-Communist groups and parties in the capitalist democracies, as a means of safeguarding the Soviet Union against the threat of fascist aggression and of expanding the influence of the Communists in capitalist democracies.

Under the terms of the united front understanding in China, the Chinese Communists pledged themselves, as of 1937, to cease subversive activities against the government, to abolish their separate government and administration, and to integrate the Chinese Red Army with the government's central army.

(3) The "war within the war": The Chinese Communists did not fulfill this promise. Soon after the outbreak of the Sino-Japanese War, the government assigned to the Communists certain defense zones. While the Kuomintang armies in obedience to the Chinese high command, kept within their assigned defense zones, the Communist armies insisted on being granted entry into any Kuomintang zone that they desired to enter. Whenever the Kuomintang troops refused to admit the Communist troops into their defense sectors and to share with them their exceedingly limited resources they were called "traitors" by the Communists. When the National Government refused to grant the Communists permission to establish in Kuomintang areas their own separate civil administrations, called "united front governments," which flouted the National authority of Chungking and accepted orders only from the Communist capital, Yenan, the Communists accused the Kuomintang of being "antidemocratic" and the Kuomintang troops of being "experts in dissension." Such tactics inevitably led to clashes with Kuomintang troops. The latter fought in self-defense against both the Communists and the Japanese for the protection of their bases.

Internecine strife led to a general deterioration of the Chinese war situation. After the United States entered the war against Japan both the Communists and the Kuomintang became more interested in their own status vis-a-vis each other than in fighting Japan. The interparty struggle became of paramount importance. For the Chinese believed that America guaranteed victory against Japan, and the fruits of this victory would obviously go to the party that won out in the Kuomintang-Communist struggle for power.

(h) Role in World War II: In spite of this internecine strife, or quasi war, the Chinese Communists have contributed to the United Nations war against Japan. By organizing extensive guerrilla territories within areas enclosed by the Japanese Army they have prevented the full Japanese exploitation of North China's resources in foodstuffs, raw materials, and manpower. They have also rescued many American pilots who have been forced down in Communist-controlled areas.

Contrary to the widely advertised reports of their sympathizers, the Chinese Communists have, however, fought the Japanese far less than have the National Government troops. The generalissimo, Chiang Kai-shek, and his followers have yield ground politically and militarily to the Communists in order to avoid an open break; as a Nationalist, Chiang Kai-shek has been primarily interested in the war against Japan.

(i) Military capacity small: The Chinese Communists now claim to have an army of 910,000 troops in addition to local militia forces numbering about 2,000,000 men. However, in October 1944 the strength of the Chinese Communist regular forces was reliably reported as 475,000. The degree to which the increase since October of last year represents an actual increase in fighting capacity depends upon the number of rifles available. Rifles were available for only about 250,000 in October 1944.

(j) The alternative settlements of the Kuomintang Communist problem—

(1) General: As far as can be seen at present there are three alternatives for a settlement of the internal situation in China; (1) civil war between the Kuomintang and the Chinese Communists; a settlement which would be disastrous for the Chinese people, even though it might ultimately decide the question of which party shall rule; (2) institution of a national assembly to inaugurate a democratic, constitutional form of government in which all parties find representation; (3) division of China into two (or more) separate parts, these parts to be united in a loose federation represented by a coalition government of all parties. The decisions of this coalition government would be executed independently by the Chinese Communists and the Kuomintang. The two parties would continue to maintain their separate armies and administrations.

Many observers believe that neither of the latter two alternatives is feasible. Both the Kuomintang and the Chinese Communists aspire to supreme control over China. This being the case some observers believe that civil war is unavoidable.

(2) Generalissimo sponsors the National Assembly: Chiang Kai-shek has proposed the National Assembly, which is to convene on November 12, 1945, as the only possible means for a peaceful solution of the Kuomintang-Communist problem and for the reestablishment of unity in China. He insists, however, that no unity can be achieved so long as there are several independent partisan armies in China. He, therefore, demands that the Communists fulfill their pledge of 1937 to subordinate their army to the National Government. He makes compliance with this demand a prerequisite for any political settlement with the Communists.

(3) Chinese Communists sponsor idea of coalition government: The Communists refuse to comply with this demand. They have boycotted the National Assembly and insist that the coalition government is the only solution of the interparty problem in China. The plan for a coalition government might be workable if the Communists would accept a clear demarcation of Kuomintang and Communist areas. But throughout the war the

Kuomintang has vainly tried to obtain an agreement with the Communists for a demarcation of defense areas, and there is no indication that the Communists would accept any demarcation of Kuomintang and Communist areas if a coalition government were to be established.

In view of this, the coalition government, were it to be established without the Communists being committed to a specific demarcation of their areas, would only serve the interests of the Communists who in their present areas would obtain legal status by consent of the Kuomintang and other parties, while leaving the Kuomintang part of the country open to further Communist infiltration through legal or illegal means. Chiang Kai-shek has refused to accept the idea of a coalition government.

(4) Unity or permanent division of China, the issues at stake: Here the matter rests (July 3, 1945). For the time being it is a question of the National Assembly versus the coalition government. The former provides a chance for unifying China by the agreement of the Chinese armed parties to submit to arbitration and law instead of force. The latter would continue into the postwar period the system of territorial division of China between the Kuomintang and the Chinese Communists and the maintenance of separate party armies. Real unity cannot be achieved on this basis. Each party insists on its own plan.

(k) International implications—(1) Common policy of United States and U. S. S. R.: It is generally believed that a peaceful interparty settlement in China depends largely upon the extent to which the United States and Soviet Russia can follow a common policy toward China. Were the Soviet Union to decide to give active support to the Chinese Communists, in terms of supplies or military aid, while the United States supports the Chungking government, the Russians and Americans would be meeting head on.

(2) Uncertainty concerning Soviet aims in China: Present relations between Chungking and Moscow are cool. The Soviet press is strongly denouncing the reactionaries in the Kuomintang and is openly sponsoring the plan of the Chinese Communists for a coalition government. There are indications that Soviet Russia envisages the establishment of Soviet domination (along somewhat the same lines as in outer Mongolia and in eastern Europe, in the areas of north China adjacent to Soviet Russia; that is in Sinkiang, inner Mongolia, Manchuria, and possibly also the northern provinces of China proper. A typical statement in this regard is one by a Soviet Russian diplomat in China who emphasized that Soviet Russia is determined that all her border states should be free from unhealthy combination or linkage with other great powers.

The Chinese Communists' plan for a coalition government would conceivably further this aim in that north China and Manchuria might legally become the exclusive spheres of influence of the Chinese Communists and hence come under a regime that would be wholly obedient to Soviet Russia. At the same time the coalition government, which would represent all groups in China, would lend China an outward appearance of unity.

On the other hand, it is conceivable that the Soviet Union will try to improve relations with Chungking on the basis of the reestablishment of a "united front" between the Kuomintang and the Chinese Communists. For it has been Soviet Russia's experience in China that cooperation or a united front between the Kuomintang and the Chinese Communists has always favored the Communists against the Nationalists, no matter what political shading the latter represent, whether reactionary or liberal. By contrast, the Communist cause in China has suffered whenever the Kuomintang has fought the Communists in an all-out civil war. It is possible that this is the explanation for Soviet Russia's apparent willingness to welcome the visit of Dr. T. V. Soong, President of the Executive Yuan and Minister of Foreign Affairs of the Chinese Government. He arrived in Moscow, and Chungking would have the advantage, for Soviet Russia, of reducing the danger of immediate disagreement between U. S. S. R. and the United States.

(3) The United States and the situation in China—(a) The postwar peace in the Far East depends on reestablishment of Chinese independence and unity: The type of peace we shall gain by our victory over Japan depends on our success in aiding the Chinese to regain complete independence and to establish unity. For China is the center of the Far East; political, economic, and military relationships in the Far East have always revolved around China. Russia became one of the leading Far Eastern powers by acquiring vast regions from China. Russia's growth as a Far Eastern power has depended greatly upon its success in extending its influence in China. Similarly, Japan grew to a world power by virtue of her territorial acquisitions in Korea and Manchuria. She grew into a world menace after her vast conquests in China proper in the 1930's.

The independence and territorial and administrative integrity of China, including Manchuria, have been key points of United States policy and interests in the Far East. During the past 85 years Russia, and during the past 50 years Russia and Japan, the two leading military land powers in Asia, have been the chief threats to China's independence. Because of this, a considerable part of the international struggle over China has been centered on creating a balance between these two powers. The sea powers, Great Britain and the United States, have maintained the balance between the two land powers. America's concern in this contest between Russia and Japan for control in China has been demonstrated several times. The rivalry between Russia and Japan has centered on Manchuria and Korea.

(b) With the defeat of Japan, Soviet Russia will emerge as the sole military land power in Asia: Necessary as is the defeat of Japan to the reestablishment of peace in the Pacific, the fact remains that her defeat will upset the whole structure of the international balance of power in the Far East which was developed in the decades before 1931. Deprived of her empire in China, and with her cities and industries smashed to pieces, Japan will be back where she started at the dawn of her modern era; a group of relatively worthless islands, populated by fishermen, primitive farmers, and innocuous warriors. The clock will be turned back some 80 years, to the time when the rivalry between Russia and the western democracies in China began. With the total defeat of Japan, Russia will emerge again as the sole military land power of any account in Asia. But she will be vastly stronger than at any time in the past.

(c) Prevention of a repetition of the Polish situation in Manchuria and Korea is essential to postwar stability in the Far East: The problem of postwar peace in the Far East revolves, insofar as the United States is concerned, around two major questions: (1) How can the military-political vacuum in the Far East be filled following the defeat of Japan? (2) How can the United States promote internal unity in China?

The answer to both questions is vitally affected by the action of Soviet Russia, and by the arrangements in regard to the Far East that we can make with Soviet Russia. If it be assumed that Soviet Russia will join in the war against Japan, the solution of these questions will be greatly affected by the extent to which we can prevent the division of China along the same lines as Europe into an American-British and a Soviet zone of military operations. For the elements of uncertainty as to Soviet Russia's intentions in China and in regard to the Chinese Communists are very similar to those in regard to eastern Europe during 1945 and 1944. Many of the fears and speculations current at that time, to the effect that Soviet Russia intended to develop eastern Europe as an exclusive Soviet sphere of influence, have proved to be right. There is justification for similar fears in regard to north China, Manchuria, and Korea. Just as Soviet Russia's plans in eastern Europe have been favored by the absence of American and British forces in these areas, so also would Soviet Russia, if she does plan to create a Soviet sphere of influence in north China, Manchuria, and Korea, find herself in a most favorable position if these areas were assigned to her exclusively or even predominately as a zone of military operations against Japan.

On the other hand, if American forces cooperate on equal terms with Soviet Russian, Chinese, and British forces in the reconquest and occupation of north China, Manchuria, and Korea, a peace settlement in complete accord with the terms of the Cairo declaration of December 1, 1943, can much more readily be achieved. For it is clear that if the war were to end with us in control of Japan, and with Chungking-Chinese, American, and British forces in control of central and south China, while Soviet Russian and Chinese Communist forces held the controling power in Manchuria and Korea, a peace settlement in regard to these areas might entail a considerable compromise of the terms of the Cairo declaration. In that case, the plan of the Chinese Communists for a coalition government might well be the only feasible way of settling the situation in China; north China and probably also Manchuria and Korea would come under the control of native Communists dependent upon Soviet Russian support, and in these areas there would be established a now typical united front or democratic coalition administrations in which the Communists hold the dominant power. Deprived of the vast raw material resources of north China and Manchuria the present National Government of China would find itself unable to compete with the Communists in the north and to establish a strong and stable state. For this reason it is necessary, for the maintenance of peace in the Far East and for the long-range interests of the United States, that the Cairo declaration be implemented without modification.

Threat to Gas Rates

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Milwaukee Journal of August 22, 1949, entitled "Threat to Gas Rates."

THREAT TO GAS RATES

Is Congress getting ready to knock the props from under the Federal Power Commission's authority to regulate natural-gas rates?

The House has already approved an amendment to the Natural Gas Act preventing the FPC from fixing rates for natural gas sold in the fields by the so-called independent producers to interstate pipe-line companies. An identical bill has been given the okay of the Senate Commerce Committee.

If the Senate approves the bill, the Nation's natural-gas consumers—soon to be joined by thousands of Milwaukeeans—may find natural gas controlled, at least on part of its course to the user, by little more than the old principle of what the traffic will bear.

This unhappy prospect has come about through a combination of the endless fight of utilities against regulation, some recent court decisions and devious and fantastic logic by some Members of Congress.

The Natural Gas Act exempts production and gathering of gas from FPC control. The people who control natural gas supplies have contended that the exemption applies to the sale of gas at the field. The FPC has contended that it applies only to production and gathering and that the gas comes under FPC jurisdiction the moment the matter of sale to a pipe-line company enters the picture.

Matters drifted along for 11 years because the FPC did not feel the need to control or fix prices for field sales. Natural-gas production was a young industry, just starting to flex its muscles. But in the last 2 or 3 years the industry has grown tremendously and those who control the natural gas reserves see an expanding and brilliant future. Prices showed a tendency to rise. In fact, they did double at some fields. The FPC began feeling it would have to step in. The FPC position was strengthened by a Supreme Court decision in 1947 which, as a by-product of the main question in issue, upheld the FPC right to fix rates. The only recourse of those who controlled gas reserves was to change the law. The House has voted to do so.

Proponents of the bill argue that the fact the FPC did not use its power to control field prices for 11 years indicates that the power to do so was not needed. By the same reasoning a community which has had no murders for 11 years could wipe out its laws against homicide.

The proponents further argue that the FPC would still control pipe-line rates even when field sale rates were exempt. That is like making a man responsible for a horse that has already started running away. Any price set by the FPC or a State public service commission would have to cover the price paid at the field.

Finally, they argue that field sales are a matter of State jurisdiction. That would give Texas or Kansas or Arkansas control over rates to consumers in Wisconsin and other States.

Regulation of natural-gas prices, if it is to mean anything, must be a continuous chain—from the field to the pipe line to the distributor to the consumer. If field regulation is forbidden, regulation will be hampered all along the line.

Representative BIEMILLER has called attention to this threat to consumer protection. His warning ought to result in a determined move to beat the bill in the Senate.

Federal Power Policy for the Pacific Northwest

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 23 (legislative day of Thursday, June 2), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article entitled "Case for a Federal Power Policy for the Pacific Northwest, Stated by H. G. West," written by H. G. West, vice president of the Inland Empire Waterways Association.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CASE FOR A FEDERAL POWER POLICY FOR PACIFIC NORTHWEST STATED BY H. G. WEST

(By H. G. West, vice president, Inland Empire Waterways Association.

Public power is in the Pacific Northwest. This point is firmly established from the fact that out of 3,500,000 kilowatts of power now being produced, 2,000,000 is private power or produced by the private utility companies and approximately 1,500,000 (1,000,000 from Grand Coulee and 500,000 from Bonneville) is the Federal pool. McNary will add approximately 980,000 kilowatts of power and Chief Joseph will add in excess of 1,000,000 kilowatts of power. Thus, in a very few years, Federal power production will far exceed the private power production.

It is estimated by competent engineers that there is approximately 33,000,000 to 40,000,000 kilowatts of hydroelectric power potential in the Columbia-Snake River Basin. It must, therefore, be clearly accepted by all that if Pacific Northwest citizens are to request the Federal Government to build these multiple-purpose dams, develop the power, extend irrigation, reclamation, and navigation, and to develop a flood-control system, the Federal Government must have and is entitled to determine the power policy. This would include how this power shall be developed, how it shall be distributed, and how it should be sold.

RATE IS EQUITABLE

The principle of the postage-stamp rate established under the Bonneville Act has proved very equitable to the entire region. In the early days, there was considerable demand for the bus-bar rate which would have benefited large metropolitan areas and especially would have benefited Portland over and above any other community. This would have produced cheaper power for that immediate area and would have created an industrial development in and around the close proximity of the Bonneville Dam. However, the Pacific Northwest today enjoys a very low power rate. In fact, the average cost per kilowatt-hour in all classes of service in 1947 in Oregon, Idaho, and Washington was 49.2 percent lower than the national average. In 1947, Pacific Northwest farms electrified reached 94.5 percent. Also, the average consumption per domestic user in the Pacific Northwest in 1947 was 144.6 percent over the national average. Another very great advantage of the postage-stamp rate is the fact that it eliminates any possibility of political selection of sites and there is no advantage accorded to any particular region or to any area when all power goes into a common pool and is distributed in Portland, Seattle, Spokane, Lewiston, or any other place within the Columbia River Basin at the same cost to the consumer.

PREMISE HELD FALSE

The Bonneville Act came in at a time when we were told that it would take approximately 50 years to consume the 500,000 kilowatts from Bonneville and approximately 75 years to consume the 1,000,000 kilowatts from Grand Coulee. The Bonneville Act provided then, and does today, that 50 percent of the power should be reserved for public power agencies such as the P. U. D.'s, municipal power, farm cooperatives, and the REA's. Politically, maybe that is still important; economically, it is a false premise. The development of the Pacific Northwest should not be on a partisan political basis.

When the Bonneville Act first came in we were faced with a so-called surplus of power and a political situation. Today, we have a shortage of power in the Pacific Northwest, although there is a surplus of power, I am told, on the national level. What the situation will be when we get into a 30,000,000- or 35,000,000-kilowatt production, none of us can see or foretell; but, presumably, we will be in a position of surplus power. Therefore, a well-defined Federal power policy, having for its purpose the distribution of the federally developed power at the lowest possible cost to all, is essential. The power policy should have for its purpose definite elimination of the wasteful fight which has been carried on for years—on one hand, the Bonneville Administration using all of its power and its resources for the elimination of private utilities; on the other hand, the private utilities hampering the development of our public power resources in the Northwest.

I do not believe that it is necessary to politically dominate an area to develop the resources of the region. A set of rules should be set up whereby private utilities and public power agencies can live and work together to the best interest of the general public. This is not a new idea. I recite in brief the life of the North Pacific Grain Growers, Inc., a farm cooperative marketing organization. Many years ago the farmers of the Pacific Northwest felt that they were being unnecessarily taken advantage of by the so-called old-line grain dealers. Therefore, they received Government assistance in setting up the North Pacific Grain Growers. It was not necessary to drive the independent old-line grain dealers out of the grain business. Both of these agencies, so-called public and private, are in business and doing more business today than they were in the early days. The beneficiary of this program is the farmer. This should be our objective in the Federal power policy field.

RESEARCH ADVOCATED

Any student of the problem knows well that it is comparatively easy to sell a pool of 3,500,000 kilowatts of power or to sell a pool of 10,000,000 kilowatts of power. This is entirely different from attempting to sell a pool of 20,000,000 kilowatts of power, 30,000,000 kilowatts of power, or a maximum of 40,000,000 kilowatts of power. Therefore, incorporated in the Federal power policy should be a principle permitting the Federal power agency to go into research for uses of power as applied to the resources of the Pacific Northwest—not for the purpose of putting the Federal Government into private industry, but rather for the purpose of the Federal Government developing the know-how, locating the natural resources, and then making available to private industry the formula or other technique that might be necessary. The people of the Pacific Northwest can well pay a fraction of the bill per kilowatt-hour for this service for it is of value and benefit to them.

Under a well-defined Federal power policy, it will be comparatively simple to work out a financing program so that when the Congress of the United States authorizes and appropriates for a project it can appropriate the entire amount at one time. This would make available to the construction agency the entire appropriation in order that they might effect all economy possible in construction procedures and would eliminate the necessity of subjecting each project (after it is authorized and appropriated for) to the annual squabble and fight over regional appropriations.

I would like to see the name of the Bonneville Power Administration completely eliminated and changed to a Pacific Northwest Federal power sales agency or some other name suitable. This is because I think the name, Bonneville Power Administration is too closely linked with the fight that has been going on since 1934; and upon the determination of the Federal power policy a close, cooperative system of coordination can be effected involving the Federal power sales

agency with the construction agencies of the Corps of Engineers and the Bureau of Reclamation.

TWO PRIME POINTS

In my judgment there are two firsts—

No. 1 first: The adoption by Congress of S. 2180. This bill was submitted by Senator WARREN G. MAGNUSON, of Washington, and is a bill "authorizing certain works for the improvement of navigation, control of floods, and the conservation and utilization of the water of the Columbia River and its tributaries and for other purposes." In very brief, this bill authorizes the projects contained in the 308 review report. This report had complete 100-percent approval of the people of the Pacific Northwest, as testified to in the recent hearings held by the board of Army engineers in Spokane, Seattle, Portland, and Boise in the early part of 1949. It would make into law the agreement reached on April 11, 1949, by the Army engineers and the Bureau of Reclamation and would authorize an appropriation of $500,000,000 for the Department of the Interior and $500,000,000 for the Chief of Engineers, Department of the Army. This legislation should have the complete endorsement and enthusiastic support of every Congressman and Senator from the Pacific Northwest States, from every community, every chamber of commerce, every farm organization, and every citizen in this area.

No. 2 first (after the adoption of S. 2180): The development of a Federal power policy * * * this as a third arm of making S. 2180 workable. If the politicians want to resolve the political issues of the Pacific Northwest, here is their opportunity to demonstrate that they are statesmen. However, if for selfish, partisan, political reasons they want to continue to stir up the political fires that are holding back the development of the Pacific Northwest, then they will not accept our plan. After a Federal power policy is developed and on the books and S. 2180 is authorized and on the books, then the only political issue involved is for Republicans and Democrats alike to make known their support of this program.

The CVA is not needed, nor is it wanted; the Federal power policy and S. 2180 is needed and is wanted.

Declaration on Reduction of Arms-in-Aid Bill

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by David Lawrence:

REDUCTION OF ARMS-IN-AID BILL SEEN RESTATING POLICY—ACTION OF HOUSE CALLED IMPORTANT IN VIEW OF ATTITUDE ON DISARMING

(By David Lawrence)

Like a breath of fresh air in a world of staleness comes the little-noticed but all-important action of the House of Representatives in amending the "declaration of principles" in the arms-aid bill so as to proclaim anew the purpose of the United States to strive for a reduction in armament when the opportunity arises.

Some testimony from the Secretary of Defense before the House Foreign Affairs Committee recently indicated a callousness and cynicism on the subject of disarmament. It remained for Norman Thomas, Socialist, to enunciate before a Senate committee a different doctrine of morality in international affairs today. He urged that, while our defenses be built up, America make provision for a possible diminution of armament spending coincident with an effort to secure peace.

Almost at the same time that Mr. Thomas was testifying, the House was unanimously passing an amendment to the preamble of the arms-aid bill reading as follows:

"The Congress reaffirms the policy of the United States to seek agreements to provide the United Nations with armed forces as contemplated in the Charter and agreements to achieve universal control of weapons of mass destruction and universal regulation and reduction of armaments, including armed forces, under adequate safeguards to protect complying nations against violation and invasion."

AGREES WITH HISTORIC POLICY

This is in line with tradition and historic policy for decades past. Almost every appropriation bill for naval building passed by the House for many years contained a proviso that the President was authorized to terminate the construction at any time when it appeared that an international agreement to reduce armaments was being achieved.

For generations the idea of a "naval holiday" has symbolized the same purpose. The United States at no time, outside war years, has authorized a standing army of a size which could be regarded as engaging in an armament race. Today, however, the building up of a powerful navy and strategic air forces constitutes one phase of an armament race which is designed to balance the presence of Russia's huge standing army.

Thus, the familiar argument is that Russia is bent on aggression and that the Soviets intend to attack the Allied world and deprive their peoples of liberties. This is the thesis for armament building that has dominated militaristic thinking throughout the ages.

Instead of calling for an immediate demobilization of the Red Army and promising that American and Allied armaments would then be held in abeyance, no move is made by the President toward negotiating a reduction in armament. It is argued that Russia already has 200 divisions in her army and that the Allies couldn't mobilize as many as 40, even with the European arms program now being considered. For this reason, the proposal is that the United States maintain a strategic air force large enough to attack Russian targets instantly.

AN AGREEMENT NECESSARY

Sooner or later there must be an international agreement on air power just as there has been on naval building in the past. A certain measure of disarmament has already been accomplished so far as the United States Navy is concerned by cutting down its own air power—as if air power were something worth spending money for only when it arises from or flies to land bases.

Reduction of the efficiency of America's naval air power is now an accomplished fact and Secretary Johnson is getting ready to cut the whole Navy virtually in half next year. Land-based air forces, however, are being increased, and this is the direction in which a reduction in armament could next be examined. For if the cut in the Navy were part of a general reduction of armament intended to bring a mood of peace in the world, then it would be well worth the sacrifices made and it would warrant a similar cut in land-based air power provided, of course, agreements to demobilize the Red Army can be consummated.

Usually Congress directs the President to negotiate agreements to reduce armament. If the militarists who nowadays influence policy in high places can be persuaded to step aside, it may be that diplomacy can start again to see if there isn't some way to cut down Russian armament, too.

Welfare State Is Good Americanism

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. BIEMILLER. Mr. Speaker, yesterday I was privileged to speak at the opening session of the national convention of the American Federation of Teachers, which is being held this year in my home city of Milwaukee. I have been proud to be a member of this organization for nearly 20 years.

My speech was on the sound American background of the welfare state. Under leave to extend my remarks, I am inserting it in the RECORD:

WELFARE STATE IS GOOD AMERICANISM

This is an especially appropriate occasion on which to lay a ghost which seems to be haunting some fearful men. This apparition has been variously hinted at, whispered about, denounced, decried. The tone of voice has had an interesting correlation with the wealth or industrial interests of the man who has spoken of it, but benighted or bigoted, frightened or frightening, the ghost story remains basically the same. Beware the welfare state! Beware! Beware!

Personally, I don't believe in ghosts. In fact, such legends usually arouse my curiosity and skepticism. So I decided to investigate this shadowy haunt, and to determine what was really behind the fluttering sheets and clanking chains that frightened men were using to try to frighten others more.

It was a simple exorcism. When I had pulled up the blinds and let a little light into the corners of the room, there wasn't any ghost at all. All that was left were the slightly ridiculous trappings of fear, looking more like a scarecrow than a menace.

But underneath this pale disguise I did make an important discovery. I found the welfare state all right, but it didn't frighten me. It made me proud. Here was a theory of government that was as American as our Constitution, as democratic as Lincoln, as forward-looking as Roosevelt. It was a state that took seriously its responsibilities toward all its citizens and that had developed organizations, techniques, and means for making democracy effective in the unequal places.

I found the welfare state consistent with Lincoln's statement that "The legitimate object of government is to do for the people what needs to be done, but which they cannot by individual effort do at all or do so well for themselves."

The ghost-raisers mutter that the welfare state is a dangerous—an un-American—theory. The implication, sometimes the open charge, is made that it is synonymous with foreign communism, with Stalinism. Well, let us look at that without its masquerade.

WELFARE STATE OLD AS COUNTRY

The concept of the welfare state started with the inception of our country. It began with the Constitution of the United States which charges the Government with the responsibility of the "general welfare" of its people. That was one of the great differences between this new country and the tired nations of Europe in the eighteenth century. It was then perhaps a new and revolutionary idea for a government to be established not only by the people but for the people. I expect that in that sense, I,

too, am a revolutionary. I still believe in our Constitution.

On the basis of that clause in our Constitution, the Government has done many things for the welfare of its people. As early as 1806 Thomas Jefferson, as President of the United States, asked Congress to approve a donation of lands for a "national establishment for education." Remember, in those days the grant of lands was not merely a method of providing free rent, but was actually used as a financial asset, an asset indeed, much more valuable than the grant of a specific sum of money would have been. Jefferson pointed out that such a land grant should, in fact, be land that "will be among the earliest to produce the necessary income." Thus, in the earliest years of our Republic we were not only thinking of the general welfare of the people, but we were already implementing that concept with subsidies granted by the Government.

The grants for education were among the first that could be considered as fitting even the narrow definition of "welfare." But the Government continued, granting eventually 250,000,000 acres of land for various purposes. For education, for wagon roads, so that everyone, not only the rich, could travel more easily; for canals and levees, for public buildings, for railroads. And for those who were not able to make an adequate living in the industrial areas of the East, the Homestead Act of 1862 gave vast areas of public lands, apportioned into individual units. Surely, this act, planned and carried out as a Government bounty to individuals, can hardly be considered as anything but a public-welfare program. Here the state was "meddling" with a program that was directly and purely in the interest of hundreds of thousands of its less successful citizens.

In 1949 the Federal Government no longer gives land grants to help the unemployed. The method of payment has changed—but land or money, income or income-producing property—there is no change in principle. And even a Federal grant of money is far from a new idea for Americans.

As early as 1887, Congress provided money grants to the States for agricultural experiments in order to benefit farmers and the general public who consumed farm products. In 1890 money grants were given for instruction in land-grant colleges. As early as 1911 grants were provided for the Forest Service, and long before anything so dangerous to the status quo—or should I say the status quoers—as the New Deal, the Government was already giving subsidies to States for 15 major purposes.

WELFARE STATE AIDS INDUSTRY

It is, therefore, not alien to our American traditions or to our patriotism for our Government to be interested in the welfare of its people. On the contrary, our Congress and our statesmen throughout our history, have always assumed the responsibility for trying to meet the needs of our citizens. All our citizens. Even those who are now complaining so bitterly that the Government is threatening our way of life because it doesn't "let business alone."

I wonder whether they really mean they want to be let alone. Does business honestly not want to continue getting the help the Government has been giving it ever since 1791? It was in that year that our then Secretary of the Treasury, Alexander Hamilton, a gentleman our most convinced conservatives have established as a symbol of free enterprise, addressed the House of Representatives to make an impassioned plea for Federal subsidies to manufacturers. He argued that—

"The propriety of stimulating by rewards the invention and introduction of useful improvement is admitted without difficulty."

And yet what a cry of terror arose when in 1949 the administration talked of granting loans to small manufacturers.

During the nineteenth century the Government gave to the railroads a total of 179,000,000 acres of land. And now the railroad companies think it unfair they should pay property taxes.

More recently the Reconstruction Finance Corporation and the Export-Import Bank have assisted industry at least as much as other legislation has assisted industrial workers. And at the moment, even the Republican Party, in the person of its new chairman, Mr. Guy Gabrielson, must be willing, even anxious, that the Government continue at least one aspect of its welfare program, since the Carthage Hydrocol Corp., which Mr. Gabrielson heads, has received a total of more than $18,000,000 in loans from the RFC.

So the specter of the welfare state as a sort of foreign agent threatening American institutions can hardly be accepted by even the most credulous.

WHAT INDUSTRY REALLY WANTS

But our believers in ghosts warn us that there are other dangers. The "long arm of the Federal Government," they weep, is choking the life out of private enterprise. Government controls are depriving Horatio Alger's bootblacks of their right to become millionaires. They do not mention that even in the infinitely less complicated economy of the nineteenth century these heroes worked at sweatshop wages and only in books did very many of them become kings of industry. The real-life workers remained in the sweatshops until the Government got that antisocial aspect of our life eliminated.

They passionately insist that a welfare sate cannot exist side by side with capitalism because it is based on the necessity of government regulation. And government regulation means the death of free enterprise.

All right. Let's conjure up their sort of genii. What would this country be like with no government regulation?

We would, of course, have almost no corporation taxes. We would have no control of wages and hours, and working conditions. We would have no—heavens no!—protection of labor unions. We would have no control of farm prices. We would have no protection of small business against monopolies. We would have no protection of workers against unemployment, against industrial accidents, against old age, against illness.

Up to this point, this type of ghost does not frighten them. Indeed, this is what they mean by their "let us alone" policy. This is what they are fighting to obtain. In the first 6 months of the Eighty-first Congress, business interests have carried on this fight to the tune of about $4,000,000 expended in lobbying activities. Let me itemize some of the things for which this money was spent.

More than half a million dollars was paid to fight against a health program that would give to the workingman the possibility of getting medical care without mortgaging his future.

More than $300,000 was spent by big business—and this does not include the National Association of Manufacturers with their $5,000,000 budget—to preserve the Taft-Hartley Act. More than that, to push for infinitely more suffocating controls on labor. Did you know, for example, that big business had two of its spokesmen appear recently before a Senate investigating committee to advocate the outlawing of all industry-wide bargaining, the legal abolition of union shop, the repeal of the Norris-LaGuardia Anti-Injunction Act, the elimination of all national unions?

Around a quarter of a million was spent by various real-estate groups and apartment-house owners in a vain attempt to prevent any public-housing legislation. Another quarter million was cheerfully paid by groups fighting against public power and the subversive consequences of low consumer rates.

Money was spent combating every measure that was planned in the interests of the general public. Whenever possible, issues were muddled so that even in Congress many representatives of the people became confused. An unfortunate case in point is a bill which I'm sure is very close to the interests of our union. I'm speaking of the pending legislation on Federal aid to education, where the waters have been so muddied that it may now be in danger of not passing at all. Let me remind you that there are really only two main issues involved. After the sound and the fury, the only questions that remain are: First, do we want teachers' salaries to be raised? And, second, are auxiliary services, such as the health services proposed in a bill I introduced, to be available to every child? But the Chamber of Commerce would have you believe that the passage of a Federal-aid-to-education bill would create a Frankenstein monster which would regulate the thinking of all American children. That is sheer nonsense.

The casualness with which these people have spent such huge sums to try to stem the tide of progress shows that they would be in delighted agreement if it was proposed to abolish this sort of Government regulation. This is the sort they dress up as the scarecrow of nationalization or socialization. This is what they mean by the welfare state.

CONFUSION IN THINKING

But let us carry out their proposal to its logical conclusion. No Government control would also mean no controls over labor. Is that what they want? It would mean the shutting down of the RFC. Would Mr. Gabrielson like that? It would involve stopping guaranteed home builders' loans as well as stopping low-cost housing. Ah, this sounds like a different story. That is not what they meant at all. Of course, the Government should protect their interests.

In other words, they are not really against Government control. They're against Government control of the powerful for the sake of the weak. What business and industry fear is the state that is concerned with the welfare of all its people.

Perhaps, after all, it is not a ghost they see, but a hallucination. Certainly, they show many other symptoms of a confusion bordering upon insanity.

They say: We want no Government controls—on us. Please may we have as much Government control as possible—on the workers.

They say: We want free enterprise; it is the basis of capitalism. But we must not do anything to control monopolies, which will swallow up free enterprise.

They say: We must maintain a democratic way of life. But don't by any means be guided by the mandate of the majority of the people.

They say: Economic security is a dreadful thing; it kills incentive. But please, may we have another loan to industry.

They not only sound confused. This schizophrenic attitude has almost confused me. What is dangerous about a government that directs its energies toward helping its people? What is subversive about the elected official who works for the people who elected him?

Are we supposed to pass housing legislation to put more millions into the pockets of the apartment-house owners and building contractors—or to enable the average American citizen to live decently? Are we to reduce taxes so that the monster corporations can make more fantastic profits, so that their gilded youth may buy an extra yacht, a second Cadillac, or are we to use tax money to enable the man and woman who have grown old on the job not to die in the poorhouse? Are we to break the back of organized labor, so that monopolies can cut wages and raise prices?

WELFARE STATE IS BULWARK OF DEMOCRACY

What those few callers in the night are opposing sounds suspiciously like democracy.

They seem to be talking about the interest of the few instead of the many. Their bogie or hallucination, or could it possibly, after all, be merely double talk—seems to be used only to protect self-interest, not the country. The goals of the detractors become strangely like the targets against which our forefathers fought in 1776. They sound terribly similar to the smoke-screen tactics against which we fought in 1941.

To me the only safeguard against real annihilation. the only positive approach to the proven dangers of communism and fascism, is the welfare state. A state which is concerned with real protection of free enterprise, to the point of controlling monopolies, but also with the protection of its citizens from government by corporation. We must have a government which wants to raise the standard of living for everyone, not just increase the wealth of the industrialists and financiers. We must have recognition of man's right to work at a living wage, not just his right to starve.

Our opponents try to make the name become a sneer by their tone of voice. They scoff at those of us who believe in the welfare state, giving an intonation to the word "welfare" that suggests something that has just crawled out from under a stone, that implies at the best an incompetent dreamer, at the worst a dangerous revolutionary. They snicker at the "reformers" and "do-gooders."

This kind of war on words makes little sense to me. Perhaps because of my own academic background, I prefer to learn through a dictionary what words mean. I see nothing wrong in expecting a government to do good. I find nothing incompetent or unrealistic about attempting reforms of known evils. I consider the welfare state as a realistic, twentieth-century bulwark for democracy.

And since I do believe in democracy, I think that even those who apparently lost their faith in it have a right to state their case and to try to achieve the ends in which they believe. This is the way they can do it.

Let them elect to the next Congress men who will carry out their wishes.

Let them repeal all the social-security legislation, cancel unemployment compensation, stop old-age insurance, end workmen's compensation, abolish the minimum-wage laws, and cease public-health measures.

Let them abolish all Federal controls on monopolies and end farm subsidies.

Let them herald the return of the slums and the sweatshops—of illiteracy and superstition.

Then, and only then, will they be able to abolish the welfare state.

How many Americans do you think will vote for that? How many Americans do you think will support the persons who want it? How many Americans do you think are afraid of the welfare state?

Administration's Chickens Come Home To Roost

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock from the New York Times of August 19, 1949. The basic reason for the reduction in authorization for military assistance to Europe was the reason stated clearly in the minority report, namely, the belief that it would increase rather than decrease the prospects for the European unity which is essential if security is to be obtained. But it cannot be denied that the dictatorial tactics used by the administration in its handling of the whole proposal increased substantially in a good many cases congressional resistance. Opposition on that basis is most unfortunate and I hope will be prevented in the future, as it can be with a change in approach.

CHICKENS USUALLY COME HOME TO ROOST

(By Arthur Krock)

WASHINGTON, August 18.—Those who have approved the foreign policy of the Truman administration, from its inception in the Greek-Turkish aid program to the submission of the North Atlantic Treaty and the corollary arms assistance bill as drafted, may be witnessing the latest show of congressional resistance with surprise. They may wonder why Congress, after legislating these revolutionary steps in foreign policy, now discloses a considerable membership which would sharply amend the arms bill; and also why the bipartisan front in this policy area has been breached.

EXPLANATIONS OFFERED

Several explanations have been offered by administration spokesmen and by Washington observers who go along with them 100 percent. The people have been told they are witnessing a display of "the new isolationism"; that misguided and ignorant advocates of lower Government costs are also responsible. They have been told that the resistance in Congress to the arms bill as drafted is spearheaded by incompetent hicks who don't know, and can't be made to learn, the facts of international life. Since it is very difficult to explain in any of these ways the exceptions to the military assistance bill taken by Senators VANDENBERG and DULLES, these have been dismissed as the product of mere vanity or petulance.

There are, however, deeper, and this correspondent thinks far more accurate and comprehensive, reasons for the trouble the administration is having with the bill to rearm our North Atlantic allies. Among them:

1. The practice of the Truman administration has been to run foreign policy down a one-way street. After deciding on vast commitments it has informed Congress, including the Republican leaders, what they are. It has then, invoking the spirit of bipartisanship, demanded that these commitments be legislated in the form agreed on by the administration, and fought any changes, even minor ones. to the last ditch.

STATE AND THE ECA

This procedure, for example, brought General Marshall to the Capitol, when the European Recovery Act was being considered, to oppose operating the program under an independent administrator instead of the State Department. Though he said that would be like having "two Secretaries of State," and indicated he could not then remain in office, Congress made the ECA independent; no one resigned; and ECA has worked well with the State Department.

This attitude of the administration, however, repeated from time to time, served to harden Congress against its continuous "warnings" that no proposed legislative draft must be altered and no proposed expenditure in foreign policy must be reduced or diverted by 1 cent.

2. While Senators VANDENBERG and CONNALLY, the latter chairman of the Committee on Foreign Relations, were struggling to get a unanimous committee report in favor of the North Atlantic Treaty, the State Department, without consultation with them, suddenly published the requests of our intended allies for armament. It accompanied this with its published pledge that it would recommend an arms program to Congress.

A CHANGE OF FRONT

This firmly linked the program with the treaty in the congressional mind, something the bipartisan leaders, by agreement with the administration, had been striving to disconnect in order to get a heavy Senate vote for the treaty. But then Secretary Acheson on April 27 said to the committee: "If you ratify the pact it cannot be said that there is no obligation to help (with arms). There is an obligation to help, but the extent, the manner, and the timing is up to the honest judgment of the parties * * *. I urge that both the treaty and the proposed military-assistance program should be considered separately and on their own merits."

3. But from the moment the arms program went to the Capitol the administration began to insist that, unless its decisions as to "the extent, the manner, and the timing" were approved without material change, Congress would be risking our national security. Only today Mr. Acheson informed a balky House that any "curtailment * * * serves only to * * * prolong the period during which our ability to resist attack [in the North Atlantic area] is not commensurate with our stated determination to do so * * * [to] delay in taking action which is required in our own interests." All details drafted thus became an executive "must," which Congress cannot alter except at national peril.

INTERIM MEASURE

The administration previously had been compelled to drop the section that would have permitted the President to arm any nation or group he saw fit to arm. And some of the amendments offered by Senators VANDENBERG and DULLES were reluctantly accepted. But the more important ones which were called unacceptable would make the bill the truly interim measure Mr. Acheson said it was intended to be, and give Congress a chance to decide, when the time for judgment came, whether the cosigners of the North Atlantic Treaty were doing their part in self-help and integration.

Such tactics by the administration are the real causes of congressional resistance.

The Spanish Problem

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 23 (legislative day of Thursday, June 2), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received on one phase of the Spanish problem.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LA CORUNA, SPAIN,
September 6, 1948.

DEAR AUNT: I have no assurance that this or another letter I have written will ever reach you. However, I am making another effort although you will note by my handwriting that my hands are not in condition for writing.

I was arrested in La Coruna on July 11, while directing the organization of the resistance movement. Upon entering a house on Calle Real where I was to meet Antonio

Secane, leader of the guerrilla army of Galicia, I found the police waiting for me inside. The above-mentioned person had been arrested the night before. A woman accompanied me—Maria Blazquez. Upon knocking at the door, we were taken by surprise by the police. Maria, with supreme courage and serenity, and without fear, lunged at the nearest guard and pushed me back hoping that I would thus manage to escape. She was felled by a shot in the stomach. I managed to reach the second floor and upon readying my pistol for any eventuality, I was fired on from above. The bullet hit me squarely in the face, knocking out one eye and shattering my nose and face. Despite this I managed to reach the street and escape. However, the loss of blood was so great, that one-half hour later I was caught since the police were able to trail me to my hiding place through the bloody tracks I left behind.

After 13 days in the hospital, half cured, I was taken to the headquarters of the Civil Board, where the so-called interrogations were begun. It is not necessary to relate what they did to us, especially to Antonio Secane and myself.

I am practically a skeleton. From July 11 to September 1, when I was released from the dungeon and interned in a semi-isolation cell, I lost 24 kilos (approximately 55 pounds). My stomach and intestines are practically ruined and for many days I did nothing but spit out large chunks of blood. It is humanly impossible for me to roll a cigarette with my hands. Secane is in practically the same state. This is fascism. However, I have never lost spirit. They are now rushing matter in order to liquidate us as soon as possible. I believe that, at the very latest, we will have been executed by November 1. They are in a hurry, a great hurry, for although we are prisoners, we are still harmful to them. They thought that, with our capture, they would liquidate the guerrillas, but they have failed completely. Despite the great mobilization of forces on their part, the whole guerrilla movement remains firm. Moreover, since our capture, the activities of the guerrillas have increased, and daily dozens of new partisans join their ranks. This, dear Rosa, is what really matters. The rest, our lives hanging by a thread, and the knowledge that this thread will soon be cut by the butchers of our people is a secondary matter.

During 4½ years, those of us who returned from exile, have put our scarce intelligence, but all of our heart and conscience at the service of the cause of the liberation of our beloved homeland. We have fallen. We only regret that we cannot do more. However, it is comforting to know that nothing and no one will be able to undermine the struggle. How great and how brave are our people. What indestructible faith they have in victory. With such faith and such people, and for so noble a cause as that which we defended and will continue to defend to the last moment, we are ready to give not one but a hundred lives without vacillation. I am only sorry that I did not give more, that I was not capable of accomplishing the task entrusted upon me with confidence and honor when I was sent to Spain.

All of Galicia and Spain are a volcano of struggle which shall never be extinguished by Franco.

Because of my condition, my being isolated and surrounded by provocateurs and police disguised as prisoners, I am not certain that I will be able to leave behind my last letter to you, and to Pasionaria. However, if this letter should reach you please send her a copy. Tell her that we will hold aloft the banner of struggle until death; that she may rest assured that the resistance movement of Galicia remains firm, that the struggle will not cease because the love and respect which our people have for us cannot be extirpated ever with rivers of blood by the cowardly Fascists. This is being demonstrated daily and hourly.

The four women who fell victims of fascism merit special mention. They all carried on as they had been taught to carry on by our beloved Pasionaria. They are Maria Blazquez del Foxo, Josefina Gonzales Cudairo, Clementina Gallego Abaledo, and Carmen Orozco. Their physical condition is very grave. The bullet has not yet been removed from the stomach of Maria Blazquez. Carmen Orozco is suffering from a grave cardiac ailment. Clementina Gallego is partly paralyzed in one leg.

Eight of us await trial together. They are trying to include a pair of provacateurs, common criminals and highwaymen, with us for the purpose of discrediting us and have us appear as adventurers and common thieves before the military tribunal. Two or three death sentences each will be demanded for at least three of the eight that stand accused. These are for Jose Gomez Galioso, teacher; Antonio Sanchez, worker; Juan Romero Romos, cabinet-maker. The others, although also in grave danger, may be spared the death penalty if the campaign of solidarity is intensified. They are Jose Bartrina, doctor; Jose Rodriguez Campos, worker; Jose Remos Diaz, sailor; and Juan Martinez, peasant.

It took us 4 days to write this letter. To you, and to her, whom even more than aunt and cousin, I have always loved as mother and sister, I request that you remain firm. No anguish. For you, may my death be an inspiration to help more and more, the liberation of our people. If it is possible and there is still time, send me a few lines.

And nothing more. If my friends can help me, ask them to cable me. I have no relatives, and thanks to the kindness of the other prisoners, I am still alive. * * *

A very, very strong embrace—my very last—in which my heart is entwined.

NOTE.—You are free to give publicity to this letter.

(This prisoner was executed in November in spite of the efforts made by liberals and labor unions in the United States to save him.—L. D. H.)

Why We Belong in the Saddle

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Detroit News of August 18, 1949:

WHY WE BELONG IN THE SADDLE

The fears and feelings which are prompting Senators VANDENBERG and DULLES to take a dim view of the under-cover plans of our own military leaders to ride the saddle when the North Atlantic alliance begins to operate through a military council can be well understood and are in some respects highly commendable.

Both men are sensitive to those difficulties in any political alliance which derive from such things as national pride and human nature.

They know that a balanced program of action is not likely to develop on both sides of the Atlantic if in the beginning we attempt to lord it over Europe.

At the same time, there are practical considerations of an opposite sort which need now to be reckoned with unless we are to fall into a very deep pit.

The first is that a military council is quite unlike a political council.

It cannot function in the manner of a board of directors, with equal voice all around the table, because in the nature of things its success depends on ultimate response to a single will.

No military coalition in history has ever succeeded on any other basis.

In World War II our higher military affairs were directed by the combined Chiefs of Staff of Britain and the United States, but the fact was that Gen. George C. Marshall became the governing hand in strategy.

The second proposition is that either the North Atlantic alliance will succeed under American leadership, or it will not succeed at all.

That is so because the greater part of the military power is in our hands, and the fact can't be altered. Therefore there is no use blinking it or dodging the responsibilities which it entails.

In the middle of World War II Winston Churchill invoked the principle that the nation which was carrying the greater part of the load would also have to exercise the major portion of the authority. That was how Gen. Dwight D. Eisenhower came to be named as commander for the great invasion.

But this was no new idea. Nations always have accepted it in principle, or else their alliances have failed for having scorned it.

Marshal Ferdinand Foch became the supreme leader in 1918, not because he was a military genius, but because France was bearing the heaviest burden among the Allies.

No matter how generous our sentiments may be toward the nations with which we are in alliance, to think along any other lines when we are confronted with the military problem can mean only that we have an unrealistic appreciation of history.

If we are not ready for such responsibility—not only to accept it but to be firm about our inherent right to it—then we had no business entering the alliance.

Don't Sell Education Short

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, August 23 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by Tracy F. Tyler, associate professor of education of the University of Minnesota and president of the Minnesota Radio Council, as well as editor of the Journal of the Association for Education by Radio, which appeared in the September 1949 issue of that publication.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DON'T SELL EDUCATION SHORT!

Broadcasting was almost given up for lost at the Institute for Education by Radio at Columbus last May. A majority of the speakers seemed to take it for granted that TV was the coming medium; that everything

radio did, TV could do better; and that it was only a matter of time before radio would go the way of silent motion pictures.

No doubt TV is superior to radio in certain types of programs. But sound alone can provide stimulation to the imagination in many dramatic situations that is superior to sight and sound combined. It also appears that, because TV viewing is so much more tiring than radio listening, TV sets will be used fewer hours per day than radios when the novelty wears off. Finally, TV seems totally unsuited for those who wish to secure education, information, or entertainment while working at other tasks—doing housework, studying, reading, playing games, dancing, etc.

What radio's eventual place in society will be in the future will probably depend as much as anything else on the vision with which the leaders in today's radio industry study its problems and apply the remedies which good judgment dictates.

Radio exists to render public service. Unless it serves well the public interest, convenience, and necessity it has no justification for existence. Not all radio station owners appear to have accepted this principle even though it was stated clearly in the original Radio Act of 1927 and repeated in the Communications Act of 1934. They seem to believe, or so their actions would make it appear, that the radio frequency which they use is theirs solely for profit. Nothing could be farther from the truth.

The United States Congress, when the Radio Act of 1927 was written, left no doubt that all radio frequencies belong to the people. That principle has never been challenged, but not all of its implications have been followed.

An excellent example comes to mind. The Constitution reserves to the several States the control of education. Yet State educational institutions—colleges, universities, and public schools—which desire radio facilities to make their educational service more effective, have generally been pushed aside in favor of others who use publicly owned radio frequencies for private profit.

If a public school or State university needs land for educational purposes, such property can be acquired regardless of its prior use or ownership. Why not radio frequencies?

Have the members of the Federal Communications Commission forgotten that education is the most important function which a State provides for its citizens? How long could a democratic government survive without education—without an enlightened electorate? And what are the practical implications of this principle? Perhaps it might be simpler to show some of the respects in which it is being violated.

The University of Minnesota and Iowa State College, to mention only two examples, have been operating for years much-appreciated and needed educational radio services for their respective States. In each case the State-owned station operates simultaneously on a clear-channel assignment with a commercial station. Under present FCC rules, both WOI and KUOM are required to leave the air at sunset and thus be silent during the hours when the largest potential audiences are available. The rule is supposed to protect the commercial station from interference in its service area. Yet engineering studies show no interference in California from WOI (where KFI, which shares WOI's frequency, is located); or in a similar area surrounding New York (where the station which shares KUOM's frequency is located). There is thus, it seems to this writer, no longer any sound reason why WOI and KUOM should not be permitted to broadcast unlimited time.

But there is an even more vital issue at stake. Many State-owned educational radio stations need the coverage for State-wide service which only AM broadcasting can provide. And educational needs are superior to commercial ones. If the FCC finally recognizes this fundamental fact, beclouded as it has been by those who have a personal rather than public-interest point of view, could it longer hesitate to serve the needs of such States as Iowa and Minnesota, even though some interference might result?

It is regrettable that the original Federal Radio Commission lacked the foresight to make provision for educational broadcasting by the States when it made the original allocations. The FCC did better. It set aside educational channels when it opened the FM band. This has proved to be a wise decision. The only danger now is that some FCC members, lacking a sound educational philosophy, may reassign these educationally dedicated frequencies to commercial use merely because they think the States have been too slow in using them.

Hearings concerning rule making for TV allocations began in Washington on August 29. Will the FCC make the same mistakes as did the FRC more than 20 years ago? Education in most States is not yet ready to enter the TV picture. But that time will come. Will there be TV frequencies for education then? The newest Commissioner, Frieda B. Hennock, believes that provision should be made in the ultra-high-frequency band for the establishment of a noncommercial educational TV service. So far the majority of the Commission does not agree with her.

If education is frozen out of the TV band as it was out of the AM band, will it not give our enemies another example of what they so often accuse us; the worship of material things over those of the spirit? Can we afford to make this mistake?

TRACY F. TYLER, *Editor.*

Effective Medical Care for All Might Save 325,000 Lives Each Year

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. MITCHELL. Mr. Speaker, in a report to the President by the Federal Security Administration, entitled "The Nation's Health—A 10-Year Program," it is estimated that some 325,000 lives might be prolonged each year if we had enough medical personnel and hospitals, if public-health work were fully effective, if we had a better system of financing medical care, and if our present scientific knowledge were better harnessed and distributed.

In response to a number of inquiries as to the basis for this estimate, the following memorandum has been prepared. The information contained therein should be of great interest to the Members.

BASIS OF ESTIMATES OF POSTPONABLE DEATHS

(In the Nation's Health, pp. 8 and 9)

It is estimated that some 325,000 deaths might be avoided each year through wider distribution and earlier application of present medical knowledge in the prevention, diagnosis, and treatment of illness. This total is made up of the following estimates for several causes of deaths:

Cause of death	Average number of annual deaths, 1943–45	Estimated number preventable [1]
Total	1,430,000	325,000
Communicable diseases and pneumonia	170,000	120,000
Cancer and heart disease	600,000	115,000
Accidents	100,000	40,000
Complications of infancy and pregnancy	[2] 100,000	[2] 30,000
Other	460,000	20,000

[1] Assuming enough medical manpower and facilities, fully effective public health work, and health education, an adequate system of financing medical care, and Nation-wide application and distribution of present medical knowledge.

[2] Excluding communicable diseases and pneumonia.

Communicable diseases and pneumonia: Of the 170,000 annual deaths from communicable diseases, including pneumonia, we should be able to prevent at least 120,000 with our present medical knowledge and skill. The Brookings Institution (1), in presenting estimates of the Metropolitan Life Insurance Co. on possible increases in life expectancy through reduction of mortality at ages 20–65 among white males, indicates that 80 percent of the deaths from syphilis and tuberculosis are preventable, and 40 percent of the deaths from pneumonia and influenza. These diseases take a toll of about 150,000 lives a year. Nearly 90,000 of these lives might have been saved if the percentage reductions estimated by the Metropolitan Life Insurance Co. could have been effected.

The Brookings report also indicates some of the striking improvements in control of communicable diseases effected by the Army in World War II. The number of cases of typhoid fever among Army personnel in the United States declined from an annual rate of 0.24 per 1,000 men in World War I to only 0.007 per 1,000 in World War II. With compulsory smallpox vaccination in World War II, only 116 cases occurred among troops in the United States and overseas, as contrasted with 853 in World War I. The tuberculosis mortality rate in the Army was nearly 90 percent lower in the Second World War than in the First. In the two periods the number of cases of tetanus per 100,000 wounds and injuries dropped from 13.4 to 0.44. Except for tuberculosis, these diseases account for relatively few deaths each year. The fact that their incidence can be materially reduced, however, is evidence of the value of control measures.

When regulations on use of repressive drugs against malaria were strictly enforced by the Navy and Marine Corps, the malaria rate dropped from 31.2–49.4 per 1,000 in November 1942–June 1943 to 10.7–17.2 during October 1943–March 1944, and even lower thereafter. Even more effective antimalaria drugs have since been developed, and DDT is proving to be a powerful tool in eradicating the mosquito vectors of the disease. Use of sulfa drugs has not only greatly reduced the case-fatality rates from meningitis but also has prevented the spread of the disease. One Army report showed only 2 cases among 15,000 men receiving sulfadiazine as a preventive measure, while there were 40 cases among 18,800 controls not receiving sulfa drugs.

These are striking evidences of what may be done in reducing illness and mortality from communicable diseases when preventive, diagnostic, and therapeutic measures can be taken promptly and thoroughly. Wide application of immunization against tuberculosis may open new possibilities of

controlling that disease. The estimated possible saving of 120,000 lives that succumb to these diseases would seem conservative.

New antibiotics and hormones, and newly discovered uses of those that have already proved beneficial, month by month indicate success in treating more diseases and offer increasing promise of prolonging lives and reducing disability and pain. A few dramatic examples of these recent advances in medical knowledge and skills are the rapid cures of typhoid fever with chloromycetin; the effect of compound E or cortisone on rheumatoid arthritis and rheumatic fever; the value of aureomycin in amebic dysentery, of neomycin in tuberculosis, and of both in Rocky Mountain spotted fever.

Cancer and heart diseases: The Brookings report (1) cites estimates of the Metropolitan Life Insurance Co. that mortality from cancer might be reduced by 40 percent and deaths from heart disease by 10 percent. Applying these percentages to the 172,000 annual deaths from cancer and other malignant tumors and to the 423,000 from heart diseases would give a saving of about 115,000. The Brookings report gives further evidence of potential reduction in cancer mortality, by stating that 190,877 lives might be saved if each of the 333,890 new cases a year received the best care now known. The report goes on to say that even if all the new cases had only average early treatment, nearly 95,000 lives might be saved. Cancer experts usually agree that deaths from that disease could be substantially reduced if all cases were diagnosed and treated promptly.

Accidents: The Brookings report (1) also cites estimates by the Metropolitan Life Insurance Co. that 80 percent of the deaths from accidents among white males aged 20–65 could be prevented. Applying that rate to the nearly 100,000 deaths from accidents would give a saving of 80,000. Better safety precautions and public health measures and more effective mental hygiene could go far toward preventing deaths from accidental causes in factories, homes, and highways.

Safety precautions can probably be adopted more easily and rapidly in industry than elsewhere, however. Thus the potential reduction of accidental deaths among men of working age is probably greater than can be expected for the general population. For this reason, the estimated number of lives that might be saved from accidental death cited in the Nation's Health represents 40 rather than 80 percent of the annual number of deaths from accidents, or an estimated saving of 40,000 lives.

Infant and maternal mortality: In 1945 some 110,000 mothers and babies died of complications of pregnancy and conditions peculiar to the first year of life. If the rate for maternal mortality in Connecticut in that year had applied throughout the United States, the total of nearly 5,700 maternal deaths would have been reduced to 3,300, representing a saving of 2,400 lives. Similarly if the Rhode Island rate for deaths of infants in the first year of life had obtained for the United States as a whole, 28,000, of the nearly 105,000 babies born alive who died in the first year of their existence might still be living.

According to the Associate Chief of the United States Children's Bureau (2), expert care could save more than a third of the premature babies that die (2). Moreover, maternal mortality in at least one of the best States in 1945 was unnecessarily high; physicians who studied the causes of maternal death in Minnesota estimate that three-fourths of those who died might have been saved (2).

Other causes of death: If only the potential reduction in mortality in the four groups indicated above were totaled, the estimated annual saving would be about 305,000 lives. Of the 460,000 deaths from other causes, about 35,000 were from diabetes mellitus, over 7,000 were from appendicitis and 12,000 were from hernia and intestinal obstruction. The Metropolitan Life Insurance Co. (1) estimates that reductions of 40 percent in mortality are possible for all these conditions among white males aged 20-65. Applying that rate to all deaths from these causes would effect a saving of nearly 22,000 lives. The mortality reductions that might be possible for suicide, ulcer, biliary calculi, and cirrhosis of the liver are estimated at 25 percent by the Metropolitan. Applying that reduction to the nearly 14,000 deaths from suicide, the 9,000 from ulcers, the 12,000 from cirrhosis of the liver, and the 7,000 from biliary calculi would give a saving of an additional 11,000 lives. According to the Metropolitan, mortality from nephritis and intracranial lesions could be cut about 10 percent. That would give a saving of about 22,000 in the 93,000 deaths from nephritis and the 127,000 from intracranial lesions.

Totaled, these estimated savings would represent 54,000 lives. The percentage reduction of mortality in the Metropolitan Life Insurance Co.'s estimates, however, doubtless postulate more effective health education and more widespread knowledge and practice of dietary and hygienic standards than can be realistically expected for many years to come. As a more conservative estimate, the figure cited in the Nation's Health for potential savings from these diseases is 20,000.

Conclusion: It is obvious that one cannot expect a simultaneous reduction in all types of fatalities. A life saved from one disease will ultimately succumb to another. Control of the communicable diseases of childhood over the past generation and reductions in maternal and infant mortality are largely responsible for the increased number of deaths in the older age groups from heart diseases, cancer, and nephritis. By the same token, with our aging population, some day our total death rate may start to increase.

The absolute numbers given in these estimates are, of course, only broad general approximations of the potential effectiveness of our present medical knowledge as experienced in areas of the United States that have made the greatest progress in control of specific diseases. Even though we know that everybody must die of some cause some day, we cannot be complacent about the continuing prevalence of malaria, typhoid fever, and other eradicable diseases in some parts of the United States, or relinquish efforts to prevent early deaths, prolong lives, reduce sickness and disability, and improve the well-being and productivity of everyone in the country.

Loyalty Pledges

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 23 (legislative day of Thursday, June 2), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Why Not a Constructive Pledge?" published in my home town newspaper, the Eugene (Oreg.) Register-Guard of July 25, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY NOT A CONSTRUCTIVE PLEDGE?

All over the United States there is controversy over the loyalty pledges which are being exacted from public servants, especially school teachers. Most of these proposed pledges take the negative form of a declaration that the person has not been, and promises in no way to be connected with the Communist Party. This sort of pledge is not only futile but a proper cause of resentment.

Why not substitute a constructive pledge for which the pattern is found in the oath which is required of the President of the United States under article 2, section 1, of the Constitution of the United States? It is a very simple thing and it reads:

"I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States."

That same oath, with appropriate variations as to the name of the office, is widely used in the swearing in of all Federal officials and the ranking officers of many States. There is no reason why the same oath should not be administered to all public servants, however humble. There is nothing humiliating in it. On the contrary, this affirmative pledge lends great dignity to any office of trust—and every public office is an office of trust.

Those pledges which refer to communism are insulting because of the implications. They imply that the person who is required to make the promise is already suspect or that he is of such weak character that he could easily be seduced. The affirmative pledge to support the Constitution of the United States, the laws of the State of Oregon, would be sufficiently binding in every case. It is possible to prosecute any public servant who departs from such an oath, if action becomes necessary. But the main point is that this is a pledge which does not degrade. It adds dignity to any public duty.

Enterprise, Oreg.

EXTENSION OF REMARKS

OF

HON. LOWELL STOCKMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. STOCKMAN. Mr. Speaker, under leave to extend my remarks, I wish to include an article written by Richard L. Neuberger about Enterprise, Oreg., which is in the district I represent. Mr. Neuberger has certainly caught the spirit of the town of Enterprise. He makes you want to be a part of this glorious frontier of the West, which is also an active business and agricultural center. I offer the refreshment of the article which follows to every Member of the House and the Senate:

MY FAVORITE TOWN—ENTERPRISE, OREG.

(By Richard L. Neuberger)

The Alps are 7,000 miles away, but they could have been the models for the frowning mountains so close to Main Street in Enterprise, Oreg., that one of the high school's

long-armed basketball stars might reach out and touch a snowy summit. Distance does not dilute the presence of the mountains in this Arcadian trading center near Oregon's northeast corner. Mountains are as much a part of the community as the wide bridges over Prairie Creek or the old box-shaped hotels where all rooms have the same key and no one locks his door anyway.

The traveler on State Highway 82 drives through the twisting slot tooled by the Wallowa River, and Enterprise suddenly is framed in the windshield. Over the cowl the wayfarer sees a compact collection of church steeples, bungalows, and squat two-story business buildings tucked in an elbow of crags.

This embrace of municipality and granite range is an affectionate one; the tight lasso of timberline seems only a snowball's throw beyond the musty courthouse with its recessed windows and piano-crate contours. Two thousand people live in Enterprise, but the dwarfing proximity of the mountains makes it appear little more than an upland village. What edifice of brick and mortar could be a match for Ruby Peak or Traverse Ridge?

People do not even turn around for a second look at a hulking blond young man, 6 feet 5 inches tall and constructed proportionately, who trudges into the First National Bank with a pair of black-and-tan hounds in leash. He is Allan Wilson, who hunts alone for cougars on the rim rock of the nearby Snake River Canyon, deepest in the Nation. Once Allan bagged five during an afternoon and banked $300 in bounty money; for felis concolor, America's biggest cat, is a menace not only to Enterprise's calves and horses, but also to their foraging wild brethren such as elk and mule deer, on the other side of the valley's neat fences.

Allan Wilson is just another citizen performing a workaday job. What matters if the task takes him along chasm thresholds where the Eiffel Tower might be lost in the dim depths below? Nor did Enterprise residents ever waste curiosity on a rosy-cheeked girl working in the sheriff's office, who walked barefooted on an apron of ice down to the congealing waters of Wallowa Lake in December and splashed in to keep her backstroke from rusting. This was commonplace to Enterprise, although the Portland Oregonian, 350 miles away, put it on the front page when an excited tourist described the girl's feat.

Enterprise is off the principal thoroughfares of the Northwest. One always must specially plan an itinerary to enjoy its pastoral atmosphere. Incongruously enough, this distance of the region's culture from mid-channel makes Enterprise impervious to pomp and power, just as contiguity makes it indifferent to the solitudes. Opposite extremes produce the same reaction.

That rangy man with sandy hair, clad in Levis and mackinaw, hunched over a bowl of soup in the dining room of the stone-built Enterprise Hotel, is Justice Bill Douglas of the United States Supreme Court. From the cabin of tamarack logs which he put together himself, Douglas has used the Forest Service phone line, strung from the lodgepole pines in Lostine Canyon, to decline invitations from two Presidents of the United States to be their running mate on victorious tickets. Yet the local chieftain gave the episode a whole lot less attention than did the Times or Herald Tribune, on the other side of the continent in New York City.

Some western towns on the fringe of the backwoods are robust and boisterous. They express their individuality in rodeos and stampedes. Although Ranger Grady Miller, a hawk-nosed man who was brought up in Enterprise and lives in a frame house near the library, manages what the Chief Forrester at Washington calls the most rugged ranger district in the United States of America, the community is staid and placid. Its new $230,000 hospital will not have to be guarded by "Quiet" signs.

On the narrow fields between the last row of Enterprise's homes and garages and the first tilt of the mountains, dairy herds graze in an alpine setting. Up an occasional draw can be seen Eagle Cap, granite capital of the Wallowa Range, where a dozen rivers rise like spokes from the hub of a wheel. These rivers enrich the valley. Grass flourishes in the spring until it tickles a Holstein's belly. Pastures present a sylvan picture against the dark grandeur of the peaks. Ponderosa pines, with orange-colored bark seamed like alligator hide, grow along the dirt roads which lead to the county seat.

The county seat is Enterprise, and it reflects both economically and spiritually this tranquil farming vista. Last year the town shipped $2,800,000 worth of cattle, $1,344,000 worth of hogs, and $1,250,000 in dairy products. The Mount Emily Sawmill hires 90 men, but 60 of them are logging in the woods, so agriculture remains the dominant influence on Enterprise. People study the grain and cattle market before they peer at the dates set for the fishing season.

The outdoor life is accepted with matter-of-fact acknowledgment in Enterprise. Most boys have drawn a bead on an elk by the time they are old enough to take their Tenderfoot tests for the Scouts. Allan Wilson's son Kimmy shot his first cougar when he was 9. It is the breach rather than the observance of this code which draws attention. The Chieftain has been crusading against visiting hunters who use planes to spot the quarry. What chance does this give the poor critter of antler and hoof?

Walter Brennan and Eugene Pallette, movie actors with nearby ranches, shop on Main Street and are accepted as casually as Justice Douglas. This is probably because all these celebrities can throw a diamond hitch, wrestle a yearling, and ride a rim-rock trail. They thus acquire protective coloration. In Enterprise they would be conspicuous only if they could not accomplish these deeds. Ability to weave a diamond hitch on a pack horse is as essential to locomotion outside Enterprise as a driver's license is to travel on the highways.

Enterprise is in a calendar-art setting. The town of steeples and poplar trees, the cows in their carpet of green, the tassels of pine, the majestic ridge of the Wallowa Range—this makes more than one venerable nomad nostalgic for the illustrations in the Heidi book he read long ago. "Switzerland must be like this," is a common reaction of tourists who leave the well-worn Oregon Trail for State Highway 82.

The reaction is not new. It was that of men who wandered into the Wallowas before the internal-combustion engine revolutionized American life. The pioneers saw before them everything they would need. The valley burgeoned with fish, game, timber, water, and rich alluvial soil. Nez Perce Indians had been promised they could live in the region for "as long as the sun shall set in the sky," but now they were ordered to move on. The Stone Age had to give way to the Iron Age.

Under Chief Joseph, the Indians fought for their homeland. At White Bird Hill, east of where Enterprise now dots the valley, more soldiers died than on any day during the Indian wars except when Custer fell. But the Nez Perce were outnumbered. Joseph led them on a meandering 1,000-mile retreat to Yellowstone Park and then north toward Canada. The Second Cavalry cut them off and, surrounded by stacks of his dead, Joseph at last surrendered.

"I am tired of fighting," he told General Miles. "Our children are freezing to death. From where the sun now stands, Joseph will fight no more forever."

From this somber beginning in 1877 stemmed the prosperous hinterland economy which now centers in Enterprise. The town was incorporated 9 years later. Shortly after the turn of the century, the highway and a branch-line railroad were thrust up the Grande Ronde and Wallowa Rivers from La Grande. Tucked away behind its ranges, Enterprise has been a thriving but remote community ever since.

People who see Enterprise lose their heart to a scene which is at once uniquely alpine and rural, and combines the best features of each. Two or three Enterprise professional men actually got there by going through Dun & Bradstreet to find the strongest financial settlement west of the Rockies, within 30 minutes of good hunting and fishing. From widely scattered points, all of them eventually arrived at Enterprise.

Because of their own fierce sense of loyalty to the town, Enterprise's people think they know how the Nez Perce must have felt long ago when ordered to abandon their encampment in the alder trees along Prairie Creek. It is too late now to make amends, but the majestic beetling summit which is closest to town of all the Wallowas bears an honored name. It is Chief Joseph Mountain. The choice was unanimous in Enterprise, where more than one generation has looked up at the snowy crown in salute to a warrior of another time and race who loved the little vest-pocket valley enough to pledge his life for it.

Agricultural Workers

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mrs. DOUGLAS. Mr. Speaker, as I stated in the RECORD yesterday, there is wide distress among the agricultural workers in the State of California because of mounting unemployment. Under the international agreement made with the Republic of Mexico, does the United States Government propose to import Mexican nationals for agricultural work?

In a letter dated August 22, 1949, written to Mr. Robert C. Goodwin, Director of the United States Employment Service, Mr. H. L. Mitchell, president of the National Farm Labor Union, points out very clearly that prevailing conditions in other States around the country indicate there are more than enough agricultural workers here in the United States already to supply the demand without bringing in additional workers from other countries.

Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include a copy of the letter sent by Mr. Mitchell to Mr. Goodwin:

AUGUST 22, 1949.

Mr. ROBERT C. GOODWIN,
Director, United States Employment Service, Washington, D. C.

DEAR MR. GOODWIN: I was very glad to see that the reorganization plan transferring the United States Employment Service back to the Labor Department has been approved by Congress.

There are several matters I would like to take up with you at this time and I trust some consideration may be given to the proposals I am making.

We have been over the recent international agreement with the Republic of Mexico for importation of Mexican nationals. While it

may be some improvement of last year's agreement, with between four and five million American citizens out of work, the bringing in of a single foreign worker is indefensible on any score.

I note that under terms of the new agreement, you do have a certain amount of discretion as to establishing needs for agricultural workers. I also note that there is a provision that priority may be given to Mexican wetbacks who are in this country illegally before any recruitment is done in Mexico. According to a report issued June 29, of a survey jointly undertaken by the University of Texas on the general educational board of the Rockefeller Foundation, it is reported that there are a half million illegal Mexican aliens in the State of Texas alone. The United States immigration authorities along the border can apprehend any number of illegal Mexicans for carrying out the purpose of the international agreement up to the 35,000 proposed to be recruited under it.

According to your memorandum of July 25 to members of the Farm Labor Advisory Committee, certifications as of July 1, were made for 10,336 British West Indians; 12,021 Canadians; 9,867 Mexicans, in addition to 5,707 American citizens from Puerto Rico. It was also stated that a ceiling of 5,000 Canadians for the potato harvest in Aroostook County, Maine, had been set.

In reference to the British West Indians, we understand that approximately half of the number given in this break-down have been in this country since the war, certifications have been renewed each year, and these workers transferred annually from Florida to Connecticut and other New England States.

Among the employers of British West Indians is the Imperial Agricultural Corp., of Hartford, Conn. A number of our unemployed members wrote the personnel director of that corporation asking for jobs. A postal card was sent to them (a copy of which is enclosed) urging them not to come to Connecticut as there were no jobs for them. It is well known that there is unemployment in the State of Connecticut as well as in other New England States. It appears to me that your office should see that the foreign workers are returned immediately to their homes and American citizens given such jobs as may be available.

I know the argument that industrial workers will not accept low-paid jobs and that it is not the function of the United States Employment Service to concern itself about wage rates and other conditions. I would also like to point out that it is not the function of the Employment Service to maintain these low rates and bad conditions by supplying labor from this or any other country for exploitation. The tobacco companies make millions of dollars and some of them, such as the Imperial Corp., are owned by foreign capital.

Further, each year at the end of the tobacco harvest these British West Indians, numbering approximately 2,000 to 2,500 are transferred back to Florida to work for the United States Sugar Corp., at Clewiston, and others are sent south to take jobs of Americans in the fruit and vegetable crops. I am informed that the Florida Employment Service has had an order for 2,500 sugarcane workers for months and has done nothing about recruiting American citizens for these jobs. At different times we have made direct offers to the United States Sugar Corp. to assist in recruiting all the labor they need from the mid-Southern States. We have gotten nothing but a run-around from the company and the employment service. The Jamaicans go back each year to work and unless immediate action is taken, the same thing will happen this year. Would it not be possible for you to send the British West Indians back to their homes and assist the United States Sugar Corp. in recruiting its labor from sources they used prior to the war, in Arkansas, Tennessee, and Mississippi?

About 60 days ago, Mr. B. J. Dorsky, president of the Maine State Federation of Labor, wrote me that the Maine Employment Service Commission had communicated with him in reference to the proposal to bring in 5,000 potato harvest hands from Canada. We replied, offering to cooperate in recruiting the 5,000 workers needed for this job. But Mr. Borsky informs me that he discussed the matter with employment service officials and received some assurance that they would accept Americans before bringing in foreign workers. To date, nothing has been done, as far as I can determine.

I also wish to call your attention to an application for 9,000 foreign workers being made for cotton picking in the State of Mississippi. The cotton report of August 1 estimates that the Mississippi crop will be 753,000 bales less than last year, due to boll weevil infestation. Decreases indicated in production for the State of Arkansas, 332,000 bales; Alabama, 237,000 bales; Louisiana, 131,000 bales; Missouri, 31,000 bales; Tennessee, 20,000 bales; or a total of 1,504,000 bales in these mid-Southern States less than last year. In terms of manpower requirements for picking the crop, each worker averaging 200 pounds per day, 5 days a week for 8 weeks, there will be no jobs for 282,000 cotton pickers who found employment picking cotton in these States last year. I might point out that cotton estimates of the Department of Agriculture Crop Reporting Board on August 1 of each year are usually very close to the accurate picture prevailing during the coming season.

Although there is an indicated increase in cotton production in Texas, Arizona, New Mexico, and California offsetting the decrease in the Southeast and mid-South States, the labor supply is available in these States for harvesting the cotton crop. There is terrific unemployment in California now and people out there could well be sent to Arizona for harvesting the crop. I would like to point out that in irrigated land, cotton does not deteriorate as rapidly as elsewhere. With Government guaranties of cotton prices there is no reason to attempt to furnish enough labor to pick the cotton crop as rapidly as it opens. The work season in all parts of the Cotton Belt could be extended 30 days and the agricultural workers benefit by it. The United States Employment Service is not obligated to protect the profits of the employers any more than it is obligated to concern itself with wages of the workers.

As to the sugar-beet section of the country, I am not prepared to comment on that directly; however, it may be noted that the thousands of native-born Americans of Mexican descent who have been forced off the farms along the border in Texas are available for jobs. The sugar-beet growers formerly obtained all their labor from the cities of Texas. They can do so again when 4,000,000 Americans are unemployed.

Sincerely yours,

H. L. MITCHELL, *President.*

Seattle City Light Continues Remarkable Growth—Places One of Largest Generator Orders on Record

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. MITCHELL. Mr. Speaker, Members who are familiar with our great Federal power projects—Bonneville and Grand Coulee—in the Pacific Northwest may not relaize that we also have large-scale power projects operated by municipal agencies. I believe the Members will be greatly interested in the following account of the progress of Seattle City Light, written by its superintendent, Mr. E. R. Hoffman, and published in Public Power magazine for August 1949.

Under Mr. Hoffman Seattle City Light has understood the growing demand for power and has lost no time in its efforts to develop fully the hydroelectric capacity of the Skagit River.

Mr. Hoffman's article gives salient facts and figures and outlines the consistently forward-looking attitude of Seattle City Light.

SEATTLE'S PIONEER SYSTEM PLACES ONE OF LARGEST GENERATOR ORDERS—UTILITY ORDERS THREE 90,000-KILOWATT ELECTRIC GENERATORS; HAS DOUBLED CAPACITY AVERAGE OF ONCE EVERY 5½ YEARS

(By E. R. Hoffman, superintendent, Seattle City Light)

Symbolic of a phenomenal growth that has seen the system double its load an average of once every 5½ years, Seattle City Light last month gave Westinghouse Electric Corp. one of the largest orders for electric generators ever placed.

Three 90,000-kilowatt machines, which will cost almost $4,450,000, were ordered for the new Ross powerhouse. First of these new units is expected to start operating in November 1952, the second in February 1953, and the third in May 1953. Still another Westinghouse generator, of 60,000-kilowatt capacity, was recently ordered for City Light's Gorge powerhouse, at a cost of $935,677. It will be installed and placed in operation by September 1951, but will run at two-thirds capacity until a new higher dam is built at Gorge.

Plans for expanding the Seattle system are indicative of the constant progress made by this utility since it was begun in 1902. Since that time, when it had only a street lighting load, the utility has had a phenomenal growth, and now ranks second only to Los Angeles in the size of the municipally owned electric systems. Its assets now total about $135,000,000. Customers exceed 115,000, and employees number approximately 1,300.

Fundamentally, Seattle City Light has been a pioneer—first municipal utility to build a hydro plant (1905); first in low rates and good service; first in promoting the use of electric ranges, hot-water tanks, and other appliances; and first with an intelligently planned, sustained public relations program.

PIONEERED IN ELECTRIC COOKING

In 1910, when electric cooking was a radical innovation, Seattle City Light started selling electric ranges. It not only sold them, but rewired them for more efficient operation, and passed the new ideas back to the manufacturers.

At the end of 1948 more than 77 percent of Seattle City Light's residential customers used electric ranges. Approximately 50,000 had electric hot-water heaters, and 42,574 were on the all-electric rate, using only electricity for lighting, cooking, and automatic storage-tank-water heating.

The average charge for electricity to Seattle City Light residential customers in 1948 was 1.259 cents per kilowatt-hour, compared to a national average of 3.01 cents. The average Seattle City Light residential customer used 5,059 kilowatt-hours in 1948, compared to a 1,563-kilowatt-hour national average.

LARGE CONSTRUCTION PROGRAM

Seattle City Light has maintained a heavy construction program almost constantly for nearly 50 years. Its Cedar Falls hydro plant was built to the maximum practical capacity

of 30,000 kilowatts in 1929. Its Lake Union steam plant provides 38,000 kilowatts, considered ample for reserve or emergency use (the steam plant has been operated during the shortage to feed power into the Northwest power pool).

Seattle City Light's Skagit project, one of the large hydroelectric projects in the world, is being developed as rapidly as possible. The Skagit plants now furnish 194,000 kilowatts, which is scheduled to be increased to 644,000 kilowatts by 1956. Further development is practical.

The Skagit River, largest tributary to Puget Sound, cuts through a deep gorge in the Cascade Mountains about 100 miles northeast of Seattle and about 20 miles south of the Canadian border. The steep fall of the river makes it possible to run the same water—each time at a high head—through three generating stations in 11 miles.

Gorge power house is located in the town of Newhalem at the lower end of the gorge, and receives waters through a 20½-foot tunnel 11,000 feet long. Water enters the tunnel behind a low-diversion dam that is scheduled to be replaced with a high dam in 1956, greatly increasing the capacity.

Diablo Dam, 389 feet tall, and Diablo power house are located about 7 miles upstream from Newhalem. At the head of the gorge stands Ross Dam, fourth tallest in the world and only 10 feet shorter than Grand Coulee.

Contracts for construction and equipment totaling about $20,000,000 will be let in 1949. This includes thirteen 230,000-volt transformers, three 90,000-kilowatt generator units, and a large amount of line and substation equipment.

Over 100 miles of steel-tower 230,000-volt transmission line will be constructed, at a cost of more than $6,000,000, work to start this year. Work is already under way on the addition of 274,000 kilovolt-amperes of substation capacity. Also work will start this year on 70 miles of new 110,000-volt subtransmission line.

FINANCING EXPANSION

Seattle City Light's construction is paid for by revenue bond issues and money appropriated from earned surplus. The utility has paid its own way from earnings from its beginning, and the excellence of its financial position is shown by the eagerness of bidders for its bonds, at effective interest rates as low as 1.83 percent.

The power shortage of the Northwest power pool is expected to affect Seattle City Light for several winters to come, as long as the utility remains a member of the pool and is called on to share the available power.

Last winter the writer pointed out that Seattle City Light was better able to carry its own load than most other utilities in the area, and had a 10-year contract with Bonneville for sufficient power to fill out its needs. The same was true of Tacoma City Light.

Books Abroad

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of August 19, 1949:

BOOKS ABROAD

Conscientious objectors who worked on farms and in hospitals in lieu of military service during the war were not allowed to receive for their own use the wages which they earned. Instead, these wages were paid to Selective Service and kept in the Treasury in a special deposit. They aggregated, in round figures, about $1,250,000—a tidy contribution on the part of the COs. There was a kind of unofficial understanding between Selective Service and the COs that at the end of hostilities the latter would be allowed to designate the use to which this contribution should be put. An informal poll was taken in 1945 among the men whose earnings created the special Treasury deposit. The consensus was that it should be devoted to relief purposes, and this year the National Service Board for Religious Objectors requested that the money be used through the CARE book program for the benefit of the war-destroyed libraries of Europe. It seems a singularly apt designation in keeping with the principles to which the COs adhered.

Senator SPARKMAN, in the Senate, and Representative JUDD, in the House, have introduced bills to bring this wish of the COs to realization. Their bills would simply authorize a contribution to CARE of an amount equal to the moneys received by the Selective Service System for work performed by the COs. The authorization is, in a sense, an obligation of the United States and deserves congressional assent now, despite the pressure of more weighty and urgent measures. It would constitute, moreover, a most felicitous way of acknowledging the real and respectable service rendered by the men whose consciences forbade them to fight; and it would render valued aid in the cultural rehabilitation of Europe.

Order of the Day Issued by Gen. Julius Klein and Address by Hon. Alexander Wiley, of Wisconsin, at American Legion Celebration at Columbus, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, August 24 (legislative day of Thursday, June 2), 1949

Mr. WILEY. Mr. President, we all know that one of the most important means for defense of our beloved Nation is through a strong, well-equipped, well-trained National Guard. At this very moment, throughout our Nation, many guard units are out on training maneuvers. For example, at Camp Haven, at Sheboygan, Wis., there are being trained units of the Illinois National Guard under the able command of Brig. Gen. Julius Klein. This distinguished and popular soldier commands the One Hundred and Ninth Antiaircraft Brigade, which trained last week at the splendid facilities at Camp McCoy, Wis.

The One Hundred and Ninth Brigade is one of the largest antiaircraft brigades of the Middle West. From the write-ups which I have read in Wisconsin newspapers, including the Sheboygan Press, General Klein's units have met a characteristically hospitable reception from our Wisconsin people and officials.

FOURTH ANNIVERSARY OF UNITED STATES VICTORY IN JAPAN

Last week marked the fourth anniversary of the surrender of the Japanese forces to General MacArthur. At that time I was glad to note that General Klein had issued an order of the day to his troops commemorating this inspiring occasion. I should like to point out that at the time of the surrender, General Klein commanded 10,000 combat troops under General MacArthur.

General Klein, in his order of the day, stressed the importance of adequate preparedness in order to prevent a repetition of the terrible unpreparedness which we have experienced unfortunately on several occasions in our history.

SENATOR WILEY'S LEGION ADDRESS

I believe that my colleagues will be interested in this order of the day, not only for its patriotic and historic meaning, but because its message on preparedness is so vital in these troubled times. Last Sunday, in addressing an American Legion celebration at Columbus, Wis., it was my own privilege to also reiterate the importance of eternal vigilance.

I ask unanimous consent that the text of General Klein's statement as carried in the Chicago Herald-American of August 15 be printed in the Appendix of the CONGRESSIONAL RECORD, and that it be followed thereafter by the text of my own address entitled "The Minute Men of 1949" at the American Legion observance in Columbus, Wis.

There being no objection, the order of the day and the address were ordered to be printed in the RECORD, as follows:

[From the Chicago Herald-American of August 15, 1949]

GENERAL KLEIN HAILS MACARTHUR IN ORDER TO ILLINOIS NATIONAL GUARD

CAMP MCCOY, August 15.—Brig. Gen. Julius Klein, commanding general of the One Hundred and Ninth AAA Brigade, Illinois National Guard, issued the following order of the day yesterday.

"This significant day in history should not be unnoticed by members of this command. Four years ago on August 14, 1945, the Japanese nation conceded defeat and Gen. Douglas MacArthur thus erased the stigma of the treacherous attacks on Pearl Harbor, Corregidor and Bataan.

"We citizen-soldiers salute General MacArthur, whose devotion to duty keeps him behind his desk in Tokyo. Those of us fortunate enough to have served under the general know first-hand that our former commander in chief has as his goal peace and the establishment of democracy as a working principle throughout the world.

"Placing his job above all else, General MacArthur will continue to serve his country until the job is done. Then, and only then, will General MacArthur return to receive the well-deserved plaudits of his grateful countrymen.

"As members of this command go about their duties, let them not forget our comrades who fell in battle, sacrificed their lives so that we may enjoy the benefits of a free world. Those who bear scars of the conflict today realize they were spared to help the world in its struggles for peace and freedom. We must prove ourselves worthy of these sacrifices.

"Training as we are today, we citizen-soldiers are charged with the responsibility of protecting our Nation, and a strong National Guard is added insurance that this Nation will never again suffer the ignominy of another Pearl Harbor.

"Yesterday, we trained with broomsticks and wooden rifles. Today, we train with modern, combat-proven equipment. We must be efficient in the use of this equipment. Never again must the scornful 'they were unprepared' echo throughout the world.

"This Nation must be prepared to discourage totalitarianism in any form. Well-trained and equipped, we can easily attain the objective. Thus we will be true to the memory of those who laid down their lives in the cause of democracy and to our old battle commander, General MacArthur, who today individually leads the battle for the preservation of the democratic principle in the Far East."

General Klein commanded 10,000 combat troops under General MacArthur and in the days of the Japanese surrender was at MacArthur's headquarters in Luzon.

A copy of this order of the day was wired to General MacArthur at his headquarters in Tokyo.

ADDRESS BY THE HONORABLE ALEXANDER WILEY, UNITED STATES SENATOR FROM WISCONSIN, AT AMERICAN LEGION CELEBRATION AT COLUMBUS, WIS., ON SUNDAY, AUGUST 21, 1949

THE MINUTE MEN OF 1949

It is a real pleasure to be with you here today at this great community patriotic gathering.

You know sometimes, when things don't go so well in Congress, some Senators or Representatives may get discouraged about the fate of our Nation. But getting back home again, feeling the strong steady pulse of Wisconsin, seeing the gathering of the colors at an inspiring assembly like this one—this serves to raise any man's spirits and give him new confidence that our beloved country—yours and mine—will be adequate.

That, my friends, is the theme of these few remarks today—adequacy in this age of aviation, this age of atomic bombs, this age of communism sweeping throughout the civilized globe.

WORLD WATCHES GRASS ROOTS ACTIONS

It may seem hard to realize, but the eyes of the world today are focused upon communities like Columbus, Wis. Why? Because you here are really America. Washington, D. C., doesn't really determine the future of our Nation. Rather it is communities like Columbus, Wis., at the grass roots of this land of 148,000,000 people, which will decide whether America will remain intact or whether it will go down the road of dictatorship as so many other countries have gone.

You men and women, members of the Legion, members of the National Guard, of the Organized Reserves, of other fraternal and service organizations, are the minute men and minute women of America in 1949.

THE MEANING OF VIGILANCE

Now what do I mean by minute men? I mean that spiritually, economically, politically you stand at the ramparts today the way Wisconsin boys stood at the ramparts at Gettysburg or other American boys stood at the ramparts at Lexington and Concord in 1776, the way you veterans stood on guard in two world wars. That isn't empty talk, my friends. You and I want to make sure that the enemy from without and the enemy from within does not breach those ramparts. You remember that Abraham Lincoln warned us to beware most of all of "the enemy from within."

Let us, therefore, analyze just how you and I are called upon for adequacy. Let us see just how it is that you and I must defend this great land.

INVINCIBLE NATIONAL DEFENSE

Now obviously the first way by which you and I can do so is to make sure that we have the strongest possible armed forces in the Nation. History has taught us that the mere desire for peace, the mere writing of a treaty—the North Atlantic Pact, or any other document, does not of itself make for peace. To be prepared, George Washington told us—"to be prepared for war is one of the most effectual means of preserving the peace."

The 18,000,000 ex-servicemen of our Nation know that. Many of you men know what it is to go into action practically as a raw recruit because our Nation did not adequately prepare. You know that America has unfortunately followed a practice of starving its armed forces in between wars and then trying frantically at the last moment when a Pearl Harbor occurs to build up overnight a striking force. We must not allow our armed services to deteriorate again.

I don't mean, of course, that we should be extravagant with our military appropriations. On the contrary, every single dollar that is spent in our $13,000,000,000 defense budget (the budget which you as taxpayers will have to pay)—every single dollar must go for the most up-to-the-minute rifles, machine guns, cannon, bazookas, airplanes, rockets and all of the other terrible but necessary instruments of modern warfare.

Your Congress has taken actions to secure the best possible defense. We have passed measures to reorganize our armed forces in the light of the Hoover Commission reports. We have appropriated liberally to the Army, the Navy, the Air Corps, and the Marines. We have passed legislation in the interest of the National Guard and the Organized Reserve Corps. We have tried to encourage our men to devote a few hours of several days during the week in preparing themselves against any future emergency.

But we still have a long way to go in making sure that this country never again falls the victim of a Pearl Harbor-like attack. Military defense of itself is not sufficient. Moral defense, if you please, spiritual defense, economic defense—these are all necessary, too.

SPIRITUAL DEFENSE

Now just what do I mean by spiritual defense or moral defense? I mean that you and I must take steps to see that America is strong enough psychologically to withstand the greatest onslaught of alien-thinking that has ever swept across the globe. I refer, of course, to the red tide of communism. This tide has already enveloped the 425,000,000 people of China. It is penetrating across all of Asia. It has clamped an iron curtain over half of Europe. It is on the march everywhere.

The agents of communism are in Wisconsin as they are elsewhere in our Nation. They are not always card-carrying members of the Communist Party engaged in underground activity. Oftentimes, they pose in the guise of mere fellow travelers or parlor pinks. They say they don't want communism but merely, let us say, socialism or some other hybrid variety. Nevertheless, my friends, these are the enemies from within against whom you and I must prepare and against whom we must be adequate.

The minute men and women of the American Legion and Auxiliary are called upon to antidote the Communist propaganda wherever it may arise. It may come in the schools. It may come in labor unions. It may come amazingly enough even from the pulpit. It may come in the press. Yes, it may come from government as you and I so well know.

These agents of communism and their dupes or fellow travelers try to disintegrate our Republic. They try to set class against class, religion against religion, labor against management, farm people against city people. Communism thrives on such disunity. It thrives on anarchy and chaos, on hatred and fear. It is up to you and me, my friends, to antidote these conditions, to replace poison by poise, unbalance by balanced, clear, sane thinking.

You and I can't pass the buck for anti-Communist activity to Washington. Right now, in the Senate Judiciary Committee, we are reviewing anti-Communist legislation. But it will be to no avail for us to pass such legislation unless you here at the grass roots of Wisconsin are eternally vigilant and, as you and I so well recall, such "eternal vigilance is the price of liberty."

This, my friends, constitutes moral defense, spiritual defense, against alien thinking. You and I are called upon to defend not only the free-enterprise system against the system of collectivism, but we are called upon to preserve the other great landmarks of this great country—the Constitution with its Bill of Rights. There are some individuals who would want to sabotage the Constitution. They do not want three coequal branches of government to rule our people—the executive, the legislative, and the judicial. They want the Chief Executive to take over and Congress to become a mere puppet of the President with the courts also becoming the slave of the executive branch. Such actions, my friends, would in effect nullify the Constitution. This is a real and pressing danger. More and more legislation is being suggested which limits the power of Congress and in turn gives more power to the Chief Executive.

Men of good will of both major political parties are fighting against this legislation. This isn't just a partisan matter. It is a matter of patriotism or nonpatriotism.

JUSTICE FOR VETERANS

Part of our spiritual defense must, of course, come in the form of showing our gratitude toward those whom we can never fully repay for their great service to our country, and I refer, of course, to our 18,000,000 ex-servicemen. How can this Nation possibly be spiritually strong unless its discharges its debt to these veterans?

We have made some progress along this line. Congress has steadily sought to perfect the GI bill of rights in the interest of World War II veterans. The House of Representatives recently passed H. R. 5598, an omnibus veterans' bill. It did so without dissent by a smashing vote of 356 to 0. Under this bill, compensation of service-connected veterans is increased by something more than 8 percent. Over 2,000,000 veterans of World Wars I and II will be affected by various sections of this bill increasing disability and death payments.

And there are other bills which will be necessary in the interest of non-service-connected disabled veterans. You and I know that all veterans, their widows, and dependents, have been hard hit by the constant rise in the cost of living which has made their pensions and allowances very inadequate in many cases.

Earlier in this Congress, along a somewhat different line, I was happy to cooperate with the American Legion in introducing and securing the passage of three bills to protect the insignia of the American Legion, the American Legion Auxiliary, and the Sons of the American Legion, from commercial infringement. In addition, I was glad to introduce other legislation urged by the Legion and other veterans organizations, to extend the readjustment allowance provision of the GI bill of rights. This provision, as you know, helps tide unemployed or self-employed veterans over periods of inactivity and lack of earnings. The Senate Labor Committee reported a version of this bill unanimously, but the readjustment allowance provision expired. I have hopes to revive it.

AMERICAN PIONEERING

May I conclude my talk today to you Minute Men of 1949 and of the days that are to follow with this thought: That there is no unresolved problem that under God, we will not be able to solve. The pioneer spirit is still a part of our American make-up. In spite of frustrations, we've never laid down on the job. When there is a problem in front of us, there's always the impulse to do something about it. And in spite of the kicker and the defeatist, the record of human

achievement on this continent is heroic and worthy. But you and I know we can't live on merely contemplating the past. Of course, we can be grateful that ever since the seventeenth century on this continent there has been a long heritage of voluntary cooperation and that there has always been adequacy in this race to meet any challenge that arose.

SELF-RELIANCE NEEDED

You and I know that none of our accomplishments or our victories were just automatic. There was always a struggle. What you and I must do is quit spending our time merely on criticizing and denouncing those who oppose the ideals of the Republic, and instead, let us revitalize those ideals. Yes, there must be a renaissance in the individual and in the national group—renaissance or a new rebirth resulting in self-improvement. This improvement of the individual cannot come from bureaucracy or the general welfare state. Rather, it comes from a rebirth of the individual's own spirit along lines of self-reliance.

This Nation is the result of individual planning, not governmental planning. Its political system from the very beginning was built upon the concept that the individual should develop and grow and not become the serf of the state. There was a restlessness about our forebears, resulting in seeking and searching, in wondering what was beyond the horizon. In other words, this resulted in self-development. Now, one of the dangers today not only to the individual but to our society, is the idea of the benevolent so-called welfare state where men get to become leaners upon the fancied panacea of state planning. The natural step that follows is the socialistic state, then communism is the next step.

WE MUST PREVENT UNLIMITED POWER IN ANY GROUP

Karl Marx spoke of the dictatorship by the proletariat. The proletariat, of course, was the third estate, with unlimited power in a premier presiding over a so-called representative assembly. This was not a check and balance state, such as we have. You and I know that Stalin, Hitler, and Mussolini, and, yes, Napoleon were not just historical accidents. They were the natural result of a sequence of wrong political thinking. We don't want their counterpart to arise in America. To make sure that they won't arise, we will have to fight consistently against domination by any third estate, whether it be called business, labor, or any other group. We've got to fight and see that such a group does not get unlimited power.

You know, the real danger of the Republic is the tendency to take on European political philosophy and abandon our American way. There is a saying that when conditions arise where the people have nothing to lose, then, there is an opportunity for dictatorship. But, my friends, we have everything to lose, if we permit a third estate—labor, management, or any other group—to take over. Let us ask ourselves what we've got to lose, and when we do that, we will see the tremendous values and blessings which Americans enjoy.

Let us remember that anything that subjects the individual to the state, that creates in the state a tyrannical power over all society, that this does not constitute an advance, nor is it liberal. When government bureaucracy increases, so does the danger to representative government.

RESULTS OF RED PHILOSOPHY

The light within, my friends, has not died out in the Republic, but here and there, it seems to burn quite dimly. Russia and America stand face to face across a prostrate world. The world looks to America and we've got to see that the pioneering spirit of our forebears is revived. When that happens, we will realize that a democracy means a government of the many, and not of the few; that States' rights must be more and more recognized; and that the functions of central government must more and more be limited.

Today the rise of Communist philosophy has aroused a few of our people to the danger that we are facing, but there is always the danger of others becoming complacent. That is where you minute men fit in. Arouse those who would otherwise go to sleep.

Let me point out, however, that the philosophy of communism has had some other results. It has aroused a new vitality in the teachings of the Man of Galilee, and this is fortunate, indeed, for our sorely tried world.

CONCLUSION

I want to thank you, my friends, for your kind attention to this address. It has been a real joy to get back to Columbus and to discuss the over-all problem of defense of our Nation—impregnable military defense as well as spiritual defense.

I hope that when I get back to Washington, you will drop me a note now and then whenever the spirit moves you on ways and means by which I can be of service.

Thanks again and good luck to you all.

Unemployment in Northern Michigan

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. POTTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter received from Mr. Myrt M. Riggs, executive secretary, Cheboygan, Mich., Chamber of Commerce.

This letter points out just one example of the unemployment problem existent throughout northern Michigan. I have brought the economic condition of Cheboygan, as well as other small communities in my district, to the attention of Dr. Steelman's office. Our small communities are receiving the full brunt of our unemployment problem and every aid should be extended them in the letting of Government contracts.

The letter follows:

CHEBOYGAN CHAMBER OF COMMERCE,
Cheboygan, Mich., August 18, 1949.

Hon. CHARLES E. POTTER,
Member of Congress, House Office Building, Washington, D. C.

DEAR CONGRESSMAN: Cheboygan's unemployment problem has now reached the point where nearly 50 percent of our employable workers are without jobs and we therefore appeal to you for whatever help you can give us in getting Government contracts for our industries.

Our paper mill, which is Cheboygan's largest industry, has been shut down since the first of the year, and by now the men who were employed there have drawn as many unemployment checks as they are eligible to receive. The mill owners are attempting to reopen the mill but in this business readjustment period they have been unable to obtain enough orders to resume operation. Consequently, a critical situation faces these men and their families if the mill is not able to obtain enough orders to justify reopening soon.

The Great Lakes Garment Manufacturing Co.'s plant, Cheboygan's second largest industry, is operating at only 45 percent of capacity. This industry has a long record of steady operation during normal times but since the first of the year has not been able to obtain enough orders to provide even reasonably steady employment for its workers.

There are several other small industries in Cheboygan that employ from about 15 to 60 workers each and they too are in need of additional business to help overcome a very serious unemployment problem here.

Normally the paper mill employs about 200 men and the garment factory about 150, most of which are women. These are our two largest industries and because the paper mill has not been in operation since the first of the year and with the garment factory operating at only 45 percent of capacity it can readily be determined that we are face to face with a very serious unemployment problem.

With our two principal industries unable to provide the jobs which Cheboygan depends upon for a major share of its employment and with other business here off considerably our total unemployed is now nearly 50 percent of our employable workers.

Announcement of the huge number who are out of work in Cheboygan was made by Leonard J. Sullivan, manager of the unemployment office here during an emergency meeting of the Chamber of Commerce Industrial Committee this week when we met with the managers of our two largest industries to discuss Cheboygan's employment prospects in the period ahead.

R. W. LeRoy, president of the paper mill, reported at our meeting that he had orders for only 2 days' operation and this naturally would not justify reopening the mill. C. J. O'Toole, manager of the Great Lakes Garment Manufacturing Co., said his industry had no immediate solution to their unemployment problem.

With nearly 50 percent of our people out of work because our industries are without orders we respectfully appeal to you for all the assistance you can give us in getting Government orders that will overcome a critical unemployment problem which we are now in the midst of.

We will be deeply grateful for any assistance you give us and will you please advise us what procedure to follow toward solving our problem?

Very sincerely,

M. M. RIGGS,
Executive Secretary.

Lodi, Calif., Maintains Low Tax Rate Due to Municipal Operation of Electric Distributing System

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks, I include herein an editorial from the Sacramento Bee concerning the tax rate in Lodi, Calif.

Lodi, in my opinion, is one of the big little cities of America. It has a high per capita wealth. It has a very fine municipal government which is well managed and it has a low tax rate. The tax problem of Lodi is solved by the fact that Lodi operates its own electric and water distribution systems. This has been the situation for many years and

the result is that Lodi has many improvements but a very low tax rate. The article referred to follows:

WHY LODI'S TAX IS LOW

The city of Lodi has adopted a tentative budget for the 1949-50 fiscal year calling for a $1 tax rate, a reduction of 15 cents from the current modest rate.

Now, if anyone wants to find out why taxes are so low in Lodi, the answer is very obvious and can be found very simply.

It lies in the fact Lodi operates her own electric and water distributing systems, two splendidly run publicly owned utilities enjoying a gross annual income of more than $500,000.

Low tax rates are nothing new for the San Joaquin County city.

They date back to the time her people threw off the yoke of the privately owned utilities and went into the power and water business for themselves.

These two systems have made possible numerous civic improvements. And in the next year the income will permit the purchase of two fire engines, two police cars, three new trucks for the street department and the employment of two additional policemen and three firemen—in addition to $100,000 for capital outlays.

Other vexed communities struggling with the problem of rising tax rates could profit from the experience of Lodi.

Military Aid to Europe—Letter by Robert S. Field

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 24 (legislative day of Thursday, June 2), 1949

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Robert S. Field regarding military aid to Europe, which appeared in the New York Times on August 4, 1949.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of August 4, 1949]

POLICIES TO FOSTER TRADE—IMPORTANCE IS STRESSED OF ECONOMIC RECIPROCITY AS PROVIDED IN PACT

VINELAND, N. J., *August 1, 1949.*

To the EDITOR OF THE NEW YORK TIMES:

Controversy over the precise amount of military aid to be given Europe to implement what General Bradley recently described as our "strategy of deterring a potential aggressor," must not be permitted to detract from the task of implementing the economic provisions of the North Atlantic Pact.

Sometimes overlooked, article II of the pact reads in part: "The parties * * * will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them."

Early next month critical conferences will be held in Washington between representatives of Britain, Canada, and the United States for the furtherance of such economic collaboration. Exceedingly difficult issues are involved. The capacity for intelligent compromise characteristic of these three great nations gives hope of success, but only if any drift toward renewed protectionism be rigidly rejected.

We hear much about British hesitance to incur the risks of greater multilateralism in trade at this stage of her recovery. Our own reluctance to assume the risks involved in renewal of our reciprocal trade program and adherence to the International Trade Organization could be productive of far more serious consequences.

No one anticipates the return of Smoot-Hawleyism. But so vast is our purchasing power that even a moderate drop in our imports due to the recession may embarrass smaller European nations struggling to get back on their feet. Failure to extend trade agreements legislation or join the ITO may seriously enhance the pessimism that deepens depression, by awakening memories of 1930, when our tragic error of trying to relieve economic stagnation at home by cutting imports from abroad served to curtail the sales and purchasing power of our foreign customers and thereby aggravated the depression and the Hitler horror.

Some measure of military aid seems necessary. But in the heat of arguing how much and for what precise purpose, let's not lose sight of the necessity of sound trade and tariff policies. Although less in the foreground of public discussion they are absolutely indispensable to the creation of a healthy European economy capable of resisting Communist infiltration.

ROBERT S. FIELD.

Insurance Feature of FHA Bill

REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. WICKERSHAM. Mr. Speaker, much more encouraging news was presented to us this week on private housing legislation. The House Banking Committee reported H. R. 5987 by a vote of 13 to 6, a far better bill than the Senate version. Here are high lights of the House bill:

The nonprofit billion-dollar cooperative housing section was removed, as was the title transferring permanent war housing to public housing agencies.

National Association of Home Builders of the United States recommendations for higher mortgage limits in high-cost areas were accepted. Title I, section 8, limit of $4,750, and section 203 (b) 2 (D) Sparkman bill limit of $6,650 were both increased by $950, but only for high-cost areas at the discretion of the Administrator.

Combination 505 (a) loans were retained, as urged by National Association of Home Builders of the United States, but an expiration date of 180 days was established—probably about March 15, 1950.

Section 608 was extended to June 1950 with no change in the 90-percent insuring limit; Senate bill reduces loan to 80 percent. Of equal importance, satisfactory provisions were made for FHA's administrative expenses.

Three hundred million dollars direct Federal loans by the Veterans' Administration at 4 percent was kept in the bill. A floor fight may strike out this proposal.

Fannie May liberalizations of great importance were approved—specifics described hereafter.

SOME HURDLES HOUSE BILL MUST JUMP

Must secure rule for floor action. No opposition was encountered. The rule has just been granted.

The bill must survive emasculating amendments on the House floor.

The House bill must prevail against Senate bill in conference committee, where differences are adjusted and compromises made.

Because of objectional features the Senate bill will likely have a rough time on the Senate floor. The coalition may not muster sufficient strength to knock out direct Veterans' Administration lending and cooperatives.

House action is possible today. The Senate floor action is unlikely until after Labor Day.

Titles I and VI will expire August 31. A lapse of days and even weeks before new bill reaches White House is likely.

COMPARISON OF HOUSE AND SENATE BILLS

Because the industry and veteran home buyers alike have so much at stake, because congressional decisions will depend upon impact of informed individuals writing, wiring, and phoning their Congressmen, I will devote my time to comparison of the bills. Study the provisions carefully because the volume of construction and sales for the next year will depend upon the settlement of these issues.

Here are the high lights of the two bills:

FHA TITLE I AMENDMENTS

House bill, H. R. 5987, extends title I to July 1, 1952, in an amount of $1,250,000,000. Class 3 loans are reduced from $4,500 to $3,000, and new section 8 with maximum mortgage amount $4,750 for 95-percent 30-year loans may be increased by FHA to $5,700 maximum in high-cost areas. Senate bill has same provisions excepting that $4,750 is maximum loan.

FHA TITLE II AMENDMENTS IN HOUSE BILL

Title II revolving fund increased by $1,500,000,000. Section 203 (b) 2 (B) now providing 90-percent $6,300 loans repealed. Section 203 (b) 2 (C) is amended to provide 95 percent of $7,000 value plus 70 percent of the excess up to total of $11,000 on owner-occupant 25-year mortgages. Present law is 90 percent of $7,000 and 80 percent of excess to $11,000. Senate bill carries the same provision.

Section 203 (b) 2 (D) provides maximum mortgage amount $6,650 on a 95-percent 30-year mortgage with $950 additional for each bedroom in excess of two but not exceeding four—85-percent firm commitment for the builder. Maximum of $6,650 may be increased by FHA to $7,600 in high-cost areas. Senate bill does not provide this permissive increase.

Section 207 is amended and new section 213 added for nonprofit cooperative housing. Four-percent loans for 40 years. House and Senate versions differ slightly.

FNMA AMENDMENTS

House and Senate bills agree on all provisions. The 50-percent restriction is lifted for GI loans not exceeding $10,000, loans under section 8, title I, section 203 (b) 2 (D), section 207, section 213, section 608, section 611, and section 803.

Prior to sale to FNMA, Veterans' Administration must certify that dwelling conforms with minimum Veterans' Administration construction standards and the mortgagee must certify that no bonus, fee, or other charges in excess of those expressly authorized by the Association have been or will be charged or received by such mortgagee to or from the builder or the mortgagor in connection with such mortgage.

FNMA is authorized to make real-estate loans acceptable for insurance under section 213 and authorization for investments, loans, purchases, and commitments is expanded from $1,500,000,000 to $3,000,000,000.

FHA TITLE VI AMENDMENTS

The House bill extends section 608 to June 30, 1950, with one-half billion increased authorization and no reduction is made in 90-percent insurance features. Senate bill extends to March 31, 1950, with same one-half billion increase, but reduces present 90-percent insurance to 80 percent. I favor the 90-percent insurance feature.

Both bills raise section 611 insurance percentage from 80 percent to 85 percent—$5,950 per individual unit with $850 for each additional bedroom in excess of two.

Where construction is initiated under section 611 the mortgage may be replaced by individual mortgages covering each individual dwelling upon completion and insured under this section on the same basis as loans under section 203 (b) 2 (D).

FHA BUDGET AMENDMENT

Both bills provide that FHA expenses for examination and insurance of loans and other field expenses not attributable to general overhead, can be paid out of income received by FHA from premiums and fees during the previous fiscal year, provided that not more than 35 percent of such previous year's income can be so used.

The FHA is authorized to process applications and issue commitments under section 8 of title I, title II, title VI, or title VIII, even though the permanent home financing may not be insured by FHA. If not so insured, FHA is authorized to charge additional reasonable application fees.

WAR AND VETERANS' HOUSING DISPOSAL

The Senate bill authorizes HHFA to transfer 32,000 units of permanent Lanham Act housing to local public housing agencies to be operated as tax-exempt public housing. HHFA would be authorized to transfer any permanent warhousing project to a local public-housing agency for these purposes if requested in writing within 60 days after passage of this act. The House bill does not include this title.

COOPERATIVE HOUSING AMENDMENTS

The Senate bill would establish a new Cooperative Housing Administration under HHFA with a billion dollars for making direct loans, including development advances, at approximately 3 percent for 50 years to construct rental projects for families of moderate income. Loans would not exceed development costs. CHA would have wide powers to regulate rents, approve income limits for admission and occupancy, sites, design, and so forth. Construction contracts would be at a fixed price with a criminal penalty of $5,000 fine and/or 1 year in jail for failure on the part of a builder, or seller of land, to disclose legal or equitable interest in such project. The House bill does not include this title.

VA AMENDMENTS

The Senate bill extends GI home-loan benefits to unremarried widows of veterans. In computing aggregate guaranty entitlement available to a veteran, VA may exclude the initial use of the guaranty where the property has been (1) condemned for public use, (2) destroyed by fire or natural hazard, or (3) has been disposed of because of other compelling reasons devoid of fault on the part of the veteran. The House bill does not include this provision.

The Senate bill changes present 501 loan guaranty from 50 percent, or $4,000, to 60 percent, or $7,500. The mortgaged property would have to conform with VA minimum construction requirements. The House bill has same provision.

The Senate bill abolishes section 505 (a) 90 days after passage of the act. The House bill continues 505 (a) for 180 days.

The Senate bill authorizes VA to make direct loans to veterans where they show (1) satisfactory credit risks, (2) ability to repay, and (3) that veteran is "unable to obtain from private lending sources at an interest rate not in excess of 4 percent a loan for which he is qualified under section 501." Such loans would be made to the individual veteran at 4 percent and up to $10,000 each for 25 years. VA would be provided $300 million to make such loans until June 30, 1951. The House bill authorizes direct loans by VA to veterans up to $10,000 at 4 percent for 30 years when the veteran shows that he has been unable to get a 501 loan and the VA finds private capital is not available in the area where the dwelling is located. No credit or payment ability is required to be shown. VA authorization, $300,000,000, expires June 30, 1951.

The House bill extends loan term of GI mortgages from 25 to 30 years. The Senate bill does not.

HOUSING FOR EDUCATION INSTITUTIONS

The Senate bill authorizes HHFA to lend $300,000,000 at 2½ percent for 40 years to educational institutions for the construction of student and faculty housing. The House bill authorizes RFC to purchase obligations of and to make loans to nonprofit educational institutions of higher learning for the construction of student and faculty housing, such loans to be at 4 percent and up to 40 years, but no special fund is set aside for that purpose.

PREFAB DISTRIBUTION LOANS

The Senate bill gives RFC authority to make loans directly to any business enterprise or financial institution to finance the purchase and erection, including the distribution and marketing, of prefabricated houses manufactured with financial assistance under section 102; the total amount of such loans is not to exceed $25,000,000 outstanding at any one time. The House bill is substantially the same except that loans cannot exceed $75,000,000 outstanding at any one time.

Farmers Cold to United States Crop-Disaster Aid

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Boston Herald on the effect of the drought in New England and farmer reaction to Federal disaster loans:

FARMERS COLD TO UNITED STATES CROP DISASTER AID

(By W. E. Playfair)

Drought-stricken farmers of Massachusetts yesterday said "no thanks" to production-disaster loans proffered by the Federal Government.

CROP LOSSES PILE UP

While the officers of the Farmers Home Administration in Boston and Brockton awaited applications for loans, spokesmen for the 32,897 persons in the Commonwealth classified as farmers said the move of Secretary of Agriculture Brannan in declaring this State a drought disaster area was little more than an empty gesture.

They said the great majority of agriculturists who had suffered substantial losses from the rainless summer would be refinanced by their normal sources of credit, and in the long run would have to take their losses like any other businessmen.

One of these leaders was L. Roy Hawes, head of the State Grange, who announced that the members of that organization had voted against Federal aid, 100 to 5. He said the Washington loans were unnecessary.

Meantime, estimates of crop losses due to drought continued to pile up and in Maine, the only one of the New England States not yet in the disaster column, the USDA Council called on Secretary Brannan to declare an emergency in seven southern and central counties.

These counties are Washington, Kennebec, Androscoggin, Sagadahoe, Oxford, Cumberland, and York. The other nine, the council found, had no critical situation.

Hawes and other spokesmen for the farmers said the majority of those needing money to carry on would depend on "hard" loans from the land banks and the four production credit associations at Northampton, Worcester, Taunton, and Concord, rather than the "soft loans" of actual Government money from the Farmers Home Administration.

SEES NEED FOR LOANS

On the other hand, Louis A. Webster, head of the marketing division of the State department of agriculture, said the time might have arrived when some farmers who should be kept in business were unable to get money from their local banks or other regular sources.

"Those who irrigate and thus were prepared for the drought," he said, "have enjoyed good crops and good prices. Most of the others can get additional loans where they have previously been borrowing. There will still be a few very deserving cases who can make good use of the disaster loans to pull themselves out of the hole."

Explaining how the Federal loan plan will affect the market gardener who loses his vegetables from the drought, the dairyman whose pastureland is burned, or the orchardist whose young trees have withered, Webster said:

REFUSED PREREQUISITE

"If a man has lost his crop, he will first go to his normal credit source, whether a private bank, land bank, production credit association, or any other lending agency, and try to arrange with them to stake him for another year.

"If they refuse, he writes or telephones to the Farmers Home Administration, Post Office Building, Boston or Brockton, and applies for a loan. But he must first have been turned down by the others.

"He must now produce a statement of assets and liabilities, income and expenses, and if he has become embarrassed by unusual or unnecessary expenses, or by unfortunate trades, or was practically insolvent through debts to grain and other leaders before the drought struck, he cannot use the drought as an excuse for being refinanced.

"But if he proves that he has been careful and has a reasonable earning capacity, they will stake him to new money at 3 percent for 10 years. Over a period of years many farmers have found it necessary to be financed by the FHA and have graduated to a position where they are now financed by private banks or other agencies."

The loans include both farm and home operating expenses, since, as Webster puts it, the farmer has to live as well as work.

"And a cash-crop farmer may be terribly broke between crops," he said. "The dairy farmer has it much better in this respect."

Reviewing the crop damage, Webster said pasturage had been hardest hit. Because it had been necessary to feed hay and corn fodder to cattle, the department estimated a hay shortage of more than 100,000 tons, which would be 6,000 cars, or 120 trainloads.

Appeal to the Nation

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 24 (legislative day of Thursday, June 2), 1949

Mr. LUCAS. Mr. President, out of order, I ask unanimous consent to incorporate in the Appendix of the RECORD an editorial from the New York Times of Tuesday, August 23, 1949, under the caption "Appeal to the Nation." The editorial deals with the arms program to implement the North Atlantic Treaty.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

APPEAL TO THE NATION

As he did in the case of the North Atlantic Treaty, President Truman has again gone to the Nation over the heads of the congressional opposition to win added support for the foreign military aid program as part of a broadly conceived American policy to preserve peace and our own security. The effect of his first appeal was manifested in the melting of the opposition and the senatorial approval of the Atlantic Pact by a larger majority than had been expected. But in the matter of military aid, designed primarily to put teeth into the Atlantic Pact, he faces a harder task. For the opposition to this program is both greater and more determined. The House in a fit of reckless irresponsibility, has already overruled the carefully considered verdict of its own Foreign Affairs Committee and has slashed the aid for western Europe in two. Few Senators are willing to go that far, but the pressure for cutting the program is growing among them as well.

There are many reasons for this development, including an inept congressional leadership and the growing tendency to play politics with great world issues and with national security for purely partisan advantage which is endangering the whole bipartisan foreign policy. The administration is just as much to blame for this as are the Republicans. But the primary reason goes beyond politics and rests in the still incomplete adjustment of many minds to the realities of the international situation. There are still too many men in Congress who permit their subconscious isolationism, pacifism, or just plain comfort and preference for big words rather than deed to trap them into a nostalgia for normalcy. That tendency is also becoming bipartisan, but it is most pronounced among the latter-day Republicans, who seem to prefer the policies of Harding to those of Theodore Roosevelt.

To all of such persuasion President Truman rightly presents some of the facts of life. He points out to them that the fond belief that the world would immediately return to its old familiar ways once the fighting stopped has been vain, that the devastations and dislocations of the war have been too great for such an easy adjustment, and that in addition the war has unleashed new forces which manifest themselves, on the one hand, in the effort of many subject peoples to gain a new freedom and the good things of life, and, on the other hand, in the attempt of Soviet Russia to exploit this effort for its own aggressive and tyrannical ends.

In such a situation, the democracies dare not stand still or stand alone. For standing still they leave the field to Russia, and standing alone they suffer from a weakness which in itself invites aggression that threatens to engulf them one by one. Only by standing together and going forward together in mutual defense and combined economic effort can they hope to survive and win the contest against tyranny. By their own fundamental principles they can do so only on the basis of voluntary association which requires a common determination and mutual adjustment of their common problems. But to do so they must meet the challenge of the age, or perish. And since the United States does not believe that democracy is ripe for suicide, it has taken the lead in averting it.

It has done so by inspiring the United Nations, which, however, has not fulfilled all hopes because of Russian sabotage. It has done so through the Truman Doctrine and the European recovery program, which stopped and reversed the Communist tide in Europe, though it surrendered the second front in Asia by default. Finally, it has done so through the North Atlantic Treaty. But all the results attained by these measures remain in jeopardy until they can be defended. And they can be defended only if the democracies become strong enough both to discourage aggression and to lift the fear of aggression, on which depends further progress. That is the purpose of the military-aid program, which Mr. Truman characterized as an investment in security that is part of the price of peace and is only a tiny fraction of what another war would cost. We are confident that the Nation will agree with him, and that public response to his plea will compel Congress to bow to the national will.

Democracy in Northern Ireland

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. KING. Mr. Speaker, in the August 13 issue of the magazine Nation, there appears an interesting article, which clearly depicts the political conditions in Northern Ireland. The article is written by Griffin Barry, who was formerly a correspondent for the London Daily Herald, and who has spent more than a year in making a special study of Ireland with a view to publishing a book regarding postwar conditions there.

Mr. Barry comments on the recent Government of Ireland Act which was passed by the British Parliament in London. He points out that 200 members of Parliament voted against that clause in the act which would make the Parliament of Northern Ireland the sole judge of any political change in that area.

The absurdity of leaving the future of Northern Ireland in the hands of its Parliament is clearly exposed in the rest of the article, which indicates how that Parliament is chosen and how democratic practices are flaunted in their voting practices. The regulations for determining voting eligibility apparently are changed at almost every election in order to retain the control of the Parliament in the hands of a ruling clique.

Comment on the Special Powers Act, a measure originally intended to be in effect for but a single year, shows the tyrannical method in which justice can be, and often is, meted out in Northern Ireland. The gestapo methods of Hitler were but a facsimile of the methods employed in Northern Ireland under this act, which is still in effect today, but in a much more despotic form than when originally enacted.

The article by Mr. Barry is entitled: "Ulster: Persecution and Progress." I would like to call attention, however, to the fact that Northern Ireland does not constitute the historic province of Ulster, which consisted of nine counties. Only six counties have been partitioned from the rest of Ireland to constitute the Northern Ireland territory, because that was as much of Ireland as could be cut off without losing dominance of the people of the area.

The chicanery employed by the British Government in setting up Northern Ireland as a separate country may in some degree explain why American statesmen are always second best when dealing with foreign diplomats. We just do not speak their language nor employ their tactics. Perhaps it is well that we do not, or otherwise we likewise might be

tempted to ride ruthlessly over the rights of other peoples and other countries, as has been done in the case of the partition of Ireland.

For the benefit of those who might not have read the article by Mr. Barry, I am adding it to my remarks at this point, and I recommend it to my colleagues. It reads as follows:

ULSTER: PERSECUTION AND PROGRESS

(By Griffin Barry)

LONDON.—Eire, a state associated with the British Crown only in external relations (and very few of them) passed out of being some weeks ago and the Republic of Ireland was born into an independence that seems unreal. Dangerous one day, even, the times in western Europe being what they are. However, the Irish wanted it.

A grievance remains, of course—partition. At the Ulster border, men of the same race meet in perpetual collision even when no blood is shed, as nowadays it rarely is. Here stands the fence between two religions and between the urban and the rural ways of life. Toward this impasse the British attitude seemed unassailable. Herbert Morrison, Lord President of the Council, said: "If Irishmen themselves will come together and make their own agreements, this Government will willingly consider the results." What could be fairer? With the machinery of democracy provided, and negotiation not ruled out, the ring is held until these contestants get over their reverberating bad temper. That looks like imperialism at its modern best.

Surprisingly, the Ireland bill brought on an attack of Labor Party indiscipline without equal so far. More than 60 dissents came from within the party. Labor members' abstentions amounted to many more. Dissent came from rising young men who have careers to lose and can ill afford to quarrel with the big brass of the party. Few have Irish blood themselves and not many have a considerable Irish Catholic vote in their constituencies, either. The dissents arose, apparently, from a principle. Absentees and dissenters alike were admonished by Mr. Attlee for their breach of discipline and five young career men lost their jobs as parliamentary secretaries to Socialist Ministers. Penalties were paid cheerfully. The bill passed, but not until nearly 200 members of all parties, with a very large proportion from Labor, had failed to endorse the clause which makes the Parliament of Northern Ireland sole arbiter of any change.

During the debate, Geoffrey Bing, a young Ulster Protestant member for a Labor constituency in England, described the body which administers his native land. Set up in 1920, this subordinate parliament is responsible for the peace, order, and good government of Northern Ireland, and not much else, direct taxation and other important matters being reserved to Westminster. Authority in any matter, indeed, lies squarely under the authority of the Parliament of the United Kingdom. In 1922 the new legislature began to take seriously its job of insuring law and order. A spill-over of violence from the insurrectionary south was then feared in the northern counties. The Special Powers Act was brought out—a stiff measure, limited to 1 year's operation.

Complaint now rises not from the original act, possibly necessary in a period of blood and tears, but from the fact that it has never been repealed. A generation has grown up under it. Quietly through the years its restraints are added to. Offenses for which there was originally a penalty of 2 years in prison carry, since 1943, a maximum of 14 years. Public behavior is still assumed to be crisis behavior—potentially. Such matters as treating in public bars or methods of obtaining a bicycle permit are still minutely regulated. The Northern Ireland Minister of Home Affairs, or any police officer to whom he delegates his powers, may suppress any public meeting or newspaper merely by proclaiming it. He can order the destruction of any memorial, headstone, or tomb. He can send the owner of any film or phonograph record to prison for a term of years. A unique section provides that acts not specifically provided for in the regulations may be deemed against the aims of the code and a magistrate may produce a regulation impromptu for dealing with them. So, a citizen, not guilty of violating any particular statute, must hazard a guess of his own as to what part of his behavior is going to be liable to punishment.

A person detained under these regulations is deprived of protections that have hedged the liberty of the subject in Britain for ages. He may be held indefinitely without being charged and without trial. He is allowed no visitors and no messages. He has no access to legal advice. A curious statute deals with the examination of witnesses by a resident magistrate. Significantly, it became law in 1933, when the only sign of trouble in Northern Ireland was an ordinary election. It was first employed in a round-up of alleged rioters at the polls. A witness may not be accompanied to court by a legal adviser or friend and is specifically not excused from answering questions on the ground that an answer may incriminate or tend to incriminate himself. Refusal to answer is punishable by penal servitude up to 14 years.

An armed force 13,000 strong (in a population of one and a third millions) called "B" Specials, assisted by the Royal Irish Constabulary, police these laws. The constabulary are traditional police in a country where Roman Catholics vary from under a third of the population to more than half; on this force, Catholics sometimes get subordinate jobs. "B" Specials are recruited from the Orange lodges, militant Protestant clubs peculiar to Northern Ireland. They are a part-time police, sporting the colors of the dominant religion, who may be called out at any time but who, whether they are on duty or not, have the power to search premises or question anybody without showing a warrant. Northern Ireland officials point out that these precautions against violence are seldom used. Pressed as to why they are there at all, Belfast men bring the covert use of dynamite and murder out of a not distant past, notably at the beginning of the late war.

Remembering that in democratic societies the vote exists to canalize discontent away from murder and dynamite, one looks at the Northern Ireland franchise. Sure enough it began to adapt to the needs of a mixed society in the years of direct British rule. In 1919 proportional representation was set up. That year Catholic aldermen in Londonderry, whose supporters outnumbered Protestants by some 500 votes, gained a majority of two on the municipal council of the country's second largest city. Next year the new parliament took over. Proportional representation was dropped. In 1946, notwithstanding a majority of 2,347 Catholic votes in the city as a whole, 8 Catholics sat in a council of 20. This result had been achieved through the years by the careful gerrymandering of wards.

Then a Labor Party raised its alarming head. Labor cut through the religious issue where it could, drawing votes alike from Protestant poor and Catholic poor. Another menace was evident too. Catholic families, usually large and nearly always poor, began to send voters to the polls at a steeply rising rate. And at the end of the Second World War it became clear that gerrymandering would not forever cancel out the effect of the new self-interest vote, particularly when it combined with a rising Catholic vote. In the year that Great Britain plumped for labor the shipbuilding magnates in Belfast and linen manufacturers throughout the little country were worried. During the next year, 1946, the Northern Ireland Franchise Act was passed.

It restored, quite simply, the plural vote—a practice abandoned in the years following 1840 when wealthy country gentlemen and not wealthy manufacturers ruled a feudal Ireland. Directors of corporations were allowed as many as ten votes in their company's name. On the other hand, persons who could find no domicile in separately taxed property were deprived of the vote. Hundreds of thousands of poorly housed people must stay away from the polls. Among these, some 3,000 returned soldiers were barred from the Londonderry elections after 1 year unless, in an over-crowded town, they had found separately owned housing. This had one bizarre effect. Because a British charter forbids tampering with the methods by which thirteen North Irish members are sent over the water to the Mother of Parliaments, nearly twice as many Londonerry people can vote for members of that distant concern as may use the ballot to select aldermen in their home town.

Reviewing this denial of democracy, Mr. Bing tried to focus the attention of the Labor Government on its responsibility—in vain, as the vote showed. This is a cautious preelection year in Britain. But he drilled away manfully at the apathy which settles over Englishmen nowadays at the approach of the Irish question—any Irish question. The restraints of capitalism, developing swiftly in Britain, are stalled north and south in Ireland, he submitted. But in one area the British no longer have a say; in the other they are still overlords. Relief from the "full blast" of capitalism came in the north when the Labor government's new social services were extended there. But if a northern worker is a Catholic he must, with this imported progress, accept at home religious persecution with its major concomitants—an insecure job or none, a nasty experience in using the vote to change the rules of the game. In this generation there have never been enough votes—never quite enough—to modernize anything in Northern Ireland. What then? Violence, he did not deny, sometimes occurs to the Irish mind.

Pass the Judd Bill

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Tribune of August 23, 1949:

PASS THE JUDD BILL

While the Truman administration is groping for a new formula for resisting communism in Asia, the Senate is sitting on a measure that could win us many new friends among Oriental peoples.

The measure was introduced in the House by Minnesota's Representative WALTER JUDD. It would permit Asiatics to enter this country under a quota system now applied to other countries. Those already living here would be allowed to become naturalized citizens.

The bill would affect some 90,000 immigrants who have been living in the United States and Hawaii for the past 30 years or

more. Many are parents of Japanese-American veterans who served with distinction in World War II. While their sons and daughters are citizens by virtue of their birth in this country, the privilege of citizenship is denied to them. For these people passage of the Judd bill would be an act of simple justice.

The bill was passed by the House March 1 and has since been bottled up in the Senate Judiciary Committee. In an effort to prod the Senate, the House on June 6 passed the so-called Walter Resolution, a skeleton version of the Judd bill which would do only one thing—give all legally resident immigrants the right of naturalization. Sponsors hoped that the Senate would at least pass this, if not the Judd bill.

Senator PAT MCCARRAN (Democrat, Nevada), Chairman of the Judiciary Committee has said publicly that he is in sympathy with objectives of the legislation. Yet he has made no move to send even the Walter resolution to the Senate floor for a vote.

At a time when this country is fighting a cold war of ideas, the committee's inaction is inexcusable. We can hardly expect to persuade Asiatic peoples to enthusiastically embrace our way of life as long as we fail to live up to our professed ideals about racial equality.

Spending Goes Up, Up, and Up

EXTENSION OF REMARKS
OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 19, 1949

Mr. MACK of Washington. Mr. Speaker, the following table taken from the New York Sun on July 22, 1949, shows the average amount of money spent and collected by each Presidential administration per annum. It will be seen that the present administration during the postwar years under President Truman has jumped astronomically even over the extraordinary expenditures of the war years.

These figures of Federal Government expenditures, during President Truman's administration represent approximately 25 percent of the total income of the United States. In short, it is as if every fourth row of corn were planted, cultivated and grown to maturity, and then turned under. There would appear to be no services rendered to the average worker or producer to justify the enormous increase in expenditures between the administration of Calvin Coolidge and the present incumbent, Mr. Truman. More, it may be suspected that the enormous drain on our productive plant represented by this huge Federal charge, is acting as a dead hand upon American business, and as Mr. Hoover and others have pointed out, is slowly but surely changing the character of our Government and economic system.

The figures given below in ever case represent the actual expenditures and receipts, and are complete from 1789 to July 1, 1949.

It also should be noted that the figures of present Government spending are already out dated. By the end of July, they were at the rate of $46,400,000,000. If present Government plans in respect to the Anglo-American Economic Pact, domestic Government spending, and so forth, actually are carried out, the average annual expenditure by the Federal Government could easily reach $60,000,000,000 for the fiscal year, 1950.

President	Number of fiscal years served	Average annual expenditures	Average annual receipts
George Washington	8	$4,261,063	$4,083,221
John Adams	4	8,565,667	8,746,210
Thomas Jefferson	8	9,053,036	14,175,104
James Madison, War of 1812	8	18,404,737	21,486,994
James Monroe	8	18,404,737	21,486,994
John Quincy Adams	4	16,356,759	23,707,822
Andrew Jackson	8	19,121,125	31,507,671
Martin Van Buren	4	30,581,316	25,554,895
Harrison and Tyler [1]	4½	24,201,042	23,206,787
James K. Polk, Mexican War	4	43,869,305	30,784,915
Zachary Taylor	1	39,543,492	43,603,439
Millard Fillmore	3	46,696,016	54,664,391
Franklin Pierce	4	63,788,566	70,543,232
James Buchanan	4	68,233,373	49,429,093
Abraham Lincoln, War of Secession	4	838,095,103	190,756,531
Andrew Johnson	4	394,639,414	456,312,115
U. S. Grant	8	281,673,348	333,963,198
Rutherford B. Hayes	4	258,067,014	306,474,992
Garfield and Arthur	4	256,935,689	368,505,852
Grover Cleveland, first term	4	269,407,275	368,539,784
Benjamin Harrison	4	353,078,975	384,112,711
Grover Cleveland, second term	4	360,418,546	329,237,222
William McKinley, Spanish War	4	523,479,634	519,052,037
Theodore Roosevelt	8	581,931,314	584,593,495
William Howard Taft	4	699,802,969	698,516,267
Woodrow Wilson, World War I	8	5,867,282,518	3,046,972,711
Warren G. Harding	2	3,333,617,715	4,058,119,816
Calvin Coolidge	6	3,097,591,523	3,993,323,650
Herbert Hoover	4	3,872,619,164	2,863,250,628
Franklin D. Roosevelt, World War II	12	31,020,193,854	13,813,402,113
Harry S. Truman	4	45,016,855,863	41,688,267,575

[1] Until 1843 the Government's fiscal year coincided with the calendar year, but was then changed to run from July 1 to the following June 30. Thus the fiscal year 1949, for example, is the year beginning July 1, 1948, and ending June 30, 1949. President Tyler, due to this change, was accountable for 4½ fiscal years instead of 4.

Mr. Speaker, according to an analysis made in the United States News and World Report, issue of August 12, 1949, an additional tax expenditure from the States themselves, plus counties, cities, and towns, is estimated at $22,200,000,000 for the present fiscal year. Added to the Federal expenditures, this brings the total tax burden of the United States to the staggering figure of $68,600,000,000. In short, this is the amount which will be spent in cash by all Federal, State and local governing institutions.

A break-down of the major brackets by which this immense sum is spent indicates for the fiscal year, 1950—at the present rate of $46,400,000,000:

To business	$20,308,000,000
To individuals	26,098,000,000
Wages and salaries	9,242,000,000
Welfare payments and grants	13,840,000,000
Interest	1,387,000,000
Loans, investments, subsidies	1,228,000,000
Miscellaneous	401,000,000

It is obvious that much of the huge expenditures listed under other categories actually should be allocated to welfare payments, grants, and subsidies, since without these hand-outs many other governmental costs obviously would be substantially reduced.

A break-down of State and local taxation for the fiscal year, 1950, shows approximately $8,300,000,000 for general business administration, and $13,900,000,000 listed as payments to individuals.

Wages and salaries for all those directly in the Government service—civilian and military—will total $9,242,000,000 on the basis of present spending plans. This compares with $3,537,000,000 in 1940.

An article by Sylvia F. Porter in the New York Post of August 8 states that the United States has spent $72,000,000,000 in loans and gifts overseas during the past 10 years. This figure is attributed to a study in the Congressional Quarterly.

A total of $49,000,000,000 represents lend-lease. The balance—$23,000,000,000—represents our postwar spending for relief, rehabilitation, and so forth, abroad. It does not take in other billions which have been spent in one way or another but charged off elsewhere, as, for example, military supplies treated as surplus and transferred for payments out of all proportion to the true values involved.

Sufficiency of Defense But No WPA in the Defense Department

EXTENSION OF REMARKS
OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. JONES of Missouri. Mr. Speaker, less than 5 months ago when Louis Johnson took the oath of office as Secretary of Defense he promised to bring about greater efficiency and more economy in the conduct of our Military Establishment. Throughout this period he has led us to believe that we could expect, if not a unification of services, at least a better cooperation and a mutual understanding which in itself would tend

to bring about a greater efficiency. This morning speaking before a representative group of Congressmen at a conference which was held in the Pentagon, the Secretary made the official announcement that during the next 4 months the civilian rolls in the Department of Defense would be reduced by approximately 135,000 persons which should result in an annual saving of approximately a half billion dollars. For the benefit of those Members who did not avail themselves of the opportunity to attend this conference, I am inserting herewith a copy of the statement made by Secretary Johnson at the opening of this meeting:

Secretary JOHNSON. Members of the Senate and of the House, I want to express my appreciation of your coming down here this morning. This may be one of the first times in Government that we have asked you to come here to the Pentagon. I hope none of you got lost.

Our problem's been this. First, I'd like to say I hate to fire anyone. I'm sorry that circumstances make it necessary. What we have here for you this morning is a part of the program, and only a part. It's a part that has been worked out by the three Departments over a period of several months, after study and after impartial review. The recommendations have come up from the three Departments after such study and impartial review, extending over several weeks.

There were suggestions, ladies and gentlemen, that this announcement should be held until Congress adjourned or that this should be held for a few weeks. The recommendations were ready at noon yesterday. The wires or messages were gotten to you as soon as possible after they were ready. Each day's delay in putting this into effect, I am told, costs us out of our budget each day a minimum of a million dollars. Therefore, my conscience would not permit me to delay beyond the time this job could physically be done; hence, our invitation to you.

The next thing I want to say is that the actions you have before you are the actions of the civilians in the Defense Department, not the actions of the military. The military, the generals and the admirals, are the victims, if such you want to say, of this action by the civilians.

We have confronting us, not perfectionism of defense. We seek, in a balanced team, a sufficiency of defense. This program is one of the steps toward that end. The civilian heads of the Military Establishment feel that sufficiency of defense is one element and that the other element of equal importance is the operation of this sufficiency of defense within the economy of the United States itself.

The Russian approach over the months has been that we were going to have a blowup in our economy, that things would "go to pot."

Stressing again that there are the two elements, the military sufficiency and a vigorous American economy, the civilians of the Department are firmly of the conviction that in maintaining that sufficiency of defense, we must bring it within the economy of the United States. This is a step toward that end.

What you have shows a reduction of approximately 135,000 civilians over the period of the next 4 months. There are some installations closed. There are others due to be closed.

This work is not the result of the McNarney Management Committee. This is the point from which the McNarney group steps off in doing their work of eliminating duplication, of cutting out all waste and extravagance and abolishing all unnecessary jobs and in coordinating the business functions of the Department.

I think I can summarize it by saying so far as civilian personnel is affected here, it's because they are not necessary in the sufficiency of the defense of the United States. I have said to both committees that so long as I am Secretary of Defense we want a dollar's defense for each dollar you give us, and I personally will tolerate no WPA in the administration of the Defense Department.

There can be no approach to a peaceful world unless there are the two things I referred to—One is sufficiency of defense which we will not let be impaired, and, secondly, a vigorous economy with the defense fitting into that economy. That's our continuing approach. This is a step in that direction.

Again, for Mr. Early and myself, for the Secretaries of the Departments, I thank you for coming down here so that you could have this data before the release at 12 o'clock.

Export and Imports From Marshall-Plan Countries—Editorial from the Baltimore Sun

EXTENSION OF REMARKS
OF
HON. WALTER F. GEORGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES

Wednesday, August 24 (legislative day of Thursday, June 2), 1949

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Uncomfortable Figures on Marshall Plan Area Trading," from the Baltimore Sun of August 14, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of August 14, 1949]

UNCOMFORTABLE FIGURES ON MARSHALL PLAN AREA TRADING

There is no comfort whatever in the June figures on imports from the Marshall-plan countries. The Government statisticians have discovered that the total was a thin $65,500,000 in that month as against $72,400,000 in May and a monthly average for the first quarter of 1949 of up to $95,100,000.

To complete the picture, the Government has also supplied figures on exports to the same group of Marshall-plan countries. And the exports have tended in the opposite direction from imports—up instead of down. The June total was $406,700,000 as against $387,600,000 for May and a monthly average in the first quarter of $386,400,000.

Here's another touchy detail. Among the countries which have fallen off most in imports to American markets are those where our aid has been of longest standing and is of most urgent political significance. Germany has slipped from $4,400,000 in May to $2,900,000 in June and thus set up new worries for Commissioner McCloy. Turkey was down to $3,800,000 from $8,000,000 in May—a really whacking drop.

No doubt in many commodities and many countries there are special circumstances which help explain the fall. Seasonal trends may have played some part. But the overall pictures is of a widening gap in the difference between dollar earnings and dollar needs in the Marshall-plan area. And this drop comes with the plan moving toward the middle of the projected 4-year course.

But merely to lament the trade trends doesn't help any. What can we do about them? The most important thing is to sweep away any artificial obstacles to international trade—any artificial obstacles which are within our own domestic control.

We can push everlastingly to get our tariffs down to reasonable levels. We can insist that Congress get busy and pass the extender of the Reciprocal Trade Agreements Act which has been in abeyance since the last extender law lapsed at the end of June. We can work to widen the understanding among our own people that it is silly to send dollars abroad and then put up obstacles against the return of goods in exchange.

Lion's Share of Taxes

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Medford (Mass.) Mercury of August 19, 1949, which very graphically recites the conflict between the various governmental taxing authorities in the frantic search for new sources of revenue to pay the cost of the ever-expanding services and improvements demanded by our people. The editorial follows:

LION'S SHARE OF TAXES

States, cities, and other local governments have been searching frantically for new sources of revenue. The cost of road building, fire protection, police service, and all other functions has skyrocketed. Local officials say, with considerable justice, that the taxpayers demand good and expanding services, but that they kick hard when taxes are increased. It is something like the case of the irresistible force meeting the immovable object. And one of the major reasons for the difficulty is the extent to which the Federal Government has increased its share of total national tax revenues.

A recently published revealing graph illustrates the trend. In 1940 the Federal Government took $5,600,000,000 in taxes and State and local bodies took $8,700,000,000. In other words, of every tax dollar the taxpayer shelled out the Federal Government received 39 cents and the other governments got 61 cents.

Now the Federal Government is taxing us to the tune of $39,100,000,000 a year, while local governments take $14,500,000,000. Breaking this down, at present the Federal Government swallows 73 cents out of each tax dollar, while the rest of the governments get but 27 cents.

The result, as United States News points out, is that local governments "are moving into tax fields now occupied by the Federal Government. Favorite old tax sources—incomes, sales, admissions, gross receipts, liquor, tobacco, gasoline, others—are being hit hard. Triple taxation is no longer any novelty." In a few places residents actually pay three separate income taxes—one to the Federal Government, one to the State, and a third to the city.

This illustrates one very practical reason why Mr. Truman's program has met such hard going in Congress. In the Senate, particularly, Democrats as well as the Republican opposition show a growing concern over the tax burden.

Congress is committed to enormous military budgets and to continued heavy spending for European aid. It must also provide for the normal functions of the Government. That is why more and more of its members are viewing avoidable spending with a cold eye. It is also the reason why sentiment for putting into effect the Hoover Commission recommendations is increasing.

War in Asia Unless—

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1949

Mr. JUDD. Mr Speaker, it is urgently to be hoped that our Government will not ignore the warnings of Mr. Stewart Alsop as it has previously ignored similar warnings from many others on the disaster that will befall us in Asia, if the Communist conquest of China is not halted by giving the right kind of assistance to those forces in China, beginning with its government—our ally—which continue to resist Communist advances, no matter how frequently our State Department "writes it off." Would we rather lose so dearly bought a victory than frankly admit our own miscalculation as to the nature of communism in Asia and move at once to correct them? Our course there in the future must not be left to those who have been so wrong in the past. The two men, above all others, who have the understanding, the ability, and the prestige to lead us and the people of Asia in retrieving the situation are Generals MacArthur and Wedemeyer. The country would gladly entrust to them the powers Mr. Alsop rightly states must be given to a commander for the whole area. Mr. Alsop's article follows:

[From the Washington Post of August 24, 1949]

ASIA—SUMMING UP: II

(By Stewart Alsop)

What now clearly threatens in Asia is nothing less than a third world war. What is needed to avert this catastrophe is to treat the situation in Asia as a warlike situation, which it is. A policy of business as usual in Asia will make a third world war inevitable.

The Soviets are already directing their drive for power in Asia as though it were a major war effort. The supreme commander of this effort is no less a man than V. M. Molotov. The American response to the Soviet power drive is feeble, diffuse, and lacking in direction. It is absolutely essential that the United States should be able to respond to every challenge rapidly, sometimes secretly, and always powerfully. This can only be done by conferring great personal authority on a man of real stature whom the Congress and the country can trust. The British have already done just this, by giving great power to Malcolm MacDonald, high commissioner for southeast Asia.

The kind of power which must be granted is suggested by the nature of the most immediate problem in Asia—that of finding a realistic American course of action in China. The Molotov-Mao Tse Tung strategy is obvious. It is to press down to the borders of Burma and Indochina and link up the vast Chinese Communist armies with the strong Communist undergrounds in these countries. If this can be done before the resistance to the Communists in Burma and Indochina is strengthened, Burma and Indochina will go. And they are the keys to southwest Asia, Therefore any action which will slow the Communist push south is in the vital American interest.

Yet a public, official American commitment to what is left of the Chinese Nationalist Government would in the end confront the United States with an impossible choice. We could send troops to back up the commitment. Or we could welsh on the commitment, which would finally destroy American influence in Asia.

What is needed instead is an unpublic, realistic, clandestine effort to shore up the many independent remaining centers of resistance to the Communists in South China. A comparatively small investment in arms and, above all, silver, astutely distributed, might hold up the Communist push south for a long time. And a few months, even a few weeks, may spell the difference between holding southeast Asia and losing it.

This sort of clandestine effort, which promotes American interests without publicly committing the United States, can only be successfully undertaken if something like wartime powers are granted. Wartime authority is also essential if the only remaining instrument of western power in Communist China—the economic weapon—is to be effectively employed.

The Chinese Communists must trade with the west, and they know it. Mao Tse Tung has already announced that the greedy capitalists, in their hunger for markets, will be forced to trade with him on his own terms. If the West proves him right, the West deserves to lose Asia. But there is no reason why he should be proved right, for it is quite possible so to control trade with China that the threat of a partial or complete economic blockade can become a powerful instrument of policy.

For example, Mao Tse Tung has publicly promised "material assistance" to the Communists in southeast Asia. If Shanghai and other big Chinese cities are not to wither away, they must have what only the West can supply—fuel oil, cotton, machinery, a dozen other commodities. It must be made crystal clear to the Communist leaders that infiltration or supplying of arms to southeast Asia, or pressure on Hongkong, or any other aggressive action beyond China's borders, will mean economic blockade and the death of Chinese industry. Thus the Chinese Communists can be constantly confronted with the conflict between self-interest and ideology which led to Tito's break with the Kremlin.

If this economic weapon is to be used, firm agreement with the British is essential. But it is also essential that Congress grant the great power necessary to control every dollar's worth of trade with China. Indeed, whatever facet of the struggle for Asia may be examined, it is clear that great power, exercised with the speed and flexibility of wartime, is wholly necessary.

It is necessary, too, for a final and compelling reason. Everywhere in Asia the conviction is growing that the United States has written off not only China, but all Asia. This conviction is Molotov's greatest single asset. Asia must be convinced, first, that the United States has no imperial ambitions, but second that Asia will not be allowed to succumb to a new Soviet imperialism. The best way to do this is to appoint a supreme commander to direct a great American effort in Asia and to grant him the money and the authority he must have if the Soviet drive for power in Asia is to be halted.

Potatoes Contain High Food Values

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1949

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I include a very fine article on the excellent dietary values of white potatoes which appeared originally in Hygeia, the health magazine of the American Medical Association, of which Dr. Morris Fishbein, of Chicago, is editor. The article was written by Harriet Morgan Fyler.

Reprints of this unuusually interesting and instructive article recently have been issued by and are available from the National Potato Council, 700 Atlantic Building, 930 F Street NW., Washington, D. C.

In the past, there has been so much misinformation about the place of potatoes in our diets that this official recognition by the American Medical Association concerning the high food values of white potatoes, should be of vital interest to everyone everywhere.

I am sure it will be interesting information both to all consumers and to potato producers, including those in the famed Red River Valley of the North—Minnesota and North Dakota—where some of the world's finest white potatoes are grown.

Dietary values of the white potato have been ignored by many persons in the United States. Weight for weight it has one-fourth as much vitamin C as oranges and grapefruit and one-half as much as tomatoes. It is estimated the daily adult requirement for vitamin C (1,000 international units) can be supplied by 14 ounces of potatoes, three times the average serving.

The value of the white potato was recognized by Hess in 1920 when he wrote: "It is not an exaggeration to state that the white potato is the chief bulwark of man against scurvy." Certainly, in low-cost dietaries where the price of citrus fruits may be prohibitive, potatoes are an important source of vitamin C.

One average 5-ounce serving of white potato supplies as much vitamin B_1 (thiamine) as two slices of genuine, whole-wheat bread. Although potatoes are usually classified in the group of foods which are considered as only fair sources of this vitamin, they can furnish quantities of the daily need for vitamin B_1 if consumed in liberal quantities.

Potatoes contain relatively small amounts of vitamin A and riboflavin. If prepared with milk, as escalloped potatoes or with cheese, as Delmonico potatoes both the riboflavin and vitamin A content are increased significantly, because milk and cheese are two of the best sources of these nutrients. Two-fifths of a cup of milk, estimated amount required for one serving of escalloped potatoes, would add 140 international units of vitamin A and 180 micrograms of riboflavin. One ounce of cheese, estimated amount required for one serving of Delmonico potatoes, would add 400 international units of vitamin A and 170 micrograms of riboflavin. For these reasons wise cooks should serve potatoes prepared with milk or cheese or both at least two or three times a week. The white potato makes important mineral contributions to the diet, particularly iron. Unless iron furnished by a food

can be converted into ions before passing into the lower part of the small intestine, it is excreted. Research has revealed that although roast beef has eight times as much total iron as cooked potatoes, it is only 17 percent available to the body and, therefore, provides only 0.99 milligram of ionogenic iron per 100 grams as compared with 0.60 milligram of ionogenic iron furnished by 100 grams of cooked white potato.

White potato also contains some copper. The copper content of potato is of some importance because of the observation that iron is of little use in hemoglobin production if copper is completely absent. The amount of copper needed for this purpose is extremely small.

The potato is a food in which alkaline forming elements—potassium, phosphorus, sodium, magnesium, and calcium—are present in relatively larger proportions than in other vegetables. For this reason potatoes are classified with citrus fruits and other alkaline-forming foods. Potatoes contain less calcium than some vegetables, which is another reason they should be frequently prepared with milk.

The protein of potatoes, like that of all other plant foods, is incomplete, that is, it lacks certain essential amino acids which are necessary for growth and maintenance of body processes. Only animal foods, such as meat, fish, eggs, and milk, contain complete proteins.

Despite the fact that the potato is highly nutritious and grown in every State, the people in the United States consume considerably less white potatoes than European peoples. For the period 1930 to 1936 the yearly per capita consumption of white potatoes in the United States was about 2 bushels (120 pounds) while the per capita consumption of potatoes in central Europe for a corresponding period was 10 bushels (600 pounds). In 1932, when the price of potatoes was 39 cents a bushel, the lowest during the 10-year period from 1928 to 1938, there was no apparent increase in potato consumption. The price of a bushel (60 pounds) of potatoes during the 10-year period from 1928 to 1938 ranged from 39 cents in 1932 to $1.31 in 1929, with an average of 78 cents.

Probable reason for the potato being regarded as a food to be avoided is the widespread notion that it is exceptionally fattening. Weight-conscious Americans have come to look with suspicion on the white potato simply because it is listed among starchy foods. Actually, 78 percent of this sturdy vegetable is water, and only from 10 to 20 percent, depending on the variety, is starch. One medium-sized potato supplies 100 calories, and provides no more calories than a 7-ounce glass of orange juice, a large apple, a baking power biscuit, or 1½ tablespoonfuls of French salad dressing. Since 3,000 calories are estimated to be the daily caloric need of an average, fairly active adult man, a medium-sized potato could hardly be blamed for his having to let his belt out several holes.

The white potato also is the innocent victim of that queer dietetic cult which asserts that potatoes and meat should never meet at the same meal. These two dissimilar foods, they argue, are "incompatible" in the digestive tract and if combined, "digestive troubles go on and on." Meat and potatoes complement each other: Potato with its high starch and low protein content balances meat with its high protein and low starch content and furthermore the digestion system is equipped to take care of both foods.

The United States Department of Agriculture has established three grades for potatoes shipped in interstate commerce. They are classified into three grades on the basis of minimum diameter, disease, injury, and other defects, dirt, or other foreign matter. Top grade, known as United States Fancy, includes potatoes with a minimum diameter of 2 inches. This grade is used by restaurants and is seldom available to the home consumer. Second grade, United States No. 1, lists potatoes with a minimum diameter of 1⅞ inches. Potatoes smaller than this are included in United States No. 2 grade. State adoption of Federal grades is voluntary.

Consumers should select potatoes of medium size, free from dirt, cuts, and decay, with few and shallow eyes. The shape and the color of the skin are not significant and differ with varieties. A good potato should feel firm and cut crisply. The jumbo size, especially the globular shape, is likely to have a hollow center.

Potatoes are almost without a rival in the frequency with which they appear in meals without sating the appetite. While most cooks serve only baked, boiled, mashed, fried, and hashed brown potatoes, there are over 500 potato recipes. But before adventuring into the maze of potato recipes cooks should know the essentials of potato cookery.

From a survey of scientific literature on the nutritive value of cooking the white potato, the author has concluded that whenever possible they should be steamed, baked, or boiled in their jackets or skins. When potatoes are cooked in their jackets there is a transference in the concentration of vitamin C from the area immediately beneath the skin, to the central portion of the potato. In uncooked potatoes vitamin C is concentrated largely in that portion which is removed when potatoes are peeled. There is also some evidence that vitamin B_1 is concentrated near the skin. It was for this reason that cooks in Nazi Germany and dominated countries were heavily fined if they were caught peeling their potatoes before cooking them during World War II.

A peeled, sliced white potato cooked in boiling, unsalted water, loses 33 percent of its vitamin B_1, 60 percent of its vitamin C and 20 percent of its iron. A small portion, about 15 percent, of vitamin B_1 and vitamin C lost from the potato is dissolved in the cooking water and may be salvaged in the cooking water. Unpeeled, whole potatoes cooked in boiling salted water lose about 40 percent of vitamin C.

Baking potatoes at 450° F. until completely cooked causes a 15 percent destruction of vitamin B_1, and a 50 percent destruction of vitamin C. There would, of course be no mineral loss in baked potatoes.

Mashing potatoes after they are cooked causes an additional 2 percent loss of vitamin C. Cooked potatoes held at 40° F. for 24 hours lose about 15 percent of vitamin C. More vitamin C is conserved if the potatoes are reheated by frying in a small amount of fat than if they are reheated in a creamed sauce.

Mashed potatoes meet and triumphantly pass the fine-texture test if they are mashed as soon as they are cooked and if a ricer is used to press out every tiny lump before adding the milk or cream, butter, and seasoning. Baked potatoes appear at their best if the skin is cut a little and the steam pressed out.

Stuffed baked potatoes serve two important purposes. They solve the housewife's problem of the unexpectedly delayed meal, for the mixture replaced in the jackets will await the tardy guest in better state than the plain baked potato. They also make for variety. A luncheon plate can be made truly memorable by a baked potato stuffed with a mixture of buttered and seasoned pulp and grated cheese, and topped with a tiny frankfurter or sausage.

Boiled potatoes lend themselves to any number of variations. Served with green specks of parsley, or cubed and creamed, they add distinction to a fish dinner. Cubed, seasoned, and mixed with sauteed onions, they form the makings for the popular hashed brown potatoes.

For many persons, scalloped potatoes are really the ultimate of perfection. Thinly sliced, peeled, raw potatoes are laid in successive layers in a well-buttered casserole. Between the layers go generous dots of butter, a little sifted flour, salt, and pepper. Fresh milk is poured in to cover the potatoes. The dish is baked in a slow oven (275° F.) until the potatoes are tender.

B-36 Charges Are Lies, Johnson Testifies—Defense Chief Tells House Unit Its Investigation Has Hurt the Government and Defense—Accuses Unification Foes—Says They Are Using These Allegations To Terrorize Me Into Halting the Plane Program

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. BOYKIN. Mr. Speaker, the preceding statement is the headline of an article carried today on the front page of the New York Times.

It is a cold-blooded factual recital by a nationally known newspaperman reporting yesterday's hearing before the Armed Services Committee of the House. May I say that this was but one of a series of hearings which, in my opinion, will go down in history as the most infamous and flagrant attempt to assassinate the character o. top-flight public officials that was ever launched and disclosed by this Congress.

Mr. Speaker, feeling very strongly with respect to the matter of the investigation of the so-called ugly rumors now being conducted by the Armed Services Committee, I am again addressing myself to that question. In retrospect it is not hard to understand why this House launched the present investigation. In fact, after the impassioned presentation of the bill of particulars b,. the gentleman from Pennsylvania [Mr. VAN ZANDT] there was little else this House could do but to vote the $50,000 and cause that complete investigation be made in order to clear the names of some of the finest men who have ever served this Government in official capacity.

Mr. Speaker, you yourself have said that "If Stu Symington was a dishonorable man you would not believe it until he came here and told you so." As you so esteem Stu Symington, so I esteem and feel about Louie Johnson. Louie Johnson is an honorable man. Behind every statement which I have ever heard him make through all the years I have known him there has been a ring of force, sincerity, honesty, truth, and determination.

Mr. Speaker, I am reminded of the statement made by one of the great characters in Shakespeare's Othello, wherein he said:

Good name in man and woman • • • is the very life of the soul. He who filches of me my purse steals trash—'twas mine, 'tis

his, and it has been slave to thousand. But he who robs me of my good name robs me of that which enriches him not but makes me poor indeed.

I can well picture the dramatic tenseness in the hearing yesterday as well as in the voice of my good friend, Secretary Louis Johnson, when he told the Armed Services Committee:

The charges are utterly false. The tendency to malign and defame and assassinate the reputations of public officials is much the same as a new, growing, and dangerous cancer. The integrity of the entire Department of Defense has been brought into question.

Mr. Speaker, inasmuch as it will be some time before the Armed Services Committee hearings are printed, I am asking the unanimous consent of my colleagues to insert into the RECORD a news article discussing yesterday's Armed Services hearing as printed in the New York Times.

In conclusion, let me say that this House is going to hear further from me with respect as to who and what malicious influences launched this infamous smear of our public officials.

B-36 CHARGES LIES, JOHNSON TESTIFIES; DENIES INFLUENCE—DEFENSE CHIEF TELLS HOUSE UNIT ITS INVESTIGATION HAS HURT THE GOVERNMENT AND DEFENSE—ACCUSES UNIFICATION FOES—SAYS THEY ARE USING THESE ALLEGATIONS TO TERRORIZE ME INTO HALTING PLANE PROGRAM

(By William R. Conklin)

WASHINGTON, August 23.—Louis Johnson, Secretary of Defense, denounced the House investigation of the billion dollar B-36 long-range bomber program today as an inquiry based on rumors and anonymous letters that were "utterly untrue."

As the day's principal witness before the House Armed Services Committee, Mr. Johnson defended the entire B-36 program.

Representative JAMES E. VAN ZANDT, Republican, of Pennsylvania, who aired the charges of impropriety and political influence on the House floor last May, sat silently throughout Mr. Johnson's testimony. Representative VINSON, Democrat, of Georgia, asked for questions when the Defense Secretary had finished. Mr. VAN ZANDT asked none.

After being sworn in by Mr. VINSON, Secretary Johnson read a 10-page prepared statement. In it, he said he was trying "to remain calm under great provocation" because he considered the anonymous charges a direct slur on his reputation.

"The charges, unsupported by any evidence, apparently flow from rumors that are the figment of some malicious imagination," he said. "The charges are utterly false. The tendency to malign and deface, to assassinate the reputations of public officials, is much the same as a new, growing and dangerous cancer. The integrity of the entire Department of Defense is brought into question.

"The suggestion that I used influence on the B-36 program I brand as a lie out of the whole cloth," Mr. Johnson continued. "And that is the last time in this hearing that I use the word 'lie'—I'm getting too excited.

"I have been called all kinds of names by experienced name callers," the Defense Secretary asserted. "My job now is unification of the armed services and I intend to complete it without regard to name-calling. But you are making my job harder. The Government has been hurt by this investigation. The national defense has been hurt. When charges of this kind are made, they should be scrutinized well to see what foundation they rest upon. The opponents of unification are using these charges in an effort to terrorize me into stopping the B-36 program."

REPLIES TO THREE ALLEGATIONS

Chairman VINSON pointed out that Representative VAN ZANDT had not vouched for the truth of the charges in his House speech. However, he took up each of three allegations in which Mr. Johnson's name had been mentioned by Mr. VAN ZANDT.

"The first charge is that the renegotiation of canceled contracts with other aircraft manufacturers was handled by an outside law firm upon recommendation of Mr. Johnson," Mr. VINSON said.

"That charge is utterly false," the Secretary replied.

"The second charge is that after Mr. Johnson was sworn in last March he gave orders in great haste to give an additional $183,000,000 contract to the Consolidated Vultee Corp., a firm from which he had recently resigned," the chairman continued.

"I did not act in 'great haste,' " Mr. Johnson answered. "That is the sort of innuendo that I take pleasure in branding as false."

"The third charge is that Floyd Odlum was active in assisting Mr. Johnson in raising funds for the last Democratic campaign, and that that activity coincided with a rise in the fortunes of Consolidated-Vultee and its B-36," Mr. VINSON said.

"There is no evidence to support that charge," Secretary Johnson retorted. "It is an effort to intimidate, to coerce, and it is false. Each of the three statements is false."

ODLUM SCHEDULED TO TESTIFY

Mr. Odlum, chairman of the board of Consolidated-Vultee, is scheduled to testify before the committee on Thursday. Under questioning by committee members, Mr. Johnson said he had raised funds for President Truman's campaign last fall and had received two contributions totaling $3,000 from Mr. Odlum. Asked if any other aircraft manufacturers had contributed to the campaign, Mr. Johnson said he recalled none.

"Generally it's the poor people who contribute to the Democratic campaign," Mr. Vinson observed with a wide smile.

Mr. Johnson said he had not sought the post of Defense Secretary, adding that he had been "drafted" for it by President Truman late in January. While he admitted receiving $148,532 in legal fees from Consolidated-Vultee in the last 9 years, he said his former connection with the company had no importance now.

He said he had no apologies to make for having raised campaign funds, "since I see many faces on this committee who did the very same thing." He added that neither he nor any member of his family owned aircraft stock now.

Mr. Johnson assured the members that there would be neither censorship nor partisan politics in his conduct of the Office of Secretary of Defense.

Earlier, the committee heard Lt. Gen. Nathan F. Twining, of the Air Force; Lt. Gen. Lauris Norstad, Air Force Deputy Chief of Staff for Operations; and General Rawlings, Chief Fiscal Officer of the Air Force. Their testimony recounted that the B-36 program, in addition to Air Force approval, had been approved by the Joint Chiefs of Staff, the Research and Development Board and the Munitions Board.

General Norstad, a 42-year-old West Pointer, said the House inquiry had had two disadvantageous effects on the Air Force. He said "the Air Force had been diverted from its normal problems of national security and that the morale of both the civilian and military heads of the Air Force had been impaired."

Gen. Omar N. Bradley, Chairman of the Joint Chiefs of Staff, and Admiral Louis Denfeld, Chief of Naval Operations, are among those scheduled to testify tomorrow.

Northwestern Minnesota Has Big Stake in H. R. 5472, the Flood-Control Bill

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1949

Mr. HAGEN. Mr. Speaker, the Ninth District of Minnesota, which I represent in the United States House of Representatives, has a very important interest and stake in this measure, H. R. 5472, a bill authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes.

Included in the measure are two very important projects to the people of the Ninth District.

In section 205 of the bill under the title of preliminary examinations and surveys will be found provisions for a preliminary examination and survey of the following rivers in northwestern Minnesota: Mud River, Thief River, Moose River, and Lost River, tributaries of the Red River of the North, and Snake River, Tamarac River, Two River, Big Joe River, and Little Joe River, also tributaries of the Red River of the North in the State of Minnesota.

During recent years, excessive rains and the lack of proper drainage and runoff facilities have resulted in hundreds of thousands of dollars of loss to the farmers residing in the areas drained by these rivers. A flood-control project is absolutely necessary to prevent further excessive damage to the farmers in this area in the future. It is quite certain, in my mind, that a preliminary survey will show the need for a flood-control project on these rivers.

Also included in this measure, which I am sure the House will approve today, is a further authorization of $4,000,000 for project construction in various areas of the Red River of the North Basin of Minnesota and North Dakota. The provision for this authorization is found on page 21 of the text of the bill in section 203, under the title "Red River of the North Basin." The text of the section is as follows:

In addition to previous authorizations, there is hereby authorized to be appropriated the sum of $4,000,000 for the prosecution of the comprehensive plan for flood control and other purposes in the Red River of the North Basin, approved in the act of June 30, 1948.

A brief description of the Red River of the North project is found on page 117 of the Committee Report No. 969, issued by the House Committee on Public Works. The statement is as follows:

RED RIVER OF THE NORTH BASIN, MINN., N. DAK., AND S. DAK.

Location and description: Red River of the North is formed by the confluence of Otter Tail and Bois des Sioux Rivers at Wahpeton, N. Dak., and Breckenridge, Minn. It flows 400 miles to the international boundary between the United States and Canada, thence northeast 155 miles to Lake Winnipeg in Canada. The drainage area at the international boundary is 40,200 square miles. The total population of the basin in the United States

is about 508,000. The largest community is Fargo, N. Dak., with a population of 52,850 in 1940. About 77 percent of the population resides on farms or in communities of less than 2,500 inhabitants. Agriculture is the principal occupation in the basin.

Most flood damage results from major basin-wide floods, caused principally by snowmelt in the spring. An estimated 2,000,000 acres of land, including sections of Wahpeton, Fargo, Grand Forks, Breckenridge, Moorhead, and East Grand Forks on the central plain, and several districts in the upland regions are subject to flood damage. Five major floods have occurred since 1881, and 8 more localized damaging floods have occurred since 1892. The flood of May 1948 caused damages estimated at $10,000,000. Average annual damages are estimated at about $1,390,000 at July 1947 prices.

Existing project and comprehensive plan: The Lake Traverse and Bois des Sioux River project, authorized by the Flood Control Act of June 22, 1936, was completed in 1948, and is the only flood-control project constructed in the basin by the Corps of Engineers. The 1944 Flood Control Act authorized reservoirs on Sheyenne Park, Pembina, and Tongue Rivers, and improvements on Red Lake and Clearwater River, which are now in the planning or construction stages. The Flood Control Act approved June 30, 1948, authorized a comprehensive plan of improvement to include improvements for local protection in the interest of flood control and major drainage on the lower Sheyenne, Maple, and Rush Rivers in North Dakota, on the Mustinka, Otter Tail, Wild Rice, Marsh, and Sand Hill Rivers in Minnesota, and on the Bois des Sioux and Red Rivers in the vicinity of Wahpeton-Breckenridge to be accomplished by channel improvement, and at Fargo-Moorhead, and at Grand Forks-East Grand Forks by channel improvements, levees, etc., in addition to construction of a multiple-purpose reservoir (Orwell site) on the Otter Tail River to control floods and, in conjunction with previously authorized Federal reservoir projects on Sheyenne River and at Red Lakes, to increase low flow for water supply and pollution abatement. The estimated Federal cost of the comprehensive plan is $9,928,000, of which $2,000,000 were authorized for appropriation by the 1948 Flood Control Act for initiation of the plan. The estimated annual cost of Federal maintenance, is $8,800.

Local cooperation: In connection with local protection improvements, local interests are required to give the usual assurances covering lands, damages, highway, bridge, and utility changes, maintenance and operation of channel and levee works after completion, and provision of spoil areas. Improvement at any recommended locality may be undertaken independently of the others whenever funds for that purpose are available and prescribed local cooperation has been provided. The estimated cost to local interests is $2,337,000.

Benefits: The average annual benefits of the authorized comprehensive plan are estimated at $1,025,000. This amount when compared with average annual charges of $546,330 yields a benefit-cost ratio of 1.88 to 1.

Status of comprehensive plan: Orwell Reservoir on Otter Tail River, and channel improvements on Wild Rice, Marsh, and Sheyenne Rivers, are under construction.

Use of additional monetary authorization: The estimated total cost of work under way in the comprehensive plan is $2,498,000, compared with present authorization of $2,000,000, leaving a deficit in authorization of $498,000. Authorization needed to initiate and complete remaining projects in the comprehensive plan amounts to $7,430,000. Total additional authorization needed, therefore, is $7,928,000. The proposed authorization for appropriation of $4,000,000 in the bill will permit the completion of work under way and about one-half of the remaining projects in the comprehensive plan.

Remarks: The Red River of the North drainage basin is subject to destructive floods, and the inadequate natural water supply has restricted its development. The committee is convinced that additional authorization to permit continuation of the comprehensive plan is needed for the economic welfare of the citizens of the area.

Los Angeles County Flood-Control Projects Will Benefit by Passage of H. R. 5472, Rivers and Harbors and Flood Control Act of 1949

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1949

Mr. McDONOUGH. Mr. Speaker, the passage of H. R. 5472 known as the Rivers and Harbors and Flood Control Act of 1949 which provides additional authorization of $40,000,000 for the continuation of flood-control projects within the Los Angeles County drainage area will help speed up the completion of the various flood-control projects which are more urgently needed than heretofore because of the great increase in population which has required the building of more homes in the Los Angeles area than in any other similar area in the United States which adds additional hazard to the possible loss of life and property in many areas that were not occupied or developed before World War II.

Although the $40,000,000 additional authorization is not as much as should have been approved in order to catch up with the work which was suspended on these projects during the war years, it is nevertheless of great help and will be very much appreciated by the taxpayers of Los Angeles County who have contributed $85,000,000 of their own funds to construct and maintain many of these flood-control projects in addition to the funds appropriated from time to time by the Federal Government.

The continuation and acceleration of these projects is especially needed at this time to help relieve the alarming increase in unemployment in Los Angeles County. The latest figures show 431,000 unemployed in California, 258,600 of this number being in Los Angeles County. These projects will also increase the assessed valuation of Los Angeles County by restoring to the tax rolls many thousands of acres of valuable land which would otherwise be inundated if flood protection were not provided. The hazard of floods in southern California is increased by the fact that unlike most sections of the United States the mountain areas do not have adequate watershed in the way of undergrowth and forest to absorb the water and thus prevent the danger of flooding the lower plains where most of the towns, cities, and residential areas are located.

The Flood Control Act of 1941 approved the general comprehensive plan for flood control in Los Angeles County, known as the Los Angeles County drainage area project, and provided partial authorization for it. The current estimated cost to the Federal Government is $328,486,000 and the current total authorization, provided in 1936, 1938, 1941, 1944, and 1946, is $157,541,000. This leaves a balance of authorization required to complete the entire project of approximately $171,000,000.

The Corps of United States Army Engineers has been working on this project since 1936. Several of the units have been completed and a number are under construction. Allotments to date to the project amount to $89,740,000. With an anticipated appropriation of approximately $12,500,000 for the fiscal year 1950 there is a remainder of authorization of but $55,300,000, and this amount is fully obligated to cover the balance of cost of units now under construction.

In order to determine the amount of additional authorization needed at this time, it is necessary to consider the rate at which construction should proceed to complete the entire Los Angeles County drainage area project within a reasonable period of time, giving consideration to the needs of the area for protection, to proper planning and to programing of construction.

The Los Angels County flood control district engineers have made a careful study of these factors as applied to the remaining units of the project, resulting in a recommended program for completing the project in 8 years.

It is significant to note that completion of most of the flood-control projects in the United States now authorized by Congress has been recommended within a 6-year period by the Chief of Army Engineers.

The program recommended calls for appropriations in the order of $40,000,000 in fiscal year 1951, $30,000,000 in 1952, and $25,000,000 annually for several years thereafter.

It is essential from the standpoint of good planning to provide a backlog of authorization to extend over at least a 4-year period. Therefore, based on the above program, an additional authorization of not less than $75,000,000 is now required; or, if it is the view of the Corps of Engineers that authorization is obligated for the full cost of a unit once construction is started, then authorization is now required in excess of $100,000,000.

Such authorization will permit appropriations for a 4-year construction period for the Los Angeles County drainage area project including completion of the Whittier-Narrows Flood Control Basin by 1952. It will allow the necessary time for orderly and efficient advance planning and for coordination of a large and complex construction program by the Corps of Engineers.

The taxpayers of Los Angeles County are not seeking special consideration or favors. Our flood-control district has raised and spent $85,000,000 of its own funds on flood control and conservation work. We believe that we have ourselves helped solve our flood-control

problems to a far greater degree than has any other local area in the United States, and we will continue to do so to the utmost of our ability.

Los Angeles is continuing to grow, not only in population but industrially. Today, we have 4,000,000 people in Los Angeles County. It is a metropolitan district serving a vast area of the West in many ways. Unfortunately, it is also subject to tremendous flood hazards. The effects of major floods in this metropolitan center are of national significance and completion of flood-control projects is essential.

Scientific Research Program

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1949

Mr. DURHAM. Mr. Speaker, a strong scientific research program is one of the most important aspects of national security in the world today. Any examination of the new weapons created for the last war indicates clearly the importance of a strong and active body of scientists. We were able to produce the atom bomb, to make effective use of radar, and numerous other important military devices because we had a large body of scientists who already understood the fundamental science and were thereby capable of immediately adapting themselves to the development of weapons based on that scientific knowledge. To have concentrated in the 1930's on the manufacture of bombs to the exclusion of scientific research might have yielded more TNT bombs for the war but certainly would have precluded our obtaining the atom bomb.

It is true that only since the war have the funds from private and State sources for fundamental research dropped to the point that large Federal contributions are necessary. This situation has led to the proposal of the National Science Foundation which is greatly to be desired, and has led to the expenditures of considerable funds by the Navy and the Atomic Energy Commission on research activities.

While military security is a sufficient justification for an active program in research in physical science, this is by no means the only justification. Discoveries may improve communication and transportation both military and civil. They can yield new tools such as isotopes for the study of biology and for medical therapy. This last aspect, that many of the recent advances in the biological and medical fields are based on tools arising from research in the physical sciences, should be emphasized. Nevertheless, the potentiality of humanitarian advances of scientific research should not mislead those emphasizing military security into the belief that this country can long remain strong without continued scientific advance.

Turn now to the second major item, which is the need of reasonable continuity of financial support. Scientific programs do not usually bear fruit in less than several years. Also scientists by and large are accorded a high degree of tenure in their employment, whether it be in universities, industrial, or Government laboratories. The fixed costs of operating a modern research establishment with its large research machines are a very considerable fraction of the total budget. All of these factors make it very difficult to make a large reduction in the operating budget of a research laboratory without completely disrupting its operations. If senior scientists of outstanding caliber are discharged for lack of funds, then morale and the chance of reemployment of capable men will be lost for years. Even the discharge of considerable numbers of junior scientists and assistants will break up research teams in the middle of investigations. Furthermore, even extensive reduction in scientific personnel will not yield a large reduction in budget unless whole sections of the laboratory are completely closed down to save machine operating costs.

As vice chairman of the Atomic Energy Committee, I believe that the Atomic Energy Commission is steadily working to reduce the operating costs of its major research laboratories by making them more efficient, and it should also be realized that the laboratories are young and do not have the tradition that would help an established laboratory. Also, the Research and Development Board has done an excellent job of coordinating research, but further coordination is needed, and that is why I urge the setting up of the National Science Foundation by Federal statute, for this and all other reasons outlined above.

[From the Washington Post of August 21, 1949]

PIGEONHOLED SCIENCE

The country cannot afford another year of delay in the establishment of a National Science Foundation. Beginning with the war, the Nation's reservoir of basic science has been badly depleted. Much attention has been given to applied science, but little to the pure research which is the fuel of all other scientific work. The purpose of a National Science Foundation would be to survey scientific deficiencies and, through grants and fellowships, to concentrate research where it is needed. An incidental benefit would be to take the heat off the Atomic Energy Commission by relieving the AEC of the sponsorship of a fellowship program in basic science.

Each effort since 1945 to enact the science foundation into law has been defeated, either because of administratively unworkable features in the bill or because of the failure of one House of Congress to act. There is still time during this session to remedy the lack. The Thomas bill, not brilliant but acceptable, has passed the Senate; however, the companion Priest measure in the House has been stuck in the Rules Committee since mid-June. Mr. PRIEST ought to exert every influence to see that his bill comes to a vote, for a functioning science foundation is a national defense need no less important than armaments.

The Price of Social Security

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1949

Mr. GOODWIN. Mr. Speaker, I am appending hereto one of the most eloquent statements I have seen on the danger facing our people by reason of a failure to comprehend just where we are headed for unless we stop this made stampede to set up an all-powerful universal-service government in Washington. The editorial is from the Saugus (Mass.) Advertiser of August 18, 1949, and quotes an editorial from the Boston Traveler:

We have been warning you that we are buying so-called social security at an awful price. We do not mean a money price. Enormous taxes are the least of it.

From time to time we have quoted here the observations of others a thousand times more distinguished among their fellow citizens than we are.

We now emphasize to you the statement of ex-President Hoover on his seventy-fifth birthday that this Nation is on the last mile to collectivism, in other words dictatorship.

We present below an editorial from the Boston Traveler:

"LAST MILE TO COLLECTIVISM

"Herbert Hoover, our only living ex-President and a man who has known the depths as truly as the heights of public estimation, spoke in the grave accents of an elder statesman on his seventy-fifth birthday. His message is one for the Nation gravely to ponder. It is the mature belief of the man who might, in a sense, be called the last President of nineteenth century America, that this Nation is on the last mile to collectivism.

"Today an American citizen works 1 week each month for the Government. Government is costing the American family $1,300 a year, compared to less than $200 a year in his administration. One worker in eight works for the Government. One person in seven receives some form of Government subsidy. Government debt is increasing and more Government spending means power, 'more power, more centralization in the hands of the state.' For what that means in terms of a lowered living standard, look to England, says Mr. Hoover.

"We have said that in a sense Mr. Hoover was the last President of nineteenth century America. Does that mean he is a has-been and his viewpoint quaint and historic? We believe precisely the opposite. History has a pendulum quality and what has been, is again. There is nothing new in a trend to collectivism. History is full of instances. Neither is there anything new in the disillusion that follows.

"There are two ways of learning in human life, the easy way by following the ripened wisdom born of experience and the hard way, through experience itself. A wise America will choose the easy way out of the road to serfdom. It will heed the warning of Herbert Hoover and start the pendulum back before it is too late."

This ever-increasing bureaucracy, this gallop of increasing centralization of government, is the reverse of all the freedoms won for us at such a cost of blood and suffering.

Again we say, as one of those who has but a short time to endure when it comes: We are selling our priceless heritage of freedom for a mess of pottage. And what a mess it is.

You are afraid of poverty, of depressions, of lack of security in your old age? Be afraid only, my friends, of losing your liberty and freedom.

Be afraid of trusting men with unlimited powers to tell you what you shall do, where you shall work and at what price.

Remember Jefferson, "The least governed people is the best governed people."

Add to those who warn faithfully, "It is later than you think," Ex-President Hoover, one of our ablest of public servants.

"Long may our land be bright
With freedom's holy light;
Protect us by thy might,
Great God, our King."

Norway's Recovery Program

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two short statements concerning Norway's recovery program, which express most eloquently the progress which that nation has made with ECA aid and hard work in leading the way back to a sound economy among the countries of western Europe. The first is by ECA Chief, Paul G. Hoffman, and the second is by A. E. Staley, Jr., retiring ECA Chief of Mission in Norway.

The article appeared in News of Norway dated May 7, 1949. This publication is published by the Royal Norwegian Information Service, 3516 Massachusetts Avenue, Washington, D. C.

They follow:

From ECA Chief Paul G. Hoffman's introduction of Ambassador Wilhelm Morgenstierne before the United States Associates of the International Chamber of Commerce, New York, April 27:

"On the 9th of April 1940, when the Germans swooped down upon Norway's peaceful, almost defenseless people, the shock was felt by every American, no matter what their descent. During the following 62 days of bitter, desperate military opposition * * * hopeless from the start * * * we read our newspapers with despairing admiration. It seemed incredible that such a little country, such a handful of people would dare to stand up against the machine-made might of Hitler. * * *

"It is not surprising that now * * * under the European recovery program * * * Norway's people are exhibiting the same high qualities. They have tackled their recovery problems with the same determination, the same refusal to admit defeat. Not even Great Britain * * * the story of whose austerity program has won the admiration of the world * * * has put into practice such a schedule of self-denial. My friend, the late Knute Rockne, the famous coach at Notre Dame and himself an American-Norwegian, used to say, "A team that won't be beaten, can't be beaten." The Norwegians are taking that position. They couldn't be beaten by the Germans and they are refusing to be beaten by the destruction the Germans left upon their departure.

"The destruction was appalling. Half of Norway's merchant fleet was gone. Northern Norway was laid waste, her iron mining destroyed, and her ore concentration facilities in ruins. There had been terrific damage to buildings and equipment throughout the country. It is estimated that altogether Norway had lost a fifth of her entire national wealth.

"Norway's fundamental problem is still that of repairing the damage of war but by the end of 1948, somewhat more than half the job had been done. The fishing fleets and whaling factories had been brought back to prewar levels. The merchant fleet was approaching 90 percent of prewar tonnage. Norway, with help from America, is getting back on her feet."

NORWAY HAS UNIQUE OPPORTUNITIES, SAYS STALEY

In a final meeting with the Oslo press before his resignation as ECA's chief of mission in Norway, Mr. A. E. Staley, Jr., described the Norwegian 4-year recovery plan as a key to broadened economic opportunities, unique among the Marshall lands.

"It is of decisive importance for the Norwegian economy," he maintained, "that Norway's water power resources be developed. Such development will entail heavy investment, however, which in turn will be justified to the extent that they lead to increased production of export wares. In my opinion," he continues, "Norway has great possibilities for securing increased amounts of foreign exchange through the export of goods whose manufacture requires large amounts of electricity. The Norwegian long-range program emphasizes water power development, but one must be fully aware that these and other investments will not begin to show results until several years after the projects' completion."

Regarding the program in general, Mr. Staley predicted, "The realization of the Norwegian long-range program will be an example of how a country can surely and steadily work its way ahead toward an improved economic status. In this respect, Norway occupies, in many ways, a unique position among Marshall lands."

Just in Passing

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Olean (N. Y.) Times-Herald:

JUST IN PASSING

It is some time since this newspaper first appraised its readers of the fact that the huge sum of $2,800,000,000 had accumulated in the veterans pension fund—actually overpayments on premiums paid by the service personnel—and that the Government intended to send out a dividend to each policyholder.

Veterans' Administrator Carl R. Gray, Jr., has announced that application blanks for the 16,000,000 veterans who would be affected by this $2,800,000,000 distribution would be available toward the end of next month, with payments beginning in January.

But a somewhat different light has been cast on the matter by Representative KENNETH B. KEATING, of Rochester, N. Y.

Mr. KEATING has accused the Veterans' Administration of trying to mislead veterans as to how soon they will get their refunds.

The Rochester Congressman pointed out that the Veterans' Administration has not yet even obtained the floor space needed for the machinery and personnel to handle the repayments.

He said that this might delay the start of the actual distribution several months, so that the vast bulk of the payments would be received by the veterans shortly before election day in 1950—"just," Mr. KEATING, added, "as the Truman administration planned in the first place."

The passage of time may prove Mr. KEATING to be either right or wrong; but if he should be right, and there should be an odor of election politics clinging to this veterans, repayment distribution, it might easily be a condition that might have entirely different results than had been anticipated by those who "attended to the details."

Of Many Things

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a stimulating article entitled "Of Many Things" by Thomas E. Murphy, which recently appeared in the Hartford (Conn.) Courant.

This article, commended to my colleagues, is a momentous and worth-while commentary on the significance of the practices involved not only as they affect my at-large district of Connecticut, but of their patent effect nationally.

OF MANY THINGS

(By Thomas E. Murphy)

THE COMMON MAN AND THE FOOD RACKET

Not being a friend of General Vaughan I had to wait more than 2 years before I could get a deep freezer. Let me hasten to say I paid for it myself, too, which definitely puts me in the category of the common man. As one of the gang, then, I'd like to address myself today to the subject of how the common man gets bilked by Uncle Sam, who, as I shall demonstrate, now travels under the name of "the big butter and egg man."

Tom Hewes, Hartford lawyer, and former Assistant Secretary of the Treasury, wrote an important book a year or so ago. He called it Decentralize for Liberty. It sold quite a few copies, but not nearly so many as it deserved. The principal thesis of this book was the fact that Government has grown so large that it is now beyond the reach of individual citizens. Its ramifications are so complex that common men like myself are practically at its mercy.

Now don't get the idea I'm going to talk politics. But I would like to talk about food, and how the politicians have hiked the price of food on people who can't afford it. Meanwhile, the same statesmen shed crocodile tears every time the plight of the common man is mentioned.

Last week Uncle Sam tucked away 10,000,000 more pounds of butter. It's not going on the bread of poor children who could certainly use it. No. It's just stored away as uselessly as the gold at Fort Knox. Uncle Sam has the biggest deep freezer of them all. Right now he has 20,000,000 pounds of butter salted away.

That's the reason why you can't get butter at less than 62 cents a pound. When it

reaches that figure Uncle Sam steps in and buys it. That's the law.

Same way with eggs. Right now the Government has 143,000,000 dozens stored away—1 dozen for every man, woman and child in the United States.

Same way with corn. Uncle Sam has bought up 533,000,000 bushels of corn and has it stored away. Same way with wheat and other foodstuffs.

Now what's going to happen to all this food eventually is beyond my gifts of prophesy. I know that even under good storage conditions the time will come when something will have to be done with it.

The thing that irks me, too, is the fact that the city dweller, the factory worker who may be having a tough time getting along, pays through the nose going and coming. Not only does he pay for the subsidies that buy the butter and eggs, but he's rooked a second time when he goes to the grocery store and finds that because of the compulsory buying by his government the price of butter and eggs is away beyond what he can afford to pay.

How long this insane condition will persist is a question. Even more interesting, however, is how long Joe Doakes, the factory worker, is going to get bilked by a "friendly administration." Some day he's going to wake up and then, let us hope there will be hell to pay.

An even more disgraceful exhibition of hoaxing the buying public occurred right here in Connecticut during the last election. Then the principal mouthpiece for the common man's party campaigned on the issue that he was darned well going to look into the causes of high food prices and was going to do something about it.

The only relationship these statements had to food was the fact that they went under the heading of baloney.

For here you had the spectacle of Candidate Bowles campaigning on an issue of lower food prices while you had Candidate Truman of the same party campaigning among the farmers and telling them that the Government grab bag was going to be continued as usual.

Needless to say there was nothing done in Connecticut about lower food prices. To do something would have required Governor Bowles to attack the policies of the national administration. Quite simple, if lower food prices are really wanted, to make the worker's pay envelope stretch further, it could be done simply by abandoning the policy of the Government's hiking up the price of basic foodstuffs every time they get within reach of the worker's dollar

Specifically, here's what happens. Suppose the demand for butter slackens because people won't pay the price. It starts to dip to 59 cents or thereabouts. Uncle Sam rushes into the market brandishing his check book and offers 62 cents a pound wholesale. Naturally those who have butter to sell do business with the Government. The butter is carted off and put in cold storage and the price of butter soars again to a point above the 62 cents.

Now, by what legerdemain, you may ask, is it possible for one candidate to campaign on the issue of lower food prices, and another to fix a policy of keeping prices sky-high? To do this successfully several things are necessary. In the first place there must be such an eagerness to win in the minds of the candidates that they subordinate common honesty to sleight-of-hand. In the second place, the hugeness of Government, and its complexity, mentioned at the outset, makes it possible to get away with the shenanigans without questioning by the people who are getting rooked.

So when you start thinking about those free deep freezers that were passed out in Washington a few years back, remember that Uncle Sam has the biggest deep freezer of all. Into this huge maw are going daily millions of dollars of precious foodstuffs that should be on the table of poor people. When you buy eggs or butter, remember that the price you're paying is not rigged by any "Detroit plan" that figured so prominently in the last campaign, but is the result of a Washington plan, that places the price of foodstuffs beyond the reach of poor people. I don't know why more of the common men, so-called, don't rear up on their hind legs and do something about it. To me it is one of the more sickening aspects of mediocrity and slick dealings in government. It smells, but not of Mr. Maragon's essence of perfume.

The United States and the United Nations Secretariat

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 18, 1949

Mrs. DOUGLAS. Mr. Speaker, I have been much troubled in recent months by certain statements and newspaper reports criticizing the operations of the United Nations and attacking particularly the administration of the United Nations Secretariat. These stories and reports reflected a lack of understanding or appreciation of the nature of the United Nations and of the way it was designed to operate. It seems to be necessary and desirable to refresh our knowledge about these matters.

From the very beginning, the nations of the world joining the new United Nations organization were concerned about the way it was to be administered. They did not want the new organization to be under the control or subject to undue influence of any nation or group of nations. They wanted an organization which would devote itself to the common goal as expressed in the principles of the Charter. For this reason, they gave careful attention to the plans for a Secretary General and his staff to assure that they would provide an effective and independent administration for the new organization.

Of course, the drafters of the United Nations Charter realized that there were no international human beings, that the international civil servants who were to serve the Secretariat of the United Nations would have to be recruited from among citizens of the nations of the world. The drafters were fully aware that human beings have affiliations, loyalties, prejudices, and that it is not possible for individuals to divest themselves of these when they came to work for the United Nations. Nevertheless, it was believed possible for men and women to devote themselves to the work of the United Nations, to be single-minded in their duties to the Organization without regard to their national or other ties. In brief, it was believed that citizens of member nations could be loyal international civil servants and could serve the common interest as expressed in the United Nations.

Mr. Speaker, the United States was a leading proponent of the principle that there should be an independent United Nations Secretariat. We fully supported the promulgation of the articles of the Charter which refer to the Secretariat. Later, in the General Assembly, we were leading proponents of regulations and practices designed to assure that the Secretariat be allowed to develop as an independent, international organ.

It is important to look again at the exact terms of article 100 of the United Nations Charter. This article provides:

1. In the performance of their duties the Secretary General and the staff shall not seek or receive instructions from any government or from any other authority external to the Organization. They shall refrain from any action which might reflect on their position as international officials responsible only to the Organization.

2. Each member of the United Nations undertakes to respect the exclusively international character of the responsibilities of the Secretary General and the staff and not to seek to influence them in the discharge of their responsibilities.

In accepting this article, we agreed that the development of the United Nations requires that the United States and other Members respect the international character of the Secretary General and his staff. We agreed that if the United Nations is to be effective we and other nations must not seek to influence Secretariat officials in the performance of their duties. It was agreed that the Secretary General alone would be responsible for picking his staff and that the individuals he hired would not have to be of any particular persuasion, creed, or loyalty. It was required only that they take and uphold an oath to be loyal to the principles of the United Nations and not to accept instructions with regard to their work from any government or any source outside the United Nations. Of course, in view of the nature of the Organization, it was appropriate to provide that, subject to the paramount considerations of efficiency, competence, and integrity, "due regard shall be paid to the importance of recruiting the staff on as wide a geographic basis as possible"—article 101.

These principles, it seems to me, have been forgotten by some of us in recent months. The statements and newspaper stories of which I spoke seem to reflect the view that the United States should be able to decide who may work on the United Nations Secretariat and who may not. Things have been said which seem either designed or calculated to force the resignation from the secretariat of individuals whom some people do not like, or to compel the Secretary General to fire such individuals. Fortunately for the United Nations, the Secretary General has maintained his independence. I recall some time ago reading in the newspapers that Secretary General Lie had been requested by one of the governments of eastern Europe to discharge the large proportion of the citizens of that country who were employed by the Secretariat because these individuals were personally

and politically unacceptable to that government. We all approved the action of Secretary General Lie when he turned this request down flat. We would wish him to do so again in similar circumstances, and I am sure that he would. We cannot, however, expect or insist that the Secretary General maintain the independence of the Secretariat vis-à-vis some member countries, and at the same time, ourselves attempt to interfere in the administration of his staff.

I do not know what truth, if any, there is in some of the stories about the Secretariat which appeared in the papers. If careful investigation shows that there is some basis for criticism or correction of Secretariat practices, the United States is not merely entitled but is obligated to take appropriate steps to see that these practices are discontinued. The steps that are appropriate are, of course, those contemplated by the Charter and by the system established by the General Assembly of the United Nations for this purpose. Committees of the General Assembly regularly review the work of the Secretariat and have opportunities to scrutinize as carefully as may be necessary what goes on there. The United States is represented on these committees, and through our representatives we can and should give careful attention to assure that the Secretariat is functioning properly and that the members of the Secretariat are carrying out their functions as loyal and independent civil servants.

Many of the stories which have circulated recently refer to the entry into the United States of Communists coming here in connection with United Nations activities. Of course, some Communists come to the United Nations headquarters. Communists come to the United Nations headquarters as representatives of the Communist governments who are members of the United Nations, and perhaps there are a few others who have official business in the organization. The idea of the United Nations was to unite all the nations of the world regardless of differences in political outlook, and to persuade them all to live and let live in peace. We knew that the Soviet Union was a Communist country when we joined the United Nations. We knew that there would be Communists coming to the United Nations headquarters when the Congress of the United States, reflecting the wishes of the people of the United States, unanimously invited the United Nations to establish its headquarters in this country. At that time we saw the problem in its proper perspective, realizing that we were a strong and free country unafraid of alien ideas, and that whatever dangers might be involved in admitting to this country a few aliens antagonistic to our form of government is unimportant as compared to the importance of having the United Nations and of having it here in the United States. We realized that in any group of several thousand people there might be an occasional individual who abuses his role in the United Nations and the purposes for which he comes to the United States. If such a situation arose, we had confidence that the agencies of our Government would be fully able to cope with the problem and protect the interests and security of the United States. The experience of the past years has, I believe, justified our confidence.

Mr. Speaker, I do not wish to believe that the statements and stories about the United Nations Secretariat reflect attempts to undermine the faith of the people of the United States in the United Nations. If in some instances that should be the motive, I know it will not succeed. The people of the United States stand today, as they did 4 years ago, fully behind the United Nations. There is undoubtedly concern and some disillusionment that the postwar era has not proved to be the golden age of universal brotherhood which some of us romantically expected. Peace, we are learning, is a hard-bought thing. But we believe it is worth the price, we have faith that peace can be achieved and maintained, and that in the world as it is today the United Nations is the best and only hope for saving ourselves and other peoples of the world from a terrible and fatal third war. It is particularly when relations between nations are strained that the need and importance of the United Nations becomes clear. I know that the people of the United States will not permit their faith in the United Nations to be destroyed by unfounded tales, and that they will insist that the United States continue to live up to its obligations as a member and as host to the United Nations, and play a leading role in developing the Organization in accordance with the Charter principles so that it can more effectively accomplish the high purposes and aims for which it was established.

More Votes in It

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. GOODWIN. Mr. Speaker, there are still a lot of people left who still cling to the time-honored philosophy that thrift is a virtue and that there is something enobling in prudent savings. The Wakefield (Mass.) Daily Item recently carried an editorial commenting on current State legislation which is so pointed in connection with these remarks as applied to the national picture that I append it hereto.

MORE VOTES IN IT

Another demonstration of the line of thinking that goes on on Beacon Hill among some of the element more or less recently elevated to power there came with the assertion by one Democratic legislator that the money from investments which is all many old people have to live on was stolen by their ancestors and hoarded.

The issue in this particular graduated income-tax dispute has been whether people living on such incomes should be entitled to the same exemption benefits given under earned income.

The demogogic attitude is that anybody who has something to live on without going on relief or some other State fund must have come by it dishonestly.

It is parallel in logic to the long-familiar belief of some people that anybody who can get more than $100 a week (used to be $50) can't possibly earn it.

It long has been a fact that people who live on incomes from invested money have not had too easy sledding. Interest and dividend rates are about half or less what they once were.

Is it a crime for an heir to get the benefit of what some thrifty ancestor worked hard for years ago?

Or is it better to pocket pride and live on public charity?

For those who must, the second course is accepted and just. But should we discourage those who have the will to the old-fashioned way? The type of administration we have in both State and Nation today likes the public-funds method.

More votes in it.

Apalachicola Waterway

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1949

Mr. SIKES. Mr. Speaker, I submit herewith House Memorial 1443 adopted by the Legislature of the State of Florida, urging development of the port of Apalachicola, completion of the Jim Woodruff Dam and further expediting the completion of the Apalachicola waterway. This, Mr. Speaker, is the greatest waterway now under construction in the Southeast.

It possesses immeasurable value to the entire area from the standpoint of navigation, hydroelectric power development, and flood control, and is a source of municipal water supply.

I am glad to call the memorial to the attention of the Congress.

House Memorial 1443

A memorial to Congress, the President and his Corps of Engineers, urging development of the Port of Apalachicola, completion of the Jim Woodruff Dam and further expediting the over-all Apalachicola, Chattahoochee, Flint River Valley projects

Whereas the port of Apalachicola was once a leading port on this continent; and

Whereas economic, agricultural, and trade changes adversely affected this port and along with the Civil War its development was retarded and the great river systems and tributaries also remain undeveloped natural resources; and

Whereas Congress in its wisdom has now seen fit to authorize and make appropriations to develop these rivers and tributaries into a mighty waterway; and

Whereas these rivers constitute the Apalachicola River Basin comprising the Apalachicola, Chattahoochee, and Flint Rivers and their tributaries of Florida, Georgia, and Alabama, an aggregate of some $100,000,000 has been approved for this over-all project with more than 10 percent of said amount having been expended or contracted for on the great Jim Woodruff Dam near Chattahoochee in the great State of Florida; and

Whereas the national resources of this great State are being developed and are subject to great industrial progress with the advent of transportation, electric energy, and flood control; and

Whereas from the viewpoint of national defense the port of Apalachicola is strategically located, and

Whereas the port of Apalachicola is located at the mouth of the river system flowing through the world's largest and most completely equipped military post at Fort Benning, Ga., and in close proximity to Headquarters of the Third Army at Fort McPherson, and the numerous southeastern divisions offices of military service, as the South Atlantic Division, Corps of Engineers, the Ordnance depot, hospitals, and such other area units; and

Whereas official records disclose maritime losses were suffered at the hands of the enemy within sight of the heart of the city of Apalachicola because of the lack of a sufficient channel to this harbor of safety; and

Whereas the city of Apalachicola is already a designated port of entry and documentation with weather station facilities existent and quarantine station authorities and is the only subject port complete with these facilities between Tampa and Pensacola, Fla.; and

Whereas the port of Apalachicola is the only city at the mouth of a great river system developed or being developed, without sufficient channels to accommodate transoceanic trade; and

Whereas the Florida Chamber of Commerce and the Florida Junior Chamber of Commerce have given their unanimous endorsement to the development of the port of Apalachicola: Now, therefore, be it

Resolved by the Legislature of the State of Florida, That the Congress of the United States, the President, and his Corps of Engineers, are hereby memorialized and respectfully urged to facilitate and expedite the further development of the port of Apalachicola for transoceanic commerce and trade, and the immediate completion of the Jim Woodruff Dam located near Chattahoochee, Fla., and completion of the other Apalachicola Basin projects as expeditiously as is possible; and be it further

Provided, That copies of this memorial be transmitted forthwith by the chief clerk of the house and the secretary of senate of the State of Florida to the President of the United States, the Senators and Representatives of the Federal Congress from the States of Florida, Georgia, and Alabama, and to Gen. Lewis A. Pick, Chief of Engineers, Washington, D. C.; be it further

Provided, That a copy of this memorial be spread upon the journal of both the Senate and House of Representatives of the State of Florida and sufficient copies thereof be furnished to the press.

Approved by the Governor, June 12, 1949.

Filed in office secretary of state, June 13, 1949.

Unfair to Judges

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Alliance (Ohio) Review:

UNFAIR TO JUDGES

Representative KEATING is offering a bill to prohibit members of the Supreme Court from testifying as character witnesses before other tribunals, as if it were an essential check upon the discretion of those judges.

In some measure that view may be valid, but we suspect that the chief value of such a measure would lie in the protection it would give against unreasonable demands upon judges.

At present they have no alternative to testifying before trial courts if they are subpenaed. The inquiry suggests that judges as a group are extremely reluctant to go on the witness stand because it takes them out of their role as impartial agents of justice. Probably a great majority of them would welcome a law relieving them of this necessity.

An accused person who calls upon a friend on the bench to testify in his behalf puts the judge in question on the spot. The judge cannot refuse without seeming cruel and unfaithful to his friend, and he cannot accept the bid for his help without embarrassment to himself and to the judicial system as a whole.

A law of the type Congressman KEATING suggests would relieve Supreme Court Justices of this dilemma as well as of the duty of responding to subpenas as character witnesses, while leaving them free to testify if they have knowledge of facts bearing upon the case.

Utah Editor Comes to Front for Central Arizona Project

EXTENSION OF REMARKS

OF

HON. HAROLD A. PATTEN

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. PATTEN. Mr. Speaker, the Casa Grande Dispatch, of Casa Grande, Ariz., carries a reprint of an article from the King County Standard of Kanab, Utah. This article clearly brings before the public a concise bit of reasoning pointing to the importance of the central Arizona project to the State of Arizona and deflating many of the arguments set forth by the State of California in opposing the central Arizona project:

UTAH EDITOR COMES TO FRONT FOR CENTRAL ARIZONA PROJECT

H. Eugene Roberts, publisher of the King County Standard of Kanab, Utah, recently came to the support of the central Arizona project with a well-worded reply to the Blade Tribune of Oceanside, Calif., which has been severely criticizing the project.

Mr. Roberts' letter is of interest to all Arizonians who are fighting for the Colorado River water, and is published herewith in full.

"Referring to your letter of June 7, 1949, with respect to the central Arizona project, wherein you point out the enormous cost of the Federal expenditure to the central Arizona project, we realize that $738,000,000 is a lot of money. We are also mindful of the fact that if Arizona does not use the water to which it is entitled, naturally the State of California will inherit that water, too, and Arizona will forever be a desert outside of a few small areas.

"We are mindful of the fact that the amount of money involved seems tremendous; nevertheless, the money will be spent within the confines of the United States and undoubtedly the great State of California will manufacture considerable equipment which will probably be used in the excavation and tunneling and in pouring cement in this project. Therefore even California would not be sustaining a total loss in the moneys expended.

"In fact, I visualize the central Arizona project as the makings of a tremendous empire in the State of Arizona and like all unselfish people we shall be very happy to contribute our support to Arizona's prosperity while in the final analysis there is intercourse between great States of the Pacific and Intermountain area and we shall all go forward together.

"I can imagine that the Government has spent a great amount in and for the State of California in the Shasta Dam, the Hoover Dam, the Parker Dam, the Davis Dam, and the dams on down the Colorado River which take care of the Brawley and Imperial Valley areas, along with canals and ditches which also the Government has undoubtedly contributed greatly to. We are mindful that Arizona probably shares in some of the water from some of the dams but not nearly in proportion to the amount which the great and sovereign State of California shares. Frankly, we are happy to see California receive all this benefit and more, too, but not at the expense of taking water which rightfully belongs to Arizona away from her.

"Reclamation of the West has added untold millions of dollars potential revenue to the State of California, as well as to Utah, Arizona, Idaho, Nevada, Oregon, Washington, Montana, Wyoming, and Colorado, and although I am a good Republican, I am in favor of every one of these projects. I believe it was Herbert Hoover who started the planning on the Hoover Dam although it was completed under the Democratic administration. The Grand Coulee Dam and other great reclamation projects in their respective States are great boons to those States and undoubtedly we cannot place the value entirely upon the acres watered for a great project such as the central Arizona project because there will probably be several hydroelectric plants along the way which will manufacture a large amount of electricity and will help the economy of the great State of Arizona.

"If Arizona is a greater State than it is today, undoubtedly this will assist the State of California in its commercial intercourse with the State of Arizona considerably more than to leave Arizona a small State due to the fact that they need water which they are entitled to.

"California is blessed with tremendous reservoirs of water in the Sierra Nevadas and has a lot of excellent rivers and canals coming down from those mountains from the north end of the State to the south. Arizona does not have one-tenth the potential water that the State of California has and therefore they are entitled to their just share of the Colorado River, even at the expenditure of a large sum of money. Finally, through taxes in one form or another, 40 percent of the staggering sum you mention will get back to the taxing bodies of this country.

"What you call Arizona's special-privilege legislation might well be California's steal of Arizona's rightful share of the Colorado River water in the event that Arizona does not get the water.

"Therefore, we do not feel that we can support your well-meaning program as it is based upon entire selfishness for California rather than the altruistic designs which so many editors, Congressmen, and Senators of your great State pour into our newspapers daily, propaganda against the central Arizona project, under the guise that it is to protect our Nation from willful and wanton expenditure on the central Arizona project.

"Our editorial policy therefore will be in behalf of the State of Arizona and their project."

Military Public Works Bill

EXTENSION OF REMARKS
OF
HON. JOHN C. DAVIES
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1949

Mr. DAVIES of New York. Mr. Speaker, the paradox of events which have taken place in this body within the last 2 weeks is absolutely amazing. Within that period we have been begged, pleaded with, cajoled, and threatened with eventual war and defeat if we did not approve a billion and a half dollars for arms in Europe. At the same time, there was in this body, not the slightest sign of action on a bill which is the domestic version of the same, but at a much cheaper price. It would provide for the maintenance and improvement of our military and naval establishments in this country and in our possessions. This bill is H. R. 4766.

It was argued, and possibly with some truth, that if we supplied arms to Europe to enable them to withstand any possible aggression, the western democracies would be our first line of defense. This argument was used again and again, and I daresay that many of the gentlemen in both this House and our companion body voted for the bill principally because of that reason. But, I wonder if it has occurred to many of these gentlemen that if and when the arms-aid-for-Europe bill passes, and nothing is done about the military public works bill, the Eighty-first Congress will be responsible for building an imposing and strong stone front on our fort of defense while leaving the back door not only unprotected, but absolutely wide open.

I refer to the Territory of Alaska, which is defenseless at the present time. Alaska would be the chief beneficiary from the military public works bill. Approximately $130,000,000 would be authorized to build and improve defenses in that Territory. And there is a desperate need for such defenses in that area. The Honorable E. L. BARTLETT, the distinguished Delegate from Alaska wrote last week:

> We have magnificent airfields in Alaska. They are woefully unprotected. They cannot be properly protected until installations such as contemplated by the pending bill—particularly housing—are constructed. Combat troops to guard the fields cannot be housed in needed numbers now because of lack of installations.

Mr. BARTLETT further points out that if action is not taken at once during this session of Congress, there can be nothing at all done toward relieving this deplorable condition until the spring of 1951. We have been told that there is a threat of war constantly hovering over us, and that ratification of the Atlantic Pact and the approval of billions for arms for Europe were absolutely necessary to keep the peace. There were many in this body who believed that sending arms to Europe would be tantamount to a declaration of war. My colleague, the gentleman from Tennessee [Mr. SUTTON], stated that case very effectively last week on this floor. Nevertheless, a portion of the funds requested were approved.

It has been rumored that one reason for inaction on the military public works bill is that certain high officials in our Government are afraid of antagonizing Russia by fortifying Alaska. If there is any grain of truth in that rumor at all, it is the most glaring inconsistency I have known in many a day. For the same high officials are wholly in favor of full aid to Europe. In other words, they are in favor of arming Europe and running the risk of displeasing the Soviet Union, while leaving our back door so defenseless that it invites attack.

I am uncomfortably reminded of a similar situation a few years ago, when this country, by Presidential order was trading arms and destroyers to England, and by congressional action was providing lend-lease arms to our allies in Europe, while leaving some of our small island outposts in the Pacific in the position of inviting attack. Japan attacked Pearl Harbor as a result of the antagonism caused by our refusal to condone her aggression in China any longer. Now we are going to show Russia that we refuse to condone her political aggression in Europe any longer. And we have today a most vulnerable spot which at one point is only 50 miles across the Bering Strait from Russia.

It is no secret that Russia has been improving Siberia at a terrific pace since the war ended. Whole cities have grown up there. The Red Army has maneuvered there. There are large and well developed air bases there.

General Vandenberg has testified:

> There is only one military threat to the security of the United States and to the peace of the world. * * * This threat is from the Soviet Union.

Governor Gruening of Alaska has stated:

> I can state categorically that Alaska is defenseless and * * * can be taken tomorrow by a minor airborne invasion.

I ask my colleagues to mull over these two statements. Consider the facts carefully. They are simple. We will antagonize Russia by our policy in Europe. Russia is even now the only threat to our security. Russia could take Alaska tomorrow if she so desired. Russian bombers based in Alaska could rain untold destruction and death on the industrial and population centers of the United States.

Added to all the rest of the facts is the inescapable point which was added 2 weeks ago by the white paper on China. We have written China off, and with her much of Asia, which will undoubtedly be Communist within a few years, possibly even months. The danger in the Pacific is real.

Governor Gruening also stated:

> If there is another Pearl Harbor—and this time it will be a far more serious disaster than in 1941—it shall not be said that no warning has been given.

That is the situation, gentlemen. The danger is real; the warning has been given. If no action is taken on H. R. 4766, the Eighty-first Congress will be guilty of criminal negligence of our defenses at a time when our country's security is in continued peril.

Policy in the Orient

EXTENSION OF REMARKS
OF
HON. HAROLD A. PATTEN
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1949

Mr. PATTEN. Mr. Speaker, a very timely letter, written by Mr. William R. Mathews, editor of the Arizona Daily Star, which was written to the editor of the New York Times and appeared in that paper on August 21, 1949, is inserted for the attention of my colleagues. The article gives in a concise and practical manner a proposed solution to a condition which requires the attention of our country at this time:

POLICY IN THE ORIENT—SUPPORT FOR DUTCH IN INDONESIA, NATIONALISTS IN CHINA URGED

To the EDITOR OF THE NEW YORK TIMES:

As a newspaper editor and reporter who has had much experience abroad, and who has just returned from the Orient, I believe that I have information that will help formulate a successful diplomatic policy in the Orient.

Our present diplomatic policy is defeatist. Such a policy will not only fail to win anything; it will, unfortunately, accelerate anarchy and defeat. The people of the Orient, like people everywhere, have only contempt for weakness; they have respect only for strength and firmness.

The time has come when we must adopt a positive and firm policy, because what we have been fighting is a cold war. Just as we did not stem its tide in Europe until we dared to show strength at Berlin, so we must now dare to stem the tide in the Orient. If I did not think it could be done, and done cheaply, I would not be writing. It does no good to hold post mortems and engage in bitter recriminations.

As to Indonesia we must, with decency and firmness, support the Dutch, but at the same time temper the passionate and extravagant demands of the Republicans of Soekarno. I know from personal conversations with Republican leaders that once they successfully drive out or discredit the Dutch, they are counting on Uncle Sam playing Santa Claus to them. If we loan or appropriate any money for Indonesia, it should be loaned through the Dutch, because, as I size up the competency of the Indonesians, they will squander it without producing results.

SOME CONTROL NEEDED

The Indonesians are ready to learn self-government, but are not ready for independence. Unless the independence the Dutch are willing to grant them is tempered with some degree of responsible Dutch control, we Americans will in a few years at the cost of American lives and hundreds of millions of dollars be compelled to intervene to restore order. The only danger of communism in Indonesia will arise from a prolonged disorder which our present diplomatic policy,

using the United Nations as a front, is fostering.

If we assign this task to the Dutch, we can spare ourselves much of the cost and dilution of our military strength. At the same time we will help the Indonesians. For us to prattle about plebiscites and democracy in a country 93 percent illiterate amounts to tragic political amateurism.

The fate of Indonesia will probably be determined by what we do in China. The cold war in China is not lost. It will not be lost if all of continental China is occupied by the Communists. That means that we must see to it that a friendly Chinese Government holds Formosa and Hainan off South China, and the British keep their century-old territory at Hong Kong.

A friendly Chinese Government based from such places as Formosa and Hainan can hold its own, and at the same time deal out plenty of misery to Communist-held China. The role of guerrilla warfare can be reversed.

The Nationalist naval blockade is having real effect. It is a legal blockade, just as legal as the North's blockade of the South in our Civil War, because it is effective. The Communists are getting into a tough spot. They have plenty of anarchy on their hands. They are not getting production restored. On the contrary, they have been eating up the country more like a plague of locusts.

AID TO NATIONALISTS

A comparatively little help to the Chinese Nationalist Government can soon accomplish much. But it should not be expected to accomplish such great schemes as the "unification of China." All it should be expected to do is to help the Nationalist Government organize first just a small area on the continent, which would set an example to win adherents for a larger China, based on the Yangtze and limited on the north by the Yellow River.

A part of this program will call for the rise of new Chinese leadership. If there are any regeneration possibilities in China; if Asia is awakening, this leadership will be forthcoming only when the present desperate situation stimulates it into activity.

For the present we will have to deal with Chiang Kai-shek, despite his long record of proved military incompetency. There are some Chinese generals who are competent, and as a matter of wisdom we should make our help conditional upon the elevation of these generals, and the removal of Chiang Kai-shek from military control. From what I could find out, Acting President Li is an infinitely better man to deal with, but although he is acting President, Chiang controls the armies. That intolerable situation must be ended.

WHAT VICTORY IMPLIES

What we face in the Orient is thus a cold war, one we have been fighting in a defeatist spirit, without knowing it. We can, and must, win it. But victory does not imply bringing all of China under a government friendly to us. That cannot be done by us, and we should not deceive our own people into thinking it can be done. Only a future regeneration of the Chinese people can do that. We can probably assist in that regeneration by helping it to rally on such bases as Hainan and Formosa, and maintain Hong Kong as a symbol of Anglo-American interest.

Hong Kong is vital. Evacuation or loss of it by the British will reverberate with shattering effects throughout southeast Asia, where millions of Chinese are waiting to see what happens. In widely separated points in these areas I tried to get an opinion from Chinese about the present Communist government. Not a single Chinese would talk. The word had evidently gone out to keep lips sealed.

The program I have outlined above will cost comparatively few millions. It would have the enthusiastic support of men who have been on the spot, such as Admiral Badger and General MacArthur. This I know from personal conversations. It represents a prudent use of our political power as compared to our past blind follies in thinking that we can buy peace with our billions. It does not call for any ECA millions. It promises to give the Chinese support when they start helping themselves. And that, in my opinion from extensive reporting abroad over many years, is all that we should do anywhere.

WILLIAM R. MATHEWS.

TUCSON, ARIZ., *August 12, 1949.*

Now and Then

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I would like to include a timely editorial which appeared in the Il Progresso Italo-American under date of August 21, 1949. This article points out that regardless of what our religious faith may be, we should now more than ever before in the history of mankind, stay close to the church in its fight against a faithless doctrine.

The article follows:

NOW AND THEN

The two main targets of the heavy artillery and poison-gas brigade of the Kremlin in the Soviet's cold war against civilization and human decency are the American people and the Vatican which has hundreds of millions of devout followers and believers throughout the world. That this is so, is entirely understandable. Nay, it is inevitable.

Morally and spiritually the American people whose Government, unlike the Russian, never went into partnership with the Nazis, have come out of World War II, very much invigorated. Similarly, the Vatican has also managed to survive the Nazi terror and even advance after rendering considerable services to the democratic cause through serving as a center of resistance to Hitlerism and often as a haven to its fleeing victims. We are not drawing parallels. We are merely pointing them out. It is quite natural that Stalin, as the successor to Hitler—in the world of terror, tyranny, and enmity to peace should, like his Nazi precursor, and, in many respects ideology and "moral" mentor, concentrate his massed fire power of slander against these two great forces in modern civilization. Here we find the why and wherefore of the countless bucketsful of filth now being hurled against the American people by the Russian dictatorship. Here is the key to the vicious propaganda drive now being waged by Moscow and all its lickspittles against His Holiness, Pope Pius XII. It is in this light that this extremely significant phase of the cold war must be viewed and can be understood. It is essential to have a historical approach.

A DELUGE OF LIES

Let us illustrate by putting under our microscopic lens the disease germs let loose via the Moscow airwaves in a German broadcast to Austria on August 4, 1949, at 1 p. m. Eastern Standard Time. We quote in part:

"The princes of the church are tied to Wall Street by links of gold." Myron Taylor, the personal representative of Truman at the Vatican "is a creature of the Morgan group. Nor is it surprising that the Vatican should so eagerly support the Marshall plan and the Atlantic Pact. It is here that the Vatican's financial and economic interests merge with the interests of the imperialists. The Catholic dignatories are flesh of the flesh and blood of the blood of the leading strata of the capitalist class."

It is not at all necessary for us to defend the Vatican against such threadbare lies and crude and calculated vilification. The Holy Father needs not our assistance in the unholy war waged against Catholicism by Generalissimo Stalin and his cringing cronies. Hitler and his pack of hyenas also tried to destroy the Vatican. They failed miserably and went down to ignominious defeat—with their leader buried and lost beyond identification in the rubble and rubbish of what was once prosperous and progressive Germany.

But what is necessary is to point out the archhyprocrisy and rank fraud of the demagogs and despots now oppressing the Russian people and threatening world peace and human decency. If anyone in the world knows that there is not a word of truth to the above fantastic accusations against the Holy See it is the very authors and utterers of the charges. These assassins of the truth know slander when they see it and peddle it. That is their main craft and sole cause.

FORCED TO TELL TRUTH

For instance, before Stalin signed his pact with Hitler, to unleash World War II and when the Bolsheviks were afraid that the Nazis would not do business with them, they were very eager to praise and befriend Pope Pius who was a recognized enemy of the poisonous reactionary national socialism. Then, the same holy father was viewed in an altogether different and very opposite manner by the Communists. Thus Moscow's mouthpiece in New York, the Daily Worker of March 4, 1939, through its foreign news editor, Harry Gannes, then proclaimed on page 6:

"Fascist dictators try to conceal their hatred of and campaign against Cardinal Pacelli, new Pope Pius XII.

"If there was one cardinal more than any other out of the 62, whom the Fascist dictatorship did not want chosen as Pope, he was Cardinal Pacelli, the present Pius XII.

"This fact, both Hitler and Mussolini are striving to conceal from their people now. The reactionary press here is now not slighting the fact that Hitler's personal organ, the Voelkischer Beobachter, inveighed against the election of Cardinal Pacelli to the Pontificate. But the press here seems to forget that Mussolini had been even more insistent in his bullying threats to the conclave of cardinals, not to elect Cardinal Pacelli or anyone like him to the Papacy.

"If Pope Pius XI lived through the most difficult period of the Catholic Church's history, Pius XII will be confronted with even more terrible attacks against the Catholic Church."

And all this highest praise from the same Communist headquarters, that today ooze nothing but poison and fiendish hatred against the same holy father. Obviously, the Communists and their camp followers and bedfellows cannot and should not ever be trusted.

But these defenders of the anti-Christ certainly knew what they were talking about when they said above that Pope "Pius XII will be confronted with even more terrible attacks against the Catholic Church." Here apparently was much more than Communist prophecy. Here more than 10 years ago—was Bolshevik "promise." Today, mankind suffers from Bolshevik performance. In venality and bestiality, the Communists are unsurpassed and unsurpassable.

Socialism Under Labor in Britain

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting another interesting article by Mr. E. T. Leech on the socialist experiment in Great Britain. He states that the British are taking it easy and they are living in an unreal world.

The article follows:

BRITISH TAKE IT EASY AND PLAY IT SAFE IN A COMPETITIVE WORLD

LONDON, August 28.—British people drew more money out of their savings accounts in the last 2 weeks of July than at any similar time since the war. Some $64,000,000 of added currency went into circulation. Savings withdrawals exceeded deposits by more than $20,000,000.

However, it wasn't a run on the banks. Nor any reflection of the loss of faith in British currency which has caused it to drop sharply in value through most of the world. Instead, millions of people were just getting ready for the biggest week-end holiday travel in their history.

Bank holiday comes four times a year, and the one on August 1 this year was a record. It actually started several days before the end of the week. Some shops put up signs saying they would be closed for a week. And London was shut up tighter than a drum.

Maybe the British people were taking a holiday from the wave of crises which had been sweeping over them for weeks. They had been bombarded with warnings that their country's plight is desperate. They had been told that their standard of living was threatened; that their rations were about to drop, and that their work and production had to go up.

But they were in a holiday mood. They were tired—and obviously little impressed by repeated warnings. Their chief worry had been that the railroad workers would stage a national slow-down just before the holiday. But the union had just given legal notice that it would delay the general strike for 21 days—so the holiday crowds flocked out of the cities to the country and seashore.

This particular situation was typical of how the English have come to react to their troubles. The great bulk of them just don't react. They take life fairly easy—certainly easier than most Americans do—and go about their jobs and recreation in a spirit of letting the politicians do the worrying.

TIME OUT FOR TEA

British life moves at a pleasant tempo. Offices and shops and factories shut down midafternoon for tea, and many of them in the morning. It was a new experience for me to be in a newspaper shop when the office boys came around with tea and work stopped for a pleasant interlude. In factories this cuts into mass production.

Perhaps the best explanation was the one given me by a leading businessman. Taxes and prices, he said, are so high, and goods so scarce, that the most important thing a worker can buy is leisure. This seems to be the chief reason why many workers resist overtime. They'd rather have their rest than the money left to them after taxes.

This isn't new under the Socialists. Many of the British upper classes have taken life pretty easy for years. Now, with the spread of paid holidays and many forms of insurance and medical benefits furnished by the state from taxes, the habit has spread.

The British economy for many years has been an easy and sheltered one. It has been free from the stiff competition and drive of American business.

LET EVERYBODY GET BY

Some 2,500 trade associations got together and fixed up production and prices. These agreements were ratified in many cases by the Government, as in the iron and steel industry. The idea was to let everybody get by, including the least efficient.

A complete absence of antitrust laws made all this legal. In the United States it would violate the antitrust and monopoly statutes, and the various laws to regulate railroads and utilities.

Owners clung to obsolete plants and machinery, rather than spend money to replace them. And workers during many years of heavy unemployment learned to mistrust and resist new machinery and methods, fearing they would reduce jobs.

The unions still don't like competition. The Labor government has stopped it completely in all nationalized industries. And it has made for uniformity and common prices and practices by its tight planning and controls in private business.

LESS COMPETITION

Fortune magazine recently quoted the general secretary of the Trades Union Congress, which bosses the Labor Party, on the matter of competition. Asked whether he thought Britain should have more or less of it, he answered, "Less."

Also, a considerable number of English businessmen are old family institutions, and younger generations became more interested in adequate profits than in spending money for modernized plants and new machinery.

British business and labor split sharply over the ownership and control of industry. But they pretty much agree that in operation it should be noncompetitive.

Present controls, which prohibit building or installation of new machinery except for export business under conditions approved by a series of bureaus, guarantee against new competition. Tight rules and working schemes, set up or approved by government, give monopoly unions stability in dealing with closely knit employers.

CONSUMERS DON'T KICK

Consumers, of course, get neither the improved quality or reduced prices which come from competition. This doesn't seem to worry them too much.

But it is playing havoc with the sale of British merchandise in a world of falling prices and growing buyer resistance.

There's a big billboard near the foot of Fleet Street which reads: "Pay—It will buy more when we make more—and make it at lower cost."

This is typical of appeals constantly made to the workers to do better, try harder and cut costs. There is some discussion, too, that British plants aren't as modern, well equipped and efficient as those of competitors, particularly American. Moreover, expensive machinery can't pay off on one-shift operations—and some British unions refuse to work night shifts.

But aside from the highly practical and independent London Economist and a few other publications, almost nothing is said about the lack of British competition. It is a tight, monopolistic system, which plays it safe. It doesn't take chances on new machinery when the old is working—especially under the tax system which won't permit business to set aside enough earnings for equipment, replacement, or reserves.

GO WITHOUT, PLAY SAFE

The worker, too, plays safe. A returning unionist, after a visit to America to inspect textile plants, pointed out that United States workers have autos, household appliances and other luxuries which British labor does not. But, he noted, "They are worried because they buy it on the hire-purchase [installment] plan." The British worker would rather go without and play safe. And so would his boss.

The passion for security, and a not too vigorous life, runs through all classes. But now it is making it hard for England to compete in a world which is not so highly sheltered and restricted.

Sonoma County Wines

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1949

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert an editorial appearing in the Press Democrat of Santa Rosa, Calif., setting forth one of the oldest and largest industries in my home county. Grape culture and wine production has been a California institution for many years. We have produced many grades of world-famous wines and champagnes. The editorial follows:

LET'S PROMOTE OUR FINE SONOMA COUNTY WINES

(By Louis Foppiano, president, Sonoma County Wine Growers Association)

Beautiful Sonoma County is world-famous for its wines. For more than a century, fine wines grown on the scenic hillsides and in the fertile valleys have been acclaimed for their outstanding quality. Upon this principle of unsurpassed quality, a foremost Sonoma County agricultural industry of great economic importance has been built.

The significant place that Sonoma County grape and wine growing occupies today is indicated by the extent and scope of this colorful, historic industry. More table wines are produced in this county than in any other in the United States. Our 62 bonded wineries last year had a gross production of 8,064,000 gallons of red and white table wines, plus an additional 1,016,000 gallons of dessert wines.

Approximately 23,000 Sonoma County acres are planted to vineyards from which are gathered almost 40,000 tons of grapes annually. Most of the grapes are used in the production of wine.

Evidence of the industry's economic importance is the multi-million-dollar investment in vineyards and wineries, plus the annual dollar return to growers and employees. The total investment in vineyards and winery property is estimated at more than $22,000,000.

In recent years, the annual return to grape growers has averaged some $3,441,000, while the annual value of wine production has averaged an additional $8,000,000. The grape and wine industry employs an estimated 3,000 persons the year-round, paying them a total of some $6,370,000 annually.

These figures emphasize that Sonoma County, in addition to having a reputation for quality wines, is also a leader in the quantity of wine produced.

One reason for this is that Sonoma is naturally endowed with ideal conditions of soil and climate favorable to the growing of European variety wine grapes best suited for the production of fine wines.

Another factor is the painstaking care exercised by succeeding generations of wine

growers to use these choice wine grapes in the production of superlative wines.

The county's first commercial wine grower, Gen. M. G. Vallejo, was an ardent advocate of wine quality. He was producing wines at the Pueblo of Sonoma as early as 1839 and a few years later received official commendation for his wines at a San Francisco exposition. At the State fair of 1861, he received five first place awards for the superior quality of his red and white table wines.

By this time, another active exponent of wine quality had settled at Sonoma and started a vineyard adjoining General Vallejo's property. The newcomer was Col. Agoston Haraszthy, destined to become the "father of modern California viticulture."

Haraszthy's grape and wine growing activities won for him an honored place in the annals of the California wine industry and brought added fame to Sonoma County. His Sonoma vineyard was planted to imported vines, personally selected by him during a visit to the famous wine districts of Europe in 1861. From his experiments with these imported vines, he demonstrated the superiority of wines produced from European grape varieties. Even more beneficial was Colonel Haraszthy's generosity in sharing his knowledge of wines and his imported cuttings with other California wine growers, which was followed immediately by a great modern expansion of the industry.

The traditions of quality established by Vallejo and Haraszthy are of even greater importance to the Sonoma County wine industry today. The highly competitive aspects of present-day wine marketing make it imperative to concentrate on the production of wines of highest merit. In addition, the growing number of Americans who use and enjoy our wines are developing a taste preference for wines of superior quality.

Wines grown in Sonoma County and elsewhere in California are enjoying greater popularity today than at any other time in history. Wine consumption nationally has increased steadily during the past 18 months, a highly encouraging sign of the increased national interest in our wines. Unfortunately, returns to producers have been far from satisfactory.

One important aspect of wine marketing we seem to have overlooked is the aggressive promotion of Sonoma County wines in their home district, that is, in Sonoma County. Sonoma County residents, I am glad to report, are beginning to show increasing pride in the fine wines of their home county.

Our celebrated Redwood Highway is traveled by tourists from all parts of the United States and from many foreign lands. The valley is a mecca for vacationers. Many of them first became interested in our county because of the wines grown here. It is only natural for them to expect to be able to enjoy Sonoma County wines in Sonoma County.

All too often, ordering a bottle of Sonoma County wine in some of our most distinguished eating places, they are told it is not available. I feel certain that wider use and service of our good Sonoma wines throughout the county will help visitors to appreciate more how much our great county can contribute to hospitable and friendly living.

Sonoma County growers have an honest pride in the wines they produce. In addition to contributing substantially to the agricultural prosperity of the county, their wines spread the name and fame of the Sonoma Valley throughout the world.

We hope sincerely that our Sonoma County neighbors share our pride in the prestige and popularity of our wines.

We hope, too, that you will join with our wine growers in using and promoting our wines, in helping to make the name Sonoma synonymous with quality wherever fine wines are enjoyed.

Evils of Communism

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I would like to include an article written by Miss Dorothy Kelly, of the Immaculate Conception High School, Montclair, N. J., and which appeared as an editorial in the Bloomfield (N. J.) Independent Press, August 19, 1949, entitled "Evils of Communism." In my opinion this article is not only timely, but is another indication that we must jealously guard and preserve our American democracy, and the principles of freedom as expressed in our Declaration of Independence.

The article follows:

EVILS OF COMMUNISM

(By Dorothy Kelly, Immaculate Conception High School, Montclair, N. J.)

If we were to look at a Soviet newspaper we would see many pictures and articles on the Soviet worker. The main job of these Soviet workers is the produce for the state. This state plan is a master of all workers and the only thing which counts.

The first commandment of the Soviet is "Deliver what is due to the state." It is not the worker who counts, but the well-being of the state. After the state has been nourished it will in its time nourish its citizens.

Even with all this slave labor these workers receive little in the way of pay. Statistics show that a Soviet worker must labor 1 hour and 28 minutes to buy a quart of milk while an American worker will work only 33 minutes.

Communist's idea of democracy is to destroy the four freedoms of—speech, press, religion, assembly. They believe the state should control the social, political, and economic life of the individuals.

Karl Marx, founder of communism, has taught all private ownership and the use of those goods for private profit is the cause of all war crime and evil in the world.

Democracy is the belief in the rights of the people and freedom. Democracy entitles us to the pursuit of happiness, life, and liberty. The Communists on the other hand believe man, like a cog in a machine, is but a tool of the state. He foments conflict, he rejects the moral law, he does anything to deceive, and he fans class struggle.

He also opposes racial discrimination to gain aid for his party; he will use man as a slave to help the state; he calls those who disagree with him capitalists; he condemns property rights; he supports dictatorship as he recognizes no right of man; he tries to overthrow the government; he supports good causes as a wedge for Communist propaganda and dictatorship of democracy, but means the dictatorship of Moscow.

Communism robs man of all his dignity and liberty; makes marriage and family artificial. There is no matrimonial bond which is not subject to the whim of the individual. The woman is taken from the family and her children and put into public life to work the same as the men. The care and education of the children is left to the state.

Communistic ideas are now seeping into every nation, large and small, advanced and backward; no country is free of them. It spreads its propaganda through pamphlets, movies, radio, newspaper and schools. I is spread to all kinds of people, the rich as well as the poor. We wonder how a system like this could spread so rapidly. The main reason for this rapid spread is the skillful deception the Communists use on the people. They pretend to desire only to better and help in every way the conditions of the working class. One of their main ways of winning over workers is to promise those out of work a job.

The effects of their propaganda is before our eyes. After 20 years of terrorism and slavery, Russia has failed in its objective of an earthly paradise.

Communism is intrinsically wrong and no one who would save Christian civilization may collaborate with it in any undertaking whatsoever.

Uncle Sam and the Windmill

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by O. L. Huntsman:

UNCLE SAM AND THE WINDMILL

(By O. L. Huntsman)

Why should the fruits of labor and genius be wasted by our failure to use them? That question may sound silly and yet it is based upon the facts which are not generally known.

For the purpose of better serving the people of the country, money has been appropriated by Congress for the purpose of developing new and better ways of generating power from natural resources. Pursuant to this policy a study was made of the power potentials of the wind upon a commercial scale and in conformity with the facts discovered, a wind-driven electric-generating plant has been designed by an engineer, Percy H. Thomas, of Washington, D. C., who is connected with the Federal Power Commission. He has waived his patent rights to the public, as a contribution and benefit. The State or any citizen may have the full benefits of his genius without costs. Patent rights often cost fortunes even for their use on small contraptions. This designed wind-powered aerogenerator and tower upon which it is mounted is not a mere toy. It can generate 7,500 kilowatts with a 34-mile-an-hour wind. Velocities of winds such as this are perhaps very common there in California at the elevations of the tower just mentioned for it will place the center of the giant wheel 455 feet above the ground. The blades are 80 feet long. Of course this machine is not an enlargement of any common design. Every feature is scientifically calculated to serve its purpose best and to endure the hardships of storms and winds up to 200 miles per hour. The advantages of many experiments are engineered into its specifications.

Already delegations of people from other lands have come to see the model, confer with the inventor, and to study the specifications. There may be people in America who want to do likewise and to create an industry for fabricating and building these power plants. Cities, districts, and private enterprises may want them installed to augment their power supplies. There are many

possibilities connected with the future of aerogenerators.

A few months ago the people of California experienced a bad drought. While the dry wind and hot sun dried up their streams and reservoirs and kept storm clouds away; the springs in canyons shrank to a trickle. The turbines in the hydro-plants which drove the generators came to a stop. There was a brownout caused by the lack of electric power in a vast region where millions live and work with power-driven machines and tools. All were adversely affected in various ways.

If there had been installed on the windy buttes of California a few of the giant wind-driven generators designed by Mr. Thomas, there need not have been any brownout or shutting down of factories and shops in California. It can happen again. And as time goes on and more people settle there, the loss of electric power will cause greater hardship to greater numbers.

Every year, in this broad land, there are vast areas somewhere suffering from drought. The Tennessee Valley is no exception. That region has grown industrially to a point now where all the dependable power supply has been marketed and the Tennessee Valley Authority has petitioned the Congress for a vast sum of money with which to build steam-generating plants to help meet the demand for more electricity. A drought there in time of emergency would cause inestimable losses with serious consequences.

One of the reasons that the Eightieth Congress had for opposing a law appropriating funds to be used for building steam plants was that, by so doing, it would not be developing a natural resource. The building and operation of a device like a steam plant is not to be classed in the category of developing a natural resource. This line of reasoning could not be applied to the construction of auxiliary plants driven by the wind. For the utilization of the force of a breeze is indeed the development of a natural resource as surely as the building of a dam to harness a river.

That common old phenomenon, the wind, that fills your eyes with dust, and at times dries up your water supply and kills crops, can be made to serve you through the medium of electricity. It can be made to clean the air in your house from the dust it creates and to pump water from the deep well when the streams are dry to wet the dusty field. If only someone, with an eye for business and service, would undertake the task of building the first windmill to fill that need. A new chapter in the annals of great achievement will then have been written, like that of the steamboat, the train, and many others.

Rent Decontrol

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 24 (legislative day of Thursday, June 2), 1949

Mr. CAIN. Mr. President, during the recent Senate debate on the adequacy of the Housing Expediter's 1950 budget as agreed to by the conferees on the independent offices appropriations bill several questions were raised concerning what has happened in those cities which have been decontrolled since April of this year when the Rent and Housing Act of 1949 became law. Part of a factual answer is to be found in a Wall Street Journal article of August 11 and in a résumé of the rent decontrol situation in Texas which was carried in the Baltimore Evening Sun of August 18. For the reason that these articles are of interest to every Senator and to others generally, I ask unanimous consent that they be printed in the Appendix to the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of August 11, 1949]

DECONTROLLED CITIES—SIX FIND FORECAST OF BIG RENT HIKES, MASS EVICTIONS UNFOUNDED—AVERAGE RAISE IS MODERATE—MANY DON'T BOOST RATES—MORE HOMES AVAILABLE—OWNERS LEERY OF VACANCIES

What would happen if your town kicked off rent control?

An official horrifying answer comes from Washington. The average rent in the typical city would soar 60 percent, the rent control authorities declare. (They say they know because a Government survey proves rents on new apartments and other units already free from Federal ceilings are 60 percent above comparable controlled dwellings.) So if all restrictions were thrown off in your city, you'd likely witness mass evictions, great profit for landlords and extreme pain for tenants.

Just to check this, the Wall Street Journal has done some reporting in six cities that actually have abandoned rent control. Knoxville, Dallas and Salt Lake City did it, as the law permits, against Federal advice. Spokane, Boise and Little Rock were freed by "guinea pig" orders from Washington—hustled out to at least the first two of these towns to beat local secession from control.

There simply seems to have been no unusual turbulence following decontrol.

PRINCIPAL FINDINGS

Many landlords have not boosted rents at all; the average increase has been moderate. Item: the Knoxville Real Estate Board, in the midst of a survey of its 30 member offices, finds returns from the first 21 show "in half the rental units there has been no increase at all," nearly 2 months after decontrol. The average rental increase reported for all property handled by these offices is 7.3 percent.

Rather than rising to the level of previously uncontrolled apartments, the decontrolled units are now helping to force down rents of these new apartments. Item: At Boise Hills Village, a million-dollar rental project opened a year ago and not subject to controls, a single bedroom apartment rented for $85 monthly. Now the fee is $75. Rents of similar older apartments were under ceilings of about $35 until decontrol on April 1; since then they have risen to around $46.

Evictions have not risen generally. Item: The report from Arkansas' largest city, decontrolled April 26, is that "the eviction rate plays no important part in the Little Rock picture."

The rank and file of tenants are not enraged. Item: The week after rents were freed June 23 the CIO ran a big ad in the Dallas News asking that exorbitant rents be reported. "We got just 60 complaints as a result of that ad," says Roy Eastus, chairman of the mayor's committee to handle grievances. "I don't think that's a bad showing for a city of almost 500,000."

It's easier to find a place to rent, now. Item: The Spokane Property and Home Owners' Association figures more than a thousand previously withheld units have been placed on the market since decontrol a couple of weeks ago. A neutral observer, Mrs. Dudley Gunn, secretary of the mayor's coordinating committee which helps veterans and newcomers find living space, says decontrol has brought a steady flow of additional rental units on the market. Last Friday, for instance, brought 24 calls from landlords offering units for rent. Listings range from $20 to $100 monthly, furnished and unfurnished, houses and apartments. She says no unreasonable rent increases have come to her attention.

THE GOUGERS EYE THE PARASITES

This is not to report that the six cities are bathed in sweetness and light. Interviewers found some tenants talking about their landlords as gougers, and some property owners referring to their tenants as parasites—perhaps evidence the situation is normal. There is still a great need everywhere for more good low-rental housing, as there was under controls.

Some rent hikes have been well above the average. In Knoxville, white-haired Charles E. Twigg, of Chickamauga Avenue, says, "We got a double jolt when the landlady suddenly jumped the rent from $45 to $55 on us; the rent-control office had let her hike it from $30 to $45 just before we moved in last December." Mrs. R. T. McGolderick, of Morelia Avenue, is annoyed by a 100-percent jump in her rent, formerly $30. "I think $60 is a lot for a house that has 10 rooms with no water upstairs and just 1 bathroom for the entire place," she declares. A tenant on Magnolia Boulevard was told his $35 rent from now on would be $150. "I think they want us to move," commented the tenant, murmuring some recollections of an overflowing bathtub. "That's right," confirmed the rental agent.

Some tenants' complaints have been well organized and well publicized. In Spokane a group headed by Billy Williams, former University of Idaho grid star, is gathering data to present our side of the picture. The Dallas Tenants' Committee, organized by the CIO and AFL, has been trumpeting its discoveries, such as this: "A housing development of 100 units renting for $50 a month each found rents increased 60 percent. Nine pregnant women in the development had their rent raised even more."

RENT RESTRAINT

Partly because of the glare of such publicity, and partly for other reasons, most landlords are very deliberately restraining their increases.

In Salt Lake City, where decontrol took effect just last Friday, the Apartment House Association is asking property owners to sign pledges voluntarily limiting hikes to 10 percent, or to a 6-percent return on current valuation. Darrel Welling, executive vice president of the group, said a grievance committee would be formed to police signers.

"We will be forced to resort to publicizing the names of landlords who hike rents more than 25 percent," said James Smith of the Spokane Property and Home Owners' Association. The organization has recommended hikes of no more than 15 percent, and Mr. Smith comments he personally is raising rents on only 3 of his 18 units. In Little Rock, real-estate men warned each other at a luncheon that "it's up to you property owners to keep the slate clean and hold your rent increases to a reasonable figure if you don't want Federal regulation to return."

DALLAS HAS A SYSTEM

Most decontrolled cities have no municipal regulation, but in Dallas the mayor has set up a committee to handle grievances, under authority of a 15-year-old antiprofiteering ordinance. Any tenant can file a written complaint, giving all details. In a serious case the committee gets in touch with the landlord, obtaining complete information from him. Then both parties are summoned in an effort to iron out differences. If this fails, the committee can present the evidence to the city attorney and ask him to prosecute. The fine would be $200 for first offenders and $500 for repeaters.

Chairman Eastus says the committee has received about 150 complaints but so far has not had to turn any over for prosecution. "We came close last week, but the fellow finally listened to reason," he remarks. The committee uses a rough yardstick that a property should earn 8 percent to 10 percent on its cost but not more than 12 percent. And it figures at least 5 percent of the gross rental should be used for repairs and maintenance to give the tenant a fair shake.

Mr. Eastus, who is also president of the local real-estate board, says that in most cases the formal procedure has been bypassed for "a phone call or two to settle the problem." A favored method of settling disputes is to stagger rent increases: "Thus instead of taking a big increase all at once the tenant would pay a smaller one with the understanding that in a few months the rent would go up another notch. This gives him time to look for a new place to live."

FEAR OF VACANCIES

More persuasive than fear of local regulation, or fear of the return of Federal control, is a healthy fear of vacancies. "The real situation is that supply and demand are beginning to affect our operations for the first time. The tenant is beginning to talk back on the matter of rents," observe Laurance Gallaway, chairman of the rent-control committee of the Dallas Real Estate Board. Northrop received Air Force approval last year.. "I guess there are at least 1,000 rental living units vacant in Dallas right now. We can't jack the rent too high or the tenant will move out. I've several apartments myself that stood vacant a month; recently I lowered the rent and they were snapped up the next day."

Jack Collier East, president of the Little Rock real estate board, says the average top increase on properties he knows about is $5 to $7 monthly; he can recall only one $15 boost. "Ninety percent of the property owners I know have not increased their rents. They're plain scared to—they're afraid they'll have a lot of vacant units on their hands."

Little Rock is a good example of alarming predictions followed by very mild occurrences.

Before decontrol there were public hearings, lasting till after midnight, at which testimony of an acute housing shortage was presented by all sorts of people—the manager of the North Little Rock Housing Authority, the veterans' counselor from Little Rock Junior College, a representative of the Arkansas CIO, a social worker from the Family Service Agency.

After decontrol lists of apartments for rent in the classified columns of newspapers are appreciably longer, and it is common to see for-rent placards in the windows of real estate offices. Decontrolled rents have not risen to the level of new apartments which were never controlled. These new units are feeling the competition. Their owners say they have a hard time cutting the high rents—$90 to $125—so they are throwing them open to families with children and pets.

EXPERIENCE IN BOISE

Lift of ceilings in Boise was opposed by the Disabled American Veterans and the Central Labor Council. The DAV contended rents would soar with controls gone; the union group softened its position after making a canvass of about 4,000 residents and finding fewer than 1,000 would sign petitions opposing decontrol. The labor council said its survey showed many renters felt landlords were not getting fair treatment.

Rents did not skyrocket in the Idaho city as predicted, though the fee for small apartments in the $25–$30 per month bracket rose by about 15 or 20 percent. The Governor's office, which has been closely involved in decontrol maneuvers, says it has received one complaint, from an elderly woman on pension whose rent was hiked to $15 from $12. The city council and the local newspaper have heard no complaints. Decontrol has brought more units on the market. Before ceilings were lifted the "for rent" listings in the Idaho Statesman were few—and were mostly for shacks without plumbing or modern heat or for uncontrolled dwellings in the $100–$150 category. Now there are several listings daily for both houses and apartments.

Runaway rentals were predicted in Spokane, too, but have failed to materialize as yet. Perhaps two examples are fairly typical. Mrs. E. Favre, owner of 115 apartment units, has raised rents $5 per month on 22 units, cut rents $10 and $5 on two other units, and left the rest unchanged. Frank Jenknis, agent handling around 200 units, has raised no rents at all as yet.

In Knoxville, Harry Hyman, area rent control director, predicted decontrol would result in average rent hikes of 50 percent on low and medium bracket dwellings. Real estate managers insist the average is nearer 15 percent on those boosted, and only about half have been increased at all. The Knoxville News Sentinel notes the "relatively small portion (of tenants) who have complained to the area rent control office or to this newspaper," and concludes that most "are pretty well resigned, if not satisfied."

[From the Baltimore (Md.) Evening Sun of August 18, 1949]

RENT DECONTROL IN TEXAS

(By Wayne Gard)

DALLAS, TEX.—In Texas the freeing of landlords from Federal control of rents has assumed the aspects of a popular crusade. The Texas Legislature was the earliest in the country to vote for State-wide decontrol of rents. Dallas was the first large city to free rentals. Of the 82 cities which lifted rent control in the first 4 months after the present Federal rent law went into effect, April 1, 28, or more than a third, were in Texas.

This Texas movement could not have achieved such quick success if it had represented landlords alone. To the surprise and obvious irritation of Federal officials trying to maintain their control over rents, many Texas tenants have been outspoken against rent control and others have refused to oppose decontrol. In Dallas, six out of seven voters are tenants. Yet in a city-wide election last April, decontrol of rents was favored by a vote of 6 to 5.

There were several reasons why many Texas tenants, as well as nearly all landlords, favored ending rent control. One was that they viewed as unfair the retention of a wartime freeze on rents while the prices of other commodities and services went soaring on an inflationary spree. They knew that rent control impeded the repairing of rent houses and apartments and stood in the way of building homes to rent. They knew that many of the rents were held unfairly low and that a large proportion of renters were making unreported side payments to landlords. They realized that the Texas rent scales were frozen in a period when rents were unusually low.

From a practical point of view, tenants knew that rent housing would be much more plentiful after rent control was lifted. This action not only would spur construction but would make available for rent many homes that were being offered for sale only. More important, it would put back on the rent market thousands of vacant Texas homes that Texas landlords were deliberately keeping vacant because they refused to submit to the inequities and iniquities of rent control.

In Dallas a spokesman for a group of landlords told the City Council that, in this city alone, housing for 3,000 families would go on the market the day after rent control was lifted. That was a partisan and possibly exaggerated statement, but it was obvious to any observer that many homes and apartments were being withheld because of rent control. This spokesman cited 734 ads by landlords in a recent Sunday issue of the Dallas Morning News, offering dwellings for rent, as evidence that this city had no shortage of rent property. He predicted that after the lifting of controls houses and apartments at $55 a month would be plentiful in contrast to the $60 to $112.50 asked in current ads. Another spokesman predicted that, once control was lifted, 50 percent of the old houses being held for sale and 25 percent of the new ones would be offered for rent.

The moment that rent control became a State and local issue, the rent officials became active lobbyists against any change. Even Tighe Woods, the housing expediter in Washington, flew to Austin and Dallas at taxpayers' expense to lobby agaisnt decontrol. In Austin he found the decontrol bill already passed by both houses. He tried ineffectually to get them to reconsider it. He talked for 45 minutes with Governor Beauford Jester, seeking to persuade him to veto the decontrol bill. After Woods left, Jester looked over his mail again and handed the bill to the attorney general for an opinion on its validity. On receiving a favorable report, he signed the measure.

Texas resentment against Federal meddling was not limited to putting Tighe Woods in his place. At an earlier hearing before a committee of the Texas Senate last May 24, Brig. Gen. G. C. Gates, of San Antonio, deputy commander of the Air Force Training Command at Randolph Field, argued against decontrol and hinted that the Air Force might pull up and leave if decontrol were voted. He was soundly denounced in the Senate for his threat and his pressure boomeranged to help pile up the Senate vote of 25 to 3 for decontrol. The House already had voted for decontrol, 86 to 34.

Of the results of decontrol, not much can be said definitely yet. The State decontrol law does not go into effect until October 19. Of the outcome in Dallas, the largest city in the country with the rent lid off, reports are conflicting. The Dallas rent-control office, smarting from its defeat, put out a hasty report based on unverified telephone calls and statements by agents of labor unions. This report, citing alleged rent hikes from 10 to 380 percent, can safely be dismissed as almost pure hokum issued for propaganda purposes.

Questioning of tenants reveals that few of them have any complaint. The unionist drive against decontrol has about petered out. The Dallas landlords had given the city council a pledge against unreasonable rent hikes, and nearly all of them appear to be keeping their word. They are even cracking down on those of their number who tend to get out of line.

In May, one suburban landlord, a retired preacher and one-time Klan leader, jumped the gun by hiking rents before decontrol became effective. The other landlords hopped on him and applied enough pressure to induce him to cancel his premature action. Some tenants of this landlord, who habitually has had disputes with his renters, are now moving out. But most of the others seem satisfied to stay where they are, either agreeing to a small increase or signing a long-term lease.

Despite the amazing wartime and postwar growth of greater Dallas, the construction of dwellings has almost caught up with the active demand. Sale prices are down considerably from their peak of 2 years ago. One large home that brought $18,500 2 years ago was resold 2 months ago at $15,000. Landlords do not dare make much increase

in rents for fear of having their houses or apartments left vacant. So much property is being put back on the rent market that the law of supply and demand is exerting a check on rents for the first time since Pearl Harbor.

Decontrol, bringing higher rents in some instances, already is spurring some tenants to buy or build. As these families move into their own homes, the vacancies they leave will increase further the housing available for those who remain tenants and will serve as a brake on rent increases.

Valley of the Dammed

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1949

Mr. LEMKE. Mr. Speaker, in my extension of remarks, I am including part 15 of the "Valley of the Dammed" by Bigelow Neal, of Garrison, N. Dak., published in the McLean County Independent.

In this part, Mr. Neal shows the contemptuous manner in which the real estate division of the Army Engineer Corps operates. No one is opposed to the development of the Missouri River Basin. No one is opposed to the utilization of the water resources in this basin, nor to the development of hydroelectric power.

We do insist, however, that as little damage as possible be done, and that unnecessary lands be not acquired by purchase or condemnation proceedings in violation of Public Law 534. We also insist that the Real Estate Division and the negotiators of the Army engineers deal frankly and aboveboard with the public.

I have had personal contact with the Real Estate Division and the negotiators of the Army engineers in connection with the Wahoo bombing plant in Nebraska. There, like in the "Valley of the Dammed" the unnecessary damage and ruthless destruction of farm homes was brought vividly to my attention. There they grabbed 17,500 acres of the most valuable farm land in that State. They tore down some 60 farm homes, barns and improvements, and sold them as rubbish.

Later they discovered that they had ruthlessly taken 12,500 acres more than they needed for their bombing plant. After they had driven these farmers from their farms and homes, they offered this 12,500 acres for sale.

It is this policy of wanton destruction and total disregard for the rights of the American citizens, that Mr. Neal so ably exposes. Here is part 15 of his Valley of the Dammed:

VALLEY OF THE DAMMED

(By Bigelow Neal)

PART XV. THE POLICY OF THE REAL ESTATE DIVISION

By way of summary let's consider next the apparent policy of the Real Estate Division of the Army Engineer Corps as it rolled over those of us unfortunate enough to live in its path:

1. The Real Estate Division came into this community with a policy enveloped in a self-generated cloud of hostility toward every family to be displaced by the building of Garrison Dam. Their attitude was based on a preconception of all farmers along the river as opponents and enemies to be routed as early in the battle as possible and to be driven out of their homes so that there could be no possibility of litigation dragging in the courts when the land was wanted for construction purposes or for water.

This preconception classified all farmers as unpatriotic, as chiselers or worse. These things I have been told many times by employees of the division in sufficient standing to know well of what they spoke.

2. Their policy dictated that they "buy" this land at the lowest possible figures, regardless of the value of the land or of the rights of its owners, or the instructions of Congress or of the opinions of the Supreme Court.

3. For appraisal they sent out two appraisers working together and evidently instructed to have as little contact with the farmers as possible, without being openly hostile. In coming to their appraisal conclusions, these appraisers were forced to follow rules and figures not particularly adapted to North Dakota. Nor were the appraisers free to use their own individual or collective judgment.

4. Facts connected with the appraisal, including the appraisal figures, were kept an absolute secret from the farmers, thus causing the landowners to believe that the intentions of the Real Estate Division were not honorable and breeding hatred and distrust.

5. First offers by "negotiators" were often—and probably always—far below their own appraised valuation.

6. I have submitted evidence to show that where the first offer was not accepted by the farmer, various forms of threats, suggestive remarks, and innuendoes were used to frighten the farmers into signing options.

7. They failed to inform the landowners of their legal rights in the straightforward, friendly manner which a citizen would expect in dealing with his Government.

8. By failing to make an initial offer to the landowner of the full amount for which the land was appraised by Government appraisers, they lost the confidence of the landowners in the integrity of its Government's agents and clearly showed an unethical policy of buying land, not at the price that the Government's agents, themselves, considered fair and reasonable but at the lowest price possible.

9. The Real Estate Division's offers for the land did not represent a fair market price as shown by the fact that in the cases brought to trial by condemnation proceedings, the juries awarded the landowners 25 to 75 percent higher than the Government's last offer. Also in a majority of recent cases the Government witnesses, not attached to the real estate division, appraised the land higher than the values placed on it by the real estate division appraisers.

10. That in the matter of rentals they have adopted and maintained an attitude of mystery, tending to create fear and distrust in the minds of the landowners and thus driving them from their homes years before the Army Engineer Corps had any use for the land. In addition, they have changed the rental figures without warning and without reason and they often have refused to rent the land at all to the end that the landowner became a trespasser in his own home often for 6 months at a time thus making it impossible for the farmers to plan or to summer-fallow or to follow any farm program or practice.

11. That they have used a form or lease so cumbersome as to be incomprehensible to the average person and with clauses often so unreasonable that no man could carry them out. Among them a 300-word paragraph on what would happen if uranium or thorium were found on the land and another cautioning the tenant to enter into and carry out the terms of a soil conservation agreement with the soil conservation district and to practice crop rotation. And this is bland disregard of the fact that no man could obtain a lease for more than 1 year. Further this impossible document mystified and discouraged the landowner by such statements as illustrated by paragraph 14 which reads as follows:

"That the lessee shall pay to the proper authority, when and as the same becomes due and payables, all taxes, assessments, and similar charges, which at any time during the term of this lease, may be taxed, assessed, or imposed upon the Government or upon the lessee with respect to or upon the leased premises. In the event any taxes, assessments or similar charges are imposed with the consent of the Congress upon the property owned by the Government and included in this lease (as opposed to the leasehold interest of the lessee therein), this lease shall be renegotiated so as to accomplish an equitable reduction in the rental provided above, which shall not be greater than the difference between the amount of such taxes, assessments, or similar charges and the amount of any taxes, assessments or similar charges which were imposed upon such lessee with respect to his leasehold interest in the premises prior to the granting of such by Congress; *Provided*, That, in event that the parties hereto are unable to agree, within 90 days from the date of the imposition of such taxes, assessments, or similar charges, on a rental which, in the opinion of the said officer, constitutes reasonable return to the Government on the leased property, then in such event, the said officer shall have the right to determine the amount of the rental, which determination shall be binding on the lessee subject to appeal in accordance with provision No. 15 of this lease."

And then when the landowner, thoroughly bogged down in this mass of incomprehensible verbiage, begins to wonder why he should pay taxes on land the Government has taken away from him and decides he doesn't dare risk signing such a document, his last vestige of faith in the ethics of the real estate division is shattered by a statement which says that this lease is revokable at will by the Secretary of the Army."

Can you understand now why my neighbors turned and fled and this valley was turned into a lifeless scar on the face of the prairies?

The way it might have been

Coming now from the gloom of cruelty and stupidity I am sure you will be glad, as I am, to find that somewhere the sun still shines. Somewhere there are men who put human values ahead of bureaucratic bigotry. Even if we have to go nearly two thousand miles away, it is still possible to find where the human home is a thing of dignity and where a policy of honesty and gentleness is the order of the day.

I refer now to the land-acquisition policy of the Tennessee Valley Authority. Specifically to a treatise on that policy by one who should know. It is a pamphlet written by the Assistant General Counsel of TVA, Mr. Charles J. McCarthy. The title is "Land Acquisition Policies and Proceedings in TVA." It is reprinted from the Ohio State Law Journal Vol. X, No. 1—Winter 1949. A letter addressed to Mr. McCarthy at TVA, Knoxville, Tenn., should reach him, although in fairness to him, may I say I had no communication from him.

Please understand that I hold no brief for either TVA or a possible MVA. Frankly I am not fully convinced either way. All I wish to do here is to express my gratitude to the Land Division of TVA for going a long way toward restoring my faith in such agencies and to Mr. McCarthy for the use of his material as a basis.

The document is too long to copy. I shall make some extracts and review briefly other parts of Mr. McCarthy's article. The point I ask you to bear in mind is that here is the policy under which TVA has acquired over 1,000,000 acres of land with less than 4 percent going to litigation.

Let's start with a direct quotation:

"The ultimate objective of the TVA program is, of course, the welfare of the individuals who live in the TVA area, but even viewed narrowly a land-acquisition program which promotes respect and confidence rather than antagonism is important to the accomplishment of the specific objectives of the TVA program."

And another quotation:

"The importance of conducting the land-acquisition program in such a way as to insure the retention of the good will of the people directly affected was recognized by TVA from the outset and two major objectives were established for this program: First to obtain the lands needed at a cost which is fair to the Government and second, to leave the area in which a reservoir is built and the people who lived in the reservoir area at least as well off as they were before TVA entered the picture. Experience has shown that there is no inconsistency between these two objectives, that, in fact, a land-acquisition program which insures fair and impartial treatment of the affected landowners is the most effective method of obtaining the needed lands at a reasonable price."

And another quotation:

"Condemnation has many disadvantages: It is expensive and it takes away from the acquiring agency the determination of the amount to be paid. More important still, it is likely to leave a residue of ill will no matter how hard the parties may try to conduct the proceedings in a friendly manner. The condemning agency and the landowner become antagonists and the feeling of antagonism toward the agency is likely to be carried over consciously or unconsciously into subsequent dealings."

And yet another:

"The appraisal of the land in a reservoir is a product of months of highly organized research and investigation. The first step is to make a background study of the entire reservoir area in as great detail as possible. All of the appraisal personnel participate in the preparation of this study, which covers all factors which could have a bearing on market value. Land sales which have taken place in and near the reservoir during the preceding 10 or more years are studied and analyzed and are adjusted by means of the farm real estate index published by the Department of Agriculture. The study also covers farming practices, soils and soil fertility, crop yields and prices, and literally dozens of other factors which have a bearing on the value of the land. It also includes inquiries of qualified residents of the area as to the prevailing views of land values.

After the background study has been completed, various field appraisers make independent appraisals of the same tracts. The results are discussed with them by an appraisal committee, which reviews all appraisals for the project, and the supervisor of appraisals, and in this way a uniform basis for fixing values is reached which represents the composite judgment of the appraisal staff."

And another:

"The farmer who lives in a reservoir area does not usually want to sell. The loss of his land imposes a burden upon him, even if he receives a fair price. He must find a new place to live, move his household furniture, move or dispose of his farming equipment and stock and frequently make other substantial adjustments. If he wants to relocate in the same general area, he must buy his new farm in a seller's market in which he is competing with other prospective buyers whose farms have been acquired for the same reservoir project. These factors are taken into consideration by TVA and an attempt is made to leave the landowner in as good a financial position as he occupied before his land was purchased. This policy is required by considerations of fairness to the landowner and we are satisfied that it pays off in dollars and cents."

And lastly:

"The experience of TVA with these policies establishes that a land-acquisition program can be a source of positive benefit to a regional agency, instead of a source of conflict with the landowners."

Method of appraisal under TVA

Now whether you believe in a TVA or not, it must be clear enough that the TVA has made an honest attempt at acquiring lands without cruelty and with a minimum of injustice. They try to relocate the farmer and leave him in the same position as if TVA had never come to the country. That conforms to the fifth amendment to the Constitution and to its interpretation by the Supreme Court. Where families are dislocated and their finances are too slim to reestablish them, TVA will stretch a point and help them financially. Also it gives priority to its displaced landowners in all its public works.

In view of the above it is certainly a far cry between the policy of TVA and the stupid, unjust, and cruel program imposed on the valley of the Missouri.

Lastly TVA does make allowances for special cases. As an illustration we have here a neighbor of mine, Mr. George Fairbanks. Mr. Fairbanks lives alone. In the years since he purchased his present home, he has gone practically blind. He cannot recognize a friend standing within 2 feet of him, except by voice. But as Mr. Fairbanks had lost his sight by degrees, so, too, has he learned every foot of his section of land so that he can move about it and handle his stock and his fence repairing with a fair degree of efficiency. Take away Mr. Fairbanks' farm and what has he left? If he were given a new home outright, he would still be helpless in it for many years. The Real Estate Division says Mr. Fairbanks is unfortunate but it can't play favorites. But TVA says it can play favorites under such circumstances. For my part, it seems that the taking of Mr. Fairbanks' home on the basis of a scant agricultural valuation is a rank injustice and those responsible for such an act should hide their heads in shame.

More Housing

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. MULTER. Mr. Speaker, I direct the attention of my colleagues to the following editorial which appeared in the Brooklyn Eagle of August 22, 1949:

CITY'S NEW HOUSING PROGRAM WILL HIT MANY BOROUGH SLUMS

Clearance of slum areas in Brooklyn has long been one of the major problems here. Run-down buildings, with squalid living conditions, exist in various parts of the borough and cry out for action to remove them. They are, as the recent series by Maj. Joseph Caccavajo, pointed out, evidences of blight disease.

Now comes the report of the city housing authority, for the first time presenting the complete picture of the progress already made and the goals in sight in attacking the housing problem throughout the city.

In this program Brooklyn's sore need for rehabilitation of blighted areas is recognized clearly in a few figures.

Tentative sites already have been chosen for 49 new low-rent projects, 19 of them in Brooklyn. And 11 of the 19 new developments scheduled for the borough are to be built on sites where slum conditions exist.

This will not be an easy program to carry out. Apart from the financing, which is a complicated and costly process in itself, there is the human factor to be considered.

Granted that the people now living in the slums will be much better off in the new, modern apartments, all with spacious grounds for plenty of light and air and with adequate play areas for children, the fact remains that those same families will have to be removed to make room for the improvements.

Where are they to go? Often as not, there is no place for them. So the housing authority plans other developments on land that is now vacant. When these projects are ready, the slum areas are cleaned out and more new housing is built to wipe out once and for all another blot on the borough's map.

In the 42 months the city's mass public housing program has been in effect, 42 projects have been developed—a rate of 1 a month. Immediately after the war ended, 17,000 apartments were provided. By July 1 of this year, 63,000 had been completed or were nearly ready for occupancy.

The city housing authority has performed virtual miracles in the face of terrific obstacles in helping to eliminate slums at the same time it was furnishing homes for the thousands who had none. It cannot be forgotten, however, that State and Federal subsidies have made its work possible, and have permitted the long-range planning that one day may make the word "slum" a useless remnant of the English language.

Mr. Speaker, I am happy to announce that I have just been advised by the Public Housing Administration that the application of New York City has been approved for the erection of 20,300 units under this program. That means housing for about 100,000 persons.

Funny Money Men

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1949

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I include an

article on the subject of money. I have been interested and made a study of our monetary system for many years. This research, by my friend William O. Skeels, of the District of Columbia Bar, into the intention of the delegates to the Constitutional Convention should be of considerable interest to Members of Congress as well as students of the money question.

The article follows:

FUNNY MONEY MEN

(By W. O. Skeels)

One hears and reads so much from the various types of do-gooders, generally known as funny money men about constitutional money, congressional-controlled money, the enforcement of that part of our Constitution regulating money and so forth, that I have thought that a little light on the subject would serve a good purpose.

It is clear to anyone who wishes to look into the situation which prevailed at the time the Constitution was being written that the only intention of its makers was to provide for the conversion of gold and silver into usable coins for money, to establish a uniform value for them, and set the value of foreign coins which were in general use in the States at the time, and to prohibit the issuance of paper money of any kind. They also provided that the States could not coin or issue money and also prohibited States from making anything but gold or silver coin a tender in payment of debts.

They had no intention of issuing any paper currency on the credit of the United States as is clearly set forth by the provision for borrowing money on the credit of the United States. As a matter of fact, one of the main reasons for the Constitutional Convention was to get matters in shape so that they could borrow money to pay soldiers and carry on other governmental functions. Private bankers were demanding payment of their loans and refusing further extension of credit. The wealthy men who sat in the Convention were not anxious to antagonize the money-loaning group of the time.

To indicate the need of a stronger union on which to base national loans with which to pay our soldiers, allow me to quote the following from the National Constitutional Convention of Monday, March 17, 1783:

"A letter was received from General Washington, enclosing two anonymous and inflammatory exhortations to the army to assemble, for the purpose of seeking, by other means, that justice which their country showed no disposition to afford them. The steps taken by the general to avert the gathering storm, and his professions of inflexible adherence to his duty to Congress and to his country, excited the most affectionate sentiments toward him. By private letters from the army, and other circumstances, there appeared good ground for suspecting that the civil creditors were intriguing, in order to inflame the army into such desperation as would produce a general provision for the public debts. These papers were committed to Mr. Gilman, Mr. Dyer, Mr. Clark, Mr. Rutledge, and Mr. Mercer. The appointment of these gentlemen was brought about by a few members, who wished to saddle with this embarrassment the men who had opposed the measures necessary for satisfying the army, viz, the half-pay and permanent funds; against one or other of which the individuals in question had voted.

"This alarming intelligence from the army, added to the critical situation to which our affairs in Europe were reduced by the variance of our ministers with our ally, and to the difficulty of establishing the means of fulfilling the engagements and securing the harmony of the United States, and to the confusions apprehended from the approaching resignation of the superintendent of finance, gave peculiar awe and solemnity to the present moment, and oppressed the minds of Congress with an anxiety and distress which had been scarcely felt in any period of the Revolution."

Article I, section 8 of the Constitution contains two provisions pertaining to money: "The Congress shall have power * * *

"To borrow money on the credit of the United States. * * *

"To coin money, regulate the value thereof, and of foreign coin."

Section 10: "No State shall * * * coin money; emit bills of credit; make any thing but gold and silver coin a tender in payment of debts."

In the Constitution of the United States of America (annotated) printed under the provisions of Senate Concurrent Resolution No. 35, adopted May 14, 1936, with citations of cases of the Supreme Court of the United States construing its several provisions, we find:

"Definition of coinage: Coinage is the conversion of metal into money by governmental direction and authority. It means to mold into form a metallic substance of intrinsic value and stamp on it its legal value."[1]

PURPOSE OF CLAUSE—EXCLUSIVE POWER OF CONGRESS

The power to coin money and to regulate its value was withdrawn from the States (art. I, sec. 10) and by this clause conferred exclusively on the Federal Government for the purpose of providing a currency which would have a uniform legal value in all the States.[2] To this end, Congress has legislated from a very early date—the first act being April 2, 1792 (1 Stat. 246), establishing a mint and providing for coinage in general.

In order to get clearly in mind the attitude of the delegates allow me to present the following debates taken from Elliot's Debates on the Federal Constitution, volume V, page 434:

Mr. Gouverneur Morris moved to strike out "and emit bills on the credit of the United States." If the United States had credit, such bills would be unnecessary; if they had not, unjust and useless.

Mr. Butler seconds the motion.

Mr. Madison: "Will it not be sufficient to prohibit the making them a tender? This will remove the temptation to emit them with unjust views; and promissory notes, in that shape, may in emergencies be best."

Mr. Gouverneur Morris: "Striking out the words will leave room still for notes of a responsible minister, which will do all the good without the mischief. The moneyed interest will oppose the plan of Government, if paper emissions be not prohibited."

Mr. Gorham was for striking out without inserting any prohibition. If the words stand, they may suggest and lead to the measure.

Mr. Mason had doubts on the subject. Congress, he thought, would not have the power, unless it were expressed. Though he had a mortal hatred to paper money, yet, as he could not foresee all emergencies, he was unwilling to tie the hands of the legislature. He observed that the late war could not have been carried on, had such a prohibition existed.

Mr. Gorham: "The power, as far as it will be necessary or safe, is involved in that of borrowing."

Mr. Mercer was a friend to paper money, though, in the present state and temper of America, he should neither propose nor approve of such a measure. He was consequently opposed to a prohibition of it altogether. It will stamp suspicion on the Government to deny it a discretion on this point. It was impolitic, also, to excite the opposition of all those who were friends to paper money. The people of property would be sure to be on the side of the plan, and it was impolitic to purchase their further attachment with the loss of the opposite class of citizens.

Mr. Ellsworth thought this a favorable moment to shut and bar the door against paper money. The mischiefs of the various experiments which had been made were now fresh in the public mind, and had excited the disgust of all the respectable part of America. By withholding the power from the new government, more friends of influence would be gained to it than by almost anything else. Paper money can in no case be necessary. Give the Government credit and other resources will offer. The power may do harm, never good.

Mr. Randolph, notwithstanding his antipathy to paper money, could not agree to strike out the words, as he could not foresee all the occasions that might arise.

Mr. Wilson: "It will have a most salutary influence on the credit of the United States, to remove the possibility of paper money. This expedient can never succeed whilst its mischiefs are remembered; and, as long as it can be resorted to, it will be a bar to other resources."

Mr. Butler remarked that the paper was a legal tender in no country in Europe. He was urgent for disarming the government of such a power.

Mr. Mason was still averse to tying the hands of the legislature altogether. If there was no example in Europe, as just remarked, it might be observed, on the other side, that there was none in which the Government was restrained on this head.

Mr. Read thought the words, if not struck out, would be as alarming as the mark of the beast in Revelation.

Mr. Langdon had rather reject the whole plan than retain the three words "and emit bills."

On the motion for striking out—

New Hampshire, Massachusetts, Connecticut, Pennsylvania, Delaware, Virginia, North Carolina, South Carolina, Georgia, aye, 9; New Jersey, Maryland, no, 2.

This vote in the affirmative by Virginia was occasioned by the acquiescence of Mr. Madison, who became satisfied that striking out the words would not disable the Government from the use of public notes, as far as they could be safe and proper; and would only cut off the pretext for a paper currency, and particularly for making the bills a tender, either for public or private debts.

In a discussion on the limitation of the States the following appears on page 484:

Mr. Wilson and Mr. Sherman moved to insert, after the words "coin money" the words "nor emit bills of credit, nor make anything but gold and silver coin a tender in payment of debts;" making these prohibitions absolute, instead of making the measures allowable, as in the thirteenth article, with the consent of the legislature of the United States.

Mr. Gorham thought the purpose would be as well secured by the provision of article 13, which makes the consent of the general legislature necessary; and that, in that mode, no opposition would be excited;

---

[1] *Griswold* v. *Hepburn* (63 Ky. 20 (1865)).

[2] *Legal Tender* cases (12 Wal. 457, 545 (1871)); *United States* v. *Marigold* (9 How. 560, 568 (1850)); *Briscoe* v. *Bank of Kentucky* (11 Pet. 257 (1837)); *Houston* v. *Moore* (5 Wheat. 1, 49 (1820)); *Sturges* v. *Crowninshield* (4 Wheat. 122, 193 (1819)).

whereas, an absolute prohibition of paper money would rouse the most desperate opposition from its partisans.

Mr. Sherman thought this a favorable crisis for crushing paper money. If the consent of the legislature could authorize emissions of it, the friends of paper money would make every exertion to get into the legislature in order to license it.

My contention is not that our banking system does not need to be changed. I do contend that the founding fathers of the United States were converts of the English banking system and had no desire to change it. Remember that the delegates were of the lending, not borrowing group. The Haves, not the Havenots.

RFC Loans Boon to Small Business

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1949

Mr. CELLER. Mr. Speaker, my attention has been called to some of the statements made in the public press and testimony before committees of Congress to the effect that the Reconstruction Finance Corporation should be trimmed in its powers and authority to such an extent that it would be reduced to a mere stand-by financial agency. I do not know where the agitation for such a move has started, but I am convinced that such a step would be disastrous to deserving business enterprises of every size who are presently unable either to secure credit of any kind, or to secure credit on reasonable terms. Those who would place RFC in moth balls support their views by the general statement that the legitimate credit needs of business in this country today can be supplied through private financial institutions. The acceptance of such a view clearly indicates a lack of knowledge of what the RFC is doing, and has been doing for years, to fill the credit needs of those business enterprises, both large and small, which simply could not secure credit from the usual banking channels. In a moment I shall call your attention to certain statistics which bear out my views in this regard.

We all know that small businesses have more difficulty in obtaining credit from private sources than do the larger companies, and, of course, long-term credit is one of the most pressing needs of small business. Indeed, it is frequently found that there is insufficient private credit available to some large businesses. It may be true that the potential private credit available to all businesses may be sufficient for our needs, but the fact is that it does not always flow when and where it is needed. The experience of the RFC has clearly demonstrated that there is a gap between the credit which private banking institutions can, or are willing to supply, and the credit that is needed to maintain a sound and expanding economy. That gap, of course, will be narrower in periods of high prosperity than at other times. The RFC has been filling this need and has done so at no cost to the taxpayer. Not only has the Corporation paid its way in its normal peacetime activities, but it has made a net return to the Government of about $500,000,000. The record shows also that in those periods when banks are less cautious the number of loans authorized by the RFC are proportionately reduced. By the same token, the tightening of bank credit results in the approval of more RFC loans. That is precisely the way Congress intended the RFC to operate and it is performing a magnificent service.

The Members of this House will recall that in 1947, after extensive hearings in which all the activities of RFC were reviewed in detail, the Congress enacted a comprehensive amendment to the RFC Act, the effect of which was to place the Corporation on a solid peacetime basis. The vast powers which had been granted to the Corporation for the conduct of its wartime activities were repealed, and the Corporation was trimmed down from an $18,000,000,000 Government agency to a $2,000,000,000 agency. In addition, strict limitations were placed on the Corporation with respect to the powers Congress permitted it to retain. Again in 1948 its activities were the subject of full inquiry by a special subcommittee of the Senate Banking and Currency Committee, and thorough hearings by the House Banking and Currency Committee. Again the Congress approved its operations and extended its life. Those who would now place this agency on a stand-by basis evidently are adherents to the school of thought that we must wait until we have an economic conflagration before calling on the RFC for assistance. I cannot subscribe to any such theory. On the contrary, I believe the RFC should continue to exercise its powers to aid in providing employment in communities all over the United States and by so doing aid substantially in preventing a depression. Any other view, in my opinion, is dangerously short-sighted.

As further evidence of the fact that private credit is not presently supplying the credit needs of the country, I call your attention to the activities of the Federal National Mortgage Association, a subsidiary of the RFC, which provides at the direction of Congress a secondary market for mortgages purchased originally by private financing agencies. This secondary market is intended to give encouragement to the housing program by supplying a ready flow of capital to finance the purchase of homes. Under existing law FNMA may purchase 50 percent of the portfolio of the original mortgagee. You will recall only a few months ago when the funds available to FNMA for this purpose were about exhausted and that agency was forced to cease its purchases, the Congress was deluged with requests that the necessary additional funds be provided to continue the program, since otherwise progress in solving the housing shortage would be seriously jeopardized. Banks, of course—and properly so—must maintain sufficient liquidity to meet the requirements of their demand depositors, and accordingly were not willing to tie up their funds in long-term mortgages unless there was some assurance that the RFC, through the Federal National Mortgage Association, would take a portion of them off their hands should the private institutions so desire. I am informed that at the present time FNMA is purchasing mortgages at about the average rate, dollar-wise, of thirty to thirty-five million a week. These purchases make it obvious that private credit is simply not available in sufficient amounts to meet this particular situation.

In this connection I should like to read an excerpt from a letter dated August 5, 1949 from Mr. James L. Dougherty, General Counsel of the RFC, to Senator MAYBANK, Chairman of the Senate Banking and Currency Committee, which committee is presently considering certain legislation relating to housing:

> I believe it appropriate before concluding this letter to say a word regarding the manner in which RFC and FNMA operate, and the relationship between them. A couple of years after the Federal Housing Administration had been organized pursuant to the provisions of the National Housing Act, approved in June 1934, the Federal Housing Administrator importuned the RFC to take some action to support and popularize the FHA-insured mortgage with the investors of the country. FHA complied by purchasing FHA-insured mortgages through the RFC Mortgage Company, a subsidiary of RFC. Later it became obvious that the better way to assist the Federal Housing Administrator would be to organize and capitalize a national mortgage association under the provisions of title III of the National Housing Act.
>
> The Federal Housing Administrator issued a charter for a national mortgage association to RFC which promptly paid in $10,000,000 of capital and, in accordance with the regulations of the Administrator, $1,000,000 of paid-in surplus. It was, and continues to be, a 100-percent-owned subsidiary of the RFC. Although FNMA is a separate corporation, its operation and activities have been smoothly geared to the operations of the RFC. In fact, it operates in practice as a division of RFC. The facilities of RFC's 31 loan agencies make the facilities of FNMA easily accessible to the mortgagees of the Nation and greatly simplify the operation of purchasing and handling a very large number of items.
>
> "FNMA purchased its first mortgages in the early part of 1938 and since that time it has perfected the mechanics for examining, acquiring, servicing, selling, assigning, and releasing where necessary FHA-insured and VA-guaranteed mortgages. Each of RFC's agency managers is a duly authorized agent of FNMA and, pursuant to the terms of appropriate powers of attorney, they acquire, service, assign, and release mortgages as occasion may demand.
>
> "It is not the purpose of FNMA to retain the mortgages it purchases as permanent investments but to sell them to private investors at the earliest opportunity. The experience of FNMA has been that these Government-guaranteed mortgages are considered more desirable by some investors after they have had several years of "season-

ing." In the past FNMA has sold more than 200,000,000 of them at a handsome profit to the Government. Investors have exhibited some interest in our present holdings and we are now formulating procedures for making FNMA's mortgages available to investors. Some of the older mortgages which have been held for a period should sell at a premium."

I wish to go on record as endorsing the splendid manner in which the RFC, through the FNMA, is administering this important program, and particularly to congratulate that agency on the orderly plans it is making to turn these mortgages over eventually to private institutions on a sound business basis.

Under RFC's basic statute the Corporation cannot make a loan to a business enterprise if private credit on reasonable terms is otherwise available. Consequently applicants are required to show that their normal banking channels have rejected the credit requested. In this connection the RFC recently made a survey covering the period from July 1948 to March 1949, the purpose of which was to determine the reasons why banks rejected loans. Among the more numerous reasons given by the banks are the following: first, loan could not be made under the bank's established policy, second, maturity requested too long, third, collateral insufficient; fourth, type of collateral not acceptable; fifth, bank's legal loan limit did not permit loan; sixth, new enterprise or considered speculative. In a large number of cases the reason was not given, not known, or not readily ascertainable. The important point to me is that if the banks for a reason of their own, or for no reason at all, decline to advance credit in a deserving situation, these businesses have nowhere to turn except to the RFC. I herewith insert in the RECORD certain tabulations covering the period from July 1948 through March 1949 setting out, among other things, the disposition made by the Corporation of loan applications and the reasons why the banks rejected applications made to them.

The RFC has and is placing a special emphasis on the service it can render to small-business enterprises of virtually every type throughout the United States. For the 18-month period beginning January 1, 1948, through June 30, 1949, the Corporation has authorized 5,564 loans. Of this number 2,999 were in amounts of $25,000 and under. One thousand nine hundred and seventy-eight were for amounts between $25,000 and $100,000. In other words, 4,977 of the 5,564 loans made by the Corporation during this period were in amounts of $100,000 or less. Approximately 90 percent, then, of all the business loans made by the Corporation are to small enterprises. I also insert in the RECORD a table showing more in detail a break-down of RFC's business-loan authorizations in terms of the size of loans. This table conclusively demonstrates that RFC is assisting in a major way in the strengthening and preserving of small businesses, which, without RFC assistance, would be denied the credit needed for continued existence.

Reconstruct'on Finance Corporation—Recapitulation of applications received during the months July 1948 through March 1949 showing disposition of such applications
